COPYRIGHT STATEMENT

This consultant's report, dated May 15, 2009, is prepared for the exclusive and confidential use of Sacramento Rendering Company concerning potential development of APN Nos. 067-0050-048 and 067-0090- 002 located in the County of Sacramento, California. Any use of this report, the accompanying appendices, or portions thereof, other than for project review and approval by appropriate governmental authorities, shall be subject to and require the written permission of Sierra Nevada Arborists. Unauthorized modification, distribution and/or use of this report, including the data or portions thereof contained within the accompanying appendices, is strictly prohibited.

QUALIFICATION STATEMENT

Sierra Nevada Arborists is a fully insured, Loomis-based arboriculture consulting firm founded in January of 1998 by its Principal, Edwin E. Stirtz. Mr. Stirtz is an ISA Certified Arborist, and a member of the American Society of Consulting Arborists and International Society of Arboriculture. In addition, Mr. Stirtz is a member of the Association of Environmental Professionals. Mr. Stirtz possesses in excess of 27 years experience in horticulture and arboriculture, both maintenance and construction, and has spent the last 17 years as a consulting and preservation specialist in the Sacramento and surrounding regions.

Sacramento Rendering Company Project Site
Initial Arborist Report & Tree Inventory Summary
May 15, 2009

INTRODUCTION

Sierra Nevada Arborists is pleased to present the Initial Arborist Report and Tree Inventory Summary for the trees located within and/or overhanging the Sacramento Rendering Company property encompassing Assessor Parcel Numbers 067-0050-048 and 067-0090-002 located on Kiefer Boulevard in the County of Sacramento, California. This Initial Arborist Report and Tree Inventory Summary memorializes tree data obtained by Edwin E. Stirtz, ISA Certified Arborist WE-0510A, at the time of initial field reconnaissance and inventory efforts during the periods February 16-20, 2009 and April 13-17, 2009.

SCOPE OF INVENTORY EFFORT

The County of Sacramento Tree Preservation Ordinance (Sacramento County Code Title 19, Chapter 19.12) regulates both the removal of protected trees and the encroachment of construction activities within their driplines. The Ordinance defines a “tree” as “any living native oak tree having at least one trunk of six inches or more in diameter measured four and one-half feet above the ground, or a multi-trunked native oak tree having an aggregate diameter of ten inches or more, measured four and one-half feet above the ground.” In addition, all native oak and specified non-oak native trees which measure four inches in diameter and larger (or 10-inch aggregate diameter for multi-trunk native oak and Northern California Black Walnut trees) and other non-native trees with trunk diameters of 19 inches and larger are afforded various levels of protection through the County’s environmental review policy. These separate requirements are not based solely on the Sacramento County Tree Preservation Ordinance. Tree inventories and arborist reports submitted to the Sacramento County Department of Environmental Review and Assessment (“DERA”) are used, among other things, to evaluate project impacts and create appropriate mitigation pursuant to the Sacramento County General Plan policies and CEQA. To that end, on January 25, 2008, DERA promulgated a separate set of criteria to be utilized when preparing tree inventories and arborist reports for a proposed development site. A copy of the DERA Arborist Report Requirements dated January 25, 2008, are included as Appendix A to this report.

At the request of Sacramento Rendering Company in February and April 2009, Edwin E. Stirtz of Sierra Nevada Arborists visited the Sacramento Rendering Company project site located in the County of Sacramento, California. The purpose of this field reconnaissance effort was to identify and inventory the trees within and/or overhanging the proposed project area which measured four inches in diameter and larger measured at breast height (“DBH”), specifically including the identification of any native oaks, California Sycamore, Northern California Black Walnut, Oregon Ash, Goodding’s Black Willow, California Box Elder, White Alder and California Buckeye as requested by the Sacramento County Department of Environmental Review and Assessment (“DERA”) in their Arborist Report Requirements dated January 25, 2008.

This Initial Arborist Report and Tree Inventory Summary presents information concerning the species, size and current condition of the trees within the proposed project area, along with initial pre-development recommendations on a tree-by-tree basis which logically follow

Sacramento Rendering Company Project Site
Initial Arborist Report & Tree Inventory Summary
May 15, 2009

the characteristics noted within the trees at the time of field inventory efforts in February and April, 2009. Information concerning the nature and extent of root system and canopy impacts which will be sustained by the trees from proposed development activities, along with specific tree-by-tree mitigation recommendations for the trees which will sustain encroachment into their protected root zones can be provided in a Supplemental Arborist Report and Construction Impact Assessment once development plans have been refined and finalized for the proposed project area.

METHODOLOGY

During field reconnaissance and inventory efforts Edwin E. Stirtz of Sierra Nevada Arborists conducted a visual review from ground level of the trees within and/or overhanging the proposed project area as depicted on the Site Map which was provided for field reference by Kris Steward of the Law Offices of George E. Phillips. The trees which measured four inches in diameter and larger measured at breast height ("DBH") were identified in the field by affixing to the tree's trunk a round, pre-stamped metal numbering tag bearing numbers 5701 through 6597. The tree numbers utilized in this report and accompanying inventory summaries correspond to the tree tag which is affixed to the tree in the field, and those tree numbers or grouping of numbers have been rough-plotted on the enclosed Site Map so that the precise vertical and horizontal location of the trees may be surveyed in the field by a licensed land surveyor and data for the trees (i.e. tree number, diameter, dripline and protected root zone radii) may be properly depicted on future development plans and Tree Location Exhibits as requested by DERA.

