This chapter describes existing utilities and service systems that serve the UWSP area. Utilities and service systems described in this chapter include water supply and conveyance, wastewater treatment and conveyance, stormwater conveyance, solid waste collection and disposal, and electricity, natural gas and telecommunications. Pertinent federal, state, and local regulations and requirements are reviewed. Potential impacts of the proposed UWSP on utilities and service systems are discussed, and as warranted, mitigation measures that could avoid or minimize the magnitude of potential impacts are presented. This chapter discusses potential impacts on stormwater conveyance facilities; for a discussion of stormwater quality management, see Chapter 13, *Hydrology and Water Quality*.

The Notice of Preparation (NOP) for the EIR was circulated on October 5, 2020. The County received several comments related to utilities, all stating that the County should continue consultation with utility providers to ensure that the EIR addresses impacts on the utility and infrastructure network and the provision of service to the UWSP area.

The information and analysis in this chapter was developed based on project-specific construction and operational features, data provided by the City of Sacramento (City) regarding existing water use, and additional data and information gathered from the Sacramento 2035 General Plan, Sacramento 2035 General Plan Master EIR, Sacramento 2035 General Plan Background Report, the City of Sacramento Draft 2020 Urban Water Management Plan (UWMP), a water supply assessment (WSA) (Appendix UT-1), and other published technical reports, as indicated in footnoted references.

ENVIRONMENTAL SETTING

WATER

WATER SUPPLY

The Natomas Central Mutual Water Company (NCMWC) currently serves agricultural customers in the western portion of the UWSP area while the City of Sacramento currently serves domestic customers within the eastern portion of the UWSP area and would serve future development allowed under the proposed UWSP.

SURFACE WATER

Most of Sacramento's water supply comes from surface water diversions pursuant to the City's surface water rights and entitlements. These consist of water rights established before 1914 (pre-1914 rights), water rights established after 1914, and a settlement contract between the City and the U.S. Bureau of Reclamation (Reclamation).

The City's pre-1914 appropriative rights entitle the City to surface water from the Sacramento River. The City's right is based on the use of Sacramento River water since 1854; this pre-1914 appropriative right allows for direct diversion of 75 cubic feet per second (cfs) from the Sacramento River.

The City's post-1914 Sacramento River rights are reflected in five water rights permits issued by the State Water Resources Control Board or its predecessor, the State Water Rights Board. Permit 992 authorizes the City to take up to 81,800 acre-feet per year (AFY) from the Sacramento River by direct diversion, with a maximum diversion of 225 cfs, and has a priority date of March 30, 1920. This permit sets a boundary around the area in which the City is allowed to use diverted Sacramento River water (the *place of use*): the area within the legal city limits, an area that changes from time to time through annexations.

The City has four additional post-1914 water rights permits, which authorize diversions of American River water. Permits 11358 and 11361, which authorize the City to divert water from the American River by direct diversion, have priority dates of October 29, 1947, and September 22, 1954, respectively. These permits allow for diversions at the City's E.A. Fairbairn Water Treatment Plant (FWTP), on the south bank of the American River just downstream from the Howe Avenue Bridge, and specify a combined maximum allowable rate of diversion of 675 cfs. The authorized place of use for both permits is 79,500 acres within and adjacent to the city limits.

The final two post-1914 permits (permits 11359 and 11360) authorize re-diversion for consumptive uses¹ of American River tributary water previously diverted by Sacramento Municipal Utility District's (SMUD's) Upper American River Project. Permits 11359 and 11360 have priority dates of February 13, 1948, and July 29, 1948, respectively, and the place of use for both permits is 96,000 acres within and adjacent to the city limits. These permits allow for diversions at the FWTP and at the City's Sacramento River Water Treatment Plant (SRWTP), located on the east bank of the Sacramento River between the American River confluence and the I Street Bridge. The combined maximum allowable re-diversions under these permits are up to 1,510 cfs of Upper American River Project direct diversion water and up to 589,000 AFY of Upper American River Project stored water.

¹ Water used consumptively diminishes the source and is not available for other uses, whereas non-consumptive water use does not diminish the source or impair future water use. *Consumptive water use* is defined as any use of water that causes a diminishment of the source at the point of appropriation. *Diminishment* is defined as to make smaller or less in quantity, quality, rate of flow, or availability. Surface water use is non-consumptive when there is no diversion from the water source or diminishment of the source.

In addition, the City entered into a water rights settlement contract with Reclamation in 1957 after Reclamation's construction of Folsom Dam, which provides improved flood control to downstream communities. The essence of the City/Reclamation settlement contract is that the City agreed to (1) limit its combined rate of diversion under its American River water rights permits to a maximum of 675 cfs, up to a maximum amount of 245,000 AFY in the year 2030, and (2) limit its rate of diversion under its Sacramento River water rights permit to a maximum of 225 cfs and a maximum amount of 81,800 AFY. This limits the City's total diversions of Sacramento and American River water to 326,800 AFY in the year 2030 (see **Table UT-1**). The contract also specifies an annual build-up schedule to this maximum amount (see **Table UT-2**).

In return, the contract requires Reclamation to make enough water available in the rivers at all times to enable the City's agreed-upon diversions. The City agreed to make an annual payment to Reclamation for Folsom Reservoir storage capacity used to meet Reclamation's obligations under the contract, beginning with payment for 8,000 acre-feet (AF) of storage capacity in 1963 and building up, more or less linearly, to payment for the use of 90,000 AF of storage capacity in 2030. The water rights settlement contract is permanent and has no delivery limitations. The Reclamation contract, in conjunction with the City's water rights, provides the City with a reliable and secure water supply.

The City's diversions of American River water at the FWTP are also subject, during certain time periods, to limitations specified in the Water Forum Agreement (WFA). The Water Forum was established in 1993 by a group of water managers, local governments, business leaders, agricultural leaders, environmentalists, and citizen groups with two "co-equal" goals: to provide a reliable and safe water supply through the year 2030, and to preserve the wildlife, fishery, recreational, and aesthetic values of the Lower American River. After six years of intense interest-based negotiations, the Water Forum participants approved the 2000 WFA. Several factors can affect the allocation of water supply from the American River. When March to November unimpaired flow into Folsom Reservoir (UIFR) is greater than 1.6 million acre-feet, no annual WFA restrictions are applied. However, other restrictions could be in effect such as the Central Valley Project shortage criteria.²

² Central Valley Project Municipal and Industrial (M&I) Water Shortage Policy Guidelines and Procedures ensure consistent and equitable implementation of the M&I Water Shortage Policy throughout the Central Valley Project for those M&I Contractors subject to the Water Shortage Policy. These guidelines focus on the process and calculations of public health and safety and adjustments to a Contractor's Historical Use.

Table UT-1: Summary of the City of Sacramento's Post-1914 Water Rights

Application or License Number	Priority Date	Source	Maximum Amount Specified*		Purpose of Use	Season of Diversion and Re-diversion	Place of Use	Deadline to Perfect Full Use
			(cfs)	(AFY)				
A. 1743 P. 992	3/30/1920	Sacramento River	225	81,800	Municipal	January 1– December 31	City of Sacramento	12/31/2030
A. 12140 P. 11358	10/29/1947	American River	675	245,000	Municipal	November 1– August 1	79,500 acres within and adjacent to the city limits	12/31/2030
A. 16060 P. 11361	9/22/1954	Tributaries of the American River			Municipal	November 1– August 1	79,500 acres within and adjacent to the city limits	12/31/2030
A. 12321 P. 11359	2/13/1948	Tributaries of the American River	1,510	589,000	Municipal	November 1– August 1	96,000 acres within and adjacent to the city limits	12/31/2030
A. 12622 P. 11360	7/29/1948	Tributaries of the American River			Municipal	November 1– August 1	96,000 acres within and adjacent to the city limits	12/31/2030
Maximum Diversion Amount			900	326,800				
NOTES: AFY = acre-feet per year; cfs = cubic feet per second								
1 Permits 11359, 11360, and 11361 allow for re-diversion of surface water tributaries within Sacramento Municipal Utility District’s Upper American River Project into the American River. Permits 11359 and 11360 allow for re-diversion at 1,510 cfs at the E.A. Fairbairn Water Treatment Plant and at the Sacramento River Water Treatment Plant for up to 589,000 AFY of stored Upper American River Project water.								
* Amounts shown reflect the 1957 water rights settlement agreement between the City of Sacramento and the U.S. Bureau of Reclamation, as discussed in the text in this chapter.

Table UT-2: Maximum Diversion Schedule (acre-feet per year) in the Settlement Contract between the City and Reclamation

Source	2025	2030	2035	2040	2045
American River	228,000	245,000	245,000	245,000	245,000
Sacramento River	81,800	81,800	81,800	81,800	81,800
Total	309,800	326,800	326,800	326,800	326,800
NOTES: City = City of Sacramento; Reclamation = U.S. Bureau of Reclamation					
SOURCE: City of Sacramento 2021.					

As part of the WFA, each water purveyor signed a purveyor-specific agreement that specified that purveyor's Water Forum commitments. The City's purveyor-specific agreement limits the quantity of water it can divert from the American River at the FWTP during two hydrologic conditions: extremely dry water years ("Conference Years")³ and periods when river flows are below the so-called "Hodge Flow criteria."⁴

The City's purveyor-specific agreement defines extremely dry water years (Conference Years) as years in which the California Department of Water Resources projects an annual March to November UIFR of 550,000 AFY or less, or the UIFR is less than 400,000 AFY. In Conference Years, the City has agreed to limit its diversions for water treated at the FWTP to 155 cfs and 50,000 AFY. Conference Years have occurred on the American River only twice during the 72-year period of record for historical hydrology.

In addition to Conference Years, the City's purveyor-specific agreement specifies limitations on the City's diversion rate at the FWTP when American River flows bypassing the FWTP are less than the Hodge Flow criteria as follows: 3,000 cfs from March through June; 2,000 cfs from October 16 through February; and 1,750 cfs from July through October 15.

Based on CalSim II⁵ analysis of 1922 to 1994 climate data, in 59 percent of years the American River is predicted to experience flows that are less than Hodge Flow

³ "Conference Years" occur when March–November UIFR is less than 400 thousand acre-feet. In those years' diverters and others are required to meet and confer on how best to meet demands and protect the American.

⁴ A "Hodge Year" occurs when the March–November UIFR is less than 1,600 thousand acre-feet. In the case of *EDF v. East Bay Municipal Utility District* (Superior Court, Alameda County, 1990, No. 425955), the court (Judge Hodge) established minimum flow levels that would have to be met in the American River for East Bay Municipal Utility District to divert water into the Folsom South Canal. These flow levels have come to be known as "Hodge Flows." "HodgeFlow trigger" which affects diversions at the Fairbairn treatment plant when the LAR flow is less than 3,000 cfs during Mar-Jun; 2) Less than 2,000 cfs from October 16-Feb; and 3) Less than 1,750 cfs from July-Oct15.

⁵ CalSim is the model used to simulate California State Water Project/Central Valley Project operations. CalSim II is the latest version of CalSim available for use.

conditions at some time during the peak months of June through August. When flows passing the FWTP are greater than the Hodge Flow criteria and Conference Year conditions do not exist, the purveyor-specific agreement allows diversions of American River water up to the FWTP's current maximum rate of 310 cfs (200 million gallons per day [mgd]).

It is important to note that the WFA does not restrict diversion under the City's American River entitlements from a Sacramento River diversion point (which leaves the water in the American River throughout its reaches). Therefore, during a Conference Year condition, the City's annual surface water diversion amounts are limited only by the FWTP Conference Year condition and the diversion and treatment capacity at the SRWTP. Assuming a maximum treatment capacity of 50,000 AFY at the FWTP and 180,000 AFY at the SRWTP, the current drought-limiting scenario allows surface water production of 230,000 AFY.

GROUNDWATER

The City obtains the majority of its water supply from surface water in the American and Sacramento Rivers; groundwater makes up the balance of its water supplies.

Groundwater for municipal uses is obtained from the North American and South American subbasins of the Sacramento Valley Groundwater Basin. The North American Subbasin is bounded by the Bear River to the north, the Feather River to the west, the Sacramento and American Rivers to the south, and a north-south line extending from the Bear River to Folsom Lake to the east. The South American Subbasin is bounded by the Sierra Nevada to the east, the Sacramento River to the west, the American River to the north, and the Cosumnes and Mokelumne Rivers to the south.

Based on production capabilities, the City expects to pump up to 24.175 million gallons per day or 27,083 AF in 2025 and would continue to use groundwater to supplement its surface water supplies over the next 20 years (see **Table UT-3**).

Table UT-3: City of Sacramento Groundwater Supplies

	Projected Water Supply Volume (acre-feet)*				
	2025	2030	2035	2040	2045
City of Sacramento	27,083	31,107	35,131	39,155	39,155
NOTE: * Based on sustainable target pumping of 20,591 acre-feet (AF) from the North American Subbasin and up to approximately 19,000 AF from the South American Subbasin. SOURCE: City of Sacramento 2021.					

The City extracts groundwater from 28 municipal wells; 26 of the wells are located north of the American River in the North American Subbasin and the other two wells extract groundwater from the South American Subbasin. However, only 23 of these wells are currently operated on a regular basis to supply municipal water. The City has constructed

three additional water supply wells. One well was installed at the FWTP but the appurtenances and facilities needed to pump, treat, and deliver groundwater are pending design and installation. The City expects to complete design in spring 2023 and this new well could be operational by late 2023 or early 2024. The other two groundwater supply wells were constructed at Shasta Park with a 4 MG reservoir. These wells were expected to be permitted and on-line in 2021; however, delays occurred over the last two years. The City expects to have these new groundwater wells operating in early 2023. The City also owns and operates 22 irrigation/park supply wells (City of Sacramento 2021).

The City is one of many water purveyors that use groundwater from the North American and South American subbasins. Although the City pumps from both subbasins, more than 90 percent of the City's groundwater is pumped from the North American Subbasin. For example, in 2020, the City pumped 19,022 AF of groundwater from the North American Subbasin and 1,407 AF from the South American Subbasin for potable water consumption (City of Sacramento 2021).

In 2014, the Sacramento Groundwater Authority (SGA) prepared a groundwater management plan for the portion of the North American Subbasin located between the American River and the Sacramento County line. Additionally, as a result of the Water Forum Successor Effort, the Central Sacramento County Groundwater Management Plan was prepared. These two plans identify measures to be taken to maintain a sustainable, high-quality groundwater resource.

The WFA identified a sustainable yield for the North American Subbasin of 131,000 AFY. The SGA monitored groundwater extractions from the North American Subbasin from 2000 to 2013 and estimated all annual average extractions at 99,500 AFY. The Groundwater Management Plan also reports that groundwater use declined during this period, largely as a result of the implementation of conjunctive use⁶ operations and water use efficiency measures. The Groundwater Management Plan concludes that the North American Subbasin is well within its sustainable yield indicator, and because North American Subbasin is largely developed, it is not expected that new water demands would cause the basin to approach its average annual sustainable yield (SGA 2014). The South American Subbasin occupies approximately 248,000 acres or 388 square miles, and is bounded on the east by the Sierra Nevada, on the west by the Sacramento River, on the north by the American River, and on the south by the Cosumnes and Mokelumne Rivers. These perennial rivers generally create a groundwater divide in the shallow subsurface. It is clear that there is interaction between groundwater of adjacent subbasins at greater depths (DWR 2006).

⁶ Conjunctive use is the long-term use of surface water and groundwater resources to maximize total water availability in a region. In general, surface water supplies are used to meet water supply demands in most water years, while an aggressive groundwater recharge program uses surplus surface water to replenish groundwater with the goal of having additional groundwater in storage that can be used during dry years.

The Central Sacramento County Groundwater Management Plan represents a critical step in establishing a framework for maintaining a sustainable groundwater resource for the various users overlying the basin in Sacramento County between the American and Cosumnes Rivers. The Central Sacramento County Groundwater Management Plan documented the estimated long-term average annual sustainable yield of the Central Basin to be 273,000 AFY, while extractions were estimated at 250,000 AFY (Water Forum and Sacramento County Water Agency 2006).

The management plan identifies measures to maintain pumping levels within the sustainable yield, including reduction of demand, conjunctive use with groundwater banking and exchange opportunities, and aquifer storage and recovery projects (Water Forum and Sacramento County Water Agency 2006).

RIVERARC PROJECT

The City is participating as a partner in the RiverArc Project, a multi-agency effort to enhance water supply diversity and reliability on a regional scale. While providing additional water supply options for its stakeholders, the RiverArc Project would increase the sustainability of regional groundwater supplies and provide additional environmental protection in the American River watershed.

The RiverArc Project would divert water from the Sacramento River to offset the water currently diverted from the American River and would deliver that water to a new regional water treatment plant. That water would then be distributed through existing and new pipelines to local water agencies, including the City of Sacramento. For the City of Sacramento, the RiverArc Project would enable the City to divert surface water when the Hodge Flow restrictions are in place on the American River. A new water treatment plant could also be used during peak periods, which would increase water supply reliability in the North Natomas area.

The drought from 2011 to 2017 reinforced the need for this project. Supportive stakeholders and water agencies are working to identify and secure project development funding that may not exist in the future. This includes Proposition 1 funding and additional funding opportunities at the federal, state, and local levels.

The new water treatment plant for the RiverArc Project would be constructed in three phases. Phase 1 would have the capacity to treat 10 to 40 mgd and is scheduled to start in 2026 and continue to 2030. Phase 2 would add an additional 30 to 60 mgd in treatment capacity and is scheduled to begin in 2040 or later. Phase 3 would build out the treatment plant's capacity and is scheduled to start in 2050 or later. The additional capacity added during this phase would be determined based on the water supply needs of the region. It is anticipated that the current project phases and capacities will be further refined as regional water agencies continue to evaluate their water demands and the sustainability and reliability of their water supplies (Placer County Water Agency 2024).

WATER DEMAND

Retail water demand in the City of Sacramento is primarily residential, but also includes commercial, institutional, and raw water for landscape irrigation. Generally, water demand decreased from 2000 to 2010 because of a combination of factors: increased conservation efforts, deployment of water-conserving fixtures, replacement of leaky pipelines, increased public awareness of California's multi-year drought and dry conditions, effects of the economic recession (commencing in 2008), and the City's meter retrofitting program. As of December 2020, 99 percent of the City's water connections were metered (City of Sacramento 2021).

As of December 2020, which is the date of the most current information available, the City served 142,946 retail customer connections. This customer connection count does not include fire service connections. Actual retail water demand by type of use by customer sector, such as residential, commercial, institutional, and industrial) in 2020 was 100,483 AF (City of Sacramento 2021).

The City also wholesales water to other regional agencies including Sacramento International Airport, Sacramento Suburban Water District, California American Water Company, and Sacramento County Water Agency.

Table UT-4 provides a projection of the City's total water demands for 2025 through 2045. **Table UT-5** presents a summary of water demands and available supply during multiple dry years. As discussed in the City's UWMP, the available water supply figures shown in Table UT-4 conform to the requirements of the Water Forum Agreement, including Hodge Flow requirements (discussed previously).

**Table UT-4: City of Sacramento Maximum Total Water Demands through 2045
(acre-feet per year)**

Water Use	2025	2030	2035	2040	2045
Potable and Raw Water	107,432	113,809	120,187	126,564	132,942
Recycled Water	1,000	1,000	1,000	1,000	1,000
Total	108,432	114,809	121,187	127,564	133,942
SOURCE: City of Sacramento 2021: 4-3, Tables 4-8 and 4-9.					

WATER INFRASTRUCTURE

The City of Sacramento provides more than 45 billion gallons of water for drinking, household use, fire suppression, landscaping, and commercial and industrial uses. The distribution system is a pipeline network, in which surface water and groundwater is mixed within the system. The Department of Utilities operates and maintains the City's two water treatment plants, eight pump stations, many storage reservoirs, 28 municipal wells, thousands of hydrants, and nearly 1,800 miles of pipeline to convey water to homes and businesses throughout the City (City of Sacramento 2021).

Table UT-5: Comparison of City of Sacramento Multiple-Dry-Year Supply and Demand, 2025 through 2045 (acre-feet per year)

Year Scenario	Water Supply or Demand	2025	2030	2035	2040	2045
First Year, Multiple-Dry-Year Scenario	Supply Total	333,200	350,200	350,200	350,200	350,200
	Demand Total	108,432	114,809	121,187	127,564	133,942
	Excess Supply	224,768	235,391	229,013	222,636	216,258
Second Year, Multiple-Dry-Year Scenario	Supply Total	333,200	350,200	350,200	350,200	350,200
	Demand Total	109,707	116,085	122,462	128,840	138,397
	Excess Supply	223,493	234,115	227,738	221,360	211,803
Third Year, Multiple-Dry-Year Scenario	Supply Total	333,200	350,200	350,200	350,200	350,200
	Demand Total	110,983	117,360	123,738	130,115	142,853
	Excess Supply	222,217	232,840	226,462	220,085	207,347
Fourth Year, Multiple-Dry-Year Scenario	Supply Total	333,200	350,200	350,200	350,200	350,200
	Demand Total	112,258	118,636	125,013	131,391	147,308
	Excess Supply	220,942	231,564	225,187	218,809	202,892
Fifth Year, Multiple-Dry-Year Scenario	Supply Total	333,200	350,200	350,200	350,200	350,200
	Demand Total	113,534	119,911	126,289	132,666	151,764
	Excess Supply	219,666	230,289	223,911	217,534	198,436
SOURCE: City of Sacramento 2021: 7-13, Table 7-11.						

WATER TREATMENT

The City owns and operates two water diversion and treatment facilities: the SRWTP on the Sacramento River and the FWTP on the American River. These treatment plants operate as demands dictate; treatment is directly related to consumer demands.

The SRWTP, located just downstream of the Sacramento River's confluence with the American River on the east side of the Sacramento River, south of Richards Boulevard and north of the Railyards redevelopment area, has a permitted treatment capacity of 160 mgd. The City is currently evaluating further expansion of the SRWTP to increase the diversion and treatment capacity to 310 mgd (City of Sacramento 2021).

The FWTP, located on the south bank of the Lower American River, has a permitted capacity of 160 mgd, with a peak hydraulic flow of 200 mgd. As discussed previously above, there are restrictions on how much water can be diverted at the FWTP under certain flow conditions in the Lower American River. The City's current maximum surface water treatment capacity is 320 mgd. In 2020, City treated and delivered 100,483 AF (or 89.7 mgd), of which 20,429 AF (or 18.2 mgd) was groundwater.

WATER STORAGE

Stored water is used to meet water demands during periods when peak-hour demand exceeds maximum daily supply rates. These high-demand periods usually occur for four to six hours during hot summer days, and for potentially longer periods during large fire events.

The City currently has 17 storage facilities. Twelve storage reservoirs are located throughout the city, with a combined capacity of 49 million gallons (MG). The City also has five finished water storage facilities at its water treatment plants: two at the FWTP and three at SRWTP. The reservoirs at the water treatment plants have a combined capacity of approximately 45 MG. Total treated water in storage is 89 MG (City of Sacramento 2021).

WATER DISTRIBUTION

The City conveys water using its system of larger transmission pipelines, which are at least 16 inches in diameter, and smaller distribution mains, which range from 4 to 12 inches in diameter. Transmission pipelines are used solely to convey large volumes of water; they are generally not tapped for water or fire services. In total, the City manages approximately 1,800 miles of water pipelines (City of Sacramento 2021).

The NCMWC currently serves its agricultural customers in the western portion of the UWSP area with an existing 30-inch pipeline located a quarter mile to the east of Garden Highway, while the City of Sacramento currently serves domestic customers within the eastern portion of the UWSP area with an existing 24-inch transmission line in El Centro Road and San Juan Road that connects with the 1.5 MG El Centro water storage tank located approximately two miles north of the plan area and the 1.5 MG San Juan water storage tank located directly northeast of the UWSP area at the intersection of San Juan Road and West Drainage Canal (Witter Canal). The Northlake project (formerly Greenbriar), which is currently under construction, will complete a 24-inch connection from the El Centro tank east to the Elkhorn Pump Station located at the intersection of Elkhorn Boulevard and Natomas Boulevard in the City of Sacramento, thus improving the capabilities of the City of Sacramento's looped water main system.

WASTEWATER

Wastewater is collected throughout Sacramento County and is conveyed through Sacramento Area Sewer District (SacSewer) local sewer systems to the regional interceptor system for treatment at the Sacramento Regional Wastewater Treatment Plant (SRWWTP **EchoWater Facility**) in Elk Grove, which is owned and operated by SacSewer.

TREATMENT

SacSewer provides regional wastewater conveyance and treatment services to commercial, residential, and industrial end users in the City of Sacramento, and in unincorporated Sacramento County and the cities of Citrus Heights, Elk Grove, Folsom, Rancho Cordova, and West Sacramento, as well as the communities of Courtland and

Walnut Grove. The existing SRWWTP EchoWater Facility currently maintains a maximum average dry-weather treatment capacity of 181 mgd (Carollo 2008). As of 2023, actual average dry-weather flow (ADWF) for the facility was approximately 135 mgd, substantially lower than the facility's capacity (SacSewer 2023a). Treated effluent is discharged into the Sacramento River.

~~In 2010, the Central Valley Regional Water Quality Control Board (RWQCB) released a draft targeted permit for the SRWWTP that targeted ammonia reductions from the existing SRWWTP. The SRWWTP currently maintains secondary level treatment processes. To meet these target requirements and other anticipated future discharge requirements, SacSewer is upgrading the SRWWTP. The new system, referred to as the EchoWater Project, is fully operational and commenced operations in 2023. With completion of the EchoWater Project, the SRWWTP produces high quality effluent for discharge to the Sacramento River and will increase recycled water use and reuse through the deployment of new treatment technologies and facilities. However, the upgrades associated with the EchoWater Project will only increase the quality of effluent discharged into the Sacramento River; the upgrades will not result in a net increase in the permitted capacity of the SRWWTP.~~

CONVEYANCE

SacSewer owns and operates 5,000 miles of lateral and main wastewater pipelines and is responsible for the day-to-day operations and maintenance of those pipelines and over 100 pump stations (SacSewer 2023b). SacSewer provides service to 1.6 million people in the Sacramento region, including the unincorporated areas of Sacramento County; the cities of Citrus Heights, Rancho Cordova, and Elk Grove; portions of the cities of Folsom and Sacramento; and the communities of Courtland and Walnut Grove. In these areas, SacSewer provides sewer collection service to residential, commercial, and industrial customers.

An existing 24-inch sewer conveyance line currently flows from outside the UWSP area south along El Centro Road into a 33-inch sewer line located at the intersection of El Centro Road and San Juan Road that flows approximately 1.6 miles east along San Juan Road to the New Natomas Pump Station, which is generally located northeast of the I-5 and I-80 interchange and operated by SacSewer.

STORMWATER DRAINAGE

The UWSP area is located within the Natomas Basin, a low-lying area east of the Sacramento River, north (upstream) of its confluence with the American River. The basin is served by a series of canals and pump stations. In the undeveloped areas of Natomas, canals and drains serve the dual purpose of providing flood control and irrigation water. As discussed above, irrigation water is provided to the UWSP area by the NCMWC, a private water company whose service area includes the entire Natomas Basin. Drainage and flood control for the Natomas Basin is provided by Reclamation District (RD) 1000, a public agency that has a coinciding service area and several joint-use facilities with the NCMWC. RD-1000 operates the primary drainage canals within the Natomas Basin and is responsible for conveying and pumping urban and non-urban

stormwater runoff from the basin. Runoff from developed and existing agricultural lands within the Natomas Basin flows into numerous local drainage ditches that ultimately drain into the primary RD-1000 canals.

The nearest RD-1000 facility is the West Drainage Canal (Witter Canal), which is located along the eastern edge of the UWSP area. There are two existing pump stations in the UWSP area that pump runoff into this facility, the San Juan Pump Station, which is located directly southwest of the intersection of San Juan Road and West Drainage Canal (Witter Canal), and the Riverside Pump Station, which is located about a quarter mile to the north, also on the westside of West Drainage Canal (Witter Canal). Existing stormwater runoff is conveyed to these pump stations via a system of existing irrigation and drainage ditches that are maintained by the NCMWC and in many cases by RD-1000.

SOLID WASTE

DISPOSAL

The Sacramento County Department of Waste Management and Recycling (DWMR) provides solid waste services to the unincorporated portions of Sacramento County. Sacramento County owns and operates the Kiefer Landfill, located at Kiefer Boulevard and Grant Line Road. Kiefer Landfill is 1,084 acres in size, with a permitted disposal area of 660 acres. Kiefer Landfill is the primary solid waste disposal facility in the County. Kiefer Landfill is classified as a Class III municipal solid waste landfill facility and is permitted to accept general residential, commercial, and industrial refuse for disposal, including municipal solid waste, construction waste, green materials, agricultural debris, dead animals, and other designated debris. The Kiefer Landfill receives over 700,000 tons of waste per year. Kiefer Landfill is permitted to accept a maximum of 10,815 tons per day of solid waste and currently has a design capacity of approximately 117 million cubic yards. The Kiefer Landfill has 75 million cubic yards of remaining capacity and is expected to be operational until 2098. (Hoseit, pers. comm. 2021.)

COLLECTION/PROCESSING

Sacramento County also owns and operates the North Area Recovery Station (NARS) located in North Highlands. The NARS is 23 acres in size and accepts waste from the general public, businesses, and private waste haulers. The facility has a permitted capacity of processing 2,400 tons per day (Hoseit, pers. comm. 2021). In 2020, the NARS processed an average of 1,200 tons per day of recyclables, trash, yard waste, and construction waste (Hoseit, pers. comm. 2022a).

There are various other transfer stations and small privately owned landfills throughout Sacramento County, located mainly within the boundaries of the City of Sacramento. These include three additional facilities other than NARS that process construction waste. These facilities are Florin Perkins Public Disposal, located at 4201 Florin Perkins Road, L and D Landfill and Material Recovery Facility (L and D Landfill), located at 8635 Fruitridge Road, and Sierra Waste Recycling and Transfer Station (Sierra Waste), located at 8260 Berry Avenue. Florin Perkins Public Disposal recycles 75 – 95 percent

of all construction waste and meets all local recycling requirements as well as CalGreen requirements. The recycling program at L and D Landfill includes a full-service operation for construction and other related industries and includes certified C&D recycling, concrete and asphalt reclamation, soil recycling, beneficial reuse of many inert materials, and final disposal as landfill. Sierra Waste accepts commercial and residential solid waste, including construction waste, inert debris, recycled materials, non-curb-side collected green waste, wood waste products, and mixed-material waste.

Residential (not multi-family) solid waste in the unincorporated areas of Sacramento County is collected by the Sacramento County DWMR. County DWMR does not provide solid waste collection (including recycling or organics) for commercial business and multi-family residential units. Solid waste for commercial and multi-family customers is collected by private franchised haulers. Solid waste collected by the commercial haulers is either taken to a transfer station and then transported to a landfill, or taken directly to a landfill.

Commercial and multi-family wastes in unincorporated Sacramento County are taken to a variety of landfills within Sacramento County, as long as they are compliant with the County DWMR's regulations for commercial waste hauling. A majority of the residential solid waste collected is taken to the NARS, where it is sorted for transport to a landfill (County DWMR 2022).

ELECTRICITY, NATURAL GAS, AND TELECOMMUNICATIONS

ELECTRICITY

Electrical service to the UWSP area is provided by Sacramento Municipal Utility District (SMUD). SMUD is responsible for the generation, transmission, and distribution of electrical power to its 900-square-mile service area, which includes most of Sacramento County and a small portion of Placer County. SMUD gets its electricity from diverse and competitively priced resources, including hydropower generation; cogeneration plants; advanced and renewable technologies such as wind, solar, and biomass/landfill gas power; and power purchased on the wholesale market.

An existing SMUD 69 kilovolt (kV) transmission line currently extends from South Natomas across I-80 to El Centro Road where it continues north along El Centro Road and connects to an existing electric substation located just off-site at the intersection of Arena Boulevard and El Centro Road before continuing north and east from this location. SMUD has plans to construct an additional 69 kV transmission line in the UWSP area that would generally run in a northwesterly direction along the West Drainage Canal to San Juan Road, where it would turn west and terminate in the vicinity of El Centro Road. Portions of this line would fall within the boundaries of the UWSP. However, this facility has long been envisioned by SMUD and would be constructed regardless of whether the UWSP is approved. The facility therefore not a part of the UWSP project since it has independent utility from the project. As such, the impacts of constructing this facility are not evaluated in this EIR.

In addition, an existing Western Area Power Administration 120 kV transmission line currently traverses the UWSP area, extending from South Natomas across I-80 to Bryte Bend Road where it continues south along Bryte Bend Road across the Sacramento River Into West Sacramento. The 120 kV transmission towers are spaced approximately 600 feet apart on center.

NATURAL GAS

Natural gas service to the UWSP area is currently supplied by Pacific Gas and Electric (PG&E), a publicly traded utility that provides electricity and natural gas distribution, electricity generation, transportation and transmission, natural gas procurement, and storage throughout Northern California. The utility company is bound by contract to update its systems to meet any additional demand. PG&E serves 48 counties in California with a total service area of approximately 70,000 square miles in Northern and Central California. PG&E provides services with 42,141 miles of natural gas distribution pipelines and 6,438 miles of transportation pipelines (PG&E 2022).

An existing natural gas main enters the UWSP area from the west after crossing under the Sacramento River and then crosses twice beneath I-80, before it traverses north within El Centro Road and exits the UWSP area at Arena Boulevard.

TELECOMMUNICATIONS

Telecommunications service to Natomas is provided by several providers, including Comcast and AT&T (Wood Rodgers 2021a). These providers provide local and long-distance phone, high-speed internet, and cable television service and generally complete upgrades to their existing distribution systems as the need arises to meet customer demand.

REGULATORY SETTING

FEDERAL

U.S. ENVIRONMENTAL PROTECTION AGENCY

The U.S. Environmental Protection Agency (USEPA) established primary drinking water standards in Clean Water Act Section 304; states are required to ensure that potable water for the public meets these standards. Standards for 81 individual constituents have been established under the Safe Drinking Water Act, as amended in 1986. USEPA may add additional constituents in the future.

SAFE DRINKING WATER ACT

USEPA administers the Safe Drinking Water Act, the primary federal law that regulates the quality of drinking water and establishes standards to protect public health and safety. The California Department of Public Health implements the Safe Drinking Water Act and oversees the quality of public water systems statewide. The California

Department of Public Health establishes legal drinking water standards for contaminants that could threaten public health.

CLEAN WATER ACT

Code of Federal Regulations Title 40, Part 503, as well as California Code of Regulations Title 23 and standards established by the RWQCBs, regulate the disposal of biosolids. The main purpose of these regulatory measures is to ensure appropriate limits for effluent discharge to surface waters. These limits affect the sizing and treatment capacities of wastewater utilities that serve communities in California. Clean Water Act Sections 401 and 402 contain general requirements regarding National Pollutant Discharge Elimination System (NPDES) permits, and Section 307 describes the factors that USEPA must consider in setting effluent limits for priority pollutants.

RESOURCE CONSERVATION AND RECOVERY ACT

The Resource Conservation and Recovery Act, Subtitle D (United States Code Title 42, Section 6901 et seq.), contains regulations for municipal solid waste landfills and requires states to implement their own permitting programs incorporating the federal landfill criteria. The federal regulations address the location, operation, design, groundwater monitoring, and closure of landfills. The USEPA waste management regulations are codified in Code of Federal Regulations Title 40, Parts 239–282. The Resource Conservation and Recovery Act Subtitle D is implemented by Public Resources Code Title 27, approved by USEPA.

FEDERAL ENERGY REGULATORY COMMISSION

The Federal Energy Regulatory Commission is an independent agency that regulates the transmission and sale of electricity, natural gas, and oil; licenses and inspects hydropower projects; reviews proposals to build liquefied natural gas terminals; and oversees related environmental matters.

STATE

DRINKING WATER QUALITY

As part of its efforts to implement the Safe Drinking Water Act, the California Department of Public Health inspects and provides regulatory oversight for public water systems in California. In the Sacramento area, the Central Valley RWQCB also has responsibility for protecting the beneficial uses of the state's waters, including groundwater; these beneficial uses include municipal drinking water supply, as well as various other uses.

Public water system operators are required to monitor their drinking water sources regularly for microbiological, chemical, and radiological contaminants to show that drinking water supplies meet the regulatory requirements listed in California Code of Regulations Title 22 as primary maximum contaminant levels. Primary standards are developed to protect public health and are legally enforceable. Among these contaminants are approximately 80 specific inorganic and organic contaminants and six radiological contaminants that reflect the natural environment, as well as human

activities. Examples of potential primary inorganic contaminants are aluminum and arsenic, while radiological contaminants can include uranium and radium.

Public water system operators are also required to monitor for a number of other contaminants and characteristics that deal with the aesthetic properties of drinking water. These are known as secondary maximum contaminant levels. Secondary standards are generally associated with qualities such as taste, odor, and appearance, but these are generally non-enforceable guidelines. However, in California, secondary standards are legally enforceable for all new drinking water systems and new sources developed by existing public water suppliers. The public water system operators are also required to analyze samples for unregulated contaminants, and to report other contaminants that may be detected during sampling.

CALIFORNIA MODEL WATER EFFICIENT LANDSCAPE ORDINANCE

The California Model Water Efficient Landscape Ordinance (MWELO) sets restrictions on outdoor landscaping. Because the Sacramento County is a “local agency” under the MWELO, it must require project applicants to prepare plans consistent with the requirements of the MWELO for review and approval by the County. The MWELO was most recently updated by the DWR and approved by the California Water Commission on July 15, 2015. All provisions became effective on February 1, 2016. The revisions, which apply to new construction with a landscape area greater than 500 square feet, reduced the allowable coverage of high-water-use plants to 25 percent of the landscaped area. The MWELO also requires use of a dedicated landscape meter on landscape areas for residential landscape areas greater than 5,000 square feet or nonresidential landscape areas greater than 1,000 square feet and requires weather-based irrigation controllers or soil-moisture based controllers or other self-adjusting irrigation controllers for irrigation scheduling in all irrigation systems.

URBAN WATER MANAGEMENT PLANNING ACT

California Water Code Section 10610 et seq. requires all public water systems providing water for municipal purposes to more than 3,000 customers, or supplying more than 3,000 AFY, to prepare an UWMP. UWMPs represent key water supply planning documents for municipalities and water purveyors in California, and often form the basis of water supply assessments, or WSAs (see below) prepared for individual projects. UWMPs must be updated at least every five years on or before December 31, in years ending in five and zero.

WATER SUPPLY ASSESSMENT

California Public Resources Code Section 21151.9 requires that a WSA be prepared for a proposed plan, as defined in the statute, to ensure that long-term water supplies are sufficient to meet the project’s demands in normal, single dry, and multiple dry years for a period of 20 years. Preparation of a WSA is required if a proposed action meets the statutory definition of a “project,” which includes at least one of the following (Water Code Section 20912[a]):

- A proposed residential development of more than 500 dwelling units (DU).

- A proposed shopping center or business establishment employing more than 1,000 persons or having more than 500,000 square feet of floor space.
- A proposed commercial office building employing more than 1,000 persons or having more than 250,000 square feet of floor space.
- A proposed industrial, manufacturing, or processing plant, or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area.
- A mixed-use project that includes one or more of the projects specified in the above list items.

Completion of a WSA requires the collection of proposed water supply data and information relevant to the project in question, an evaluation of existing/current use, a projection of anticipated demand sufficient to serve the project for a period of at least 20 years, the delineation of proposed water supply sources, and an evaluation of water supply sufficiency under single-year and multiple-year drought conditions.

WRITTEN VERIFICATION OF WATER SUPPLY

Government Code Section 66473.7(a)(1) requires an affirmative written verification of sufficient water supply. The written verification is designed as a “fail-safe” mechanism to ensure that collaboration on finding the needed water supplies to serve a new large subdivision occurs early in the planning process. This verification must also include documentation of historical water deliveries for the previous 20 years, as well as a description of reasonably foreseeable impacts of the proposed subdivision on the availability of water resources of the region. Government Code Section 66473.7(b)(1) states:

The legislative body of a city or county or the advisory agency, to the extent that it is authorized by local ordinance to approve, conditionally approve, or disapprove the tentative map, shall include as a condition in any tentative map that includes a subdivision a requirement that a sufficient water supply shall be available. Proof of the availability of a sufficient water supply shall be requested by the subdivision applicant or local agency, at the discretion of the local agency, and shall be based on written verification from the applicable public water system within 90 days of a request.

In other words, as a result of the information contained in the written verification, the city or county may attach conditions to assure that an adequate water supply is available to serve the proposed plan as part of the tentative map approval process. Pursuant to Government Code Section 66473.7(i), additional water supply verification is not required for:

Any residential project proposed for a site that is within an urbanized area and has been previously developed for urban uses, or where the immediate contiguous properties surrounding the residential project site are, or previously

have been, developed for urban uses, or housing projects that are exclusively for very low- and low-income households.

CALIFORNIA WATER CONSERVATION ACT

The California Water Conservation Act, enacted in November 2009, required each urban water supplier to select one of four water conservation targets contained in California Water Code Section 10608.20, with the statewide goal of achieving a 20 percent reduction in urban per-capita water use by 2020.

SUSTAINABLE GROUNDWATER MANAGEMENT ACT OF 2014

The Sustainable Groundwater Management Act of 2014 (SGMA) became law on January 1, 2015 and applies to all groundwater basins in the state (Water Code Section 10720.3). (The SGMA comprises three separate bills: Senate Bill [SB] 1168, SB 1319, and Assembly Bill [AB] 1739. All three were signed into law by Governor Edmund G. Brown, Jr. on September 16, 2014.) By enacting the SGMA, the Legislature intended to provide local agencies with the authority and the technical and financial assistance necessary to sustainably manage groundwater within their jurisdictions (Water Code Section 10720.1).

Pursuant to the SGMA, any local agency that has water supply, water management, or land use responsibilities for a groundwater basin may elect to be a “groundwater sustainability agency” for that basin (Water Code Section 10723). Local agencies had until January 1, 2017, to elect to become or form a groundwater sustainability agency (GSA). In the event a basin is not within the management area of a GSA, the county within which the basin is located will be presumed to be the GSA for the basin. However, the county may decline to serve in this capacity (Water Code Section 19724).

In October 2015, the SGA Board submitted a notification of its intention to become the GSA for the Sacramento County portion of the North American Subbasin. In late January 2016, following a 90-day comment period, SGA was designated as the exclusive GSA for its management area. SGA coordinated with representatives throughout the North American Basin to ensure that effective GSAs were formed covering the entire subbasin by June 30, 2017. The Groundwater Sustainability Plan (GSP) Emergency Regulations for evaluating GSPs, the implementation of GSPs, and coordination agreements were adopted by the California Department of Water Resources and approved by the California Water Commission on May 18, 2016.

Groundwater authorities have additional powers under the SGMA to manage groundwater within the basin, including, for example, the power to: conduct investigations of the basin, require registration of groundwater extraction facilities and metering of groundwater extractions, regulate groundwater extractions from individual groundwater wells or wells generally, and assess fees on groundwater extractions (see, generally, Water Code Section 10725 et seq.). The SGMA also provides local agencies with additional tools and resources to ensure that the state’s groundwater basins are sustainably managed.

SGMA also requires the California Department of Water Resources to categorize each groundwater basin in the state as high, medium, low, or very low priority (Water Code Sections 10720.7 and 10722.4). The North American Subbasin has been categorized as high priority. All basins designated as high- or medium-priority basins must be managed by a GSA under a GSP that complies with Water Code Section 10727 et seq.

NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

As authorized by the Clean Water Act, the NPDES is a federal program that has been delegated to the State of California for implementation through the State Water Resources Control Board and the nine RWQCBs, collectively called the Regional Water Boards. Each NPDES permit for point-source discharges defines threshold limits of allowable concentrations of pollutants contained in discharges. SacSewer treats wastewater at the SRWWTP EchoWater Facility and then discharges the treated effluent into the Sacramento River near the town of Freeport. These discharges are subject to the NPDES permit program, which protects the beneficial uses of surface waters that could be used for drinking, fishing, swimming, agriculture, and other activities. NPDES permit number CA0077682 for the SRWWTP EchoWater Facility was issued in 2016.

INTEGRATED WASTE MANAGEMENT ACT (ASSEMBLY BILL 939)

Regulations affecting solid waste disposal in California are included in Public Resources Code Title 14, the Integrated Waste Management Act, which was originally adopted in 1989. AB 939 was designed to increase landfill life by diverting solid waste from landfills in the state and conserving other resources through increasing recycling programs and incentives. AB 939 requires counties to prepare integrated waste management plans to implement landfill diversion goals and requires cities and counties to prepare and adopt source reduction and recycling elements. These elements must set forth a program for management of solid waste generated with the jurisdiction of the respective city or county. Each source reduction and recycling element must include, but is not limited to, all of the following components for solid waste generated in the jurisdiction of the plan:

- Waste characterization
- Source reduction
- Recycling
- Composting
- Solid waste facility capacity
- Funding
- Special waste

The Source Reduction and Recycling Element programs are designed to achieve landfill diversion goals by encouraging recycling in the manufacture, purchase and use of recycled products. AB 939 also requires California cities to implement plans designed to divert the total solid waste generated within each jurisdiction by 50 percent based on a

base year of 2000. The diversion rate is adjusted annually for population and economic growth when calculating the percentage achieved in a particular jurisdiction.

PUBLIC RESOURCES CODE SECTION 41780

The California Legislature set the policy goal for the state that not less than 75 percent of solid waste generated be source reduced, recycled, or composted by the year 2020. Furthermore, a 50 percent diversion rate was to be enforced for local jurisdictions.

ASSEMBLY BILL 1220

The California Department of Resources Recycling and Recovery (CalRecycle) and the State Water Resources Control Board completed a parallel rulemaking as a result of AB 1220 (Chapter 656, Statutes of 1993). AB 1220 required clarification of the roles and responsibilities of the two boards, the RWQCB's and CalRecycle's local enforcement agencies in regulating solid waste disposal sites. The approved Title 27 regulations combine prior disposal site/landfill regulations of CalRecycle and the State Water Resources Control Board that were maintained in California Code of Regulations Title 14 and Title 23, Chapter 15 (which contains requirements for disposal of hazardous waste).

The purpose of these CalRecycle standards is to protect public health and safety and the environment. The regulations apply to active and inactive disposal sites, including facilities or equipment used at the disposal sites. These standards make clear that primary responsibility for enforcing state minimum standards rests with the local enforcement agency in cooperation with the RWQCB or other oversight agency. Subchapters of Title 27 include all of the following:

- Operating criteria for landfills and disposal sites.
- Requirements to have enough materials to cover waste to prevent a threat to human health and the environment.
- Requirements for operations at solid waste facilities for the handling of waste and equipment needs of the site.
- Requirements for controlling activities on-site.
- Requirements for controlling landfill gas created from the decomposition of wastes on-site.
- Requirements for the owner/operator of a facility to properly operate the site to protect the site from fire threat.

ASSEMBLY BILL 341

To reduce greenhouse gas emissions from the disposal of recyclables in landfills, AB 341 (Chapter 476, Statutes of 2011) requires local jurisdictions to implement commercial solid waste recycling programs. Businesses that generate 4 cubic yards or more of solid waste per week or multifamily dwellings of five units or more must arrange for recycling services. To comply with AB 341, jurisdictions' commercial recycling

programs must include education, outreach, and monitoring of commercial waste generators and report on the process to CalRecycle. Jurisdictions may enact mandatory commercial recycling ordinances to outline how the goals of AB 341 will be reached. For businesses to comply with AB 341, they must arrange for collection of recyclables through self-hauling, subscribing to franchised haulers for collection, or subscribing to a recycling service that may include mixed-waste processing that yields diversion results comparable to source separation (CalRecycle 2021).

ASSEMBLY BILL 1826

To further reduce greenhouse gas emissions from disposal of organics materials in landfills, AB 1826 (Chapter 727, Statutes of 2014) required businesses to recycle their organic waste beginning on April 1, 2016, depending on the amount of solid waste generated per week. Similar to AB 341, AB 1826 requires jurisdictions to implement an organic waste recycling program that includes the education, outreach, and monitoring of businesses that must comply. *Organic waste* refers to food waste, green waste, landscaping and pruning waste, nonhazardous wood waste, and food-soiled paper that is mixed with food waste.

CALIFORNIA PUBLIC UTILITIES COMMISSION

The California Public Utilities Commission regulates the design, installation, and management of California's public utilities, including electric, natural gas, water, transportation, and telecommunications. The California Public Utilities Commission also provides consumer programs and information, such as energy efficiency, low-income programs, demand response, and California solar initiative for California's energy consumers.

CALIFORNIA CODE OF REGULATIONS

New buildings constructed in California must comply with the standards contained in Title 20, Energy Building Regulations, and Title 24, California Building Standards Code, known as CALGreen. Part 6 of Title 24 contains California's Energy Efficiency Standards for Residential and Nonresidential Buildings. These regulations were established in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to incorporate new energy efficiency technologies and methods.

CALIFORNIA ENERGY COMMISSION

On May 9, 2018, the California Energy Commission adopted new building standards requiring all new homes to have solar photovoltaic systems starting in 2020. The new standards aim to reduce energy uses in new homes by more than 50 percent. Other key areas the new standards address include updated thermal envelope standards (prevention of heat transfer), residential and nonresidential ventilation requirements, and nonresidential lighting requirements.

LOCAL

SACRAMENTO LOCAL AGENCY FORMATION COMMISSION

The Sacramento Local Agency Formation Commission's (LAFCo's) authority is defined in the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000. Government Code Section 56300 requires that each LAFCo establish policies to provide well-planned urban development, preservation of open space, and orderly formation of local agencies. LAFCo has review authority for annexations to special districts.

SACRAMENTO COUNTY 2030 GENERAL PLAN

The following policies from the Agricultural, Conservation, Energy, Land Use, and Public Facilities elements of the Sacramento County 2030 General Plan are applicable to the proposed UWSP.

AGRICULTURE

AG-27 The County shall actively encourage groundwater recharge, water conservation and water recycling by both agricultural and urban water users.

CONSERVATION

- CO-1 Support conjunctive use water supply for development.
- CO-7 Support the Water Forum Agreement Groundwater Management Element. Prior to approving any new development water supply plan shall be approved that demonstrates consistency with an adopted groundwater management plan.
- CO-9 Developments in areas with significant contamination shall utilize remediated groundwater as part of their water supply when feasible.
- CO-14 Support the use of recycled wastewater to meet non-potable water demands where financially feasible.
- CO-16 Ensure developments are consistent with the County Water Efficient Landscape Ordinance, which shall be updated as needed to conform to state law.
- CO-22 Support water management practices that are responsive to the impacts of Global Climate Change such as groundwater banking and other water storage projects.
- CO-23 Development approval shall be subject to a finding regarding its impact on valuable water-supported ecosystems.
- CO-34 Development applications shall be subject to compliance with applicable sections of the California Water Code and Government Code to determine the

availability of an adequate and reliable water supply through the Water Supply Assessment and Written Verification processes.

- CO-35 New development that will generate additional water demand shall not be approved and building permits shall not be issued if sufficient water supply is not available, as demonstrated by Water Supply Assessment and Written Verification processes.
- CO-36 Water supply entitlements will be granted on a first come first serve basis to optimize the use of available water supplies.

ENERGY

- EN-1 Develop standards which would reduce the energy required to maintain interior spaces in the comfort zone, including such standards as tree planting and proper orientation of dwellings.
- EN-2 Inform the public of the need and of ways to conserve energy in the home.
- EN-11 Promote the location within the Sacramento area of those industries which are labor intensive, utilize solar energy systems, and are consistent with other policies in terms of environmental protection.
- EN-12 Encourage industry located or locating in the Sacramento area to participate in cogeneration of power.
- EN-14 Develop or revise design standards relating to building solar orientation, landscaping, impervious surfaces, and parking space requirements to conserve energy.
- EN-16 Promote the use of passive and active solar systems in new and existing residential, commercial, and institutional buildings as well as the installation of solar swimming pool heaters and solar water and space heating systems.
- EN-17 Support the development and improvement of solar space cooling systems.
- EN-18 Develop and implement standards for the protection of the solar rights of property owners.

LAND USE

- LU-73 Sewer and water treatment and delivery systems shall not provide for greater capacity than that authorized by the General Plan.

PUBLIC FACILITIES

- PF-2 Municipal and industrial development within the Urban Service Boundary but outside of existing water purveyors' service areas shall be served by either annexation to an existing public agency providing water service or by creation

- or extension of a benefit zone of the SCWA [Sacramento County Water Agency].
- PF-4 Connector fees for new development shall cover the fair share of costs to acquire and distribute surface water to the urban area.
 - PF-5 New treatment facilities and all facility operations shall be funded by beneficiaries.
 - PF-6 Interceptor, trunk lines, and flow attenuation facilities shall operate within their capacity limits without overflowing.
 - PF-7 Although sewer infrastructure will be planned for full urbanization consistent with the Land Use Element, an actual commitment of additional sewer system capacity will be made only when the land use jurisdiction approves development to connect and use the system.
 - PF-8 Do not permit development which would cause sewage flows into the trunk or interceptor system to exceed their capacity.
 - PF-9 Design trunk and interceptor systems to accommodate flows generated by full urban development at urban densities within the ultimate service area. System design may take into consideration land that cannot be developed for urban uses due to long-term circumstances including but not limited to conservation easements, floodplains, public recreation areas etc. This could include phased construction where deferred capital costs are appropriate.
 - PF-10 Development along corridors identified by the Sanitation Districts in their Master Plans as locations of future sewerage conveyance facilities shall incorporate appropriate easements as a condition of approval.
 - PF-13 Public sewer systems shall not extend service into agricultural-residential areas outside the urban policy area unless the Environmental Health Department determines that there exists significant environmental or health risks created by private disposal systems serving existing development and no feasible alternatives exist to public sewer service.
 - PF-14 Independent community sewer systems shall not be established for new development.
 - PF-15 Support CSD-1 and SRCSD policies to fund new trunk and interceptor capital costs through connection fees for new development.
 - PF-16 Support SRCSD policy to fully fund treatment plant operation through monthly service charges to system users. Fund treatment plant expansion and upgrades and existing trunk and interceptor replacements or improvements through connection fees or other revenue sources.

- PF-18 New development projects which require extension or modification of the trunk or interceptor sewer systems shall be consistent with sewer facility plans and shall participate in established funding mechanisms. The County should discourage development projects that are not consistent with sewer master plans or that rely upon interim sewer facilities, particularly if the costs of those interim facilities may fall on ratepayers. Prior to approval of a specific Commercial Corridor redevelopment project which requires extension or modification of the trunk or interceptor sewer systems, a sewer study and financing mechanism shall be prepared and considered along with the proposed Corridor redevelopment project, in consultation with the Sacramento Area Sewer District.
- PF-19 Extension or modification of trunk or interceptor sewer systems that are required for new developments shall be consistent with sewer facility plans and shall participate in an established funding mechanism. New development that will generate wastewater for treatment at the SRWTP shall not be approved if treatment capacity at the SRWTP is not sufficient to allow treatment and disposal of wastewater in compliance with the SRWTP's NPDES Permit.
- PF-23 Solid waste collection, handling, recycling, composting, recovery, transfer and disposal fees shall recover all capital, operating, facility closure and maintenance costs.
- PF-24 Solid waste disposal fees and rate structures shall reflect current market rates and provide incentives for recovery.

SACRAMENTO LOCAL AGENCY FORMATION COMMISSION POLICIES, STANDARDS, AND PROCEDURES

Sacramento Local Agency Formation Commission Policies, Standards, and Procedures require that any proposed annexations are consistent with applicable service elements of the Sphere of Influence of any affected agencies, and that adequate services be provided within the time frame needed for the inhabitants of the annexation area (Section I, Standard Number 4). A Municipal Services Review is prepared to meet these requirements. In addition, the Local Agency Formation Commission requires that any annexation provides for the lowest cost and highest quality of urban services (Section I, Standard Number 5). Where local policies may be silent, the Commission will make findings pursuant to the Cortese-Knox-Hertzberg Local Government Reorganization Act.

SACRAMENTO COUNTY STORMWATER ORDINANCE

The Sacramento County Water Resources Department is responsible for reviewing drainage plans and hydrologic and hydraulic analyses for the proposed UWSP. Drainage design standards for the proposed development are based on Chapter 9, Storm Drainage Design, from the Sacramento County Improvement Standards, and from discussions with the Project team and RD-1000. Stormwater Quality standards are based on the Stormwater Quality Design Manual for the Sacramento Region. The

County has established a Stormwater Ordinance (Sacramento County Code 15.12). The Stormwater Ordinance prohibits the discharge of unauthorized non-stormwater to the County's stormwater conveyance system and local creeks. It applies to all private and public projects in the county, regardless of size or land use type.

STORMWATER QUALITY DESIGN MANUAL FOR THE SACRAMENTO REGION

The Sacramento Stormwater Quality Partnership, which includes the County of Sacramento and the Cities of Citrus Heights, Elk Grove, Folsom, Galt, Rancho Cordova and Sacramento, has prepared the *Stormwater Quality Design Manual for the Sacramento Region* (Sacramento Stormwater Quality Design Partnership 2018). This manual is intended to satisfy the regulatory requirements of each jurisdiction's respective municipal stormwater permits. The manual outlines planning tools and requirements to reduce urban runoff pollution to the maximum extent practicable from new development and redevelopment projects.

New development is required to include treatment of urban runoff using the BMPs defined in the Stormwater Quality Design Manual for the Sacramento Region. The BMPs include a number of options for treatment, from simple grassy swales and rain gardens to more complex systems that use cisterns, pumps, and sand filters.

SACRAMENTO COUNTY DEPARTMENT OF WASTE MANAGEMENT & RECYCLING

The County DWMR manages the operations, maintenance, and development of the solid waste management system within unincorporated portions of Sacramento County. The County DWMR provides solid waste residential curbside pickup services for garbage, recycling, organics, and bulky waste collection to households in the unincorporated areas; provides transfer and disposal services for household hazardous waste, residential, commercial, and self-haul customers at the NARS and Keifer Landfill; and, through its ordinances, regulates collection by franchised haulers for commercial solid waste and recycling for businesses and commercial properties.

IMPACTS AND ANALYSIS

SIGNIFICANCE CRITERIA

For purposes of this EIR and consistent with the criteria presented in Appendix G of the CEQA Guidelines, impacts related to utilities may be considered significant if implementation of the proposed project would:

- Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects;
- Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years;

- Result in a determination by the wastewater treatment provider, which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments;
- Generate solid waste in excess of state or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals; or
- Comply with federal, state, and local management and reduction statutes and regulations related to solid waste.

ISSUES NOT DISCUSSED IN IMPACTS

All potential issues related to utilities identified in the significance criteria above are evaluated below.

METHODOLOGY AND ASSUMPTIONS

WATER

WATER SUPPLY

The City's Water Study Design Manual contains the Water System Design Criteria, a summary of recommended potable-water system performance and operational criteria. The Water System Design Criteria provides a table of gross unit water use factors for various land uses. The demands are divided into two categories of water use factors: residential and nonresidential. The residential factors are based on acre-feet per year per dwelling unit (AFY/DU) and the nonresidential factors are based on AFY per acre. For the proposed UWSP, dwelling units are comprised of low, medium and high density residential. Nonresidential water use factors are distributed to each of the commercial areas based on type of facility and services provided or performed at this facility. Based on the Water System Design Criteria, water use factors for development allowed under the proposed UWSP were derived. A water supply assessment, or WSA, prepared by the City of Sacramento for the proposed UWSP calculates water demand under all water year types including normal, single dry, and multiple dry years over a 20-year planning horizon. The WSA was adopted by the City of Sacramento City Council at its December 6, 2022, meeting.

Water demand for the proposed UWSP was compared to water supplies available to the City, in accordance with City procedures, and a determination was made regarding the sufficiency of supply for the proposed UWSP using the WSA (see Appendix UT-1). Based on the City's water use factors discussed above, land uses allowed under the proposed UWSP would generate a water demand of approximately 4,313 AFY (see **Table UT-6**).

WATER DISTRIBUTION

The water distribution infrastructure required to serve development allowed under the proposed UWSP was reviewed to determine if its construction and installation would cause significant environmental effects.

WASTEWATER**TREATMENT CAPACITY**

The amount of wastewater generated by development allowed under the proposed UWSP was compared to available wastewater treatment capacity at the ~~SRWWTP~~ **EchoWater Facility**. SacSewer's standards were utilized to determine wastewater flows generated by development allowed under the proposed UWSP.

Table UT-6: Water Demand for the Proposed UWSP

Proposed Development		Residential Water Use Factor	Non-residential Water Use Factor	Water Demand (AFY)
RESIDENTIAL				
LOW DENSITY				
Rural Residential	197 DUs	0.61	--	120
Suburban Neighborhood	2,366 DUs	0.61	--	1,443
Traditional Neighborhood	1,063 DUs	0.61	--	649
MEDIUM DENSITY				
Urban Neighborhood	749 DUs	0.39	--	292
HIGH DENSITY				
Traditional Neighborhood	911 DUs	0.12	--	109
MIXED USE				
Traditional Center	791 DUs	0.19	--	151
Urban Center	3,279 DUs	0.15	--	492
NON-RESIDENTIAL AREAS				
Commercial	47.1 Acres	--	1.5 AF/acre	71
Public/Quasi-Public	141.1 Acres	--	2.0 AF/acre	282
Parks and Recreation Areas	120.5 Acres	--	3.0 AF/acre	362
Open Space	154.2 Acres	--	0	0
Other Water Use				342
TOTAL				4,313
NOTES: AFY = acre-feet per year; DUs = dwelling units SOURCE: Environmental Science Associates 2022.				

The proposed UWSP is estimated to create a sewer demand of 13,215 equivalent single-family dwelling units (ESDs) based on SacSewer's methodology for planning level ESD calculations (see **Table UT-7**). Typically planning level ESDs are based upon a minimum of 6 dwelling units per acres. However, the land use plan indicates densities in several land use categories exceeding this minimum. Table UT-7 shows the ESDs per acres utilized for ESD calculations and the total ESDs calculated by land use. A factor of 1 ESD per residential unit was selected based on the nature of the proposed UWSP's low-density urban infill residential. This factor, when multiplied by 310 gallons per day per ESD, yields a sewer generation rate of 310 gallons per day per residential unit. For residential land uses, sewer densities ranged from 6 to 40 dwelling units per acre, while for nonresidential uses a sewer density of 6 units per acres was used for schools, general office, and commercial buildings per SacSewer's standards.

Table UT-7: UWSP Land Use and Sewer ESDs

Proposed Land Use	Land Use Description	Area (ac)	Sewer Density (du/ac)	ESDs
VLDR	Very Low Density Residential	160.9	6	965
LDR	Low Density Residential	431.5	6	2,589
LMDR	Low/Medium Density Residential	138.6	8	1,109
MDR	Medium Density Residential	62.5	12	750
HDR	High Density Residential ¹	36.4	18.75	683
VHDR	Very High Density Residential ¹	22.6	26.25	593
CMU	Commercial Mixed Use	83.2	40	3,328
E/HC	Employment/Highway Commercial	52.9	6	317
S	School ²	146.1	6	877
OS	Open Space	141.8	6	851
AG	AG-Cropland ³	410.2	0	0
AR	AG-Residential ³	84.2	0	0
UF	Urban Farm/Greenbelt	45.0	6	270
P	Park	73.5	6	441
W	Water (Basin/Canal)	15.0	6	90
LC	Landscape Corridor	35.6	6	214
ROADS	Major Roads A	126.5	6	943
ROADS	Major Roads B (within AG-Buffer ³)	0	0	0
TOTAL		2,067.7		14,020
NOTES: 1 Sewer density for HDR & VHDR are 75 percent actual dwelling units per acre. 2 School ESDs are adjusted as necessary by methodologies provided is SASD Standards Section 201.1.5. 3 AR, AG and AG-buffer road areas will be outside the annexation of SASD's service so are not included the ESD calculations. SOURCE: Wood Rodgers 2021b				

Based on an average dry-weather flow (ADWF) of 310 gallons per day per ESD, it is estimated that the development allowed under the proposed UWSP at buildout would produce a wastewater demand of 4.27 mgd ADWF and 9.23 mgd peak wet-weather flow.

WASTEWATER CONVEYANCE

The wastewater conveyance infrastructure required to serve development allowed under the proposed UWSP was reviewed to determine if its construction and installation would cause significant environmental effects.

DRAINAGE/STORMWATER

The storm drain infrastructure required to serve development allowed under the proposed UWSP was reviewed to determine if its construction and installation would cause significant environmental effects.

SOLID WASTE

The estimated amount of solid waste generated by development allowed under the proposed UWSP was compared to available processing capacity at the NARS and available disposal capacity at the Keifer Landfill. Solid waste generation rates provided by CalRecycle were utilized to determine the estimated amount of solid waste generated under the proposed UWSP. Based on these rates, development allowed under the proposed UWSP at buildout would generate approximately 17,687 tons of solid waste per year (see **Table UT-8**), or 335,378 cubic yards per year, which equates to approximately 48.5 tons pf solid waste per day or 918.8 cubic yards per day.

Table UT-8: Solid Waste Generation for the Proposed UWSP

Land Use	Generation Rate	Dwelling Units	Commercial Area (sf) or Students	Annual Solid Waste Generation (Tons/Year)
Residential	1.1 tons/dwelling unit/year	9,356	N/A	10,292
Commercial (Town Center)	13 lbs/1000 sf ft/day	N/A	3,000,000	7,118
Schools (K-8; K-12; K-14)	1 lbs/student/day	N/A	3,000	278
Totals		9,356	3,003,000	17,686.60
SOURCE: CalRecycle 2022.				

ELECTRICITY, NATURAL GAS, AND TELECOMMUNICATIONS

The electrical, natural gas, and telecommunications infrastructure required to serve development allowed under the proposed UWSP was reviewed to determine if its construction and installation would cause significant environmental effects.

IMPACT UT-1: CONSTRUCTION OF INFRASTRUCTURE COULD RESULT IN ADVERSE PHYSICAL EFFECTS

WATER

TREATMENT

The City owns and operates two water diversion and treatment facilities: the SRWTP on the Sacramento River and the FWTP on the American River. These treatment plants operate as demands dictate; treatment is directly related to consumer demands.

The SRWTP is located just downstream of the Sacramento River's confluence with the American River on the east side of the Sacramento river, south of Richards Boulevard and north of the Railyards redevelopment area. The SRWTP has a permitted treatment capacity of 160 mgd.⁷ The City is currently evaluating further expansion of the SRWTP to increase the diversion and treatment capacity to 310 mgd.⁸

The FWTP, located on the south bank of the Lower American River, has a permitted capacity of 160 mgd, with a peak hydraulic flow of 200 mgd. As discussed previously, there are restrictions on how much water can be diverted at the FWTP under certain flow conditions in the Lower American River. The City's current maximum surface water treatment capacity is 320 mgd. In 2020, City treated and delivered 100,483 AF (or 89.7 mgd), of which 20,429 AF (or 18.2 mgd) was groundwater.

Development allowed under the proposed UWSP would demand 4,313 AFY (see Table UT-6) or 3.85 mgd, of water that would require treatment prior to delivery within the UWSP area. The SRWTP and FWTP have a maximum combined capacity of 360 mgd (403,398 AFY) if operated continuously. Based on Sacramento's 2020 water demand of 275 mgd, the treatment plants have a combined excess capacity of 85 mgd, and thus the demand associated with the proposed UWSP represents roughly 0.05 percent of this excess capacity. As a result, no additional water treatment capacity would need to be constructed to accommodate the increase in water demand anticipated under the proposed UWSP, and this impact would be **less than significant**.

MITIGATION MEASURE

None required.

DISTRIBUTION

Buildout of the proposed UWSP would require a water storage tank site southwest of the intersection of Bryte Bend Road and San Juan Road. From this facility, a 24-inch transmission main is proposed to connect from the existing 24-inch transmission main in San Juan and El Centro roads. Finally, a series of 16-inch or 24-inch transmission

⁷ City of Sacramento. 2021. *City of Sacramento 2020 Urban Water Management Plan*. Jointly prepared by City of Sacramento and West Yost Associates. June 2021. Page 3-8.

⁸ City of Sacramento. 2021. *City of Sacramento 2020 Urban Water Management Plan*. Jointly prepared by City of Sacramento and West Yost Associates. June 2021. Page 3-8.

mains are planned to serve the Development Area via a system of looped pipelines in major roadway corridors (see Plate PD-16). None of the required improvements to the water distribution system would occur offsite.

The potential impacts associated with the construction and installation of these on-site improvements are considered throughout the technical chapters of this Draft EIR, including Chapter 6, *Air Quality*; Chapter 7, *Biological Resources*; Chapter 9, *Cultural Resources*; Chapter 11, *Geology, Soils, and Paleontology*; Chapter 15, *Noise and Vibration*; Chapter 18, *Transportation and Circulation*; and Chapter 19, *Tribal Cultural Resources*. Project-specific mitigation measures for construction identified for each topical issue would reduce potential significant impacts associated with construction and installation of water distribution facilities to the maximum extent feasible. There are no environmental impacts that would occur specifically related to the construction and installation of water distribution facilities. In addition, future facilities would be required to comply with the County's requirements for construction projects, including but not limited to, grading permits and encroachment permits. Therefore, the impact related to the construction of water distribution facilities would be **less than significant**.

MITIGATION MEASURES

None required.

WASTEWATER

TREATMENT

Development allowed under the proposed UWSP would increase wastewater flows by approximately 4.27 mgd ADWF and 9.23 mgd peak wet-weather flow. The ~~SRWWTP~~ **EchoWater Facility** has a current excess capacity of up to 46 mgd, and thus the demand associated with the proposed UWSP represents roughly 8.7 percent of this excess capacity. In addition, SacSewer expects per capita consumption to fall 25 percent over the next 20+ years through the ongoing installation and use of water meters, as well as compliance with conservation mandates such as the state Water Conservation Act of 2009 (SB X7-7). As a result, substantial water conservation is expected throughout SacSewer's service area, and the ~~SRWWTP~~ **EchoWater Facility**'s existing 181 mgd ADWF treatment capacity would be sufficient for at least 40 more years. As a result, no additional wastewater treatment capacity would need to be constructed to accommodate the increase in wastewater generation anticipated under the proposed UWSP, and this impact would be **less than significant**.

MITIGATION MEASURE

None required.

CONVEYANCE

Buildout of the proposed UWSP would require a sewer pump station near the intersection of Street 8 and El Centro Road along with a 1.8-mile force main that is aligned to run north along El Centro road and east along San Juan Road, parallel to the existing sewer trunk line in San Juan Road. This force main would connect to the New

Natomas Pump Station located 1.6 miles to the east outside the UWSP area operated by SacSewer. In addition, an 18-inch sewer trunk line is proposed to extend south from the new sewer pump station down El Centro Road to serve the southern portion of the Development Area. Finally, a 30-inch sewer trunk line would extend west on Street 7 to Bryte Bend Road from the new sewer pump station, where it would split to serve the westerly and northerly portions of the Development Area while a 12-inch sewer trunk line would extend east on Street 7 from the new sewer pump station to serve the easterly portion of the Development Area (see Plate PD-15).

The potential impacts associated with the construction and installation of these on- and off-site improvements are considered throughout the technical chapters of this Draft EIR, including Chapter 6, *Air Quality*; Chapter 7, *Biological Resources*; Chapter 9, *Cultural Resources*; Chapter 11, *Geology, Soils, and Paleontology*; Chapter 15, *Noise and Vibration*; Chapter 18, *Transportation and Circulation*; and Chapter 19, *Tribal Cultural Resources*. Project-specific mitigation measures for construction identified for each topical issue would reduce potential significant impacts associated with construction and installation of wastewater conveyance facilities to the maximum extent feasible. There are no environmental impacts that would occur specifically related to the construction and installation of waste conveyance facilities. In addition, future facilities would be required to comply with the County's requirements for construction projects, including but not limited to, grading permits and encroachment permits. Therefore, the impact related to the construction of wastewater conveyance facilities would be **less than significant**.

MITIGATION MEASURE

None required.

STORMWATER/DRAINAGE

In order to manage stormwater flows within the UWSP area, a new on-site storm drain system including collection, detention basins, conveyance pipelines and proposed pump stations would need to be constructed and installed to serve future development (see Plate PD-17). In addition, the banks of the levees at the San Juan Pump Station and the Riverside Pump Station would be reinforced at these locations to prevent erosion due to an increase in the amount of stormwater entering the West Drainage Canal (Witter Canal) from the UWSP area.

The potential impacts associated with the construction and installation of these on- and off-site improvements are considered throughout the technical chapters of this Draft EIR, including Chapter 6, *Air Quality*; Chapter 7, *Biological Resources*; Chapter 9, *Cultural Resources*; Chapter 11, *Geology, Soils, and Paleontology*; Chapter 15, *Noise and Vibration*; Chapter 18, *Transportation and Circulation*; and Chapter 19, *Tribal Cultural Resources*. Project-specific mitigation measures for construction identified for each topical issue would reduce potential significant impacts associated with construction and installation of storm drainage facilities to the maximum extent feasible. There are no environmental impacts that would occur specifically related to the construction and installation of storm drainage facilities. In addition, future facilities

would be required to comply with the County's requirements for construction projects, including but not limited to, grading permits and encroachment permits. As a result, the impact related to the construction of storm drain facilities would be **less than significant**.

MITIGATION MEASURE

None required.

ELECTRICITY

Two new electric substations would be required to serve development allowed under the proposed UWSP. Substation No. 1 would be located southwest of the intersection of proposed Street 2 and El Centro Road in close proximity to the existing 69kV line and is anticipated to serve the Town Center District and the surrounding residential areas on the southerly portion of the Plan Area. Substation No. 2 is proposed southeast of the intersection of El Centro Road and San Juan Road. In addition, a backbone electrical system would be constructed to deliver electricity from the proposed substations to future development allowed under the proposed UWSP (see Plate PD-18). None of the required improvements to the electrical distribution system would occur offsite.

The potential impacts associated with the construction and installation of these on-site improvements are considered throughout the technical chapters of this Draft EIR, including Chapter 6, *Air Quality*; Chapter 7, *Biological Resources*; Chapter 9, *Cultural Resources*; Chapter 11, *Geology, Soils, and Paleontology*; Chapter 15, *Noise and Vibration*; Chapter 18, *Transportation and Circulation*; and Chapter 19, *Tribal Cultural Resources*. Project-specific mitigation measures for construction identified for each topical issue would reduce potential significant impacts associated with construction and installation of electrical distribution facilities to the maximum extent feasible. There are no environmental impacts that would occur specifically related to the construction and installation of electrical distribution facilities. In addition, future facilities would be required to comply with the County's requirements for construction projects, including but not limited to, grading permits and encroachment permits. For these reasons, the impact related to the construction of onsite and off-site electrical distribution facilities would be **less than significant**.

MITIGATION MEASURE

None required.

NATURAL GAS

Existing natural gas infrastructure in the UWSP area may be plumbed along arterial and collector streets to serve commercial uses and the high school and community college sites within the Development Area. Natural gas would not be extended to single-family homes, as the UWSP is pursuing a goal of Net Zero Energy design. None of the required improvements to the natural gas distribution system would occur offsite.

The potential impacts associated with the construction and installation of these on-site improvements are considered throughout the technical chapters of this Draft EIR,

including Chapter 6, *Air Quality*; Chapter 7, *Biological Resources*; Chapter 9, *Cultural Resources*; Chapter 11, *Geology, Soils, and Paleontology*; Chapter 15, *Noise and Vibration*; Chapter 18, *Transportation and Circulation*; and Chapter 19, *Tribal Cultural Resources*. Project-specific mitigation measures for construction identified for each topical issue would reduce potential significant impacts associated with construction and installation of natural gas distribution facilities to the maximum extent feasible. There are no environmental impacts that would occur specifically related to the construction and installation of natural gas distribution facilities. In addition, future facilities would be required to comply with the County's requirements for construction projects, including but not limited to, grading permits and encroachment permits. As a result, the impact related to the construction of natural gas distribution facilities would be **less than significant**.

MITIGATION MEASURE

None required.

TELECOMMUNICATIONS

New telecommunications infrastructure would be necessary to serve the technological needs of proposed development in the UWSP area. None of the required improvements to the telecommunications system would occur offsite.

The potential impacts associated with the construction and installation of these improvements are considered throughout the technical chapters of this Draft EIR, including Chapter 6, *Air Quality*; Chapter 7, *Biological Resources*; Chapter 9, *Cultural Resources*; Chapter 11, *Geology, Soils, and Paleontology*; Chapter 15, *Noise and Vibration*; Chapter 18, *Transportation and Circulation*; and Chapter 19, *Tribal Cultural Resources*. Project-specific mitigation measures for construction identified for each topical issue would reduce potential significant impacts associated with construction and installation of new telecommunications infrastructure to the maximum extent feasible. There are no environmental impacts that would occur specifically related to the construction and installation of new telecommunications infrastructure. In addition, future facilities would be required to comply with the County's requirements for construction projects, including but not limited to, grading permits and encroachment permits. Therefore, the impact related to the construction of telecommunications facilities would be **less than significant**.

MITIGATION MEASURE

None required.

IMPACT UT-2: RESULT IN A PROJECT WATER DEMAND THAT CANNOT BE MET BY SUPPLY

Development allowed under the proposed UWSP would be required to comply with water conservation, reuse, and efficiency standards under CALGreen. To this end, development would use low-flow/high-efficiency plumbing fixtures, and landscaping in the project area would be designed and maintained for low water use and appropriate

site conditions and methods for reducing water demand. Compliance with these measures may reduce the project's water demand to less than 4,313 AFY.

The increase in water demand under the proposed UWSP would represent an increase of approximately 0.05 percent relative to the City of Sacramento's total 2020 water demand of 100,483 AF. As shown in Table UT-1 and discussed above, the City has surface water rights to divert up to 326,800 AFY from the American and Sacramento Rivers and had a groundwater pumping capacity of 20,429 AFY in 2020. Thus, the total available water supply for the city of Sacramento in 2020 was more than 346,000 AF and is sufficient to meet demand generated by the proposed UWSP in normal precipitation years.

The City's surplus water supply is projected to range from 224,768 AFY in 2025 to 216,258 AFY in 2045 during a single dry year or the first year of a multiple-dry-year drought (see Table UT-5). Buildout of the proposed UWSP is anticipated to occur before 2045, when the City's surplus water supply is projected to be 198,436 AFY in the fifth year of multi-year drought. Therefore, the increase in water demand resulting from development allowed under the proposed UWSP would be approximately 2.17 percent of the City's surplus water supply in 2045. Thus, as shown in Table UT-5, the City of Sacramento would have adequate planned water supply to serve development allowed under the proposed UWSP during normal, single dry, and multiple dry years, as confirmed by the WSA prepared for the proposed UWSP. Therefore, the impact of the proposed UWSP on water supply resources would be **less than significant**.

MITIGATION MEASURES

None required.

IMPACT UT-3: RESULT IN A PROJECT SEWER DISPOSAL DEMAND THAT CANNOT BE MET BY DISPOSAL OR CONVEYANCE CAPACITY

As discussed above, development allowed under the proposed UWSP would increase wastewater flows by approximately 4.27 mgd ADWF and 9.23 mgd peak wet-weather flow. However, this increase in wastewater flow would not exceed the current excess capacity of up to 46 mgd at the SRWWTP EchoWater Facility. In addition, SacSewer expects per capita consumption to fall 25 percent over the next 20+ years through the ongoing installation and use of water meters, as well as compliance with conservation mandates such as the state Water Conservation Act of 2009 (SB X7-7). As a result, substantial additional conservation is expected throughout SacSewer's service area, and the SRWWTP EchoWater Facility's existing 181 mgd ADWF treatment capacity would be sufficient to treat wastewater generated by existing and future land uses for at least 40 more years. Thus, no additional wastewater treatment capacity would need to be constructed to accommodate the increase in wastewater generation anticipated under the proposed UWSP, and this impact would be **less than significant**.

MITIGATION MEASURES

None required.

IMPACT UT-4: RESULT IN A PROJECT SOLID WASTE DISPOSAL DEMAND THAT CANNOT BE MET BY LANDFILL CAPACITY

CONSTRUCTION

Project construction would generate various types of construction waste: scrap lumber, scrap finishing materials, various scrap metals, and other recyclable and non-recyclable construction-related wastes. Construction waste would be managed in accordance with ordinances promulgated by the DWMR—in particular, in accordance with DWMR's requirement that haulers achieve at least 30 percent recycling rate and up to 50 percent pursuant to AB 939. Recyclable construction materials—concrete, metals, wood, and other materials—would be diverted to recycling facilities.

Development in the UWSP area would comply with County requirements to divert a minimum of 50 percent of construction waste to a certified recycling processor. Adhering to these requirements would minimize the total volume of demolition and construction waste that would be landfilled but would not avoid disposal of all construction waste in local landfills. Construction solid waste could be delivered to one or more of the following facilities: NARS, Florin-Perkins Public Disposal, L and D Landfill, or Sierra Waste. Use of these facilities would be short-term, and the volume of material would represent a relatively minor component of daily input to these facilities. Therefore, new or expanded solid waste management or disposal facilities would not be required to accommodate project-related construction, and thus no adverse physical environmental effects would occur. As a result, potential construction-related impacts of the proposed UWSP on solid waste facilities that process construction waste would be **less than significant**.

MITIGATION MEASURES

None required.

OPERATION

Operation of development allowed under the proposed UWSP would generate municipal solid waste. Waste from operations would include household, commercial, residential, and office wastes. As shown in Table UT-8, development anticipated under the proposed UWSP would generate approximately 17,687 tons of solid waste per year or 335,378 cubic yards per year, which equates to approximately 48.5 tons of solid waste per day or 918.8 cubic yards per day.

Waste generated by development allowed under the proposed UWSP would be collected and transported to NARS for processing and then on to Kiefer Landfill for disposal. Solid waste would be either recycled in accordance with state and County programs and requirements, composted as organic materials or landfilled at the Kiefer Landfill.

The NARS currently processes 1,200 tons of solid waste per day and is permitted to receive up to 2,400 tons per day. Project-related waste would represent an increase of

approximately four percent over the amount of solid waste currently processed at the facility and about two percent of the facility's permitted capacity. As a result, sufficient solid waste processing capacity would be available to serve development allowed under the proposed UWSP.

Kiefer Landfill currently has approximately 75 million cubic yards⁹ of available capacity and is expected to be operational until 2098. Project-related wastes would represent less than one-third of a percent (<0.01 percent) of total annual capacity of Kiefer Landfill or 0.44 percent of available capacity. Therefore, sufficient landfill disposal capacity would be available to serve development allowed under the proposed UWSP.

Based on the above, the proposed UWSP would not require new or expanded solid waste management or disposal facilities. Because there would be no need to expand or create new landfill or solid waste management facilities, there would be no related physical environmental effects. Therefore, the operational impact of the proposed UWSP on landfill capacity would be **less than significant**.

MITIGATION MEASURES

None required.

IMPACT UT-5: CONFLICT WITH SOLID WASTE REGULATIONS

As previously discussed, the DWMR oversees solid waste, recycling, and disposal needs in the greater Sacramento area. The DWMR regulates commercial solid waste collection by franchised haulers through ordinances. DWMR ordinances include the requirement that franchised haulers achieve at least 30 percent recycling rate and up to 50 percent pursuant to AB 939 and offer recycling services to businesses and multi-family dwelling units. Because the haulers serving the UWSP area would be regulated by DWMR, they would be in compliance with federal, state, and local statutes and regulations related to solid waste. Therefore, the proposed UWSP would not conflict with solid waste regulations and impacts are considered **less than significant**.

MITIGATION MEASURES

None required.

⁹ One cubic yard is equivalent to approximately 0.1125 tons un-compacted, or approximately 0.375 tons compacted, as waste would arrive at the landfill from trucks or other transport equipment.

21 OTHER RESOURCE TOPICS

INTRODUCTION

This chapter describes environmental topics listed in Appendix G of the CEQA Guidelines, including mineral resources and wildfire, that would either not be affected by the proposed plan or would involve impacts of the UWSP that would be clearly less than significant.

MINERAL RESOURCES

For purposes of this EIR and consistent with the criteria presented in Appendix G of the CEQA Guidelines, impacts on mineral resources may be considered significant if implementation of the proposed plan would:

- Result in the loss of availability of a known mineral resource that would be a value to the region and the residents of the state; or
- Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan.

OVERVIEW

Mineral resources present within Sacramento County include sand, gravel, clay, gold, silver, peat, topsoil, lignite, natural gas and petroleum. However, aggregate (sand and gravel) and natural gas are the principal mineral resources that are currently in production. Aggregate deposits are primarily located in the southeastern portion of the county within the Old American River channel south of Rancho Cordova while natural gas production areas are located in the far southwestern portion of the county in the Delta (County of Sacramento 2017).

The Surface Mining and Reclamation Act of 1975 requires the State Geologist to classify land into Mineral Resource Zones (MRZs) based on the known or inferred mineral resource potential of that land. A majority land in Sacramento County is classified as either MRZ-1, defined as areas where available geologic information indicates that little likelihood exists for the presence of significant mineral resources, and MRZ-3, areas containing mineral occurrences of undetermined mineral resource significance. Only portions of land along the American River corridor and in the center of the County, south of the American River, are classified as MRZ-2, areas where adequate information indicates that significant mineral deposits are present, or where geologic information indicates that significant inferred resources are present (County of Sacramento 2010).

According to the Mineral Land Classification Map of Portland Cement Concrete-Grade Aggregate Resources in Sacramento County (Dupras 1999a) and the Selected Historic

and Active Mining Operations in Sacramento County (Dupras 1999b), resources published by the California Geological Survey, there are no significant mineral resources or active mining operations in or near the UWSP area. Likewise, based on these conditions, the entire UWSP area has been classified by the State geologist as MRZ-1 (County of Sacramento 2010). Finally, according to information from the Geologic Energy Management Division, no active or inactive natural gas wells are located within the UWSP area (CalGEM 2022).

IMPACT: LOSS OF AVAILABILITY OF A KNOWN MINERAL RESOURCE OR LOCALLY KNOWN MINERAL RESOURCE SITE

As described above, there are no significant mineral resources or active mining operations in or near the UWSP area and the area is classified as MRZ-1 by the State geologist. Furthermore, the UWSP area has also not been identified as an area likely to produce natural gas. For these reasons, implementation of the proposed UWSP would not result in the loss of availability of a known mineral resource or locally important mineral resource recovery site, and **no impact** would occur.

WILDFIRE

For purposes of this EIR and consistent with the criteria presented in Appendix G of the CEQA Guidelines, impacts related to wildfire may be considered significant if, for projects located in or near State Responsibility Areas or lands classified as very high fire hazard severity zones, implementation of the proposed plan would:

- Substantially impair an adopted emergency response plan or emergency evacuation plan;
- Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire;
- Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment; or
- Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes.

OVERVIEW

With large areas of the state burning annually, often at great cost to life and property, wildfire has become a significant concern in much of California over the last two decades. These events are most often associated with rural and suburban areas adjacent to or directly within areas where a combination of vegetation, terrain, climate, and weather heighten the risk of wildfire and make control of wildfire difficult. These

areas, commonly referred to as the Wildland-Urban Interface, present specific risks and challenges associated with wildfire. These conditions are being exacerbated by the effects of climate change, which has resulted in prolonged fire seasons and an increase in the severity of climate, weather, and fuel conditions that increase the risk of catastrophic wildfire.

The California Department of Forestry and Fire Protection (CAL FIRE) has considered each of these criteria in its preparation of Fire Hazard Severity Zone Maps for each of California's counties. Where areas of higher wildfire risk are present, these zones are categorized as moderate, high, or very high. Of particular interest to this topic is the presence of fire hazard severity zones within areas where CAL FIRE has responsibility for fire protection. These areas are referred to as State Responsibility Areas (SRAs) and are typically located in the rural and nonurbanized areas of the state. In contrast, most of the urbanized areas of the state lie within Local Responsibility Areas, where local city fire departments and organized fire districts have fire protection responsibility. The UWSP area is located within an SRA, but as noted in Chapter 2, *Project Description*, fire protection and prevention services are currently provided by the City of Sacramento Fire Department through a contract with the Natomas Fire Protection District. It is anticipated that this arrangement would remain in place if the UWSP is approved. As such, the UWSP area is located within an SRA, but fire protection services are contractually provided by a local fire protection agency. This is a common arrangement in many areas of California, particularly in the rural and semi-rural areas immediately surrounding urbanized cities, as is the case with the UWSP area.

With respect to the conditions described above that contribute to heightened wildfire risk, these conditions are not present within the UWSP area. According to fire history maps compiled by CAL FIRE, there have been no recorded wildfires in the area since record-keeping began more than 100 years ago (CapRadio 2024). While the area is located within an SRA, with fire protection services provided by a contracted local agency, no portion of the UWSP is located within a fire hazard severity zone, and neither are any adjoining areas. The nearest designated fire hazard severity zone to the UWSP area is 20 miles to the east, in the lower Sierra Nevada Foothills. The UWSP area itself is primarily occupied by agricultural uses and is crisscrossed by roadways and irrigation canals and ditches. Woody and flammable vegetation of the types associated with high wildfire danger (e.g., scrub vegetation, woodlands, and timber) are not present in the area. With respect to the vicinity surrounding the UWSP area, the riparian area along the Sacramento River to the west contains marginal wildfire fuels, but under existing conditions there are no substantial fuels present to carry fire from the riparian area to the UWSP area and the proposed ~~534~~ **542**-acrea Agricultural buffer to the west of the Development Area would maintain that condition. Urbanized areas lie to the south, east, and north of the UWSP area and thus are devoid of high-risk characteristics. Owing to the area's flat terrain, lack of flammable vegetation, and existing land uses, the area's risk relevant to wildfire is low.

IMPACT: SUBSTANTIALLY IMPAIR AN ADOPTED EMERGENCY RESPONSE PLAN OR EMERGENCY EVACUATION PLAN

Individual development projects constructed and operated within the UWSP area would be required to comply with applicable County requirements concerning ingress and egress, emergency access, and minimum roadway design requirements. While additional traffic volumes could be expected with the construction of more housing and other uses, the County would be required to periodically update its emergency response and evacuation plan(s) in response to changing conditions, as required in the County's General Plan and State law.¹ This periodic reevaluation would address these changed conditions, and would adjust the evacuation plans accordingly, thus rendering this impact **less than significant**.

IMPACT: EXPOSURE TO POLLUTANT CONCENTRATIONS FROM A WILDFIRE

As noted in the overview discussion above, the UWSP area does not present features associated with enhanced wildfire risk. The area's flat terrain, its absence of vegetation conducive to the spread of wildfire, and existing land uses present a low risk of wildfire for the area. The residential, commercial, and other land uses proposed as part of the UWSP would not increase the area's susceptibility to wildfire, and thus would not exacerbate wildfire risks. This impact would be **less than significant**.

IMPACT: INSTALLATION OR MAINTENANCE OF INFRASTRUCTURE THAT MAY EXACERBATE FIRE RISK OR THAT MAY RESULT IN TEMPORARY OR ONGOING IMPACTS TO THE ENVIRONMENT

As noted above, the area is at low risk for wildfire, and the land uses proposed as part of the UWSP would not change that condition. Roads, fuel breaks, and other features associated with abating wildfire risk would not be required. There would therefore be no exacerbation of wildfire risks or ongoing impacts associated with wildfire risk abatement activities. This impact would be **less than significant**.

¹ General Plan Policies SA-31 through SA-34 contain requirements for periodic updates to the County's Emergency Response Plan, Local Hazard Mitigation Plan, coordination with local agencies and jurisdictions on emergency response and evacuation, and public education concerning emergency response procedures. At the State level, AB 747 (2019) requires that the safety elements within general plans be reviewed and updated as necessary to identify evacuation routes and their capacity, safety, and viability under a range of emergency scenarios. Since safety elements are required to be updated at the same time as housing elements, and since housing elements are required to be updated on a five to eight-year timetable, the County's evacuation routes and procedures would also necessarily be updated on a regular basis.

**IMPACT: EXPOSE PEOPLE OR STRUCTURES TO SIGNIFICANT RISKS AS A
RESULT OF RUNOFF, POST-FIRE SLOPE INSTABILITY, OR DRAINAGE CHANGES**

As noted above, the area is at low risk for wildfire, and the land uses proposed as part of the UWSP would not change that condition. Accordingly, there would be no exposure of people or structures to post-fire impacts like downslope flooding, landslides, or drainage changes because the area is flat. This impact would be **less than significant**.

22 CUMULATIVE IMPACTS

INTRODUCTION

A cumulative impact consists of an impact that is created by the combination of the project evaluated in the EIR together with other past, present, and reasonably foreseeable projects causing related impacts.

The beginning of the cumulative impact analysis includes a description of the cumulative analysis methodology and the geographic or temporal context in which the cumulative impact is analyzed (e.g., the Sacramento County, the Sacramento Valley Air Basin, other activity concurrent with project construction). In some instances, a project-specific impact may be considered less than significant, but when considered in combination with other cumulative projects or activities, the impact may be considered significant or potentially significant.

As noted above, where a cumulative impact is significant when compared to existing or baseline conditions, the analysis must address whether the project's contribution to the significant cumulative impact is "considerable." If the contribution of the project is considerable, then the EIR must identify potentially feasible measures that could avoid or reduce the magnitude of the project's contribution to a less-than-considerable level. If the project's contribution is not considerable, it is considered less than significant, and no mitigation of the project contribution is required.

METHODOLOGY

The CEQA Guidelines suggest that the analysis of cumulative impacts for each environmental factor can employ one of two methods to establish the effects of other past, current, and probable future projects. A lead agency may select a list of projects, including those outside the control of the agency, or alternatively, a summary of projections. These projections may be from an adopted general plan or related planning document, or from a prior environmental document that has been adopted or certified, and these documents may describe or evaluate regional or area-wide conditions contributing to the cumulative impact.

In this Draft EIR, a combination of these two methods is used depending upon the specific resource area being analyzed. To evaluate traffic and traffic-related air quality and traffic-related noise impacts, the impacts were evaluated using the projected growth in traffic through 2040 based on SACOG projections. Other impacts, such as construction air and noise impacts, were evaluated using a list of recently approved and/or proposed projects in the vicinity of the UWSP area that are not yet constructed, are not yet occupied, or are very newly constructed. This development includes growth under projects proposed and adopted by the City of Sacramento and Sacramento County in north Natomas and the Central City. **Plate CI-1** shows the location of projects

within the vicinity of the UWSP area while **Table CI-1**, below, includes a comprehensive list of projects in unincorporated portions of southeast, southcentral, and northwest Sacramento County and incorporated portions of Sacramento County (Elk Grove, Folsom, Rancho Cordova, Sacramento) as wells as projects in nearby Placer and Sutter counties that border Sacramento County.

Table CI-1: Cumulative Project List

Project Number	Project Name	Location	Description	Status
UNINCORPORATED SACRAMENTO COUNTY				
1	Vineyard Springs Comprehensive Plan	South-central portion of Sacramento County	2,650 acres bounded by Gerber Road to the north, Calvine Road to the south, Excelsior Road on the east, and Bradshaw Road on the west	Approved 2000
2	North Vineyard Station Specific Plan	South-central portion of Sacramento County	1,594 acres bound by Florin Road to the north, Gerber Road to the south, Vineyard Road to the east, and Elder Creek on the west	Approved 1998
3	Florin Vineyard Gap Community Plan	Within the community plan areas of Vineyard and South Sacramento	3,872 acres bounded by Elder Creek Road on the north, Bradshaw Road on the east, Churchill Downs neighborhood to the south, and Union Pacific Railroad tracks on the west	Approved 2010
4	Mather Airport Master Plan	10425 Norden Ave, Mather, CA	Establishes a program for modifications of existing facilities and development of new facilities through 2035	Approved 2014, Amended 2016
5	Cordova Hills	Southeastern Sacramento County	2,669 acres east and adjacent to Rancho Cordova	Approved 2013
6	Easton Project, including Glenborough at Easton and Easton Place	Within Cordova Community Planning Area	1,391 acres south of U.S. 50 and east of Rancho Cordova	Approved 2008
7	NewBridge Specific Plan	Eastern Sacramento County along Jackson Road	1,095 acres	Approved 2020
8	Mather South Community Master Plan	Eastern Sacramento County along Jackson Road	884 acres located northeast of the Plan Area	Approved 2020

Project Number	Project Name	Location	Description	Status
9	Jackson Township Specific Plan	Eastern Sacramento County along Jackson Road	1,391 acres located between NewBridge and West Jackson	Approved 2022
10	West Jackson Highway Master Plan	Eastern Sacramento County along Jackson Road	5,900 acres east of South Watt Avenue, north of Elder Creek Road, south of Kiefer Boulevard, and west of Excelsior Road	In Process
11	Capitol SouthEast Connector Expressway	Link I-5 and SR-99 South of Elk Grove to U.S. 50 East of El Dorado Hills	Designed to provide congestion relief	Preliminary design
12	Stoneridge Quarry	Eastern Sacramento County south of U.S. 50	Quarry mining and processing of materials on 619 acres of a 1,360-acre property	Approved 2011
13	Teichert Quarry	Eastern Sacramento County south of U.S. 50	Quarry mining and operation of a processing plant on 380 acres of a 584-acre property for 25 years	Approved 2010
14	Milgate Quarry	Eastern Sacramento County south of U.S. 50	Quarry mining on 194 acres for 50 years	Currently Inactive
15	Granite White Rock North Mine	Between Folsom Boulevard (to the north) and White Rock Road (to the south), adjacent to Easton and Glenborough	Mining 25 million tons of sand and gravel on 2,125 acres over 20 years	In Process
16	Granite Vineyard South Mine Expansion	Between Elder Creek Road (to the north) and Florin Road (to the south)	Expansion of mining from 146 acres to 206 acres (for an increase of 60± acres) on a 255-acre property	In Process
17	Grandpark Specific Plan*	Northwest Sacramento County, east of SR-99, north of Elkhorn Boulevard	Proposed Specific Plan for 5,675 acres	In Process
18	Metro Air Park*	Northwest Sacramento County, north of I-5	Approximately 1,867 acres, Industrial/Office park	Approved 1993
19	Elverta Specific Plan*	Northern Sacramento county, bounded by Gibson Ranch on the east, U Street on the South, various property lines approximately 1,350 feet west of Palladay Road on the west	1,820 acres of residential, ag-res, commercial, parks, schools	Approved 2007
20	Northborough (within Elverta Specific Plan)*	East of 16th Street in Elverta Specific Plan	298 acres within Elverta Specific Plan, including 1,127 residential units, parks, and school	Approved 2017

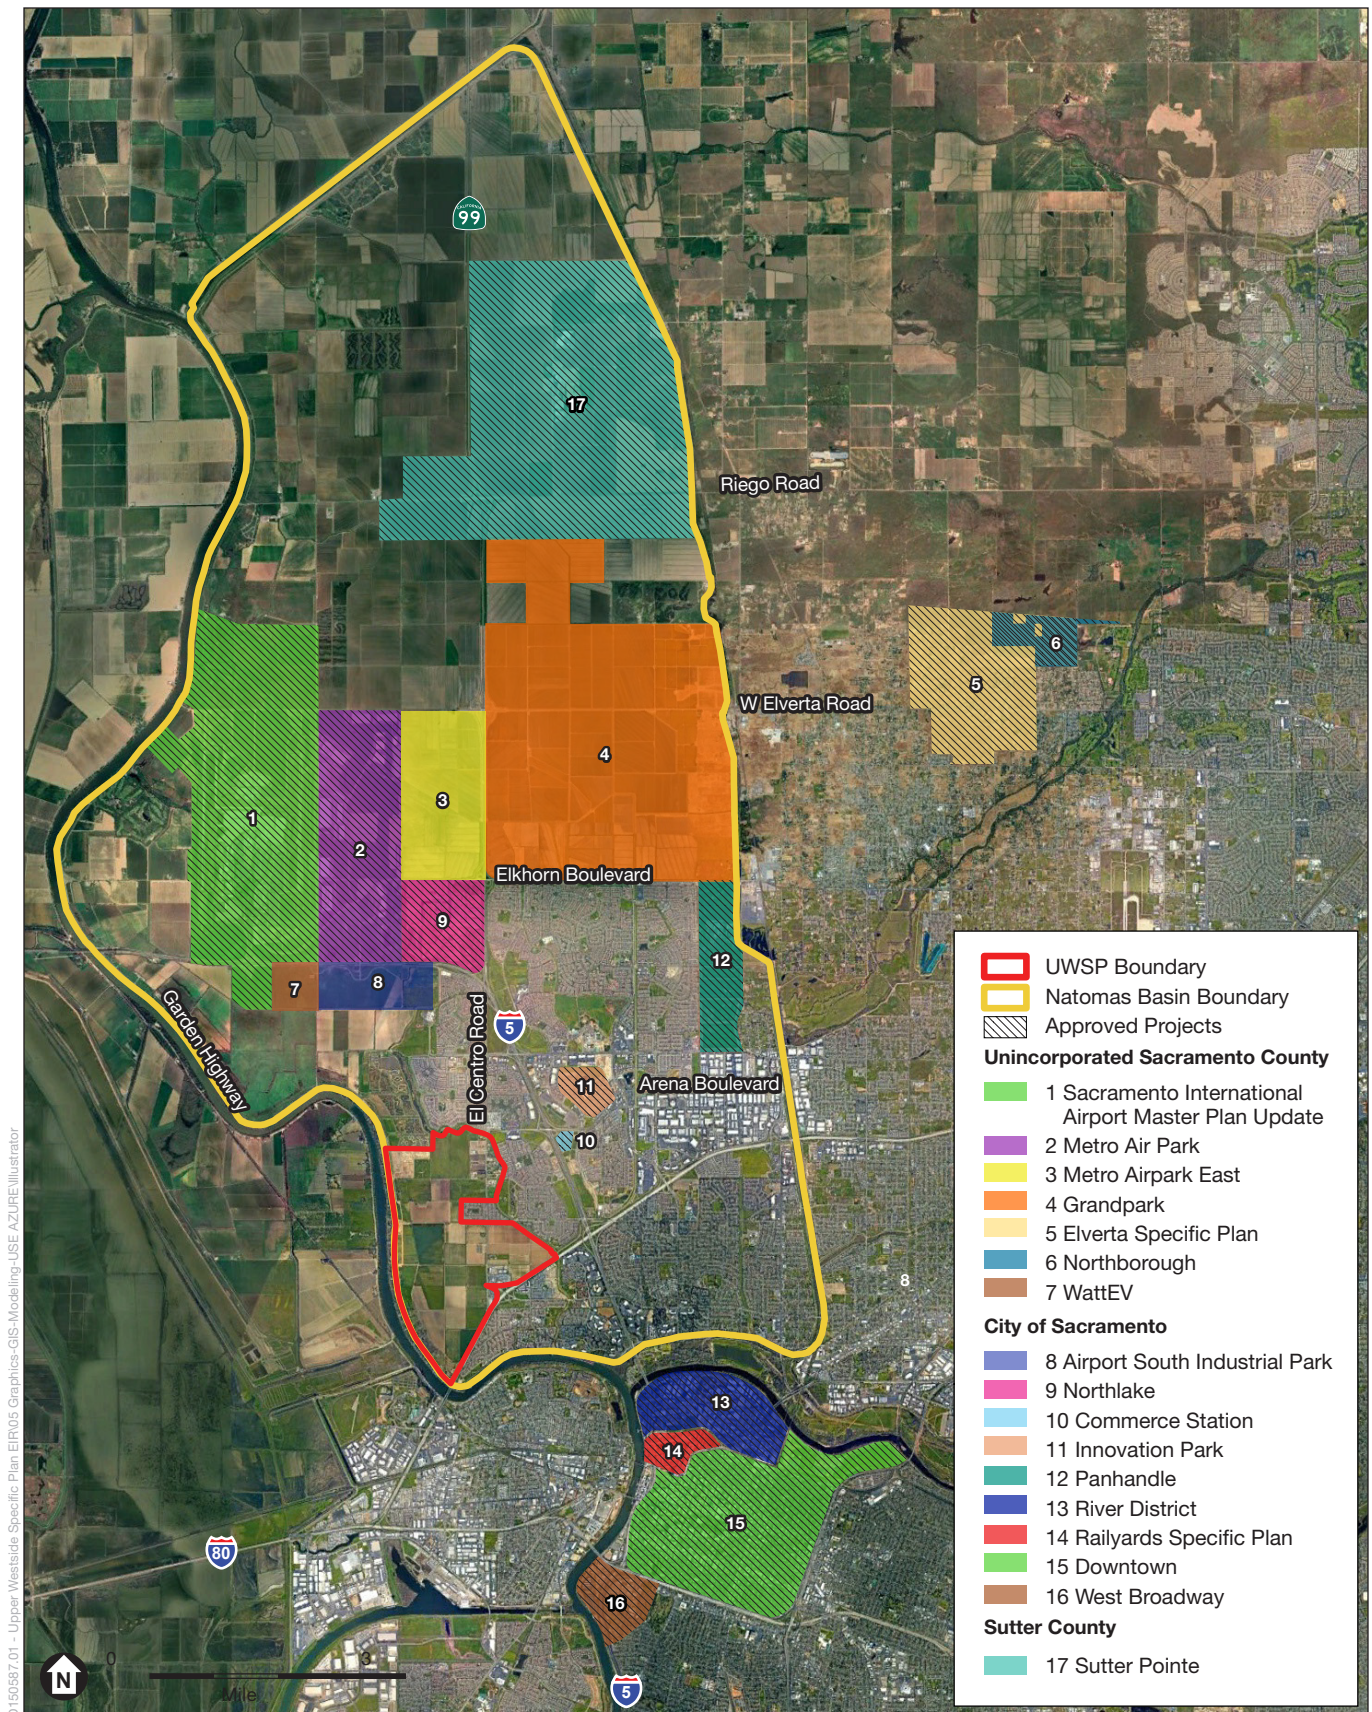

Project Number	Project Name	Location	Description	Status
21	Sacramento International Airport Master Plan*	Northwest Sacramento County, north of I-5	Updates a program for modifications of existing facilities and development of new facilities through 2035	Approved 2022
22	Metro Airpark East	Northwest of SR-99 and Elkhorn Boulevard interchange	Proposed logistics center on 529-acre parcel	Currently inactive
23	WattEV*	Northwest Sacramento County, south of I-5 within Sacramento International Airport Master Plan area	Publicly accessible Electric Vehicle (EV) charging facility that would be built on a 110-acre parcel of land adjacent to I-5 and proximate to SR-99	In process
24	Carli Mine Expansion	11509 Florin Road, On The North Side Of Florin Road Between Eagles Nest Road And Sunrise Boulevard.	Expansion of 153 acres to existing Carli Mine, and ready-mix plant.	Approved 2020
25	Aspen IV	North Side Of Jackson Road Approximately 2,000 Feet East Of Bradshaw Road,	278 acres of aggregate mining	Approved 2018 Approved 1991
26	Aspen V	east side of Bradshaw Road, approximately 1,300 feet south of Kiefer Boulevard	Fully mined – reclamation will occur at same time as Aspen VI.	Originally approved in 1996
27	Aspen V a	Eastern Sacramento County south of Highway 50	Fully mined – reclamation will occur at same time as Aspen VI.	Originally approved in 1996
28	Aspen III South	Southwest Corner Of Fruitridge Road And Mayhew Road	Sand and gravel mining along 881.7 acres of the 966.3 acres.	Amendment Approved 2013
29	Aspen VI	Northside of Jackson Road, approximately 2,000 feet east of Bradshaw Road	752.5 acres sand & gravel mining	Approved 2018
30	Aspen IV South	northeast corner of Mayhew Road and Elder Creek Road	570 acres of surface mining	Approved 2013
31	Aspen V South	South side of Jackson Road, east of Bradshaw Road	Aggregate surface mining on 193 acres of the 261 acres project site	Originally approved in 1999
32	Aspen 8 and 9	both sides of Elder Creek Road approximately 4,000 feet east of Bradshaw Road	353-acres of surface mining	Approved 2016

Project Number	Project Name	Location	Description	Status
33	Aspen 8 & 9 Expansion	both sides of Elder Creek Road approximately 4,000 feet east of Bradshaw Road	Additional 245 acres of surface mining to Aspen 8 & 9	In progress
CITY OF RANCHO CORDOVA				
34	Arboretum	Within the Grant Line North Planning Area	1,349 acres bounded by Highway 16 to the south, Grant Line Road to the east, Kiefer Boulevard to the north, and Sunrise Boulevard to the west	Currently Inactive
35	Suncreek Specific Plan	Located in southern Rancho Cordova	1,265 acres located east of the Folsom Canal	Approved 2013
36	Sunridge Ranch Specific Plan	Located in southern Rancho Cordova	2,606 acres south of Douglas Road, east of Sunrise Boulevard, and north of Grant Line Road	Approved 2002
37	Rio del Oro Specific Plan	Located in central Rancho Cordova	3,828 acres south of White Rock Road, east of Sunrise Boulevard, and north of Douglas Road	Approved 2010
38	Westborough Specific Plan	Located in central Rancho Cordova	1,695 acres north of White Rock Road and including Rancho Cordova Parkway	In Progress
39	Rancho Cordova General Plan	City of Rancho Cordova	All land uses assumed in the City of Rancho Cordova General Plan	Adopted 2006
CITY OF FOLSOM				
40	Folsom South of 50 Specific Plan	Eastern Sacramento County, south of U.S. 50 and west of Folsom city limits	3,510 acres south of U.S. 50, north of White Rock Road, east of Prairie City Road, and west of Sacramento/El Dorado County Line	Approved 2011, currently under construction
CITY OF SACRAMENTO				
41	Aspen 1/New Brighton	Eastern City of Sacramento at County line	232 acres at the corner of Jackson Road and Watt Avenue	Approved 2015
42	Innovation Park/ CNU Medical Center Campus*	Located in northern City of Sacramento	Reuse of the former Sleep Train Arena in North Natomas, includes California Northstate University Medical Center Campus.	Approved 2022

Project Number	Project Name	Location	Description	Status
43	Northlake (previously known as Greenbriar)*	Northern City of Sacramento, west of SR-99, north of I-5	577± acres located at the southwest corner of the intersection of Elkhorn Boulevard and SR-99.	Approved 2008
44	Downtown/ Central City Specific Plan*	Downtown Sacramento	Generally bounded by the Sacramento River to the west, Business 80 to the east, the American River on the north (excluding the River District and Railyards)	Approved 2018
45	Panhandle*	Northeast City of Sacramento	589± acres in the City of Sacramento, which includes the land north of Del Paso Road, south of Elkhorn Boulevard, west of Sorento Road/E. Levee Road, and east of the developed neighborhoods known as Natomas Park and Regency Park	Approved 2018
46	West Broadway Specific Plan*	Central City of Sacramento	292 acres area generally bounded by the Sacramento River on the west; U.S. 50 and Broadway on the north; Muir Way and 5th Street on the east; and 4th Avenue on the south.	Approved 2020
47	Railyards Specific Plan *	North of Downtown Sacramento, east of I-5	244 acres formerly used by Union Pacific Railroad, entitled for dense urban residential neighborhoods, a historic museum, a shopping and market district, a regional intermodal transit station, a county courthouse, a medical campus, a soccer stadium, pedestrian-oriented streets, shopping and entertainment complexes, riverfront access, and high-rise mixed-use buildings	Approved 2016
48	River District Specific Plan*	North of Downtown Sacramento, east of I-5	773 acres including a transit-oriented mixed use urban environment that would include 8,144 dwelling units, 3.956 million square feet of office, 854,000 square feet of retail/wholesale, 1.463 million square feet light industrial, and 3,044 hotel units.	Approved 2011

Project Number	Project Name	Location	Description	Status
49	Delta Shores MDR-6 & MDR-7 Project	North of Delta Shore South Circle and south of Cosumnes River Boulevard	197-parcel residential project	Approved 2023
50	Airport South Industrial Project*	Northern City of Sacramento, south of I-5	Annexation from unincorporated County to City of Sacramento	In process
51	Commerce Station P06-018*	Del Paso Road and East Commerce Parkway, east of I-5	Planned 180-5-acre development with 20.6-acre regional shopping center and 155.8-acres of mixed uses.	Approved 2008
CITY OF ELK GROVE				
52	Southeast Industrial Area	East of Grant Line Road and SR-99	Southeast Industrial Area (382 acres annexed to City of Elk Grove in 2019), potential for additional 189 acres to be annexed in future	Approved 2019
53	Elk Grove Crossing Specific Plan	Within the Kammerer/ SR-99 Sphere of Influence Area between the future extension of Big Horn Boulevard on the west and the future extension of Murphy's Corral Road on the east.	319 acres including high and medium density residential, commercial, office, retail, entertainment, and light industrial/"flex" uses.	In process
54	Southeast Policy Area (SEPA) and Lent Ranch/Elk Grove Promenade	North of Kammerer Road, east of Bruceville Road, west of SR-99	1,200 acres including industrial/"flex" uses, mixed use, offices, parks, schools, and residential uses. Approximately 270 acres including commercial, office uses. Projects have been incorporated into the City's General Plan.	SEPA approved 2014, potential changes pending
55	Bilby Ridge	South of Bilby Road, north of the Planned Kammerer Road extension, between Bruceville Road and Willard Parkway	484 acres planned for residential, retail, service commercial, schools, parks, and open space	In process

Project Number	Project Name	Location	Description	Status
SUTTER COUNTY				
56	Sutter Pointe Specific Plan*	Southern Sutter County. Bound by Natomas Road on the east and Powerline Road on the west. The northern boundary is approximately 4 miles north of the City of Sacramento while the southern boundary is adjacent to the Sutter/ Sacramento county line.	7,528 acres including approximately 49.7 million square feet of industrial, commercial, and business/ professional development; and 17,500 low-, medium-, and high-density residential units.	Approved 2009
PLACER COUNTY				
57	Placer Vineyards Specific Plan	Southwestern Placer County. Bound to the north by Base Line Road, to the south by the Sacramento County line, to the west by the Sutter County line and Pleasant Grove Road, and to the east by the Dry Creek Parkway and Walerga Road	5,230 acres including 14,132 residential units, 274 acres of commercial uses, 919 acres of park and open space land, and 851 acres of quasi-public uses (i.e., public facilities/services, schools, roadways, religious facilities)	Approved 2007
58	Placer Ranch Specific Plan	Terminus of Woodcreek Oaks Boulevard north of the City of Roseville	2,213-acre specific plan containing 5,636 dwelling units and 8.4-million square feet of commercial, employment, and university-related non-residential uses.	Under development
59	Sunset Area Plan	Located between the cities of Rocklin to the east, Roseville to the south, and Lincoln to the north	Mix of labor and employment uses, associated with Placer Ranch Specific Plan	Updated approvals in 2019
60	Regional University Specific Plan	South of Pleasant Grove Creek between Brewer Road and the City of Roseville	6,000-student university campus and 3,232-unit associated community development.	Development Guidelines adopted 2019
<p>NOTES: I-5 = Interstate 5; SR-99 = State Route 99; U.S. 50 = U.S. Highway 50</p> <p>* Located within the vicinity of the UWSP area</p> <p>SOURCE: County of Sacramento 2024</p>

Upper Westside Specific Plan EIR

Plate CI-1
Cumulative Projects Within the Vicinity of UWSP

CUMULATIVE ISSUE AREAS

Cumulative impacts for each environmental resource topic area are discussed below. Significance criteria, unless otherwise specified, are the same for cumulative impacts as project impacts for each environmental resource topic area. When considered in relation to other probable future projects, cumulative impacts for some resources could be significant and more severe than those caused by the proposed UWSP alone.

AESTHETICS

GEOGRAPHIC CONTEXT

The geographic context for the analysis of cumulative effects related to aesthetics, light, and glare varies depending on the specific environmental issue area being analyzed. The geographic context for scenic vistas and visual resources includes the area that comprises the view shed of and from the UWSP area while the geographic context for light and glare considers other development in the surrounding area that could affect the same area as that affected by project-generated light.

CUMULATIVE IMPACTS EVALUATION

SCENIC VIEWS AND SCENIC VISTAS

As discussed in Chapter 4, *Aesthetics*, of this Draft EIR, scenic views and scenic vistas in the Sacramento region are typically elements of the broader viewshed, such as distant views of the Sierra Nevada and the Coast Range. Scenic views and scenic vistas are usually background elements that can be seen from a range of viewpoints. These types of expansive and open views are considered part of the County's visual heritage. Scenic views and scenic vistas are differentiated from scenic resources, which typically comprise distinct natural or built features within a specific area that act as the focal point of a viewshed and are usually foreground elements. Accordingly, cumulative effects to scenic resources are addressed in the *Visual Character* impact discussion below.

Various plans, policies, and regulations include specific provisions for the protection of scenic views and scenic vistas. These include but are not limited to general plans, specific plans, zoning regulations, design requirements, design review programs, and design guidelines. Development standards such as height restrictions and minimum setback distances are among the most effective methods employed to avoid or minimize adverse impacts to scenic views and scenic vistas. While recently approved and/or proposed projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1) are required to adhere to applicable plans, policies, and regulations aimed to protect aesthetic resources, including scenic views and scenic vistas, it is nonetheless reasonable to assume that the introduction of new buildings, structures, and landscaping elements that would occur with implementation of these projects could block numerous existing scenic views. This impact would be more pronounced where vertical development would occur on areas currently comprised of largely flat agricultural land and rural residential communities to the north of the UWSP area, where

distant views of the Sierra Nevada and the Coast Range experienced by local residents and travelers are largely unobstructed. This blockage of scenic views and scenic vistas across an extensive and largely undeveloped area would be a significant cumulative impact.

As discussed in Chapter 4, *Aesthetics*, of this Draft EIR, while the proposed UWSP includes development standards and design guidelines to direct the buildout of the ~~1,532~~ **1,524**-acre Development Area to ensure high quality design and visual cohesion and consistency, development of the UWSP area would result in the construction of buildings, structures, and landscaping elements that could block distant views of the horizons in all directions from most areas within the UWSP area. Given the extent of urban development that would occur with implementation of the proposed UWSP and the largely undeveloped nature of the UWSP area, the contribution of the proposed UWSP to the significant cumulative impact on scenic views and scenic vistas would be considerable. Aside from implementation of development standards and design guidelines already required for the proposed UWSP, no other feasible mitigation is available to reduce the magnitude of the visual changes that would occur. Therefore, the cumulative impact would be **significant and unavoidable**.

VISUAL CHARACTER

Cumulative development would construct new urban uses within or directly adjacent to existing urban uses. Future development under these projects would generally blend in with existing commercial and residential development and would not likely result in individual or cumulatively significant impacts related to degradation of visual character. However, a substantial portion of cumulative growth in the vicinity of the UWSP area would occur on presently non-urbanized lands to the north of the UWSP area. This development includes growth contemplated under the proposed Airport South Industrial Park project and Grandpark Specific Plan, and the approved Metro Air Park and Northlake specific plans in North Natomas (see Table CI-1 and Plate CI-1). The visual character of the lands on which these projects would be developed is very similar to the visual character of the UWSP area. Like the UWSP area, these lands are dominated by crop farming interspersed with rural communities and open space areas. While development on these lands would be required to comply with applicable plans, policies, and regulations aimed to ensure high-quality design and visual cohesion and consistency, the change in visual character experienced by local residents and travelers would be permanent and substantial, regardless of whether or not the new development would be visually appealing. This change in visual character across an extensive and largely undeveloped area would have a significant cumulative impact.

As discussed in Chapter 4, *Aesthetics*, of this Draft EIR, implementation of the proposed UWSP would result in the development of residential, commercial, mixed use, office, school, park, open space, roadways, and other urban uses, as well as creation of an agricultural buffer area on an approximately 2,066-acre site in unincorporated northwestern Sacramento County, which currently comprises mostly agricultural cropland, along with rural residential and commercial uses. While the proposed UWSP includes adoption of design guidelines and development standards aimed to ensure high quality design and visual cohesion and consistency, the change in visual character

would be permanent and drastic. Given the extent of urban development that would occur with implementation of the proposed UWSP and the largely undeveloped nature of the UWSP area, the contribution of the proposed UWSP to the significant cumulative impact on visual character would be considerable. Aside from implementation of development standards and design guidelines already required for the proposed UWSP, no other feasible mitigation is available to reduce the magnitude of the visual changes that would occur. Therefore, the cumulative impact would be **significant and unavoidable**.

LIGHT OR GLARE

As previously noted, several recently approved and/or proposed projects in the vicinity of the UWSP area, such as specific plans in the Central City of the City of Sacramento, would develop new urban uses within or directly adjacent to existing urban uses that generally already contain many existing sources of light and glare. Future development under these projects would add new sources of light and glare, but the net increases in light and glare would not be anticipated to result in individual or cumulatively significant impacts. However, a substantial portion of cumulative growth in the vicinity of the UWSP area would occur on presently non-urbanized lands to the north of the UWSP area. This development includes growth contemplated under the proposed Airport South Industrial Park project and Grandpark Specific Plan, and the approved Metro Air Park and Northlake specific plans in North Natomas (see Table CI-1 and Plate CI-1). Like UWSP area, the majority of the lands on which these projects would be developed consists of farm fields that are devoid of nighttime lighting and are dark at night. Rural residential uses and associated vehicular traffic on local roadways in these areas produce minimal amounts of light or illumination. Future development under these projects could result in the conversion of previously undeveloped land to urban uses in such a way that the additional sources of light and glare would noticeably change the aesthetic environment, especially with regard to diminished views of the night sky. This introduction of new sources of light and glare and the resultant change to the aesthetic environment across an extensive and largely undeveloped area would have a significant cumulative impact.

As discussed in Chapter 4, *Aesthetics*, of this Draft EIR, upon full buildout, the proposed UWSP would result in the urbanization of up to 4,532 **1,524** acres with up to 9,356 housing units; more than 3 million square feet of commercial, retail, and office uses; as well as schools, parks, and associated roadways and parking lots. New uses and associated automobiles would introduce new sources of light to an area with relatively few lighting sources. In addition to new sources of light, the urbanization of up to 4,532 **1,524** acres of sparsely developed land would also introduce new sources of glare from reflective elements such as glass and rooftop photovoltaic (PV) solar panels. Although spillover lighting, excessive lighting, and glare would be minimized due to the strict lighting standards that would be adopted as part of the project, implementation of the proposed UWSP would introduce a substantial amount of new lighting to an area that is currently rural and contains minimal lighting. Given the extent of urban development that would occur with implementation of the proposed UWSP and the largely undeveloped nature of the UWSP area, which includes minimal amounts of existing lighting or illumination, the contribution of the proposed UWSP to the significant cumulative impact related to production of light and glare would be considerable. ~~Mitigation Measure AE-3~~

~~is proposed to ensure that~~ Outdoor lighting associated with development allowed under the proposed UWSP is **would be** designed in accordance with Section 140.7, Prescriptive Requirements for Outdoor Lighting, in the 2022 Building Energy Efficiency Standards, which specifies wattage allowance per lighting application based on lighting zones. However, aside from implementation of development standards and design guidelines already required for the proposed UWSP, no other feasible mitigation is available to reduce the magnitude of the visual changes that would occur. Therefore, the cumulative impact would be **significant and unavoidable**.

AGRICULTURAL RESOURCES

GEOGRAPHIC CONTEXT

Farmland and agricultural resources are important contributors to Sacramento County's economy and land conservation efforts. The geographic context for cumulative impacts related to the conversion of farmland to nonagricultural use, conflicts with existing agricultural use and zoning, and other changes that could result in the conversion of farmland to nonagricultural use is Sacramento County.

CUMULATIVE IMPACTS EVALUATION

CONVERT FARMLAND TO NONAGRICULTURAL USE

Cumulative loss of agricultural land is a great concern in the State of California, especially within the Central Valley. This is a particular concern in Sacramento County, where approximately 11,320 acres of Important Farmland was lost between 2010 and 2020 (California Department of Conservation 2024). This is approximately five percent of the acres of Important Farmland that were present in 2010. Much of the cumulative development in unincorporated southeast, southcentral, and northwest Sacramento County (see Table CI-1 and Plate CI-1) includes large portions of Important Farmland that would be converted to urban uses. As a result, cumulative development in the County would continue the trend of Important Farmland being converted to non-agricultural use, and thus would result in a potentially significant cumulative impact.

As discussed in Chapter 5, *Agricultural Resources*, of this Draft EIR, the proposed UWSP would convert approximately 1,372 acres of farmland to nonagricultural uses. While the implementation of Mitigation Measure AG-1 would reduce the impact of farmland conversion by mitigating the loss of farmland at a 1:1 ratio consistent with Sacramento County General Plan Policy AG-5, there would be a substantial net loss of agricultural production **farmland** within Sacramento County as a result of the proposed UWSP. Due to the sizable acreage of farmland that would be converted to nonagricultural uses, implementation of the proposed UWSP would result in a considerable contribution to the cumulative loss of farmland, and this cumulative impact would remain **significant and unavoidable**.

CONFLICT WITH EXISTING ZONING FOR AGRICULTURAL USE

Land enrolled in a Williamson Act contract is preserved exclusively for agricultural and open space uses. A standard contract refers to a typical 10-year contract. A super

contract refers to a 20-year contract. Therefore, land enrolled in the Williamson Act program protects the conversion of land to non-agricultural uses over a decade or more. In the Sacramento Valley region, the acreage of land under Williamson Act contracts has increased five of the past six years, resulting in a net negligible change in acreage (County of Sacramento 2023a). However, Sacramento County has experienced a cumulative loss of farmland, or Williamson Act contracts have not been renewed, as urban development continues in the County. Projects considered in the cumulative list (see Table CI-1 and Plate CI-1), particularly large specific plans on agricultural land, would have a cumulatively considerable impact on the further conversion of Williamson Act land throughout the County.

As discussed in Chapter 5, *Agricultural Resources*, of this Draft EIR, the proposed changes to land use designations and allowable uses within the UWSP area would be permitted with approval of a General Plan amendment and approval of related amendments to the County Code. Because the entitlements requested as components of the proposed UWSP would change the zoning to make it consistent with the proposal, the proposed UWSP would not conflict with zoning for agricultural use within the UWSP area.

With regard to land within a Williamson Act contract, Sacramento County requires land within a Williamson Act contract be zoned for agricultural use. As discussed in Chapter 5, *Agricultural Resources*, of this Draft EIR, the UWSP area includes one parcel (APN 225-0190-024) under a Williamson Act contract, which would continue to be designated as Agricultural Cropland with implementation of the proposed UWSP and would be within the proposed agricultural buffer to the west of the Development Area. Implementation of the proposed UWSP would not affect the zoning, contract status, or viability of the parcel under a Williamson Act contract within or in the vicinity of the UWSP area.

For these reasons, implementation of the proposed UWSP would not result in a considerable contribution to cumulative conflicts with existing zoning for agricultural use, or a Williamson Act contract, and this cumulative impact would be **less than significant**.

OTHER CHANGES THAT COULD CONVERT FARMLAND TO NON-AGRICULTURAL USE

Sacramento County has experienced a tremendous amount of growth in recent decades. Development within the County as well as surrounding counties has reduced the amount of agricultural land in the area due to increased urban development. The County's General Plan calls for the development of unincorporated areas to provide areas for the county to grow. Thus, existing agricultural land may be converted to non-agricultural uses, especially as adjacent properties become entitled for urban development. Most cumulative development in unincorporated southeast, southcentral and northwest Sacramento County (see Table CI-1 and Plate CI-1) include large tracts of farmland. As growth and development expand, additional areas of agricultural land may be affected, and thus would result in a significant cumulative impact.

As discussed in Chapter 5, *Agricultural Resources*, of this Draft EIR, the proposed UWSP emphasizes policies that support the long-term preservation of agriculture and

ensure that development pressures are avoided to the maximum extent feasible. For example, UWSP Policy 3-EE specifies the implementation and maintenance of an agricultural buffer to the west of the Development Area to preserve existing agricultural uses and farming operations, to allow visual separation between the Development Area and the Garden Highway/Sacramento River, and to create a transition to habitat mitigation areas located to the northeast. UWSP 3-FF specifies that the agricultural buffer would be outside of the County's Urban Policy Area (UPA) and Urban Services Boundary (USB). UWSP Policy 3-GG specifies that uses within the agricultural buffer should be limited to those compatible with the rural character of the area, consistent with Section 3.4.4, *Agricultural Buffer Uses*, within the proposed UWSP, and the County's Zoning Code. Development allowed under the proposed UWSP would be concentrated within the established Development Area and necessary infrastructure to serve this development would not be sized to serve development offsite. As a result, implementation of the proposed UWSP would not result in a considerable contribution to the cumulative conversion of farmland to non-agricultural use, and this cumulative impact would be **less than significant**.

AIR QUALITY

GEOGRAPHIC CONTEXT

The geographic context for changes in the air quality environment due to development permitted under the proposed UWSP would be both regional and local. Ozone and PM₁₀ would be the primary pollutants of regional concern as the Sacramento Valley Air Basin (SVAB), which includes Sacramento County, is currently in state and federal nonattainment for these pollutants. Dust and toxic air contaminants (TACs) would be the primary pollutants of local concern as project emissions could combine with the emissions of other projects within 1,000 feet of the UWSP area to negatively affect nearby sensitive receptors.

CUMULATIVE IMPACTS EVALUATION

CONSTRUCTION EMISSIONS OF CRITERIA AIR POLLUTANTS AND PRECURSORS

The Sacramento Metropolitan Air Quality District (SMAQMD) has developed thresholds of significance in consideration of achieving attainment status under the California Ambient Air Quality Standards and National Ambient Air Quality Standards and has determined that projects with estimated emissions below these thresholds would not result in a cumulatively considerable contribution to regional air quality degradation.

As discussed in Chapter 6, *Air Quality*, of this Draft EIR, the project applicant would be required to adhere to SMAQMD rules and regulations for construction (e.g., Rule 403 related to fugitive dust and Rule 4040 related to Particulate Matter) and comply with SMAQMD Basic Construction Emissions Control Practices (BCECPs) to control dust, such as watering all exposed surfaces two times daily and maintaining at least two feet of free board space on haul trucks transporting soil, sand, or other loose material on the site. However, construction activities that would be associated with the proposed UWSP would result in NO_x emissions that would exceed the applicable significance threshold;

therefore, the project could potentially result in a significant incremental contribution towards cumulative air quality impacts. Consequently, all heavy-duty off-road diesel-powered construction equipment engines shall be California Air Resources Board (CARB) Tier 4 Final compliant or cleaner as required by Mitigation Measure AQ-1a. With this measure in place, project-related construction emissions of ozone precursors would not exceed the applicable mass emission thresholds established by SMAQMD. As a result, construction of development allowed under the proposed UWSP would not be considered to result in a cumulatively considerable net increase of a criteria pollutant for which the project region is non-attainment, and this cumulative impact would be **less than significant**.

LONG-TERM OPERATIONAL EMISSIONS OF CRITERIA AIR POLLUTANTS AND PRECURSORS

The SMAQMD directs lead agencies to use the region's existing attainment plans as a basis for analysis of cumulative emissions. A project's interference with such plans may be determined using the SMAQMD's recommended thresholds of significance for ozone precursors, PM_{2.5}, and PM₁₀. Given the project's required compliance with all applicable BMPs, the SMAQMD's recommended cumulative thresholds are identical to its operational thresholds. Accordingly, if the proposed plan would result in an increase of ROG, NO_x, PM₁₀, or PM_{2.5} in excess of SMAQMD's operational phase cumulative-level emissions threshold, which are equivalent to SMAQMD's project-level operational emissions thresholds, the project could potentially result in a significant incremental contribution toward cumulative air quality impacts.

As discussed in Chapter 6, *Air Quality*, of this Draft EIR, the project applicant would be required to comply with the provisions of the SMAQMD-approved Air Quality Management Plan prepared for the proposed UWSP as required by Mitigation Measure AQ-1b. However, even with this requirement in place, project-related operational emissions of ozone precursors and NO_x would still exceed the applicable mass emission thresholds established by SMAQMD. Therefore, operation of development allowed under the proposed UWSP could be considered to result in a cumulatively considerable net increase of a criteria pollutant for which the project region is non-attainment, and this cumulative impact would be **significant and unavoidable**.

EXPOSURE OF RECEPTORS TO TACS

The SMAQMD currently does not have thresholds of significance related to cumulative health risks, therefore the Bay Area Air Quality Management District's (BAAQMD's) thresholds were used for this analysis. According to BAAQMD guidance, a project would have a cumulative significant impact if the aggregate total of all past, present, and foreseeable future TAC sources, plus the contribution from the project, exceeds a cancer risk of 100 in one million persons, a chronic non-cancer risk of 10.0, or an annual average PM_{2.5} concentration of 0.8 µg/m³.

EXPOSURE OF EXISTING SENSITIVE RECEPTORS

The CARB has identified diesel particulate matter (DPM) from diesel-fueled engines as a TAC; thus, high volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated

health risks from DPM. In addition, gasoline includes multiple TACs, which are released through various processes during the operation of gasoline dispensing facilities (GDFs). Such TACs include benzene, ethyl benzene, toluene, and xylene, among others.

Following the guidance within the SMAQMD's *Guide to Air Quality Assessment in Sacramento County* (SMAQMD 2020) as well as guidance from the Toxics Committee of the California Air Pollution Control Officers Association (CAPCOA) (CARB and CAPCOA 2022) the concentrations of pollutants from operation of the existing GDFs at the I-80 interchange with El Camino Avenue were calculated using AERMOD. The associated cancer risk and non-cancer hazard indices were calculated using the CARB's Hotspot Analysis Reporting Program Version 2 (HARP 2) Risk Assessment Standalone Tool (RAST). For this analysis, the primary TAC of concern is benzene. As such, potential health risks related to the exposure of receptors to benzene were considered.

Only the highest estimated pollutant concentrations at the maximally exposed individual receptor (MEIR) were used in calculating cancer risk and hazard indices. Health risks to all other receptors would be lower than the health risks to the MEIR, because all other receptors would be exposed to lower concentrations of GDF-related pollutants as compared to the MEIR. Additionally, the estimation of health risks conservatively assumed that nearby receptors would be continuously exposed to pollutants from the GDF at the maximum estimated concentrations. This assumption would represent a scenario whereby a resident living nearby also attends one of the nearby schools and is therefore exposed to pollutants both at home and at school and, thereby, offers the most conservative approach to analysis. The existing receptors located to the south of the site, across Interstate 80 (I-80), could be exposed to increased multiple TACs, including DPM emissions associated with increased traffic on I-80 generated by the proposed UWSP.

Total cumulative cancer risk for existing off-site sensitive receptors would generally be the same as the cumulative cancer risks associated with the proposed on-site multi-family housing, presented in **Table CI-2**. Therefore, the proposed UWSP would result in potential health risks associated with the existing receptors located to the south of the site, across I-80, and a potentially significant impact would occur.

Implementation of Mitigation Measure AQ-1b would be required. Also, Mitigation Measure AQ-4a would require that the specific plan design guidelines and development standards of the proposed UWSP include consideration of ~~CARB's land use siting recommendations found in its *Air Quality and Land Use Handbook: A Community Health Perspective*~~ **buffer distances using the CARB and AQMD guidance**. In addition, installation of a minimum efficiency reporting value (MERV 13) filter in the HVAC systems for the existing sensitive receptors to the south of the project site, across I-80, would reduce the cancer risk for such receptors. However, because installation of such filters in the existing residences would require resident approval, neither Sacramento County, nor the project applicant, can legally impose such improvements on private properties. Therefore, such a mitigation approach as outlined in Mitigation Measure AQ-4b would only be effective for residents that select to

participate in the program, and it would be speculative to predict what the participation level would be.

Table CI-2: Cumulative Cancer Risk

Health Risk at MEIR	Maximum Cancer Risk (in a million)	Chronic Risk (Hazard Index)	Acute Risk (Hazard Index)	PM_{2.5} Concentration (µg/m³)
Total Health Risk Existing Conditions	173.8	0.15	0.74	0.17
Total Health Risk Existing Plus Cumulative No Project Conditions	287.4	0.18	0.74	0.10
Total Health Risk Existing Plus Cumulative Plus Project Conditions	331.8	0.19	0.74	0.35
Total Health Risk Cumulative Plus Project Contribution	158	0.04	0.00	0.18
SOURCE: Based on Raney June 2024 (Table 13).				

In addition, implementation of Mitigation Measure AQ-1a would require the use of low emissions engines (i.e., Tier 4 Final) that would reduce the project's generation of DPM emissions during construction. However, the aggregate total of all past, present, and foreseeable future TAC sources, plus the contribution from the proposed UWSP, would likely continue to exceed the cancer risk threshold of 100 in one million persons. Therefore, the cumulative impact would remain **significant and unavoidable**.

EXPOSURE OF FUTURE SENSITIVE RECEPTORS

The cumulative potential health risks associated with the multi-family housing proposed near two existing GDFs at the I-80 interchange with El Camino Avenue and I-80 are presented in Table CI-2.

As presented in the table, the total cancer risk for cumulative conditions without the proposed UWSP would be 287 per one million, and the cumulative conditions with the proposed UWSP would be 332 cancer risks per million. Therefore, the risk would exceed the cumulative impact significance threshold of 100 in one million and the proposed UWSP would exacerbate existing conditions related to potential health risks associated with the proposed multi-family housing in close proximity to two existing GDFs and I-80. The cumulative impact would be potentially significant.