At the time of field identification and inventory efforts specific data was gathered for each tagged tree including the tree's species, diameter measured at breast height ("DBH") and dripline radius ("DLR"). In addition, for the trees which met the criteria of the DERA Requirements and/or County of Sacramento Tree Preservation Ordinance an assessment was made of the tree's root crown/collar, trunk, limbs and foliage.¹ Utilizing this data the tree's overall structural condition and vigor were separately assessed ranging from "excellent"² to "poor" based upon the observed characteristics noted within the tree and the Arborist's best professional judgment. Ratings are subjective and are dependent upon both the structure and vigor of the tree. The vigor rating considers factors such as the size, color and density of the foliage; the amount of deadwood within the canopy; bud viability; evidence of wound closure; and the presence or evidence of stress, disease, nutrient deficiency and insect infestation. The structural rating reflects the root crown/collar, trunk and branch configurations; canopy balance; the presence of included bark, weak crotches and other

¹ At the time of field inventory efforts some of the trees within and/or overhanging the proposed project area were dormant as noted in the accompanying Inventories Summaries. Therefore, the trees' vigor was rated based upon observed bud formation at the time of site visits in February and/or April, 2009. A reassessment of the trees' foliage may be required later in the season prior to making final decisions regarding retention of these trees in a developed environment.

² It is rare that a tree qualifies in an "excellent" category, and it should be noted that there were no trees observed within the project area which fell within the criteria of an "excellent" or "good" rating. A complete description of the terms and ratings utilized in this report and accompany inventory summary are found on pages 10-11.

Sacramento Rendering Company Project Site
Initial Arborist Report & Tree Inventory Summary
May 15, 2009

structural defects and decay and the potential for structural failure. Finally, notable characteristics were documented and *initial* recommendations on a tree-by-tree basis were made which logically followed the observed characteristics noted within the trees at the time of the field inventory effort. The initial recommendations are based on the assumption that the tree would be introduced into a developed environment and may require maintenance and/or may not be suitable for retention within a post-development setting.

SUMMARY OF INVENTORY EFFORT

Field reconnaissance and inventory efforts found 697 trees measuring four inches in diameter and larger measured at breast height within and/or overhanging the proposed project area. Composition of the 697 inventoried trees includes the following species and accompanying aggregate diameter inches:

SPECIES DIVERSIFICATION			
African Sumac	=	19 trees	(197 aggregate diameter inches)
Blue Gum Eucalyptus	=	26 trees	(864 aggregate diameter inches)
Blue Oak	=	1 tree	(39 aggregate diameter inches)
Brazilian Pepper	=	1 tree	(27 aggregate diameter inches)
California Fan Palm	=	1 tree	(16 aggregate diameter inches)
Coast Redwood	=	511 trees	(4,410 aggregate diameter inches)
Cork Oak	=	1 tree	(10 aggregate diameter inches)
English Walnut	=	3 trees	(34 aggregate diameter inches)
Fremont Cottonwood	=	5 trees	(88 aggregate diameter inches)
Fruiting Pear	=	1 tree	(10 aggregate diameter inches)
Fruitless Mulberry	=	2 trees	(45 aggregate diameter inches)
Modesto Ash	=	2 trees	(25 aggregate diameter inches)
Monterey Pine	=	1 tree	(16 aggregate diameter inches)
Olive	=	69 trees	(843 aggregate diameter inches)
Pacific Willow	=	7 trees	(185 aggregate diameter inches)
Plum	=	1 tree	(10 aggregate diameter inches)
Poplar	=	5 trees	(53 aggregate diameter inches)
Red Iron Bark Eucalyptus	=	26 trees	(439 aggregate diameter inches)
Silver Dollar Eucalyptus	=	3 trees	(54 aggregate diameter inches)
Silver Maple	=	1 tree	(24 aggregate diameter inches)
Valley Oak	=	1 tree	(26 aggregate diameter inches)
White Aldar	=	8 trees	(137 aggregate diameter inches)
White Birch	=	2 trees	(12 aggregate diameter inches)

Our field inventory effort found that many of the inventoried trees within and/or overhanging the project boundaries did not meet the criteria of the County of Sacramento Tree Preservation and Protection Ordinance; however, these trees have been memorialized within this report due to their size (i.e., all trees which measure 4"+ DBH) to accurately document

Sacramento Rendering Company Project Site
Initial Arborist Report & Tree Inventory Summary
May 15, 2009

the trees' species, diameter and dripline measurements for mapping purposes as requested by the Sacramento County Department of Environmental Review and Assessment.

Initial Recommended Removals

At this time 27 of the 697 inventoried trees have been recommended for removal from the proposed project area due to the nature and extent of defects, compromised health and/or structural instability noted at the time of field inventory efforts. If these trees were retained within the proposed project area it is our opinion that they may be hazardous depending upon their proximity to planned development activities.³ For reference, the trees which have been recommended for removal due to the severity of noted defects, compromised health and/or structural instability are highlighted in green within the accompanying inventory summaries and are separately summarized in the Summary of Initial Recommended Removals attached as Appendix D to this report.

It should also be noted that several trees within the proposed project area currently exhibiting characteristics which will require further evaluation prior to making a final decision regarding the tree's suitability for retention in a residential setting. These activities should include, at a minimum, root collar excavation and inspection, tissue sampling and analysis to check for the presence of pathogens, decay detection on the tree's lower trunk, aerial inspections/evaluation for installation of support systems to help support weak crotch structures, and/or the removal of dense vegetation to allow for a more thorough inspection of the tree's root crown/trunk areas. In addition, some of the trees within the proposed project area are trees which may be undesirable on residential lots, or are trees which will require periodic/seasonal monitoring to assess the trees' ongoing structural integrity. At this early stage of the project Sierra Nevada Arborists has not recommended the removal of these trees since development plans, including proposed home sites and building footprints, have not yet been finalized and the precise location of these trees in proximity to planned improvement activities is not known. It is strongly recommended that further analysis and/or evaluation of these trees and others with a conditional rating which is less than "fair" be performed by an ISA Certified Arborist prior to making final development decisions, particularly if the trees are planned for retention and development, residential and/or pedestrian activities will occur within their fall zone. At this time it is recommended that these trees be monitored and thoroughly inspected by an ISA Certified Arborist on at least an annual basis to keep abreast of the trees' changing condition(s) and to assess the trees' ongoing structural integrity and potential for hazard in a developed environment.