Implementation of Mitigation Measure AQ-1b would be required during operation of the proposed UWSP. Also, Mitigation Measure AQ-4a would require that the specific plan

design guideline and development standards of the proposed UWSP include consideration of CARB's land use siting recommendations found in its *Air Quality and Land Use Handbook: A Community Health Perspective* **recommendations in land use siting as applicable using CARB's "Strategies to Reduce Air Pollution Exposure Near High Volume Roadways" Technical Advisory and the AQMD's "Mobile Sources Air Toxics Protocol" or applicable AQMD guidance to establish buffer distances**. In addition, Mitigation Measure AQ-4c, would require that a minimum MERV 13 filter be included in the central heating, ventilation, and air conditioning systems for all sensitive land uses within 1,000 feet of I-80. MERV 13 filters are rated to capture at least 85 percent of particles that are 1.3 to 3.0 microns in size, and over 90 percent of particles that are 3.0 to 10.0 microns in size. Therefore, the inclusion of MERV 13 filters in sensitive land uses provided by the proposed UWSP would dramatically reduce resident PM_{2.5} exposure. In fact, the installation of upgraded MERV rating filters has been shown to reduce indoor PM_{2.5} exposure by 19 to 28 percent. A linear relationship exists between PM_{2.5} concentration and the associated cancer risk when all other variables, including exposure time, remain constant. Therefore, in the case of the proposed UWSP, a 19 to 28 percent reduction in PM_{2.5} concentration would equate to a 19 to 28 percent reduction in cancer risk. After installation of MERV 13 filters, the total cumulative plus project contribution cancer risk can reasonably be expected to range between 114 to 128 cases per million, which would still exceed the total cumulative plus project contribution cancer risk significance threshold of 100 cases per million. Therefore, implementation of Mitigation Measures AQ-1b, AQ-4a, and AQ-4c would reduce the total cumulative plus project contribution cancer risk; however, the proposed UWSP would continue to exacerbate existing conditions at future residences in the UWSP area. As a result, the project's contribution to the cumulative health risk would be cumulatively considerable, and thus the cumulative impact would **significant and unavoidable**.

EXPOSURE TO OBJECTIONABLE ODORS

As discussed in Chapter 6, *Air Quality*, of this Draft EIR, land uses allowed under the proposed UWSP would generate temporary odors during construction as well as during operation of new odor sources associated with the commercial land uses (e.g., fast-food and sit-down restaurants). Construction-related odors would be minimal, temporary, and would cease once construction is complete. Because of the localized character of odor-related impacts, as well as adherence with SMAQMD Rule 402, which prohibits any person or source from emitting air contaminants that cause detriment, nuisance, or annoyance to a considerable number of persons or the public, the contribution of the proposed UWSP to odor issues would not be cumulatively considerable and would not result in a considerable contribution such that a new significant cumulative impact would occur. Therefore, the cumulative odor impact would be **less than significant**.

BIOLOGICAL RESOURCES

GEOGRAPHIC CONTEXT

Landcover types within the UWSP area consist primarily of agricultural uses, including field crops, grain and hay, partially irrigated crops, pasture, and truck crops. These agricultural lands can function as important foraging habitat for special-status species,

including Swainson's hawk, since they can provide some of the same functional values as the native annual grasslands that were historically prevalent throughout the Sacramento region. Additional landcover types include ruderal, annual grasses and forbs, deciduous, Fremont cottonwood, valley oak, vineyard, and urban/developed areas. Open water is also present in the form of retention basins and agricultural ditches, which provide suitable aquatic habitat for some special-status species, including giant garter snake. The geographic context for this cumulative analysis of the impacts to biological resources is the Sacramento region and the Natomas Basin.

CUMULATIVE IMPACTS EVALUATION

HAVE A SUBSTANTIAL ADVERSE EFFECT, EITHER DIRECTLY OR THROUGH HABITAT MODIFICATION, ON ANY SPECIES IDENTIFIED AS A SPECIAL-STATUS SPECIES

Historic and ongoing loss of agricultural lands managed in a manner suitable for Swainson's hawk foraging has occurred in the Sacramento region as these areas were, and continue to be, converted to urban development or agricultural practices of little to no value to Swainson's hawk, such as orchards and vineyards. Additionally, ongoing conversion of seasonal wetlands and other aquatic habitat in the region have affected the availability of habitat for species such as giant garter snake and western pond turtle.

As previously analyzed in Chapter 7, *Biological Resources*, of this Draft EIR, implementation of the proposed UWSP will result in a net loss of 1,197 acres of Swainson's hawk foraging habitat, 975 of which are in the Swainson's Hawk Zone, and a net loss of 22 acres of aquatic habitat for giant garter snake and western pond turtle. The UWSP area also includes 72.4 acres of suitable undisturbed upland habitat and 396 acres of disturbed suitable upland habitat for giant garter snake (HELIX 2024). Future development is expected to continue in the Sacramento region, including the Natomas Basin where the proposed UWSP is located. Cumulative development within the Natomas Basin (see Table CI-1 and Plate CI-1) would result in the permanent loss of annual grasslands, annual croplands, and other upland habitat that serve as habitat for a range of special-status species found in the Natomas Basin and broader Sacramento region, including Swainson's hawk, giant garter snake, and northwestern pond turtle.

These cumulative development projects and plans would be required to comply with the Sacramento County 2030 General Plan, and the Sacramento County Swainson's Hawk Impact Mitigation, or the ordinances and planning documents applicable to the local jurisdiction in which the cumulative development projects occur. Additionally, they would be subject to compliance with the California Endangered Species Act, federal Endangered Species Act, California Fish and Game Code, and other relevant regulations, permits, and requirements. Nevertheless, the implementation of previously approved and reasonably foreseeable future development projects listed in **Table CI-3** are expected to result in permanent conversion of annual grasslands, agricultural areas, and other biologically significant upland habitat within the Natomas Basin. As shown in Table CI-3, more than half of the 53,537-acre footprint of the Natomas Basin is either already developed or approved for development. Furthermore, reasonably foreseeable future projects listed in Table CI-3 are anticipated to result in approximately 7,600 acres of development in the Natomas Basin, including annual grasslands and agricultural

areas that are potentially existing suitable habitat for special-status species such as Swainson's hawk. The cumulative impact of the development within the Natomas Basin summarized in Table CI-3 on special-status species would be potentially significant.

Table CI-3: Acreage of Existing and Reasonably Foreseeable Development in the Natomas Basin

Project/Development	Project Acreage	Percentage of Natomas Basin¹
EXISTING/APPROVED		
NBHCP-covered development	17,500.0	32.7
Panhandle (included in above)	589.4	1.1
Sacramento International Airport with buffer lands	5,900.0	11.0
SWIFT (WattEV) (included in above)	110.0	0.2
<i>Subtotal</i>	<i>23,400.0</i>	<i>43.7</i>
Other Developed Land		
Urban as of 1997 ¹	3,854.0	7.2
Innovation Park (included in above)	183.7	0.3
Highways	1,435.0	2.7
Major canals ²	503.0	0.9
Northlake (formerly known as "Greenbriar")	577.0	1.1
<i>Subtotal</i>	<i>6,369.0</i>	<i>11.9</i>
REASONABLY FORESEEABLE		
Grandpark	5,675.6	10.6
Upper Westside	1,523.8	2.9
Airport South Industrial Park	419.0	0.8
<i>Subtotal</i>	<i>7,618.4</i>	<i>14.3</i>
Total	37,387.4	70.0
NOTES: 1 1997 land cover was used as the baseline/existing conditions for the 2003 NBHCP's analyses. 2 Corresponds to Class I canals in NBHCP. SOURCES: City of Sacramento, Sutter County, and Natomas Basin Conservancy 2003; County of Sacramento 2023b; City of Sacramento 2022; NorthPoint development 2021; USFWS 2017b		

As discussed in Chapter 7, *Biological Resources*, of this Draft EIR, the proposed UWSP would implement multiple mitigation measures to avoid or substantially lessen its impacts to special-status species. Implementation of Mitigation Measure BR-1 would require each development phase to have a qualified biologist prepare a Baseline

Biological Resources Report documenting current biological resource conditions and applicable mitigation measures. Implementation of Mitigation Measure BR-2a would avoid construction impacts on all special-status species by requiring that all project personnel would receive a comprehensive Worker Environmental Awareness Program presentation on the first day on a site prior to the initiation of construction, including an overview of sensitive biological resources on site and their protections.

To avoid impacts on special-status plant species, implementation of Mitigation Measure BR-2b would require the applicant to prepare a Weed Control Plan. Implementation of Mitigation Measure BR-2c would require a pre-construction survey for special-status plant species; marking special-status plant species or plant populations for avoidance; if avoidance is not possible, preparing and implementing a plan to salvage, replant or relocate plants, collect seeds or other propagules for plant reintroduction, or making payment of compensatory mitigation; and conducting monitoring surveys to meet success criteria.

To avoid impacts on giant garter snake, implementation of Mitigation Measure BR-3 would require conducting construction activity during the active period for giant garter snake (May 1 through September 30), unless approved by CDFW to work outside of that period; conducting pre-construction surveys; dewatering giant garter snake habitat for at least 15 days prior to excavation or filling; designating avoided giant garter snake habitat; presence of a biological monitor during grading activities; removal of temporary fill or construction debris from the site following construction, and compensating for permanent impacts on giant garter snake habitat at mitigation sites outside of the Natomas Basin and in the American Basin Recovery Unit as defined in the *Recovery Plan for the Giant Garter Snake* (*Thamnophis gigas*) (USFWS 2017a).

To avoid impacts on northwestern pond turtle, implementation of Mitigation Measure BR-4 would require dewatering of irrigation ditches as described in Mitigation Measure BR-3, conducting a pre-construction survey within 24 hours of the start of construction, limiting clearing to the minimal area necessary to facilitate construction activities, and having a biological monitor present during grading activities within 200 feet of aquatic northwestern pond turtle habitat to stop construction work in the immediate vicinity of the turtle.

To avoid impacts on tricolored blackbird, loggerhead shrike, song sparrow ("Modesto" population), purple martin, yellow warbler, yellow-headed blackbird, American white pelican, northern harrier, white-tailed kite, bird species protected by the Migratory Bird Treaty Act, and nesting raptors, implementation of Mitigation Measure BR-4 would require pre-construction nesting bird surveys during the avian nesting season within 250 feet of the construction disturbance footprint to locate any active passerine (perching bird) nests and within 500 feet to locate any active raptor (bird of prey) nests. If active nests are found, the measure calls for establishing a no-disturbance buffer until young have fledged or the nest is otherwise no longer active.

To avoid impacts on burrowing owls, implementation of Mitigation Measure BR-6 would require conducting focused burrowing owl surveys, and if burrowing owls are detected,

avoiding disturbance to individuals and their burrows; conducting take avoidance surveys immediately prior to the start of construction; and, where on-site avoidance is not possible, providing compensatory mitigation for disturbance and/or destruction of burrows.

To avoid impacts on nesting Swainson's hawks, implementation of Mitigation Measure BR-7a would require Swainson's hawk nesting surveys be conducted prior to development of the proposed UWSP if construction activities will begin during the nesting season, and if active nests are found, the development of an avoidance and minimization plan. BR-7a would also require regular monitoring of the nest during construction activities and halting construction if construction activities are disturbing the nest.

Implementation of Mitigation Measure BR-7b would mitigate for the permanent loss of 1,197 acres of foraging habitat for Swainson's hawk at a **0.75:1 (mitigation habitat to permanently lost habitat) or 1:1 ratio, depending on proximity of the mitigation sites to the Sacramento or Feather River,** by preserving off-site habitat and ensuring that the preserved land is managed in perpetuity in a manner suitable for Swainson's hawk foraging (and would also mitigate impacts to habitat of other special-status species using annual cropland and annual grasses and forbs). Mitigation sites would be located outside, but within 10 miles, of the Natomas Basin. This preserved habitat could otherwise be lost because there is an ongoing regional trend of widespread conversion of annual row crops, many of which are suitable foraging habitat for Swainson's hawks, to orchards and vineyards, which are not suitable foraging habitat for Swainson's hawks. Such changes in cropping patterns are up to the discretion of the agricultural operator and not subject to the discretionary approval of local land use agencies. Therefore, preservation of suitable foraging habitat in perpetuity under Mitigation Measure BR-7b would contribute to long-term protection of foraging habitat for Swainson's hawk in the Sacramento region.

Implementation of Mitigation Measure BR-7c would mitigate for the permanent loss of Swainson's hawk nest trees at a ratio of at least 3:1 (replacement nest trees to removed nest trees). Mitigation replacement trees would be of one of the following species: coast live oak (*Quercus agrifolia*), valley oak (*Q. lobata*), interior live oak (*Q. wislizeni*), box elder (*Acer negundo*). Historical and ongoing changes to agricultural practices and urbanization in the Central Valley have contributed to a decline in Swainson's hawk nesting habitat. Replacement of Swainson's hawk nesting trees under Mitigation Measure BR-7c would prevent the UWSP from contributing to a net loss of Swainson's hawk nesting trees in the Central Valley.

To avoid impacts on pallid bats, implementation of Mitigation Measure BR-8 would require a pre-construction survey by a qualified biologist who is experienced with bat surveying techniques for habitat assessment of the project area to characterize potential bat habitat and identify potentially active roost sites. If potential roost sites are found, Mitigation Measure BR-8 would require implementation of seasonal avoidance of bat roosts, and if seasonal avoidance is infeasible, establishment of a no-disturbance buffer

until the end of the seasonal avoidance windows or the site is deemed inactive by the qualified biologist. In addition, the measure requires certain steps during trimming or removal of trees hosting potential bat roosting sites to avoid and minimize impacts to pallid bats.

To avoid impacts on valley elderberry longhorn beetles, implementation of Mitigation Measures BR-9a and BR-9b would reduce the potential impact to the species by implementing measures consistent with the USFWS's Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle (*Desmocerus californicus dimorphus*), dated May 2017.

With implementation of these mitigation measures, the proposed UWSP's contribution to cumulative impacts to special-status species would not be cumulatively considerable, and the cumulative impact associated with the proposed UWSP with respect to special-status species would be **less than significant**.

HAVE A SUBSTANTIAL ADVERSE EFFECT ON PROTECTED STATE OR FEDERALLY PROTECTED WETLANDS OR SURFACE WATERS AND SENSITIVE NATURAL COMMUNITIES

There are no sensitive natural communities in the UWSP area and, therefore, the proposed project would not result in any potential impacts to such resources. The UWSP area includes protected state or federally protected wetlands or surface waters and cumulative impacts for these biological resources are discussed below.

As previously analyzed in Chapter 7, *Biological Resources*, of this Draft EIR, an estimated total of 45.08 acres of the UWSP area are subject to United States Army Corps of Engineer (USACE) and Central Valley Regional Water Quality Control Board (RWQCB) jurisdiction under Section 404 and 401 of the Clean Water Act (CWA). Future development is expected to continue in the Sacramento region, including in the Natomas Basin where the proposed UWSP is located. Cumulative development within the Natomas Basin (see Table CI-1 and Plate CI-1) would result in the permanent loss of jurisdictional wetlands and waters.

Since approximately 150 years ago, permanent wetlands were routinely drained for conversion to agricultural land and other uses (County of Sacramento 2010). Sacramento County once supported seasonal and emergent wetlands in association with the many natural drainage systems that previously flowed through the County; however, many of these natural drainage systems are now either channelized or confined within a system of artificial levees (County of Sacramento 2010). Future development within the Sacramento region in general, and the Natomas Basin in particular, is anticipated to continue to result in the loss of these sensitive habitats.

Any planned future development would be required to comply with local ordinances and plans, such as General Plans and/or Habitat Conservation Plans that are applicable to the jurisdictions in which the development projects occur, in addition to all relevant regulations, permits, and requirements that protect jurisdictional wetlands and waters. Nevertheless, implementation of previously approved projects have resulted in permanent losses of wetlands and waters, and reasonably foreseeable future

development projects are expected to result in additional permanent losses of jurisdictional wetlands and waters. As shown in Table CI-3, more than half of the 53,537-acre footprint of the Natomas Basin is either already developed or approved for development. Furthermore, reasonably foreseeable future projects listed in Table CI-3 are anticipated to result in approximately 7,600 acres of development in the Natomas Basin. A portion of this development is assumed to result in additional losses to potentially jurisdictional wetlands and waters. The cumulative impact of the development within the Natomas Basin summarized in Table CI-3 on wetlands and waters would be potentially significant.

As discussed in Chapter 7, *Biological Resources*, of this Draft EIR, the proposed UWSP would implement multiple mitigation measures to avoid or substantially lessen its impacts on jurisdictional wetlands and water. Implementation of Mitigation Measure BR-11 would require that the existing preliminary jurisdictional delineation of wetlands and supporting wetland delineation report would be submitted to the County for review and approval before the issuance of any demolition, grading, or building permit for construction activity within the UWSP area. Wetlands identified in the report would be avoided through project design where feasible, and if avoidance is not feasible, compensation for permanent impacts on wetlands or waters would be provided at a 1:1 ratio, or as agreed upon by the California Department of Fish and Wildlife (CDFW), USACE, and the Central Valley RWQCB, as applicable. Given the implementation of Mitigation Measure BR-11, the proposed UWSP project would not result in a considerable contribution to cumulative impacts to protected state or federally protected wetlands or surface waters, and the cumulative impact associated with the proposed UWSP with respect to wetlands would be **less than significant**.

INTERFERE SUBSTANTIALLY WITH THE MOVEMENT OF ANY NATIVE RESIDENT OR MIGRATORY FISH OR WILDLIFE SPECIES OR WITH ESTABLISHED NATIVE RESIDENT OR MIGRATORY WILDLIFE CORRIDORS, OR IMPEDE THE USE OF NATIVE WILDLIFE NURSERY SITES

Sacramento County once supported seasonal and emergent wetlands in association with the many natural drainage systems that previously flowed through the county; however, many of these natural drainage systems are now either channelized or confined within a system of artificial levees (County of Sacramento 2010). Future development within the Sacramento region in general, and specifically in the Natomas Basin, is anticipated to continue to result in the loss of these habitats that facilitate species movement and migration.

As previously analyzed in Chapter 7, *Biological Resources*, of this Draft EIR, an estimated total of 45.08 acres of the UWSP area are subject to USACE and RWQCB jurisdiction under Section 404 and 401 of the CWA. Future development is expected to continue in the Sacramento region, including the Natomas Basin where the proposed UWSP is located. Cumulative development within the Natomas Basin, presented in Table CI-3, could result in the permanent loss of irrigation canals, seasonal wetlands, and other aquatic habitat, which may negatively impact the availability of wildlife movement habitat for species such as giant garter snake and northwestern pond turtle.

These cumulative development projects and plans would be required to comply with local ordinances and planning documents, such as General Plans and/or Habitat Conservation Plans/Natural Community Conservation Plans that are applicable to the jurisdictions in which the cumulative development projects are constructed.

Nevertheless, the implementation of previously approved and reasonably foreseeable future development projects listed in Table CI-3 are expected to result in the permanent loss of jurisdictional wetlands and waters. As shown in Table CI-3, more than half of the 53,537-acre footprint of the Natomas Basin is either already developed or approved for development. Furthermore, reasonably foreseeable future projects listed in Table CI-3 are anticipated to result in approximately 7,600 acres of development in the Natomas Basin including potentially jurisdictional wetlands and waters. The cumulative impact of the development within the Natomas Basin summarized in Table CI-3 on wetlands and waters would be potentially significant.

As previously analyzed in Chapter 7, *Biological Resources*, of this Draft EIR, the UWSP area likely provides dispersal habitat for individual giant garter snakes. Implementation of Mitigation Measure BR-3 would require the applicant to compensate for permanent impacts on aquatic giant garter snake habitat through creation, preservation, and management of marsh, or preservation and management of rice fields, as habitat for giant garter snake; or enhancing or restoring connectivity of giant garter snake habitat at mitigation sites in the American Basin Recovery Unit as defined in the *Recovery Plan for the Giant Garter Snake (Thamnophis gigas)* (USFWS 2019). The UWSP area is within the Pacific flyway and thereby supports some migratory bird species.

Implementation of Mitigation Measure BR-5 would limit construction to the non-nesting season when feasible or, if avoiding the nesting season is not feasible, conducting pre-construction surveys for nesting birds and establishing no-disturbance buffers around any active nests to ensure they are not disturbed by construction; and repeating the pre-construction surveys when work resumes after being suspended for seven days. **In addition, implementation of Mitigation Measure BR-12 would minimize the potential for bird-building collisions by ensuring that new structures built in close proximity to agricultural lands that may be attractive to nearby resident or migratory bird populations are designed to minimize bird-window collisions and that highly visible up-lighting is prohibited in these areas.**

With implementation of Mitigation Measures BR-3, and BR-5, **and BR-12**, the proposed UWSP would not result in a considerable contribution to cumulative impacts on movement conditions for native resident or migratory wildlife, and the cumulative impact associated with the proposed UWSP with respect to movement corridors for native resident or migratory wildlife would be **less than significant**.

CONFLICT WITH ANY LOCAL POLICIES OR ORDINANCES PROTECTING BIOLOGICAL RESOURCES

Sacramento County has adopted an ordinance to protect Swainson's hawk foraging habitat and has also adopted measures protecting native and landmark trees. As described previously in Chapter 7, *Biological Resources*, of this Draft EIR, the proposed UWSP would result in conversion of Swainson's hawk foraging habitat and may affect native trees protected by Sacramento County. Implementation of Mitigation Measure BR-7b would mitigate the project's contribution to conversion of Swainson's hawk

foraging habitat and Mitigation Measures BR-10a through BR-10c would mitigate the project's contribution to impacts ~~to~~ **on** native trees. With implementation of these mitigation measures, which are consistent with the applicable Sacramento County policies, the proposed UWSP would not result in a considerable contribution to cumulative conflicts with local policies or ordinances protecting biological resources, and the cumulative impact associated with the proposed UWSP would be **less than significant**.

CONFLICT WITH THE PROVISIONS OF AN ADOPTED HABITAT CONSERVATION PLAN, NATURAL COMMUNITY CONSERVATION PLAN, OR APPROVED LOCAL, REGIONAL, OR STATE HABITAT CONSERVATION PLAN

As previously analyzed in Chapter 7, *Biological Resources*, of this Draft EIR, construction of the proposed UWSP would not conflict with implementation of the NBHCP or Metro Airpark Habitat Conservation Plan (MAP HCP). The MAP HCP's conservation strategy has been aligned with the NBHCP's conservation strategy, and its implementation integrated with that of the NBHCP. The MAP HCP's conservation strategy was initially based on the 1997 NBHCP, but the MAP HCP has since been revised to incorporate applicable provisions of the 2003 NBHCP, and TNBC is the plan operator for both the MAP HCP and the NBHCP. Thus, the NBHCP's General Conservation Strategy applies to the MAP HCP as well. Cumulatively considerable impacts related to the NBHCP's General Conservation Strategy, as well as the NBHCP's Guidelines for Reserve Acquisition and the Conservation Strategies for Wetland Habitat and Upland Habitat, are analyzed below.

SITE-SPECIFIC MANAGEMENT PLANS

As previously analyzed in Chapter 7, *Biological Resources*, of this Draft EIR, development of the proposed UWSP is not anticipated to adversely affect any Site-Specific Management Plans (SSMPs) for existing or future TNBC reserves within or in the vicinity of the UWSP area. While the TNBC Alleghany Reserve would be surrounded by the UWSP Agricultural Buffer and adjacent to the San Juan Road tie-in to Garden Highway, this is not anticipated to require a change to the SSMP for Alleghany Reserve as the right-of-way along the road is wide enough to accommodate all construction activities and therefore avoid direct and indirect effects to the reserve. The TNBC Cummings Reserve would be adjacent to Agricultural and Open Space Buffers included in the proposed UWSP area, which would also not necessitate a change to the Cummings Reserve SSMP. Therefore, no cumulatively considerable impacts to the SSMP element of the NBHCP's General Conservation Strategy would occur.

BUFFERS WITHIN THE RESERVE LANDS

As previously analyzed in Chapter 7, *Biological Resources*, of this Draft EIR, the proposed UWSP is not expected to affect the buffers within existing reserve lands. Buffers are often incorporated into TNBC reserves to minimize the effects of incompatible adjoining land uses. The UWSP proposes an Agricultural Buffer between the UWSP development area and the Cummings and Alleghany reserves. Therefore, no cumulatively considerable impacts to the buffers within the reserve lands element of the NBHCP's General Conservation Strategy would occur.

CONNECTIVITY

The NBHCP conservation strategy prioritizes maintaining connectivity for giant garter snake between TNBC reserves. As previously analyzed in Chapter 7, *Biological Resources*, of this Draft EIR, the proposed UWSP is not expected to affect connectivity within existing reserve lands. The approximately 22 acres of suitable giant garter snake aquatic habitat within the UWSP area is largely isolated from the broader Natomas Basin due to urban development on the eastern, northeastern, and southeastern boundaries of the UWSP area. The UWSP area is hydrologically connected to Cummings Reserve but given that the existing canals and ditches in the UWSP area are terminal habitat for giant garter snake, development of the proposed UWSP would not reduce connectivity between existing TNBC reserves. Therefore, no cumulatively considerable impacts to the connectivity element of the NBHCP's General Conservation Strategy would occur.

MINIMUM BLOCK SIZE

As previously analyzed in Chapter 7, *Biological Resources*, of this Draft EIR, the proposed UWSP is situated such that it would not preclude TNBC from establishing minimum habitat blocks for its reserve system. TNBC has already completed the 2,500-acre block requirement, and the UWSP area would not preclude connecting existing reserves to create minimum habitat blocks of at least 400 acres and creating linkages that enhance the NBHCP Reserve System. Therefore, no cumulatively considerable impacts to the minimum block size element of the NBHCP's General Conservation Strategy would occur.

FORAGING HABITAT AND MITIGATION RATIO

As previously analyzed in Chapter 7, *Biological Resources*, of this Draft EIR, Mitigation Measure BR-7b would require compensation for permanent loss of Swainson's hawk foraging habitat at a **0.75:1 (mitigation habitat to permanently lost habitat) or 1:1 ratio, depending on proximity of the mitigation sites to the Sacramento or Feather River**, through purchase of credits from an agency-approved conservation bank, or through protection of habitat through acquisition of fee-title or a conservation easement at sites outside, but within 10 miles, of the Natomas Basin. Mitigating for Swainson's hawk foraging habitat outside of Natomas Basin would avoid potential conflicts with TNBC's efforts to secure Swainson's hawk foraging habitat conservation sites within the geographic boundaries of the Natomas Basin. There are substantial opportunities for mitigation land that could fulfill the requirements of Mitigation Measure BR-7b located outside of the Natomas Basin (refer to Plate BR-4). Therefore, while the proposed UWSP development is within the Swainson's Hawk Zone, implementation of Mitigation Measure BR-7b would minimize conflicts with this NBHCP strategy through (1) applying a higher mitigation ratio for conservation of Swainson's hawk foraging habitat than proposed in the NBHCP, and (2) by targeting this compensatory mitigation outside of the Natomas Basin.

Similarly, Mitigation Measure BR-3b would require mitigation for permanent loss of aquatic and associated upland habitat for giant garter snake (i.e., foraging habitat) through creation, restoration, enhancement, preservation, and management of suitable

aquatic and associated upland giant garter snake habitat, or purchase of credits for aquatic and associated giant garter snake upland habitat (e.g., constructed marsh) at a ratio of at least 1:1 (mitigation aquatic and upland habitat to permanently lost aquatic and upland habitat), or mitigation through preservation and management of rice fields at a ratio of at least 2:1. Compensatory mitigation would be located outside, and within 10 miles, of the Natomas Basin so as to avoid conflicts with TNBC's efforts to secure giant garter snake habitat mitigation sites within the Natomas Basin.

By exceeding TNBC's mitigation ratio for Swainson's hawk and giant garter snake, and targeting compensatory mitigation outside of the Natomas Basin, the proposed UWSP would have a less than significant impact on the foraging habitat and mitigation ratio requirement of the NBHCP's General Conservation Strategy; therefore, the proposed UWSP would not contribute to a cumulatively considerable impact to on the NBHCP or MAP HCP.

GUIDELINES FOR RESERVE ACQUISITION

The NBHCP aims to create a system of reserves that would support giant garter snake and Swainson's hawk, and other covered species that use those same habitats. Criteria that TNBC considers when evaluating potential reserve acquisitions include setbacks adjacent to reserve lands, mitigation of effects related to sale or transfer of habitat mitigation reserve sites, and overall acquisition criteria.

As previously described in Chapter 7, *Biological Resources*, of this Draft EIR, the existing Alleghany Reserve would be within the Agricultural Buffer of the proposed UWSP and would be buffered from the Development Area. Although the NBHCP aims to have an 800-foot setback between reserve acquisitions and urban development, the Alleghany Reserve is not a new acquisition and the NBHCP states that mitigation lands or easements lacking an 800-foot setback may be acquired on a case-by-case basis.

The proposed UWSP would not result in the sale or transfer of reserve lands, nor cause impact from real estate, right of way, or other acquisitions or uses that would affect TNBC reserves. Therefore, mitigation for such activities and impacts do not apply to the proposed UWSP.

As previously analyzed in Chapter 7, *Biological Resources*, of this Draft EIR, Mitigation Measures BR-3b and BR-7b would require compensation for permanent loss of giant garter snake and Swainson's hawk habitat, respectively. Mitigation could be fulfilled through purchase of credits from an agency-approved conservation bank, or through protection of habitat through acquisition of fee-title or a conservation easement; however, these mitigation sites would be outside of the Natomas Basin and would not be part of TNBC's reserve acquisitions.

Because the proposed UWSP would have no impact on any of TNBC's guidelines for acquisition, there would be a less than significant impact on the NBHCP's Reserve Acquisition Criteria; therefore, the proposed UWSP would not contribute to a cumulatively considerable impact to the NBHCP or MAP HCP.

CONSERVATION STRATEGY FOR WETLAND AND UPLAND HABITAT

The NBHCP conservation strategy for wetland habitat is to (1) convert rice land into managed marsh wetlands and (2) preserve rice land and manage it to provide greater habitat values than unpreserved rice land for the benefit of giant garter snake. The UWSP area does not include existing rice land; however, it includes agricultural ditches and canals that provide potential aquatic habitat for giant garter snake. The development of the UWSP area would result in the permanent loss of approximately 22 acres of aquatic habitat, and approximately 468 acres of associated upland habitat, suitable for giant garter snake (HELIX 2024).

As previously described in Chapter 7, *Biological Resources*, of this Draft EIR, Mitigation Measure BR-3b would provide compensatory mitigation for giant garter snake outside of the Natomas Basin and in the American Basin Recovery Unit as defined in the *Recovery Plan for the Giant Garter Snake* (*Thamnophis gigas*) (USFWS 2019).¹ Compensatory mitigation would be at a 1:1 ratio, exceeding the NBHCP's mitigation ratio for giant garter snake. As stated under the Connectivity discussion, above, the existing canals and ditches in the UWSP area are terminal habitat for giant garter snake; therefore, mitigation within the American Basin Recovery Unit would provide an equal amount of habitat, but of a higher quality, relative to the canals and ditches in the UWSP area due to better habitat connectivity within the American Basin Recovery Unit.

By exceeding TNBC's mitigation ratio for giant garter snake and targeting compensatory mitigation in the American Basin Recovery Unit, there would be a less than significant impact on the NBHCP's Conservation Strategy for Wetland Impacts.

The NBHCP's primary strategy to mitigate impacts to Swainson's hawk includes acquiring upland habitat as mitigation lands inside the Swainson's Hawk Zone and elsewhere within the Basin. The net loss of annual grasses and forbs, and agricultural land (field crops, grain and hay, partially irrigated crops, pasture, and truck crops) associated with development of the UWSP area, excluding the Agricultural Buffer, would result in a permanent loss of 1,197 acres of Swainson's hawk foraging habitat, 975 acres of which are in the Swainson's Hawk Zone.

As described under Foraging Habitat and Mitigation Ratio, above, Mitigation Measure BR-7b would provide compensatory mitigation for Swainson's hawk outside, but within 10 miles, of the Natomas Basin, where substantial opportunities for Swainson's hawk foraging habitat mitigation land exists. Compensatory mitigation would exceed the NBHCP's mitigation ratio for Swainson's hawk.

These mitigation lands would be managed for the benefit of other wildlife and plant species covered by the NBHCP and the MAP HCP that share upland habitat requirements with Swainson's hawk (see Table BR-3). The proposed UWSP would avoid or substantially lessen potential impacts to NBHCP and MAP HCP covered species

¹ The Natomas Basin is a small portion of the overall American Basin Recovery Unit (376,104 acres) identified in the USFWS Recovery Plan for giant garter snake.

by implementing measures (see Mitigation Measures BR-1 through BR-9), that are as protective as, or more protective than, those required by the NBHCP and MAP HCP.

To further evaluate whether implementation of the proposed UWSP, in combination with existing, approved, or reasonably foreseeable development, could result in significant cumulative impacts on the ability for TNBC to implement the NBHCP's conservation strategy for wetland and upland habitat, an assessment was conducted to evaluate the availability of potential conservation lands within the Natomas Basin relative to the remaining needs to fulfill the conservation requirements of the NBHCP. As shown in **Table CI-4**, 84 percent of the lands currently available for acquisition by TNBC would remain available following the build-out of the UWSP area.

Table CI-4: Proportion of Available Reserve Lands Remaining After Build-out of Existing and Planned Development

Land Use	Acreage
A. NBHCP Plan Area	53,537
B. Existing Conservation Lands	6,530
Acquired TNBC Reserve Lands	5,186
Other Conservation Easements ¹	630
California Protected Areas Database (CPAD) Protected Areas ²	714
C. Existing or Planned Development (Table CI-3)	37,387
City of Sacramento and Sutter County HCP Development	17,500
Sacramento International Airport and Bufferlands	5,900
Existing Developed Land	6,369
Proposed Development	7,618
D. Available TNBC Reserve Lands [A – (B+C)]	9,620
TNBC Reserve Lands Needed for Permitted Areas	8,750
Acquired TNBC Reserve Lands	5,186
Remaining Need for TNBC Reserve Lands	3,564
E. UWSP Development Area	1,524
Proportion of Available Reserve Lands Remaining After Build-out of the UWSP Area [100 – (E/D)]	84%
NOTES:	
1 Other conservation easements were sourced from the California Conservation Easement Database GIS dataset as well as publicly available information regarding reserve lands set aside for the Greenbriar/Northlake project and excludes TNBC reserve lands.	
2 CPAD is a GIS dataset depicting lands that are owned in fee and protected for open space purposes by public agencies or non-profit organizations.	

Given that 84 percent of the lands currently available for acquisition by TNBC in the Natomas Basin would remain available following the build-out of the UWSP area, there would be a **less than significant** impact to the NBHCP Conservation Strategy for Upland Habitat; therefore, the proposed UWSP would not contribute to a cumulatively considerable impact to the NBHCP or MAP HCP.

SUMMARY

As described above, the proposed UWSP would not contribute to a cumulatively considerable impact to the conservation strategies core to the NBHCP and MAP HCP, including cumulatively impacting the ability of the plan to secure future reserve lands in the Basin. As such, the cumulative impact with respect to the adopted NBHCP associated with the proposed UWSP would be **less than significant**.

CLIMATE CHANGE

GEOGRAPHIC CONTEXT

Prominent GHGs contributing to the greenhouse effect are carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. Human-caused emissions of these GHGs in excess of natural ambient concentrations have been found to be responsible for intensifying the greenhouse effect and leading to a trend of unnatural warming of the earth's climate, known as global climate change or global warming. Climate change is a global problem caused by global pollutants and is inherently cumulative. Therefore, the cumulative context for climate change is global, and there is an existing adverse cumulative condition.

CUMULATIVE IMPACTS EVALUATION

As discussed in Chapter 8, *Climate Change*, of this Draft EIR, development of the proposed UWSP would result in the production of GHG emissions during construction activities and throughout the operational period of the project due to vehicle use, energy use, waste generation, water treatment and distribution, and other area sources. However, with the implementation of Mitigation Measures CC-1a through CC-1c, GHG emissions generated within the UWSP area would be reduced.

It is important to note that the development of the UWSP area in conjunction with future planned development in unincorporated and incorporated portions of Sacramento County as well as in nearby Placer and Sutter counties (see Table CI-1 and Plate CI-1) would provide regional vehicle miles traveled (VMT) reductions compared to the cumulative scenario with the proposed UWSP alone. Surrounding large-scale development, such as proposed Airport South Industrial Park project and Grandpark Specific Plan, and the approved Metro Air Park and Northlake specific plans in North Natomas would provide additional community amenities (e.g., shopping, jobs, entertainment) that would support development associated with the proposed UWSP, thus resulting in a decrease in VMT associated with the proposed plan. Considering incorporated mitigation measures, future anticipated reductions in project generated VMT, and the continuation of GHG reducing State regulations, long-term operational GHG emissions are anticipated to be lower than those estimated for the proposed UWSP.

CONSTRUCTION

Incorporation of Mitigation Measure CC-1a would reduce the construction GHG emissions impact associated with the proposed UWSP and associated subsequent projects to a less-than-significant level. Although an existing cumulative adverse condition exists, construction of the proposed UWSP and associated subsequent projects, as mitigated, would not result in a cumulatively considerable contribution to an existing adverse cumulative condition, and this cumulative impact would be **less than significant**.

OPERATION

With regarding to UWSP operations, Mitigation Measures CC-1b and CC-1c would reduce emissions associated with the proposed UWSP to a less-than-significant level. Although an existing cumulative adverse condition exists, operation of the proposed UWSP, as mitigated, would not result in a cumulatively considerable contribution to an existing adverse cumulative condition, and this cumulative impact would be **less than significant**.

CULTURAL RESOURCES

GEOGRAPHIC CONTEXT

The geographic context for the analysis of cumulative effects related to cultural resources is Sacramento County for historic and historic-era archaeological resources, and the portions of Central Valley identified as the territory of the local Native American community for pre-contact Native American archaeological resources.

CUMULATIVE IMPACTS EVALUATION

Cumulative development in Sacramento County could result in significant cumulative impacts on cultural resources as there are over 600 previously recorded historical resources in the County, 16 of which are listed on the National Register of Historic Places (NRHP) and/or the California Register of Historical Resources (CRHR), and over 600 previously recorded pre-contact Native American resources in the County, seven of which are listed on the NRHP and/or the CRHR. In addition, there are several other cultural resources in the County that have been determined eligible for listing but have not been formally designated (County of Sacramento 2010). Projects within unincorporated and incorporated portions of Sacramento County (see Table CI-1 and Plate CI-1) could negatively affect known and unknown historical sites, including destruction or alteration of historic buildings or structures. Furthermore, these projects could negatively affect known and unknown pre-contact Native American sites, including the disruption of human remains. However, each individual project is subject to review under CEQA and is required to obtain necessary permits and approvals from federal and state resource agencies. As a result of these processes, each project would be required to avoid, minimize, and compensate for impacts on cultural resources, such that the cumulative impact would be reduced, though not completely eliminated. However, because not all such impacts from these other projects have been or can be reduced with certainty to less-than-significant levels, the loss of any cultural resources would result in a significant cumulative impact.

As discussed in Chapter 9, *Cultural Resources*, of this Draft EIR, there are historical resources and potential historical resources within the UWSP area. Furthermore, there are archaeological resources, some with potential human remains, as well as potential archaeological resources within the UWSP area. Implementation of the proposed UWSP could negatively affect these cultural resources, and while Mitigation Measures CUL-1 through CUL-3 would be implemented to reduce the impacts of development allowed under the proposed UWSP on these resources, in some instances it may not be feasible to avoid a cultural resource, and the resource may need to be altered or destroyed. In addition, as the extent and location of such actions are not known at this time, it is not possible to conclude that the mitigation measures, or equally effective mitigation measures, would reduce significant impacts to a less-than-significant level in all cases. Therefore, implementation of the proposed UWSP could result in a considerable contribution to the cumulative loss of cultural resources, and this cumulative impact would remain **significant and unavoidable**.

ENERGY

GEOGRAPHIC CONTEXT

The geographic context for the analysis of cumulative effects related to energy includes the service areas of the local electricity and natural gas providers, SMUD and PG&E, respectively.

CUMULATIVE IMPACTS EVALUATION

As discussed in Chapter 10, *Energy*, of this Draft EIR, development allowed under the proposed UWSP would use energy resources during construction and operation; therefore, it could contribute to potential cumulative impacts during either of these phases as well. In addition, continued growth in the Sacramento area and throughout SMUD's and PG&E's service areas could contribute to ongoing increases in demand for electricity and natural gas, which are discussed below.

ENERGY DEMAND

Cumulative development (see Table CI-1 and Plate CI-1) could cumulatively contribute to ongoing increases in demand for electricity and natural gas. These anticipated increases would be countered in part by ongoing increases in national, statewide, and local requirements and incentives to support construction or retrofit of buildings with increased energy efficiency.

For electricity, overall supply during most conditions is adequate; therefore, there is no existing significant adverse condition that would be worsened or intensified by development allowed under the proposed UWSP. However, as demand continues to increase in SMUD's service area, temporary shortfalls could occur in SMUD's system (and other portions of the statewide grid) during temporary periods of high peak demand. Peak demands occur in the area during the summer's hot weather conditions when people run their air conditioners. In the future, electrification of buildings and increased use of electricity as a transportation fuel would add to SMUD's peak demand.

With an increasing number of hot-weather days and the move toward electrification of buildings, meeting demand during peak periods is a key planning consideration for the utility. SMUD is actively planning to offset growth in peak demands by encouraging and deploying energy efficiency and conservation measures within its service area. Through a combination of increases in efficiency and deployment of power management strategies, including power imports during peak periods, SMUD expects to maintain sufficient capacity to provide power to its service area, including development allowed under the proposed UWSP, at least through 2050 (SMUD 2019).

With respect to natural gas, PG&E sources natural gas from a combination of producers and suppliers located in Canada and the U.S. The utility maintains contracts with producers and suppliers over daily, monthly, and longer-term agreements. PG&E also maintains gas storage facilities and a network of conveyance and distribution pipelines within its service area. PG&E maintains an active planning process to identify and deploy additional conservation measures to minimize future increases in demand, to secure a continued natural gas supply, and to maintain sufficient distribution system capacity within its service area. Existing and planned infrastructure is anticipated to be sufficient to maintain service to development allowed under the proposed UWSP and to other cumulative scenario projects (PG&E 2023).

Similarly, regarding the efficiency of fuel use during construction and operation, there is no existing significant adverse condition (such as a shortage) that would be worsened or intensified by the project. Cumulative development (see Table CI-1 and Plate CI-1) could require gasoline or diesel fuel but would not combine with the fuel demands of the proposed UWSP to cause a significant adverse cumulative impact relating to the wasteful, inefficient, or unnecessary consumption or use of fuel. In the event of a future shortage, higher prices at the pump would curtail unnecessary trips that could be termed “wasteful” and would moderate choices regarding vehicles, equipment, and fuel efficiency.

Additionally, conservation policies encouraged by the County, including those set forth in the 2030 Sacramento County General Plan (electricity and natural gas services, energy consumption per capita, renewable energy, and energy efficiency appliances), are expected to support increased energy conservation in new development, such as that which would occur under the proposed UWSP. Although the proposed UWSP could result in an overall increase in energy demand from suppliers, the anticipated increases would be restrained by these requirements.

For these reasons, cumulative impacts on energy production and transmission facilities would not be significant, and the contribution of the proposed UWSP would not be cumulatively considerable. As such, the cumulative impact with respect to energy would be **less than significant**.

GEOLOGY, SOILS, AND PALEONTOLOGY

GEOGRAPHIC CONTEXT

The geographic context for the analysis for cumulative geology, soils, and paleontology effects encompasses and is limited to the UWSP area and the immediately adjacent area (i.e., one-half quarter mile of the UWSP area). This is because impacts relative to geology, soils, and paleontology impacts are generally site-specific. For example, the effect of erosion would tend to be limited to the localized area of a project and could only be cumulative if erosion occurred as the result of two or more adjacent projects that spatially overlapped.

CUMULATIVE IMPACTS EVALUATION

SEISMIC SHAKING AND SEISMIC-INDUCED GROUND FAILURE

Strong seismic ground shaking and seismic-induced ground failures (e.g., liquefaction, settlement) could occur within the UWSP area due to the presence of the Huntington-Berryessa fault system, as well as other active faults located farther away. The intensity of such an event would depend on the causative fault and the distance to the epicenter, the magnitude, the duration of shaking, and the nature of the geologic materials on which UWSP components would be constructed. Strong groundshaking and high ground accelerations could affect the entire UWSP area, including at the locations of cumulative projects.

As discussed in Chapter 11, *Geology, Soils, and Paleontology*, of this Draft EIR, the California Building Code (CBC) and Sacramento County building codes would require that the structural elements of development allowed under the proposed UWSP and cumulative projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1) undergo appropriate design-level geotechnical evaluations prior to final design and construction. The geotechnical investigations would include any necessary recommendations for soils remediation and/or foundation systems necessary to reduce seismic-related hazards. With compliance with existing regulations, development allowed under the proposed UWSP and cumulative projects would not cause or contribute to a cumulatively considerable impact with respect to seismic ground shaking and seismic-induced ground failures, and this cumulative impact would be **less than significant**.

SOIL EROSION OR TOPSOIL LOSS

Like the proposed UWSP, the development of cumulative projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1) could result in soil erosion or topsoil loss. However, as discussed in Chapter 11, *Geology, Soils, and Paleontology*, of this Draft EIR, each project involving disturbance of one acre or more of land would be required to prepare and implement a Storm Water Pollution Prevention Plan (SWPPP) per requirements of National Pollutant Discharge Elimination System (NPDES) Construction General Permit. The SWPPPs would describe Best Management Practices (BMPs) to control runoff and prevent erosion for each such project. Through compliance with this requirement, the potential for erosion impacts would be reduced. The Construction General Permit has been developed to address cumulative conditions arising from

construction throughout the state and is intended to maintain cumulative effects of projects subject to this requirement below levels that would be considered significant. For example, two adjacent construction sites would be required to implement BMPs to reduce and control the release of sediment and/or other pollutants in any runoff leaving their respective sites. The runoff water from both sites would be required to achieve the same action levels, measured as a maximum amount of sediment or pollutant allowed per unit volume of runoff water. Thus, even if the runoff waters were to combine after leaving the sites, the sediments and/or pollutants in the combined runoff would still be at concentrations (amount of sediment or pollutants per volume of runoff water) below action levels. With compliance with existing regulations, development allowed under the proposed UWSP and cumulative projects would not cause or contribute to a cumulatively considerable impact with respect to erosion or loss of topsoil, and this cumulative impact would be **less than significant**.

UNSTABLE GEOLOGIC OR SOIL UNITS

Like the proposed UWSP, the development of cumulative projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1) could occur on unstable geologic or soil units (e.g., susceptible to liquefaction or expansion). However, as discussed in Chapter 11, *Geology, Soils, and Paleontology*, of this Draft EIR, and above in the analysis relative to seismic shaking, the designs for development allowed under the proposed UWSP and cumulative projects would be required to comply with the CBC and County building codes. Geotechnical investigations would be required to assess for unstable geologic or soil units, and provide recommendations to address such conditions, if present. With compliance with existing regulations, development allowed under the proposed UWSP and cumulative projects would not cause or contribute to a cumulatively considerable impact with respect to unstable geologic or soil units, and this cumulative impact would be **less than significant**.

PALEONTOLOGICAL RESOURCES

Cumulative development in Sacramento County could result in significant cumulative impacts on paleontological resources as there are six previously recorded fossil localities from the Riverbank Formation within the County and two other localities from Pleistocene-age alluvial deposits. However, like development allowed under the proposed UWSP, each cumulative project would be subject to review under CEQA and would be required to obtain necessary permits and approvals from federal and state resource agencies. As a result of these processes, each project would be required to avoid, minimize, and compensate for impacts on paleontological resources, such that the cumulative impact would be reduced, though not eliminated. However, because not all such impacts from these other projects have been or can be reduced with certainty to less-than-significant levels, the loss of any paleontological resources could result in a significant cumulative impact.

As discussed in Chapter 11, *Geology, Soils, and Paleontology*, of this Draft EIR, Holocene-age alluvium and basin deposits and the Riverbank Formation are mapped at the surface within the UWSP area, as well as the surrounding area. Additionally, Pleistocene-age alluvium occurs in the surrounding area and is expected to be present

beneath the Holocene-age deposits. The Pleistocene-age alluvium and the Riverbank Formation are considered to have a high potential to contain significant paleontological resources. However, with the implementation Mitigation Measures GEO-6a through GEO-6d, which would require that qualified technical specialists provide oversight and worker training, and that clear parameters for resource monitoring and steps to be executed if a paleontological resource is discovered be provided, damage to or loss of paleontological resources on the project site would effectively be avoided. Cumulative projects would be required to implement similar mitigation measures, as required by Sacramento General Plan Policies CO-161, CO-162, and CO-163. With compliance with existing regulations and implementation of paleontological resource mitigation measures, development allowed under the proposed UWSP and cumulative projects would not cause or contribute to a cumulatively considerable impact with respect to the loss of paleontological resources, and this cumulative impact would be **less than significant**.

HAZARDS AND HAZARDOUS MATERIALS

GEOGRAPHIC CONTEXT

The geographic context for the analysis of cumulative hazards and hazardous materials effects encompasses and is limited to the UWSP area and the immediately adjacent area (i.e., one-half mile of the UWSP area). This is because impacts relative to hazards and hazardous materials impacts are generally site-specific. For example, the effect of hazardous materials spills would tend to be limited to the localized area of a project and could only be cumulative if hazardous materials spills occurred as the result of two or more adjacent projects that spatially overlapped.

CUMULATIVE IMPACTS EVALUATION

ROUTINE USE AND ACCIDENT CONDITIONS

Like the proposed UWSP, construction and operational activities associated with cumulative development in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1) would include the routine transport, use, and disposal of hazardous materials as well as the risk of accidental release of hazardous materials. Cumulative development in the area would be required to comply with the same federal, state, and local regulatory requirements described in Chapter 12, *Hazards and Hazardous Materials*, of this Draft EIR, that would minimize and/or avoid hazards to the public or the environment through the routine transport, use, disposal, or accidental release of hazardous materials. With compliance with the numerous laws and regulations that govern the transportation, use, handling, and disposal of hazardous building materials during construction and operations, development allowed under the proposed UWSP and cumulative projects would not cause or contribute to a cumulatively considerable impact with respect to routine use or accident hazardous materials conditions, and this cumulative impact would be **less than significant**.

SCHOOLS

Like the proposed UWSP, construction and operational activities associated with cumulative development in the vicinity of the UWSP area (see Table CI-1 and

Plate CI-1) would include the routine transport, use, and disposal of hazardous materials. Additionally, construction equipment could produce hazardous emissions while in use. As discussed above in the cumulative analysis for Routine Use and Accident Conditions, hazardous emissions and the handling hazardous materials associated with cumulative development in the area would be heavily regulated by existing federal, State, and local regulations. With compliance with the numerous laws and regulations that govern the transportation, use, handling, and disposal of hazardous building materials during construction and operations, development allowed under the proposed UWSP and cumulative projects would not cause or contribute to a cumulatively considerable impact with respect to hazardous materials near schools, and this cumulative impact would be **less than significant**.

HAZARDOUS MATERIALS SITE LISTING

Like the proposed UWSP, cumulative development in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1) would be required to comply with the same federal, state, and local regulatory requirements described in Chapter 12, *Hazards and Hazardous Materials*, of this Draft EIR. Compliance with these regulatory requirements would minimize and/or avoid impacts related to developing on a site that has contaminated soil or groundwater associated with it. In addition, as required by Mitigation Measures HAZ-4a through HAZ-4c, cumulative projects may be required to reduce the potential impact through the implementation of mitigation measures requiring Phase I site investigations and the preparation and implementation of health and safety plans and/or soil and groundwater management plans if necessary, depending on the outcome of the investigations. With compliance with the numerous laws and regulations that govern hazardous materials and implementation of mitigation measures for hazardous materials issues, development allowed under the proposed UWSP and cumulative projects would not cause or contribute to a cumulatively considerable impact with respect to being listed on hazardous materials site, and this cumulative impact would be **less than significant**.

EMERGENCY PLANS

Like the proposed UWSP, cumulative development in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1) that include road work and/or other construction activities associated with the construction of these projects could cause traffic congestion and/or interrupt the flow of traffic. However, as with development allowed under the proposed UWSP, each cumulative project would be required to prepare a Traffic Control Plan (TCP) to ensure the safe and efficient movement of traffic through construction work zones, including emergency response traffic. With compliance with required TCPs, construction activities associated with the proposed UWSP and cumulative development in the area would be unlikely to combine to adversely affect emergency evacuation routes, and this cumulative impact would be **less than significant**.

WILDFIRES

As discussed in Chapter 12, *Hazards and Hazardous Materials*, of this Draft EIR, the UWSP area is not located within a high fire hazard severity zone. Therefore, projects developed under the proposed UWSP could not cause or contribute to a cumulatively

considerable impact with respect to being in a high fire hazard severity zone, and **no impact** would occur.

HYDROLOGY AND WATER QUALITY

GEOGRAPHIC CONTEXT

The geographic context for the analysis of most cumulative hydrology and water quality effects encompasses and is limited to the UWSP area and the immediately adjacent area (i.e., one-half mile of the UWSP area). This is because impacts relative to hydrology and water quality are generally site-specific. For example, the effect of erosion would tend to be limited to the localized area of a project and could only be cumulative if erosion occurred as the result of two or more adjacent projects that spatially overlapped. However, the geographic context for cumulative effects to groundwater supplies and recharge is the Sacramento Valley-North American Subbasin, which covers 351,000 acres that span across portions of Sutter, Placer, and Sacramento counties.

CUMULATIVE IMPACTS EVALUATION

WATER QUALITY STANDARDS AND WASTE DISCHARGE REQUIREMENTS

As discussed in Chapter 13, *Hydrology and Water Quality*, of this Draft EIR, construction of development allowed under the proposed UWSP would comply with NPDES Construction General Permit regulations that would prevent the release of sediment and other pollutants during construction activities through the preparation and implementation of a SWPPP. In addition, development allowed under proposed UWSP would be required to comply with existing regulations for the appropriate storage, use, transport, and management of hazardous materials during construction and operations. Furthermore, development allowed under the proposed UWSP that would use hazardous materials would maintain and implement spill prevention and countermeasures control plans as well as hazardous materials management plans to reduce the risk of release of contaminants. **With respect to certain properties within the UWSP area, Mitigation Measures HAZ-4a through HAZ-4c would require the preparation Phase I site investigations and the preparation and implementation of health and safety plans and/or soil and groundwater management plans if necessary, depending on the outcome of the investigations.** Finally, development allowed under the proposed UWSP would also be subject to the Municipal Stormwater Permit (MSP) Municipal Separate Storm Sewer System (MS4) requirements, including hydromodification management controls and low impact development (LID) design standards that would require that drainage plans for each project adequately control run on and runoff to prevent erosion or impacts to water quality. **Specifically, Mitigation Measure HYD-1, would require the preparation and submittal of a drainage study in accordance with the requirements outlined in the Sacramento Stormwater Quality Partnership's 2018 Stormwater Quality Design Manual (or subsequent updates).** Similarly, all cumulative projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1) that involve the creation or replacement of 10,000 square feet of impervious surface area would also be subject to the same Construction General Permit, hazardous materials management, and MSP requirements. With compliance

with existing regulations, development allowed under the proposed UWSP and cumulative projects would not cause or contribute to a cumulatively considerable impact with respect to water quality, and this cumulative impact would be **less than significant**.

GROUNDWATER SUPPLIES AND RECHARGE

As discussed in Chapter 13, *Hydrology and Water Quality*, of this Draft EIR, the Sacramento Valley Groundwater Basin, North American Subbasin, is a high-priority subbasin, though not one in a condition of critical overdraft. Water supplies in this area are from a combination of surface water, groundwater, imported water, and recycled water. The proposed UWSP and cumulative development within the northwestern unincorporated portion of Sacramento County (North Natomas), the City of Sacramento, bordering areas of Placer and Sutter counties (see Table CI-1 and Plate CI-1) are located within this subbasin. Water service providers within the subbasin, such as the City of Sacramento, are required to determine whether the projected water demand associated with development allowed under the proposed UWSP and cumulative development have been included as part of the each water service provider's 2020 Urban Water Management Plan (UWMP), each of which quantifies and evaluates the water supplies available to each water service provider and compares the available supply with the existing and anticipated water supply demand. As part of the environmental review process, each water service provider processes a Water Supply Assessment (WSA) for each cumulative project upon request to determine if its planned water supplies are sufficient to meet the demands of the new project in addition to its existing and projected water supply obligations. For example, the WSA prepared by the City of Sacramento for the proposed UWSP concluded that the planned water supplies in its UWMP can meet the water supply demand of development anticipated under the proposed UWSP during normal, single dry and multiple dry years over a 20-year dry period. Cumulative projects would be required to go through the same process of requesting a WSA from their water service provider to compare their water demand with the provider's available water supply. If the water service provider did not account for the water demand of a given cumulative project and would be unable to meet the requested demand, the cumulative project would be denied. Therefore, with compliance with existing water supply regulations, development allowed under the proposed UWSP and cumulative projects would not cause or contribute to a cumulatively considerable impact with respect to groundwater supplies, and this cumulative impact would be **less than significant**.

Development allowed under the proposed UWSP would increase impervious surfaces within the UWSP area, and consequently could decrease groundwater recharge. Similarly, cumulative projects within the northwestern unincorporated portion of Sacramento County (North Natomas), the City of Sacramento, bordering areas of Placer and Sutter counties (see Table CI-1 and Plate CI-1) that increase the amount of impervious surface could decrease groundwater recharge. However, as discussed in the groundwater recharge impacts analysis in Chapter 13, *Hydrology and Water Quality*, of this Draft EIR, construction of development allowed under the proposed UWSP would be required by MSP MS4 requirements and the Stormwater Quality Design Manual to conform to LID design and sustainability measures, such as the inclusion of project design features such as bioswales, pervious paving, and other LID measures, designed

to reduce runoff and infiltrate stormwater back into the subsurface. Cumulative projects would also be required to include similar design features to maintain groundwater infiltration. These design measures would maintain the existing degree of recharge potential for the groundwater basin. Therefore, with compliance with existing MSP regulations, development allowed under proposed UWSP and cumulative projects would not cause or contribute to a cumulatively considerable impact with respect to groundwater recharge, and this cumulative impact would be **less than significant**.

DRAINAGE PATTERNS

As discussed in Chapter 13, *Hydrology and Water Quality*, of this Draft EIR, and above under the cumulative analysis for water quality, development allowed under the proposed UWSP and cumulative projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1) would be required to comply with NPDES Construction General Permit regulations that would prevent the release of sediment and other pollutants during construction activities through the preparation and implementation of a SWPPP. Each SWPPP would include BMPs to control stormwater flow and prevent drainage issues. In addition, development allowed under the proposed UWSP and cumulative projects would also be subject to the MSP MS4 requirements, including hydromodification management controls and LID design standards that would require the preparation of drainage plans to adequately control run on and runoff to prevent erosion or drainage issues. With compliance with existing regulations, development allowed under the proposed UWSP and cumulative projects would not cause or contribute to a cumulatively considerable impact with respect to drainage issues, and this cumulative impact would be **less than significant**.

RELEASE OF POLLUTANTS IN A FLOOD HAZARD ZONE

As discussed in Chapter 13, *Hydrology and Water Quality*, of this Draft EIR, the proposed UWSP and several of the cumulative projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1) are in a special flood hazard area within the Natomas Basin. However, levees are also in place and are designed to protect the Natomas Basin from the 100-year flood event. The Natomas Levee Improvement Project is ongoing and by 2025 will have improved the level of protection to the 200-year flood event. With this level of flood protection, the proposed UWSP and cumulative projects would not be subject to flooding and thus the cumulative impact would be **less than significant**.

WATER QUALITY AND GROUNDWATER PLANS

As discussed in Chapter 13, *Hydrology and Water Quality*, of this Draft EIR, and in the discussion above for water quality, groundwater supplies, and recharge cumulative impacts, project designs for development allowed under the proposed UWSP and cumulative projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1) would be required to capture and treat stormwater to prevent impacts to water quality and to maintain the level of infiltration of stormwater into the subsurface at current levels. These requirements are contained in the NPDES Construction General Permit and MSP, along with required water supply assessments for projects with water demand. In addition, cumulative projects would be located within the Sacramento Valley Groundwater Basin, North American Subbasin, which is a high priority basin subject to

Sustainable Groundwater Management Act. The UWSP area is under the jurisdiction of the Sacramento Groundwater Authority GSA, which has established groundwater sustainability goals that cumulative projects would be required to be consistent with. Compliance would ensure that development allowed under the proposed UWSP and cumulative projects would be consistent with the Water Quality Control Plan (Basin Plan) and the Groundwater Sustainability Plan, and this cumulative impact would be **less than significant**.

LAND USE

GEOGRAPHIC CONTEXT

The geographic context for the analysis of cumulative impacts related to land use is the area that encompasses recently approved and/or proposed projects in the vicinity of the UWSP area. This development includes growth under projects proposed and adopted by Sacramento County, Sutter County, and the City of Sacramento as shown on Plate CI-1.

CUMULATIVE IMPACTS EVALUATION

DIVIDE AN ESTABLISHED COMMUNITY

Division of an established community typically involves constructing a physical barrier to neighborhood access, such as a new freeway, or removing a means of access, such as a bridge or a roadway. Neither the proposed UWSP nor cumulative projects would include physical obstructions (e.g., freeways or other impenetrable linear features) that would divide an established community or isolate individual neighborhoods. Consequently, the cumulative impact would be **less than significant**.

CONFLICT WITH APPLICABLE PLANS, POLICIES, OR REGULATIONS

The proposed UWSP, in combination with cumulative development in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1), particularly development on presently non-urbanized lands to the north of the UWSP area, would substantially change the land uses within and in the vicinity of the UWSP area. As described in Chapter 2, *Project Description*, of this Draft EIR, the proposed UWSP would guide development of residential and non-residential land uses on 2,066± acres of unincorporated land in northwestern Sacramento County. Cumulative development on presently non-urbanized lands to the north of the UWSP area includes growth contemplated under the proposed Airport South Industrial Park project and Grandpark Specific Plan, and the approved Metro Air Park and Northlake specific plans in North Natomas (see Table CI-1 and Plate CI-1). The proposed UWSP and the aforementioned cumulative projects would result in the conversion of largely undeveloped land to urban uses. However, all development, including the proposed UWSP, must be reviewed for consistency with applicable land use plans, policies, and regulations in accordance with the requirements of CEQA, the State Zoning and Planning Law, and the State Subdivision Map Act, all of which require findings of plan and policy consistency prior to approval of entitlements for development. These requirements would ensure that project-specific and cumulative

impacts related to conflicts with applicable plans, policies, or regulations would be **less than significant**.

NOISE

GEOGRAPHIC CONTEXT

The geographic scope for cumulative effects on noise and vibration would consist of an area approximately 900 feet around the perimeter of each of the potential development sites within the UWSP area. This distance was selected because typical construction noise levels can affect a sensitive receptor at a distance of 900 feet if there is a direct line-of-sight between a noise source and a noise receptor (i.e., a piece of equipment generating 85 dBA would attenuate to 60 dBA over a distance of 900 feet). An exterior noise level of 60 dBA will typically attenuate to an interior noise level of 35 dBA with the windows closed and 45 dBA with the windows open. Because construction noise usually generates the highest noise levels for a mixed-use development project, this geographical scope (distance) may also be conservatively applied to operational impacts.

CUMULATIVE IMPACTS EVALUATION

EXCEEDANCE OF ESTABLISHED NOISE STANDARDS

CONSTRUCTION

Of the 17 cumulative projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1), there are no projects that are within the 900-foot geographic scope for noise and vibration analysis. Therefore, **no cumulative impact** would occur with respect to this criterion.

STATIONARY SOURCES

Of the 17 cumulative projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1), there are no projects that are within the 900-foot geographic scope for noise and vibration analysis. Therefore, the cumulative impact with respect to noise from stationary noise sources would be **less than significant**.

TRAFFIC

The cumulative traffic noise analysis considers all the roadways analyzed in the transportation analysis. Operational noise impacts of the proposed UWSP would result primarily from increased traffic on the local roadway network. Cumulative (year 2040) plus project traffic data were used to estimate cumulative operational noise increases. The 2040 traffic data inherently include partial or full buildout of several proposed and/or approved projects in North Natomas and in the Central City of Sacramento (see Table CI-1 and Plate CI-1). In addition, the several roadway connections within the study area were also assumed under cumulative conditions.

EXISTING ROADWAYS

The significance of cumulative impacts related to traffic noise levels on existing roadways is determined using a two-step process. First, like the project-level assessment of traffic

impacts, the increase in noise levels between cumulative (2040) conditions with the project and existing baseline (2019) conditions is compared to an incremental 3 dBA or 5 dBA threshold, as applicable based on the existing noise level. If the roadside noise levels exceed this incremental threshold, a significant cumulative noise impact is identified.

The second step of the analysis of cumulative roadside noise impacts (if a significant cumulative noise impact is predicted based on the above methodology) is to evaluate whether the contribution of the project to roadside noise levels would be cumulatively considerable. This second step (if necessary) involves assessing whether the project's contribution to roadside noise levels (i.e., the difference between cumulative conditions and cumulative plus project conditions) would exceed a 1.5 dBA incremental contribution; this is a threshold that is considered to be cumulatively considerable. The 1.5 dBA increase used to represent a cumulatively considerable contribution is conservatively based on the minimum increase identified as potentially significant by FICON (see Table NOI-10). Except in carefully controlled laboratory experiments, a change of 1 dB cannot be perceived (Caltrans 2013). Consequently, a cumulatively considerable contribution would reasonably be more than 1 dBA.

The roadway segments analyzed and the results of the noise increases resulting from modeling are shown in **Table CI-5** for 2040 cumulative plus weekday p.m.² full buildout of the proposed UWSP's mixed uses.

As shown in **Table CI-6**, although cumulative traffic noise impacts would occur along 18 of the roadways analyzed, the traffic noise associated with the proposed UWSP would only represent a cumulatively considerable contribution to these cumulative impacts (i.e., the project would contribute an increase of more than 1.5 dBA over the cumulative without project scenario) along 11 of them. Therefore, the proposed UWSP would contribute considerably to a cumulative significant roadway noise impact along 11 roadways.

Mitigation Measure NOI-3a is proposed, which would require that that speed reductions be ~~considered~~ **implemented, if feasible,** along El Centro Road ~~with in~~ coordination with the Sacramento County Department of Transportation (DOT) ~~to determine feasibility and that a cost-benefit analysis be performed to determine the feasibility of~~ barriers **be erected, if feasible,** along Arena Boulevard **using a cost-benefit analysis to determine feasibility,** while Mitigation Measure NOI-3b is also proposed, which would require the use of rubberized asphalt on noise impacted roadways, consistent with existing County DOT practice for arterial roadways. While these measures would reduce the project's contribution to cumulatively significant roadway noise impacts along roadways in the Specific Plan area, the availability of feasible mitigation along many offsite segments is limited and largely unavailable. As a result, like project level roadway noise impact, the impact with respect to cumulative roadway noise on existing roadways would remain **significant and unavoidable**.

² The peak hour was used to represent the maximum period of traffic generation and associated noise generated by the project.

Table CI-5: Modeled Traffic Noise Levels Year 2040 with Weekday P.M. Full Buildout of Project Mixed Uses

NOTES:

- 1 Significance threshold derived from Table NOI-11.
- 2 Sensitive receptors were considered to be residences of all densities, schools, & transient lodging facilities.
- 3 A significant impact is identified only along segments where the project-related traffic noise level increase would exceed the significance threshold AND where sensitive receptors are present along the roadway segment.
- 4 Significant impacts are not identified for the existing transient lodging facilities along these roadways because existing noise from I-80 would render the increase unnoticeable.

NOTES:

- 1 The distance from the roadway segment centerline to the nearest potential location for an outdoor activity area based on proposed roadway cross-sections.
- 2 The Day/Night Average Level (DNL) computed at the distance cited in the "Distance" column.
- 3 If the predicted DNL at the nearest potential outdoor activity areas exceeds the County's 65 dBA exterior noise level standard this column is flagged as "Yes".
- 4 The level above 65 dBA DNL represents the degree of sound attenuation which would be required to reduce traffic noise levels to 65 dBA DNL if the outdoor activity area were located at the distance from the centerline shown under the "Distance" column.
- 5 The contour distances represent the distance from the roadway segment centerline to the indicated contours.

NOISE EXPOSURE ALONG PROJECT ROADWAYS

The proposed UWSP proposes extensive development of residential uses of varying densities throughout the UWSP area, including areas located adjacent to major roadways. While the interior spaces of residential uses share the same noise-sensitivity regardless of density, the noise-sensitivity of exterior areas varies according to the type of proposed residential use. For example, in low-density residential developments, the noise-sensitive exterior spaces where the County's exterior noise standards are applied are commonly considered to be backyards. As for higher density residential developments, such as apartments, the County's exterior noise standards are applied at common outdoor usage areas such as pool or park spaces rather than individual patios or balconies. For mixed-use developments that include a residential component, it is not unusual for no outdoor use areas to be proposed. Because specific plans for individual developments are not yet available as of the time of this analysis, potential traffic noise impacts are assessed through prediction of distances to future traffic noise contours along the roadways that would potentially affect development within the UWSP area. Where noise contours exceeding the General Plan standards shown in Table NOI-7 (65 dB DNL for residential uses and 70 dB DNL for parks and playgrounds) would extend into areas proposed for such uses, potentially significant noise impacts could occur that warrant consideration of mitigation measures.

Table CI-6 shows the predicted future plus project (cumulative) traffic noise exposure at those locations along each roadway segment, a comparison of those predicted levels against the applicable Sacramento County exterior noise standards, and the distances to the future 65 and 70 dB DNL traffic noise contours. Roadway segments where future traffic noise levels at proposed residential land uses are predicted to exceed 65 dB DNL and, therefore, require mitigation include El Centro Road, Radio Head, and Farm Road as well as residential uses proposed near I-80.

To address this cumulative impact, **Mitigation Measure C-NOI-1** is prescribed below, which would ensure that all necessary and feasible noise reduction strategies for reducing noise exposure to proposed on-site uses would be applied. With the implementation of this mitigation measure, the impact with respect to cumulative traffic noise would be **less than significant**.

Mitigation Measure C-NOI-1: To ensure consistency with the Sacramento County General Plan 65 dB DNL exterior noise level standard at the outdoor activity areas of future residential uses proposed within the UWSP area, the following noise mitigation measures should be considered either singularly or in combination during project design, depending on the level of sound attenuation required. At proposed residential locations adjacent to Interstate 80 it is probable that a combination of the following measures would be required.

Residential outdoor activity areas shall be located beyond the 65 dBA DNL noise contour distances shown in Table CI-6, to the extent that such a design can be accommodated into the development scheme, otherwise, barriers or screening methods shall be employed. This includes individual backyards of single-family residences and common outdoor use areas of multi-family residences; and/or

- Residential outdoor activity areas proposed within the 65 dBA DNL noise contour distances shown in Table 16 shall be screened from view of the roadway by intervening structures or sound barriers. If sound barriers are proposed, project-specific grading plans shall be reviewed to determine the location and heights of barrier necessary to achieve compliance with the County's noise standards. With the exception of residences proposed in proximity to Interstate 80, noise barriers along other roadways would not need to exceed 6 feet in height to provide the required traffic noise attenuation.

If noise barriers are to be constructed within the Plan area, the traffic noise barriers shall take the form of a masonry wall, earthen berm, or combination of the two, or, if reviewed and approved by an acoustical consultant as providing comparable performance prior to construction, other materials may be acceptable (i.e., wood or wood composite fence with overlapping slat construction).; and /or

- Single-family residences shall be oriented such that the front of the residence faces the roadway segment where levels exceeding 65 dBA DNL would occur, thereby using the residence to shield the backyard from the roadway and creating a larger setback between the roadway centerline and backyard outdoor activity area.

CUMULATIVE VIBRATION IMPACTS

Of the 17 cumulative projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1), there are no projects that are within the 900-foot geographic scope for noise and vibration analysis. Therefore, the cumulative impact with respect to groundborne vibration would be **less than significant**.

CUMULATIVE NOISE FROM AIRPORT OPERATIONS

The noise contours presented in Plate NOI-2 and used to address the existing noise levels from airport operations in the project-level analysis found in Chapter 15, *Noise*, of this Draft EIR, were derived from the Sacramento International Airport Land Use Compatibility Plan (ALUCP) prepared by the Sacramento Area Council of Governments (SACOG) dated December 12, 2013. These contours reflect a "Theoretic Capacity" level of Airport activity extending beyond the minimum 20-year year time frame that state law requires and consider both of the contemplated future runway system configuration scenarios. Therefore, as the project-level impact analysis of airport noise conservatively represents a cumulative scenario, the cumulative impact would also be **less than significant**.

POPULATION AND HOUSING

GEOGRAPHIC CONTEXT

The geographic context for the analysis of cumulative effects related to population and housing is the SACOG six-county Sacramento region that includes Sacramento, Sutter, Placer, Yolo, Yuba, and El Dorado counties.

CUMULATIVE IMPACTS EVALUATION

POPULATION GROWTH

A significant cumulative impact related to population and housing would result in an increase in population for which infrastructure, services, and housing have not been planned. General plans for counties and incorporated cities in the six-county Sacramento region, such as the Sacramento County 2030 General Plan and the City of Sacramento 2040 General Plan, provide an inventory of land supply within each jurisdiction and projects the amount and location of land and development that will be required to accommodate future populations and economic growth. In addition, the SACOG Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) establishes a plan for housing the population of the six-county Sacramento region. The foundation for the MTP/SCS land use forecast includes local government general plans, community plans, specific plans, other local policies and regulations, and the SACOG Sacramento Region Blueprint, which guides the region's transportation planning and funding decisions.³ Like the proposed UWSP, cumulative projects in the six-county Sacramento region must be reviewed for consistency with applicable land use plans, policies, and regulations in accordance with the requirements of CEQA, State zoning and planning law, and the State Subdivision Map Act, all of which require findings of plan and policy consistency prior to approval of entitlements for development.

As discussed in Chapter 16, *Population and Housing*, of this Draft EIR, as a condition of approval of the proposed USWP, the proposed plan and subsequent UWSP development would be required to be determined consistent with applicable Sacramento County General Plan policies, including policies related to urban growth and expansion of the USB and UPA. Consequently, the proposed UWSP would not induce substantial unplanned population growth as identified in the Sacramento County General Plan. However, the UWSP area and the proposed UWSP were not anticipated for development in either the SACOG Blueprint or the current MTP/SCS, and even though the proposed UWSP aligns with many of the principles contained in the Blueprint and the County's smart growth policy LU-120, this inconsistency would remain. For this reason, the contribution of the proposed UWSP to substantial unplanned population growth within the six-county Sacramento region would be cumulatively considerable, and this cumulative impact would be **significant and unavoidable**.

DISPLACEMENT OF HOUSING

As discussed in Chapter 16, *Population and Housing*, of this Draft EIR, agriculture is the predominate land use within the UWSP area, with large parcels devoted to growing crops. Agricultural residential homes are located within the northeastern portion of the UWSP area near El Centro Road and within the southwestern portion of the UWSP area along Garden Highway. The proposed UWSP does not propose changes to these properties, nor would uses allowed under the proposed UWSP cause the displacement

³ The current 2020 MTP/SCS was adopted in November 2019 and projects transportation and housing needs through 2040.

of housing. Rather, the proposed UWSP would substantially add new housing to the UWSP area.

As discussed above, like the proposed UWSP, cumulative projects in the six-county Sacramento region must be reviewed for consistency with applicable land use plans, policies, and regulations in accordance with the requirements of CEQA, State zoning and planning law, and the State Subdivision Map Act, all of which require findings of plan and policy consistency, including policies aimed to prevent or minimize displacement of housing, prior to approval of entitlements for development. Required compliance with these requirements would ensure that the cumulative impact related to displacement of housing would be **less than significant**.

PUBLIC SERVICES AND RECREATION

GEOGRAPHIC CONTEXT

The UWSP area is in unincorporated northwestern Sacramento County, in a largely undeveloped and rural area adjacent to the city of Sacramento. The cumulative context for fire protection services is the Sacramento Fire Department (SFD) service area. This area includes the City of Sacramento, and rural areas outside the city limits where the SFD has a contract to provide primary aid – the Pacific/Fruitridge Fire Protection District and the Natomas Fire Protection District. Law enforcement services are provided by the Sacramento County Sheriff's Office, and its entire service area is considered. The cumulative context for school services is the geographic area served by the Natomas Unified School District (NUSD), which accepts K-12 students in North Natomas, South Natomas, unincorporated areas between the Sacramento River and I-5, and the area surrounding the Sacramento International Airport. The cumulative context for parks and recreation services is the area served by the City of Sacramento Department of Youth, Parks, & Community Enrichment, within the City of Sacramento, and the Sacramento County Department of Regional Parks. Finally, the cumulative context for library services is that area served by the Sacramento Public Library System, which encompasses all of Sacramento County.

CUMULATIVE IMPACTS EVALUATION

FIRE PROTECTION

The service area for the SFD includes 24 fire stations and covers 146 square miles throughout the Sacramento area. As development throughout the region continues to grow, the demand for fire protection services increases proportionally. Residential, commercial, industrial, and public uses all place a demand on fire protection services. The proximity of fire stations to the areas they serve is critical for effective fire suppression and emergency response. Several development projects are approved or proposed that would need these services, specifically the proposed Airport South Industrial Park project and Grandpark Specific Plan, and the approved Metro Air Park and Northlake specific plans in North Natomas (see Table CI-1 and Plate CI-1). As these projects would also require fire protection services within the SFD service area, there would be a need for the construction of new fire protection facilities. Therefore,

there would be a cumulative potentially significant impact to SFD services and facilities which could result from the construction of new fire protection facilities.

As the SFD implements a ratio of one fire station for every 16,000 new residents, the site of the potential fire station within the UWSP area would account for the 25,574 new residents associated with the proposed UWSP, in combination with the capacity of existing facilities. The physical impacts of the construction of the potential UWSP fire station are analyzed throughout the chapters of this Draft EIR. It is important to note that the proposed UWSP would be developed over many years, and the timing of that development would largely be driven by market forces that cannot be predicted with certainty. The same is true for other cumulative developments that could be built in the area over the next couple of decades. It is possible that at some point in the future, cumulative development could surpass the capacity of the new UWSP fire station and existing fire protection facilities to provide services at SFD's preferred service ratio. However, it is not possible to predict when that could happen or where any new facilities that might be required would be located. As such, it cannot be known what the environmental effects of constructing those facilities would be. Regardless, any actual construction that could be proposed in the future would be required to undergo a separate environmental review process and would only result in localized impacts. Therefore, the contribution of the proposed UWSP to this impact would not be cumulatively considerable, and the cumulative impact of the physical environmental effects of providing new or expanded fire protection services would be **less than significant**.

POLICE PROTECTION

The service area for the Sacramento County Sheriff's Office covers a total of 944 square miles in unincorporated portions of Sacramento County as well as the city of Rancho Cordova. As development throughout the region continues to grow, the demand for police protection services increases proportionally. Residential, commercial, industrial, and public uses all place a demand on police protection services. Typically, police vehicles are stored at a police station, but are not dispatched directly from the station. In that way, police services can be provided at some distance from actual stations or substations. There is a sheriff's substation included as part of the proposed UWSP that would support the population generated from the proposed plan. This substation, in combination with other facilities present within the Sheriff's Office service area, would serve the demand for police services resulting from cumulative development within unincorporated portions and of Sacramento County and the City of Rancho Cordova (see Table CI-1 and Plate CI-1). However, as development continues throughout the region, it may be necessary to expand an existing station or construct a new substation. Therefore, the cumulative impact on police protection services would be potentially significant.

Though the projects listed for cumulative consideration, in combination with the proposed UWSP, could have a cumulatively significant impact on police protection services in the Sheriff's Office service area, the proposed UWSP itself would not pose a cumulatively considerable contribution to this potential effect. The potential onsite Sheriff substation would meet the needs of future UWSP area residents. The physical impacts of the construction of the potential sheriff's substation are analyzed throughout

the chapters of this Draft EIR. Therefore, the contribution of the proposed UWSP to this impact would not be cumulatively considerable, and the cumulative physical environmental impact of providing new or expanded police protection services would be **less than significant**.

SCHOOLS

The NUSD service area currently operates 20 schools, five elementary schools, six K–8 schools, two middle schools, five high schools, one charter school serving grades K–12; and one school that is operated as a virtual academy. Students are generated when residential uses are constructed. Several projects throughout the North Natomas area and would include residential uses that would likely utilize the Natomas Unified School District’s facilities. Such projects include the Grandpark and Northlake specific plans (see Table CI-1 and Plate CI-1). The implementation of these plans would increase the demand for school services, which could have potentially significant physical effects through the construction of new facilities.

As previously discussed in Chapter 17, *Public Services and Recreation*, of this Draft EIR, the NUSD has sufficient capacity to serve some of the K-12 students generated within its service area. The proposed UWSP would construct K-8 schools and a high school to serve the needs of students generated in the UWSP area. The physical impacts of the construction of the proposed schools are analyzed throughout the chapters of this Draft EIR. In addition, pursuant to SB 50, development allowed under the proposed UWSP would be required to pay school impact fees, which is considered full mitigation for any impacts to school services that would result from the proposed plan. Therefore, the contribution of the proposed UWSP to this impact would not be cumulatively considerable, and the cumulative physical environmental effects of providing adequate school facilities would be **less than significant**.

PARKS AND RECREATION

The Sacramento Department of Youth, Parks, and Community Enrichment maintains approximately 4,265 acres of park land, including a mix of regional parks, community parks, neighborhood parks, and parkways, while the Sacramento County Department of Regional Parks maintains and operates more than 15,000 acres of parks throughout the county, including open spaces, multi-use trails, sports facilities, golf courses, river access, and picnic areas. As development within the region continues to expand, demand for parks and recreation facilities increases proportionally. The residential, commercial, and office uses proposed as part of the proposed UWSP would place a demand on existing City and County facilities. Several development projects which are approved or proposed (see Table CI-1 and Plate CI-1) would require the use of these facilities. As mentioned, such projects include the proposed Airport South Industrial Park project and Grandpark Specific Plan, and the approved Metro Air Park and Northlake specific plans in North Natomas. The implementation of residents and uses resulting from these projects and plans would result in a need for the construction of new parks and recreation facilities. Therefore, there would be a cumulative potentially significant impact to City and County parks and recreation facilities which could result from the construction of new facilities.

As the Sacramento County General Plan Policy PF-123 implements a ratio of 5 acres of parkland for every 1,000 residents, the proposed 149.1 acres which would be implemented through the proposed UWSP would be sufficient to meet the need for the 127.9 acres of parkland required for the 25,574 proposed residents. The physical impacts of the construction of the proposed parkland are analyzed throughout the chapters of this Draft EIR. Therefore, the contribution of the proposed UWSP to this impact would not be cumulatively considerable, and the cumulative impact on parkland would be **less than significant**.

LIBRARIES

The proposed UWSP is served by the Sacramento Public Library System (SPLS), which serves the County of Sacramento. As development within the Sacramento region continues to expand, the demand for library services increases. The residential, commercial, and other public uses proposed as part of the proposed UWSP would place demand on library services within the SPLS service area. Cumulative development within unincorporated and incorporated portions of Sacramento County (see Table CI-1 and Plate CI-1), such as the proposed Airport South Industrial Park project and Grandpark Specific Plan, and the approved Metro Air Park and Northlake specific plans in North Natomas, would also require library services. Given this increase in development, there would be a need for the construction of new library facilities within the SPLS service area. Therefore, the cumulative impact on library facilities would be potentially significant.

Though the projects listed for cumulative consideration in combination with the proposed UWSP could have a cumulatively significant impact on library facilities in the SPLS area, the proposed UWSP itself would not pose a cumulatively considerable contribution to this potential effect. The plan proposes a library to be shared with the Los Rios Community College District or NUSD, and thus increased demand for library services generated by new residents within the UWSP area would be met. The physical impacts of the potential construction of this library are analyzed throughout the chapters of this Draft EIR. Therefore, the contribution of the proposed UWSP to this impact would not be cumulatively considerable, and the cumulative impact on library services would be **less than significant**.

TRANSPORTATION

GEOGRAPHIC CONTEXT

The geographic context for the analysis of cumulative transportation effects is the immediate vicinity of nearby and similar project locations (see Plate CI-1) where impacts to the setting of transportation could occur.

CUMULATIVE SETTING

Consistent with the modeling year of SACOG's Sacramento Activity-Based Travel Simulation Model (SACSIM), Year 2040 was assumed as the cumulative buildout year for the cumulative transportation impact analysis. The partial or full buildout of several proposed and/or approved projects in North Natomas and in the Central City of

Sacramento (see Table CI-1 and Plate CI-1) were assumed in the cumulative setting. In addition, the following roadway connections within the study area were also assumed under cumulative conditions:

- Northpark Drive overcrossing of I-5 between East Commerce Way and El Centro Road
- Snowy Egret Drive overcrossing of I-5 between East Commerce Way and Duckhorn Drive
- I-5/Metro Air Parkway interchange
- Improvements to the I-80/West El Camino Avenue interchange, including widening of the interchange and modifications to the ramps
- New Truxel Road American River bridge from Garden Highway to Richards Boulevard
- Extension of East Commerce Way southerly to San Juan Road
- Meister Way overcrossing of SR-99
- Extension of Elkhorn Boulevard westerly to Crossfield Drive

Finally, the cumulative setting assumed development of the following currently vacant parcels within the City of Sacramento located west of I-5:

- Southeast quadrant of Arena Boulevard/El Centro Road – multi-family assumed per existing zoning
- Northeast quadrant of Arena Boulevard/Duckhorn Drive – employment center assumed per existing zoning
- East of Duckhorn Drive between Arena Boulevard and San Juan Road – employment center assumed per existing zoning
- West of El Centro Road between Del Paso Road and Manera Rica Drive – multi-family assumed per existing zoning
- Paso Verde School located north of Del Paso Road opposite Hovnanian Drive⁴

CUMULATIVE IMPACTS EVALUATION

PROGRAM, PLAN, ORDINANCE, OR POLICY ADDRESSING THE CIRCULATION SYSTEM

Like the proposed UWSP, cumulative development would be required to evaluate consistency with relevant programs, plans, ordinances, or policies related to transportation facilities. These include the County's General Plan, Caltrans' 2020-2024 Strategic Plan (Four Pillars of Traffic Safety) and plans and policies related to bicycle and pedestrian access and transit service. As discussed in Chapter 18, *Transportation*, of this Draft EIR, the proposed UWSP would be responsible for implementing Mitigation

⁴ The school has since been constructed and the parcel is no longer vacant.

Measures TR-1a, TR-1b, and TR-3a, which would address project-specific impacts related to bicycle and pedestrian accessibility and transit delay/transit demand impacts. However, as identified improvements to needed bicycle and pedestrian facilities would require approvals from Caltrans and the City of Sacramento, the County cannot compel these agencies to approve and allow construction of the specified improvements. Therefore, to the extent that cumulative impacts would occur in regard to consistency with any of these programs, plans, ordinances, or policies, the contribution of the proposed UWSP could be cumulatively considerable, and this cumulative impact would thus remain **significant and unavoidable**.

VEHICLE MILES TRAVELED

According to County's *Transportation Analysis Guidelines* (TAG), projects that do not demonstrate a significant VMT impact under baseline conditions can be presumed to also be less than significant in the cumulative year. This guidance is aligned with the Technical Advisory, which states:

“A project that falls below an efficiency-based threshold that is aligned with long-term environmental goals and relevant plans would have no cumulative impact distinct from the project impact. Accordingly, a finding of a less-than-significant project impact would imply a less than significant cumulative impact.”

Page 55 of the SACOG MTP/SCS states that average VMT per capita in the region is expected to decrease by 10 percent relative to current conditions by the Year 2040. This result is due to improved multi-modal transportation choices and planned land use growth in “low VMT areas.” Thus, the SACOG region planning principles and projections are aligned with the Technical Advisory in terms of long-term environmental goals to reduce VMT and greenhouse gas emissions.

As discussed in Chapter 18, *Transportation*, of this Draft EIR, the proposed UWSP would generate VMT per capita and per employee that are below the County's applicable thresholds, and the net change in VMT due to regional retail and roadway widening components would be negative (i.e., the increase in VMT resulting from roadway widenings would be offset by the reduction in VMT resulting from regional retail). Therefore, the cumulative impact of the proposed UWSP with respect to roadway network VMT is considered **less than significant**.

HAZARDS DUE TO DESIGN OR INCOMPATIBLE USES

RURAL ROADWAYS DESIGN STANDARDS

In consideration of cumulative traffic volumes on study area roadways, the TIA (see Appendix TR-1) found that the proposed UWSP would contribute substantially to cumulative impacts (i.e., over 6,000 ADT on roadways with less than 24 feet of pavement width and less than a six-foot shoulder) that would occur on the following Sacramento County rural roadways:

- Powerline Road: Bayou Way to Del Paso Road
- Powerline Road: Del Paso Road to Garden Highway

- Garden Highway: Powerline Road to Radio Road
- Garden Highway: Radio Road to San Juan Road

Without the proposed UWSP, these facilities would carry between 3,300 and 4,700 ADT. With the proposed UWSP, however, they would carry between 7,000 and 9,500 ADT. This increase in traffic is likely due to new vehicle trips to/from the proposed UWSP residential areas being attracted to employment uses contained within the proposed Metro Air Park. The proposed UWSP's contribution to this cumulative impact would be considered potentially significant.

To address the potentially significant cumulative impacts to rural roadways identified above, the following mitigation measure would be required. With implementation of Mitigation Measure C-TR-1, the cumulative impact related to degraded conditions on Powerline Road and Garden Highway would be **less than significant**.

Mitigation Measure C-TR-1: The project applicant shall pay their fair share cost of improving the following roadways to conform with current County design standards: Powerline Road from Bayou Way to Garden Highway; and Garden Highway from Powerline Road to San Juan Road. Payment for improvements would be made to Sacramento County who would be responsible for making the improvements. Alternatively, if a future update to the *Sacramento County Transportation Development Fee and Transit Impact Fee (SCTDF/TIF) Program* includes these shoulder improvements (noting that the 2019 Update includes 94 miles of added shoulders on rural roadways but not on these two roadways), then applicant payment of SCTDF/TIF fees would meet their fair share obligation.

The County's TAG indicates that when deficient operations (i.e., volume exceeding 6,000 ADT) are identified on substandard roadways, they should be upgraded to the current rural roadway standard, which consists of two 12-foot travel lanes and 6-foot paved shoulders. The fair share requirement reflects the fact that the impact would be cumulative in nature, and partially driven by other proposed land development and roadway improvements within the County.

The County's TAG indicates that when deficient operations (i.e., volume exceeding 6,000 ADT) are identified on substandard roadways, they should be upgraded to the current rural roadway standard, which consists of two 12-foot travel lanes and 6-foot paved shoulders. The fair share requirement reflects the fact that the impact would be cumulative in nature, and partially driven by other proposed land development and roadway improvements within the County.

FREEWAY OFF-RAMP QUEUES

In consideration of cumulative traffic volumes on study area roadways, the TIA (see Appendix TR-1) found that the proposed UWSP would contribute substantially to cumulative queuing impacts at both off-ramps at the I-5/Del Paso Road and I-5/Garden Highway interchanges and the northbound off-ramp at the I-5/Arena Boulevard interchange. This is likely caused by downstream surface street congestion (primarily at

intersections within the city of Sacramento such as Garden Highway/Truxel Road, Del Paso Road/El Centro Road, and Arena Boulevard/East Commerce Way) that causes traffic to spill back to the interchange, thereby hindering the flow of off-ramp traffic. With the proposed UWSP, all study freeway off-ramps would have maximum queues that exceed the available storage, and the proposed UWSP's contribution to this cumulative impact would be considered potentially significant.

To address the potentially significant cumulative queuing impacts identified above, Mitigation Measure C-TR-2 would be required, which includes recommended improvements at the surface street intersection bottlenecks along Arena Boulevard responsible for queues that spill back to the I-5/Arena Boulevard interchange. These improvements are outside the control of Sacramento County or Caltrans since they are located within the City of Sacramento. Therefore, the County cannot ensure that they will be constructed when needed. Testing of their effectiveness showed that they would result in both off-ramps at the I-5/Arena Boulevard interchange having maximum queue lengths that are within the available storage provided.

Note that Mitigation Measures TR-3a and TR-3e would improve conditions at the I-80/West El Camino Avenue interchange such that maximum queues do not spill onto I-80 under cumulative plus project conditions. Those same improvements would cause the northbound off-ramp maximum queue at the I-5/West El Camino Avenue interchange to also not spill back onto the freeway.

With respect to the off-ramp queues at the two remaining study interchanges (I-5/Arena Boulevard and I-5/Garden Highway), a variety of potential surface street improvements were tested along the roadways leading to this facilities. This involved collaboration with staff from the City of Sacramento regarding the viability of certain improvements. Improvements such as lane restriping, adding lanes, or modifying signal phasing were either found to not be effective or could also cause the need for additional right-of-way. At both interchanges, the following conclusions were reached. First, there are no known improvements planned at either interchange. Second, the feasibility of any surface street improvements that could reduce off-ramp queuing is not known.

Therefore, as the County cannot guarantee recommended improvements at the Arena Boulevard/El Centro Road and Arena Boulevard/East Commerce Way intersections listed under Mitigation Measure C-TR-2 that would improve off-ramp queues at the I-5/Arena Boulevard interchange and as potential surface street improvements to improve off-ramp queues at the I-5/Arena Boulevard and I-5/Garden Highway interchanges are not feasible, the cumulative impact related to freeway off-ramp queuing would remain **significant and unavoidable**.

Mitigation Measure C-TR-2: The project applicant shall construct or **pay its fair share** of the following improvements:

- At the Arena Boulevard/El Centro Road intersection, construct second westbound left-turn lane, second southbound through lane, restripe

eastbound right-turn lane to a shared through/right, and lengthen northbound right-turn lane to 400 feet with right-turn overlap arrow.

- At the Arena Boulevard/East Commerce Way intersection, pay fair share cost of installing an eastbound right-turn overlap phase.

Payment for improvements would be made to the City of Sacramento who would be responsible for making the improvements.

FREEWAY ON-RAMP RAMP METER QUEUES

The TIA (see Appendix TR-1) also found that the proposed UWSP would contribute substantially to cumulative queuing impacts at several on-ramp ramp meter locations due to traffic added to study area roadways by cumulative projects. Most freeway ramp meter on-ramp locations would continue to have sufficient storage for queues under cumulative conditions; however, the proposed UWSP would cause the maximum queue at the metered on-ramps at the I-5 southbound diagonal on-ramp at West El Camino Avenue (PM peak hour), I-5 southbound on-ramp at Del Paso Road (AM peak hour), and I-5 southbound loop on-ramp at Garden Highway (AM peak hour) to exceed their available storage. Therefore, the contribution of the proposed UWSP to this cumulative impact would be considered potentially significant.

To address the potentially significant cumulative on-ramp queuing impacts identified above, Mitigation Measure C-TR-3 is proposed, which would require that the project applicant pay its proportionate share percentage toward improvements at the interchanges discussed above. The fair share payment is to be made by the applicant to Sacramento County where it will be held in a custodial account. At such time that a lead agency (either City of Sacramento or Caltrans) indicates an intent to construct the specified (or other equally effective) improvements, the County will transfer the fair share payment to that appropriate agency. While this payment would represent the project's fair share contribution toward the improvements, it would not assure that the improvements would be constructed because the remaining fair share funding sources are not known at this time. Furthermore, it is unknown whether the City of Sacramento or Caltrans will approve construction of said improvements. Therefore, the cumulative impact with respect to freeway on-ramp ramp meter queues exceeding available capacity would remain **significant and unavoidable**.

Mitigation Measure C-TR-3: The project applicant shall pay its proportionate fair share percentage toward improvements at the I-5 SB diagonal on-ramp at West El Camino Avenue, I-5 SB loop on-ramp at Garden Highway, and I-5 SB diagonal on-ramp at Del Paso Road. Queuing could be reduced at each on-ramp by widening it to include a second metered lane (either general purpose or carpool).

EMERGENCY ACCESS

Like the proposed UWSP, cumulative development would be required to comply with applicable fire code requirements for emergency evacuation, including proper emergency exits for residents, visitors, and employees. Further, individual buildings proposed within each cumulative project would be subject to the review and approval of

access and circulation plans by the fire department with jurisdiction over the project site. Therefore, the cumulative impact would be **less than significant**.

TRIBAL CULTURAL RESOURCES

GEOGRAPHIC CONTEXT

The geographic context for the analysis of cumulative effects related to tribal cultural resources are the portions of the Central Valley identified as the territory of the local Native American communities.

CUMULATIVE IMPACTS EVALUATION

Cumulative development in portions of the Central Valley identified as the territory of the local Native American communities could result in significant cumulative impacts to tribal cultural resources as several confidential tribal cultural resources locations, including ethnographic landscapes and hundreds of pre-contact Native American archaeological resources, have been identified throughout the County according to the Native American Heritage Commission's Sacred Lands File and North Central Information Center database, respectively. Future development projects in unincorporated and incorporated portions of Sacramento County as well as in neighboring Placer and Sutter counties (see Table CI-1 and Plate CI-1) would be subject to review under CEQA and would be required to obtain necessary permits and approvals from federal and state resource agencies. As a result of these processes, each project would be required to avoid, minimize, and compensate for its impacts on sensitive tribal cultural resources in consultation with culturally-affiliated Native American tribes, such that the cumulative impact would be reduced, though not eliminated. Because not all such impacts from these other projects have been or can be reduced with certainty to less-than-significant levels, the loss of any tribal cultural resources would result in a significant cumulative impact.

As discussed in Chapter 19, *Tribal Cultural Resources*, of this Draft EIR, pre-contact Native American archaeological resources, some with potential human remains, as well as potential archaeological resources, are present within the UWSP area, all of which could be considered tribal cultural resources. Implementation of the proposed UWSP could negatively affect these tribal cultural resources, and while Mitigation Measures TRC-1 and TRC-2 along with Mitigation Measures CUL-2 and CUL-3 would be implemented to reduce the impacts of development allowed under the proposed UWSP on these resources, in some instances it may not be feasible to avoid resources, and the resource may need to be altered or destroyed. In addition, as the extent and location of such actions are not known at this time, it is not possible to conclude that the mitigation measures, or equally effective mitigation measures, would reduce significant impacts to a less-than-significant level in all cases. Therefore, implementation of the proposed UWSP could result in a considerable contribution to the cumulative loss of tribal cultural resources, and this cumulative impact would remain **significant and unavoidable**.

UTILITIES AND SERVICE SYSTEMS

GEOGRAPHIC CONTEXT

The geographic context for the analysis of cumulative effects related to utilities and service systems varies depending on the specific utility and service system being analyzed. To begin, as the City of Sacramento provides water service not only to projects in the City but also to development in unincorporated portions of North Natomas through agreements with the County, the geographic context for water supply, treatment, and distribution includes the water service area for the City of Sacramento, which includes most of the land within the city limits as well as small pockets of land adjacent to the city limits. Next, the geographic context for wastewater treatment, collection and conveyance includes the service area for the Sacramento Area Sewer District (SacSewer), which includes the cities of Citrus Heights, Elk Grove, Folsom, Rancho Cordova, Sacramento, and the unincorporated communities of Courtland, Locke, and Walnut Grove. Furthermore, the geographic context for storm drainage includes the area covered by the North Natomas Drainage Basin, which covers approximately 55,000 acres in northwestern Sacramento County and southeast Sutter County, while the geographic context for solid waste includes unincorporated and incorporated portions of Sacramento County that utilize the Kiefer Landfill. Finally, the geographic context for energy and telecommunications facilities storm drainage includes the service area covered by Pacific Gas & Electric (PG&E), the Sacramento Municipal Utility District (SMUD), and the telecommunications providers.

CUMULATIVE IMPACTS EVALUATION

INFRASTRUCTURE

As with the proposed UWSP, cumulative development in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1) would require the construction of necessary infrastructure (water and wastewater lines, storm drain facilities, electrical, natural gas, telecommunications infrastructure, etc.). As discussed in Chapter 20, *Utilities*, of this Draft EIR, while most infrastructure needed to serve development allowed under the proposed UWSP would be limited to the UWSP area, a 69 kV transmission line would need to be extended from the New Natomas Pump Station, located approximately 1.6 miles to the east, to the project site. The environmental impacts associated with the construction of infrastructure within the UWSP area have been addressed throughout this Draft EIR and project specific mitigation has been identified to reduce construction-related potential significant impacts to the maximum extent feasible. No specific environmental impacts related to the construction and installation of infrastructure have been identified. With respect to off-site improvements, as the 69 kV transmission line would be extended west along the northern edge of I-80, which has been previously disturbed, the construction of the transmission line would not result in significant environmental impacts. Therefore, the proposed UWSP would not have a cumulatively considerable contribution to a significant cumulative impact associated with construction of utility infrastructure, and this cumulative impact would be **less than significant**.

See *Water* below for a discussion of the need for expanded or new water treatment facilities. See *Wastewater* below for a discussion of the need for expanded or new wastewater treatment facilities.

WATER

The proposed UWSP, in combination with future growth within the water service area of the City of Sacramento, which includes projects in the City of Sacramento and several projects in North Natomas such as the proposed Airport South Industrial Park project and the approved Metro Air Park and Northlake specific plans in North Natomas (see Table CI-1 and Plate CI-1), would result in a net increase in demand for potable water supply. As shown in **Table CI-7**, cumulative development within the City's water service area would demand at least 24,809 AFY. As discussed in Chapter 20, *Utilities*, of this Draft EIR, the City's surplus water supply is projected to range from 224,768 AFY in 2025 to 216,258 AFY in 2045 during normal, single dry year and over multiple-dry-years and droughts up to five years. Thus, the City of Sacramento would have adequate planned water supply to serve development within the City's water service area, including the proposed UWSP, during normal, single dry, and multiple dry years. Therefore, this cumulative impact would be **less than significant**.

Table CI-7: Cumulative Water Demand within the City of Sacramento's Service Area

	Million Gallons per Day	Acre-feet per Year
City of Sacramento		
Aspen 1/New Brighton	--	--
Innovation Park/CNU Medical Center Campus	0.9	1,051
Northlake (previously known as Greenbriar)	2.4	2,680
Downtown/Central City Specific Plan	2.5	2,770
Panhandle	1.7	1,941
West Broadway Specific Plan	0.4	454
Railyards Specific Plan	2.0	2,278
River District Specific Plan	0.2	215
Delta Shores MDR-6 & MDR-7 Project	--	--
Airport South Industrial Project	0.3	314
Commerce Station P06-018	--	--
Sacramento County		
Sacramento International Airport	11.7	13,106
Metro Airpark		
WattEV		
Total	22.1	24,809
SOURCE: ESA 2024		

Furthermore, the proposed UWSP, in combination with future growth within the water service area of the City of Sacramento (see Table CI-1 and Plate CI-1), would also result in a net increase in demand for water treatment at the City's E.A. Fairbairn Water Treatment Plant and Sacramento River Water Treatment Plant. As shown in Table CI-7, cumulative development within the City's water service area would require the treatment of at least 22.1 mgd of water. As discussed in Chapter 20, *Utilities*, of this Draft EIR, both water treatment plants have a combined excess capacity of 85 mgd. As a result, it is expected that this excess capacity would be sufficient to accommodate future development in the City water service area, including the proposed UWSP, through 2045. Therefore, this cumulative impact would be **less than significant**.

WASTEWATER

The proposed UWSP, in combination with future growth within the service area of SacSewer, which includes some of the projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1), would result in a net increase in the amount of wastewater treated by the Sacramento Regional Wastewater Treatment Plant (SRWWTP EchoWater Facility), which is owned and operated by Regional San. As discussed in Chapter 20, *Utilities*, of this Draft EIR, the SRWWTP EchoWater Facility has a current excess capacity of up to 46 mgd. In addition, SacSewer expects per capita consumption to fall 25 percent over the next 20+ years through the ongoing installation and use of water meters, as well as compliance with conservation mandates such as the state Water Conservation Act of 2009 (SB X7-7). As a result, it is expected that remaining treatment capacity would be sufficient for at least 40 more years. Therefore, considering these conditions, enough treatment capacity exists to serve future growth within the service area of SacSewer, including the proposed UWSP, and this cumulative impact would be **less than significant**.

SOLID WASTE

The proposed UWSP, in combination with future growth within Sacramento County, which includes some of the projects in the vicinity of the UWSP area (see Table CI-1 and Plate CI-1), would result in a net increase in the amount of solid waste disposed of at the Kiefer Landfill. As discussed in Chapter 20, *Utilities*, of this Draft EIR, the Kiefer Landfill presently has approximately 75 million cubic yards of available capacity and is expected to be operational until 2098. As a result, it is expected that remaining disposal capacity would be sufficient to accommodate future development in Sacramento County for the foreseeable future. In addition, all cumulative projects would also be subject to the same local and state management and reduction statutes and regulations related to solid waste. Therefore, considering the amount of available disposal capacity and required compliance with state and local solid waste standards, enough disposal capacity exists to serve future growth within Sacramento County, including the proposed UWSP, and this cumulative impact would be **less than significant**.

23 GROWTH INDUCEMENT AND URBAN DECAY

GROWTH-INDUCING EFFECTS

As stated in Section 15126.2(e) of the CEQA Guidelines, an EIR must discuss ways in which a proposed project could foster economic or population growth or the construction of additional housing, either directly or indirectly, in the surrounding environment. Also, the EIR must discuss the characteristics of the project that could encourage and facilitate other activities that could significantly affect the environment, either individually or cumulatively. Growth can be induced in several ways, such as through the elimination of obstacles to growth, through the stimulation of economic activity in the region, or through the establishment of policies or other precedents that directly or indirectly encourage additional growth.

The purpose of this analysis is to evaluate the potential growth-inducing effects on the city of Sacramento and the region due to the implementation of the proposed UWSP. Additional analysis of the growth-inducing effects from the proposed UWSP is provided in Chapter 14, *Land Use*, and Chapter 16, *Population and Housing*.

In general, a project may foster spatial, economic, or population growth in a geographic area if the project removes an impediment to growth (e.g., establishes an essential public service; provides new physical or transportation access to an area; results in a change in zoning or approval of a general plan amendment), or if economic expansion or growth occurs in an area in response to the project (e.g., changes in revenue base, employment expansion). These circumstances are described further below.

- **Elimination of Obstacles to Growth:** The extent to which a proposed project removes infrastructure limitations, provides infrastructure capacity, or removes regulatory constraints that could result in growth unforeseen at the time of project approval.
- **Economic Effects:** The extent to which a proposed project could cause increased activity in the local or regional economy. Economic effects can include such effects as the multiplier effect. A multiplier is an economic term used to describe interrelationships among various sectors of the economy. The multiplier effect provides a quantitative description of the direct employment effect of a project, as well as indirect and induced employment growth. The multiplier effect acknowledges that the on-site employment and population growth of each project is not the complete picture of growth caused by the project.

ELIMINATION OF OBSTACLES TO GROWTH

The elimination of physical obstacles to growth is considered a growth-inducing effect and one way a project may remove an impediment to growth would be through establishment of an essential public service. The proposed UWSP would result in the elimination of an obstacle to growth by extending the Urban Services Boundary and

Urban Policy Area to serve the ~~4,532~~ **1,524**-acre Development Area (see Plate PD-5 in Chapter 2, *Project Description*), both of which currently border the UWSP area to the north and east. However, as discussed in Chapter 14, *Land Use*, the proposed UWSP is consistent with Sacramento County General Plan Policy LU-120, which is intended to reduce impacts of many different types – such as growth inducement, unacceptable operating conditions on roadways, poor air quality, and lack of appropriate infrastructure – by establishing design criteria for all amendments to the Urban Policy Area. Furthermore, as the Urban Services Boundary and Urban Policy Area would not be extended to include the adjacent ~~534~~ **542**-acre Ag Buffer, the pressure to develop properties to the west of the development area would be reduced as any future development in this area would need to show consistency with General Plan Policy LU-120 and seek discretionary approval from the Sacramento County Board of Supervisors.

ECONOMIC EFFECTS

The commercial and office uses that would be developed under the proposed UWSP could result in an estimated 8,900 new jobs (EPS 2022). In addition to the employment growth generated by the proposed UWSP, additional local employment could be generated through what is commonly referred to as the multiplier effect. The multiplier effect refers to the secondary economic effects caused by spending from project-generated residents and employees. The multiplier effect tends to be greater in regions with larger diverse economies, given a decrease in the requirement to import goods and services from outside the region, as compared to the effects of spending in smaller economies where goods and services must be imported from elsewhere.

Two different types of additional employment are tracked through the multiplier effect. *Indirect employment* includes the additional jobs generated through residents' expenditure patterns and direct employment associated with the proposed UWSP. For example, future residents and employees in the UWSP area would spend money in the local economy, and the expenditure of that money would result in the creation of additional jobs. Indirect jobs tend to be relatively close to places of employment and residences.

The multiplier effect also calculates *induced employment*. Induced employment follows the economic effect of employment beyond the expenditures of employees in the project area to include jobs created by the stream of goods and services necessary to construct projects and support businesses in the UWSP area. For example, when a manufacturer buys or sells products, the employment associated with those inputs or outputs is considered induced employment. As an additional example, when an employee who works in a non-residential space developed under the proposed UWSP goes out to lunch, the person who serves the employee lunch holds a job that was indirectly caused by the proposed UWSP. When that server then goes out and spends money in the economy, the jobs generated by this third-tier effect are considered induced.

The multiplier effect also considers the secondary effect of employee expenditures. Thus, it includes the economic effect of the dollars spent by those employees who

purchase goods and services in support of the jobs created by implementation of the proposed UWSP.

Increased employment in the UWSP area would support increased purchases of supplies, equipment, and services from businesses in Sacramento and nearby cities and from businesses located elsewhere in the region and beyond the Sacramento area. The increased spending also would initiate subsequent rounds of additional business spending by those and other businesses. Increased employment in the UWSP area would provide increased wage and salary incomes that would support additional household spending for a wide variety of goods and services.

Increased future employment generated by resident and employee spending ultimately results in physical development of space to accommodate those employees. The characteristics of this physical space and its specific location determine the type and magnitude of environmental impacts of this additional economic activity. Although the economic effect can be predicted, the actual environmental consequences of this type of economic growth are too speculative to predict or evaluate because they can be spread throughout the Sacramento region and beyond. Some of the increased employee spending would occur near the UWSP area and more of it would occur near employees' places of residence, many of which would be in Sacramento and nearby cities, and elsewhere in the Sacramento region. The additional employee spending would support business activity and jobs and initiate subsequent rounds of additional spending.

ENVIRONMENTAL EFFECTS OF INDUCED GROWTH

While economic and employment growth in the project area is the intended consequence of the proposed plan, growth induced directly and indirectly by the proposed UWSP could also affect the greater Sacramento region. Potential effects caused by induced growth in the region could include increased traffic congestion; increased air pollutant emissions; loss of agricultural land and open space; loss of habitat and associated flora and fauna; increased demand on public utilities and services, such as fire and police protection, water, recycled water, wastewater, solid waste, energy, and natural gas.

URBAN DECAY

The analysis of urban decay in this chapter is based on the Upper Westside Specific Plan Urban Decay Analysis, prepared by Economic & Planning Systems, Inc. (EPS), for the proposed UWSP, included in this EIR in Appendix UD-1. The analysis is based on an estimated 30-year buildout period, commencing in 2022 and ending in 2052.¹ The

¹ Two years have passed since the Urban Decay Analysis was prepared. According to EPS, updating the study period from 2024 to 2054 would not significantly change the key findings found in the analysis (Lapin 2024).

analysis includes an examination of Phase 1 of the proposed UWSP,² which comprises a 20-year buildout.

ECONOMIC AND SOCIAL EFFECTS

Under CEQA, economic or social effects are not considered significant effects on the environment. Rather, these effects are considered in the context of their potential linkage or indirect connections between a project and physical environmental effects. More specifically, the direction for treatment of economic and social effects is stated in Section 15131(a) of the CEQA Guidelines:

Economic or social effects of a project shall not be treated as significant effects on the environment. An EIR may trace a chain of cause and effect from a proposed decision on a project through anticipated economic or social changes resulting from the project to physical changes caused in turn by the economic or social changes. The intermediate economic or social changes need not be analyzed in any detail greater than necessary to trace the chain of cause and effect. The focus of the analysis shall be on physical changes.

A social or economic change also may be considered in determining whether the physical change is significant (CEQA Guidelines Section 15382).

Anticipated economic or social effects of a project may be used in the determination of the significance of physical changes caused by the project (CEQA Guidelines Sections 15064(e), 15131(b)). As required by CEQA, the focus of the analysis in this EIR is on the physical changes that would result from the approval and implementation of the proposed UWSP. Consistent with the requirements of CEQA, this EIR includes consideration of potential adverse physical environmental effects that could be the result of socioeconomic and/or economic changes that could be triggered by the proposed plan, and as appropriate considers social and economic factors that may affect the significance of a physical effect. Chapter 16, *Population and Housing*, considers socio-economic effects related to the potential of the proposed UWSP to result in displacement of housing or residents. The discussion below focuses on the socio-economic issue of urban decay.

TERMINOLOGY

As used in CEQA, the term “urban decay” was introduced by the California Court of Appeal in the case entitled *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184 (*Bakersfield Citizens*). In that decision, the court required the City of Bakersfield to revise and recirculate two EIRs for two proposed Wal-Mart stores because the documents both failed to address the possible indirect physical effects flowing from the direct economic effects of the two projects. Although the court did not expressly define urban decay, the court seemed to equate the concept with a

² Phase 1 consists of 9,356 dwelling units and approximately 2.0 million square feet of retail and other non-residential space.

“chain reaction of store closures and long-term vacancies, ultimately destroying existing neighborhoods and leaving decaying shells in their wake.”³

For the purposes of this assessment and consistent with the above-described court decision, urban decay is not simply a condition in which buildings become vacant as businesses compete with each other in the normal course of the market-based economy, nor is it a condition where a building may be vacated by one business or use and reused by a different business or for alternative purposes. Rather, under CEQA and for the purposes of analysis in this EIR, urban decay is defined as a physical deterioration of properties or structures that is so prevalent, substantial, and lasting for a significant period of time, that it impairs the proper use of the properties and structures, and the health, safety, and welfare of the surrounding community. Physical deterioration includes abnormally high business vacancies, abandoned buildings, boarded doors and windows, long-term unauthorized use of the properties and parking lots, extensive or offensive graffiti painted on buildings, dumping of refuse or overturned dumpsters on properties, dead trees and shrubbery, and uncontrolled weed growth.

Prolonged business vacancies that could result in urban decay generally result from a lack of sufficient demand for commercial goods or services in a market area. Under these conditions, there is insufficient demand for the provision of goods or services to support the existing inventory of developed commercial space in a market area. In any market area, a small percentage of commercial vacancy is common and is considered a natural part of the market economy. In most market areas, the vacant or partially occupied commercial spaces are regularly maintained, as vacancies are assumed to be temporary and building owners have an economic incentive to maintain their property to make it more attractive for future tenants. Urban decay conditions can potentially occur in market areas where a large, persistent deficit in the demand for commercial services exists, relative to the available inventory of commercial space.

EXISTING RETAIL CONDITIONS

MARKET AREA DESCRIPTION

A retail market area represents the area surrounding proposed retail uses from *which the majority of* customer patronage is expected to be drawn. A retail market area is influenced by a variety of factors, including the location and density of the targeted residential population, the location of key competitors, the relative distance or travel time for each of the above, geographic and psychological barriers, and existing commute and shopping patterns. Retail establishments outside a given retail market area are not considered to be at risk of urban decay from development in the retail market area based on a nominal set of overlapping supply and demand dynamics.⁴ The

³ City of Bakersfield. 2004. *Bakersfield Citizens for Local Control v. City of Bakersfield* (2004) 124 Cal.App.4th 1184. Page 1204.

⁴ More information regarding the rationale for excluding the impacts to retail outlets adjacent but outside of the Market Area defined for the proposed plan is provided in Appendix UD-1.

defined Market Area for this analysis corresponds with Sacramento Area Council of Government Traffic Analysis Zones (TAZs), located in the following subareas:⁵

- North Natomas (County);
- NW Vision Area;
- South Natomas; and
- West Sacramento (Yolo County)

The boundaries of the Market Area were defined based on an evaluation of existing population density within TAZ boundaries surrounding the UWSP area, a maximum of 10-minute drive times to and from the center of the UWSP area during high traffic times to the boundaries, existing retail centers, the physical barrier of the Sacramento River, and perceived barriers of major highways including Interstate 5 and Interstate 80.⁶

RETAIL MARKET CONDITIONS IN MARKET AREA

RETAIL MARKET INVENTORY

As of the end of 2021, the Market Area had an estimated 5.1 million square feet of retail space. The northern portion of the Project Market Area is located in the North Natomas area of the County and contains the largest concentration of retail space. This segment of the Project Market Area includes a sizable mixture of neighborhood-, community-, and regional-serving retail shopping centers with major shopping destinations such as the Promenade at Sacramento Gateway, Natomas Marketplace, Park Place II regional centers, Park Place I, Natomas Town Center, and Market West Shopping Center community centers.⁷ Most of these centers are concentrated along Del Paso Road, Truxel Boulevard, and Arena Boulevard and were built between 14 and 19 years ago, except for Natomas Marketplace, which was built in 1997, about 22 years ago. Many of the neighborhood-oriented shopping centers are located along Northgate Boulevard and West El Camino Avenue, and tend to be older, built in the 1980s.

The southern portion of the Market Area, comprising the northern portion of the City of West Sacramento in southeast Yolo County, also contains a smaller mixture of neighborhood-, community-, and regional-serving retail shopping centers with major shopping destinations such as the Riverpoint Marketplace and West Capitol Plaza. There are several neighborhood-serving shopping centers concentrated on W. Capitol

⁵ A TAZ is a unit of geography used in transportation planning models.

⁶ A 10-minute drive time is reflective of the estimated time it would take to drive within the typical trade area mileage size defined by the International Council of Shopping Centers specific to the type of retail within the Project. Neighborhood-serving retail space has a typical trade area boundary of about 3 miles and the community commercial has a typical trade area of approximately 3 to 6 miles.

⁷ With respect to new retail space constructed in the Market Area between 2022 and 2024, although the specific tenants in the retail space recently constructed in the Market Area were not identified in the Urban Decay Analysis, EPS concludes it is reasonable to assume the recent retail space constructed in the Market Area is accounted for in the cumulative portion of the analysis (Lapin 2024).

Avenue, Jefferson Boulevard, and Harbor Boulevard on the southern edge of the defined Market Area.

In addition to shopping center retail, the Market Area includes approximately 1.1 million square feet of freestanding retail buildings. The majority of this square footage comprises food and beverage tenants, gas stations, and service retail such as daycare centers and car rental businesses. Two of the larger spaces include a former Fry's Electronics, which is in the process of being converted into an industrial park, and a California Family Fitness.

RETAIL MARKET PERFORMANCE INDICATORS

The Market Area's current estimated retail supply of about 5.1 million leasable square feet is dominated by existing inventory located in Sacramento County (70 percent), with the remaining 30 percent located in the West Sacramento (Yolo County) portion of the Market Area. The Market Area contains about 1.4 million square feet of neighborhood-serving retail, 630,900 square feet of community serving retail, 2.0 million square feet of regional-serving retail, and 1.1 million square feet of freestanding retail. While the Park Place I and II shopping centers are not physically in the Market Area, they are included as part of the Market Area since they land just outside of the boundary.

Vacancy rates have experienced declines since 2010 in the Market Area, the City, and County with a sharp decline in the Market Area between 2012 to 2013 from 9.2 percent down to 5.5 percent, and current rates reflect very little vacancy around 3.4 percent compared to 7 percent within the City and 6.5 percent within the County. A vacancy rate of 3.4 percent reveals a tight market with very little room for movement for existing and new businesses indicating the potential for additional supply. The retail market in the Market Area is relatively healthy as evidenced by market performance indicators noted above, corroborated by information obtained from real estate broker reports, and examples of re-tenanting.

The Market Area has had positive net absorption over the past 3 years and a total positive net absorption of more than 337,000 square feet since 2010 with only 3 years of negative net absorption, all under 65,000 square feet. Average annual lease rates for the Market Area have fluctuated from a low of \$17.00 per square foot up to \$21.88 per square foot (over the past 11 years) and fell to around \$19.89 per square foot for 2021. Lease rates for the City and County have fluctuated as well and fall a little more than \$2.00 less per square foot than in the Market Area, achieving rates around \$17.90 and \$17.40 in 2021.

Overall, the Market Area also appears to maintain a healthy, but tight retail market with only two available spaces comprising more than 20,000 square feet, including a former 34,860-square-foot Safeway in West Capitol Plaza (vacant since 2018) and a 28,700-square-foot former Big Lots (vacant since 2014) in the Northgate Shopping Center. The re-tenanting of these vacant spaces is anticipated as the Market Area has demonstrated positive net absorption over the past 3 years, as area retail continues to evolve with the changing market.

The consistent low vacancy rates, positive net absorption, and steady lease rates in the Market Area indicate a healthy retail market with the ability to sustain new retail growth commensurate with new household growth and additional sources of demand, such as new employees.

MARKET ANALYSIS

PROJECTED INCREMENTAL NEW RETAIL DEMAND

The proposed UWSP is estimated to capture newly created demand from residential growth in the Market Area. Two components of residential growth in the Market Area are estimated separately: Households within the UWSP area and households outside of the UWSP area. In addition, the proposed UWSP will generate new retail demand from new employees within the UWSP area. These components of net new demand are described in further detail below.

PROJECT-GENERATED DEMAND

DEMAND FROM OCCUPIED HOUSEHOLDS

An estimated 8,830 new occupied households within the UWSP area will generate demand for retail development within the UWSP area itself, as well as in and outside the Market Area. Please note that occupied housing units are assumed to be a proxy for households. To estimate retail spending from new households within the UWSP area, it was estimated that average household income by unit type was based on the estimated assessed value of the unit. The analysis estimated total annual spending by occupied households within the UWSP area at \$204.4 million.

It is estimated that 80 percent of project household expenditures will occur inside the Market Area (\$163.5 million). Of the \$163.5 million spent in the Market Area, a portion of project household spending is estimated to be captured by retail outlets in the UWSP area. It is estimated that project households will spend \$104.6 million within retail outlets in the UWSP area, representing 64 percent of spending in the Market Area and 51 percent of total project household spending on all retail goods and services (e.g., spending at any retail outlet in or outside of the Market Area including e-commerce outlets).

DEMAND FROM PROJECT EMPLOYEES

The non-residential development included in the proposed UWSP is anticipated to generate jobs for approximately 6,802 office employees and 2,110 other employees at buildout. To avoid overcounting employees who also may reside in the UWSP area, the analysis assumed that nonresident employees comprise 85 percent of the UWSP area employee population. Based on a 48-week per year work schedule and average weekly spending of \$153 per office employee, derived from data on office-worker retail spending from the International Council of Shopping Centers, office employees within the UWSP area will generate an estimated \$34.0 million in demand for retail space at buildout of the proposed UWSP.

Given the size of the Market Area, the location of competitive retail, and the amount of planned retail in the UWSP area, it is estimated that UWSP employees likely will stay close to their place of employment for their weekly spending. The Market Area is anticipated to capture 80 percent of UWSP office employee demand for retail space, and UWSP retail space will capture a portion of this office employee demand for retail space in the Market Area. It is estimated that the proposed UWSP will capture \$30.5 million of project-generated new office employee spending, equating to approximately 90 percent of anticipated spending captured in the Market Area and 72 percent of total office employee spending.

Spending by employees at the other nonresidential land uses in the UWSP area, including retail, hotel, and institutional spending, is estimated to generate an estimated \$5.2 million in demand for retail space at buildout of the proposed UWSP. Similar to UWSP office employees, it is estimated that UWSP other nonresidential employees will likely stay close to their place of employment for their weekly spending. It is estimated that the Market Area will capture 80 percent of UWSP other nonresidential employee spending, and UWSP retail will capture a portion of that employee spending. After applying the capture rates by category, the proposed UWSP is estimated to capture \$3.8 million of project-generated new other nonresidential employee spending, equating to approximately 90 percent of spending captured in the Market Area and 72 percent of total employee spending.

SUMMARY OF PROJECT -GENERATED RETAIL DEMAND

The total project-generated demand for retail within the UWSP area at buildout is \$139.0 million. This amount of retail spending is based on estimated demand from new project households and employees. Project-generated demand in the remainder of the Market Area is \$58.5 million. The total project-generated demand for retail space in the Market Area (including the proposed UWSP) is estimated to be \$197.4 million.

EXISTING RETAIL DEMAND

EXISTING HOUSEHOLD SPENDING IN THE MARKET AREA

In addition to incremental demand from households within the UWSP area, non-residential development included in the proposed UWSP can capture demand from existing household spending within the Market Area. On average, Market Area households have a household income of approximately \$82,000 and spend about 24 percent of their income on retail goods and services (approximately \$19,600 per year). The total annual retail spending estimate from existing Market Area households is \$444.4 million.

PROJECT CAPTURE OF MARKET AREA DEMAND (EXCLUDING PROJECT-BASED SOURCES)

The proposed UWSP is estimated to be built out over a 30-year time frame, from 2022 to 2052. During this time, the Market Area will experience residential growth outside of the UWSP area. It is estimated that there will be approximately 22,700 new households in the Market Area, excluding new households proposed in the UWSP area, through 2052. Using average estimated Market Area spending per household of approximately

\$19,600, new households in the Market Area are estimated to add \$444.4 million in spending power by 2052. Existing and new retail development in the Market Area is estimated to capture 80 percent of incremental new Market Area household spending for a total of \$355.6 million at buildout. Of the \$355.5 million spent in the Market Area, a portion of Market Area household spending is estimated to be captured by retail outlets in the UWSP area.

Applying a 37 percent capture rate, which is the average of the estimated capture rates by retail category, the total estimated new Market Area household spending captured by the proposed UWSP is \$130.0 million, or approximately 29 percent of new Market Area household spending (excluding households within the UWSP area).

COMPETITIVE RETAIL SUPPLY

EXISTING COMPETITIVE RETAIL SUPPLY

The Market Area has a current estimated retail supply of nearly 5.2 million leasable square feet that includes approximately 1.4 million square feet of neighborhood-serving retail, 879,000 square feet of community-serving retail, 2.0 million square feet of regional-serving retail, and 1.1 million square feet of freestanding retail. Total retail sales in the Market Area are estimated at approximately \$1.4 billion.

PROJECTED PROJECT SALES

The proposed UWSP as planned is anticipated to comprise approximately 338,900 occupied retail square feet in Phase 1 and a remaining 179,300 occupied retail square feet at buildout for a total of 518,200 square feet of occupied retail space. Sales for the proposed UWSP were estimated by assigning each retail shopping center type an estimated sales-per-square-foot figure in 2022 dollars. The total projected sales within the UWSP area at buildout are approximately \$263.3 million. These projected sales are anticipated to increase existing Market Area retail sales by approximately 18 percent.

ESTIMATED PIPELINE SUPPLY

Several competitive projects have been identified in the Market Area. These include Northlake located along the north boundary of the Market Area near the Highway 99-Interstate 5 Interchange; Northpointe located southwest of Northlake below Interstate 5; Innovation Park and California Northstate University (CNU) Campus located east of the UWSP area on the other side of Interstate 5; and 681 W. Capitol Ave and Raley's Landing located south of the UWSP area and Interstate 80 in West Sacramento. Projects located outside of the Market Area that reflect the continued expansion of the City's North Natomas Community Planning Area include Metro Air Park, Grandpark, the Panhandle, Town Center East, and North Natomas Square, as well as Sutter Pointe located within Sutter County just north of the Sacramento County boundary. Many approved and proposed projects contain broad project descriptions that provide a gross amount of commercial or retail acreage.

The commercial retail supply pipeline is projected to total almost 912,000 square feet of retail in the Market Area, excluding proposed retail development in the UWSP area.

This amount of retail space, which includes 472,200 square feet of community retail and 440,000 square feet of neighborhood retail, would increase the existing retail supply in the Market Area (5.2 million square feet) by approximately 18 percent. It is important to note that some of these projects have not been approved or have speculative development timelines and the buildout of all proposed acreage will be dependent on future market conditions. It is assumed that the projected square footage of the planned retail in Northlake, Innovation Park & CNU Medical Campus, Raley's Landing, and 681 West Capitol will be fully developed by 2052 and that approximately 50 percent of the North Pointe project will be developed as this is a newly proposed project.

With market adjustment factors for other sources of demand that may affect the market area, the total proposed retail supply in the Market Area estimated to be absorbed by 2052 is 638,800 square feet—or an increase of about 13 percent in occupied retail space—with 355,100 square feet of community retail and 283,700 square feet of neighborhood retail.

PIPELINE SALES

The total projected sales for cumulative retail projects in the Market Area, excluding the proposed UWSP, are approximately \$273.2 million. These projected sales, excluding the proposed UWSP, are anticipated to increase existing Market Area retail sales by approximately 17 percent.

URBAN DECAY IMPLICATIONS OF PROPOSED RETAIL

ESTIMATED PROJECT-SPECIFIC RETAIL IMPACTS

As described previously, the proposed UWSP is estimated to add more than 8,800 households (roughly 24,200 residents) from now until the anticipated buildout of the Project (2022 through 2052). This household growth, as well as new project employment, will generate demand for retail space both in and outside the UWSP area and larger project Market Area. The proposed UWSP is anticipated to add approximately 541,200 occupied building square feet of retail space at buildout, comprising community- and highway-serving retail.

The proposed additional occupied space in the UWSP area will contribute approximately \$170.0 million in annual retail sales to the Market Area for Phase 1 and \$263.3 million at buildout. Estimated retail sales associated with the proposed UWSP area represent an approximate 12 percent increase over the existing normalized supply for Phase 1, increased to 18 percent at buildout, measured in terms of sales. Of projected sales in the UWSP area, approximately \$127.4 million (75 percent of UWSP retail sales) in Phase 1 and \$139.0 million (53 percent of UWSP retail sales) at buildout represent the proposed UWSP's estimated capture of the new Project development spending (from new households and employees within the UWSP area).

The remaining project sales that will need to be captured by external sources of demand outside of the UWSP area are \$42.2 million in Phase 1 and \$124.3 million at buildout. The Market Area is estimated to capture \$61.4 million in Phase 1, and

\$58.5 million at buildout, of new project household spending, excluding the spending captured within the UWSP area itself.

There is an estimated surplus of demand from project households and new Market Area households of \$19.1 million (1.3 percent of current Market Area sales) for Phase 1, stemming from the projected total buildout of residential units within the UWSP area during Phase 1. The addition of the remainder of the nonresidential development at buildout creates an estimated deficit of about \$65.8 million in sales (4.6 percent of current Market Area sales) that will need to be captured from households and other sources of demand outside of the Market Area. The remaining \$65.8 million of total retail sales generated by the UWSP area would be attributable to a shift of sales from existing retail establishments in the Market Area.

While the proposed UWSP would capture most of the incremental new demand, it would also result in a nominal sales deficit of approximately 4.6 percent from existing establishments in the Market Area. Although there is no absolute rule, most establishments usually can withstand a short-term sales shift of 5 percent to 7 percent over a 3- to 5-year timeframe, as this typically represents a business cycle downturn. It is estimated that this nominal sales shift will decline as population and employment growth continues in the Market Area.

The estimated nominal shift from existing retail establishments is unlikely to create conditions in the Market Area conducive to urban decay, defined as the substantial and prolonged physical deterioration of properties or structures resulting in discontinued use and investment. This is because the degree to which the market would be affected does not exceed thresholds at which a healthy retail sector could recover. In other words, property owners and tenants are likely to have an economic incentive to maintain their businesses (and properties) with the expectation that longer-term market trends are likely to be favorable. As mentioned, it is estimated that the sales shift will continue to decline as demand in the Market Area continues to expand based on population growth.

ESTIMATED CUMULATIVE RETAIL IMPACTS

There is a moderate amount of retail space in future planned and proposed projects located in the Market Area. As described above, planned and proposed projects in the Market Area (excluding the UWSP area) are estimated to comprise 912,000 gross building square feet of retail space. Approximately 93 percent of this retail space (849,400 gross building square feet) is anticipated to be absorbed by 2052, concurrent with buildout of the proposed UWSP. Approximately 638,800 square feet of cumulative occupied space, excluding the proposed UWSP, is planned to serve Market Area households by 2052. Adding in the estimated occupied retail space in the proposed UWSP, the total net new occupied retail space planned by 2052 is 1.2 million square feet. The 1.2 million square feet of net new absorbed space, including the proposed UWSP, represents an approximate 23 percent increase relative to existing inventory in the Market Area. In comparison, total households in the Market Area, including the UWSP area, are estimated to increase by approximately 46 percent.

In addition to the UWSP retail sales estimate of approximately \$263.3 million at buildout (2052), other future planned retail space in the Market Area will add approximately \$285.3 million in annual retail sales to the Market Area, for total new retail sales of nearly \$548.6 million annually, with the UWSP area accounting for 48 percent of the future pipeline supply at buildout in the Market Area. The Market Area is estimated to capture \$327.0 million in Phase 1 (2042) and \$355.5 million at buildout (2052) of net new Market Area spending, excluding net new UWSP household and employee spending. Retail within the UWSP area is estimated to capture project-generated household and employee spending of \$186.0 million in Phase 1 and \$197.4 million at buildout. Total estimated net new spending in the Market Area is estimated to be \$513.0 million in Phase 1 and \$553.0 million at buildout.

After accounting for the net new spending captured in the Market Area for the proposed UWSP and the other cumulative Market Area retail projects there is an estimated surplus of demand available to support existing Market Area retailers from households within the UWSP area and new Market Area households of \$58.1 million (4.1 percent of current Market Area sales) for Phase 1 and \$4.4 million at buildout (0.3 percent of current Market Area sales).

The small percentage of available spending for Market Area retailers after the absorption of the proposed UWSP and the cumulative projects indicates an appropriate amount of retail planned for future household growth. As the Sacramento Region, including the Market Area, continues to experience residential and employment growth, this percentage is expected to increase over time and indicates that development within the Market Area is unlikely to result in existing retail outlets becoming vacant or remaining vacant for a sustained period. Thus, the percentage of available spending is unlikely to lead to conditions conducive to urban decay. With the Market Area exhibiting strong market fundamentals, property owners and tenants will have an economic incentive to maintain their properties and businesses.

Further, with much of the existing supply of retail space in the Market Area being relatively new and well maintained, there is no evidence to suggest that the existing retail space would be susceptible to vacancies based on the sole introduction of new retail space elsewhere in the Market Area.

The character of new retail space planned in the Market Area, including the UWSP area, primarily is either community- (61 percent of total) or neighborhood-serving (25 percent of total), with the remainder identified as highway-serving (14 percent of total). New neighborhood-serving retail is developed to serve proximate new residents and will be financed and developed only when sufficient surrounding residential support exists, ensuring that impacts on existing retail outlets in the Market Area are minimal. With the plentiful inventory of existing community- and regional-serving retail in the Market Area and adjacent jurisdictions and the larger Sacramento Region, new community- and regional-serving retail also will be financed and developed only if sufficient net new market support exists. This type of retail space will require differentiation from the existing community and regional retail outlets in and beyond the Market Area to successfully attract sufficient consumer demand. With the Market Area

exhibiting strong market fundamentals, it is unlikely existing retail space would be susceptible to vacancies based on the sole introduction of identified new retail space elsewhere in the Market Area.

Further, it is important to note that the estimate of net new sales excludes other sources of demand for retail space in the Market Area, including demand from employment growth in the Market Area outside of the UWSP area, and demand from residents and pass-by trips originating from outside the Market Area. These additional sources of demand would bolster the estimated demand for existing retail businesses in the Market Area.

URBAN DECAY CONCLUSIONS

The prospects for occurrence of urban decay are unlikely based on development of the proposed UWSP or the cumulative development of the proposed UWSP and other planned retail projects in the Market Area, based on the estimated level of absorption. This conclusion relies on current retail market conditions in the Market Area, findings regarding the capture of and demand for sales, the ability of landowners to adapt to changing market conditions, and jurisdictions' ability to address any instances of physical deterioration stemming from discontinued use and investment. These factors are discussed further below.

EXISTING CONDITIONS OF RETAIL SECTOR

Based on market performance indicators and corroborated with information obtained from real estate broker reports, the retail market in the Market Area is relatively healthy, with a consistently expanding inventory and a 3.4 percent vacancy rate, as described above.

EXTENT OF DEMAND

Urban decay is more likely if a new competitive project results in a relatively large quantity of oversupplied retail space in the affected market area, which can contribute to increased vacancy. The current vacancy rate of 3.4 percent and the estimated remaining additional cumulative demand to support existing Market Area retailers of 0.3 percent indicate enough retail demand in the Market Area to support the cumulative projects, including the proposed UWSP and thus is not estimated to result in conditions conducive to urban decay.

REUSE OPTIONS OF AFFECTED PROPERTIES

Retail is a highly competitive and adaptable sector that is affected by a variety of evolving trends, including consumer preferences, demographics, travel patterns, technology, and innovation (e.g., e-commerce), as well as commodity production and distribution markets. Individual tenants or property owners will respond to these trends with varying degrees of success, depending on their entrepreneurial skills, local planning, business development efforts, and other factors. In the event vacancies occur in the market, either as a result of new retail space in the market or changing market dynamics, vacated spaces have the potential to be re-tenanted or repositioned with another specialization or use.

REGULATORY CONTROLS

Commercial property owners ordinarily want to maintain their property in a state that will attract and retain tenants. In addition, most municipalities have regulations that require private property owners to maintain their properties to prevent signs of disrepair. In the Market Area, both cities and Sacramento County require property owners to maintain their properties by preventing poor property conditions and nuisances that may lead to blight. In addition, both the cities of Sacramento and West Sacramento have municipal ordinances to address the myriad physical manifestations related to urban decay.