³ At this time Tree Hazard Evaluation forms have not been prepared for these trees. In lieu, specific details concerning the nature and extent of defects noted within the trees at the time of field inventory efforts have been included within the "notable characteristics" column of the accompanying inventory summaries. It is our understanding, based upon past conversations with Todd Smith of DERA, that this level of detail is sufficient and that Tree Hazard Evaluation forms are unnecessary due to our inability to provide a meaningful "target rating" at this early stage of the project.

Sacramento Rendering Company Project Site
Initial Arborist Report & Tree Inventory Summary
May 15, 2009

CONSTRUCTION IMPACT ASSESSMENT

This Initial Arborist Report and Tree Inventory Summary is intended to provide to Sacramento Rendering Company, the County of Sacramento and other members of the development team a detailed *pre-development review* of the species, size, and current structure and vigor of the trees within and/or overhanging the proposed project area. It is not an exhaustive review of the impacts which will be sustained from project implementation. At this early stage of the project specific root system and canopy impacts on a tree-by-tree basis cannot be definitively assessed until the site development, grading, and other improvement plans have been refined and finalized and data from the accompanying inventory summary (i.e. tree numbers, dripline radius and root protection zones) is properly depicted on the plans.

Since trees are living organisms whose condition may change at any time a complete assessment of construction impacts and specific recommendations to help mitigate for the adverse impacts which may be sustained by the trees from contemplated construction activities cannot be made until the development plans have been refined and finalized. Once final plans have been developed for the site a qualified ISA Certified Arborist with special expertise and demonstrated experience with construction projects in and among native and non-native trees should review those plans and provide a more detailed assessment of impacts, including identification of trees which may require removal to facilitate home construction and other contemplated site development activities. This review will be particularly important if structures and/or residential activities will fall within or near the fall zone of a tree which has been noted as exhibiting structural defects, questionable long-term longevity and/or a conditional rating which is less than "fair", and for trees which measure 16 inches and greater in diameter which will be retained within close proximity to development as trees of this size may pose a more significant hazard if a sudden limb shed and/or catastrophic failure should occur. In addition, the review should include an assessment of root system and canopy impacts which will be sustained by the trees which will be retained within the proposed development area, along with specific recommendations on a tree-by-tree basis to help reduce adverse impacts of construction on the retained trees. In the meantime, this report provides some *initial* pre-development recommendations which logically follow the observed characteristics noted in the trees at the time of the initial field inventory efforts, as well as General Protection Measures which should be utilized as a guideline for the protection of trees which may be retained within the development area. These initial recommendations will require modification and/or augmentation as development plans are refined and finalized.

GENERAL COMMENTS AND ARBORISTS' DISCLAIMER

The County of Sacramento regulates both the removal of "protected trees" and the encroachment of construction activities within their driplines. Therefore, a tree permit and/or additional development authorization should be obtained from the County of Sacramento prior to the removal of any trees within the proposed project area. All terms and conditions of the tree permit and/or other Conditions of Approval are the sole and exclusive responsibility of the project applicant. It should be noted that prior to final inspection written

Sacramento Rendering Company Project Site
Initial Arborist Report & Tree Inventory Summary
May 15, 2009

verification from an ISA Certified Arborist may be required certifying the approved removal activities and/or implementation of other Conditions of Approval outlined for the retained trees on the site. *Sierra Nevada Arborists will not provide written Certification of Compliance unless we have been provided with a copy of the approved site development plans, applicable permits and/or Conditions of Approval, and are on site to monitor and observe regulated activities during the course of construction.* Therefore, it will be necessary for the project applicant to notify Sierra Nevada Arborists well in advance (at least 72-hours prior notice) of any regulated activities which are scheduled to occur on site so that those activities can be properly monitored and documented for compliance certification.

Please bear in mind that implementation of the recommendations provided within this initial report will help to reduce adverse impacts of construction on the retained trees; however, implementation of any recommendations should not be viewed as a guarantee or warranty against the trees' ultimate demise and/or failure in the future. Arborists are tree specialists who use their education, knowledge, training and experience to examine trees, recommend measures to enhance the beauty and health of the trees and *attempt to reduce the risk of living near trees*. Arborists cannot detect every condition that could possibly lead to the structural failure of a tree. There are some inherent risks with trees that cannot be predicted with any degree of certainty, even by a skilled and experienced arborist. Entities who choose to develop wooded properties are accepting a certain level of risk from unpredictable tree related hazards such as toppling in storms, limbs falling and fires that may damage property at some time in the future. Since trees are living organisms their structure and vigor constantly change over time, and they are not immune to changes in site conditions or seasonal variations in the weather. Further, conditions are often hidden within the tree and/or below ground. Arborists and other tree care professionals cannot guarantee that a tree will be healthy and/or safe under all circumstances or for a specific period of time. Likewise remedial treatments cannot be guaranteed. Trees can be managed but they cannot be controlled. To develop land and live near trees is to accept some degree of risk and the only way to eliminate all risk associated with trees would be to eliminate all of the trees. *An entity who develops land and builds homes and other structures with a tree in the vicinity should be aware of and inform their future residents of this Arborists' Disclaimer, and be further advised that the developer and the future residents assume the risk that a tree could at any time suffer a branch and/or limb failure, blow over in a storm and/or fail for no apparent reason which may cause bodily injury or property damage.* Sierra Nevada Arborists cannot predict acts of nature including, without limitation, storms of sufficient strength which can even take down a tree with a structurally sound and vigorous appearance.

Finally, the trees preserved within and/or overhanging the proposed project area will experience a physical environment different from the pre-development environment. As a result, tree health and structural stability should be regularly monitored. Occasional pruning, fertilization, mulch, pest management, replanting and/or irrigation may be required. In addition, *provisions for monitoring both tree health and structural stability following construction must be made a priority*. As trees age, the likelihood of failure of branches or entire trees increases. Therefore, *the future management plan must include an annual inspection* by a qualified ISA Certified Arborist to keep abreast of the trees' changing

Sacramento Rendering Company Project Site
Initial Arborist Report & Tree Inventory Summary
May 15, 2009

condition(s) and to assess the trees' ongoing structural integrity and potential for hazard in a developed environment.

Thank you for allowing Sierra Nevada Arborists to assist you with this initial review. Please feel free to give me a call if you have any questions or require additional information and/or clarification.

Sincerely,

Edwin E. Stirtz
ISA Certified Arborist WE-0510A
Member, American Society of Consulting Arborists

ASSUMPTIONS AND LIMITING CONDITIONS

1. Any legal description provided to the consultant is assumed to be correct. Any titles and ownership to any property are assumed to be good and marketable. No responsibility is assumed for matters legal in character. Any and all property is appraised or evaluated as though free and clear, under responsible ownership and competent management.
2. It is assumed that any property is not in violation of any applicable codes, ordinances, statutes, or other governmental regulations.
3. Care has been taken to obtain all information from reliable sources. All data has been verified insofar as possible; however, the consultant can neither guarantee nor be responsible for the accuracy of information provided by others.
4. The consultant shall not be required to give a deposition and/or attend court by reason of this report unless subsequent contractual arrangements are made for in advance, including payment of an additional fee for such services according to our standard fee schedule, adjusted yearly, and terms of the subsequent contract of engagement.
5. Loss or alteration of any part of this report invalidates the entire report. Ownership of any documents produced passes to the Client only when all fees have been paid.
6. Possession of this report or a copy thereof does not imply right of publication or use for any purpose by any other than the person to whom it is addressed, without the prior expressed written or verbal consent of the consultant.
7. Neither all nor any part of the contents of this report, nor copy thereof, shall be conveyed by anyone, including the client, to the public through advertising, public relations, news, sales, or other media, without the prior expressed written or verbal consent of the consultant, particularly as to value conclusions, identity of the consultant, or any reference to any professional society or institute or to any initialed designation conferred upon the consultant as stated in his qualifications.
8. This report and any values expressed herein represent the opinion of the consultant and the consultant's fee is in no way contingent upon the reporting of a specified value, a stipulated result, the occurrence of a subsequent event, nor upon any finding to be reported.
9. Sketches, diagrams, graphs, drawings and photographs within this report are intended as visual aids and are not necessarily to scale and should not be construed as engineering or architectural reports or surveys. The reproduction of information generated by other consultants is for coordination and ease of

reference. Inclusion of such information does not constitute a representation by the consultant as to the sufficiency or accuracy of the information.

10. Unless expressed otherwise: 1) information contained in this report covers only those items that were examined and reflects the condition of those items at the time of inspection; and 2) the inspection is limited to visual examination of accessible items without laboratory analysis, dissection, excavation, probing or coring, unless otherwise stated.
11. There is no warranty or guarantee, expressed or implied, that problems or deficiencies of the plants or property in question may not arise in the future.
12. This report is based on the observations and opinions of Edwin E. Stirtz, and does not provide guarantees regarding the future performance, health, vigor, structural stability or safety of the plants described herein. Neither this author nor Sierra Nevada Arborists has assumed any responsibility for liability associated with the trees on or adjacent to this project site, their future demise and/or any damage which may result therefrom.
13. The information contained within this report is true to the best of the author's knowledge and experience as of the date it was prepared; however, certain conditions may exist which only a comprehensive, scientific, investigation might reveal which should be performed by other consulting professionals.
14. The legal description, dimensions, and areas herein are assumed to be correct. No responsibility is assumed for matters that are legal in nature.
15. Any changes to an established tree's environment can cause its decline, death and/or structural failure.

Sacramento Rendering Company Project Site
Initial Arborist Report & Tree Inventory Summary
May 15, 2009

DEFINITIONS AND RATINGS

Tree Number:	Corresponds to aluminum tag attached to the tree.
Species Identification:	Scientific and common species name.
Diameter ("DBH"):	This is the trunk diameter measured at breast height (industry standard 4.5 feet above ground level).
Dripline radius ("DLR"):	A radius equal to the horizontal distance from the trunk of the tree to the end of the farthest most branch tip prior to any cutting. When depicted on a map, the dripline will appear as an irregularly shaped circle that follows the contour of the tree's branches as seen from overhead.
Protected Zone:	A circle equal to the largest radius of a protected tree's dripline plus 1 foot.
Root Crown:	Assessment of the root crown/collar area located at the base of the trunk of the tree at soil level.
Trunk:	Assessment of the tree's main trunk from ground level generally to the point of the primary crotch structure.
Limbs:	Assessment of both smaller and larger branching, generally from primary crotch structure to branch tips.
Foliage:	Tree's leaves.
Overall Condition:	Describes overall condition of the tree in terms of structure and vigor.
Recommendation:	Pre-development recommendations based upon observed characteristics noted at the time of the initial field inventory effort.
Obscured:	Occasionally some portion of the tree may be obscured from visual inspection due to the presence of dense vegetation which, during the course of inspection for the initial arborist report, prevented a complete evaluation of the tree. In these cases, if the tree is to be retained on site the vegetation should be removed to allow for a complete assessment of the tree prior to making final decisions regarding the suitability for retention.