For the reasons described above, it is not anticipated that implementation of the proposed UWSP would result in conditions that would contribute to or cause urban decay of retail commercial space in the Market Area.

24 OTHER CEQA CONSIDERATIONS

INTRODUCTION

CEQA Guidelines Section 15126 requires that all phases of a project—planning, acquisition, development, and operation—be considered when evaluating the project's impact on the environment. Further, CEQA Guidelines Section 15126.2(a) requires that the evaluation of significant impacts consider direct, reasonably foreseeable indirect, and cumulative effects of the proposed project over the short term and long term.

Section 15126 of the CEQA Guidelines also requires an EIR to identify all the following:

- Significant environmental effects of the proposed project.
- Potentially feasible mitigation measures proposed to avoid or substantially lessen significant effects.
- Significant environmental effects that cannot be avoided if the proposed project is implemented.
- Significant irreversible environmental changes that would result from implementation of the proposed project.
- Growth-inducing impacts of the proposed project.
- Alternatives to the proposed project.¹

The Executive Summary and Chapters 4 through 22 of this Draft EIR provide a comprehensive presentation of the proposed UWSP's environmental effects, potentially feasible mitigation measures, and conclusions regarding the level of significance of each impact both before and after mitigation.

Chapter 3, *Alternatives*, presents a comparative analysis of alternatives to the proposed UWSP.

Chapter 23, *Growth Inducement and Urban Decay*, presents the growth-inducing impacts of the proposed UWSP.

The other CEQA-required analyses described above are presented below.

¹ CEQA Guidelines Sections 15126.2(a), 15126.2(c), 15126.2(d), 15126.2(e), 15126.4, and 15126.6.

SIGNIFICANT AND UNAVOIDABLE ADVERSE IMPACTS

Section 15126.2(b) of the CEQA Guidelines requires that an EIR describe any significant impacts that cannot be avoided, even with the implementation of feasible mitigation measures. The environmental effects of the proposed UWSP on various aspects of the environment are discussed in detail in Chapters 4 through 22. Project-specific and cumulative impacts that cannot be avoided if the project is approved as proposed are identified below.

PROJECT-SPECIFIC SIGNIFICANT AND UNAVOIDABLE IMPACTS

AESTHETICS

DEGRADATION OF EXISTING VIEWS AND VISUAL QUALITY

The proposed UWSP would have a substantial adverse effect on a scenic vista and thus result in a significant impact. Aside from implementation of development standards and design guidelines already required for the proposed UWSP, no other feasible mitigation is available to reduce the magnitude of the visual changes that would occur. Therefore, this impact would be significant and unavoidable.

SUBSTANTIALLY DEGRADE EXISTING VISUAL CHARACTER OR QUALITY

The proposed UWSP would have a substantial adverse effect on visual character and quality and thus result in a significant impact. Aside from implementation of development standards and design guidelines already required for the proposed UWSP, no other feasible mitigation is available to reduce the magnitude of the visual changes that would occur. Therefore, this impact would be significant and unavoidable.

NEW SOURCES OF LIGHT

The proposed UWSP would introduce a substantial amount of new lighting to an area that is currently rural and contains minimal lighting, thereby adversely affecting nighttime views of the area and thus resulting in a significant impact. ~~Mitigation Measure AE-3 would ensure that~~ Outdoor lighting associated with development allowed under the proposed UWSP is designed in accordance with Section 140.7, Prescriptive Requirements for Outdoor Lighting, in the 2022 Building Energy Efficiency Standards, which specifies wattage allowance per lighting application based on lighting zones. However, because the proposed project complies with applicable County policies and standards aimed to minimize adverse light and glare, and because of the scale of proposed development, no additional feasible mitigation is available to further reduce this impact. For this reason, this impact would be significant and unavoidable.

AGRICULTURAL RESOURCES

CONVERSION OF FARMLAND TO NONAGRICULTURAL USES

Sacramento County General Plan Policy AG-5 specifies that projects resulting in the conversion of more than 50 acres of farmland shall be mitigated, except as specified by

the policy, based on a 1:1 ratio for the loss of Prime Farmland, Farmland of Statewide Importance, Unique Farmland, and Farmland of Local Importance. Implementation of the UWSP would result in the conversion of approximately 1,372 acres of farmland subject to mitigation pursuant to General Plan Policy AG-5. This total includes conversion of approximately 940 acres of Prime Farmland, 429 acres of Farmland of Local Importance, three acres of Farmland of Statewide Importance, and less than one acre of Unique Farmland. However, even with the implementation of Mitigation Measure AG-1, which requires that the project proponent shall mitigate the loss of farmland that would result from implementation of the proposed UWSP at a 1:1 ratio consistent with General Plan Policy AG-5, there would be a substantial net loss of agricultural production **farmland** within Sacramento County as a result of the proposed UWSP. Therefore, this impact would remain significant and unavoidable.

AIR QUALITY

CONFLICT WITH OR OBSTRUCT IMPLEMENTATION OF AN APPLICABLE AIR QUALITY PLAN DURING PROJECT OPERATION

Operation of the proposed UWSP could conflict with or obstruct implementation of the SMAQMD's air quality planning efforts as emission levels during operation would exceed applicable thresholds of significance. However, even with the implementation of Mitigation Measure AQ-1b, which would require the preparation of an Air Quality Management Plan, which includes a list of all feasible measures that the proposed UWSP can implement to reduce operational emissions, emission levels would still exceed applicable thresholds of significance, and, therefore, this impact would remain significant and unavoidable.

LONG-TERM OPERATIONAL EMISSIONS OF CRITERIA AIR POLLUTANTS AND PRECURSORS

Operation of the proposed UWSP would result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard as emission levels during operation would exceed applicable thresholds of significance. However, even with the preparation of an Air Quality Management Plan, which is required by Mitigation Measure AQ-1b, this impact would remain significant and unavoidable.

EXPOSURE OF EXISTING OFF-SITE SENSITIVE RECEPTORS TO TOXIC AIR CONTAMINANTS DURING OPERATION

Existing sensitive receptors located to the south of the UWSP area, across I-80, could be exposed to increased toxic air contaminant (TAC) emissions associated with increased traffic on I-80 generated by the proposed UWSP. Implementation of Mitigation Measure AQ-1b, which is discussed above, Mitigation Measure AQ-4a, which would require that the specific plan design guidelines and development standards of the proposed UWSP include consideration of CARB's land use siting recommendations found in its *Air Quality and Land Use Handbook: A Community Health Perspective* **recommendations in land use siting as applicable using CARB's "Strategies to Reduce Air Pollution Exposure Near High Volume Roadways" Technical Advisory and the AQMD's "Mobile Sources Air Toxics Protocol" or applicable AQMD**

guidance to establish buffer distances, and Mitigation Measure AQ-4b, which would require the **purchase and** installation of a minimum efficiency reporting value (MERV 13) filter in the HVAC systems for the existing sensitive receptors to the south of the project site, across I-80, would reduce the health risk to existing sensitive receptors. However, because installation of MERV 13 filters in the existing residences would require resident approval, neither Sacramento County nor the project applicant can legally impose such improvements on private properties. Therefore, such a mitigation approach as outlined in Mitigation Measure AQ-4b would only be effective for residents who select to participate in the program, and it would be speculative to predict what the participation level would be. Therefore, the health risk to existing sensitive receptors would remain significant and unavoidable.

EXPOSURE OF FUTURE ON-SITE SENSITIVE RECEPTORS TO TOXIC AIR CONTAMINANTS DURING OPERATION

Future sensitive receptors within the UWSP area occupying multi-family housing near I-80 could be exposed to increased TAC emissions associated with increased traffic on I-80 generated by the proposed UWSP. However, even with the implementation of Mitigation Measures AQ-1b and AQ-4a discussed above, and Mitigation Measure AQ-4c, which would require that a minimum MERV 13 filter be included in the HVAC systems for all sensitive land uses (e.g., residences, schools) within 1,000 feet of I-80, the health risk to future sensitive receptors would remain significant and unavoidable.

CULTURAL RESOURCES

HISTORICAL RESOURCES

Development allowed under the proposed UWSP has the potential to cause a substantial adverse change in the significance of a historical resource as defined in CEQA Guidelines Section 15064.5. However, even with the implementation of Mitigation Measure CUL-1, which requires that each individual project inventory and evaluate historical resources within the affected area, and if historical resources are discovered, develop an approach to avoid or minimize impacts, this impact would remain significant and unavoidable as in some instances it may not be feasible to avoid a historical resource, and the resource may need to be altered or destroyed. Also, because the extent and location of actions under the proposed UWSP are not known at this time, it is not possible to conclude that the mitigation measure, or an equally effective mitigation measure, would reduce the significant impact to a less-than-significant level in all cases.

ARCHAEOLOGICAL RESOURCES

Development allowed under the proposed UWSP has the potential to cause a substantial adverse change in the significance of an archaeological resource as defined in CEQA Guidelines Section 15064.5. However, even with the implementation of Mitigation Measure CUL-2a, which requires that each individual project inventory and evaluate archaeological resources within the affected area, and if archaeological resources are discovered, develop an approach to avoid or minimize impacts, and Mitigation Measure 2b, which discusses steps to take if unknown archaeological

resources are discovered during construction or operation, this impact would remain significant and unavoidable as in some instances it may not be feasible to avoid an archaeological resource, and the resource may need to be altered or destroyed. Also, because the extent and location of actions under the proposed UWSP are not known at this time, it is not possible to conclude that the mitigation measures, or equally effective mitigation measures, would reduce the significant impact to a less-than-significant level in all cases.

HUMAN REMAINS

Development allowed under the proposed UWSP has the potential to disturb human remains. However, even with the implementation of Mitigation Measure CUL-3, which discusses steps to take if unknown human remains are discovered during construction or operation, this impact would remain significant and unavoidable as in some instances it may not be feasible to avoid human remains and they may be altered or destroyed. Also, because the extent and location of such actions are not known at this time, it is not possible to conclude that the mitigation measure, or an equally effective mitigation measure, would reduce the significant impact to a less-than-significant level in all cases.

NOISE

INCREASE IN TRAFFIC NOISE AT EXISTING SENSITIVE RECEPTORS

Traffic generated by development allowed under the proposed UWMP would result in a substantial permanent increase in noise levels at nearby sensitive receptors, thus resulting in a significant impact. Mitigation Measure NOI-3a would require that speed reductions be ~~considered~~ **implemented, if feasible**, along El Centro Road to determine feasibility and that a cost-benefit analysis be performed to determine the feasibility of barriers **be erected, if feasible**, along Arena Boulevard **using a cost-benefit analysis to determine feasibility while Mitigation Measure NOI-3b would require the use of rubberized asphalt on impacts roadways**. However, the availability of feasible mitigation along many other offsite segments is limited and largely unavailable from a cost, engineering, or safety standpoint, may not fully mitigate noise impacts, or could require the consent of the impacted receptor. As such, the successful implementation of these measures cannot be guaranteed and thus this impact would remain significant and unavoidable.

INCREASE IN STATIONARY NOISE FROM PLAN COMPONENTS AT EXISTING RECEPTORS

HIGH SCHOOL USE SPORTS FIELDS AND STADIUM NOISE

Noise generated by activities on sports fields and at the stadium associated with the proposed high school may exceed the conditions of the Sacramento County General Plan daytime and nighttime exterior and interior noise level limits at the nearest existing noise-sensitive (residential) uses. However, even with the implementation of Mitigation Measure NOI-4b, which requires the project applicant to submit **Natomas Unified School District (NUSD) to undertake** an acoustical study to the County Planning Department that includes an analysis of stadium noise exposure at the nearest existing noise-sensitive uses, and identifies **implement**, as warranted, any noise controls

necessary to meet a project-specific exterior noise performance standard consistent with the County's General Plan requirements, this impact would remain significant and unavoidable as previous studies have indicated that while available noise control mitigation for noise from stadium events may reduce associated noise levels, given the overall size of crowds and the potential for nighttime events, noise impacts cannot always be mitigated, depending on the proximity of receptors.

PARK ACTIVITY NOISE

The noise generated by amplified music at an outdoor pavilion in the proposed 25.8-acre park proposed in the west-central portion of the UWSP area could exceed the County's daytime noise standard at the nearest existing noise-sensitive (residential) uses. However, even with the implementation of Mitigation Measure NOI-4c, which would require the applicant or operator of all amplified music events within the park to prepare and implement a Noise Control Plan for operations at the proposed entertainment venues to reduce the potential for noise impacts from public address systems and/or amplified music, this impact would remain significant and unavoidable as it cannot be demonstrated with certainty that noise impacts can always be sufficiently mitigated to achieve noise standards, depending on proximity of receptors and the operational volume of the performer.

INCREASE IN STATIONARY NOISE FROM PLAN COMPONENTS AT PROPOSED SENSITIVE RECEPTORS

SCHOOL SPORTS STADIUM NOISE

The noise generated by activities at the stadium associated with the proposed high school could exceed the General Plan's exterior and interior daytime standards at nearby proposed residential uses. However, even with the implementation of Mitigation Measure NOI-7j, which would require that the NUSD undertake an acoustical study ~~be~~ prepared by a qualified noise consultant that evaluates the potential noise generated by school stadium and sports field activities at the nearest existing noise-sensitive uses and identifies implement, as warranted, any noise controls, necessary to meet a project-specific exterior noise performance standard, this impact would remain significant and unavoidable as previous studies have indicated that while available noise control mitigation for noise from stadium events may reduce associated noise levels, given the overall size of crowds and the potential for nighttime events, noise impacts cannot always be mitigated, depending on proximity of receptors.

POPULATION AND HOUSING

INDUCE SUBSTANTIAL UNPLANNED POPULATION GROWTH

The UWSP area and the proposed UWSP were not anticipated for development in either the Sacramento Area Council of Governments Blueprint or the current Metropolitan Transportation Plan/Sustainable Communities Strategy. As a result, while the proposed project aligns with many of the principles contained in the Blueprint and the County's smart growth policy LU-120, it is ultimately inconsistent with Sacramento Area Council of Governments plans, and thus would be considered to directly induce

substantial unplanned population growth in the region. Therefore, this impact would be significant and unavoidable.

TRANSPORTATION

CONFLICT WITH A PROGRAM, PLAN, ORDINANCE OR POLICY ADDRESSING THE CIRCULATION SYSTEM

Development allowed under the proposed UWSP has the potential to conflict with a program, plan, ordinance or policy addressing the circulation system, such as the Sacramento County Active Transportation Plan. However, even with the implementation of Mitigation Measure TR-1a, which would require the project applicant to implement bicycle and pedestrian improvements at the El Centro Road/West El Camino Avenue intersection and I-80/West El Camino Avenue interchange, the carrying out of these improvements would require approvals from Caltrans and the City of Sacramento as these facilities are under their control, and thus Sacramento County cannot compel those agencies to approve and allow construction of the specified improvements. As a result, this impact would remain significant and unavoidable.

HAZARDS DUE TO DESIGN OR INCOMPATIBLE USES

FREEWAY OFF-RAMP QUEUES EXCEED AVAILABLE STORAGE

Development allowed under the proposed UWSP has the potential to result in safety hazards at the I-80 eastbound and westbound off-ramps at West El Camino Avenue (during one or both peak hours) as they would not have sufficient storage to accommodate maximum queue lengths despite the assumed expansion of the I-80/West El Camino Avenue interchange under the proposed UWSP. However, even with the implementation of Mitigation Measure TR-3a, which would require the project applicant to construct geometric and associated signal timing/phasing improvements (or an equivalent or more effective set of alternate improvements subject to the determination of the environmental coordinator) at the I-80/West El Camino Avenue interchange and at the West El Camino Avenue/El Centro Road intersection, implementation of these improvements would require the cooperation Caltrans and the City of Sacramento, which has jurisdiction over these facilities, and thus Sacramento County does not have the authority to compel these jurisdictions to construct the needed improvements. Therefore, this impact would remain significant and unavoidable.

FREEWAY ON-RAMP RAMP METER QUEUES EXCEED AVAILABLE STORAGE

Development allowed under the proposed UWSP has the potential to result in safety hazards at the I-5 southbound diagonal on-ramp at West El Camino Avenue and I-5 southbound loop on-ramp and I-5 northbound diagonal on-ramp at Garden Highway as they would not have sufficient storage for queues. Mitigation Measure TR-3b would require that the project applicant to pay its proportionate fair share percentage toward improvements at the I-5 southbound on-ramp at West El Camino Avenue and I-5 southbound and northbound on-ramps at Garden Highway, which would be held in a custodial account by the County. At such a time that a lead agency (either City of Sacramento or Caltrans) indicates an intent to construct the specified (or other equally

effective) improvements, the County would transfer the fair share payment to that appropriate agency. However, while this payment would represent the project's fair share contribution toward the improvement, it would not assure that the improvement would be constructed as the County does not have the authority to compel City of Sacramento or Caltrans to construct the needed improvements. As a result, the impact would remain significant and unavoidable.

POTENTIAL SAFETY ISSUES AT I-80/WEST EL CAMINO AVENUE INTERCHANGE ASSOCIATED WITH SACRAMENTO 49ER TRAVEL PLAZA TRUCK STOP

The existing 49er Travel Plaza truck stop is located in the northeast corner of the West El Camino Avenue/El Centro Road intersection. At full build-out of the proposed UWSP, this use would be replaced by commercial mixed-use. However, it would likely remain in place for a period of time while the proposed UWSP begins developing.

In the past, vehicle collisions have occurred along both the West El Camino and El Centro Road frontages of the truck stop, and development allowed under the proposed UWSP has the potential to increase the likely of collisions along these frontages and at the I-80/West El Camino Avenue Interchange until the current use is replaced by a different use. Mitigation Measures TR-3d and TR-3e would require the project applicant to eliminate the 49er Travel Plaza driveway on West El Camino Avenue and replace the free-flowing right-turn off-ramp movement with a signal-controlled movement, respectively. However, while mitigation to eliminate the 49er Travel Plaza driveway on West El Camino Avenue is feasible as it would occur completely within Sacramento County roadways under County control, mitigation to replace the free-flowing right-turn off-ramp movement with a signal-controlled movement is not as it would require approvals from Caltrans, which cannot be assured by the County. Therefore, the impact would remain significant and unavoidable.

TRIBAL CULTURAL RESOURCES

Development allowed under the proposed UWSP has the potential to cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe. However, even with the implementation of Mitigation Measures CUL-2a, CUL-2b and CUL-3, discussed above, and the implementation of Mitigation Measure TCR-1, which would require the inventory and evaluation of tribal cultural resources for each subsequent development project, and the implementation of TRC-2, which would require the repatriation of human remains in the event that remain-in-place measures are infeasible, this impact would remain significant and unavoidable as in some instances it may not be feasible to avoid a tribal cultural resource, and the resource may need to be altered or destroyed. Also, because the extent and location of actions under the proposed UWSP are not known at this time, it is not possible to conclude that the mitigation measures, or equally effective mitigation measures, would reduce the significant impact to a less-than-significant level in all cases.

CUMULATIVE SIGNIFICANT AND UNAVOIDABLE IMPACTS

AESTHETICS

DEGRADATION OF EXISTING VIEWS AND VISUAL QUALITY

Given the flat and rural nature of unincorporated portions of the North Natomas area, cumulative development in the vicinity of the UWSP area would have a substantial adverse effect on a scenic vista and thus result in a significant cumulative impact. Given the extent of urban development that would occur with implementation of the proposed UWSP and the largely undeveloped nature of the UWSP area, the contribution of the proposed UWSP to the significant cumulative impact on scenic vistas would be considerable. Aside from implementation of development standards and design guidelines already required for the proposed UWSP, no other feasible mitigation is available to reduce the magnitude of the visual changes that would occur. Therefore, the cumulative impact would be significant and unavoidable.

SUBSTANTIALLY DEGRADE EXISTING VISUAL CHARACTER OR QUALITY

Given the flat and rural nature of unincorporated portions of the North Natomas area, cumulative development in the vicinity of the UWSP area would substantially degrade the existing visual character or quality of public views of the site and its surroundings and thus result in a significant cumulative impact. Given the extent of urban development that would occur with implementation of the proposed UWSP and the largely undeveloped nature of the UWSP area, the contribution of the UWSP to the significant cumulative impact on visual character would be considerable. Aside from implementation of development standards and design guidelines already required for the proposed UWSP, no other feasible mitigation is available to reduce the magnitude of the visual changes that would occur. Therefore, the cumulative impact would be significant and unavoidable.

NEW SOURCES OF LIGHT

Given that unincorporated portions of the North Natomas area are rural in nature and are largely devoid of nighttime lighting, lighting associated with cumulative development in the vicinity of the UWSP area would be substantial enough to adversely affect nighttime views in the area and thus result in a significant cumulative impact. Given the extent of urban development that would occur with implementation of the proposed UWSP and the largely undeveloped nature of the UWSP area, which includes minimal amounts of existing lighting or illumination, the contribution of the proposed UWSP to the significant cumulative impact related to production of light and glare would be considerable. ~~Mitigation Measure AE-3 is proposed to ensure that~~ **Outdoor** lighting associated with development allowed under the proposed UWSP **is would be** designed in accordance with Section 140.7, Prescriptive Requirements for Outdoor Lighting, in the 2022 Building Energy Efficiency Standards, which specifies wattage allowance per lighting application based on lighting zones. However, aside from implementation of development standards and design guidelines already required for the proposed UWSP, no ~~other~~ feasible mitigation is available to reduce the magnitude of the visual changes that would occur. Therefore, the cumulative impact would be significant and unavoidable.

AGRICULTURAL RESOURCES

CONVERSION OF FARMLAND TO NONAGRICULTURAL USES

Cumulative development in the vicinity of the UWSP area would continue the trend of farmland being converted to nonagricultural use, and thus would result in a potentially significant cumulative impact. Implementation of the proposed UWSP would convert approximately 1,372 acres of farmland to nonagricultural uses. While implementation of Mitigation Measure AG-1 requires that the project proponent shall mitigate the loss of farmland at a 1:1 ratio consistent with Sacramento County General Plan Policy AG-5, there would be a substantial net loss of agricultural production **farmland** within Sacramento County as a result of the proposed UWSP. Due to the sizable acreage of farmland that would be converted to nonagricultural uses, implementation of the proposed UWSP would result in a considerable contribution to the cumulative loss of farmland, and this cumulative impact would remain significant and unavoidable.

AIR QUALITY

LONG-TERM OPERATIONAL EMISSIONS OF CRITERIA AIR POLLUTANTS AND PRECURSORS

As discussed above, operation of the proposed UWSP would result in a cumulatively considerable net increase of criteria pollutants for which the project region is in non-attainment under an applicable federal or state ambient air quality standard as emission levels during operation would exceed applicable thresholds of significance. Even with the preparation of an Air Quality Management Plan, which is required by Mitigation Measure AQ-1b, this impact would remain significant and unavoidable.

EXPOSURE OF EXISTING SENSITIVE RECEPTORS TO TOXIC AIR CONTAMINANTS

The aggregate total of all past, present, and foreseeable future toxic air contaminant sources within the vicinity of the UWSP area, plus the contribution from the project, would result in potential health risks to existing receptors located to the south of the site, across I-80. Even with the implementation of Mitigation Measures AQ-1b, AQ-4a, and AQ-4b, which are discussed above, the aggregate total of all past, present, and foreseeable future Toxic Air Contaminant sources, plus the contribution from the proposed UWSP, would still pose potential health risks to existing receptors located to the south of the site, across I-80, and thus the cumulative impact would remain significant and unavoidable.

EXPOSURE OF FUTURE SENSITIVE RECEPTORS TO TOXIC AIR CONTAMINANTS

The two existing gas stations at the I-80/West El Camino Avenue interchange, along with traffic generated by the proposed UWSP traveling on I-80, would result in potential health risks to future receptors with the UWSP area occupying multi-family housing near the two gas stations and I-80. Even with the implementation of Mitigation Measures AQ-1b, AQ-4a, and AQ-4c, which are discussed above, potential health risks would remain, and thus the cumulative impact would remain significant and unavoidable.

CULTURAL RESOURCES

HISTORICAL AND ARCHAEOLOGICAL RESOURCES, INCLUDING HUMAN REMAINS

Cumulative development in the vicinity of the UWSP area could negatively affect known and unknown historical sites in the county, including destruction or alteration of historic buildings or structures. Furthermore, these projects could negatively affect known and unknown prehistorical sites, including the disruption of human remains. For these reasons, a significant cumulative impact with respect to cultural resources could occur. Implementation of the proposed UWSP could also negatively affect cultural resources, and while Mitigation Measures CUL-1 through CUL-4 would be implemented to reduce the impacts of development allowed under the proposed UWSP on these resources, in some instances it may not be feasible to avoid a cultural resource, and the resource may need to be altered or destroyed. In addition, as the extent and location of such actions are not known at this time, it is not possible to conclude that the mitigation measures, or equally effective mitigation measures, would reduce significant impacts to a less-than-significant level in all cases. Therefore, implementation of the proposed UWSP could result in a considerable contribution to the cumulative loss of cultural resources, and this cumulative impact would remain significant and unavoidable.

NOISE

EXCEEDANCE OF ESTABLISHED NOISE STANDARDS – TRAFFIC

Traffic generated by cumulative development in the vicinity of the UWSP area along with development allowed under the proposed UWSP would generate enough noise to negatively affect sensitive receptors located along several roadways in the vicinity of the UWSP area and thus would result in a significant cumulative impact. Furthermore, the contribution of the proposed UWSP to this impact was found to be cumulatively considerable along some of these roadways. As discussed above, Mitigation Measure NOI-3a would require that speed reductions be considered implemented, if feasible, along El Centro Road to determine feasibility and that a cost-benefit analysis be performed to determine the feasibility of barriers be erected, if feasible, along Arena Boulevard using a cost-benefit analysis to determine feasibility, while Mitigation Measure NOI-3b is also proposed, which would require the use of rubberized asphalt on impacts roadways, consistent with existing County DOT practice for arterial roadways. However, the availability of feasible mitigation along many other offsite segments is limited and largely unavailable from a cost, engineering, or safety standpoint, may not fully mitigate noise impacts, or could require the consent of the impacted receptor. As a result, like project level roadway noise impact, the cumulative impact with respect to cumulative roadway noise on existing roadways would remain significant and unavoidable.

POPULATION AND HOUSING

POPULATION GROWTH

A significant cumulative impact related to population and housing would result in an increase in population for which infrastructure, services, and housing have not been

planned. General plans for counties and incorporated cities in the six-county Sacramento region, such as the Sacramento County 2030 General Plan and the City of Sacramento 2040 General Plan, provide an inventory of land supply within each jurisdiction and projects the amount and location of land and development that will be required to accommodate future populations and economic growth. Like the proposed UWSP, cumulative projects in the six-county Sacramento region must be reviewed for consistency with applicable land use plans, policies, and regulations in accordance with the requirements of CEQA, State zoning and planning law, and the State Subdivision Map Act, all of which require findings of plan and policy consistency prior to approval of entitlements for development. While the proposed UWS and subsequent development would be required to be consistent with applicable Sacramento County General Plan policies, the UWSP area and the proposed UWSP were not anticipated for development in either the Sacramento Area Council of Governments Blueprint or the current Metropolitan Transportation Plan/Sustainable Communities Strategy, and even though the proposed UWSP aligns with many of the principles contained in the Blueprint and the County's smart growth policy LU-120, this inconsistency would remain. For this reason, the contribution of the proposed UWSP to substantial unplanned population growth within the six-county Sacramento region would be cumulatively considerable, and this cumulative impact would be significant and unavoidable.

TRANSPORTATION

PROGRAM, PLAN, ORDINANCE OR POLICY ADDRESSING THE CIRCULATION SYSTEM

Like the proposed UWSP, cumulative development would be required to evaluate consistency with relevant programs, plans, ordinances, or policies related to transportation facilities. These include the County's General Plan, Caltrans' 2020-2024 Strategic Plan (Four Pillars of Traffic Safety) and plans and policies related to bicycle and pedestrian access and transit service. The proposed UWSP would be responsible for implementing Mitigation Measures TR-1a, TR-1b, and TR-3a, which would address project-specific impacts related to bicycle and pedestrian accessibility and transit delay/transit demand impacts. However, as identified improvements to needed bicycle and pedestrian facilities would require approvals from Caltrans and the City of Sacramento, the County cannot compel these agencies to approve and allow construction of the specified improvements. Therefore, to the extent that cumulative impacts would occur in regard to consistency with any of these programs, plans, ordinances, or policies, the contribution of the proposed UWSP could be cumulatively considerable, and this cumulative impact would remain significant and unavoidable.

HAZARDS DUE TO DESIGN OR INCOMPATIBLE USES

FREEWAY OFF-RAMP QUEUES

The proposed UWSP would contribute substantially to cumulative queuing impacts at both off-ramps at the I-5/Del Paso Road and I-5/Garden Highway interchanges and the northbound off-ramp at the I-5/Arena Boulevard interchange. This is likely caused by downstream surface street congestion (primarily at intersections within the city of Sacramento such as Garden Highway/Truxel Road, Del Paso Road/El Centro Road,

and Arena Boulevard/East Commerce Way) that causes traffic to spill back to the interchange, thereby hindering the flow of off-ramp traffic and resulting in a potentially significant impact. With respect to the I-5/Arena Boulevard interchange, Mitigation Measure C-TR-2 is proposed, which includes recommended improvements at the surface street intersection bottlenecks along Arena Boulevard that are responsible for queues that spill back to the interchange. However, these improvements are outside the control of Sacramento County or Caltrans since they are located within the City of Sacramento, and thus the County cannot ensure that they will be constructed when needed. Regarding the I-5/Del Paso Road and I-5/Garden Highway interchanges, improvements such as lane restriping, adding lanes, or modifying signal phasing were either found to not be effective or could also cause the need for additional right-of-way. For these reasons, the cumulative impact related to freeway off-ramp queuing would remain significant and unavoidable.

FREEWAY ON-RAMP RAMP METER QUEUES

The proposed UWSP would contribute substantially to cumulative queuing impacts at several on-ramp ramp meter locations due to traffic added to study area roadways by cumulative projects. While most freeway ramp meter on-ramp locations would continue to have sufficient storage for queues under cumulative conditions, the proposed UWSP would cause the maximum queue at the metered on-ramps at the I 5 southbound diagonal on-ramp at West El Camino Avenue (PM peak hour), I-5 southbound on-ramp at Del Paso Road (AM peak hour), and I-5 southbound loop on-ramp at Garden Highway (AM peak hour) to exceed their available storage, and thus result in a potentially significant impact. Mitigation Measure C-TR-3 would require that the project applicant pay its proportionate fair share percentage toward improvements at these facilities, which would be held in a custodial account by the County. At such a time that a lead agency (either City of Sacramento or Caltrans) indicates an intent to construct the specified (or other equally effective) improvements, the County would transfer the fair share payment to that appropriate agency. However, while this payment would represent the project's fair share contribution toward the improvement, it would not assure that the improvement would be constructed as remaining fair share funding sources are not known at this time and the County does not have the authority to compel City of Sacramento or Caltrans to construct the needed improvements. Therefore, the impact would remain significant and unavoidable.

TRIBAL CULTURAL RESOURCES

Cumulative development in the vicinity of the UWSP area could negatively affect tribal cultural resources in the area and thus would result in a significant cumulative impact. Implementation of the proposed UWSP could also negatively affect tribal cultural resources, and while Mitigation Measures CUL-2 through CUL-4 would be implemented to reduce the impacts of development allowed under the proposed UWSP on these resources, in some instances it may not be feasible to avoid resources, and the resources may need to be altered or destroyed. In addition, as the extent and location of such actions are not known at this time, it is not possible to conclude that the mitigation measures, or equally effective mitigation measures, would reduce significant impacts to a less-than-significant level in all cases. Therefore, implementation of the proposed UWSP

could result in a considerable contribution to the cumulative loss of tribal cultural resources, and this cumulative impact would remain significant and unavoidable.

SIGNIFICANT AND IRREVERSIBLE ENVIRONMENTAL CHANGES

Under CEQA, an EIR must analyze the extent to which a project's primary and secondary effects would generally commit future generations to the allocation of nonrenewable resources and to irreversible environmental damage (CEQA Guidelines Sections 15126.2(d) and 15127). Section 15126.2(d) states:

Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible, since a large commitment of such resources makes removal or nonuse thereafter unlikely. Primary impacts and, particularly, secondary impacts (such as highway improvement which provides access to a previously inaccessible area) generally commit future generations to similar uses. Also, irreversible damage can result from environmental accidents associated with the project. Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.

Generally, a project would result in significant irreversible environmental changes if:

- The primary and secondary impacts would generally commit future generations to similar uses;
- The project would involve a large commitment of nonrenewable resources;
- The project would involve uses in which irreversible damage could result from any potential;
- environmental accidents associated with the project; or
- The proposed consumption of resources is not justified (e.g., the project involves the wasteful use of energy).

Development of the proposed UWSP would result in the dedication of the UWSP area to mixed use urban development, thereby precluding other conflicting uses for the lifespan of the project. As described in Chapter 5, *Agricultural Resources*, implementation of the proposed UWSP would convert ~~agricultural land~~ **farmland** to urban uses. Once agricultural land is graded, paved, and developed, the loss of agricultural capabilities would be permanent, as it is highly unlikely that the land would be restored for use as open space or agricultural land.

The State CEQA Guidelines also require a discussion of the potential for irreversible environmental damage caused by an accident associated with the project. While development allowed under the proposed UWSP could result in the use, transport, storage, and disposal of hazardous wastes during construction and operation, as described in Chapter 12, *Hazards and Hazardous Materials*, all activities would comply with applicable state and federal laws related to hazardous materials, which significantly

reduce the likelihood and severity of accidents that could result in irreversible environmental damage.

Buildout of the proposed UWSP would result in the long-term commitment of resources to urban development. The most notable significant irreversible impacts are substantial changes to the visual character of the UWSP area (see Chapter 4, *Aesthetics*), increased generation of pollutants from vehicle travel and stationary operations (see Chapter 6, *Air Quality*), and the short-term commitment of non-renewable and/or slowly renewable natural and energy resources, such as water resources during construction activities (see Chapter 20, *Utilities and Service Systems*). Operations associated with future uses would also consume natural gas and electrical energy. Although the overall level of resource consumption within the UWSP area would increase, resource consumption would be minimized through adherence to building codes and General Plan policies.

As is described in Chapter 10, *Energy*, resources that would be permanently and continually consumed by project implementation include electricity, natural gas, and fossil fuels; however, the amount and rate of consumption of these resources would not result in the unnecessary, inefficient, or wasteful use of resources. With respect to operational activities, compliance with all applicable building codes, including 2023 Title 24 Energy Efficiency Standards, planning policies and standard conservation features would ensure that natural resources are conserved to the maximum extent possible. It is also possible that, over time, new technologies or systems will emerge, or will become more cost effective or user-friendly, to further reduce the reliance upon nonrenewable natural resources. Nonetheless, construction activities related to the proposed UWSP would result in the irretrievable commitment of nonrenewable energy resources, primarily in the form of fossil fuels (including fuel oil), natural gas, and gasoline for automobiles and construction equipment.

Over the past decade, our understanding of global climate change and the role that communities can play in addressing it has grown tremendously. There is a large scientific consensus that recent increases in global temperatures are associated with corresponding increases of greenhouse gases. This temperature increase is beginning to affect regional climates and is expected to result in impacts to our region and the world. Climate change has profound implications for the availability of the natural resources on which economic prosperity and human development depend. Although the relative contribution of the proposed UWSP to global warming is not currently possible to determine, this issue is explored in Chapter 8, *Climate Change*.

No references are cited in this chapter.

26 RESPONSES

INTRODUCTION

The Draft Environmental Impact Report (Draft EIR) for the Upper Westside Specific Plan was released on August 30, 2024, for a public review period that concluded on October 28, 2024. A total of 241 individual letters were received during the comment period. This chapter of the Final EIR provides responses to comments received on the Draft EIR. Each letter and oral comments from public testimony in front of the Natomas Community Planning Advisory Council and the County Planning Commission has been assigned a number, as indicated below.

For ease of review, individual comments addressing separate subjects within each letter are labeled based on the letter's numeric designation and comment number (e.g., the first comment in the first letter is Comment 1-1). The text of the comments has been provided, followed by a response. Note that the preface language of the letters is often excluded (where the text consists of salutations and brief descriptions of the commenting organization). Comment letters are included in their entirety in Appendix RTC-1.

For each comment, a response is provided to address environmental issues raised in the comment. The responses may clarify the Draft EIR text or revise or add text to this Final EIR. New or revised text is **bolded and underlined**, and deleted material is shown in ~~strikethrough~~.

Note that some of the written comments offer suggestions or express preferences related to the proposed development and do not address environmental issues or the adequacy of the Draft EIR. All comment letters will be forwarded to the Board of Supervisors for consideration via this Final EIR. In conformance with Section 15088(a) of the State California Environmental Quality Act (CEQA) Guidelines, written responses were prepared to address comments on environmental issues raised in comments on the Draft EIR.

LIST OF COMMENTERS

Comments on the Upper Westside Specific Plan Draft EIR:

WRITTEN COMMENTS ON DRAFT EIR: AGENCIES AND ORGANIZATIONS

1. State Water Resources Control Board (SWRCB), State of California statewide water resources agency
2. Central Valley Regional Water Quality Control Board (CVRWQCB), State of California regional water resources agency
3. California Department of Fish and Wildlife (CDFW), State of California natural resource agency

4. California Department of Transportation (Caltrans), State of California transportation agency
5. Sacramento Area Sewer District (SacSewer), regional wastewater treatment provider

MASTER RESPONSES

The following master responses provide clarification on topics raised in multiple comments.

MASTER RESPONSE AR-1: CONVERSION OF FARMLAND TO NONAGRICULTURAL USES

Several comments received on the Draft EIR question the assumptions, analysis, and mitigation of impacts related to conversion of farmland to nonagricultural uses.

Impacts of the proposed UWSP related to conversion of farmland to nonagricultural uses are fully addressed in Impact AG-1 on pages 5-20 through 5-22 in Chapter 5, *Agricultural Resources*, of the Draft EIR. As discussed in the analysis, the proposed UWSP would result in the loss of approximately 1,372 acres of farmland subject to mitigation pursuant to General Plan Policy AG-5. Implementation of Mitigation Measure AG-1 would require preservation of farmland at a 1:1 ratio. However, the Draft EIR concludes that, even with this mitigation, there would be a substantial net loss of farmland within Sacramento County as a result of the proposed UWSP, and this impact would be significant and unavoidable. Therefore, the Draft EIR appropriately identifies that a significant and unavoidable impact related to the conversion of farmland to nonagricultural uses would occur with implementation of the proposed UWSP.

MASTER RESPONSE AR-2: INTERFACE BETWEEN AGRICULTURAL AND URBAN USES

Several comments question the Draft EIR analysis related to the interface between planned urban uses and existing and ongoing agricultural uses. Several of these comments question the adequacy of the proposed West Edge Buffer Corridor along the western perimeter of the UWSP Development Area to alleviate potential future conflicts between agricultural operations and future urban uses.

Effects of the proposed UWSP related to the interface between planned urban uses and existing and ongoing agricultural uses are fully evaluated in Chapter 5, *Agricultural Resources*, of the Draft EIR. As discussed in the analysis, a 542-acre agricultural buffer is proposed to the west of the proposed UWSP Development Area, which is intended to allow for the continuation of existing agricultural, agricultural-residential, and mitigation uses. In addition, the proposed UWSP includes a 30- to 50-foot-wide West Edge Buffer Corridor along the western perimeter of the UWSP Development Area to alleviate potential future conflicts between agricultural operations and future urban uses.

A deeper evaluation of the parcel ownership within the agricultural buffer reveals that a large portion of the buffer has been purchased by the Sacramento Area Flood Control Agency (SAFCA), and they have indicated they will utilize this area for mitigation land for the Natomas Levee Improvement Project. Some of these SAFCA-owned parcels were utilized as borrow sites to generate dirt for the levee improvements. Similarly, one or more parcels within the agricultural buffer have been designated as habitat reserves

managed by the Natomas Basin Conservancy pursuant to the Natomas Basin Habitat Conservation Plan. These parcels are unlikely to be utilized for large-scale farming operations but for habitat re-creation and perhaps small-scale farming.

The southerly 97.0± acres of the agricultural buffer is zoned AR-2 and is comprised of parcels ranging in size from 1.1± acre to 6.7± acres with an average size of 2.5± acres, and many of the parcels have existing homes. KVIE has a television tower on a 4.8-acre parcel in this area. The northerly 420.5± acres of the agricultural buffer is zoned AG-40 and has parcels ranging in size from 0.7 acre to 50.8± acres with an average size of 15.4± acres. SAFCA owns approximately 65 percent of this acreage, including wetland creation parcels. The proposed UWSP land use plan was configured such that urban uses veer away from the northerly portion of the agricultural buffer to provide more setback from the larger AG-40 parcels. Towers, overhead power lines, and nearby residential uses already limit aerial applications of pesticide, which is a significant hinderance to farming operations under existing conditions. The County General Plan Agricultural Element does not specify a minimum buffer between agriculture and urban uses. The proposed 30- to 50-foot-wide West Edge Buffer Corridor with a gravel access road and hedgerow of trees is an appropriate separator between the minimal agricultural uses within the agricultural buffer area and the western edge of the urban development areas of the UWSP, given the existing conditions as discussed above.

The Draft EIR prepared for the proposed UWSP is an objective, accurate, and complete analysis of the potential environmental impacts that would or could result from construction and operation of the proposed UWSP. Impact AG-1 on pages 5-20 through 5-22 in Chapter 5, *Agricultural Resources*, of the Draft EIR, accurately assesses the conversion of important farmland and recognizes that the 542-acre agricultural buffer is not being zoned for non-agricultural uses. The agricultural buffer is not considered mitigation for loss of farmland in the UWSP Development Area.

MASTER RESPONSE BR-1: CONFLICT WITH NATOMAS BASIN HABITAT CONSERVATION PLAN AND METRO AIR PARK HABITAT CONSERVATION PLAN

This Master Response addresses comments related to the proposed UWSP potentially conflicting with the provisions of the Natomas Basin Habitat Conservation Plan (NBHCP) and Metro Air Park HCP (MAP HCP). This response also addresses comments related to the significance threshold identified of “Conflict with the provisions of an adopted HCP, natural community conservation plan, or other approved local, regional, or state HCP” (see Draft EIR page 7-39). Although Sacramento County is not a permittee under the NBHCP, the County recognizes the NBHCP’s importance as an instrument for conservation of listed species in the Natomas Basin and for the mitigation of development activities within the Basin. Metro Air Park HCP’s conservation plan is aligned with the NBHCP’s conservation plan, and its implementation is integrated with that of the NBHCP. The Natomas Basin Conservancy (TNBC) acts as the plan operator for both the Metro Air Park HCP and the NBHCP. Thus, projects that are consistent with the conservation plan for NBHCP would also be consistent with the Metro Air Park HCP.

The Draft EIR carefully considered existing approved developments, their mitigation strategies, and the regional conservation context through a comprehensive analysis of the effects of the proposed UWSP. This included evaluating whether the proposed UWSP would conflict with the ability for the TNBC to implement the overall Conservation Strategy under the NBHCP and MAP HCP. This master response addresses comments related to effects of the proposed UWSP on existing and future preserve lands, and the overall persistence of covered species, including the continued viability of the conservation strategies.

IMPACTS ON EXISTING TNBC RESERVE LANDS

Pursuant to the CEQA Guidelines, Appendix G, Biological Resources significance threshold f), Draft EIR Impact BR-14 included an analysis of whether implementation of the proposed UWSP would “conflict with the provisions of an adopted HCP, natural community conservation plan, or other approved local, regional, or state HCP.” The analysis included a detailed evaluation of the four main strategies of the NBHCP (General Conservation Strategy; Guidelines for Reserve Acquisition; Conservation Strategy for Wetland Habitat; Conservation Strategy for Upland Habitat), including potential project impacts related to the UWSP’s proposed buffers adjacent to the Cummings Reserve and the Alleghany Reserve. The 30-acre Alleghany Reserve is part of the NBHCP reserve system managed by TNBC and is within the UWSP area; it would be part of the proposed agricultural buffer (Ag Buffer) planned for the proposed UWSP. Any offsite improvements implemented in support of the proposed UWSP development located near the southern portion of the Alleghany Reserve would be limited to an existing section of San Juan Road. The Cummings Reserve, which is also part of the NBHCP reserve system, would be adjacent to agricultural bufferlands and open space within the UWSP area (refer to Figure 2 of HELIX 2024). Therefore, potential project operational impacts on the species and its prey associated with changes in land use, such as increased stormwater runoff and runoff of deleterious materials associated with urban development into off-site giant garter snake habitat, are not expected. The Draft EIR concluded that construction and operation of the proposed UWSP would be less than significant with implementation of Mitigation Measures BR-1 to BR-9.

AVAILABILITY OF FUTURE RESERVE LANDS AND IMPACT ON LAND PRICES

Because of the limited ways in which economic issues are addressed under CEQA (see CEQA Guideline 15131), and an admonition against speculation in CEQA Guideline 15145, speculation about land prices is not addressed in the Draft EIR. Nevertheless, land prices are susceptible to change over time based on many factors and changes in economic conditions, and the NBHCP could address changes in land prices through adjustments of Mitigation Fees, per page VI-4 of the NBHCP: “The Mitigation Fee also will be reviewed at least annually on or before March 1 of each calendar year the NBHCP is in effect and adjusted as necessary to reflect actual operation and land costs in the Basin”.

PERSISTENCE OF COVERED SPECIES

The Draft EIR considered the potential impact on Covered Species in the Biological Resources chapter. As described beginning on Draft EIR page 7-10, the Environmental Setting section of the Biological Resources chapter presented a list of special-status and NBHCP and MAP HCP covered plant and wildlife species to evaluate for their potential to occur in the UWSP area. The list was developed based on the NBHCP and MAP HCP, and by querying a nine U.S. Geologic Survey (USGS) 7.5-minute quadrangle search of the California Department of Fish and Wildlife (CDFW) California Natural Diversity Database (CNDDDB), as recommended by CDFW, as well as the California Native Plant Society (CNPS) Rare Plant Inventory (CNPS 2023) and a U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation Official Species List (USFWS 2023). Additional sources consulted included two recent Biological Resources Assessment Reports (Bargas 2020, Helix 2024), the most recent Annual Monitoring Report for the Natomas Basin Habitat Conservancy (ICF 2023), and publicly available citizen science databases, including eBird (Cornell Lab of Ornithology 2023), Bumblebee Watch (The Xerces Society 2023), and iNaturalist (2024).

In the Impacts and Analysis section of the Draft EIR Biological Resources chapter Impact BR-14 included analysis of the potential for the proposed UWSP to impact NBHCP and MAP HCP Covered Species based on three criteria: (1) whether the UWSP area is in the species' known range, (2) whether the UWSP area provides suitable habitat for the species, and (3) whether the species has been documented to occur within, or in the vicinity of, the UWSP area.

As summarized in Draft EIR Table BR-3, pages 7-77 to 7-79, there is a lack of suitable habitat within the USWP area for a number of NBHCP and/or MAP HCP Covered Species. These include several wildlife species (e.g., California tiger salamander, vernal pool fairy shrimp, midvalley fairy shrimp, western spadefoot), and plant species (e.g., Boggs Lake hedge-hyssop, legenera, Colusa grass, slender Orcutt grass, Sacramento Orcutt grass) principally due to the absence of suitable vernal pool and seasonal wetland within the UWSP area. There are also other NBHCP and/or MAP HCP Covered Species which do not rely upon vernal pool or seasonal wetland habitat for which no impacts from the proposed project were expected. For example, no impacts to cackling goose from implementation of the UWSP were identified because the species 1) does not breed in the Central Valley, 2) has not been documented to utilize habitat within the study area and (3) would only be present on a transitory basis during the winter. Similarly, no impacts to greater sandhill crane are expected because the species is not known to forage or nest in the Natomas Basin.

For those NBHCP and/or MAP HCP Covered Species with at least a moderate potential to occur within the UWSP area, Table BR-3 identified the mitigation measures that would be required to reduce the potential impacts from development within the USWP area to a less-than-significant level. For example, potential effects to loggerhead shrike would be addressed through implementation of Mitigation Measures BR-1, BR-2a, and BR-5. With implementation of those applicable mitigation measures, the Draft EIR analysis determined that potential impacts to all NBHCP and/or MAP HCP Covered Species that

had a moderate or high potential to occur in the UWSP area would be reduced to a less-than-significant level. Thereby, complete buildout of UWSP area as described in the Draft EIR would consequently not hinder the ability of the TNBC to achieve its Conservation Strategy to support each of the Covered Species because the project would either have no impact to a given Covered Species or the project's contribution for potential impacts to a Covered Species would be reduced to a less-than-significant level with implementation of avoidance and minimization measures BR-1 to BR-9.

EFFECTIVENESS OF NBHCP CONSERVATION STRATEGY WITH UWSP

The NBHCP states that the foreseeable urban development within the Natomas Basin ranges from 13,533 to 20,033 acres (Table III-5 of the 2003 NBHCP). These data were used in the NBHCP "...to provide an estimate of potential urban development and resulting take and to provide a basis to assess funding requirements" (at page III-12 of the 2003 NBHCP). The NBHCP assumes that the "permittees" for incidental take permits (City of Sacramento, Sutter County, and Metro Air Park using the NBHCP under the Metro Air Park Habitat Conservation Plan) will develop a maximum of 17,500 acres. This value is 2,533 acres below the maximum urban development projection used to develop the NBHCP. The NBHCP also makes a number of assumptions in its conservation strategy, including an acknowledgement that some agricultural lands outside the plans' preserve areas would remain in agricultural use.

Multiple comments provided the opinion that UWSP development of agricultural areas conflicted with the NBHCP Conservation Strategy. Sacramento County considered these comments but determined there were no conflicts because the NBHCP itself acknowledges that the privately held land that includes foraging opportunities in the vicinity of the reserve system are not under the control of TNBC and are not part of mitigation included in the NBHCP, and that the Land Use Agency Permittees have limited control over the use of these lands (see page IV-11 of the 2003 NBHCP).

The Draft EIR also evaluated whether the footprint of the proposed UWSP, in combination with existing and reasonably foreseeable development, could result in significant cumulative impacts on the ability for TNBC to fulfill the conservation requirement of the NBHCP, including for TNBC Covered Species reliant on agricultural lands (see Master Response BR-2). As shown in Draft EIR, Chapter 22, Cumulative Impacts, Table CI-4, page 22-31, 84 percent of the lands currently available for acquisition by TNBC would remain available following build-out of the UWSP area. To fully mitigate the remaining authorized incidental take areas covered by the NBHCP, TNBC needs to acquire an additional 3,564 acres of reserve lands (refer to Table CI-4 in the Draft EIR). Given that there would still be 8,096 acres of potential reserve lands following the full build-out of the UWSP, the ability for the TNBC to achieve the NBHCP Conservation Strategy would remain feasible.

Additionally, the potential for implementation of compensatory mitigation pursuant to development of the UWSP to conflict with the NBHCP guidelines for reserve acquisition were considered. Implementation of Mitigation Measure BR-3b and Mitigation Measure BR-7b would limit acquisition of compensatory mitigation for Swainson's hawk and giant garter snake to locations outside the Natomas Basin. As a result, implementation of

both of these mitigation measures by design would not directly compete with TNBC for limited habitat mitigation opportunities within the geographic boundaries of the Natomas Basin. Therefore, the proposed project would not conflict with Conservation Strategy of the NBHCP.

MASTER RESPONSE BR-2: REDUCTIONS IN AGRICULTURAL LAND AVAILABLE TO NBHCP COVERED SPECIES

Per the discussion of Foraging Habitat on page IV-11 of the NBHCP, the NBHCP assumed that The Natomas Basin Conservancy's (TNBC's) reserve system, in conjunction with some portion of the existing foraging habitat within the general area at the time the NBHCP was adopted, would provide for long-term viability of the NBHCP Covered Species within Natomas Basin. This assumption was based on, among other things, historic land use patterns in Natomas Basin and the adopted general plans and policies of cities and counties with jurisdiction within Natomas Basin at the time the NBHCP was prepared. Also the discussion of Foraging Habitat on page IV-11 of the NBHCP, NBHCP acknowledged that the foraging opportunities in the vicinity of the reserve system are not under the control of TNBC, are not mitigation included in the NBHCP, and that the NBHCP's Land Use Agency Permittees have limited control over the use of these lands. Within Sacramento County, there is a general trend in loss of agricultural land over time; between 2010 and 2020, there was a net decrease in 19,354 acres of agricultural land county-wide (see Draft EIR Table AG-1, page 5-3).

The UWSP would include a 542-acre Ag Buffer Area, located west of the Development Area. This buffer is intended to allow for the continuation of existing agricultural, ag-residential, and mitigation uses. Although the existing foraging habitat within the general area at the time the NBHCP was adopted is not considered mitigation under the NBHCP, the NBHCP includes an adaptive management program that allows TNBC, on behalf of Sutter County and the City of Sacramento, to respond to the urbanization of such foraging habitat and the potential impacts on the NBHCP Operating Conservation Program, as described on NBHCP pages IV-13-14. This process can be implemented by TNBC as needed and could include measures such as modification of acquisition criteria to adjust for impacts to foraging habitat outside of reserves; replacing unrestored reserve sites impacted by land use changes with replacement reserves that provide foraging habitat; modification of the percentages of the habitat types comprising prospective TNBC reserve sites; and, the pursuit of outside funding sources to acquire, improve and managed additional TNBC reserves that would maintain Natomas Basin foraging habitat.

Within the Draft EIR, Impact BR-3: Giant Garter Snake, Impact BR-7: Swainson's Hawk, and Impact BR-14: Conflict with Natomas Basin HCP and Metro Air Park HCP each included analyses of the proposed UWSP impacts on those NBHCP and MAP HCP Covered Species that are reliant on agricultural lands. These analyses document the permanent loss of 1,197 acres of Swainson's hawk foraging habitat, of which 1,194 is agricultural land and 468 acres of suitable upland habitat for giant garter snake, and describe mitigation measures to avoid or substantially lessen the magnitude of these impacts. With implementation of Mitigation Measure AG-1, conversion of farmland

within the UWSP area would be mitigated at a 1:1 ratio through preservation of other farmland, as consistent with Sacramento County General Plan Policy AG-5¹. Further, as shown on Draft EIR Plate BR-4, page 7-59, a substantial amount of cropland in production within Natomas Basin and surrounding areas would remain outside the UWSP area. Given these factors, the planned UWSP development described in the Draft EIR would not reduce agricultural lands within in the Natomas Basin in such a manner that it would inhibit TNBC's ability to achieve its Conservation Strategy under the NBHCP.

MASTER RESPONSE BR-3: IMPACTS ON GIANT GARTER SNAKE HABITAT

The program of mitigation measures for covered species presented in the Draft EIR were developed to be at least as effective and comprehensive as those included in the NBHCP. As described under Draft EIR Mitigation Measure BR-3, prior to the approval of grading permits, improvement plans or building permits project applicants within the UWSP would be required to compensate for the permanent loss of giant garter snake habitat at a ratio of at least 1:1. In comparison, the NBHCP only requires a mitigation ratio of 0.5:1. Mitigation sites would be required to be located outside of the Natomas Basin and in the American Basin Recovery Unit as described in the U.S. Fish and Wildlife Service's 2017 *Recovery Plan for the Giant Garter Snake (Thamnophis gigas)*.

The 30-acre Alleghany Reserve is part of the NBHCP reserve system managed by TNBC and is within the UWSP area; it would be part of the proposed agricultural buffer (Ag Buffer) planned for the proposed UWSP. Any offsite improvements implemented in support of the proposed UWSP development located near the southern portion of the Alleghany Reserve would be limited to an existing section of San Juan Road and would be subject to compliance with Draft EIR Mitigation Measures BR-1 through BR-9. The Alleghany Reserve does not currently provide any suitable habitat for giant garter snake, as documented in the NBHCP 2022 Annual Monitoring Report. Given these considerations, particularly the documentation that giant garter snake are not using TNBC reserve habitat within the UWSP area, use of mitigation sites within the American Basin Recovery Unit and outside the Natomas Basin as proposed under BR-3 would provide equal or superior opportunities to enhance habitat connectivity with existing reserve units that provide suitable giant garter snake habitat, consistent with the NBHCP's goals.

MASTER RESPONSE BR-4: IMPACTS ON SWAINSON'S HAWK ZONE

The NBHCP identifies the concept of the Swainson's Hawk Zone (SHZ) for the Natomas Basin, which essentially covers the portion of Natomas Basin within one mile of the Sacramento River (see Figure 13 of the NBHCP). This reach of the Sacramento River

¹ Proposed General Plan text amendment to Policy AG-5 would allow for the Board of Supervisors to approve out-of-county mitigation for farmland of lower quality tiers (i.e., unique, local and grazing farmland); the approved text amendment would also allow for out-of-county mitigation for prime and statewide importance farmlands, but only when it also provides concomitant mitigation for special-status species.

along the western margin of Natomas Basin is known to support Swainson's hawk nesting. According to the Natomas Basin Conservancy's 2023 Annual Monitoring Report, a total of 69 Swainson's hawk nesting territories were occupied basin-wide during 2022, which is well above the average of 57 occupied territories and the third highest since monitoring began in 2000. The reproductive rate (i.e., number of young per occupied territory) rebounded slightly in 2022 but remained below 1, the approximate value of a stable population. The Annual Monitoring Report stated this rate was consistent with results from other areas of the Central Valley and not based on conditions within the Natomas Basin. The report also states that in 2022, there were 35 active nesting territories along both sides of the Sacramento River, the highest number observed since 2004. While the report notes that the number of nesting pairs along the Sacramento River fluctuates substantially from year to year, there has been no discernible trend over time and the consistency of the mean number of nesting pairs persists despite continuing urbanization, ongoing tree removal, and increasing human disturbance. The Annual Monitoring Report concludes that this is perhaps due to the breeding pairs' use of alternate nest sites on both sides of the Sacramento River, which allows the species flexibility in avoiding disturbance from season-to-season.

Recognizing that the ecological value the Natomas Basin SHZ is due to its proximity to the Sacramento River riparian corridor, Mitigation Measure BR-7b, Draft EIR page 7-60, last paragraph, is revised to read:

“...Prior to the approval of either grading permits or building permits, whichever is first, project applicants for each construction phase shall compensate for permanent loss of foraging habitat through the preservation of foraging habitat. **Mitigation sites shall be located outside, and within 10 miles of, the Natomas Basin. Compensatory mitigation located at mitigation sites within 1 mile of the Sacramento River or Feather River shall be at a ratio of at least 0.75:1 (mitigation habitat to permanently lost habitat). Compensatory mitigation for mitigation sites greater than 1 mile from the Sacramento River and Feather River shall be at a ratio of at least 1:1 (mitigation habitat to permanently lost habitat), or of equal or greater ecological value as established in separate authorizations or permits by the USFWS and/or CDFW.**

Swainson's hawk foraging habitat in the portion of the SHZ within the UWSP area represents approximately 8.2 percent of the total area of the entire SHZ. The SHZ foraging habitat within the UWSP area includes no alfalfa production, which is the highest quality foraging habitat for Swainson's hawk; the balance of the SHZ outside of the UWSP area includes 644.0 acres of alfalfa production.

~~The opportunities for compensatory mitigation under Draft EIR Mitigation Measure BR-7b, as amended above, include more than 8,000 acres of highest quality foraging habitat (i.e., alfalfa, pasture, field crops, wheat, grain and hay, truck crops, young perennial, and annual grassland) within 10 miles of the UWSP area and outside of the Natomas Basin. Further, in Sutter and Butte Counties alone, there are over 23,000 acres of~~

~~available reserve lands within 1 mile of the Sacramento River or Feather River, of which over one third is highest quality Swainson's hawk foraging habitat.~~

~~Based on the proportion of Swainson's hawk foraging habitat in the UWSP area relative to the foraging habitat in the entire SHZ, in combination with Mitigation Measure BR-7b, impacts to foraging habitat within the SWZ would be mitigated to a less-than-significant level.~~

The opportunities for compensatory mitigation under Draft EIR Mitigation Measure BR-7b, as amended above, include more than 8,000 acres of highest quality foraging habitat (i.e., alfalfa, pasture, field crops, wheat, grain and hay, truck crops, young perennial, and annual grassland) outside, and within 10 miles of, the Natomas Basin. This acreage includes lands near the Sacramento River and Feather River.

Based on Mitigation Measure BR-7b, impacts to foraging habitat within the SWZ would be mitigated to a less-than-significant level.

MASTER RESPONSE HYD-1: FLOOD PROTECTION AND DRAINAGE

Several comments received on the Draft EIR expressed concerns regarding flood protection and drainage.

As discussed in Chapter 13, *Hydrology and Water Quality*, and in Appendix HYD-1, *Drainage Study*, the UWSP area is currently located in the 100-year flood zone. A remapping effort is currently underway, which would conditionally remove portions of the site from the flood zone designation, pending completion of the Natomas Levee Improvement Project. The flood control and levee improvement projects are anticipated to be completed by 2025 and will provide protection from the 200-year design storm event. Development within the UWSP area would not commence until after the levee upgrades are complete.

As discussed in Chapter 2, *Project Description*, of the Draft EIR, stormwater from each of the drainage water sheds would be directed to detention basins within each watershed prior to being routed to drainage canals. In addition, development projects implemented under the UWSP would incorporate water quality measures (e.g., amended soils, bio-retention, water quality basins) as required by the County's Storm Water Quality Design Manual. As discussed in DEIR Appendix HYD-1, *Drainage Study*, projects implemented under the UWSP will be required to comply with the Sacramento Area-Wide NPDES Municipal Stormwater Permit (Order No. R5-2008-0142), which addresses post-construction flow reduction and treatment requirements. The requirements include Low Impact Development (LID) flow reduction and treatment control measures. LID measures are typically integrated into site landscaping (including open space, yards, streetscapes, road medians, and parking lot and sidewalk planters) or into the design of paved and other impervious areas (e.g., open space, disconnected impervious areas, porous pavement, bioswales, trees). LID BMPs reduce the increase in runoff volume that would otherwise be expected from a development. Reducing runoff using LID measures reduces the amount of runoff that needs to flow into treatment BMPs.

Finally, projects constructed under the proposed UWSP would include designing the detention basins to the 500-year flood event to attenuate storm flows and designing the foundations and pads of structures built within the UWSP area to the 200-year flood event, as per ULOP requirements. Note that the existing level of community flood protection is lower than the conditions once the levee upgrades are completed in 2025. Therefore, with completion of the above-described improvements of the levee system that are independent of the UWSP and the construction and operation of the drainage systems for projects implemented under the UWSP, flood protection would be improved over existing conditions.

MASTER RESPONSE LU-1: COUNTY URBAN SERVICES BOUNDARY AND URBAN POLICY AREA

Several comments received on the Draft EIR address issues associated with the establishment and proposed changes in the Urban Services Boundary (USB) which is established in the Sacramento County General Plan.

Many of the comments assert that the proposed UWSP would be located outside the County Urban Services Boundary (USB) and Urban Policy Area (UPA). The County does not allow or approve development outside the USB or the UPA. While it is true that the proposed UWSP area is currently outside the USB and UPA, as stated on page 2-14 in Chapter 2, *Project Description*, of the Draft EIR, required entitlements for the proposed UWSP include a General Plan Amendment to expand the USB and the UPA to include the 1,524-acre Development Area within the 2,066-acre UWSP area. Thus, if approved, the UWSP would be located inside the USB and UPA, and development of the UWSP would be consistent with General Plan requirements that urban development occurs within the USB and UPA.

Some comments reflect references in the General Plan that the USB represents the “ultimate boundary of the urban area” of the County. While the Sacramento County General Plan does include such a reference, it also recognizes that the USB may change over time. As discussed in Chapter 14, *Land Use*, of the Draft EIR, the Sacramento County General Plan includes a comprehensive and robust policy framework for acceptance and approval of proposed applications to expand the USB and the UPA. The presence of this policy framework indicates the County’s expectation that over time circumstances may emerge where the “ultimate boundary of the urban area” may evolve. Project-specific and cumulative effects of the proposed UWSP are fully evaluated in the Draft EIR. Because the extension of the USB and UPA are part of the package of approvals that would be required to approve the proposed UWSP, it logically follows that the Draft EIR evaluates and discloses the environmental effects of changing the ultimate boundary the County’s urban area.

Some comments assert that the proposed UWSP would set a precedent for other development projects in Natomas to encroach beyond the USB. This assertion is unsupported by evidence in the record. As explicitly stated in the Draft EIR, a General Plan Amendment to expand the USB and the UPA to include the 1,524-acre Development Area within the 2,066-acre UWSP area is a condition of UWSP approval.

The County does not allow or approve development outside the USB or the UPA. As discussed in Chapter 14, *Land Use*, of the Draft EIR, the Sacramento County General Plan includes a comprehensive and robust policy framework for acceptance and approval of proposed applications to expand the USB and the UPA. Any and all proposed new development applications to expand the USB and the UPA would be required to meet these same requirements and would be entitled in a process requiring substantial effort.

Finally, some comments ask that the EIR include an assessment of the environmental impacts of changing the USB. The Draft EIR disclosure of environmental impacts of the proposed UWSP presented in Chapters 3 through 24 are the significant impacts of changing the USB as proposed. There are no significant environmental impacts that would occur outside of those that are attributable to the proposed UWSP, as described at length in the Draft EIR and this Final EIR.

MASTER RESPONSE LU-2: CONSISTENCY WITH SACRAMENTO COUNTY GENERAL PLAN POLICY LU-127

Several comments raise concern that the Draft EIR does not adequately address the proposed UWSP's consistency with Sacramento County General Plan Policy LU-127.

General Plan Policy LU-127 is one of nine policies in the General Plan Land Use Element (Policies LU-119 through LU-127) that address the procedures that the County will use to amend the General Plan Land Use Diagram. The General Plan states “[t]o remain effective in addressing changes in local trends and conditions that occur during the designated planning period, the Land Use Element must be amendable.” If the County, when adopting the General Plan, determined that the USB and UPA boundaries were permanent and inviolate, such policies that establish criteria and processes for changes to those boundaries would not have been included. The General Plan recognizes that amendments may be initiated by the Board of Supervisors, the Planning Commission, or private individuals. Policy LU-127 is one of this group of policies and addresses specifically expansion of the USB.

General Plan Policy LU-127 specifies that expansion of the USB is subject to the discretion of the Board of Supervisors. Policy LU-127 provides that the Board may approve an expansion of the USB with a 4/5 vote in favor if it finds that the proposed USB expansion would provide extraordinary environmental, social, or economic benefits and opportunities to the County.

The Draft EIR fully evaluates the physical environmental effects that could result with implementation of the proposed UWSP, including the substantive analysis that the Board may use to inform its consideration of Policy LU-127 criteria related to the physical environmental effects that could result with implementation of the proposed UWSP. Specifically, the Policy LU-127 criterion that addresses effects related to water supplies is addressed in Draft EIR Chapter 20, *Utilities* (see Impact UT-2 on Draft EIR pages 20-36 through 20-37). The Policy LU-127 criterion that addresses conformance with the Sacramento County air quality plan is addressed in Draft EIR Chapter 6, *Air*

Quality. The Policy LU-127 criterion that addresses physical environmental effects related to natural resource areas, aquifer recharge lands, and prime agricultural lands is addressed in Draft EIR Chapter 7, *Biological Resources*, Chapter 11, *Geology, Soils, and Paleontology*, Chapter 13, *Hydrology and Water Quality*, and Chapter 5, *Agricultural Resources*, respectively. The Policy LU-127 criterion that addresses effects related to implementation of a Sacramento County-adopted Habitat Conservation Plan is addressed in Draft EIR Chapter 7, *Biological Resources* (see Impact BR-14 on Draft EIR pages 7-76 through 7-84). However, the determination of whether the proposed USB expansion would provide extraordinary environmental, social, or economic benefits and opportunities to the County would be made by the Board, and this determination is not appropriately addressed in the EIR.

Accordingly, the Board will consider the proposed expansion of the USB in its decision whether to approve the proposed UWSP and in accordance with Policy LU-127. The Board's decision as to the compliance with Policy LU-127 does not affect the conclusions of the EIR as it relates to any of the relevant physical environmental effects of the proposed UWSP. Further, because the policy requires the judgement and discretion of the Board of Supervisors, it would not be possible for the Draft EIR to include a determination of consistency of the proposed UWSP with Policy LU-127.

MASTER RESPONSE LU-3: SACOG BLUEPRINT AND MTP/SCS

Several comments raise concern that the proposed UWSP is not anticipated for development in the current Sacramento Area Council of Governments (SACOG) Blueprint or Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS).