Sacramento Rendering Company Project Site
 Initial Arborist Report & Tree Inventory Summary
 May 15, 2009

TREE CONDITION RATING CRITERIA

RATING TERM	ROOT CROWN	TRUNK	LIMBS	FOLIAGE	STRUCTURE	VIGOR
Good	No apparent injuries, decay, cavities or evidence of hollowing; no anchoring roots exposed; no indications of infestation or disease	No apparent injuries, decay, cavities or evidence of hollowing; no codominant attachments or multiple trunk attachments are observed; no indications of infestation or disease	No apparent injuries, decay, cavities or evidence of hollowing; below average amount of dead limbs or twigs; no major limb failures or included bark; callus growth is vigorous	Leaf size, color and density are typical for the species; buds are normal in size, viable, abundant and uniform throughout the canopy; annual seasonal growth increments are average or above average; no insect or disease infestations/infections evident	No apparent structural defects; no weak crotches; no excessively weighted branches and no significant cavities or decay	Tree appears healthy and has little or no significant deadwood; foliage is normal and healthy
Fair	Small to moderate injuries, decay, cavities or hollowing may be evident but are not currently affecting the overall structure; some evidence of infestation or disease may be present but is not currently affecting the tree's structure	Small to moderate injuries, decay, cavities or hollowing may be evident; codominant branching or multiple trunk attachments or minor bark inclusion may be observed; some infestation or disease may be present but not currently affecting the tree's structure	Small to moderate injuries, decay or cavities may be present; average or above average dead limbs or twigs may be present; some limb failures or bark inclusion observed; callus growth is average	Leaf size, color and density are typical or slightly below typical for the species; buds are normal or slightly sparse with potentially varied viability, abundance and distribution throughout the canopy; annual seasonal growth increments are average or slightly below average; minor insect or disease infestation/infection may be present	Minor structural problems such as weak crotches, minor wounds and/or cavities or moderate amount of excessive weight; non-critical structural defects which can be mitigated through pruning, cabling or bracing	Tree appears stressed or partially damaged; minimal vegetative growth since previous season; moderate amount of deadwood, abnormal foliage and minor lesions or cambium dieback
Poor	Moderate to severe injuries, decay, cavities or hollowing may be evident and are affecting the overall structure; presence of infestation or disease may be significant and affecting the tree's structure	Moderate to severe injuries, decay, cavities or hollowing may be evident and are affecting the tree's structure; presence of infestation or disease may be significant and affecting the tree's structure	Severe injuries, decay or cavities may be present; major deadwood, twig dieback, limb failures or bark inclusion observed; callus growth is below average	Leaf size, color and density are obviously abnormal; buds are obviously abnormal or absent; annual seasonal growth is well below average for the species; insect or disease problems may be severe	Obvious major structural problems which cannot be corrected with mitigation; potential for major limb, trunk or root system failure is high; significant decay or dieback may be present	Tree health is declining; no new vegetative growth; large amounts of deadwood; foliage is severely abnormal

The ratings "good to fair" and "fair to poor" are used to describe trees that fall between the described major categories and have elements of both

**GENERAL PROTECTION GUIDELINES
FOR TREES PLANNED FOR PRESERVATION**

Great care must be exercised when work is conducted upon or around protected trees. The purpose of these General Protection Measures is to provide guidelines to protect the health of the affected protected trees. These guidelines apply to all encroachments into the protected zone of a protected tree, and may be incorporated into tree permits and/or other Conditions of Approval as deemed appropriate by the applicable governing body.

- ◆ A circle with a radius measurement from the trunk of the tree to the tip of its longest limb, plus one foot, shall constitute the critical root zone protection area of each protected tree. Limbs must not be cut back in order to change the dripline. The area beneath the dripline is a critical portion of the root zone and defines the minimum protected area of each protected tree. Removing limbs that make up the dripline does not change the protected area.
- ◆ Any protected trees on site which require pruning shall be pruned by an ISA Certified Arborist prior to the start of construction work. All pruning shall be in accordance with the American National Standards Institute (ANSI) A300 pruning standards, ANSI Standard 2133.1-2000 regarding safety practices, and the International Society of Arboriculture (ISA) "Tree Pruning Guidelines" and Best Management Practices.
- ◆ Prior to initiating construction, temporary protective fencing shall be installed at least one foot outside the root protection zone of the protected trees in order to avoid damage to the tree canopies and root systems. Fencing shall be installed in accordance with the approved fencing plan prior to the commencement of any grading operations or such other time as determined by the review body. The developer shall contact the Project Arborist and the Planning Department for an inspection of the fencing prior to commencing construction activities on site.
- ◆ Signs shall be installed on the protective fence in four (4) equidistant locations around each individual protected tree. The size of each sign must be a minimum of two (2) feet by two (2) feet and must contain the following language:

**WARNING: THIS FENCE SHALL NOT BE REMOVED OR RELOCATED
WITHOUT WRITTEN AUTHORIZATION FROM THE COUNTY OF
SACRAMENTO MUNICIPAL SERVICES AGENCY**

Once approval has been obtained by the County of Sacramento Municipal Services Agency protective fencing shall remain in place throughout the entire construction period and shall not be removed, relocated, taken down or otherwise modified in whole or in part without prior written authorization from the Agency, or as deemed necessary by the Project Arborist to facilitate approved activities within the root protection zone.

Sacramento Rendering Company Project Site
Initial Arborist Report & Tree Inventory Summary
May 15, 2009

- ◆ Any removal of paving or structures (i.e. demolition) that occurs within the dripline of a protected tree shall be done under the direct supervision of the Project Arborist. To the maximum extent feasible, demolition work within the dripline protection area of the protected tree shall be performed by hand. If the Project Arborist determines that it is not feasible to perform some portion(s) of this work by hand, then the smallest/lightest weight equipment that will adequately perform the demolition work shall be used.
- ◆ No signs, ropes, cables (except those which may be installed by an ISA Certified Arborist to provide limb support) or any other items shall be attached to the protected trees. Small metallic numbering tags for the purpose of identification in preparing tree reports and inventories shall be allowed.
- ◆ No vehicles, construction equipment, mobile homes/office, supplies, materials or facilities shall be driven, parked, stockpiled or located within the driplines of protected trees.
- ◆ Drainage patterns on the site shall not be modified so that water collects, stands or is diverted across the dripline of any protected tree.
- ◆ No trenching shall be allowed within the driplines of protected trees, except as specifically approved by the Planning Department as set forth in the project's Conditions of Approval and/or approved tree permit. If it is absolutely necessary to install underground utilities within the dripline of a protected tree the utility line within the protected zone shall be "bored and jacked" or performed utilizing hand tools to avoid root injury under the direct supervision of the Project Arborist.
- ◆ Grading within the protected zone of a protected tree shall be minimized. Cuts within the protected zone shall be maintained at less than 20% of the critical root zone area. Grade cuts shall be monitored by the Project Arborist. Any damaged roots encountered shall be root pruned and properly treated as deemed necessary by the Project Arborist.
- ◆ Minor roots less than one (1) inch in diameter encountered during approved excavation and/or grading activities may be cut, but damaged roots shall be traced back and cleanly cut behind any split, cracked or damaged area as deemed necessary by the Project Arborist.
- ◆ Major roots greater than one (1) inch in diameter encountered during approved excavation and/or grading activities may not be cut without approval of the Project Arborist. Depending upon the type of improvement being proposed, bridging techniques or a new site design may need to be employed to protect the roots and the tree.

Sacramento Rendering Company Project Site
Initial Arborist Report & Tree Inventory Summary
May 15, 2009

- ◆ Cut faces, which will be exposed for more than 2-3 days, shall be covered with dense burlap fabric and watered to maintain soil moisture at least on a daily basis (or possibly more frequently during summer months). If any native ground surface fabric within the protected zone must be removed for any reason, it shall be replaced within forty-eight (48) hours.
- ◆ If fills exceed 1 foot in depth up to 20% of the critical root zone area, aeration systems may serve to mitigate the presence of the fill materials as determined by the Project Arborist.
- ◆ When fill materials are deemed necessary on two or three sides of a tree it is critical to provide for drainage away from the critical root zone area of the tree (particularly when considering heavy winter rainfalls). Overland releases and subterranean drains dug outside the critical root zone area and tied directly to the main storm drain system are two options.
- ◆ In cases where a permit has been approved for construction of a retaining wall(s) within the protected zone of a protected tree the applicant will be required to provide for immediate protection of exposed roots from moisture loss during the time prior to completion of the wall. The retaining wall within the protected zone of the protected tree shall be constructed within seventy-two (72) hours after completion of grading within the root protection zone.
- ◆ The construction of impervious surfaces within the dripline of a protected tree shall be minimized. When necessary, a piped aeration system shall be installed under the direct supervision of the Project Arborist.
- ◆ Preservation devices such as aeration systems, tree wells, drains, special paving and cabling systems must be installed in conformance with approved plans and certified by the Project Arborist.
- ◆ No sprinkler or irrigation system shall be installed in such a manner that sprays water or requires trenching within the dripline of a protected tree. An above ground drip irrigation system is recommended. An independent low-flow drip irrigation system may be used for establishing drought-tolerant plants within the protected zone of a protected tree. Irrigation shall be gradually reduced and discontinued after a two (2) year period.
- ◆ All portions of permanent fencing that will encroach into the protected zone of a protected tree shall be constructed using posts set no closer than ten (10) feet on center. Posts shall be spaced in such a manner as to maximize the separation between the tree trunks and the posts in order to reduce impacts to the tree(s).
- ◆ Landscaping beneath native oak trees may include non-plant materials such as bark mulch, wood chips, boulders, etc. Planting live material under protected native oak trees is generally discouraged, and is not recommended within six (6) feet of the trunk

Sacramento Rendering Company Project Site
Initial Arborist Report & Tree Inventory Summary
May 15, 2009

of a native oak tree with a diameter at breast height (DBH) of eighteen (18) inches or less, or within ten (10) feet of the trunk of a native oak tree with a DBH of more than eighteen (18) inches. The only plant species which shall be planted within the dripline of native oak trees are those which are tolerant of the natural, semi-arid environs of the tree(s).

APPENDIX A:
DERA ARBORIST REPORT REQUIREMENTS
DATED JANUARY 25, 2008

ARBORIST REPORT REQUIREMENTS AND FORMAT

These requirements are not based solely on the Sacramento County Tree Preservation Ordinance. Tree inventories and arborist reports submitted to DERA are used to evaluate project impacts and create appropriate mitigation pursuant to Sacramento County General Plan policies and CEQA.