As the Metropolitan Planning Organization (MPO) for the Sacramento region, SACOG oversees the Regional Transportation Plan for the region, updating the plan every four years in collaboration with local governments. The Blueprint and the MTP/SCS are intended to be advisory and to guide the region's transportation planning and funding decisions. As stated in the 2020 MTP/SCS, while the MTP/SCS is required to integrate land use and transportation planning, the plan recognizes and protects local land use authority. Under SB 375 and the MTP/SCS, the region's cities and counties retain local land use authority over where future development occurs. The MTP/SCS land use and transportation assumptions are built using local plans and in close coordination with planning and transportation staff around the region. The plan does not mandate any changes to local zoning rules, general plans, or processes for reviewing projects. Nor can the plan act as a cap on development in any given jurisdiction.

It is correct that the proposed UWSP is not anticipated for development in the current versions of the Blueprint and the MTP/SCS. In fact, in describing how the land use forecast that is included in the MTP/SCS was developed, SACOG stated that it was based on an inventory of unbuilt capacity for housing and employment uses, based on existing, adopted plans. The proposed UWSP is not accounted for in the 2020 MTP/SCS or the Blueprint because it currently lies outside of the USB and UPA and did not meet SACOG's criteria for inclusion in those documents. The 2020 MTP/SCS Appendix D, *Land Use Forecast Documentation*, specifically stated "[o]utside of the

current UPA and USB, in the northwestern portion of the county, the County is also currently processing an application for two projects identified as the North Natomas Precinct and the Upper Westside Specific Plan. While many of these areas are consistent with the region's long term growth strategy, the Blueprint, and are in varying stages of the local entitlement process, they are not yet approved by the County.”² If the County approves the proposed UWSP, and in doing so extends the USB and UPA, these factors would be considered in future land use forecasts undertaken by SACOG in preparation of future versions of the MTP/SCS.

As discussed in Chapter 14, *Land Use*, of the Draft EIR, the UWSP area and the proposed UWSP are not anticipated for development in either the SACOG Blueprint or the MTP/SCS. Nevertheless, Impact LU-4, pages 14-23 through 14-33 of the Draft EIR, discusses the relationship of the proposed UWSP to the principles contained in the Blueprint, including compact development, mixed-use development, housing choice and diversity, transportation choice, reduction of vehicle miles travelled (VMT), reduction of greenhouse gas (GHG) emissions, natural resource conservation, and quality design. This discussion shows that the proposed project aligns with the Blueprint policies.

MASTER RESPONSE TR-1: TRANSIT

As there were various comments on the Draft EIR pertaining to the transit analysis, this master response has been developed such that all transit-related responses can be found in a single location. Each comment is followed by a response in italics. However, prior to presenting this information, it is instructive to provide an overview of the bus services offered by Sacramento Regional Transit (SacRT):

According to the SacRT System Fact Sheet (January 2024),³ SacRT operates 37 fixed routes, 23 commuter routes, 16 seasonal routes in addition to nine SmaRT Ride on-demand microtransit service zones, and ADA paratransit service (SacRT GO). Buses operate daily from 5 AM to 11 PM every 15 to 60 minutes, depending on the route. Express bus service is provided to major destinations such as Sacramento International Airport and UC Davis. The busiest bus routes in the system include Routes 51, 81, and 68. Given high levels of ridership on them, each operate with 15- or 30-minute headways. The Broadway/Stockton station along Route 51 is the busiest stop in the network, with 2,400 passenger boardings per day.

In terms of bus route coverage in areas that are comparably located to UWSP (relative to Downtown) and have similar mixes of residential and employment, the Oak Park area southeast of Downtown/Midtown is a good example. That area, which is bounded by State Route 99, US 50, 55th Street, and Fruitridge Road, has major employers such as UC Davis Medical Center, and a variety of housing types. SacRT operates seven surface street bus routes in the area (38,

² Sacramento Area Council of Governments, *2020 Metropolitan Transportation Plan/Sustainable Communities Strategy, Appendix D: Land Use Forecast Documentation*, November 18, 2019, page 47

³ [Microsoft Word - System Fact Sheet 2023](#)

51, 61, 67, 68, and 138). Between 5 and 6 PM, over 20 different buses along these routes pick up and drop off passengers in this area.

Comment TR-1a: Presumed transit service will not be in place until full build-out provides the requisite ridership. *Transit service is expected to continue to expand as project buildout occurs. As more residences, office space, schools, and retail are added, transit ridership will grow, furthering the need for increased transit service coverage and bus frequencies.*

Comment TR-1b: Draft EIR fails to explain how a 2% (as assumed for transportation impact analysis purposes) transit mode share is consistent with its claim that the Project is somehow “encouraging” transit use and fails to identify the assumed “base” transit mode split rate from which additional adjustments are made. *The trip generation analysis began with trip rates from the General Urban/Suburban category of the 10th Edition of the Trip Generation Manual (Institute of Transportation Engineers, 2017). That document states the following regarding trip rates derived from the General Urban/Suburban category:*

“Even if the land uses are complementary, a lack of pedestrian, bicycling, and transit facilities or services limit non-vehicle travel. Nearly all person trips that enter or exit a development site are by personal passenger or commercial vehicle”.

Various ITE documents related to trip generation do not (and cannot based on how data is submitted to ITE) provide a specific base level of transit use for land uses in this geographic category.

Footnote 3 in Table TR-1 indicates that external project trips made by transit are expected to range from 2.0 to 2.3 percent depending on the time period. This estimate is derived from the mixed-use trip generation MXD+ model described in the LTA.⁴ In developing this estimate, MXD considers the proportion of households within the project site that are situated within a ¼-mile walk of a transit stop, and the proportion of the region’s job accessible via a 30-minute ride via bus or rail. As noted on page 47 of the LTA, “the analysis presumes that at project buildout, the site would be served with fixed-route transit (with overall service levels complying with County Policy LU-120)”. This policy dictates bus service levels of 15-minute headways during peak periods and 30-minute headways during off-peak periods. Contrary to the comment’s assertion, the Draft EIR’s purpose was not to select a transit mode split that encourages or discourages transit use, but rather to develop a reasoned percentage of its residents, workers, and visitors that will use transit based on substantial evidence. The Draft EIR succeeded in this manner.

Comment TR-1c: The project fails to provide adequate transit facilities, and the DEIR fails to adequately disclose this to the public and decision-makers. It also fails to identify with any specificity the specific transit infrastructure required to handle external transit

⁴ [mxd+ - Fehr & Peers](#)

trips. *The Upper Westside Specific Plan describes the project's planned transit facilities. The project would provide four bus stops along Bryte Bend Road and a Mobility Hub on West El Camino Avenue. The Mobility Hub is described in the Specific Plan as follows:*

The Mobility Hub serves public and private transit modes, including local and regional transit, car sharing, bike sharing, and bike parking. It should include benches and informational signage, as well as bike/scooter racks and bike lockers, which give users the ability to secure their property. The Mobility Hub also has linkages to the UWSP's Class I trail system, enhancing its access by bike. This is also an ideal location for commuter or express buses (e.g. vanpool), with connections to key destinations such as downtown Sacramento, the airport, or other cities or employment centers within the region. It also accommodates specialized public or private bus services (e.g. FlixBus) that provide long-haul connections to cities outside the region.

Bus stop locations shown on Plate TR-5 are conceptual in nature and would need to be finalized based on coordination between SacDOT and SacRT.

Comment TR-1d: The Draft EIR fails to set forth enforceable mitigation to address the projected transit demand (3,576 daily transit trips). *Mitigation Measure TR-1b) describes the mitigation required to be implemented by the project to ensure an adequate level of transit service is provided to the project. The mitigation requires the transit service must be phased as development of the UWSP occurs. According to the development agreement between the County and Property Owners, internal or external shuttle service shall be initiated at the time the permit for the 500th residential unit is issued and external shuttle service should be commenced by the time the permit for the 1,000th residential unit is issued.*

Comment TR-1e: The Draft EIR fails to adequately describe the project's transit plan and how it will be funded. *The Upper Westside Specific Plan Public Facilities Financing Plan (EPS, May 2024) describes financing for transit improvements. Page 47 of the report states the following:*

This Financing Plan assumes that a new, Project-specific SCTDF district will be formed around the Plan Area. Assuming that the Project's SCTDF-Transit fee is similar to the current SCTDF District 6 fees, the Project will contribute approximately \$12.8 million to transit facilities through the transit component of the Sacramento County Transportation Development Fee (SCTDF).

Mitigation Measure TR-1b) describes how transit service frequency levels will be achieved through the annexation to County Service Area (CSA) 10, formation of a transportation services district, or other secured funding mechanism. CSAs aggregate parcels into different benefit zones, for which property owners can vote to tax themselves to provide service (e.g., trip reducing, carpooling, vanpooling, transit passes, etc.). Fees are then paid annually by property owners. Should RT decide that it cannot serve the area, then the ongoing fee payments could instead be directed at a private service provider.

MASTER RESPONSE TR-2: GARDEN HIGHWAY SAFETY CONSIDERATIONS

Garden Highway is a two-lane undivided roadway in the project vicinity. It has a posted speed limit of 45 miles per hour (mph) along the project's frontage. Speed limit signs are infrequent on the 3.7-mile stretch of this roadway from Radio Road to Orchard Lane. The speed is reduced to 40 mph just west of Orchard Lane where the roadway is within the City of Sacramento limits. Garden Highway currently carries between 1,800 and 2,300 ADT (both directions combined).

Shoulders and sidewalks are not provided on the majority of this roadway, meaning that bicyclists, pedestrians, and agricultural vehicles must share the road with vehicles. Passing is permitted on portions of the roadway. The roadway features homes with direct driveway access onto the street. Some parcels (particularly on the west side) allow for on-street parking. An advisory sign is posted in the southbound direction stating "Winding Levee Road next 3 Miles". Additionally, advisory 40 mph speed limit signs are posted approaching the horizontal curve under I-80 in each direction of Garden Highway.

A series of Chevron Alignment (CA MUTCD sign W1-8) signs are installed on the outside of the horizontal curve along Garden Highway at its I-80 undercrossing. These signs provide additional emphasis and guidance for a change in the road's horizontal alignment. The California Manual of Uniform Traffic Control Devices (Caltrans, 2014) specifies that a minimum of three Chevron Alignment signs shall be installed on the outside of a turn or curve, in line with and at approximately a right angle to approaching traffic. In each direction of this horizontal curve, seven or eight signs are erected, thereby providing multiple cues to motorists that the upcoming roadway segment is curving

The collision history along Garden Highway between Radio Road and Orchard Lane was analyzed using the Transportation Injury Mapping System (TIMS) database⁵. This is a free and publicly available dataset of reported injury collisions on local and state roadways. TIMS data was obtained for a 3-year period from June 30, 2021 through June 30, 2024. The dataset consists of numerous variables associated with each collision including time of day, day of week, date, primary collision factor, collision type, number of involved parties, collision severity, weather conditions, lighting, pavement conditions, involvement of bicyclist, pedestrian, or motorcycle, driver impaired, driver age and gender. The TIMS database classifies collisions as either fatal, severe, or injury-only. A total of 5 injury collisions were reported in the 3.7-mile corridor over the three year period. These collisions are summarized below:

- One single-vehicle, hit object collision occurred 1,000 feet west of Orchard Lane.
- Two collisions occurred along the horizontal curve immediately under the I-80 overcrossing. Both were single vehicle, run off road (one each in southbound and westbound directions), hit object collisions.
- One broadside collision occurred one mile north of I-80 overcrossing, resulting in severe injury. The primary collision factor was driving under the influence.

⁵ [TIMS - Transportation Injury Mapping System](#)

- One sideswipe collision occurred at Radio Road, caused by improper passing.

No reported injury collisions during the three-year timeframe involved bicyclists or pedestrians. Based on this data there are 0.69 crashes/million vehicle miles. Caltrans shows a statewide average of 1.09 crashes/million vehicle miles for similar roadway types (conventional 2 lane highway, flat terrain, ≤ 55 mph speed, rural area), so Garden Highway currently performs better (i.e. lower rate) than similar roadways. Additionally, the number of new vehicle trips added by the project (see Local Transportation Analysis (LTA) in Appendix TR-2) does not meet the threshold for a rural roadway functionality impact, which would necessitate wider shoulders and travel lanes.

The *Sacramento County Local Road Safety Plan (LRSP)* (DKS Associates 2022)⁶ was reviewed to determine whether it identified any recurring collision patterns along the Garden Highway corridor. Figure 17 of the LRSP shows a map indicating that between 2015 and 2019, there were two lane departure crashes on Garden Highway near the project site. This segment did not rank high in terms of frequency of such collision types, and accordingly it was not shown on Figure 18, which is a map of priority recommended guardrail installations throughout the county.

Table 1 shows the ADT on various segments of Garden Highway under existing, existing plus project buildout, cumulative no project, and cumulative plus project conditions. Project buildout would add the following volumes to Garden Highway: 1,900 ADT added north of Radio Road, 600 ADT added south of San Juan Road, and 2,300 ADT added east of Bryte Bend Road (under I-80). In terms of percent growth in traffic, this would represent a 121% increase on Garden Highway east of I-80, 83% increase on Garden Highway north of Radio Road, and 33% increase on Garden Highway south of San Juan Road.

Table 1: Traffic Volumes on Garden Highway

Segment	ADT			
	Existing Volume	Existing Plus Project Buildout Volume	Cumulative No Project Volume	Cumulative Plus Project Buildout Volume
Garden Highway north of Radio Road	2,300	4,200	3,500	8,500
Garden Highway south of San Juan Road	1,800	2,400	1,100	2,400
Garden Highway east of I-80	1,900	4,200	1,700	5,000
SOURCE: Appendix TR-1 (Upper Westside Specific Plan Transportation Impact Analysis).				

⁶ [Local Roadway Safety Plan](#)

Bicycle travel data from counts collected in 2020 is available for Garden Highway. January 2020 traffic counts revealed no bicyclists from 7 to 9 AM and 12 bicyclists from 4 to 6 PM passing through the Garden Highway/Orchard Lane intersection. A January 2020 traffic count from 4 to 6 PM revealed 8 bicyclists passing through the Garden Highway/San Juan Road intersection. An October 2020 traffic count revealed 6 bicyclists passing through the Garden Highway/Power Line Road intersection from 4 to 6 PM. Thus, this section of Garden Highway receives moderate usage by bicyclists.

Page 22-66 of the Draft EIR describes the project's responsibility to pay its fair share toward the widening of Garden Highway from Power Line Road to San Juan Road to improve it to 24 feet of pavement width for two-way vehicular travel plus a pair of six-foot paved shoulders. This is required because this segment would carry over 6,000 ADT, for which Sacramento County standards for rural roadways require this cross-section. The fair share payment (versus project construction responsibility) reflects the fact that the need for improvement is cumulative in nature, driven by both project trips and background traffic growth from other planned developments in the area. There are no known impediments to improvements to Garden Highway that would be caused by the SAFCA work. The County expects to be able to work cooperatively with SAFCA to install the shoulders under cumulative conditions when warranted, within the 40' ROW.

As noted in Table 1 above, the daily volumes on Garden Highway south of San Juan Road and east of I-80 would each not exceed 6,000 daily trips under cumulative plus project conditions. Accordingly, they would not operate at a substandard level, and thus widening of these street segments is not required. Page 18-38 of the Draft EIR indicates that the project is required to construct left- or right-turn lanes on Garden Highway at San Juan Road, Bryte Bend Road, and Radio Road. These dedicated turn lanes are intended to reduce potential conflicts with other turning movements at each intersection.

Finally, it is noted that the Street 9 connection to Garden Highway is being contemplated for removal by the project applicant. If removed, it would eliminate a planned at-grade intersection from Garden Highway, and result in an overall reduction in travel on Garden Highway (by virtue of most of the trips that do enter/exit from Garden Highway being shifted to either San Juan Road or Bryte Bend Road).

Regarding planned bicycle improvements along Garden Highway, the Sacramento County Active Transportation Plan (ATP, 2022)⁷ includes a recommendation for a shared-use (Class I, off-street) path on Garden Highway from I-80 to North Bayou Way, a distance of 7.8 miles. This trail is also listed in SACOG's Sacramento Region Trail Network Action Plan and Project List (Approved 2022).⁸ To construct this facility, additional right-of-way acquisition would be needed, requiring coordination with SAFCA.

⁷ [Active Transportation](#)

⁸ [Sacramento Regional Trail Network | SACOG](#)

The trail is not proposed to be constructed by the UWSP applicant and it is not a condition of the project's approval. Therefore, this issue is not germane to the EIR.

MASTER RESPONSE TR-3: TRAFFIC CONGESTION

Several comments pertained to concerns over worsening traffic congestion caused by the project. This master response addresses those comments.

Page 8-13 of the Draft EIR describes how Senate Bill (SB 743) resulted in the replacement of vehicle level of service (LOS) with Vehicle Miles of Travel (VMT) as the metric to be used to analyze a proposed land development's impacts on the roadway network. CEQA Guidelines Section 15064.3 prohibits the use of LOS or other measures of delay as thresholds of significance in CEQA documents. For this reason, intersection and roadway LOS analysis is not presented in any of the EIR chapters. And accordingly, no mitigation measures have been identified to specifically address facilities that would degrade to an unacceptable LOS.

However, LOS is still relevant in the development review process. It helps determine a project's consistency with General Plan LOS policies. And it can be used to identify what types of improvements are needed to address a deficient condition such that the facility meets the General Plan LOS standard that inform implementation of the circulation and policy related to safety and hazards.

A comprehensive traffic study known as a Local Transportation Analysis (LTA) was prepared for this project. The following summarizes its scope and breadth of study:

- Study Area: bounded by the Sacramento River on the west, Garden Highway on the south, Truxel Road on the east, and Del Paso Road on the north.
- Study Facilities: 43 existing study roadways, 41 existing study intersections, and 5 interchanges located in Sacramento County, City of Sacramento, and under the jurisdiction of Caltrans.
- Analysis Scenarios: existing, existing plus project, cumulative, and cumulative plus project conditions
- Analysis Time Periods: weekday AM and PM peak hour conditions for intersections, and weekday daily conditions for roadway segments in Sacramento County.
- Intersection Operations Methods: state-of-the-practice SimTraffic microsimulation model was used to analyze Caltrans facilities and intersections within the project site near the Town Center.
- Analysis Forecasting Tools: SACOG SACSIM19 model was used to develop cumulative forecasts. Model considers planned development and transportation improvements throughout the Sacramento metropolitan region.

Coordination with Caltrans well in advance of the Draft EIR release ensured an appropriate study area and analysis methods.

The proposed UWSP project would generate a large number of trips. Through its complementary mix of on-site land uses, a substantial proportion of project trips would be internalized within the site (23 percent on a daily basis, 35 percent during the AM peak hour, and 26 percent during the PM peak hour). After considering internal trips, pass-by/diverted-link trips to retail uses, and trips generated by existing uses to be removed, the project would generate about 100,000 new external daily trips, with 7,500 new trips during the AM peak hour and 8,200 new trips during the PM peak hour (see Table 9 of LTA). As indicated in Table 10, about 69 percent of that traffic is expected to use West El Camino Avenue via the I-80/West El Camino Avenue interchange to access the project site. The project would have a considerable financial responsibility for upgrading that interchange.

The LTA includes numerous LOS tables (with detailed technical calculations contained in a 775-page technical appendix), which show where operations would worsen to unacceptable levels with the project. In such instances, improvements were tested to determine if they would restore operations to an acceptable level. The identified improvements, which are located in Sacramento County, City of Sacramento, and within Caltrans' jurisdiction, are illustrated on Figure ES-1 and listed in Tables ES-1 and ES-2 of the LTA. In summary, the traffic study was comprehensive in nature, applied state-of-the-practice analysis methods, and appropriately identified the physical improvements that would be needed to accommodate the addition of project trips.

LETTER 1

State Water Resources Control Board (SWRCB), State of California statewide water resources agency, written correspondence; dated October 14, 2024.

COMMENT 1-1

Thank you for the opportunity to review the Environmental Document for the proposed Project. The State Water Resources Control Board, Division of Drinking Water (State Water Board, DDW) is responsible for regulating public water systems and issuing water supply permits pursuant to the Safe Drinking Water Act. This Project is within the jurisdiction of the State Water Board, DDW's Sacramento District.

RESPONSE 1-1

This is an introductory comment noting the jurisdiction of the State Water Resources Control Board (SWRCB), Division of Drinking Water (DDW), Sacramento District. This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 1-2

If the above noted project results in the formation of a new public water system, an application must be submitted, and a permit must be obtained from the DDW Sacramento District before water can be provided for human consumption. "Human consumption" means the use of water for drinking, bathing or showering, hand washing, oral hygiene, or cooking, including, but not limited to, preparing food and washing dishes." Health & Saf. Code § 116275 subd. (e).

Note, Health & Saf. Code § 116527 subd. (b) requires that any person submitting a permit application for a proposed new public water system must first submit a technical report at least six months before initiating construction of any drinking water-related improvements. The technical report must include an examination of the possibility of connecting to or being annexed by an existing adjacent community water system.

RESPONSE 1-2

This comment advises that the formation of a new public water system will require a permit from the DDW Sacramento District. The Draft EIR description of the provision of water supply and related storage, transmission, and distribution infrastructure created some confusion about the water service provider for the proposed project. As explained in Response 12-10 potable water for the proposed project would be served by the Sacramento County Water Agency with supplies purchased through a wholesale agreement with the City of Sacramento. As the proposed project would become part of

the County's' existing water system, a new permit for a new public water system would not be required. Please also see Response 12-10.

COMMENT 1-3

A permit amendment must also be obtained from the DDW Sacramento District when changes are made to a permitted domestic water supply source, storage, or treatment and for the operation of new water system components, as specified in the Cal. Code Regs. § 64556.

RESPONSE 1-3

The project applicant and Sacramento County understand that a permit amendment must be obtained from the DDW Sacramento District when changes are made to a permitted domestic water supply source, storage, or treatment and for the operation of new water system components. This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 1-4

- The Project will be served domestic water by a new or existing public water system. Under section 2. "Project Description", "Intended Uses of the EIR" please add "The State Water Board, Division of Drinking Water" as an approving agency and "water supply permit" as the approval (PDF page 221-223).

RESPONSE 1-4

The requested revision will be made to the Project Description.

Draft EIR, Chapter 2, *Project Description*, page 2-61, the following is added to Table PD-3:

<u>California State Water Resources Control Board, Division of Drinking Water</u>	<u>Water supply permit</u>
---	----------------------------

COMMENT 1-5

- The City of Sacramento (City), through an agreement with the Sacramento County Water Agency (SCWA), will provide potable water for the Project as a wholesaler [PDF Page 207]. The Sacramento County Local Agency Formation Commission will need to approve an annexation of the service area to the SCWA (PDF page 182). Please clearly disclose if a new "public water system", pursuant to Health and safety Code section 116275 subd. (h), will be created under the authority of SCWA. The State Water Board, DDW encourages projects that would otherwise create a new public water system to connect with nearby

community water systems, where possible, instead of forming a new public water system. If no nearby systems will agree to serve the Project, the applicant will need to submit a technical report to DDW Sacramento District pursuant to Health and Saf. Code § 116527 subd. (b).

RESPONSE 1-5

Please see Response 1-2.

COMMENT 1-6

- The City plans to sell water to the new development. The City has domestic wells in both the North American Groundwater Basin and the South American Groundwater Basin (PDF page 815). The South American Groundwater Basin is designated as a high priority groundwater basin by Department of Water Resources (Sustainable Groundwater Management Act Basin Prioritization Dashboard), but the Project impacts on this basin were not discussed in the Environmental Document. If water will be pumped from the South American Basin for the Project, please discuss the amount of water that will be pumped and the impacts of that pumping on the South American Groundwater Basin.

RESPONSE 1-6

As discussed in Chapter 20, *Utilities*, section of the Draft EIR, the City of Sacramento obtains most of its water supply from surface water from the American and Sacramento Rivers, while groundwater obtained from the North American and South American subbasins of the Sacramento Valley Groundwater Basin makes up the balance of its water supplies. As discussed in Chapter 20,

The North American Subbasin is bounded by the Bear River to the north, the Feather River to the west, the Sacramento and American Rivers to the south, and a north-south line extending from the Bear River to Folsom Lake to the east. The South American Subbasin is bounded by the Sierra Nevada to the east, the Sacramento River to the west, the American River to the north, and the Cosumnes and Mokelumne Rivers to the south.

The City extracts groundwater from 28 municipal wells; 26 of the wells are located north of the American River in the North American Subbasin and the other two wells extract groundwater from the South American Subbasin.

As described in the August 2024 Public Review Draft UWSP, section 5.4 Water Master Plan, page 5-8, the City would wholesale treated water to SCWA for retail distribution to the UWSP area. It is anticipated that the water supply would likely be a combination of both surface and groundwater. If groundwater is used, it would be extracted from the North American Subbasin because the City only uses groundwater from the North American for municipal supplies; groundwater from the South American Subbasin is used for irrigation purposes.

COMMENT 1-7

- The City will provide 4,313 acre-feet per year of treated water to meet the Project's total water demand (PDF page 841). Please explain why the City water system can't directly serve the Project and needs to provide treated water.
 - Will other sources of water besides purchased water from the City be used to serve the Project? If so, please explain these sources and discuss the impacts of the use of these sources, as needed.

RESPONSE 1-7

As described in Response 12-10, the City of Sacramento's General Plan 2040 policy, LUP-1.4 *City Services Prior to Annexation*, prevents the City from providing municipal services to areas outside of its existing service area boundaries without annexation into the City service area. As described in the August 2024 Public Review Draft UWSP, section 5.4 Water Master Plan, page 5-8, the project applicant has proposed that the City of Sacramento would be the wholesaler under an agreement with SCWA which would be the retail service provider for treated water in the UWSP area. Because the project is proposed to be developed as a community within unincorporated Sacramento County, and not be annexed to the City of Sacramento, the City's General Plan Policy LUP-1.4 obviates the potential for the City to directly serve the proposed project. See Response 1-6 for the discussion of City of Sacramento's water supply sources.

COMMENT 1-8

- Please disclose if the existing groundwater wells are on the Project site. If so, explain what actions will be taken to protect water quality. Has a well assessment or will a well assessment for the existing wells occur? Are there plans to use any of the wells as domestic supply or destroy them for the protection of water quality?

RESPONSE 1-8

As discussed in Chapter 14, *Land Use and Planning*, agriculture is the predominate land use within the UWSP area with large parcels devoted to growing seasonal row crops. During the irrigation season, the Natomas Central Mutual Water Company (NCMWC) currently serves agricultural customers in the western portion of the UWSP area through a series of agricultural water ditches. The City of Sacramento currently serves domestic customers to the east of the UWSP project area. As discussed in Response 1-7, treated water would be wholesaled by the City to SCWA for retail delivery to the UWSP area. As such, existing wells or new wells would not be used for domestic water uses. Therefore, well siting studies in addition to well assessments will not be required as groundwater underlying the UWSP area would not be used for water supply within the UWSP area.

COMMENT 1-9

- Cal. Code. Regs. § 64572 requires separation of drinking water service lines from sources of potential contamination such as irrigation drainage channels, sewer mains, and stormwater detention basins. The Project site includes existing irrigation drainage channels and will also install new irrigation drainage channels, sewer mains, and four stormwater detention basins (PDF pages 206,209, and 616). Please indicate if separation requirements can be met or if a waiver or alternative to Waterworks Standards (Cal. Code. Regs. § 64551.100) will be needed. If a waiver is needed, the water system will need to provide the DDW Sacramento District with the alternative plans and a waiver approval should be listed as part of the needed DDW approvals in the Environmental Document.

RESPONSE 1-9

The potable water system installed as part of the proposed UWSP project would be designed, approved and constructed in compliance with Cal. Code. Regs. § 64572. Should a variance be needed, SCWA, as the water retailer to the proposed UWSP project area, would provide the DDW Sacramento District with the alternative plans requested as part of the DDW approvals and identified in the environmental document.

COMMENT 1-10

Once the Environmental Document is certified, please forward the following items in support of water system's permit application to the State Water Board, DDW Sacramento District Office at DWPDIST09@waterboards.ca.gov:

- A copy of the Environmental Document and Mitigation Monitoring and Reporting Plan (MMRP);
- A copy of comment letters received and the lead agency responses as appropriate;
- A copy of the Resolution or Board Minutes certifying the Environmental Document and adopting the MMRP; and
- A copy of the date stamped Notice of Determination filed at the County Clerk's Office and the Governor's Office of Planning and Research, State Clearinghouse.

RESPONSE 1-10

The comment is noted. If the UWSP EIR is certified and the proposed UWSP is approved by the Board of Supervisors, the County will convey the requested documents to the State Water Resources Control Board, Division of Drinking Water, as requested.

LETTER 2

Central Valley Regional Water Quality Control Board (CVRWQCB), State of California regional water resources agency, written correspondence; dated October 14, 2024.

COMMENT 2-1

I. Regulatory Setting

Basin Plan

The Central Valley Water Board is required to formulate and adopt Basin Plans for all areas within the Central Valley region under Section 13240 of the Porter-Cologne Water Quality Control Act. Each Basin Plan must contain water quality objectives to ensure the reasonable protection of beneficial uses, as well as a program of implementation for achieving water quality objectives with the Basin Plans. Federal regulations require each state to adopt water quality standards to protect the public health or welfare, enhance the quality of water and serve the purposes of the Clean Water Act. In California, the beneficial uses, water quality objectives, and the Antidegradation Policy are the State's water quality standards. Water quality standards are also contained in the National Toxics Rule, 40 CFR Section 131.36, and the California Toxics Rule, 40 CFR Section 131.38.

The Basin Plan is subject to modification as necessary, considering applicable laws, policies, technologies, water quality conditions and priorities. The original Basin Plans were adopted in 1975, and have been updated and revised periodically as required, using Basin Plan amendments. Once the Central Valley Water Board has adopted a Basin Plan amendment in noticed public hearings, it must be approved by the State Water Resources Control Board (State Water Board), Office of Administrative Law (OAL) and in some cases, the United States Environmental Protection Agency (USEPA). Basin Plan amendments only become effective after they have been approved by the OAL and in some cases, the USEPA. Every three (3) years, a review of the Basin Plan is completed that assesses the appropriateness of existing standards and evaluates and prioritizes Basin Planning issues. For more information on the *Water Quality Control Plan for the Sacramento and San Joaquin River Basins*, please visit our website:

http://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/

RESPONSE 2-1

This introductory comment describes the Basin Plan, its objectives, and review process. The Basin Plan is discussed in the Draft EIR, Chapter 13, page 13-5. The comment is for informational purposes only and does not comment on the adequacy of the DEIR. This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 2-2

Antidegradation Considerations

All wastewater discharges must comply with the Antidegradation Policy (State Water Board Resolution 68-16) and the Antidegradation Implementation Policy contained in the Basin Plan. The Antidegradation Implementation Policy is available on page 74 at: https://www.waterboards.ca.gov/centralvalley/water_issues/basin_plans/sacsjr_201805.pdf

In part it states:

Any discharge of waste to high quality waters must apply best practicable treatment or control not only to prevent a condition of pollution or nuisance from occurring, but also to maintain the highest water quality possible consistent with the maximum benefit to the people of the State.

This information must be presented as an analysis of the impacts and potential impacts of the discharge on water quality, as measured by background concentrations and applicable water quality objectives.

The antidegradation analysis is a mandatory element in the National Pollutant Discharge Elimination System and land discharge Waste Discharge Requirements (WDRs) permitting processes. The environmental review document should evaluate potential impacts to both surface and groundwater quality.

RESPONSE 2-2

This comment provides an overview of the requirements of the Antidegradation Policy (State Water Board Resolution 68-16), and the Antidegradation Implementation Policy contained in the Basin Plan. The Basin Plan and the NPDES program are discussed in the Draft EIR, Chapter 13, page 13-5. The comment states that the environmental review document should evaluate potential impacts to both surface and groundwater quality. Impacts regarding surface and groundwater quality are evaluated in Chapter 13, *Hydrology and Water Quality*. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 2-3

II. Permitting Requirements

Construction Storm Water General Permit

Dischargers whose project disturb one or more acres of soil or where projects disturb less than one acre but are part of a larger common plan of development that in total disturbs one or more acres, are required to obtain coverage under the General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities (Construction General Permit), Construction General Permit Order No. 2009-0009-DWQ. Construction activity subject to this permit includes clearing, grading, grubbing, disturbances to the ground, such as stockpiling, or

excavation, but does not include regular maintenance activities performed to restore the original line, grade, or capacity of the facility. The Construction General Permit requires the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP). For more information on the Construction General Permit, visit the State Water Resources Control Board website at:

http://www.waterboards.ca.gov/water_issues/programs/stormwater/constpermits.shtml

RESPONSE 2-3

The Construction General Permit requirements and impacts associated with this permit are discussed in Chapter 11, *Geology, Soils, and Paleontology*, page 11-9, and in Chapter 13, *Hydrology and Water Quality*, pages 13-7 to 13-9. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 2-4

Phase I and II Municipal Separate Storm Sewer System (MS4) Permits¹

The Phase I and II MS4 permits require the Permittees [to] reduce pollutants and runoff flows from new development and redevelopment using Best Management Practices (BMPs) to the maximum extent practicable (MEP). MS4 Permittees have their own development standards, also known as Low Impact Development (LID)/post-construction standards that include a hydromodification component. The MS4 permits also require specific design concepts for LID/post-construction BMPs in the early stages of a project during the entitlement and CEQA process and the development plan review process.

For more information on which Phase I MS4 Permit this project applies to, visit the Central Valley Water Board website at:

http://www.waterboards.ca.gov/centralvalley/water_issues/storm_water/municipal_permits/

For more information on the Phase II MS4 permit and who it applies to, visit the State Water Resources Control Board at:

http://www.waterboards.ca.gov/water_issues/programs/stormwater/phase_ii_municipal.shtml

¹ Municipal Permits = The Phase I Municipal Separate Storm Water System (MS4) Permit covers medium sized Municipalities (serving between 100,000 and 250,000 people) and large sized municipalities (serving over 250,000 people). The Phase II MS4 provides coverage for small municipalities, including non-traditional Small MS4s, which include military bases, public campuses, prisons and hospitals.

RESPONSE 2-4

The Sacramento Areawide NPDES Municipal Stormwater Permit (MSP) and the regionwide Municipal Separate Storm Sewer System (MS4) permit, as well as the requirements of the Stormwater Quality Design Manual for the Sacramento Region, are described in Draft EIR Chapter 13, *Hydrology and Water Quality*, page 13-10. Impacts

on water quality which may be associated with this permit are discussed under Draft EIR Impact HYD-1, pages 13-17 to 13-21.

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 2-5

Clean Water Act Section 404 Permit

If the project will involve the discharge of dredged or fill material in navigable waters or wetlands, a permit pursuant to Section 404 of the Clean Water Act may be needed from the United States Army Corps of Engineers (USACE). If a Section 404 permit is required by the USACE, the Central Valley Water Board will review the permit application to ensure that discharge will not violate water quality standards. If the project requires surface water drainage realignment, the applicant is advised to contact the Department of Fish and Game for information on Streambed Alteration Permit requirements. If you have any questions regarding the Clean Water Act Section 404 permits, please contact the Regulatory Division of the Sacramento District of USACE at (916) 557-5250.

RESPONSE 2-5

The Section 404 permit and Streambed Alteration Agreement requirements and potential impacts associated with these permits are discussed in Chapter 7, *Biological Resources*. Refer also to Response 2-7.

COMMENT 2-6

Clean Water Act Section 401 Permit – Water Quality Certification

If an USACE permit (e.g., Non-Reporting Nationwide Permit, Nationwide Permit, Letter of Permission, Individual Permit, Regional General Permit, Programmatic General Permit), or any other federal permit (e.g., Section 10 of the Rivers and Harbors Act or Section 9 from the United States Coast Guard), is required for this project due to the disturbance of waters of the United States (such as streams and wetlands), then a Water Quality Certification must be obtained from the Central Valley Water Board prior to initiation of project activities. There are no waivers for 401 Water Quality Certifications. For more information on the Water Quality Certification, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/water_issues/water_quality_certification/

RESPONSE 2-6

The Section 401 Water Quality Certification requirements and potential impacts associated with these permits are discussed in Draft EIR Chapter 7, *Biological*

Resources, page 7-29, and under Impact BR-11, pages 7-71 to 7-74. Please also see Response 2-7.

COMMENT 2-7

Waste Discharge Requirements – Discharges to Waters of the State

If USACE determines that only non-jurisdictional waters of the State (i.e., “non-federal” waters of the State) are present in the proposed project area, the proposed project may require a Waste Discharge Requirement (WDR) permit to be issued by Central Valley Water Board. Under the California Porter-Cologne Water Quality Control Act, discharges to all waters of the State, including all wetlands and other waters of the State including, but not limited to, isolated wetlands, are subject to State regulation. For more information on the Waste Discharges to Surface Water NPDES Program and WDR processes, visit the Central Valley Water Board website at:

https://www.waterboards.ca.gov/centralvalley/water_issues/waste_to_surface_water/

Projects involving excavation or fill activities impacting less than 0.2 acre or 400 linear feet of non-jurisdictional waters of the state and projects involving dredging activities impacting less than 50 cubic yards of non-jurisdictional waters of the state may be eligible for coverage under the State Water Resources Control Board Water Quality Order No. 2004-0004-DWQ (General Order 2004-0004). For more information on the General Order 2004-0004, visit the State Water Resources Control Board website at: https://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2004/wqo/wqo2004-0004.pdf

RESPONSE 2-7

Waters of the State are discussed in the Draft EIR under the description of the Porter-Cologne Water Quality Control Act in Chapter 7, *Biological Resources*, page 7-31, and Chapter 13, *Hydrology and Water Quality*, page 13-5.

In response to the comment that the proposed UWSP may require a Waste Discharge Requirement (WDR) permit to be issued by Central Valley Water Board, Draft EIR, Chapter 2, *Project Description*, Table PD-3, page 2-61 is revised to read:

<u>Central Valley Regional Water Quality Control Board</u>	<u>Waste Discharge Permit Section 401 Water Quality Certification</u>
---	--

In addition, Draft EIR Mitigation Measure BR-11, page 7-71, third bullet, the first sentence is revised to read:

Where disturbance to jurisdictional wetlands or waters **of the U.S., or waters of the State**, cannot be avoided, any temporarily affected jurisdictional wetlands or waters shall be restored to pre-construction conditions or better at the end of construction, in accordance with the requirements of USACE, Central Valley RWQCB, and/or CDFW permits.

COMMENT 2-8

Dewatering Permit

If the proposed project includes construction or groundwater dewatering to be discharged to land, the proponent may apply for coverage under State Water Board General Water Quality Order (Low Threat General Order) 2003-0003 or the Central Valley Water Board's Waiver of Report of Waste Discharge and Waste Discharge Requirements (Low Threat Waiver) R5-2018-0085. Small temporary construction dewatering projects are projects that discharge groundwater to land from excavation activities or dewatering of underground utility vaults. Dischargers seeking coverage under the General Order or Waiver must file a Notice of Intent with the Central Valley Water Board prior to beginning discharge.

For more information regarding the Low Threat General Order and the application process, visit the Central Valley Water Board website at:

http://www.waterboards.ca.gov/board_decisions/adopted_orders/water_quality/2003/wqo/wqo2003-0003.pdf

For more information regarding the Low Threat Waiver and the application process, visit the Central Valley Water Board website at:

https://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/waivers/r5-2018-0085.pdf

RESPONSE 2-8

Due to the relatively shallow depth to groundwater on the project site, dewatering may be required for construction and/or operation of some projects under the proposed UWSP. Waste discharge requirements for dewatering are described in Draft EIR Chapter 13, *Hydrology and Water Quality*, page 13-9, and Impacts associated with these permits are discussed under Impact HYD-1, page 13-19.

COMMENT 2-9

Limited Threat General NPDES Permit

If the proposed project includes construction dewatering and it is necessary to discharge the groundwater to waters of the United States, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. Dewatering discharges are typically considered a low or limited threat to water quality and may be covered under the General Order for *Limited Threat Discharges to Surface Water* (Limited Threat General Order). A complete Notice of Intent must be submitted to the Central Valley Water Board to obtain coverage under the Limited Threat General Order. For more information regarding the Limited Threat General Order and the application process, visit the Central Valley Water Board website at: https://www.waterboards.ca.gov/centralvalley/board_decisions/adopted_orders/general_orders/r5-2016-0076-01.pdf

RESPONSE 2-9

This comment lists additional dewatering requirements, which are addressed above in Response 2-8. Note that the Order cited in the comment (R5-2016-0076-01) has recently been updated to R5-2022-0006-01 and then amended with order R5-2023-0058.

COMMENT 2-10**NPDES Permit**

If the proposed project discharges waste that could affect the quality of surface waters of the State, other than into a community sewer system, the proposed project will require coverage under a National Pollutant Discharge Elimination System (NPDES) permit. A complete Report of Waste Discharge must be submitted with the Central Valley Water Board to obtain a NPDES Permit. For more information regarding the NPDES Permit and the application process, visit the Central Valley Water Board website at: <https://www.waterboards.ca.gov/centralvalley/help/permit/>

RESPONSE 2-10

As described in Draft EIR, Chapter 2, *Project Description*, the proposed UWSP would be annexed to the SacSewer District. Draft EIR page 2-43 states that “[w]astewater generated within the UWSP area would be conveyed through local sewer systems to the regional interceptor system for treatment at the Sacramento Regional Wastewater Treatment Plant in Elk Grove.” Projects proposed under the proposed UWSP would not discharge wastewater to land and thus would not be anticipated to require coverage under an NPDES permit.

LETTER 3

California Department of Fish and Wildlife (CDFW), State of California natural resource agency, written correspondence; dated October 30, 2024.

COMMENT 3-1

COMMENT 1: Cumulative Agricultural Land Loss and Covered Species Habitat Loss, Conversion of Farmland to Nonagricultural Uses and Conflict with Natomas Basin HCP and Metro Air Park HCP, page numbers 5-20 to 5-23, 7-76 to 7-84

Issue: The Project is near the boundaries of the Natomas Basin Habitat Conservation Plan (NBHCP) Area and Metro Air Park Habitat Conservation Plan (MAP HCP) Area. CEQA Guidelines section 15125(d) states that EIRs must discuss any inconsistencies between projects and applicable plans (including habitat conservation plans/natural community conservation plans). The HCPs anticipate a certain amount of acreage to sustain the agricultural land that Covered Species can utilize for habitat (foraging, nesting, dispersal, cover, etc.). Since the HCPs' implementation, projects in the Natomas Basin have resulted in a decrease in the amount of agricultural land available to Covered Species. CDFW is concerned that this Project will further contribute to the habitat loss and a reduction in the effectiveness of the NBHCP's Conservation Strategy. When the NBHCP was first implemented in 2003 it was anticipated that 15,095 acres of agricultural land would remain, specifically as buffers for habitat reserves and supporting ecological functions of the Covered Species that rely on agricultural resources (Natomas Basin Habitat Conservation Plan, Page IV-11 through Page IV-13). However, agricultural land remaining for Covered Species has decreased since the NBHCP was adopted, through projects such as Greenbriar (1041 acres) and the Sacramento Area Flood Control Agency Natomas Levee Improvement Project (1600 acres). Further development projects under consideration, including this Project, Airport South Industrial Project (353.5 acres), and Grandpark (5676 acres) will further decrease the remaining agricultural lands. CDFW is concerned that further agricultural land loss will contribute to significant cumulative impacts to biological resources and will make maintaining 15,095 acres of agricultural land, as described in the NBHCP, unreachable.

Recommendation or Recommended Mitigation Measure: To identify any potential inconsistencies with the NBHCP and MAP HCP, CDFW recommends that the DEIR analyze Project related impacts from developing up to 1,532 acres within areas anticipated to remain in agricultural uses and providing available habitat for NBHCP and MAP HCP Covered Species. CDFW also recommends the DEIR discuss the persistence of the NBHCP and MAP HCP Covered Species, critical for the success of both plans, including what actions are needed to sustain the appropriate levels of habitat to support all Covered Species within the NBHCP and MAP HCP boundaries. Additionally, CDFW recommends the DEIR include a discussion on how the County will ensure that implementation of the Project will not impede the NBHCP and MAP HCP's biological goals and measurable objectives as it relates to agricultural lands.

RESPONSE 3-1

Please see Master Response BR-2: Reductions in Agricultural Land Available to NBHCP Covered Species.

COMMENT 3-2

COMMENT 2: Conservation Strategy for Upland Habitat, Page 7-84

Issue: The NBHCP conservation strategy for upland habitat is to avoid development in the Swainson's Hawk Zone (SHZ) (and to preserve upland habitat within and outside of the Swainson's Hawk Zone). The SHZ encompasses undeveloped land in the Natomas Basin that is within 1 mile of the inside toe of the levee along the Sacramento River from the Natomas Cross Canal south to Interstate 80. The SHZ was derived from the high density of Swainson's hawk nests within this area and scientific evidence for the value of the habitat (NBHCP 2003). The NBHCP recognizes the importance of the SHZ to this species and the viability of their plan which resulted in substantial effort from the City of Sacramento and Sutter County to replan development outside of this area. Replanning efforts in the SHZ have been vital to preserve the area's ecological value and the overall goals of the NBHCP, despite the associated economic and political opportunity costs. The NBHCP states that the "greatest impact of urban development on the Swainson's hawk in the Natomas Basin would occur if significant portions of the Swainson's Hawk Zone were developed." CEQA Guidelines section 15125(d) states that EIRs must discuss any inconsistencies between projects and applicable plans (including habitat conservation plans/natural community conservation plans). The UWSP describes 975 acres of permanent habitat impacts within the SHZ, which is inconsistent with the NBHCP and therefore potentially significant as analyzed in the DEIR.

Mitigation Measure BR-7b of the DEIR proposes to minimize any potential conflict with this NBHCP strategy through applying a higher mitigation ratio (1:1) for conservation of Swainson's hawk foraging habitat than proposed in the NBHCP (0.5:1); however, the NBHCP does not propose any additional development (and subsequent mitigation) within this area because of its ecological value, so only providing a comparison of the ratios without further analysis does not justify mitigation to a level of less than significant. At a 1:1 ratio, the current Mitigation Measure BR-7b will incur a net loss of available habitat for Swainson's hawk in addition to the loss of a highly productive area within the SHZ.

Recommendation or Recommended Mitigation Measure: CDFW recommends to further analyze the impact to the SHZ by providing further discussion on the Project's 1) biological impact in an ecologically valuable area; 2) the effect that Project development in the SHZ will have on the continued implementation and viability of the NBHCP, as well as the MAP HCP and 3) a comprehensive justification for how the mitigation proposed mitigates the impacts to a significant habitat.

RESPONSE 3-2

Please see Master Response BR-4: Impacts on Swainson's Hawk Zone.

COMMENT 3-3

COMMENT 3: Non-Special Status Migratory Bird and Raptor Survey Radius, BR-5 Avoid and Minimize Impacts on Nesting Birds, page number 7-53

Issue: The DEIR states that surveys shall be performed for the Project area, vehicle and equipment staging areas, and suitable habitat within 250 feet to locate any active passerine (perching bird) nests and within 500 feet to locate any active raptor (bird of prey) nests. CDFW believes a larger survey buffer with a minimum of 500 feet for migratory birds and 0.5-mile for raptors, as well as conducting them no more than seven (7) calendar days before construction commences would be more appropriate and protective for species that rebuild a nest quickly.

Recommendation or Recommended Mitigation Measure: CDFW recommends the DEIR describe how the considerations identified below will be implemented and incorporated into the appropriate DEIR section(s):

1. CDFW recommends the Project proponent add specific avoidance and minimization measures to the Mitigation Measures section. Project-specific avoidance and minimization measures may include, but not be limited to: Project phasing and timing, monitoring of Project-related noise (where applicable), sound walls, visual barriers, and buffers, where appropriate. The DEIR should include appropriate preconstruction surveys for non-listed migratory birds at a minimum radius of 500 feet (for migratory birds) and 0.5-mile (for raptors) around the Project area that can be accessed by the Project proponent. The DEIR should include specific avoidance and minimization measures that will be implemented should a nest be located within the Project site. One example is a nest buffer radius which can be determined by monitoring the active nests and determining the distance at which the activities will disturb the nesting birds.
2. CDFW recommends including performance-based protection measures for avoiding all nests protected under the Migratory Bird Treaty Act and Fish and Game Code. While some birds may tolerate disturbance within 500 feet of construction activities, other birds may have a different disturbance threshold and “take” could occur if the temporary disturbance buffers are not designed to reduce stress to that individual pair. It is the Project proponent's responsibility to confirm that the buffer is sufficient to avoid take/nest failure.
3. CDFW recommends a final preconstruction bird survey be required no more than seven (7) calendar days prior to the start of vegetation clearing or ground disturbance activities, as instances of nesting could be missed in earlier surveys. Monitoring of potential nesting activities in the Project area should continue, at a minimum, until the end of the avian nesting season (September 1). If a lapse in Project-related work of seven (7) calendar days or longer occurs, another focused bird survey should be completed before Project work can be reinitiated. It is the Project proponent's responsibility to comply with Fish and Game Code Sections 3503, 3503.5, and 3513, regardless of the time of year.

4. CDFW recommends that any removal of known raptor nest trees, even outside of the nesting season, be replaced with an appropriate native tree species planting at a ratio of 3:1 at or near the Project area or in another area that will be protected in perpetuity to reduce impacts resulting from the loss of nesting habitat.

RESPONSE 3-3

In response to the commenter's first recommendation, the proposed preconstruction survey radiuses of 250 feet (for passerine birds) and 500 feet (for raptors) is consistent with CDFW's *Conservation Measures for Biological Resources That May Be Affected by Program-level Actions* for non-listed passerines and raptors.⁹ Larger radiuses will be applied for special-status species such as Swainson's hawk and western burrowing owl.

In response to the commenter's second, third, and fourth recommendations, Mitigation Measure BR-5 is revised to read:

BR-5 Avoid and Minimize Impacts on Nesting Birds

- Mitigation Measure BR-5 applies to projects that include removal of trees or vegetation, tree trimming, or use of heavy equipment (e.g., earthwork, demolition).
- A qualified wildlife biologist shall conduct pre-construction nesting surveys during the avian nesting breeding season (approximately February 1 to August 31) within **no more than 7 days** prior to construction. **If a lapse in Project-related work of seven (7) calendar days or longer occurs, another focused bird survey should be completed before Project work can be reinitiated.** Surveys shall be performed for the project area, vehicle and equipment staging areas, and suitable habitat within 250 feet to locate any active passerine (perching bird) nests and within 500 feet to locate any active raptor (bird of prey) nests.
- A pre-construction survey report of findings shall be prepared by the qualified biologist and submitted to the County for review and approval prior to initiation of construction within the no-disturbance zone during the nesting season. The report shall either confirm the absence of any active nests or shall confirm that any young within a designated no-disturbance zone have fledged and construction can proceed. **If any active raptor nest trees that are either documented in the Pre-construction Baseline Biological Resources Report required under Mitigation Measure BR-1, or are discovered during pre-construction nesting bird surveys or construction, would be removed by Project activities, the project applicant shall**

⁹ California Department of Fish and Wildlife. Appendix I: CDFW's Conservation Measures for Biological Resources That May Be Affected by Program-level Actions. [file:///C:/Users/ewalther/Downloads/Appendix%20I%20CDFWs%20Conservation%20Measures%20\(3\).pdf](file:///C:/Users/ewalther/Downloads/Appendix%20I%20CDFWs%20Conservation%20Measures%20(3).pdf). Accessed February 2025.

compensate for the removal of raptor nest trees by planting locally appropriate native trees suitable for raptor nesting at a ratio of 3 to 1 (planted to removed), at or near the project site or, if that is infeasible, in an alternative location approved by the County. If the raptor nest is that of a Swainson's hawk, the project applicant shall follow the compensatory mitigation requirements outlined in Mitigation Measure BR-7b.

- If no active nests are identified during the survey period, or if construction activities are initiated during the non-breeding season (September 1 to January 31), construction may proceed with no restrictions.
- If bird nests are found, an adequate no-disturbance buffer **around the nest locations** shall be established ~~around the nest location~~ **by a qualified biologist** and construction activities shall be restricted within the buffer until the qualified biologist has confirmed that any young birds have fledged and are able to leave the construction area. ~~Required setback distances for the no-disturbance zone shall be established by the qualified biologist and may vary depending on species, line of sight between the nest and the construction activity, and the birds' sensitivity to disturbance.~~ **Initial no-disturbance buffers will be 250 feet around active nests of passerine songbirds, and 500-feet around active nests of raptors, excluding Swainson's hawk and golden or bald eagles, which require larger starting buffers. These buffers distances are commonly revised downward to as low as 50 to 100 feet and 250 feet, respectively, based on site conditions and the nature of the work being performed. For example, distances are often reduced if obstacles such as buildings or trees obscure the construction area from active bird nests, or existing disturbances create an ambient background disturbance similar to the proposed disturbance.** As necessary, the no-disturbance zone shall be fenced with temporary orange construction fencing, **high visibility flagging, or other demarcation that allows construction crews to avoid the no-disturbance zone** if construction is to be initiated on the remainder of the development site
- Any birds that begin nesting within the project area and survey buffers amid construction activities shall be assumed to be habituated to construction-related or similar noise and disturbance levels and no-disturbance zones shall **may** not be established around active nests in these cases; however, should birds nesting within the project area and survey buffers amid construction activities begin to show disturbance associated with construction activities, no-disturbance buffers shall be established as determined by the qualified wildlife biologist.
- Any work that must occur within established no-disturbance buffers around active nests shall be monitored by a qualified biologist. If

adverse effects in response to project work within the buffer are observed and the biologist determines the activities are likely to compromise the nest's success, work within the no-disturbance buffer shall halt until the nest occupants have fledged. If the qualified biologist determines that the activities are unlikely to compromise the nest's success, work can continue.

- **Special-status species and sensitive natural Communities detected during surveys or monitoring of the Project shall be reported to the California Department of Fish and Wildlife Natural Diversity Database using the field survey forms found at: <https://wildlife.co.gov/Data/CNDDDB/SubmittingData#4452442-pdfpfield-survey-form>.**

Additionally, in response to the commenter's third recommendation, the general raptor and passerine bird nesting period cited by CDFW is between February 1 and August 31. Defining the end of the avian breeding season as August 31 versus September 1 is comparable when considering the potential for significant impacts.

COMMENT 3-4

COMMENT 4: SWHA's Nesting Habitat Mitigation, Swainson's Hawk Mitigation Measures, page numbers 7-58 to 7-61

Issue: The DEIR lists mitigation measures for impacts to SWHA, including compensation for permanent impacts on SWHA foraging habitat (Measure BR-7b). However, there is no mitigation measure for potential impacts on SWHA nesting habitat. Recent surveys indicated that 14 Swainson's hawk nests are present within the Project area or within a 0.5-mile radius that Project activities may impact (TNBC 2019-2024, CDFW 2020-2024). The UWSP area also contains a number of mature trees that are planned to be removed by the Project which can be utilized for nesting by the SWHA. There is high likelihood that the Project may result in the take of SWHA through the removal of a nest (nesting tree) that is considered active within the last 5 years. The DEIR fails to provide a mitigation proposal for potential permanent impacts to an active SWHA nest and the measures in the DEIR (environmental training, preconstruction survey, avoidance and minimization plan, and biological monitor) are insufficient to reduce Project impacts to a less and significant level.

Recommendation or Recommended Mitigation Measure: Projects with potential impacts to active SWHA nests are required to comply with CESA. CDFW recommends that the Project proponent obtain an incident take permit (ITP) for the Project if potential take of any active SWHA nests cannot be avoided during the life of the Project. CDFW recommends the DEIR include more detailed measures for how the UWSP will mitigate for potential permanent impacts to SWHA nesting habitat before construction commences. These measures can include purchasing SWHA nesting mitigation credits from a CDFW-approved conservation bank, purchasing and placing a conservation easement on nearby biologically suitable, occupied SWHA nesting habitat, or any other method approved by CDFW. The additional measure should be incorporated into the appropriate DEIR section(s).

RESPONSE 3-4

The comment regarding the presence of Swainson's hawk nests in, and in the vicinity of, the project area is noted. Draft EIR Table BR-2, page 7-22, notes that "[a]gricultural areas and grassland provide foraging habitat for Swainson's hawk. This species was observed nesting and foraging in the study area during surveys in 2019, 2020, and 2021 (Bargas 2022) and there are numerous CNDDDB occurrences in the UWSP area." The discussion of Swainson's hawk in Impact BR-7 documents nesting activity of the SWHA in and around the project site. The analysis acknowledges some degree of disparity in the precise numbers of nests, but does not dispute the documented nesting activity in the context of determining that the project would have a potentially significant impact on the SWHA nesting.

In response to the comment, Mitigation Measure BR-7c will be added as follows:

BR-7c Compensate for Permanent Impacts on Swainson's Hawk Nesting Habitat

- Compensation for the permanent loss of nesting habitat shall be determined for each development phase. The applicant for each development phase shall retain a Qualified Biologist to verify, map, and quantify "active" Swainson's hawk nest trees, as defined by CDFW (including, but not limited to, any trees documented as an existing SWHA nesting tree in the Baseline Biological Resources Report required under Mitigation Measure BR-1) that would be permanently impacted by the current development phase.
- Prior to the approval of either grading permits or building permits, whichever is first, project applicants for each construction phase shall compensate for permanent loss of nesting habitat through the preservation of nesting habitat. This compensatory mitigation shall be at a ratio of at least 3:1 (replacement nest trees to removed nest trees). Mitigation replacement trees shall be of one of the following species: coast live oak (*Quercus agrifolia*), valley oak (*Q. lobata*), interior live oak (*Q. wislizeni*), box elder (*Acer negundo*).

This mitigation may be combined with and/or included within the mitigation provided pursuant to Mitigation Measure BR-7b, and may be provided through purchase of credits from a CDFW-approved conservation bank, or through protection of habitat, including acquisition of a conservation easement and funding long-term administration, monitoring, and enforcement of the easement.

Mitigation provided through acquisition of a conservation easement must satisfy the following requirements:

- **The mitigation site(s) shall be subject to consultation with CDFW and approved by CDFW.**
- **The form and content of the easement shall be acceptable to the County and CDFW, prohibit activities that substantially impair or diminish the land's suitability as Swainson's hawk foraging and/or nesting habitat, and protect any existing water rights necessary to maintain foraging habitat in agricultural production.**
- **An endowment in an amount, form, and structure acceptable to the County and CDFW shall be established for administering, monitoring, and enforcing the conservation easement.**
- **Project applicants for each construction phase may need to obtain an incidental take permit (ITP) for the Project if potential take of any "active", as defined by CDFW, SWHA nests cannot be avoided during the life of the Project.**

The addition of Mitigation Measure BR-7c does not require recirculation of any part of the Draft EIR. Pursuant to Public Resources Code section 21092.1 and CEQA Guideline section 15088.5 establish that recirculation is only required where "significant new information" is added to the EIR after circulation of the Draft EIR. Pursuant to Guidelines section 15088.5, the following would constitute significant new information:

1. A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
2. A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
3. A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project's proponents decline to adopt it.
4. The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded. (*Mountain Lion Coalition v. Fish and Game Com.* (1989) 214 Cal.App.3d 1043).

Mitigation Measure BR-7c would be adopted if the proposed project is approved. Because none of the conditions outlined in Guideline section 15088.5 would occur, the changes do not constitute significant new information and there is no requirement to recirculate the Draft EIR.

COMMENT 3-5**COMMENT 5: BUOW's CESA Protection, Burrowing Owl Mitigation Measures, page number 7-22**

Issue: The BUOW is listed as a State Species of Special Concern in the DEIR. On October 10, 2024, the California Fish and Game Commission granted the western burrowing owls candidate species protections under CESA. The candidacy designation temporarily affords the BUOW broad CESA protections (including prohibitions against “take” without permit authorization) throughout the entirety of California over the next 12-18 months while CDFW conducts a species status review to confirm whether (and where) listing is warranted and to recommend management and recovery actions. Projects with potential Project impacts to the burrowing owl will now be required to comply with CESA. In the event that CDFW does confirm that listing is warranted for the BUOW in the future when the Project’s construction phase is to occur and take of BUOW and its nest is unavoidable, the Project proponent will be required to comply with CESA and provide suitable mitigation for loss of nesting habitat.

Recommendation or Recommended Mitigation Measure: CDFW recommends the relevant DEIR section should be modified to note the recent CESA candidate status of the BUOW. If take of BUOW cannot be avoided, then CDFW recommends the Project proponent obtain an ITP and provide suitable mitigation that fully mitigates the Project impacts.

RESPONSE 3-5

The commenter recommends that the County consult with CDFW on potentially obtaining a 2081(b) Incidental Take Permit (ITP) to cover any incidental take of western burrowing owls (BUOW) based on the candidate species protections granted under CESA on October 10, 2024.

In response to Comment 3-5, Table BR-2: Special-Status and NBHCP and MAP HCP Covered Species Evaluated for Potential Occurrence in the UWSP Area, the BUOW’s Listing Status is revised to read:

Common Name/Species Name	Listing Status USFWS/CDFW/CRPR	Habitat, Ecology and Life History	Potential for Species Occurrence
Burrowing Owl <i>Athene cunicularia</i>	-SSC <u>CC</u> --	Open, dry, annual or perennial grasslands, deserts, and scrublands characterized by low-growing vegetation. Utilizes rodent burrows, especially California ground squirrel burrows, or alternative refuge, such as riprap, culverts, etc. Present year-round.	Moderate. Suitable habitat is present in the UWSP area in ruderal or fallowed fields and along the banks of ditches, canals, and levees, especially where small mammal burrows are present. One CNDDB occurrence from 1991 east of the UWSP area

The need for an Incidental Take Permit is not mitigation under CEQA, it is rather a requirement under Fish & Game Code should development of the project result in incidental take of a State listed species. Nevertheless, Mitigation Measure BR-6 is revised to include the following language as the final bullet of the measure to identify the potential need for a take permit:

- **Project applicants for each construction project shall obtain an incidental take permit (ITP) for the project if take of BUOW cannot be avoided during the life of the project.**

COMMENT 3-6

COMMENT 6: Streambed Alteration Agreement, Table PD-3: Subsequent Permits, Approvals, Review, and Consultation Requirements, page number 2-61

Issue: The DEIR contains a table which lists the various permits and approvals required from government agencies in order for the Project to be constructed. However, the table is missing the Streambed Alteration Agreement issued by CDFW. On page 2-55 of the DEIR, various off-site improvements are listed that may impact the West Drainage Canal. This includes the upgrades to the West Drainage Canal (Witter Canal) culvert south of the El Centro Road and Natomas Central Drive/Arena Boulevard intersection, construction of the new bike trail crossing bridge, and the levee bank reinforcement (bank armoring) for the stormwater pump discharge location. These activities will require notification for a Streambed Alteration Agreement.

Recommendation or Recommended Mitigation Measure: CDFW recommends that Table PD-3 be modified to include the Project's need for a Streambed Alteration Agreement from CDFW. CDFW also recommends the DEIR clearly state that notification for a Streambed Alteration Agreement will be required for the three Project activities listed above as well as any other activities that will impact the West Drainage Canal. The notification should include mitigation proposals for compensation to any permanent impacts to the canal which may include the purchase of suitable mitigation credits at a 3:1 replacement to loss ratio, habitat restoration/enhancement onsite or offsite, habitat connectivity enhancements (wildlife crossings), partnership with other agencies or non-profit groups on restoration projects, or other mechanisms pre-approved by CDFW.

RESPONSE 3-6

In response to the comment that the UWSP project may need a Streambed Alteration Agreement from CDFW for activities that will impact the West Drainage Canal, Draft EIR, Chapter 2, *Project Description*, Table PD-3, page 2-61 is revised to read:

California Department of Fish and Wildlife	Incidental take permit; <u>Streambed Alteration Agreement</u>
--	--

In response to the comment that the proposed UWSP may need a Streambed Alteration Agreement from CDFW for activities that will impact the West Drainage Canal, Draft EIR

MM BR-11, Avoidance of Impacts on Wetlands and Waters, page 7-72, the following is added after the second bulleted full paragraph:

- **Notification for a Streambed Alteration Agreement may be required for upgrades to the West Drainage Canal (Witter Canal) culvert south of the El Centro Road and Natomas Central Drive/Arena Boulevard intersection, construction of the new bike trail crossing bridge, and the levee bank reinforcement (bank armoring) for the stormwater pump discharge location as well as any other activities that may impact the West Drainage Canal. If required, the notification should include mitigation proposals for compensation to any permanent impacts to the canal which may include the purchase of suitable mitigation credits, habitat restoration/enhancement onsite or offsite, habitat connectivity enhancements (wildlife crossings), partnership with other agencies or non-profit groups on restoration projects, or other mechanisms.**

COMMENT 3-7

ENVIRONMENTAL DATA

CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database which may be used to make subsequent or supplemental environmental determinations (Pub. Resources Code, § 21003, subd. (e).) Accordingly, please report any special-status species and natural communities detected during Project surveys to the California Natural Diversity Database (CNDDDB). The CNDDDB field survey form can be found at the following link: <https://www.wildlife.ca.gov/Data/CNDDDB/Submitting-Data>. The completed form can be submitted online or mailed electronically to CNDDDB at the following email address: CNDDDB@wildlife.ca.gov.

RESPONSE 3-7

In response to this comment, Mitigation Measure BR-1, Pre-construction Baseline Biological Resources Report; BR-2c, Avoid and Minimize Impacts on Rare Plant Species; BR-3, Avoid, Minimize, and Compensate for Impacts on Giant Garter Snake; BR-4, Avoid and Minimize Impacts on Northwestern Pond Turtle; BR-5, Avoid and Minimize Impacts on Nesting Birds; BR-6, Avoid and Minimize Impacts on Western Burrowing Owl; BR-7a, Avoid and Minimize Impacts on Nesting Swainson's Hawk; BR-8, Avoid and Minimize Impacts on Pallid Bat; and BR-9a, Avoid and Minimize Impacts on Valley Elderberry Longhorn Beetle will be amended such that the following language is added to the end of the paragraph:

Special-status species and sensitive natural communities detected during surveys or monitoring of the Project shall be reported to the California Department of Fish and Wildlife California Natural Diversity Database using the field survey forms found at: <https://wildlife.ca.gov/Data/CNDDDB/SubmittingData#4452442-pdf-field-survey-form>

The addition of the above language to Mitigation Measures BR-1, BR-2c, BR-3, BR-4, BR-5, BR-6, BR-7a, BR-8, and BR-9a does not require recirculation of any part of the Draft EIR. Pursuant to Public Resources Code section 21092.1 and CEQA Guideline section 15088.5 establish that recirculation is only required where “significant new information” is added to the EIR after circulation of the Draft EIR. Pursuant to Guidelines section 15088.5, the following would constitute significant new information:

1. A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
2. A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
3. A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project’s proponents decline to adopt it.
4. The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded. (*Mountain Lion Coalition v. Fish and Game Com.* (1989) 214 Cal.App.3d 1043).

Mitigation Measures BR-1, BR-2c, BR-3, BR-4, BR-5, BR-6, BR-7a, BR-8, and BR-9a would be adopted if the proposed project is approved. Because none of the conditions outlined in Guideline section 15088.5 would occur, the changes do not constitute significant new information and there is no requirement to recirculate the Draft EIR.

COMMENT 3-8

FILING FEES

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing the Notice of Determination by the Lead Agency and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required in order for the underlying Project approval to be operative, vested, and final. (Cal. Code Regs, tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089.)

RESPONSE 3-8

The County understands that filing fees are due to CDFW per the filing fee schedule on CDFW’s website (<https://wildlife.ca.gov/Conservation/Environmental-Review/CEQA/Fees#56227991-annual-adjustments>).

COMMENT 3-9

CONCLUSION

Pursuant to Public Resources Code § 21092 and § 21092.2, CDFW requests written notification of proposed actions and pending decisions regarding the proposed Project.

Written notifications shall be directed to: California Department of Fish and Wildlife North Central Region, 1701 Nimbus Road, Rancho Cordova, CA 95670 or emailed to R2CEQA@wildlife.ca.gov.

RESPONSE 3-9

The County notes that CDFW requests written notification of proposed actions and pending decisions regarding the proposed Project pursuant to Public Resources Code § 21092 and § 21092.2.

LETTER 4

California Department of Transportation (Caltrans), State of California transportation agency, written correspondence; dated November 6, 2024.

COMMENT 4-1

Freeway Operations / Traffic Safety

The submittal of the DEIR includes its appendices, which contain the Transportation Impact Analysis (TIA) (Appendix TR-1), and Local Transportation Impact Analysis (LTA) (Appendix TR-2). Both documents inform the conclusions of the Transportation chapter of the DEIR (Chapter 18) and were prepared March 2022 by Fehr & Peers in accordance with the Sacramento County *Transportation Analysis Guidelines*. However, the appendices and technical calculations of the TIA and LTA were not included in the appendix of the DEIR, and therefore were not reviewed by Freeway Operations. Freeway Operations requests the technical calculations and files used for these analyses to verify their accuracy and validity.

RESPONSE 4-1

This comment states that the appendices and technical calculations for the TIA and LTA were not included in the appendix of the DEIR and therefore not reviewed by Caltrans. Sacramento County's website for the UWSP project includes direct links to the 775-page Technical Appendix to the LTA and to the 130-page Technical Appendix to the CEQA TIA. As evidenced by comments made on them by other commentors during the public review period, both documents were online and available for review during the Draft EIR public review period.¹⁰

COMMENT 4-2

Comments on the DIER are as follows:

- For Plate TR-5, please include which Regional Transit routes operate/will operate along the navy path shown. Please clarify does the gold route represent the “on-site shuttle” described in the last paragraph on page 10. If so, please consider using consistent terminology between the text and the figure so it is clearer.

RESPONSE 4-2

This comment requests modifications to Plate TR-5 (Project Transit Service) and raises questions about the content of it. The navy-blue route shown in Plate TR-5 shows the conceptual route of a fixed-route bus line (or lines) through the project site. The legend references “Regional Transit”, or SacRT as the likely provider of that service. A specific alignment of this route has not been determined though it presumably would extend from the north and east (toward North Natomas), and also extend south (toward South

¹⁰ Found at: [Upper Westside Specific Plan](#)

Natomas and Downtown). It is possible that multiple routes will operate along this alignment (see Master Response TR-1 regarding level of bus service provided in similar communities). The gold route shown on Plate TR-5 is intended to represent a type of specialized transit service, such as commuter/express bus. This type of service would only connect to the Town Center, thereby allowing a short departure from I-80.

Page 18-19 of the DEIR incorrectly stated that Plate TR-5 shows the alignment of an on-shuttle. In fact, Plate TR-5 does not show an on-site shuttle service as no such service is proposed. The Final EIR corrects this error.

COMMENT 4-3

- The legend includes conceptual stop locations for the gold route, but none are shown on the map. Please clarify will these be determined at a later date. If so, please consider removing or including a note that explains why they are not on the map.

RESPONSE 4-3

The comment raises other questions about Plate TR-5. The Upper Westside Specific Plan describes how four bus stops plus a Mobility Hub are planned. Buses represented by the gold routes in Plate TR-5 would stop at the two locations shown on West El Camino Avenue and the Mobility Hub to facilitate transfers and consolidate operations.

COMMENT 4-4

- Please include a description of the headways and hours of operation for these transit routes.

RESPONSE 4-4

At project buildout, headways would be expected to be consistent with LU-120 (i.e., 15-minutes during peak period and 30-minutes during off-peak period). Operating hours would be determined by service provider(s) but are likely to be similar to current hours for most RT buses (i.e., 5 AM to 11 PM).

COMMENT 4-5

- On page 18-33, there is discussion that states that the off-ramp queue that exceeds available storage on the I-5 southbound ramp to J Street during the peak hour with the addition of the project. It argues that this is not a significant impact because the speed differential between the off-ramp queue and adjacent travel lane would be less than 30 miles per hour. Please provide technical calculations that show support this statement.

RESPONSE 4-5

This comment requests technical calculations that support the statement in the Draft EIR that a significant impact would not occur at the southbound I-5 J Street off-ramp

because the speed differential between the off-ramp queue and adjacent travel lane would be less than 30 miles per hour. Southbound I-5 features four general purpose travel lanes and an auxiliary (weaving) lane between the Richards Boulevard on-ramp and J Street off-ramp. Just beyond the J Street off-ramp, the far right through lane (Lane #4) becomes a dedicated lane onto the US 50 (W-X) Freeway. Recurring congestion from this ramp connection spills back to and beyond J Street. To quantitatively show this, the Caltrans PeMS (Performance Measurement System) database was reviewed. This system reports traffic volumes and speeds from in-pavement detectors located throughout the state highway system. As the existing condition for the UWSP LTA represents a pre-COVID condition, data from Fall 2019 was obtained. A functional detector is located on southbound I-5 near the Railyards Boulevard undercrossing. Speeds were typically lowest from 7 to 8 AM. The following key findings were obtained from this detector for the lane adjacent to the freeway off-ramp lane (see **Image 2**):

- On one-third of the 15 midweek days sampled (October 1, 9, 24, 29, and 31), the average speed in this lane during the AM peak period ranged from 22 to 29 mph.
- During each hour, the adjacent lanes (Lanes #1 through #3) averaged 48 to 54 mph, indicating that the slowing in the #4 lane was not due to overall freeway mainline congestion, but rather due to stop-and-go travel on the ramp connector to the W-X Freeway. This is further corroborated by data from a detector on SB I-5 near L Street (i.e., further downstream), which showed this lane had an average speed of 28 mph for the same five specific days listed above.

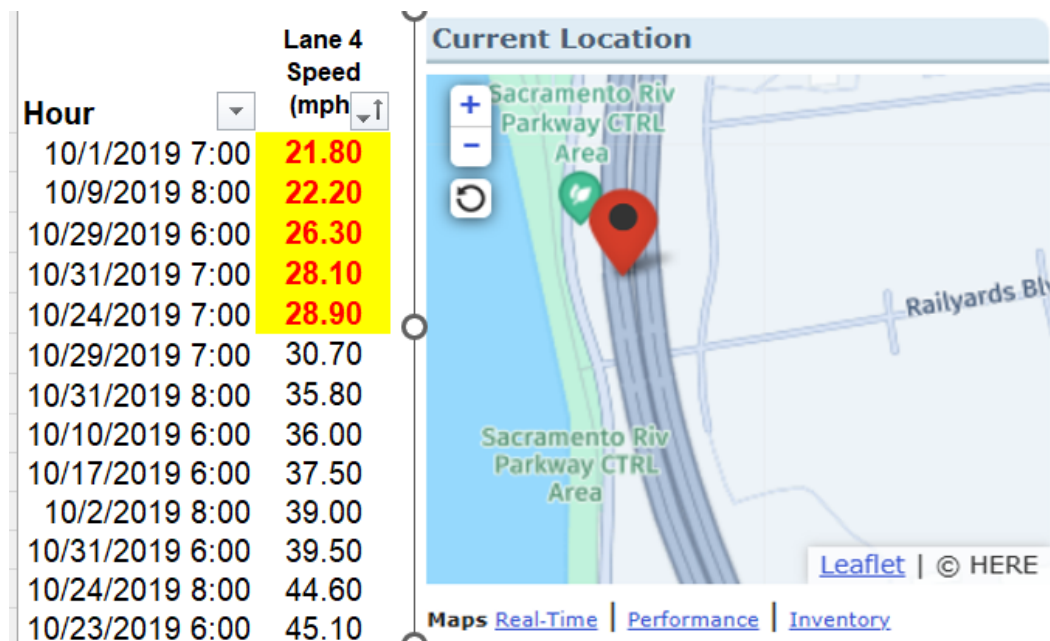

Image 2: PeMS data for average speeds on SB I-5 near J Street off-ramp.

Thus, since vehicle speeds in the travel lane adjacent to the J Street off-ramp are frequently less than 30 mph, the speed differential between the off-ramp queue and adjacent travel lane would, by definition, be less than 30 miles per hour.

Notwithstanding any of the above, this condition is now moot as changes in travel since the onset of the COVID-19 pandemic have resulted in greater percentages of Downtown Sacramento employees working from home. This has resulted in much shorter queues at the J Street off-ramp, such that the addition of UWSP traffic to it would not cause the maximum queue to exceed the available storage if analyzed under current conditions.

COMMENT 4-6

- Plate TR-8 shows a potential configuration for improvements to the I-80/West El Camino Avenue interchange. The figure includes the widening of West El Camino Avenue to 6 lanes as well as the widened intersection of West El Camino Avenue/El Centro Road.
 - The West El Camino Avenue/El Centro Road intersection includes two channelized right-turn lanes on the westbound approach that would operate with free operation. Please clarify what will be done to accommodate pedestrian crossings that conflict with this movement (i.e., pedestrians on the north leg of the intersection).

RESPONSE 4-6

This comment asks how pedestrian crossings will be accommodated at the channelized westbound right-turn lane at the West El Camino Avenue/El Centro Road intersection. Figure TR-6 of the Draft EIR shows that a crosswalk would be provided across the dual right-turns from westbound West El Camino Avenue to northbound El Centro Road. A raised, channelized island would be provided for pedestrians to stage while waiting to cross El Centro Road. The crosswalk in question would be signalized and operate in an actuated manner. When the pedestrian push-button is activated, the westbound right-turn vehicular movement would feature a red arrow (in which right-turns on red are not allowed). This would enable pedestrians to cross two right-turning lanes without any conflicts with vehicles.

COMMENT 4-7

- Please provide what are the safety implications of the triple left-turn lanes on the southbound approach the dual right-turn lanes on the northbound approach, and the dual right-turn lanes on the westbound approach of the West El Camino Avenue/El Centro Road intersection.

RESPONSE 4-7

This comment requests a discussion of safety implications of the West El Camino Avenue/El Centro Road intersection featuring dual right-turn and triple left-turn movements. These improvements would be constructed to current Sacramento County design standards including appropriate advanced signage, turn lane assignment signs on signal mast arms, appropriate pedestrian crossing times, and proper traffic signal head placement. There are many examples in Sacramento County and in other nearby agencies where these types of turn lanes have been installed. Dual right-turn lanes at signalized intersections can introduce visibility concerns of pedestrians in the adjacent

crosswalk when they are signal-controlled and part of the intersection. The West El Camino Avenue/El Centro Road intersection has dual right-turn lanes on the westbound and northbound approaches. The westbound approach design includes a channelized island and signal equipment such that pedestrians cross the dual right-turn lanes during a pedestrian-only walk phase. The intersection design does not include a crosswalk on the east leg, thereby avoiding any potential pedestrian visibility issues associated with the dual right-turn lanes.

The *Sacramento County Local Road Safety Plan* (LRSP) (DKS Associates 2022) contains a systemic approach to analyzing safety in the County. While a number of collision trends were identified, none specifically related to the intersections with dual or triple turn lanes. Lastly, it is noted that Caltrans interchange off-ramps frequently have dual right-turns and triple left-turn lanes. These features are present at the I-80/Truxel Road interchange, situated 2.3 miles east of the I-80/West El Camino Avenue interchange.

COMMENT 4-8

- Mitigation Measure TR-3a lists improvements on West El Camino Avenue and El Centro Road. One of these improvements is channelizing the dual westbound right-turn (WBR) lanes at the West El Camino Avenue/El Centro Road intersection. This movement will be extremely heavy with the addition of the project during peak hours and will conflict with the crosswalk that will be added to the north leg of the intersection. As mentioned previously, Freeway Operations has concerns over the safety of pedestrians using the crosswalk. Please clarify whether additional enhancements or accommodations be added to this intersection to protect pedestrians. The LTA specifically mentions grade-separated pedestrian overcrossings for the north and west legs.

RESPONSE 4-8

Please refer to Response 4-6 regarding crosswalk in northeast corner of the West El Camino Avenue/El Centro Road intersection. Reference to grade-separated pedestrian crossings is also mentioned in this comment, though no specific question was posed. Refer to page 121 of LTA for discussion of that topic.

COMMENT 4-9

- For Figure 1, the city boundary is very faint and difficult to see. Please consider revising so the boundary in the map matches the legend more closely.

RESPONSE 4-9

The purpose of Figure 1 of the CEQA TIA is to illustrate the project's location within the region. County limits are clearly shown. The map also highlights areas of Sacramento County that are incorporated versus unincorporated. It is apparent from the current format of this figure that areas immediately east of the project are in the City of Sacramento while areas northwest of the project are in unincorporated Sacramento County. As the requested change is stylistic and would have no effect on study outcomes, the change is not warranted.

COMMENT 4-10

- Previous comments on Plate TR-5 in the DEIR apply to Figure 5.

RESPONSE 4-10

Refer to Master Response TR-1: Transit Regarding Plate TR-5, which is also Figure 5 of the CEQA TIA.

COMMENT 4-11

- On page 22, please clean up the grammar in this sentence: “By definition, one VMT occurs when a vehicle is driven one mile.”

RESPONSE 4-11

As this comment is stylistic in nature and not germane to the Draft EIR analysis or findings, no change is warranted.

COMMENT 4-12

- Please refer to previous comments on Plate TR-8 from the DEIR, as they apply to Figure 11.

RESPONSE 4-12

Please refer to Response 4-20.

COMMENT 4-13

- Please refer to previous comments on the I-5 SB/J Street off-ramp queue exceeding available storage during the AM peak hour under Existing Plus Project conditions in the DEIR.

RESPONSE 4-13

Refer to Response 4-5.

COMMENT 4-14

- For the results in Table 14, Please clarify what assumptions were made for the ramp metering at the I-80/West El Camino Avenue interchange. With these improvements, it is very likely that the HOV preferential lane (HOVPL) would be metered along with the GP lanes.

RESPONSE 4-14

The comment is presumably referring to how many lanes are proposed/needed on the I-80 westbound on-ramp at West El Camino Avenue. As indicated in Table 14 of CEQA TIA, this on-ramp was modeled having two general purpose lanes and one High

Occupancy Vehicle (HOV) lane assuming the interchange is reconstructed. If it is decided to meter the HOV on-ramp lane, the results in Table 14 would not be materially altered, as the demand volume for the HOV lane is not large enough to cause a queue that would affect the general purpose lanes.

COMMENT 4-15

- One page 53, Mitigation TR-2 states that the Garden Highway on-ramp existing operational issue is “caused in part by Caltrans’ decision to apply metering rates of about 800 vehicles per hour (due to congestion along I-5).” These ramp meters currently operate with metering rates of 900+ vehicles per hour.

RESPONSE 4-15

This comment pertains to the southbound loop on-ramp ramp metering rate at the Garden Highway loop on-ramp interchange with I-5. The commentor is correct in that this on-ramp operates with a ramp metering rate of 900 vehicles per hour during both the AM and Pm peak hours (as confirmed by measurements in January 2025). However, as the analysis represented pre-COVID conditions, it is possible that a slightly reduced ramp metering rate was in place at the time. It is likely there was more traffic on I-5 due to more commuting into Downtown Sacramento. When freeway volumes increase, ramp metering rates are often reduced. Regardless, the observations in January 2025 of queuing that spills back from the loop on-ramp onto Garden Highway (see **Image 3**) are consistent with the results shown in Table 14 of the LTA showing the same.

Image 3: View of queued vehicles on westbound Garden Highway waiting to enter the I-5 southbound loop on-ramp (photo taken in January 2025)

COMMENT 4-16

- On page 55, there is discussion of a potential sidewalk on the south side of West El Camino Avenue east of El Centro Road across the interchange. The paragraph

states that this sidewalk may not be built, as pedestrians using it would encounter three on/off ramps carrying considerable levels of traffic. However, the Class I path along the north side of West El Camino Avenue would also encounter similar conflicts.

RESPONSE 4-16

This comment is an observation that a sidewalk on the south side of the I-80/West El Camino Avenue overcrossing would have the same number of crossings as a Class I multi-use path on the north side. Figure TR-8 shows a sidewalk on the west side of West El Camino Avenue approaching the I-80 overcrossing. While the comment is accurate, the type of crossing and amount of conflicting traffic on the north versus south side will differ. The need for and detailed design of this sidewalk will be determined as part of the Caltrans PSR/PR and PA&ED phase, during which detailed geometric improvements for an upgraded interchange are designed. The transportation analysis for the UWSP project does not recommend whether this sidewalk should be provided or not.

COMMENT 4-17

Comments on Appendix TR-2, the LTA, are as follows:

- Table ES-1 lists operational improvements that would address operational deficiencies that result from the addition of the project under Existing Plus Project conditions.
 - In Table ES-1, the improvements at the I-80/West El Camino Avenue interchange include installation of two metered lanes on the I-80 westbound (WB)/diagonal loop on-ramp. However, in Table 14 of the TIA, the ramp meter analysis assumed there would be 1 GP lane and 1 HOVPL at the West El Camino Avenue on-ramp to I-80 eastbound (EB). Please explain why this improvement is not included in Table ES-1.

RESPONSE 4-17

This comment pertains to the number of lanes assumed with interchange reconstruction at the I-80/West El Camino Avenue interchange, pointing out inconsistencies between Table ES-1 of the LTA and Table 14 of the CEQA TIA. This interchange currently has and presumably would continue to have four on-ramps. The purpose of Table 14 was to document how the project would affect on-ramp queuing. Given its physical location, the project would only add traffic to the I-80 westbound diagonal on-ramp and I-80 eastbound loop on-ramp. Each of these ramps is discussed in detail below:

1. I-80 Westbound Diagonal On-ramp from West El Camino Avenue
 - Current Configuration: single lane equipped with a ramp meter with 1,000 feet of storage.
 - Change in Traffic Due to Project: According to the LTA, the AM peak hour on-ramp volume would increase from 529 vehicles to 1,556 vehicles. The PM peak hour on-ramp volume would increase from 174 vehicles to 1,129 vehicles.

Recommended On-Ramp Configuration with Interchange Reconstruction: Two general purpose lanes and one HOV lane. This recommendation is consistent with Table 1-1 of the Caltrans' *Ramp Meter Design Manual* (2016)¹¹, which shows this minimum design configuration for on-ramp forecast volumes are between 900 and 1,800 vehicles per hour. Table ES-1 (and other duplicative tables of it) in the LTA has been modified to include reference to this on-ramp having this configuration.

2. I-80 Eastbound Loop On-ramp from West El Camino Avenue

- Current Configuration: single lane equipped with a ramp meter with 700 feet of storage.
- Change in Traffic Due to Project: According to the LTA, the AM peak hour on-ramp volume would increase from 172 vehicles to 825 vehicles. The PM peak hour on-ramp volume would increase from 80 vehicles to 759 vehicles.
- Recommended On-Ramp Configuration with Interchange Reconstruction: One general purpose lane and one HOV lane. This recommendation is consistent with Table 1-1 of the Caltrans' *Ramp Meter Design Manual* (2016), which shows this design configuration for on-ramp forecast volume of 900 vehicles per hour or less. Table ES-1 (and other duplicative tables of it) in the LTA had omitted this improvement; these tables have been modified to show it.

COMMENT 4-18

- Please explain why the improvements are described in the Mitigations TR-2, TR-3, and TR-5b from the TIA not included in Table ES-1. Some of these improvements address “operational deficiencies.”
- These comments also apply to Table 20.

RESPONSE 4-18

The LTA is a report that identifies the need for improvements that would otherwise not be required under CEQA (refer to Master Response TR-3: Traffic Congestion). This comment asks why Mitigations TR-2 (On-Ramp Metering), TR-3 (Hazards at project access intersections on Garden Highway), and TR-5b (Increased transit) are not listed in Table ES-1 of the LTA. As a result of comment 4-17, Table ES-1 of the LTA has been modified to clarify that the recommended configuration of on-ramp lanes at the I-80/West El Camino Avenue interchange despite the LTA not including the analysis documenting their need. Topics in TR-3 and TR-5b were not studied in the LTA. These topics are considered potentially significant impacts and accordingly were analyzed in the CEQA TIA and directly within the Draft EIR. They rightfully do not belong in the LTA and were therefore not included in Table ES-1.

¹¹ [RAMP METERING DESIGN MANUAL](#)

COMMENT 4-19

- Table ES-2 lists operational improvements that would address operational deficiencies that result from the addition of the project under Cumulative conditions.
 - In Table ES-2, the improvements at the I-80/West El Camino Avenue interchange include installation of two metered lanes on the I-80WB/diagonal loop on-ramp. However, in Table 17 of the TIA, the ramp meter analysis assumed there would be 1 GP lane and 1 HOVPL at the West El Camino Avenue on-ramp to I-80 EB. Please explain why this improvement is not included in Table ES-2.

RESPONSE 4-19

Table ES-2 of the LTA has been modified in the same manner as Table ES-1 to clarify the recommended configurations of on-ramp lanes at the I-80/West El Camino Avenue interchange.

COMMENT 4-20

- Please explain why the improvements are described in Mitigations TR-8 not included in Table ES-2 and Figure ES-1. Some of these improvements address “operational deficiencies,” such as the widening of the I-5 SB diagonal on-ramp at Del Paso Road from 1 to 2 GP lanes in order to avoid severely over-capacity conditions along Del Paso Road and El Centro Road.

RESPONSE 4-20

Figures ES-1 and 22 (Recommendations) of the LTA have been updated to also show the project’s fair share contribution requirement toward on-ramp ramp metering at the I-5/Del Paso Road southbound diagonal on-ramp. Tables 20 and 23 have been updated in a similar manner.

COMMENT 4-21

- These comments also apply to Table 23 and Figure 22.

RESPONSE 4-21

Refer to Response 4-20.

COMMENT 4-22

- Please refer to previous comments on Figures 1 and 5 on the TIA, as they apply to Figures 1 and 5 of the LTA.

RESPONSE 4-22

Figures 1 and 5 of the CEQA TIA are the same as Figures 1 and 5 of the LTA. Please see Response 4-9 regarding changes to Figure 1. Figure 5 is identical to DEIR Plate TR-5. Refer to Master Response TR-1: Transit for discussion of that figure and project's transit system.

COMMENT 4-23

- Please consider including a note that the 7th Edition of the Highway Capacity Manual (published February 2022) was not available at the time the analysis was conducted.

RESPONSE 4-23

The LTA has been updated to include the following sentence: The 7th Edition of the *Highway Capacity Manual* (published February 2022) was not available at the time the analysis was conducted.

COMMENT 4-24

- Page 38 of the LTA states that a peak hour factor (PHF) of 1.0 was applied for this analysis in accordance with current practices from City of Sacramento and Sacramento County. The effective PHF of SimTraffic is 0.98. However, it is likely that the PHF is lower than 1.0 or 0.98, so can we be certain that the conclusions around queueing for the off- and on-ramps are accurate. Please determine the PHF at/near the study interchanges so we can be informed of the difference between actual conditions and what was modeled.

RESPONSE 4-24

This comment requests that the actual peak hour factors (PHFs) near each interchange be disclosed so that Caltrans can be informed of the difference between actual conditions and what was modeled. The PHF at the I-80/West El Camino Avenue ramp terminal intersections ranged from 0.90 to 0.97 during the AM and PM peak hours. The PHF at the I-5/Garden Highway ramp terminal intersections ranged from 0.92 to 0.95 during the AM and PM peak hours. The PHF at the I-5/Del Paso Road ramp terminal intersections ranged from 0.85 to 0.92 during the AM and PM peak hours. The PHF at the I-5/Arena Boulevard ramp terminal intersections ranged from 0.91 to 0.95 during the AM and PM peak hours. The PHF on West El Camino Avenue approaching I-5 was 0.89 during the AM peak hour and 0.93 during the PM peak hour.

COMMENT 4-25

- Chapter 4 (on page 83) describes the lack of land use assumptions for there development of the Sleep Train Arena area at the time of analysis. In February 2022, plans for the proposed Innovation Park were approved by the City Council of Sacramento. Please clarify whether sensitivity tests be conducted with both

the Innovation Park and Upper Westside Specific Plans to determine the effects on transportation and circulation for both projects.

RESPONSE 4-25

The release date of the Notice of Preparation (NOP) for an EIR establishes the baseline condition upon which project impacts are to be judged. It also establishes the policies and procedures (in place at that particular time) that are to be utilized in technical analyses. Finally, the NOP issuance date defines the cumulative project list for cumulative conditions analysis considerations. The NOP for the UWSP EIR was released in October 2020, well before the reuse of the Sleep Train Arena property was approved by the Sacramento City Council in 2022. Therefore, no supplemental analysis, sensitivity tests, or other additional analyses are required to consider that project.

COMMENT 4-26

- On page 106, the LTA states that traffic signals were not re-optimized between Cumulative No Project and Cumulative Plus Project conditions. However, it is probably safe to assume that traffic signals would be optimized to accommodate the 2040 level of project traffic, regardless of the project is built or not.

RESPONSE 4-26

The traffic signals were not optimized between Cumulative No Project and Cumulative Plus Project conditions to isolate the effects of changes in cumulative traffic volumes resulting from the project. By reoptimizing signal timings under Cumulative Plus Project conditions, those effects can be masked.

COMMENT 4-27

- The description of improvements for the I-80 WB Ramps/West El Camino Avenue intersection on page 119 is confusing because the off-ramp is regarded as the westbound approach, but the intersection peak hour turning movements/lane configurations figures show it as the southbound approach. Please consider revising for consistency.

RESPONSE 4-27

The confusion regarding appropriate cardinal directions at the I-80/West El Camino Avenue interchange is acknowledged. The challenge stems from the fact that West El Camino Avenue approaching and departing the interchange is more appropriately described as having an east-west alignment, while I-80 has more of a north-south orientation. But the I-80 freeway is technically an east-west freeway. Accordingly, its on- and off-ramps should not be referred to as having northbound and southbound directionality. Further complicating matters is that adjacent El Centro Road, which has a due north/south alignment. Modifying all of the reports and figures to show West El Camino Avenue having a north-south alignment would likely be even more confusing, especially at the West El Camino Avenue/El Centro Road intersection. Confusion can

be minimized if readers remember that West El Camino Avenue is described in text and figures as an east-west roadway. The on and off-ramps of I-80 at West El Camino Avenue are shown with north-south orientation on figures but are rightfully described as being eastbound or westbound in the text to match the freeway's official designation as east-west.

COMMENT 4-28

- The intersection peak hour turning movement/lane configurations diagrams for intersection 33 show 3 through lanes and 2 free right-turn lanes on the eastbound approach. However, the diagram in Figure 20 shows 2 through lanes, 1 shared through/right-turn lane, and one free-right turn lane on this approach at this intersection. However, these changes are not described or justified in the list of improvements on page 119. Please revise.

RESPONSE 4-28

This comment cites an inconsistency between certain figures in the LTA. Specifically, Figure 20 shows two through lanes, one shared through/right-turn lane, and one free-right turn lane on the eastbound West El Camino Avenue approach to the I-80 WB ramps intersection (#33). In contrast, Figure 14b shows three through lanes and two free-right turn lanes on this approach. Figure 20 shows the geometrics initially assumed with interchange reconstruction and not the final geometrics associated with the “With Improvements” scenario tested under existing plus project and cumulative plus project conditions. Figure 20 was developed to depict those recommended improvements. However, the figure does not reflect the latest and final improvements, which are shown in **Image 4** below. Figure 20 has since been updated to reflect these geometrics.

Image 4: SimTraffic screenshot showing final geometrics recommended for the I-80 Westbound Ramps/West El Camino Avenue intersection.

COMMENT 4-29

- Page 121 includes discussion of grade-separated pedestrian overcrossings for the north and west legs of the West El Camino Avenue/El Centro Road intersection. These were ultimately ruled out as design features because they did not yield improved operations in the microsimulation models and would reduce pedestrian inconvenience. Freeway Operations has a few rebuttals to these statements:
 - The microsimulation models used for this analysis were created in SimTraffic, which does not model pedestrian activity as well as other softwares such as VISSIM. The crosswalk across the WBR channelization at this intersection will conflict with over 2200 vehicles during the PM peak hour under Cumulative Plus Project conditions, that will operate with free operation. Please clarify what were the pedestrian demands assumed in the SimTraffic model, and can the consultant confirm that the pedestrians using the north leg crosswalk also used the crosswalk across the WBR channelization.

RESPONSE 4-29

Refer to Response 4-6 regarding how the crosswalk in the northeast corner of the West El Camino Avenue/El Centro Road would be designed. The comment asserting that it would operate with “free operation” is not accurate. Regarding how the westbound dual right-turn was modeled in SimTraffic, it is first noted that SimTraffic does not model pedestrians crossing a channelized right turn. To account for the pedestrian phase that would be used to cross the right turn lanes, the westbound right-turn signal was modeled as having no right turn on red for the northbound through movement phase. Right turns are allowed on green for all other non-conflicting phases. Elsewhere at the intersection, 30 pedestrian calls per hour were assumed for both AM and PM peak hours for all crosswalks.

With regard to the decision not to move forward with grade-separated pedestrian facilities, this solution may be considered when there are considerable pedestrian volumes whose presence could either conflict with vehicular traffic or cause undue delay based on specific geometric and crosswalk configurations.

Grade-separated crossings would have marginal traffic operations benefits at the intersection. The at-grade west leg crosswalk would operate concurrently with the southbound movement, meaning pedestrian calls would not further lengthen the cycle length. Additionally, there are relatively few southbound and eastbound right-turning vehicles that would conflict with pedestrians in this crosswalk. The north leg and south leg crosswalks would operate concurrently with the heavy east-west through volumes. The main conflict with vehicles would be the heavy northbound dual right-turn. An east leg crosswalk is not provided because it would lengthen the overall intersection cycle length considerably (increasing delays) and also introduce conflicts associated with side-by-side vehicles turning right on the northbound approach (and potentially not seeing pedestrians).

COMMENT 4-30

- Furthermore, the safety implications of this set-up are not discussed, nor are the safety implications of the triple left-turn lanes on the westbound and northbound approaches as well as the dual right-turn lanes on the northbound approach.

RESPONSE 4-30

Refer to Response 4-7 regarding safety implications of dual right-turn lanes and triple left-turn lanes. The comment incorrectly cites that a triple left-turn lane would be located on the northbound El Centro Road approach to West El Camino Avenue. As shown in Figure 14b of the LTA, a single left-turn on this approach would be provided. This comment likely was referring to the southbound approach, which would feature a triple left-turn lane to accommodate the heavy demand.

COMMENT 4-31

- Please consider including more discussion as to what effect the geometric improvements on West El Camino Avenue and El Centro Road would have on Cumulative Plus Project conditions. Please include screenshots of SimTraffic, bar charts of percent demand served, etc.

RESPONSE 4-31

This comment requests more discussion of the effects the geometric improvements on West El Camino Avenue and El Centro Road would have on Cumulative Plus Project conditions. It specifically requests a screenshot of SimTraffic and information regarding percent demand served. **Image 5** below shows a SimTraffic screenshot of the requested intersection during the PM peak hour of the specified time period. Pages 111-130 of the Technical Appendix to the CEQA TIA include numerous screenshots showing queue spillback from this intersection and its effects on the I-80 westbound off-ramp. As shown starting on pages 691, the percent demand served at the West El Camino Avenue/El Centro Road intersection and I-80/West El Camino Avenue interchange ranges from 88 to 94 percent demand served during the AM peak hour. During the PM peak hour (see LTA appendix at page 707), percent demand served ranges from 80 to 90 percent. This result is to be expected given the size of the SimTraffic network (i.e., not all vehicles can enter and exit the network within the hour), and the LOS F results predicted at the West El Camino Avenue/El Centro Road intersection under cumulative plus project conditions.

COMMENT 4-32

- Please confirm that the dual right turn lanes on the westbound approach of West El Camino Avenue/El Centro Road Intersection is not a free operation and is signalized as is mentioned in TR-3a.

RESPONSE 4-32

Refer to Response 4-6.

Image 5: Simtraffic screenshot of West El Camino Avenue/El Centro Road intersection and I-80/West El Camino Avenue interchange

COMMENT 4-33

Forecasting & Modeling

In the CEQA Transportation Impact Analysis Final Report of Fehr & Peers, which is in the file titled "Upper_Westside_SP_DEIR_Appendix_Aug_2024," it says that the project will result in a net decrease in VMT. Yet, the SACOG residential VMT HEX map shows that the project's site has parcels with residential VMT that is more than 85% of that of the regional average. Similarly, some parcels of the project's site have work related VMT that is higher than 85% of that of the regional average as per the SACOG work related VMT HEX map. Please provide an explanation for the discrepancy between the results of the VMT analysis that are documented in the CEQA Transportation Impact Analysis Final Report and what the SACOG VMT HEX maps are showing.

RESPONSE 4-33

The comment states that "the CEQA Transportation Impact Analysis Final Report says that the project will result in a net decrease in VMT". The comment then references the SACOG residential VMT HEX map, requesting an explanation for the discrepancy between the results of the VMT analysis. First, the CEQA TIA did not conclude that the project would result in a net overall decrease in VMT. However, page 25 does include a statement that the project's regional retail would reduce VMT (based on output from the SACSIM travel demand model). SACOG residential HEX maps (found at: [Residential VMT](#)) show that residential VMT per capita of existing residences in the project vicinity tend to have average VMT that is slightly greater than the regional average. Table TR-2

on page 18-30 of the DEIR indicates that the project's household VMT per capita would be 82 percent of the regional average. This calculation (conducted using the SACSIM travel demand model with calculations per the Sacramento County Transportation Analysis Guidelines) reflects that many of these new units would be situated near complementary land uses such as retail, office, and schools. The reasonableness of this conclusion can be demonstrated by examining the SACOG HEX map for areas in the project vicinity in which there are complementary land uses. One such area is the HEX geography near West El Camino Avenue and Truxel Road in South Natomas. That HEX's VMT per capita is 74 percent of the regional average. Similarly, the HEX along Truxel Road (north of I-80, near Natomas Marketplace) has a VMT per capita that is 88 percent of the regional average. This demonstrates consistency of results from the Draft EIR versus the SACOG HEX maps (when mixed-use areas near the project site) are reviewed for their VMT characteristics.

COMMENT 4-34

Right of Way

As project moves forward, Caltrans requests the County show the State right of way (ROW) delineated in the site plans. Caltrans record maps for State Highway ROW can be by contacting: d3rwmaprequest@dot.ca.gov

- Caltrans recommends showing any monument preservation plans (if applicable) to identify any vulnerable survey monuments that will need to be perpetuated, as required.

RESPONSE 4-34

Comment noted. The County will show the State ROW on site plans as requested.

COMMENT 4-35

Hydraulics

Upper Westside Specific Plan has large footprint that will invariably alter the drainage pattern of the area. The project's net new impervious layer may result in runoff increase in a 100-year storm event which may trigger erosion and siltation. The owner should show how these concerns will be reduced to a less than significant level on Caltrans/State's drainage facilities. Developer may be held liable for future damages due to impacts for which adequate mitigation was not undertaken or sustained.

RESPONSE 4-35

Comment noted. The applicant will demonstrate that any impacts to drainage facilities under State jurisdiction will be reduced to a less than significant level to the satisfaction of Caltrans.

COMMENT 4-36**Encroachment Permit**

Any project or work, including access modification and drainage work, that takes place along or within the State's ROW requires an encroachment permit issued by Caltrans. To apply, a completed encroachment permit application, environmental documentation, and five sets of plans clearly indicating State ROW must be submitted to Encroachment Permits Offices as indicated below:

RESPONSE 4-36

Comment noted. The project applicant will obtain the necessary permit from Caltrans if work takes place in the State's ROW.

LETTER 5

Sacramento Area Sewer District (SacSewer), regional wastewater treatment provider, written correspondence; dated September 24, 2024.

COMMENT 5-1

The Project area is located outside the SacSewer service areas. As such, SacSewer has not planned, designed, or constructed facilities to provide service to the Project area. To receive sewer service, annexation into SacSewer's Collection service area and the SacSewer Treatment and Resource Recovery service area will be required. The Project applicant should work closely with the Sacramento Local Agency Formation Commission (<https://saclafco.saccounty.net>) to begin the annexation process.

Upon annexation from LAFCo, SacSewer will provide local sewer service for the Project area via its collection system, which conveys sewage from the collection system to the EchoWater Resource Recovery Facility for treatment, resource recovery, and disposal.

RESPONSE 5-1

As discuss under “Sacramento LAFCo Entitlements” on page 2-20 of the EIR, the proposed UWSP would request an extension of the SacSewer sphere of influence, and then ultimately annexation into the SacSewer service area. Please also see Response 9-2 addressing LAFCo’s comments on this issue.

COMMENT 5-2

Note: Effective January 1, 2024, the Sacramento Regional County Sanitation District and the Sacramento Area Sewer District merged into one district called the Sacramento Area Sewer District, or SacSewer for short.

RESPONSE 5-2

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 5-3

SacSewer is not a land-use authority and plans and designs its sewer systems using information from land-use authorities. SacSewer bases the projects identified within its planning documents on growth projections provided by these land-use authorities.

To receive sewer service, the project proponent must complete Sewer Master Plans that include connection points and phasing information to assess the existing and

buildout available capacity of the collection systems and determine if the current facilities can convey the additional flows generated by the Project area.

RESPONSE 5-3

A Level 2 sewer study, which is equivalent to a Sewer Master Plan, has been prepared for the proposed UWSP, and was reviewed and approved by SacSewer staff on August 30, 2021. As specific projects develop, the preparation of a Level 3 sewer study for each project may be required. These studies would also require review and approval prior to in-tract improvement plans.

COMMENT 5-4

The Project proponents propose connecting the Project area's sewage collection facilities to the SacSewer New Natomas Pump Station (NNPS) through proposed and existing SacSewer facilities. The Project area was never intended to be provided service by the SacSewer NNPS, Lower Northwest Interceptor (LNWI), or the South River Pump Station (SRPS) during the design of these facilities. Allowing connection of the Project area may result in significant capacity constraints within the existing SacSewer collections and interceptor systems. These capacity constraints must be thoroughly addressed by the project proponent before receiving service from SacSewer. Entitlements located in the Project area may require projects to be constructed with improvements to store and meter flow into the collection system. The Project proponents should work closely with SacSewer to ensure proper connection to any existing SacSewer facilities.

This environmental impact report should contemplate the onsite and offsite environmental impacts associated with extending sewer service to the Project area.

RESPONSE 5-4

SacSewer has expanded their modeling to include the proposed UWSP and other proposed projects to assess impacts on the (NNPS) (SacSewer, 2021). SacSewer has indicated that the proposed project can convey sewer flows to the NNPS as long the proposed project's sewer pump station is designed to accommodate 4-hours of emergency inline storage in lieu of the standard 2-hours of emergency storage, and the project applicant has agreed to make this accommodation. With this design change, wastewater generated by land uses allowed under the proposed UWSP would not negatively affect downstream capacity in the LNWI and the SRPS.

Pursuant to CEQA requirements as set forth in the CEQA Guidelines, each environmental resource topic subject to analysis under CEQA has been given careful consideration in light of existing and anticipated future environmental conditions, applicable regulations, the physical and operational characteristics of the proposed project, including reasonably foreseeable off-site improvements. These are described in the Draft EIR in Chapter 2, *Project Description*, pages 2-54 to 2-56, including Plate PD-21. In particular, a new sewer force main extending from the UWSP area east to the New Natomas Pump Station is described on page 2-56 and depicted on Plate PD-21. The construction and

operational impacts of these improvements are addressed throughout the environmental analyses presented in the Draft EIR.

COMMENT 5-5

In March 2021, the SacSewer Board of Directors approved the most current SacSewer planning document, the 2020 System Capacity Plan Update (SCP). In February 2013, the SacSewer Board of Directors adopted the Interceptor Sequencing Study (ISS). The SCP and ISS are on the SacSewer website at [System Capacity Plans - Sacramento Area Sewer District \(sacsewer.com\)](http://sacsewer.com).

RESPONSE 5-5

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 5-6

Customers receiving service from SacSewer are responsible for rates and fees outlined within the latest SacSewer ordinance. Fees for connecting to the sewer system recover the capital investment of sewer and treatment facilities that serve new customers. SacSewer does not guarantee sewer service or system capacity to the Project site until the proper permits are obtained to connect to the system and all facility impact (capacity) fees are paid. The SacSewer ordinances are on the SacSewer website at [Ordinances - Sacramento Area Sewer District \(sacsewer.com\)](http://sacsewer.com).

RESPONSE 5-6

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project .

COMMENT 5-7

- *References to the Sacramento Regional Wastewater Treatment Plant (SRWTP) are to be revised to accurately reflect the new name as the EchoWater Resource Recovery Facility (EchoWater Facility) throughout the document. Please revise any references to this in the document.*

RESPONSE 5-7

The requested revision has been made throughout the EIR.

COMMENT 5-8

- *References to the Sacramento Area Sewer District (SASD) are to be revised to accurately reflect the new name as the Sacramento Area Sewer District (SacSewer) throughout the document. Please revise any references to this in the document.*

RESPONSE 5-8

The Sacramento Area Sewer District was correctly referred to as SacSewer throughout the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 6

Sacramento Metropolitan Air Quality Management District (SMAQMD), regional air quality management district, written correspondence; dated October 7, 2024.

COMMENT 6-1

Mitigation Measure AQ1B

Super-Compliant VOC Architectural Coating during Operations

To ensure compliance into the future, please consider having an appropriate successor agency (such as the HOA) and not the project sponsor be responsible for implementation of this mitigation measure.

RESPONSE 6-1

Draft EIR, Chapter 6, *Air Quality*, Mitigation Measure AQ-1b, page 6-36, the first bullet is revised to read:

- **Super-Compliant VOC Architectural Coatings during Operation.** ~~Project sponsors~~ An appropriate legally responsible party, such as a home owners association, shall include in all building rules and/or building operation plans (as applicable, depending on the parcel) a requirement that all future interior and exterior spaces be repainted only with “super-compliant” VOC (i.e., ROG) architectural coatings beyond SMAQMD requirements (i.e., Rule 442: Architectural Coatings). “Super-compliant” coatings refer to paints that meet the more stringent regulatory limits in South Coast Air Quality Management District Rule 1113, which requires a standard of 10 grams VOC per liter or less (<http://www.aqmd.gov/home/regulations/compliance/architectural-coatings/super-compliant-coatings>). ~~Project sponsors~~ The appropriate legally responsible party shall be required to submit documentation to the County demonstrating compliance with this measure. With regard to third-party occupant owners and tenants, compliance with this measure shall be enforced through homeowner association rules and bylaws and tenant agreements that identify this project requirement. In addition, homeowner rules and bylaws and tenant agreements shall encourage homeowners to keep all paint- and solvent-laden rags in sealed containers to prevent VOC emissions as well as encourage the use high-pressure/low-volume paint applicators with a minimum transfer efficiency of at least 50 percent or other application techniques with equivalent or higher transfer efficiency.

COMMENT 6-2

Best Available Emissions Controls for Stationary Emergency Generators

When evaluating BACT we include NO_x with VOC/ROG and PM when looking at technology that reduces multiple pollutants. Under Best Available Emissions Controls

for Stationary Emergency Generators, please revise the first bullet, last sentence to read *If the CARB adopts future emissions standards that exceed the Tier 4 requirement, the emissions standards resulting in the lowest ROG and DPM emissions shall apply, up to and including zero emissions.*

RESPONSE 6-2

Draft EIR, Chapter 6, *Air Quality*, Mitigation Measure AQ-1b, page 6-36, the first sub bullet of the second bullet is revised to read:

- Permanent stationary emergency generators installed on-site shall have engines that meet or exceed CARB Tier 4 Off-Road Compression Ignition Engine Standards (California Code of Regulations Title 13, Section 2423). **If CARB adopts future emissions standards that exceed the Tier 4 requirement, the emissions standards resulting in the lowest ROG and DPM emissions shall apply, up to and including zero emissions standards.**

COMMENT 6-3

Promote Use of Green Consumer Products

Promoting the use of green consumer products is a good idea, but individuals can have different interpretations of what this means, and the term can be vague and misleading, leading to confusion. Please consider focusing this mitigation measure on specific, actionable education campaigns that a successor agency (such as the HOA) can implement. Examples include waste diversion programs at local schools, promoting tips to save electricity, energy savings tools and conserving energy at home.

RESPONSE 6-3

As stated in the first sentence of the fifth bullet of Mitigation Measure AQ-1b, Draft EIR page 6-37, the intent of the “Promote Use of Green Consumer Products” portion of the measure is to reduce reactive organic gases (ROG) emissions associated with future projects relative to consumer products. To clarify the meaning of “consumer products” in the context of Mitigation Measure AQ-1b, Draft EIR page 6-37, the first full bulleted item is revised to read:

- **Promote Use of Green Consumer Products.** To reduce ROG emissions associated with future projects, project sponsors shall provide education for residential and commercial tenants concerning green consumer products. Prior to receipt of any certificate of occupancy, project sponsors shall develop electronic correspondence to be distributed by email annually and upon any new lease signing to residential and/or commercial tenants of each building on the project site that encourages the purchase of consumer products; **such as hair products, deodorants, and cleaning products;** that generate lower than typical VOC emissions. The correspondence shall encourage environmentally preferable purchasing.

For on-site mitigation options to reduce greenhouse gas (GHG) emissions, such as instituting a composting and recycling program in excess of local standards, reducing electricity demand through implementation of reasonable and feasible design measures, and generation of renewable energy, refer to Mitigation Measure CC-1b in Chapter 8, *Climate Change*.

COMMENT 6-4

Mitigation Measure AQ-4b

Not all eligible existing receptors may have heating, ventilation, and air conditioning (HVAC) systems that are compatible with MERV-13 or higher filters. Please consider revising the language to clarify that indoor air filtration for the project may, if an HVAC system is not compatible, either upgrade the HVAC systems to use MERV-13 or higher (for vulnerable populations such as schools and nursing homes, MERV-14 or higher should be used) capable of at least 0.5 air exchanges per hour or provide California certified portable air-cleaning devices. Residential users should be provided with at least one air-cleaning device per occupied bedroom, with sufficient air flow to complete at least two air exchanges per hour. Residents will be trained on their use, optimal placement, and are encouraged to move the air-cleaning device(s) to where they will be breathing.

RESPONSE 6-4

It is acknowledged that some existing HVAC systems may not be compatible with MERV 13 filters; however, it would not be financially feasible for UWSP applicants to upgrade existing HVAC systems in the Project area to use MERV-13 or higher filters or provide California certified portable air-cleaning devices for each bedroom of residences. Therefore, the recommended revisions to Draft EIR Mitigation Measure AQ-4b have not been made. Nonetheless, to strengthen its intent, Mitigation Measure AQ-4b has been revised to follows:

- AQ-4b **The project applicant shall** coordinate with existing off-site homeowners adjacent to the proposed UWSP site that are within 1,000 feet of the I-80 right-of-way and offer financial assistance ~~for the use of~~ **to purchase and install** MERV 13 air filters. Financial assistance will be provided for the purchase of up to ~~two~~ **four MERV 13 air** filters per year, or per manufacturer recommendations. The UWSP applicants will establish an online procurement system (or similar) to facilitate the purchase and distribution of the filters to residents electing to participate in the program.

COMMENT 6-5

Mitigation Measure AQ4C

While we appreciate the specificity of the language, due to climate change and urban forestry practices, we recommend generalizing language on the last bullet. For example, redwoods may be an inappropriate choice due to current climate. Last sentence would read, "Trees that are best suited to trapping PM shall be planted, ~~including one or more of the following species~~ such as

RESPONSE 6-5

To allow for flexibility in implementation, Draft EIR, Mitigation Measure AQ-4C, the last bullet starting on page 6-52 and running onto page 6-53 is revised to read:

- Plant trees and/or vegetation between sensitive receptors and pollution source. Trees that are best suited to trapping PM ~~shall be planted, including one or more of the following species:~~, **such as** pine (*Pinus nigra* var. *maritima*), cypress (*Cupressocyparis leylandii*), hybrid poplar (*Populus deltoids x trichocarpa*), California pepper tree (*Schinus molle*), and redwood (*Sequoia sempervirens*), **shall be planted**.

COMMENT 6-6

The following comments pertain to the Air Quality Section of the Upper Westside Specific Plan DEIR Report

Chapter 6.0 Air Quality

Page 6-15, Table AQ-4 and the second paragraph on page 6-14 refers to Sacramento County as an attainment-maintenance area for both CO and PM-10. Sacramento County is no longer a maintenance area and is in attainment now for CO (for both 1 and 8 hour CO)– see <https://ww2.arb.ca.gov/resources/documents/2023-carbon-monoxide-sip-revision> but is still an attainment-maintenance area for PM-10. Table AQ-4 should be corrected to refer to ozone as severe-15 and not moderate for 8-hour ozone.

RESPONSE 6-6

To clarify that Sacramento County is no longer designated as attainment-maintenance for carbon monoxide and is now considered attainment for carbon monoxide Draft EIR, page 6-14, the second paragraph is revised to read:

The Sacramento region's attainment status for the criteria air pollutants is summarized in **Table AQ-4** (state designations are also provided). The Sacramento region is considered a federal nonattainment area for ozone and PM_{2.5} and an attainment-maintenance area for the federal ~~CO and PM~~₁₀ standards. Sacramento County has been designated nonattainment for the state one-hour ozone, state eight-hour ozone, and state PM₁₀ standards. The County is designated attainment or unclassified for all other state and federal standards.

In addition, to show that the federal ozone 8-hour standard is nonattainment/severe, and the federal PM₁₀ 24-hour standard is attainment/maintenance in Sacramento County Draft EIR, page 6-15, Table AQ-4 is revised to read:

Table AQ-4: Sacramento County Attainment Status

Pollutant and Averaging Time	Designation/Classification	
	State Standards	Federal Standards
Ozone (1-hour)	Nonattainment	Nonattainment¹
Ozone (8-hour)	Nonattainment	Nonattainment/Moderate Severe
Carbon Monoxide (1-hour)	Attainment	Attainment/ Maintenance
Carbon Monoxide (8-hour)	Attainment	Attainment/ Maintenance
Nitrogen Dioxide (1-hour)	Attainment	Unclassified/Attainment
Nitrogen Dioxide (Annual)	Attainment	Unclassified/Attainment
Sulfur Dioxide (1-hour)	Attainment	Unclassified/Attainment
Sulfur Dioxide (24-hour)	Attainment	No Federal Standard
Respirable Particulate Matter (PM ₁₀) (24-hour)	Nonattainment	Attainment/ Maintenance
Respirable Particulate Matter (PM ₁₀) (Annual)	Nonattainment	No Federal Standard
Fine Particulate Matter (PM _{2.5}) (24-hour)	Attainment	Nonattainment²
Fine Particulate Matter (PM _{2.5}) (Annual)	Attainment	Attainment
Lead	Attainment	Unclassified/Attainment
Visibility-Reducing Particles	Unclassified	No Federal Standard
Sulfates	Attainment	No Federal Standard
Hydrogen Sulfide	Unclassified	No Federal Standard
Vinyl Chloride	Unclassified	No Federal Standard
<p>NOTES: The California Air Resources Board (CARB) makes area designations for 10 criteria pollutants (ozone, carbon monoxide, nitrogen dioxide, sulfur dioxide, particulate matter 10 microns or less in diameter, particulate matter 2.5 microns or less in diameter, lead, visibility-reducing particles, sulfates, and hydrogen sulfide). CARB does not designate areas according to the vinyl chloride standard.</p> <p>1 The U.S. Environmental Protection Agency (USEPA) issued a Determination of Attainment on October 18, 2012 (77 <i>Federal Register</i> [FR] 64036), but the Sacramento Federal Ozone Nonattainment Area has not yet redesignated the Attainment.</p> <p>2 USEPA issued a Determination of Attainment on May 10, 2017 (82 FR 21711), but the Sacramento Federal PM_{2.5} Nonattainment Area has not yet redesignated the Attainment.</p> <p>SOURCE: SMAQMD 2022</p>		

COMMENT 6-7**Local, Sacramento Metro Air Quality Management District**

The most recent Ozone Air Quality Plan for Ozone is for the 2008 NAAQS (not for the 1997 Plan as referenced) which is available at: <https://www.airquality.org/ProgramCoordination/Documents/Sac%20Regional%202008%20NAAQS%20Attainme>

[nt%20and%20RFP%20Plan.pdf](#) An updated list of SMAQMD's most recent plans can be found at: <https://www.airquality.org/Air-Quality-Health/Air-Quality-Plans>.

The most recent PM10 Plan was the second PM10 Maintenance Plan was approved by EPA on March 14, 2024 and can be found at <https://www.airquality.org/ProgramCoordination/Documents/PM10%20Second%20MP%20Final%20Draft%202021-07-23.pdf> Please see: <https://www.airquality.org/Air-Quality-Health/Air-Quality-Plans> for list of most recent plans.

RESPONSE 6-7

To identify the most recent air quality plans applicable to the area of the proposed UWSP, Draft EIR, page 6-19, the bullets following the third full paragraph are revised to read:

- Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan (SMAQMD 2013a **2017**)
- SMAQMD's Triennial Report and Air Quality Plan Revision (SMAQMD 2015)
- **Second 10-Year** PM₁₀ Implementation/Maintenance Plan and Redesignation Request for Sacramento County (SMAQMD 2010 **2021c**).
- PM_{2.5} Maintenance Plan and Redesignation Request (SMAQMD 2013b)
- ~~2004~~ **2023** Revision to the California State Implementation Plan for CO (SMAQMD 2004 **2024a**)¹²

In addition, the associated Air Quality reference revisions have been added to Chapter 25, *Bibliography*.

COMMENT 6-8

For CO the most recent plan from SMAQMD is stated from 2004. Please add a footnote to clarify that Sacramento is in Attainment for Carbon Monoxide and that the 20-year maintenance period is over. see <https://ww2.arb.ca.gov/resources/documents/2023-carbon-monoxide-sip-revision>

RESPONSE 6-8

Please see Response 6-7.

¹² Sacramento is currently in Attainment for Carbon Monoxide and the 20-year maintenance period has concluded.

COMMENT 6-9**Sacramento Area Council of Governments**

Page 6-20, the second to the last sentence should clarify that SACOG is responsible for transportation (and not general) conformity.

RESPONSE 6-9

To clarify that SACOG is responsible for transportation conformity, Draft EIR page 6-20, second full paragraph, the second to the last sentence is revised to read:

SACRAMENTO AREA COUNCIL OF GOVERNMENTS

The Sacramento Area Council of Governments (SACOG) is the Metropolitan Planning Organization (MPO) for the site of the proposed UWSP. SACOG's jurisdiction covers six counties in the Sacramento region (El Dorado, Placer, Sacramento, Sutter, Yolo, and Yuba). One of the main responsibilities of SACOG is to maintain and develop comprehensive transportation planning for the region through metropolitan transportation plans (MTPs) and federal transportation improvement programs. These transportation planning documents are intended to improve future transportation networks and options for residents. SACOG is tasked with determining transportation conformity under the federal CAA for projects, plans, and programs. SACOG is responsible for the analysis of transportation activities to determine conformity with the federal CAA.

COMMENT 6-10**Sacramento County General Plan**

Page 6-21 has a reference date of 2011 for the goals and policies from the Sacramento County General Plan. Please make sure that the air quality goals and policies are consistent with the latest version of the General Plan Air Quality Element which was last amended on October 25, 2022 and can be found at: <https://planning.saccounty.gov/PlansandProjectsIn-Progress/Documents/General%20Plan%20Amendments/5.%20Air%20Quality%20Element%20-%20Amended%2010-25-2022.pdf>

RESPONSE 6-10

To update policy AQ-3 to refer to the correct CARB technical advisory and SMAQMD strategies guidance, Draft EIR, page 6-21, the text of General Plan Policy AQ-3 is revised to read:

- AQ-3 Buffers and/or other appropriate mitigation shall be established on a project-by-project basis and incorporated during review to provide for protection of sensitive receptors from sources of air pollution or odor. The California Air Resources Board's "Air Quality and Land Use Handbook: A Community Health Perspective," and the [SMAQMD's] approved Protocol (Protocol for Evaluating the Location of Sensitive Land uses Adjacent to Major Roadways) **"Strategies to Reduce Air Pollution Exposure Near**

**High Volume Roadways” Technical Advisory and the AQMD’s
“Mobile Sources Air Toxics Protocol” or applicable AQMD guidance**
shall be utilized when establishing these buffers.

COMMENT 6-11**Impact AQ-1: Conflict with or Obstruct Implementation of an Applicable Air
Quality Plan**

This section references the 2008 8-Hour Ozone Attainment and RFP Plan which is accurate but is inconsistent with Local, Sacramento AQMD section (see previous comment) which references an earlier SIP.

RESPONSE 6-11

The reference to the 2008 8-Hour Ozone Attainment and Reasonable Further Progress Plan in the Impact AQ-1 discussion on Draft EIR page 6-32 is accurate. As discussed in Response 6-7, the air quality regulatory setting bullets on EIR page 6-19 are revised to clarify the most recent air quality plans applicable to the area of the proposed UWSP, including the 2008 8-Hour Ozone Attainment and Reasonable Further Progress Plan.

LETTER 7

Sacramento Area Flood Control Agency (SAFCA), local flood protection agency, written correspondence; dated October 8, 2024.

COMMENT 7-1

A. Road 9

The new Road 9 roadway connection to the Garden Highway, which sits atop the Sacramento River east levee, will not be allowed at the location shown on the Upper West Side Roadway Master Plan. If the County wishes to have a connection to Garden Highway in this area, it should utilize the ramp that has been constructed at Farm Road. See the attached markup of the Roadway Master Plan.

RESPONSE 7-1

Plates PD-9 through PD-22 in Chapter 2, *Project Description*, and Plates TR-4 and TR-5 in Chapter 18, *Transportation*, of the Draft EIR, have been updated to remove the new Road 9 roadway connection to the Garden Highway.

COMMENT 7-2

B. Continuation of Legal Access to TNBC Cummings Tract and SAFCA Johnson Ranch

The legal access to The Natomas Basin Conservancy's (TNBC) Cummings Tract (Sacramento County Assessor's Parcel Numbers [APNs] 225-0110-061 and 225-0110-060) and SAFCA's Johnson Ranch property (APNs 225-0010-019 and 225-0110-020) is through the private road reservation shown along the east side of Lots 8, 9, 10, 11 and 12 and the west side of Lot 7 of Natomas Riverside Subdivision No. 3, filed for recording on August 6, 1918 in Book 15 of Maps, Page 43, Records of Sacramento County, California.

The proposed development along the west side of APN 225-0110-025 should be modified to include an OS-AG corridor to preserve the existing private road reservation. See the attached markup of the Roadway Master Plan.

RESPONSE 7-2

Development of APN 225-0110-025 would be required to maintain legal access to the TNBC/SAFCA parcels to the north. This would be accomplished via the existing road reservation or in-tract roadways through future development. Details of the access would be determined and/or negotiated during subsequent tentative map entitlements. Please note that the landowner of APN 225-0110-025 is currently a non-participant.

COMMENT 7-3

C. Conversion of Radio Road and Farm Road to Public Use

The Radio Road roadway connection to the Garden Highway is currently within a private road and canal reservation shown along the south side of Lot 8 of the Map of Natomas Riverside Subdivision No. 3. The Farm Road roadway connection to the Garden Highway is currently within a private road reservation shown along the south side of Lot 9 and the north side of Lot 23 of the Map of Natomas Riverside Subdivision No. 2, filed for recording on February 26, 1918 in Book 15 of Maps, Page 41, Records of Sacramento County, California.

Converting these private road rights to a public road right of way will require the property owner to grant a public road easement for this use. SAFCA expects to be compensated for these conveyances on SAFCA-owned property.

RESPONSE 7-3

Future traffic analysis for each tentative map will determine infrastructure phasing and required roadways. Projects that trigger the need for these roadways will enter negotiations with SAFCA to secure public access.

The comment regarding compensation is noted. This is an economic issue and is not a consideration under CEQA. As part of its consideration of the proposed project, the County will assess the economic and fiscal effects of the proposed project. However, while economic and fiscal impacts are important considerations for the County in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that “[e]conomic or social effects of a project shall not be treated as significant effects on the environment.” Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a number of factors considered in addressing the feasibility of an alternative, mitigation measure, or change to the project (see CEQA Guidelines sections 15131(b, c)).

This comment does not raise environmental issues or an issue specific to the evaluation of environmental impacts presented in the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 7-4

D. TNBC's Alleghany Trust

DEIR Plate PD-4 shows all of TNBC's Alleghany Tract (APN 225-0190-011) as being owned by SAFCA. This is also discussed in Footnote 1 at the bottom of DEIR Page 2-27. SAFCA only purchased a portion of this parcel from TNBC. SAFCA's parcel is now known as APN 225-0190-023. TNBC's remainder parcel is now known as APN 225-0190-024.

RESPONSE 7-4

Plate PD-4 has been corrected to indicate that SAFCA's parcel is now known as APN 225-0190-023 and that TNBC's remainder parcel is now known as APN 225-0190-024.

COMMENT 7-5

E. Chapter 13 - Pages 13-3, 13-9, and 13-25

The discussion of the levees surrounding the Natomas Basin in the second paragraph of the section entitled "Flood Protection" on Page 13-3 of the DEIR should add the Pleasant Grove Creek Canal in the list of flood sources.

"ULOP" is an acronym commonly used for "Urban Level of Flood Protection." The word "Flood" should be inserted into the phrase "Urban Level of Protection" on page 12 and in two places on page 13-9.

As noted on page 13-25, completion of American River Common Features Natomas Basin Project is expected to lead to achievement of ULOP. The County should consider the necessity of making ULOP findings at the time of each development approval based on the status of the Project, the specifics of the requested approval, and any changes in or new information regarding flood hazards, facility conditions, and other considerations as described in more detail in the Department of Water Resources ULOP Criteria from November 2013.

RESPONSE 7-5

The requested edits suggested in the comment are shown blow.

Draft EIR, Chapter 13, *Hydrology and Water Quality*, page 13-3, third paragraph, the first sentence is revised to read:

The Natomas Basin is surrounded by 42 miles of levees that provide protection from the American River, Sacramento River, **Pleasant Grove Creek Canal**, Natomas Cross Canal and Natomas East Main Drain Canal. Improvements to the levees were constructed in the early 1990s, which consisted of raising levees along the streams and canal systems.

Draft EIR, Chapter 13, *Hydrology and Water Quality*, page 13-9, fourth full paragraph, list item #1 is revised to read:

1. The facilities of the State Plan of Flood Control or other flood management facilities protect the property to the Urban Level of **Flood** Protection (ULOP) in urban and urbanizing areas or the FEMA standard of flood protection in non-urbanized areas.

The comment related to the County's need to make findings associated with the ULOP is noted. In the event that the County determines to approve the proposed UWSP, it would make the necessary ULOP findings. Similarly, any required findings relevant to the ULOP that would be required for subsequent discretionary approvals, which could include such entitlements as tentative maps or use permits, would be made at the time of those approvals and would reflect the level of flood protection extant at that time.

COMMENT 7-6

F. Chapter 20 - Page 20-12

The discussion of the existing Stormwater Drainage on Page 20-12 and 20-13 does not accurately describe the stormwater drainage system in the Specific Plan area. The San Juan Pump Station and the Riverside Pump Station discussed in the text serve the urbanized development in the adjacent City of Sacramento areas and do not serve the Specific Plan area. RD 1000 should be contacted to obtain a correct description of the stormwater drainage system.

RESPONSE 7-6

The discussion of the existing Stormwater Drainage system on Page 20-12 and 20-13 of the EIR is correct. As discussed in Appendix HYD-1, *Drainage Study*, runoff within the UWSP Area is presently conveyed by various gravity systems, including field drains, canal drains, and storm drains, to two pump stations operated by RD-1000 - the Riverside Pump Station, located just north of existing development situated north of San Juan Road, and the San Juan Pump Station, located along San Juan Road adjacent to the West Drainage Canal.

LETTER 8

Sacramento County Department of Environmental Management (EMD), local government entity, written correspondence; dated October 8, 2024.

COMMENT 8-1

1. **CONDITION:** Prior to final occupancy, each lot that is newly developed as part of the Legado Specific Plan must connect to public water.

RESPONSE 8-1

The comment incorrectly refers to the proposed UWSP as the Legado Specific Plan. This was an inadvertent error and it is assumed that the comment is relevant to the proposed project. As described in the Draft EIR and elsewhere in this Final EIR, the proposed project would be served with domestic water by SCWA with an intertie to the City of Sacramento lateral in El Centro Road.

This comment includes a proposed condition of approval. It does not raise environmental issues or an issue specific to the evaluation of environmental impacts presented in the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 8-2

2. **CONDITION:** Prior to final occupancy, each lot that is newly developed as part of the Legado Specific Plan must connect to public sewer.

RESPONSE 8-2

As proposed future development within the UWSP would be served by SacSewer. This comment includes a proposed condition of approval. It does not raise environmental issues or an issue specific to the evaluation of environmental impacts presented in the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 8-3

3. **CONDITION:** The applicant must contact the Environmental Health Plan Check Department prior to beginning construction of any food facility. Environmental Health may be contacted at (916) 874-6010.

RESPONSE 8-3

This comment includes a proposed condition of approval. It does not raise environmental issues or an issue specific to the evaluation of environmental impacts presented in the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 8-4

4. **ADVISORY:** Prior to recordation of the final map, if an abandoned well is found on the property, it must be issued an inactivation permit (subject to review and approval from EMD), repaired and brought back into service, or it must be destroyed at the parcel owner's cost. All well-related activities must be performed in compliance with EMD's well permitting and inspection program requirements. Contact wells@sacounty.gov with any questions.

RESPONSE 8-4

This comment includes a proposed condition of approval. It does not raise environmental issues or an issue specific to the evaluation of environmental impacts presented in the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 8-5

5. **ADVISORY:** Prior to recordation of the final map, if an abandoned septic system tank is discovered on the property, it must be destroyed in compliance with EMD's liquid waste permitting and inspection program requirements. When these septic systems are no longer in use, the septic tanks must be abandoned under a permit issued by EMD. Contact septicinfo@sacounty.gov with any questions.

RESPONSE 8-5

This comment includes a proposed condition of approval. It does not raise environmental issues or an issue specific to the evaluation of environmental impacts presented in the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 8-6

6. **ADVISORY:** Any facility in Sacramento County that handles and/or stores a hazardous material equal to or greater than the minimum reportable quantities (55 gallons for liquids, 500pounds for solids and 200 cubic feet (at standard temperature and pressure) for compressed gases) must obtain a permit and submit a Hazardous Materials Business Plan (HMBP) to EMD. The purpose of the HMBP Program is to protect public health and the environment and groundwater from risks or adverse effects associated with the storage of hazardous materials. Contact Thomas Vohoska at vohoskat@sacounty.gov with any questions.

RESPONSE 8-6

This comment includes a proposed condition of approval. It does not raise environmental issues or an issue specific to the evaluation of environmental impacts presented in the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 8-7

7. **ADVISORY:** Any facility in Sacramento County that generates hazardous waste must obtain a permit from EMD. The purpose of the program is to ensure compliance with the Hazardous Waste Control Act, verify Hazardous Waste accumulation, labeling, container and tank management standards, and waste generator status, respond to complaints of illegal disposal of hazardous waste, and issue permits and inspects businesses that treat hazardous waste pursuant to permit by rule, conditional authorization, or conditional exemption laws and regulations. Contact Thomas Vohoska at vohoskat@saccounty.gov with any questions.

RESPONSE 8-7

This comment includes a proposed condition of approval. It does not raise environmental issues or an issue specific to the evaluation of environmental impacts presented in the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 8-8

8. **ADVISORY:** Any facility in Sacramento County that stores petroleum products in aboveground tanks in quantities 1,320 gallons or greater must obtain a permit from EMD per the Above Ground Petroleum Storage Act (APSA). You must also develop and implement the Spill Prevention Control and Countermeasures (SPCC) Plan requirements per Code of Federal Regulations, Title 40, Part 112. Contact Thomas Vohoska at vohoskat@saccounty.gov with any questions.

RESPONSE 8-8

This comment includes a proposed condition of approval. It does not raise environmental issues or an issue specific to the evaluation of environmental impacts presented in the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

LETTER 9

Sacramento Local Agency Formation Commission (LAFCo), local regulatory body, written correspondence; dated October 28, 2024.

COMMENT 9-1

1. **Revise the DEIR to properly describe the type and timing of the LAFCo entitlements necessary to provide services to the USWP project area.**

LAFCo's NOP response notes that much of the project site is unserved by urban utilities, and that Sphere of Influence Amendments (SOIAs), annexations, or formations of new service providers would be necessary to serve the proposed UWSP.

RESPONSE 9-1

A list of Service District Annexation requests that would be required in order to implement the proposed UWSP is provided on page 2-20 of the Draft EIR under "Sacramento LAFCo Entitlements."

COMMENT 9-2

2. **Request for an exclusive Executive Summary to set forth LAFCo procedures and necessary actions.**

Because the project site has previously been used primarily for agriculture, the project is outside of the service boundaries of many of the providers; for several of the providers, the project area is outside of the providers' sphere of influence. For these providers, consistent with LAFCo policies, it would be necessary for the Commission to amend their Spheres of Influence prior to considering an annexation of the project area into the utility service area.

The DEIR inconsistently describes the types of LAFCo entitlements that would be necessary to extend existing urban services to the project site or to create a new service provider to serve the project area. For example, the project description indicates that a proposed annexation to Sacramento County Water Agency to provide water services to the subject area. SCWA is not a service district under the jurisdiction of LAFCo, and therefore should be removed from the project description. Should SCWA need to extend infrastructure to the subject area, but it will not be accomplished through LAFCo's annexation process. Additionally, the subject area is not included in the SOI for SacSewer. As such the project description would need to be updated to include a SOI amendment to SacSewer with a subsequent Annexation to the service district.