I. Cover Sheet/Introduction

- Project Title, Assessor's Parcel Number, Site Address (if applicable)
- Applicant Name, Address and Phone Number
- Arborist Name , Address, Phone Number, ISA Certification Number
- Date of Preparation
- Statement of Qualifications

II. Tree Report: Inventory, Identification and Assessment

Inventory

- All native oak and specified non-oak native trees (see species list) that are 4 inches in diameter (dbh) and larger (or 10-inch aggregate diameter for multi-trunk native oak and Northern California black walnut trees)

Species List

valley oak/*Quercus lobata*

interior live oak/*Quercus wislizenii*

blue oak/*Quercus douglasii*

coast live oak/*Quercus agrifolia* (in the Delta area)

oracle oak/*Quercus X morehus*

native oak hybrids

California sycamore/*Platanus racemosa*

Northern California black walnut/*Juglans californica* v. *hindsii*

Oregon ash/*Fraxinus latifolia*

Goodding's black willow/*Salix gooddingii*

box elder/*Acer negundo* v. *californicum*

white alder/*Alnus rhombifolia*

California buckeye/*Aesculus californica*

- All on-site trees and all off-site trees that have canopies overhanging the site or that may be impacted by off-site project-related construction
- Although not required for inclusion in the report, the Tree Location Exhibit (see Section III below) must include the location, trunk size, species, and dripline of all existing trees (4" dbh or larger) on the site.

Identification

- Both common and scientific name (genus, species and cultivar if applicable)
- All trees shall be identified by number in the report and identified in the field by a corresponding numbered tag attached to the tree in a manner consistent with current arboricultural practices.

Assessment

- Size: Measured diameter of the trunk at 54 inches above grade, commonly referred to as diameter at breast height (dbh) or diameter at standard height; if other than dbh then alternate measurement height must be identified. If the tree is multi-trunked include the diameter of all stems that are 1" dbh and larger. Size must be rounded to the nearest inch.
- Root protection zone defined as a circle with the radius being the measurement of the length of the distance from the trunk to the end of the longest limb. If a larger RPZ is warranted or if the longest limb method would not result in adequate protection, provide an appropriate RPZ with a brief explanation.
- Tree Health: a measure of overall vigor and vitality of the tree and rated as good, fair or poor based on an assessment of crown density, leaf color and size, active callusing, shoot growth rate, extent of crown dieback, cambium layer health, and tree age.
- Tree Structure: a measure of the tree's structural stability and failure potential and rated as good, fair or poor based on assessment of specific structural features, eg., decay, conks, co-dominant trunks, included bark, abnormal lean, one-sided canopy, history of failure, prior construction impact, pruning history, etc.
- Dripline Environment: a brief written description of the growing condition of the immediate area beneath the defined dripline protection zone (natural grasses, steep terrain, existing roadway or structure, utility lines, drainage swales, previous grading cuts or fills, fire damage, etc.)
- Overall Tree Condition: Based on the foregoing tree health and structural assessment, the arborist shall assign a numerical rating of the tree based on the following ratings: 1) severe decline, 2) declining, 3) fair, 4) good and 5) excellent.
- Recommendation for Preservation or Removal: Based on the above overall tree assessment, the arborist shall provide a written recommendation either to preserve or to remove the tree. A recommendation for tree preservation shall identify measures necessary for long term maintenance of the tree, such as crown cleanout, deep root fertilization, cabling, annual inspection, mulch placement, etc. A recommendation for removal shall identify all significant health and structural (safety) defects that would justify removal, such as co-dominant structure with included bark, excessive canopy die back, excessive root crown or trunk decay, etc.
- Tree Hazard Evaluation: For those trees that are recommended for removal by the arborist and that have Heritage or Landmark status (defined below), a more detailed evaluation using the International Society of Arboriculture's Tree Hazard Evaluation Form may be required. This evaluation assigns a numerical value for the tree based on a combination of the following:
 - failure potential
 - size of part most likely to fail
 - a target rating

The Hazard Evaluation also requires a recommendation for hazard abatement. Such an evaluation may require root crown excavation and inspection including decay probing and climbing the tree for close inspection of the trunk and major scaffold limbs.

If adequate information regarding the reason for a removal recommendation is included in the report, the Tree Hazard Evaluation Form is not required.

Definitions

Landmark Tree: *This classification is for an especially prominent or stately tree, or a special variety of a certain tree. It can be any native or non-native tree that is exceptional for its type that is in good health and structural condition. Size is not a mandatory criterion (definition from September 2, 1992 memo and SCC §19.04.030).*

Heritage Tree: *This classification is for a California native oak tree growing on any land in Sacramento County, including privately owned land, with a trunk sixty (60) inches or greater in girth (equal to 19 inches dbh or larger) measured four and one-half feet above the ground (from SCC §19.04.030).*

III. Tree Location Exhibit

The arborist report must be accompanied by Tree Location Exhibit (two full-size copies, two 8 ½" x 11" reductions, and PDF files of each on CD) that may be prepared by the project engineer. The Tree Location Exhibit must include the following information:

- Title Block: project name, name, address and phone number of the consultant/arborist, date, and County Control Number.
- Project vicinity map
- Legend or Key: a description of the symbols used on the plan.
- Tagging: All trees on the project site, and off-site trees that may be affected by the project, must be tagged and identified on the plan with the assigned arborist report number. This includes all trees 4" dbh or larger, and is not limited to only those native oak and non-oak native trees.
- Trunk and Dripline Location: All trees shall be identified on the plan by accurate trunk location and dripline protection zone (a circle using the longest tree limb as radius).
- Scale: The location map must be drawn to a standard engineering or architectural scale, not less than 1" = 40'. The map must indicate the scale at which the plan is drawn. If the map is to be reduced or enlarged then a bar scale must also be included.
- North Arrow: A north arrow must be included on the plan. Convention places north toward the top of the plan so that the project site should be oriented on the plan accordingly.
- Topography: The plan shall include existing geodetic survey elevations showing contour lines at one-foot intervals and spot elevations at all high and low points and at the base of each tree trunk.
- Property Boundary and Site Features: An accurate survey of the property's legally recorded boundaries must be shown in relation to other on-site features, e.g. trees, roadways, utility easements, fencing, drainage courses, existing structures, etc.

APPENDIX B:
TREE INVENTORY SUMMARY
(SORTED BY TREE NUMBER)

SACRAMENTO RENDERING COMPANY
 Project Site
 County of Sacramento, California
INVENTORY SUMMARY (sorted by Tree Number)

TREE#	COMMON NAME	SPECIES	CONDITIONAL ASSESSMENT						NOTABLE CHARACTERISTICS	DRIPLINE ENVIRONMENT	DERA RATING	INITIAL RECOMMENDATIONS -- WILL REQUIRE AUGMENTATION/MODIFICATION AS PLANS ARE REFINED AND FINALIZED		
			SINGLE STEM (inches)	MULTI-STEM (inches)	TOTAL DBH (sum of inches of all stems)	DLR (feet)	ROOT CROWN	LIMBS	FOLIAGE STRUCTURE	VIGOR				
5701	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	39	39	28	Poor to fair	Poor	Poor	Fair	Poor	Fair	Callusing hollowng, east side; at grade; some decay; weak attachments; old callusing wound, east side; 4" above grade with decay	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5702	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	34	34	29	Poor	Poor	Poor to fair	Fair	Poor	Fair	Callusing basal lower trunk wounds/cavities with moderate to significant decay, various locations; lens southeast; above average amount of deadwood	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5703	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	37	37	28	Poor	Poor	Poor to fair	Fair	Poor	Fair	Callusing basal lower trunk wounds/cavities with moderate decay, various locations; one-sided east; above average amount of deadwood	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5704	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	38	38	27	Poor to fair	Poor	Poor to fair	Fair	Poor	Fair	Callusing basal lower trunk wound, east side; to 6' above grade; moderate decay; weak attachments; above average amount of deadwood	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5705	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	38	38	31	Poor	Poor	Poor to fair	Fair	Poor	Fair	Callusing basal lower trunk wound, east side; to 7' above grade; moderate decay; weak attachments; above average amount of deadwood	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5706	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	37	37	31	Poor	Poor	Poor to fair	Fair	Poor	Fair	Callusing basal lower trunk wounds with moderate decay, various locations; weak attachments; above average amount of deadwood	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5707	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	21	21	18	Poor to fair	Poor	Poor	Poor to fair	Poor	Poor	Callusing basal lower trunk wounds with significant decay; weak sparse foliage	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5708	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	21	21	18	Poor	Poor	Poor	Poor	Poor	Poor	Callusing basal lower trunk wounds with significant decay; weak attachments; above average amount of deadwood; sparse foliage	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5709	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	25	25	24	Poor	Poor	Poor	Fair	Poor	Fair	Callusing basal lower trunk wounds with significant decay, various locations; weak attachments; above average amount of deadwood	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5710	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	22	22	25	Fair	Poor to fair	Poor to fair	Fair	Poor to fair	Fair	Callused trunk wound, east side; 4" above grade; no obvious decay at this time; one-sided west; slightly above average amount of deadwood	Existing road/natural grasses	1 Clean out crown; perform thorough annual inspection
5711	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	45	45	29	Fair	Poor to fair	Poor to fair	Fair	Poor to fair	Fair	Callusing basal lower trunk wound, east side; to 8' above grade; minor to moderate interior decay exposed; weak attachments; above average amount of deadwood	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5712	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	20	20	6	Poor	Poor	Poor	Fair	Poor	Fair	Callusing basal lower trunk wound, north and east sides; to 10' above grade where main stem has failed; moderate to significant decay; weak attachments; above average amount of deadwood	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5713	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	22	22	29	Poor to fair	Poor	Poor to fair	Fair	Poor	Fair	Callusing trunk wounds with moderate decay, various locations; bends east; above average amount of deadwood	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5714	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	43	43	32	Poor to fair	Poor to fair	Poor to fair	Fair	Poor to fair	Fair	Callusing basal lower trunk wound, east side; to 12' above grade; moderate decay; weak attachments; above average amount of deadwood	Existing road/natural grasses	1 Remove due to nature and extent of noted defects
5715	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	12	12	13							NUMBER, SPECIES AND MEASUREMENTS PROVIDED FOR TREE LOCATION EXHIBIT		
5716	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	20	20	22	Poor	Poor	Poor to fair	Fair	Poor	Fair	Callusing basal lower trunk cavity, northeast sides; to 3' above grade; significant decay; one-sided west	Natural grasses	1 Remove due to nature and extent of noted defects
5717	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	20	20	29	Poor	Poor	Poor to fair	Fair	Poor	Fair	Callusing basal lower trunk cavity, east side; to 2' above grade; moderate decay; one-sided west; weak attachments; above average amount of deadwood	Natural grasses	1 Remove due to nature and extent of noted defects
5718	Blue Gum Eucalyptus	(<i>Eucalyptus globulus</i>)	44	44	38	Poor	Poor	Poor to fair	Fair	Poor	Fair	Callusing trunk cavity, southeastern side; to 8' above grade; significant decay and hollowing; additional defects; weak attachments; above average amount of deadwood	Natural grasses	1 Remove due to nature and extent of noted defects