RESPONSE 9-2

The County appreciates the clarifying comments from LAFCo. As such, the description of proposed LAFCo actions presented in the Draft EIR, Chapter 2, *Project Description*, page 2-20 is revised to read:

- ~~Annexation to SacSewer~~ Expansion of the Sphere of Influence of, and subsequent annexation to, the Sacramento Area Sewer District (SacSewer).
- ~~Annexation to Sacramento County Water Agency (SCWA).~~

COMMENT 9-3

3. Request To Meet with Lead Agency

LAFCo adopted policy is to retain CEQA lead agency status for those projects that require a Sphere of Influence Amendment, as may be necessary for extending urban services to the USWP project area. As noted in our June 2021 NOP comments, in cases where the Sphere amendment(s) is/are part(s) of a larger project, such as the USWP project, LAFCo may consider entering into a Memorandum of Understanding to establish LAFCo as a co-lead agency in concert with the land use agency. Although this request was made previously in our NOP comments, Sacramento County has not responded to our query. We request to have a meeting with County staff pursuant to Section 15104 of the California Environmental Quality Act, which states that the Lead Agency shall convene a meeting with responsible agency representatives to discuss the scope and content of the environmental information as soon as possible but no later than 30 days after receiving a request for the meeting.

RESPONSE 9-3

The comment is acknowledged. The County has contacted LAFCo to arrange for the requested meeting.

COMMENT 9-4

4. Request for an exclusive Executive Summary to set forth LAFCo procedures and necessary actions.

Given the authority of LAFCo in the project consideration and our NOP comment requesting a discussion in the EIR of LAFCo's role in the entitlement process, including the Commission's procedures, and necessary actions. Our review of the DEIR indicates that no such discussion is offered in the DEIR. Please amend the EIR to include this information.

RESPONSE 9-4

The comment is acknowledged. As such, the description of proposed LAFCo actions presented in the Draft EIR, Chapter 2, *Project Description*, page 2-20 is further revised to read:

- ~~Annexation to SacSewer~~ Expansion of the Sphere of Influence of, and subsequent annexation to, the Sacramento Area Sewer District (SacSewer).
- ~~Annexation to Sacramento County Water Agency (SCWA).~~

Concurrent with, or subsequent to, the Sacramento County entitlement process, an annexation application to LAFCo must be submitted to amend the service boundaries of SacSewer to provide wastewater services to the UWSP area. This process would include the definition of the ultimate geographical boundaries of SacSewer, disclose the present and planned land uses in the area, describe the present and probable need of public services and facilities in the area, describe the present capacity of those services and facilities and disclose the presence of any relevant social or economic communities of interest in the area. LAFCo would also review the CSA annexation. LAFCo has sole authority and discretion to act on the aforementioned requests, and as a responsible agency, will contribute to and rely on this EIR.

COMMENT 9-5

5. Evaluation of public services should describe and assess LAFCo standards and requirements

The evaluation of public services should explicitly meet LAFCo requirements. The DEIR appears to properly evaluate the environmental effects of physical facilities that would need to be constructed to serve the project, including those outside of the project site, whose construction potentially could have environmental effects.

Additionally, the evaluation should assess whether service providers have (1) the service capability and capacity to serve the project area, and (2) whether they can provide services to the project area without adversely affecting existing service levels elsewhere in their service areas.

The analysis may benefit from consideration of the required service provider Plans for Services regarding the financing and timely provision of services with no adverse impact to existing ratepayers, including sustainable water supplies/treatment/distribution and wastewater collection and treatment, as well as other public services and utilities.

The evaluation should assess whether new service providers would perform any services that are now being provided by another service provider in the project area, and whether substitution of the new provider for the existing provider would have

any adverse effects on the existing provider's ability to maintain services elsewhere in its service area.

Although LAFCo responsibilities regarding public services and utilities are set forth in DEIR Chapter 20, Utilities, they are not mentioned, completed or utilized in the environmental assessment within the Chapter. We request that the DEIR's evaluation of utilities be revised to include our requested information.

RESPONSE 9-5

The Draft EIR fully evaluates the physical impacts to the environment resulting from development of the UWSP area, including physical impacts related to the provision of public services and utilities, in accordance with CEQA. This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

The following text is hereby added to the identification of local regulations in Chapter 17, *Public Services and Recreation*, and Chapter 20, *Utilities*, of the EIR

SACRAMENTO LOCAL AGENCY FORMATION COMMISSION

The Sacramento Local Agency Formation Commission's (LAFCo's) authority is defined in the Cortese-Knox-Hertzberg Local Government Reorganization Act of 2000. Government Code Section 56300 requires that each LAFCo establish policies to provide well-planned urban development, preservation of open space, and orderly formation of local agencies. LAFCo has review authority for annexations to special districts.

COMMENT 9-6

6. Evaluation of potential impacts to Prime Farmlands to meet LAFCo statutory requirements

LAFCo's required definition of prime farmland is set forth in the Cortese-Knox-Hertzberg Act. The regulatory setting contained in Chapter 5 of the DEIR properly sets forth the standards of Government Code Section 56064 in defining prime farmlands, but these criteria are not used in the evaluation of the project's effects on important farmlands elsewhere in the chapter. We request that the DEIR be amended to either include a revision of Impact AG-1 to include a parallel calculation of prime farmland lost using LAFCo's definition of such farmland, or that a standalone impact statement be drafted to evaluate the loss of such farmland.

The EIR should also assess the interface between planned urban uses and existing and ongoing agricultural uses. Specifically, the analysis should determine the types of crops typically grown in interface areas and the types of pesticides/biocides and other chemicals used on identified crops. For each identified chemical, the EIR should determine any setback required by the State and the Sacramento County

Agricultural Commissioner between the application site and sensitive uses such as residences and schools. Any low sensitivity land use buffers necessary to permit continued farming operations should be identified.

RESPONSE 9-6

The following text is hereby added to page 5-9 in Chapter 5, *Agricultural Resources*, of the Draft EIR, following the discussion of Natural Resources Conservation Soil Survey.

LAFCo PRIME AGRICULTURAL LANDS

The local agency formation commission (LAFCo) utilizes a definition of agricultural lands that differs from those utilized under CEQA. "Prime agricultural land" is defined in Section 56064 of the Cortese-Knox-Hertzberg Local Government Reorganization Act (see Regulatory Setting below). Based on the category of prime farmland if irrigated in Table AG-2 below, the area of LAFCo Prime Agricultural Land in the UWSP area is 2,028 acres. Note, however, that the discussion of loss of agricultural land in this chapter is based on the 2030 General Plan Policy AG-5 criteria because the County is the lead agency.

Effects of the proposed UWSP related to the interface between planned urban uses and existing and ongoing agricultural uses are fully evaluated in Chapter 5, *Agricultural Resources*, of the Draft EIR. Please see Master Response AR-2: Interface Between Agricultural and Urban Uses. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 9-7

7. Evaluation of potential impacts to Prime Farmlands assessed using LAFCo Policies, Standards, and Procedures

The DEIR contains an evaluation of the consistency of the proposed UWSP with Standard E of the LAFCo Policies, Standards, and Procedures. The consideration of the consistency of the proposed project assessed in the EIR is the sole responsibility of the Commission, and not the preparers of the DEIR. Please delete the discussion Sacramento County LAFCo Criteria Factors 1 through Factor 5.

RESPONSE 9-7

In response to the comment, the discussion of Sacramento County LAFCo Criteria on page 5-18 through 5-19 of the Draft EIR is revised as follows.

The proposed UWSP would be subject to standards related to agricultural resources contained in the Sacramento County LAFCo Policies, Standards, and Procedures Manual (1990) as amended in April 2024. As specified in Standard E.1 in Chapter IV, Selected General Standards, Standard E. Agricultural Land Conservation, LAFCo will approve a change of organization or reorganization

which will result in the conversion of prime agricultural land in open space use to other uses only if LAFCo finds that the proposal will lead to the planned, orderly, and efficient development of an area. For purposes of this standard, a proposal leads to the planned, orderly, and efficient development of an area only if specified criteria are met, including a determination that the proposal will have no significant adverse effect on the physical and economic integrity of other agricultural lands. In making this determination, LAFCo considers the following factors provided in Standard E.1. ~~An evaluation of the proposed UWSP with respect to these factors is provided below.~~

- ~~**Factor 1.** The agricultural significance of the subject and adjacent areas relative to other agricultural lands in the region.~~
 - ~~**Analysis:** The value of agricultural production within the UWSP area is proportional to the production value of all agricultural land in Sacramento County. As previously noted, Important Farmland within the UWSP area (approximately 1,805 acres) comprises less than one percent of the total Important Farmland within Sacramento County (200,426 acres). Prime Farmland within the UWSP area (about 1,207 acres) comprises 1.4 percent of the total Prime Farmland within Sacramento County (84,684 acres). As discussed under Impact AG-1 below, implementation of the proposed UWSP would result in the conversion of approximately 1,372 acres of Important Farmland to nonagricultural uses, which would comprise less than one percent of the total Important Farmland within Sacramento County. Impacts related to the conversion of farmland to nonagricultural uses that would result from implementation of the UWSP are evaluated under Impact AG-1 below.~~
- ~~**Factor 2.** The use of the subject and adjacent areas.~~
 - ~~**Analysis:** As described above, most of the UWSP area is in current agricultural use. Surrounding uses within the County include residential and urban uses to the north, east, and south, as well as additional agricultural to the north and east. Surrounding uses outside the County include agricultural uses across the Sacramento River to the west in Yolo County.~~
- ~~**Factor 3.** Whether public facilities related to the proposal would be sized or situated so as to facilitate the conversion of adjacent to nearby agricultural land, or will be extended through or adjacent to, any other agricultural lands which lie between the UWSP area and existing facilities.~~
 - ~~**Analysis:** If approved, the proposed UWSP would include the extension of utilities to serve the UWSP area only. The capacity of proposed utilities would not be sized to facilitate the extension of services into unplanned growth areas. Further discussion of the growth-inducing effects of the proposed UWSP are addressed in Chapter 23, *Growth Inducement and Urban Decay*.~~

- ~~**Factor 4.** Whether natural or man-made barriers serve to buffer adjacent or nearby agricultural lands from the effects of the proposed development.~~
 - ~~**Analysis:** As part of the proposed UWSP, a 534-acre agricultural buffer is proposed to the west of the Development Area, which is intended to allow for the continuation of existing agricultural, ag-residential, and mitigation uses. To buffer proposed residential uses near the western edge of the Development Area from continued agricultural activity within the agricultural buffer, an open-space buffer corridor is proposed along the western edge of the Development Area. The corridor would vary in width from 30 to 50 feet and include a hedgerow of tree plantings adjacent to planned residential uses and a farm fence adjacent to existing agricultural/ag-residential uses.~~
- ~~**Factor 5.** Applicable provisions of the General Plan open space and land use elements, applicable growth management policies, or other statutory provisions designed to protect agriculture.~~
 - ~~**Analysis:** General Plan Policy LU-2 states that the County shall maintain a USB that defines the long-range plans (beyond twenty-five years) for urbanization and extension of public infrastructure and services and defines important areas for protecting as open space and agriculture. In addition, General Plan Policy AG-1 states that the County shall protect prime, statewide importance, unique, and local importance farmlands located outside of the USB from urban encroachment while General Plan Policy AG-2 states that the County shall not accept applications for General Plan amendments outside the USB redesignating prime, statewide importance, unique and local importance farmlands, or lands with intensive agricultural investments to agricultural / residential or urban use (i.e., residential, commercial, industrial) unless the applicant demonstrates that the request is consistent with the General Plan Agriculture-Residential expansion policies. As discussed in Chapter 14, *Land Use*, of this Draft EIR, the proposed UWSP establishes a development framework for land use, community design and character, infrastructure improvements, and orderly development that is consistent with the objectives and policies in the Sacramento County 2030 General Plan that guide expansion of the Urban Policy Area (UPA) and USB. In addition, General Plan Policy AG-5 requires applicants to mitigate agricultural land conversion. The proposed project's compliance with Policy AG-5 is discussed under Impact AG-1 below.~~

(1) The agricultural significance of the subject and adjacent areas relative to other agricultural lands in the region.

(2) The use of the subject and the adjacent areas.

(3) Whether public facilities related to the proposal would be sized or situated so as to facilitate the conversion of adjacent or nearby agricultural land, or will be extended through or adjacent to, any

other agricultural lands which lie between the project site and existing facilities.

(4) Whether natural or man-made barriers serve to buffer adjacent or nearby agricultural land from the effects of the proposed development.

(5) Applicable provisions; of the General Plan open space and land use elements, applicable growth-management policies, or other statutory provisions designed to protect agriculture.

COMMENT 9-8

8. Evaluation of potential impacts to Open Space to meet LAFCo statutory requirements

LAFCo is required by its enabling legislation to evaluate a project's impact on open space. Based on our review, we note that the loss of open space with implementation of the project is not explicitly evaluated in the DEIR (e.g., there is no impact that assesses the loss of open space with implementation of the project). Additionally, there is no discussion of the County-wide loss of open space as requested in LAFCo's June 2021 NOP comment letter. Non-agricultural open space is discussed in DEIR Chapter 4, Aesthetics. Impacts AE-1 and AE-2 evaluate the project induced loss of open space as a change in visual quality. No mitigation measures are offered for either impact, and both are determined to be significant and unavoidable. Agriculture as open space is evaluated in Chapter 5, Agricultural Resources.

LAFCo requests that the EIR be modified to include an evaluation of the project's effect on open space, both at a project level and at a countywide level.

RESPONSE 9-8

Physical impacts related to open space are fully evaluated in Chapter 4, *Aesthetics*, Chapter 5, *Agricultural Resources*, Chapter 7, *Biological Resources*, and Chapter 14, *Land Use*, of the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 9-9

9. Evaluation of an alternative project that includes expansion of the City's Sphere of Influence and annexation of the project area

LAFCo's NOP comment requested that the range of alternatives assessed in the EIR should include an alternative that would amend the Sphere of Influence of the City of Sacramento and annex the project site to the City.

LAFCo requested that this alternative be evaluated to provide information to the Commission to permit them to evaluate the project's consistency with LAFCo policy

to favor the most efficient and comprehensive service provider to the proposed project. As set forth in the DEIR, the project anticipates that the City may furnish a water supply to the project as well as potentially treating and distributing potable water. Additionally, according to the NOP, the City currently provides fire protection services to the site.

This alternative was not included in the DEIR, and no rationale for its absence was provided either in response to our NOP comment or in the DEIR. We request that the DEIR be amended to include an evaluation of this alternative.

RESPONSE 9-9

It is proposed that SCWA would provide water services to the proposed project, with wholesale water from the City of Sacramento. As described in Draft EIR Chapter 2, *Project Description*, page 2-53, “[t]he UWSP area is located in the Natomas Fire Protection District. The City of Sacramento Fire Department is contracted by the Natomas Fire Protection District and County of Sacramento to provide fire and emergency services to the UWSP area and would continue to do so after approval of the UWSP.”

Pursuant to CEQA Guideline section 15126.6(a), “[a]n EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives.” The comment does not identify nor provide evidence that any environmental impacts would be avoided or made substantially less severe if the proposed project were annexed to and developed within the City of Sacramento. As such, there is no need to consider annexation to the City of Sacramento as an alternative to the proposed project.

COMMENT 9-10

10. Sphere of Influence Amendment for County Service Area No.10 (CSA-10):

CSA-10 provides transportation and related services for new development to comply with air quality control measures. The project description includes an annexation to CSA-10 or the creation of a new CSA. Please be advised that forming a new service district has a different process than Annexation. Regardless of the route, LAFCo will need to assess the Sphere of Influence for the service area.

RESPONSE 9-10

This comment addresses LAFCo processes for district sphere of influence changes and annexations. It does not raise environmental issues or an issue specific to the evaluation of environmental impacts presented in the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

LETTER 10

Sutter County Development Services Department, local government entity, written correspondence; dated October 28, 2024.

COMMENT 10-1

1. As a signatory to the Natomas Basin Habitat Conservation Plan (NBHCP), Sutter County has serious concerns regarding this project and its potential to jeopardize the validity of the NBHCP. Under the NBHCP and Incidental Take Permit (ITP), Sutter County and the City of Sacramento were permitted a designated amount of development within the Natomas Basin in exchange for compliance with the NBHCP and ITP to allow for preservation of habitat lands for threatened and endangered species. The Severability section of the NBHCP states that if one of the plan's participants has its permits revoked for failure to comply with the NBHCP, the essential effect to the implementation of the NBHCP is that less Authorized Development is covered by the plan.

RESPONSE 10-1

As discussed in Draft EIR Impact BR-14, and Chapter 22, *Cumulative Impacts*, pages 22-26 to 22-31, and addressed in Master Response BR-1, the Draft EIR carefully considered the potential for the proposed UWSP to conflict with the Natomas Basin HCP and/or the Metro Air Park HCP at the project level or in the context of reasonably foreseeable cumulative development. In each case the Draft EIR concluded that the proposed project would not conflict with those existing HCPs and thus would have a less-than-significant impact. As such, the development that is authorized pursuant to the NBHCP would be unchanged as a result of the proposed UWSP. Please also see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 10-2

2. The DEIR identifies the consistency of the UWSP mitigation measures with the provisions of the NBHCP and Metro Air Park Habitat Conservation Plan (MAPHCP), but does not fully evaluate nor consider the various conflicts the development itself and implementation of these mitigation measures would have with the related ITPs and Implementation Agreements (IA) for both HCPs, which is a significant and avoidable oversight that should be fully evaluated prior to approval of any environmental documents and mitigation measure for this proposal.

RESPONSE 10-2

Please see the Master Response 1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan which explains how complete buildout of UWSP area as described in the Draft EIR would not hinder the ability of the TNBC to achieve its Conservation Strategy to support each of the Covered Species. As discussed, the proposed project would either have no impact to a given Covered

Species or the project's contribution for potential impacts to a Covered Species would be reduced to a less-than-significant level with implementation of avoidance and minimization measures BR-1 to BR-9.

COMMENT 10-3

3. The approval of the development of this property within the Natomas Basin would constitute a significant departure from the NBHCP's Operating Conservation Plan and could trigger a re-evaluation of the NBHCP. As a signatory to the NBHCP, this is unacceptable to Sutter County, since approval of this project places the integrity of the NBHCP in jeopardy and could impact Sutter County's ability to develop within its own permitted development area.

RESPONSE 10-3

Development proposed by Sacramento County within the Natomas Basin is not subject to the provisions of the NBHCP's Operating Conservation Plan. Please also see the Master Response 1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan. This comment expresses opposition to the proposed project. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 10-4

4. As discussed in the document, the project applicants only control 292 acres or 14 percent of the UWSP area but are proposing a significant shift of 1,532 acres from agriculture/farmland to 9,356 units and 3.1 million square feet of commercial, retail, and office uses. How does Sacramento County intend to hold the larger non-participating property owners of the remaining 1,774 acres accountable and tied to biological resources and mitigation contained in this document that has also not been reviewed and approved by CDFW or USFWS?

RESPONSE 10-4

The information regarding the business structure of the project applicant is not information that is required for disclosure in the EIR and would not affect the analyses of the potential environmental effects of the proposed UWSP project. As described in the Draft EIR, developers in each phase of the UWSP build-out would be required to implement the EIR's mitigation measures that apply to the developers for each phase of work. Consistent with those mitigation measures, developers in each phase of work would also be required to apply for and receive permits from the appropriate regulatory agencies (e.g., USFWS, CDFW, USACE, Water Board, etc.) for that phase of build-out.

If the proposed UWSP is approved, the implementation of mitigation measures would be overseen by the County of Sacramento pursuant to an approved Mitigation Monitoring and Reporting Program that is required by Public Resources Code 21081.6(a)(1) and CEQA Guideline section 15097.

COMMENT 10-5

5. **BR-12: Loss of Wildlife Movement and Nursery Sites.** The permanent loss of giant garter snake dispersal habitat within the Natomas Basin, proposed with this development, will not adequately be mitigated by providing mitigation outside of the Natomas Basin. The permanent loss within the Natomas Basin will be a further detriment to available dispersal habitat, is contrary to the NBHCP and MAPHCP, and will remain a significant impact.

RESPONSE 10-5

As noted in the Draft EIR, proposed compensatory mitigation for giant garter snake would be of higher quantity and quality than what would occur under the NBHCP and would allow for better habitat connectivity within the American Basin recovery unit. For further discussion of the values of allowing for compensatory mitigation for the giant garter snake outside of the Natomas Basin, please see the Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, and also see Master Response BR-3: Impacts on Giant Garter Snake Habitat.

COMMENT 10-6

6. **BR-13: Conflict with Any Local Policies or Ordinances Protecting Biological Resources.** Although Sacramento County has adopted a Swainson's Hawk Ordinance and Impact Mitigation Program, this would still not sufficiently mitigate for the loss of 40 acres of Swainson's Hawk foraging habitat that this development would eliminate in the Natomas Basin, which is also contrary to the policies of the NBHCP and MAP HCP. Therefore, this would also still remain a significant impact.

RESPONSE 10-6

Draft EIR Impact BR-13, pages 7-75 to 7-76, addresses potential conflicts with local policies and ordinances, including specifically the County of Sacramento's Swainson's Hawk Impact Mitigation Program. The Draft EIR determined that Mitigation Measures BR-7b and BR-10a through BR-10c would reduce potential conflicts with local policies and ordinances to a less-than-significant level. Mitigation Measure BR-7b would compensate for permanent impacts on Swainson's hawk foraging habitat not only through consistency with County of Sacramento's Swainson's Hawk Ordinance mitigation ratio, but also by defining when and where mitigation must take place, the types of mitigation that would be acceptable, and additional requirements that must be satisfied if mitigation is provided through acquisition of a conservation easement.

As also noted in the Draft EIR, sufficient foraging habitat would remain in the Natomas Basin to fulfill the NBHCP's conservation strategies. Please also see the Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, and Master Response BR-4: Impacts on Swainson's Hawk Zone.

COMMENT 10-7

7. **BR-14: Conflict with Natomas Basin HCP and Metro Air Park HCP.** The NBHCP and MAPHCP are adopted conservation plans with respective plan areas that cover all of the Natomas Basin, not portions of the Natomas Basin. Although the applicant is proposing to implement some similar mitigation measures included in both plans to help to minimize impacts to covered species in the NBHCP and MAPHCP, the approval and development of the UWSP area could permanently disturb/harm over 975 acres of habitat/foraging area for these protected species, which is directly contrary to both the NBHCP and the MAPHCP documents and policies. Approval and construction of this development as proposed would potentially pose significant impacts to the long-term implementation and success of both HCPs, with or without the proposed mitigation measures.

RESPONSE 10-7

Please see Master Response BR-1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan for a discussion how impacts to all Covered Species would be reduced to a less-than-significant level. For a further response regarding the effects on and mitigation of impacts on giant garter snake and Swainson's hawk resulting from approval and development of the UWSP area, please see Master Response BR-3: Impacts on Giant Garter Snake, and Master Response BR-4: Impacts on Swainson's Hawk Zone, respectively.

COMMENT 10-8

8. It is premature to propose such significant land use changes, potential changes in habitat for protected species, and mitigation without fully evaluating the proposal's impacts to the existing NBHCP and MAPHCP (which have both already been reviewed and approved by USFWS and CDFW) without first obtaining each agencies' requirements and approvals through each of their existing permitting processes.

RESPONSE 10-8

The CEQA review of the proposed UWSP is not premature, and has been undertaken by the County at a time that is, in fact, consistent with the provisions of CEQA Guidelines section 15004, which states:

EIRs and negative declarations should be prepared as early as feasible in the planning process to enable environmental considerations to influence project program and design and yet late enough to provide meaningful information for environmental assessment.

Impact BR-14, Draft EIR pages 7-76 to 7-84, fully examines the potential for the proposed UWSP to create conflicts with the Natomas Basin HCP and Metro Air Park HCP. This analysis meets the requirements of CEQA. CDFW would use the UWSP EIR in its role as a Responsible Agency under CEQA. Separately, CDFW and USFWS will

evaluate the proposed project under the provisions of CESA and ESA, respectively. While these laws are common in their focus on the environment, they are distinct in their legal and regulatory structure, and thus analyses undertaken by CDFW and USFWS are designed to meet the requirements of those laws. Under CEQA, there is no requirement that the analyses are the same as those that would be undertaken by other regulatory agencies. CEQA Guidelines section 15151 states that

An EIR should be prepared with a sufficient degree of analysis to provide decision makers with information which enables them to make a decision which intelligently takes account of environmental consequences. An evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible. Disagreement among experts does not make an EIR inadequate, but the EIR should summarize the main points of disagreement among the experts. The courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure.

If the proposed UWSP project is approved the applicant for each phase of project implementation would be required to secure relevant permits from CDFW and USFWS. CDFW and USFWS would not issue an Incidental Take Permit or Biological Opinion, respectively, for the project until CEQA is completed, the proposed UWSP is approved, and more detailed project applications are submitted to those agencies.

COMMENT 10-9

9. As we believe this proposal may have significant and potentially avoidable conflicts with the approved NBHCP and MAPHCP, and this EIR is intended to be used for the permitting processes for USFWS, CDFW, and other applicable agencies, Sutter County should be involved in any discussion and/or permitting review process within the Natomas Basin that may affect our implementation and validity of the existing NBHCP, ITP, and IA.

RESPONSE 10-9

Please see Responses 10-6 through 10-8 above, and Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 10-10

In summary, the topics discussed above are of great concern to Sutter County. This project lies outside of the boundaries designated in the NBHCP for development. Sacramento County land use designation, boundaries, and policies should not be modified to accommodate growth which is neither contemplated nor permitted by the NBHCP. Sutter County cannot support a proposal that may undermine the adopted

NBHCP, or potentially threaten Sutter County's ability to develop within its already permitted development area. Accordingly, Sutter County strongly encourages Sacramento County to fully evaluate the impacts of this development proposal on all affected parties before reviewing and/or approving such a significant change.

RESPONSE 10-10

Sacramento County is not a participant or signatory to the NBHCP. Please see Responses 10-6 through 10-8 above, and Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

LETTER 11

Sacramento Fire Department, local government entity, email correspondence; dated September 11, 2024.

COMMENT 11-1

I reviewed the above-referenced document and don't have any additional comments. Thanks.

RESPONSE 11-1

The comment is acknowledged for the record and will be forwarded to the decision makers for consideration.

LETTER 12

City of Sacramento Department of Community Development, local government entity, written correspondence; dated October 28, 2024.

COMMENT 12-1

- **Prior NOP Comments Not Addressed** – City staff submitted comments in response to the Notice of Preparation (NOP) for the UWSP. These comments provided input on the scope of the EIR as requested by the County. However, the UWSP DEIR analysis does not properly address the issues raised in our NOP comment letter dated November 20, 2020. This letter documents the areas that are deficient in the DEIR.

RESPONSE 12-1

Please see Responses 12-2 to 12-36 below.

COMMENT 12-2

- **NBHCP Conflict & Viability** – The UWSP is in direct conflict with the conservation strategy of the adopted NBHCP and Incidental Take Permits (ITPs) issued by the U.S. Fish and Wildlife Service (FWS) and California Department of Fish and Wildlife (CDFW) to the City of Sacramento. Specifically, the ITPs limit urban development in the “Basin” to 17,500 acres which is the total combined authorized development of the City of Sacramento, Sutter County and Metro Air Park. The limitation of 17,500 acres pertains to the “Basin” for the approved conservation strategy to be successfully completed. If Sacramento County approves any urbanization beyond the 17,500 acres authorized by the wildlife resources agencies doing so would be in direct violation of the existing ITPs that the wildlife resource agencies enforce. Sacramento County may recall being asked on to join the City of Sacramento and Sutter County to participate in the NBHCP (see Attachment A letter dated 11/28/2000). If Sacramento County is considering allowing further urbanization of the Basin that was not contemplated by the NBHCP how will the County provide assurances to the NBHCP signatory parties that the conservation strategy can still be successfully completed especially without the County’s HCP participation?

RESPONSE 12-2

The approval of the proposed UWSP in unincorporated Sacramento County would not directly conflict with the NBHCP and related ITPs because the County is not a Permittee under the NBHCP and those ITPs do not cover development activities proposed in unincorporated Sacramento County. This is clearly articulated in the Draft EIR, Chapter 7, *Biological Resources*, pages 7-36 and 7-37, which state, in part:

While the UWSP area is in the Natomas Basin, the County is not a participant in either the NBHCP or the MAP HCP. Therefore, the applicant (and any future applicants for buildout of the UWSP area) is not eligible for the take coverage

granted by USFWS and CDFW under the NBHCP or MAP HCP. The proposed UWSP is also outside of the planned development areas of the NBHCP and MAP HCP and potential impacts resulting from development allowed under the proposed UWSP were not considered in the NBHCP.

Draft EIR Impact BR-14 provides a thorough analysis of the relationship of the proposed UWSP to the NBHCP. Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 12-3

The following provides a partial listing of the issues that City staff has determined conflict with the NBHCP:

- Proposed UWSP directly impacts the protected one-mile Swainson's Hawk buffer zone approved by the wildlife resource agencies.

RESPONSE 12-3

Please see Master Response BR-4: Impacts on Swainson's Hawk Zone.

COMMENT 12-4

- Proposed UWSP would allow development of 1,532 acres of land that currently is rural agricultural lands beneficial to the NBHCP and that could potentially be acquired in the future for habitat lands.

RESPONSE 12-4

Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan and Master Response BR-2: Reductions in Agricultural Land Available to NBHCP Covered Species

COMMENT 12-5

- Proposed UWSP would decrease the remaining open space lands in Natomas Basin which directly impacts the viability of the NBHCP by jeopardizing the successful completion of the NBHCP and placing urbanization near protected areas such as Fisherman's Lake and existing Conservancy owned HCP mitigation lands.

RESPONSE 12-5

Please see Master Response BR-1: Conflicts with the Conservation Strategy for the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan which summarizes the Draft EIR's assessment of the effects of UWSP development on TNBC's reserve lands.

COMMENT 12-6

- Future development of 1,532 acres of UWSP would place a greater burden on the existing planned growth authorized by the NBHCP which in turn will most likely cause HCP fee payers increased HCP fee rates and the inability to secure mitigation lands that meet all of the rigorous HCP mitigation land criteria.

RESPONSE 12-6

For a discussion of the effects of the proposed project on the availability of future reserve lands please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 12-7

- An Amendment to the NBHCP and obligations of the issued ITPs would be needed for any development to occur within the one-mile SWHZ and an in-depth effects analysis in relation to the existing adopted NBHCP conservation strategy including future viability to meet all requirements of the NBHCP considering the loss of 1,532 acres due to UWSP and cumulative impacts associated with the proposed Grandpark Specific Plan (approximately 5,400 acres) in process with the County. The County is essentially considering allowing roughly 7,000 acres of land located in the unincorporated Sacramento County portion of the Natomas Basin to be removed from benefiting and contribution to the completion of the NBHCP conservation strategy.

RESPONSE 12-7

An amendment to the NBHCP and any further obligations from the existing ITPs is not proposed as part of the UWSP. Mitigation measures in the Draft EIR appropriately include regulatory permitting with the California Department of Fish and Wildlife and the U.S. Fish and Wildlife Service where applicable. In particular, see Mitigation Measures BR-2c (Special Status Plants), and BR-3 (Giant garter snake). Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 12-8

- Biological – the Draft EIR concludes that with mitigation the UWSP biological impacts can be mitigated to a less than significant level. City staff disagrees with this conclusion.

RESPONSE 12-8

The comment expresses an opinion regarding the conclusions of the Draft EIR, but does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP. The comment is acknowledged for the record and will be forwarded to the decision makers for consideration.

COMMENT 12-9

- **NBHCP Participation** – If the County intends to allow urbanization beyond its Urban Services Boundary (USB) and Urban Policy Boundary (UPB) why would the County not join the NBHCP as the City of Sacramento and Sutter County have done? Sacramento County may recall being asked to participate in the NBHCP (see Attachment A letter dated 11/28/2000). If Sacramento County is considering allowing further urbanization of the Basin that was not contemplated by the NBHCP how will the County provide assurances to the NBHCP signatory parties that the conservation strategy can still be successfully completed especially without the County's HCP participation? This has been an issue and concern expressed for over 25 years and to date has not been resolved.

RESPONSE 12-9

Please see Response 12-7 above. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 12-10

- **Water** – During the County's preparation of the Draft EIR, the City in compliance with State law provided a water supply assessment as requested by the County. The water supply assessment is not an agreement nor commitment by the City to provide water for the future development of UWSP. The City has not entered into any agreement to provide water for the UWSP development. The Draft EIR incorrectly assumes and seems to have pre-determined that the City would provide water to UWSP per an agreement to do so with Sacramento County Water Agency (SCWA). Page 2-24 of Section 2 Project Description of the UWSP Draft EIR states the following:

"WATER

The City of Sacramento through an agreement with the SCWA would provide water service to land uses allowed under the proposed UWSP. The City of Sacramento obtains most of its water supply from surface water in the American and Sacramento rivers, while groundwater obtained from the North American and South American subbasins of the Sacramento Valley Groundwater Basin provides the remainder.

As discussed above, the proposed UWSP would require SCWA annexation. Water supply would be delivered to the UWSP area through the City's water treatment and distribution system, which consists of two water treatment plants, eight pump stations, many storage reservoirs, 28 municipal wells, thousands of hydrants, and nearly 1,800 miles of pipeline."

The DEIR conflicts with the City's 2040 General Plan policy that pertains to provisions of City services to new development in unincorporated areas. The specific policy is presented below:

“LUP-1.4 City Services Prior to Annexation. Prior to the provisions of City services to new development in unincorporated areas, the City shall require that the unincorporated properties be annexed into the City. Alternatively, the City may provide utility service to properties in advance of annexation only if the annexation process has been initiated and the landowner and City have executed a conditional agreement for services that stipulates minimum standards for the development of roads and urban infrastructure and criteria and conditions for annexation into the City.”

The Draft EIR page 14-29 lists future Service District Annexation requests to the Sacramento Local Agency Formation Commission (LAFCo). City staff opposes any filing of Service District Annexation requests including for example the listed annexation to Sacramento County Water Agency (SCWA) until to the satisfaction of the City of Sacramento pending concerns and issues are resolved such as water supply/service, Natomas Basin Habitat Conservation Plan conflicts, and provision of public services such as police and fire protection.

RESPONSE 12-10

Page 2-44 of Chapter 2, *Project Description*, of the Draft EIR, includes a description of the water system that would deliver potable water to the proposed UWSP. The Draft EIR states that “[t]he City of Sacramento through an agreement with the SCWA would provide water service to land uses allowed under the proposed UWSP.” As described in the August 2024 Draft UWSP, the City of Sacramento would serve as the water wholesaler, and the Sacramento County Water Agency (SCWA) would serve as the water retailer, and would own, operate, and maintain on-site storage, transmission, and distribution facilities.¹³ Thus, as proposed the City would wholesale treated water through its existing water infrastructure, specifically an existing 24-inch transmission line within El Centro Road and San Juan Road east of the UWSP. SCWA, as the retailer, would connect the new UWSP water infrastructure to the City’s existing transmission line, and therefore provide water service (transmission and distribution) to the UWSP area. Since the County, and not the City, would be the water service provider to the UWSP, the UWSP would not be inconsistent with City 2040 General Plan Policy LUP-1.4.

In order to provide additional clarity, Draft EIR, Chapter 2, *Project Description*, page 2-44, the first two paragraphs are revised to read:

The City of Sacramento’s ~~through an agreement with the SCWA would~~ **Department of Utilities would serve as the water supply wholesaler to the UWSP. SCWA, as the water retailer, would** provide water service to land uses allowed under the proposed UWSP. The City of Sacramento obtains most of its water supply from surface water in the American and Sacramento rivers, while groundwater obtained from the North American and South American subbasins

¹³ Sacramento County, *Upper Westside Specific Plan, Public Review Draft*, August 2024, page 5-8.

of the Sacramento Valley Groundwater Basin provides the remainder. As discussed above, the proposed UWSP would require SCWA annexation.

~~Water supply would be delivered to the UWSP area through the **Wholesale treated water would be conveyed to the UWSP area through the City's existing infrastructure east of the UWSP. The** City's water treatment and distribution system, which consists of two water treatment plants, eight pump stations, many storage reservoirs, 28 municipal wells, thousands of hydrants, and nearly 1,800 miles of pipeline. **To deliver the treated water within the UWSP, SCWA, as the water retailer would own, operate and maintain the infrastructure within the UWSP including on-site storage, transmission, and distribution facilities as summarized below.**~~

Comment 9-2 from LAFCo explicitly indicates SCWA is not a service district under the jurisdiction of LAFCo. When SCWA needs to extend the infrastructure and provide retail water service to the UWSP area, it will not be accomplished through LAFCo's annexation process, in this instance, LUP-1.4 does not apply. As described in Response 9-2,

...the description of proposed LAFCo actions presented in the Draft EIR, Chapter 2, Project Description, page 2-20 is revised to read:

- ~~Annexation to SacSewer~~ **Expansion of the Sphere of Influence of, and subsequent annexation to, the Sacramento Area Sewer District (SacSewer).**

Furthermore, this comment expresses an opinion in opposition to future service area annexations that would be required for the proposed UWSP, however it raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 12-11

- **Transportation** – The UWSP has significant implications to the transportation network and facilities located with the City of Sacramento in addition to the nearby freeways and Garden Highway. These concerns are documented in further detail in this letter.

RESPONSE 12-11

The County has responded to the City's specific transportation comments in Responses 12-24 through 12-28.

COMMENT 12-12

- **Public Services** – The Draft EIR does not adequately address the impacts of the UWSP on existing public services (police, fire, parks) nor details how these services

would be provided considering the lack of current County services in the area due to the existing rural nature and that the UWSP is geographically removed from proximity to nearby County services.

RESPONSE 12-12

The provision of public services, including law enforcement, fire and emergency services, libraries, schools, and parks and recreation facilities is described in the Draft EIR, Chapter 2, *Project Description*, pages 2-48 through 2-54. Because under CEQA the purpose of the EIR is to disclose the physical adverse environmental effects of the proposed project, it does not address the financing of these services. The Draft UWSP, Chapter 8, *Implementation*, addresses the financing of construction and operation of a variety of services. It indicates that ongoing governmental services, such as those listed in the City's comment, may be implemented and financed through a variety of methods, including the creation of a Community Facilities District, developer financing, the creation of a County Service Area, one or more Community Service Districts, Landscape and Lighting Districts, and/or Home Owners Associations.

An Upper Westside Public Facilities Financing Plan (PFFP) is being prepared for the proposed project which is intended to outline the funding and financing mechanisms for construction of public facilities, including backbone roadways and infrastructure. It also will summarize the envisioned phasing of facilities needed to support the development plan, as well as the programs to be employed for on-going public services and maintenance. More specifically, the PFFP will include an Urban Services Plan (USP) which will address the costs of and funding programs for ongoing provision of public services required to serve uses in the Plan Area, including costs for ongoing maintenance of public facilities. The PFFP will be part of the package of proposals included in the UWSP and made available for public review prior to being presented to the Board of Supervisors for its consideration and potential approval.

COMMENT 12-13

Memorandum of Understanding between City & County

On December 10, 2002, the City & County entered into a Memorandum of Understanding (MOU) (City Resolution 2002-830 and County Resolution 2002-1566) regarding Principles of Land Use and Revenue Sharing for the Natomas Area. The MOU (Attachment B) specifically calls for any future urbanization efforts in the Natomas Joint Vision Area (NJVA) to be processed through the City, with the County remaining a steward of agricultural lands and open spaces.

The DEIR inadequately addresses the implications of this MOU, particularly the agreement that future urbanization efforts in the NJVA would be processed through the City, with the County remaining a steward of agricultural lands and open spaces. Furthermore, the EIR does not acknowledge or analyze the City's intent to designate the Natomas Basin Study Area, which includes the project area, as an Area of Concern. The City's General Plan policy LUP-A.1 explicitly states the City's near-term goal (2024-

2029) to work with LAFCo on this designation, which would give the City "greater influence on land use decisions and other governmental actions" in the area.

RESPONSE 12-13

As discussed above, under CEQA the purpose of the EIR is to evaluate and disclose the significant environmental impacts of the proposed project. The issues raised by the City relating to governmental responsibilities associated with planning for future urbanization in the Natomas Basin are potential points of future discussion between the County and the City. The comment is noted and will be made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 12-14

City staff does not support the proposed County General Plan Amendment for text amendments to align County policies in various General Plan Elements regarding development in the Natomas Joint Vision Area. There has been no coordination with City staff regarding proposed text amendments to the County's General Plan that are relative to potential future development in the Natomas Joint Vision Area. Since this specifically pertains to potential development in Natomas Basin which the City has designated as an Area of Concern per the City's 2040 General Plan and located within our designated Natomas Basin Study Area it would seem that the County would provide some coordination with the City prior to moving forward with changes that pertain to a subject that has been of interest to the City for more than 25 years.

RESPONSE 12-14

This comment expresses the City's preferences concerning the proposed project but does not address the information contained within the Draft EIR or a specific environmental effect. The comment is noted and will be made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 12-15

Economic Impacts

Our concerns about the concentration of commercial development along the westerly extension of El Camino Avenue remain unaddressed. The DEIR does not sufficiently analyze the potential regional nature of this retail development and its implications for traffic patterns and associated environmental impacts. It fails to address the potential secondary physical and economic impacts within the City that may result from locating retail, hospitality, and other commercial uses adjacent to the City boundary.

RESPONSE 12-15

In addition to the CEQA-required analysis of VMT and traffic safety included in Chapter 18, *Transportation*, of the Draft EIR, the Draft EIR also contained a Local Transportation Analysis (LTA) in Appendix TR-2. The LTA was based on travel demand modeling using SACOG's SACSIM model. In addition to providing an analysis of traffic

operations for the purposes of mobility planning, the LTA provided technical data about traffic flows that formed the basis of several environmental analyses in the Draft EIR, including effects related to traffic noise, and air emissions of both criteria pollutants and toxic air contaminants. The traffic modeling included travel between all planned origins and destinations, including retail development.

The effects of the proposed retail uses in the UWSP were also studied for their indirect effects on other retail uses in the vicinity, including the potential to create urban decay as a result of the competitive real estate process. An overview of the project's potential impacts related to urban decay was presented in Chapter 23, *Growth Inducement and Urban Decay*, of the Draft EIR, with additional detail included in the *Upper Westside Specific Plan Urban Decay Analysis* in Appendix UD-1.

While raising a general question about the adequacy of the analysis of proposed retail uses, the City's comment provides no specific information as to how the analysis contained in the Draft EIR is deficient. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 12-16

The 2002 City/County MOU recognized mutual economic interests in the future of NJVA and outlined a revenue sharing framework. The DEIR does not address how the UWSP aligns with or impacts this framework. There is insufficient discussion of how the County plans to address these economic issues, especially considering the entitlements being sought by project proponents.

RESPONSE 12-16

The issues raised by the City are potential points of future discussion between the County and the City. As part of its consideration of the proposed project, the County will assess the economic and fiscal effects of the proposed project. However, while economic and fiscal impacts are important considerations for the County in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. In fact, CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that "[e]conomic or social effects of a project shall not be treated as significant effects on the environment." Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a number of factors considered in addressing the feasibility of an alternative, mitigation measure, or change to the project (see CEQA Guidelines sections 15131(b, c)). The comment is noted and will be made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 12-17

Growth Inducement

While the DEIR addresses some concerns raised in our NOP comment, particularly regarding the extension of urban infrastructure and potential growth-inducing effects, certain aspects of our request for analysis have not been adequately addressed, especially as they pertain to impacts on the City of Sacramento.

The DEIR acknowledges that the project would eliminate obstacles to growth by extending the Urban Services Boundary and Urban Policy Area. However, it does not sufficiently analyze the project's consistency with long-range plans, particularly its inclusion or absence from the Region's Sustainable Communities Strategy. This omission is significant, as it relates directly to the broader regional planning context and potential cumulative impacts on the City of Sacramento.

Furthermore, the DEIR lacks a comprehensive analysis of the project's growth-inducing effects on the City of Sacramento. While it mentions consistency with Sacramento County General Plan Policy LU-120, it fails to provide a detailed, quantitative examination of how the project's infrastructure extensions might stimulate additional development within our City limits. This analysis should include estimates of the scale, type, and timing of potential new development, as well as a thorough assessment of the resulting environmental impacts. The DEIR's current list of general impact categories is insufficient without a location-specific analysis of how these effects would manifest within Sacramento.

We request that these areas of analysis be expanded to fully address the growth-inducing impacts of the proposed project on the City of Sacramento, as originally outlined and requested in our NOP comment.

RESPONSE 12-17

The project's impacts related to growth inducement were evaluated in Chapter 23, *Growth Inducement and Urban Decay*, of the Draft EIR. The Draft EIR on page 23-1 states that the proposed project "would result in the elimination of an obstacle to growth by extending the Urban Services Boundary [USB] and Urban Policy Area [UPA] to serve the 1,524-acre Development Area."

With respect to the project's potential growth inducement in the City of Sacramento, the project site is surrounded on three sides (north, east, and south) by existing urban development within incorporated areas of the City of Sacramento, and urban services are already available in these areas. Expansion of development to the west of the project site is constrained by Garden Highway and the Sacramento River, and the project would also include a 542-acre Ag Buffer to reduce development pressures on unincorporated lands to the west of the project site.

There is no disputing that the proposed UWSP is not anticipated for development in the current versions of the Blueprint and MTP/SCS. In fact, in describing how the land use

forecast that is included in the MTP/SCS was developed, SACOG stated that it was based on “an inventory of unbuilt capacity for housing and employment uses, based on existing, adopted plans.”¹⁴ The proposed UWSP is not accounted for in the 2020 MTP/SCS or the Blueprint because it currently lies outside of the USB and UPA, and did not meet SACOG’s criteria for inclusion in those documents. The 2020 MTP/SCS Appendix D: Land Use Forecast Documentation specifically stated “[o]utside of the current UPA and USB, in the northwestern portion of the county, the county is also currently processing an application for two projects identified as the North Natomas Precinct and the Upper Westside Specific Plan. While many of these areas are consistent with the region’s long term growth strategy, the Blueprint, and are in varying stages of the local entitlement process, they are not yet approved by the county.”¹⁵ If the County approves the proposed project, and in doing so extends the USB and UPA, these factors would be considered in future land use forecasts undertaken by SACOG in preparation of future versions of the MTP/SCS.

That the proposed UWSP is not reflected in the current versions of the Blueprint and/or MTP/SCS does not automatically lead to a determination that the project, if approved, would be inconsistent with the Blueprint. In fact, the MTP/SCS states that “[i]ncluding growth within the MTP/SCS is not a guarantee that it will happen. Likewise, growth in areas outside the MTP/SCS may occur during the planning period. Growth outside the MTP/SCS may or may not be consistent with the smart growth, long-term, Blueprint vision for the region.”¹⁶

COMMENT 12-18

Habitat Conservation Plan

Hydrological connectivity

Our NOP comment requested an analysis of hydrological connectivity to existing preserves in Natomas Basin. The DEIR states that the UWSP “is not expected to significantly affect the connectivity of aquatic habitat for giant garter snake” and “would not affect the delivery of water to existing reserves.” However, this brief statement lacks the detailed analysis we sought. We request a more thorough examination of potential impacts on existing preserves, particularly the adjacent Cummings Reserve.

RESPONSE 12-18

Under Impact BR-14, the Draft EIR states: “The UWSP area is hydrologically connected to the Cummings Reserve but given that the existing canals and ditches in the UWSP

¹⁴ Sacramento Area Council of Governments, *2020 Metropolitan Transportation Plan/Sustainable Communities Strategy, Appendix D: Land Use Forecast Documentation*, November 18, 2019, page 4.

¹⁵ Sacramento Area Council of Governments, *2020 Metropolitan Transportation Plan/Sustainable Communities Strategy, Appendix D: Land Use Forecast Documentation*, November 18, 2019, page 47

¹⁶ Sacramento Area Council of Governments, *2020 Metropolitan Transportation Plan/Sustainable Communities Strategy, Appendix D: Land Use Forecast Documentation*, November 18, 2019, page 3.

area are terminal habitat for giant garter snake, the proposed UWSP would not reduce connectivity between reserve land or other giant garter snake habitat...

COMMENT 12-19

Effects on land inventory and mitigation prices

We specifically asked for an analysis of the effects of reducing land available for mitigation while increasing demand, potentially driving up mitigation prices for existing permit holders. The DEIR does not directly address this issue. While it states that mitigation lands "would not unnecessarily directly compete with TNBC for habitat mitigation opportunities," this assertion lacks supporting evidence. We request a detailed analysis of how the UWSP might affect land availability and mitigation costs for existing NBHCP and Metro Air Park (MAP) HCP parties.

RESPONSE 12-19

The Draft EIR evaluated the potential for the UWSP to interfere with the ability of TNBC to meet its reserve acquisition requirements. As explained on page 7-83 of the Draft EIR, the UWSP will not directly compete with TNBC for habitat mitigation opportunities because Mitigation Measures BR-3 and BR-7b require compensatory mitigation lands to be located outside the Natomas Basin.. Please see Master Response BR-1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 12-20

Land availability for HCP parties

We asked how and where HCP parties with authorized development would find land for mitigation given the cumulative impacts of proposed developments in the Natomas Basin Area. The DEIR's treatment of this issue is insufficient, stating only that mitigation measures BR-3 & BR-7b are "not expected to interfere with the ability of TNBC to satisfy its mitigation responsibilities." We request a more comprehensive analysis of cumulative impacts on mitigation land availability. Based on our direct experience implementing the NBHCP for over 25 years, we question if there is enough suitable land that would remain available to The Natomas Basin Conservancy to mitigate the already approved authorized development of 17,500 acres granted to the City, Sutter County and Metro Air Park if Sacramento County allows the UWSP and Grandpark Specific Plan projects to be approved. We request that Sacramento County evaluate the HCP mitigation land criteria requirements, total mitigation including size of habitat reserves that are required for completion of the HCP conservation strategy. The UWSP DEIR focuses on the impacts and mitigation of the UWSP project itself but does not address the existing HCP acreage requirements that must be completed in the Basin.

Prior to conducting any public hearings for potential action on the UWSP by the County Planning Commission and Board of Supervisors, we request Sacramento County provide the NBHCP signatory parties (City of Sacramento, Sutter County, FWS and

CDFW) a detailed accounting and graphics demonstrating of how HCP total acreage requirements could be accomplished with the potential approval and implementation of the UWSP and Grandpark Specific Plan projects. This information and data should also be included as part of the proposed Final EIR when it becomes available.

RESPONSE 12-20

As noted in the Draft EIR, all compensatory mitigation would be secured outside of the Natomas Basin. It also demonstrates that approximately 84% of the available mitigation lands within the Natomas Basin would still be available should the project be approved. Please see Master Response BR- 1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 12-21

Consistency with NBHCP Conservation Strategies

We request further clarification on the adequacy of the proposed 250-foot open space buffer between planned development and the Cummings Reserve, compared to the NBHCP's 800-foot setback requirement. The DEIR notes that exceptions to the 800-foot setback have been made in the past. While this explanation is helpful, we request further analysis on whether this 250-foot buffer is sufficient to protect the Cummings Reserve from potential edge effects of urban development.

We urge the County to provide a more robust analysis of these issues in the Final EIR to ensure the UWSP does not compromise the NBHCP's conservation goals or the ability of existing HCP parties to meet their mitigation obligations.

RESPONSE 12-21

Please see Master Response BR-1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan. In addition, the NBHCP only requires that reserves be initially sited more than 800 feet from existing or planned urban lands at the time of acquisition (see discussion of Buffers within the Reserve Lands under Impact BR-14: Conflict with Natomas Basin Habitat Conservation Plan in the Draft EIR,) and does not specify that this spacing be maintained in perpetuity. Here, the Draft EIR explained that very low density residential development is the closest planned urban development to the Cummings Reserve, which further supports the Draft EIR's conclusion that development in the UWSP area would not alter the effectiveness of buffers within TNBC reserve lands.

COMMENT 12-22

One-Mile Buffer Swainson's Hawk Zone

The City of Sacramento must express its opposition to the proposed Upper Westside Specific Plan (UWSP) due to its direct conflict with the Natomas Basin Habitat Conservation Plan (NBHCP).

The City of Sacramento, as a signatory to the NBHCP, has a legal obligation to ensure the continued integrity of this regional conservation strategy. Our analysis of the UWSP reveals that significant portions of the proposed development would encroach into the Swainson's Hawk Zone - a critical one-mile-wide buffer adjacent to the Sacramento River that was explicitly established in the NBHCP to protect essential Swainson's Hawk habitat and foraging areas. The NBHCP categorically prohibits development within this zone, with only a strictly limited exception of 252 acres granted to the City of Sacramento.

While Sacramento County is not a direct signatory to the NBHCP, both the U.S. Fish and Wildlife Service (USFWS) and California Department of Fish and Wildlife (CDFW) are bound to the NBHCP as "Permitters" with mandatory obligations to enforce its provisions. These wildlife agencies would be required to issue permits for the UWSP, yet doing so would fundamentally conflict with their legal obligations under the NBHCP, which states that any additional urban development within the Swainson's Hawk Zone "would constitute a significant departure from the Plan's Operating Conservation Program."

The project's inadequate agricultural buffer of 534 acres, ranging from merely 700 to 2,700 feet in width, is insufficient compared to the one mile (5,280 feet) protective buffer mandated by the NBHCP. This reduction in buffer width would severely compromise a core conservation measure that both wildlife agencies have previously determined to be essential for the protection of Swainson's Hawk habitat.

The NBHCP is explicit: development beyond the permitted activities necessitates a comprehensive reevaluation of the Plan, a new effects analysis, potential amendments to the Plan and/or permits, and a separate conservation strategy. For the wildlife agencies to issue permits for this project as currently designed would require the completion of all these actions - none of which have been undertaken.

We are particularly alarmed that approval of development within the Swainson's Hawk Zone would directly threaten the biological effectiveness of the NBHCP's conservation strategy, which both the City of Sacramento and Sutter County depend upon for our incidental take permits. The one-mile buffer zone was established through rigorous biological analysis and stands as an indispensable component of the plan's mitigation strategy for impacts to Swainson's Hawk.

The County must either:

- Substantially redesign the project to eliminate all development within the one-mile Swainson's Hawk Zone buffer; or
- Undertake the mandatory comprehensive reevaluation of the NBHCP required when proposing development within this zone, including preparation of a new effects analysis and development of a separate conservation strategy that definitively ensures no net loss of the effectiveness of this critical conservation measure. This reevaluation must be conducted under the strict oversight of

USFWS and CDFW to ensure absolute compliance with their obligations as Permittees under the NBHCP.

- For any County approval of development that directly disturbs the one-mile Swainson's Hawk Zone (SWZ), we request that the County first initiate an amendment to the NBHCP with the wildlife resource agencies to modify the requirements and obligations placed on the City of Sacramento and Sutter County that pertain to the one-mile SWZ. Any action by Sacramento County to approve and allow development within the SWZ is in direct conflict with the adopted NBHCP and enforceable requirements by the wildlife resource agencies including for example, the Incidental Take Permits issued by U.S. Fish and Wildlife Services (FWS) and the California Department of Fish and Wildlife (CDFW) to the City of Sacramento and Sutter County.

RESPONSE 12-22

The comment expresses opposition to the proposed project based on concerns about the UWSP potential to encroach into the NBHCP Swainson's Hawk Zone. As stated in the Draft EIR, the development of the UWSP area would result in permanent loss of 975 acres of Swainson's hawk foraging habitat within the NBHCP Swainson's Hawk Zone, which represents approximately 8.2 percent of the habitat in the entire NBHCP Swainson's Hawk Zone. The Swainson's Hawk Zone foraging habitat within the UWSP area includes no alfalfa production, which is the highest quality foraging habitat for Swainson's hawk; whereas the balance of the Swainson's Hawk Zone outside of the UWSP area includes 644.0 acres of alfalfa production. In recognition of the ecological value of the NBHCP Swainson's Hawk Zone, Mitigation Measure BR-7b has been modified to preferentially site off-site Swainson's hawk foraging habitat mitigation to locations within 1 mile of the Sacramento River or Feather River (see Master Response BR-4: Impacts on Swainson's Hawk Zone). The proposed UWSP would provide mitigation for impacts on Swainson's hawk foraging habitat at a ratio of at least 0.75:1 (mitigation habitat to permanently lost habitat) for mitigation sites within 1 mile of the Sacramento River or Feather River. Compensatory mitigation for mitigation sites greater than 1 mile from the Sacramento River and Feather River would be at a ratio of at least 1:1, or of equal or greater ecological value as established in separate authorizations or permits by the USFWS and/or CDFW. This includes lands near the Sacramento River and Feather River. Furthermore, the minimum 0.75:1 mitigation ratio identified in Mitigation Measure BR-7b is 50 percent greater than the 0.5:1 mitigation ratio identified in the NBHCP Conservation Plan considered to be an effective mitigation ratio for development of Swainson's hawk foraging habitat within the Natomas Basin. Thus, while the UWSP would result in conversion of habitat within the Swainson's Hawk Zone, such development would be adequately mitigated.

ADEQUACY OF AGRICULTURAL BUFFER

The commenter also opines that the proposed agricultural buffer is inadequate. As described in the Draft EIR, Chapter 2, *Project Description*, the Agricultural Buffer would range in width from 700 feet in the south to over 2,700 feet in the north, providing a

substantial buffer to the riparian habitat along the Sacramento River that support Swainson's hawk nesting.

The NBHCP's Swainson's Hawk Zone is intended to help maintain blocks of suitable Swainson's hawk foraging habitat proximal to their nesting and breeding habitat within the riparian corridor along the Sacramento River. Under existing conditions, not all land within the NBHCP Swainson's Hawk Zone provides suitable foraging habitat for the species, and the quality of suitable foraging habitat within the Swainson's Hawk Zone is also variable. The foraging habitat within the UWSP area includes no alfalfa production, which is the highest quality foraging habitat for Swainson's hawk; the balance of the Swainson's Hawk Zone outside of the UWSP area includes 644.0 acres of alfalfa production.

Additionally, as described in Master Response BR-4: Impacts in Swainson's Hawk Zone, Mitigation Measure BR-7b has been modified to prioritize compensatory mitigation of Swainson's hawk foraging habitat conversion under UWSP to areas within 1 mile of the Sacramento River or Feather River, prioritizing sites that effectively provide the similar ecological value as the NBHCP Swainson's Hawk Zone. The opportunities for compensatory mitigation under Mitigation Measure BR-7b include more than 8,000 acres of highest quality foraging habitat (i.e., alfalfa, pasture, field crops, wheat, grain and hay, truck crops, young perennial, and annual grassland), including lands near the Sacramento River in close vicinity of the proposed UWSP.

NEED FOR NEW EFFECTS ANALYSIS FOR NBHCP

The commenter states that approval of development within the UWSP would trigger a need to prepare a new effects analysis for the NBHCP that definitively ensures the effectiveness of the Swainson's Hawk Zone measure, unless the footprint of the UWSP were modified to eliminate all development within the Swainson's Hawk Zone. Alternatively, the commenter suggests Sacramento County prepare an amendment to the NBHCP regarding the Swainson's Hawk Zone.

The NBHCP recognizes that within the 50-year permit term of the NBHCP and ITPs, the possibility remains that existing land use outside the Permit Areas and within the Natomas Basin could change over time in a manner that would affect Swainson's hawk foraging habitat. The NBHCP's adaptive management program is thus designed to respond to changes in baseline habitat that could occur if undeveloped lands in the Natomas Basin were converted to urban uses. Impacts to SWHA nests and GGS habitat would be subject to conditions of approval in any take authorizations for those species that would relate to each phase of UWSP development. While the take authorization would proceed under a completely separate process from the prior authorizations under the NBHCP, since Sacramento County is not a signatory to that conservation plan, the take authorization for each phase of UWSP development would nonetheless consider development already authorized under the NBHCP as part of the evaluation of cumulative effects. Approval from USFWS would ensure that adequate measures are implemented to ensure no jeopardy of the species; any ITP issued from the CDFW would ensure that any impacts to SWHA nests or GGS habitat are fully mitigated.

The Draft EIR impact analysis under BR-7 explains how the effects of UWSP on Swainson's hawk nesting and foraging habitat would be less than significant with implementation of applicable mitigation, and the impact analysis under BR-14 provides a detailed discussion for why the proposed UWSP would not conflict with implementation of the NBHCP or MAP HCP.

COMMENT 12-23

Agriculture

The Draft EIR falls short in addressing crucial concerns regarding the project's impact on agricultural resources and the Natomas Basin Habitat Conservation Plan (NBHCP). While the EIR quantifies the conversion of approximately 1,372 acres of farmland within the project area, it fails to provide a comprehensive analysis of how this loss might affect the NBHCP's requirement to maintain 4,375 acres in rice cultivation for Giant Garter Snake habitat. The EIR should evaluate not only the direct loss of farmland but also the potential indirect effect of increased development pressure on remaining agricultural lands in the Natomas Basin, which could make it more challenging to maintain the required acreage of rice cultivation.

RESPONSE 12-23

The NBHCP is a habitat conservation plan and not an agriculture preservation plan. Effects of the proposed UWSP related to biological resources, including effects related to giant garter snake and associated habitat and effects related to the NBHCP, are addressed in Chapter 7, *Biological Resources*, of the Draft EIR. Effects of the proposed UWSP related to direct and indirect effects to agricultural resources are evaluated in accordance with regulations, policies, and standards applicable to agricultural resources in Chapter 5, *Agricultural Resources*, of the Draft EIR.

Impacts of the proposed UWSP related to direct conversion of farmland to nonagricultural uses are fully addressed in Impact AG-1 on pages 5-20 through 5-22 in Chapter 5. As discussed in the analysis, the proposed UWSP would result in the direct loss of approximately 1,372 acres of farmland subject to mitigation pursuant to General Plan Policy AG-5. Implementation of Mitigation Measure AG-1 would require preservation of farmland at a 1:1 ratio. However, the Draft EIR concludes that, even with this mitigation, there would be a substantial net loss of farmland within Sacramento County as a result of the proposed UWSP, and this impact would be significant and unavoidable. Therefore, the Draft EIR appropriately identifies that a significant and unavoidable impact related to the conversion of farmland to nonagricultural uses would occur with implementation of the proposed UWSP. In addition, as shown in Table BR-1 of the Draft EIR (page 7-5), the UWSP area does not currently contain any rice crop land cover types. Thus, the proposed UWSP would not have any effect on the NBHCP's ability to secure rice production acreage.

With regard to indirect effects, including potential indirect effects to agricultural lands (including lands under rice cultivation) in the Natomas Basin, as discussed in Impact AG-3 on pages 5-24 through 5-25 of the Draft EIR, the proposed UWSP would not

indirectly result in the conversion of agricultural land outside of the UWSP area. As discussed in the analysis, while implementation of the proposed UWSP would place new residents near existing farmlands and agricultural uses, the proposed plan would include an West Edge Buffer Corridor to enable continued agricultural operations within the 542-acre agricultural buffer to the west of the Development Area. In addition, the proposed UWSP includes a request to amend the UPA and USB. The amended UPA and USB would specifically exclude the aforementioned adjacent agricultural lands. In addition, for any new development north or south of the UWSP area that would propose to convert farmland to nonagricultural use, the land would need to be rezoned and entitled under a separate process requiring substantial effort. As further discussed in Impact AG-3, the proposed UWSP emphasizes policies that support the long-term preservation of agriculture and ensure that development pressures are avoided to the maximum extent feasible. For example, UWSP Policy 3-EE specifies the implementation and maintenance of the aforementioned agricultural buffer to the west of the Development Area to preserve existing agricultural uses and farming operations, to allow visual separation between the Development Area and the Garden Highway/Sacramento River, and to create a transition to habitat mitigation areas located to the northwest. As further discussed in Impact AG-3, proposed high density residential uses would be concentrated near the center of the UWSP area, and development allowed under the proposed UWSP would gradually transition to low density residential uses towards the agricultural buffer zone. This gradual dispersal of residential density would reduce pressure to urbanize areas adjacent to, as well as to the north and south of, the agricultural buffer. As discussed in the analysis, development consistent with the proposed UWSP would concentrate development within the Development Area and would not extend infrastructure to areas beyond the identified growth boundary. Furthermore, infrastructure would not be sized to serve development offsite. Consequently, the Draft EIR determined that the proposed UWSP would not indirectly result in the conversion of agricultural land outside of the UWSP area, and this impact would be less than significant (See Master Response AR-1: Conversion of Farmland to Nonagricultural Uses, Master Response AR-2: Interface Between Agricultural and Urban Uses, and Master Response BR-2: Reductions in Agricultural Land Available to NBHCP Covered Species).

COMMENT 12-24

Transportation

Roadway Widening and City Responsibility

The DEIR continues to rely on fair share contributions toward roadway widening projects within City limits without adequately addressing our concerns about implementation responsibility. For instance, Mitigation Measure TR-3b still assumes City involvement in implementing improvements at I-5 on-ramps, despite our previous statement that the City should not be assumed to have matching funds. The DEIR does not propose alternative mitigation approaches that avoid placing implementation responsibility on the City, nor does it explain how these projects would be fully funded and executed given the City's financial constraints.

RESPONSE 12-24

Mitigation Measure TR-3b requires the project applicant to pay their proportionate fair share toward improvements at the I-5 southbound on-ramp at West El Camino Avenue and I-5 southbound and northbound on-ramps at Garden Highway, which would satisfy the applicant's obligation related to traffic impacts on these facilities. Each of these ramps is owned/operated by Caltrans. The mitigation further describes how either the City of Sacramento or Caltrans could serve as the lead agency to pursue the improvements (note that both interchanges are outside the County of Sacramento, thus precluding the County from serving as lead agency). The mitigation measure does not assume any matching funds to be provided by the City of Sacramento. It is possible that new land development proposals in the vicinity of the interchanges could trigger the need for these improvements, thus creating an additional fair share contributor. Additionally, new funding sources could come from future state or federal sources, or could be generated by including these projects in a future update to the voluntary I-5 Subregional Corridor Transportation Improvements Fee Program. However, the impact is considered significant and unavoidable because both interchanges are outside the County of Sacramento, thus precluding the County from serving as lead agency, and Sacramento County cannot compel those agencies to approve and allow construction of the specified improvements.

COMMENT 12-25

TR-3a and TR-3b Impacts & Mitigations on Page ES-119 & ES-120

The City of Sacramento looks forward to working collaboratively with the County on the required I-80 West El Camino Avenue interchange improvements being triggered by the project's development. As specified in the Upper Westside Specific Plan Public Facilities Financing Plan on page 23, the traffic analysis estimated that approximately 90 percent of trips caused by new development in the County using this interchange would be caused by development in the UWSP. The City looks forward to seeing the UWSP project fulfill the required improvements and phasing to ensure the ultimate improvements are constructed when triggered by the UWSP project.

RESPONSE 12-25

The Upper Westside Specific Plan Public Facilities Financing Plan¹⁷ states on page 23 that the proposed UWSP is 90 percent of total growth in County traffic at the I-80/West El Camino Avenue Interchange. It then concludes that the proposed UWSP is therefore responsible for 90 percent of the \$38 million cost for the interchange improvements. The comment requests that the proposed UWSP fulfill its required improvements and phasing to ensure the ultimate improvements are constructed when triggered by the UWSP project.

¹⁷ Source: [ATT 4 Draft Public Facilities Financing Plan.pdf](#)

The project applicant will be financially contributing through payment of roadway fees, which include the interchange. Sacramento County, serving as lead agency, will pursue construction of the required improvements when triggered based on phasing analysis and the dynamic implementation tool.

COMMENT 12-26

Conflict with City Transportation Policies

Our NOP comments highlighted the City's current focus on reducing lanes on City roadways to align with our Climate Change goals. However, the DEIR does not acknowledge or analyze how the proposed roadway widenings, such as those in Mitigation Measure TR-3a, align with or conflict with this policy direction. We request that the Final EIR include an analysis of how the proposed transportation improvements align with the City's current transportation policies and goals.

RESPONSE 12-26

The Sacramento 2040 General Plan¹⁸ was adopted by the Sacramento City Council in February 2024. Chapter 8 (Mobility Element) includes Map M-1 (Roadway Reallocations) which identifies 10 specific road segments outside of downtown that have been identified as 'a future roadway reallocation segment'. In this context, these streets have been identified as places where excessive roadway capacity exists (i.e., too many vehicle travel lanes) and can be repurposed as spaces to prioritize walking, bicycling, and transit use. None of the reallocation segments are within the vicinity of the proposed project.

The comment requests an analysis of how the proposed transportation improvements (identified in Mitigation Measure TR-3a) align with the City's current transportation policies and goals. This mitigation measure identifies the need for improvements at the I-80/West El Camino Avenue interchange and West El Camino Avenue/El Centro Road intersection. Map M-2 shows the Circulation Diagram for the City of Sacramento including several streets outside the City limits and within the UWSP area. The map shows El Centro Road and San Juan Road as each being two lanes. According to the Upper Westside Specific Plan (August 2024), El Centro Road is planned to be six lanes from West El Camino Avenue northerly to Farm Road, and four lanes north of Farm Road to Arena Boulevard. San Juan Road would remain two lanes from west of I-5 to Garden Highway. Widening of some of these streets, which are within unincorporated Sacramento County, are necessary to comply with the County's General Plan level of service (LOS) policies. It is acknowledged that the widening of those streets would create an inconsistency with 2040 General Plan Map M-2, which is showing some streets outside the City of Sacramento limits.

The City of Sacramento 2040 General Plan includes goals pertaining to transportation (an equitable, sustainable multimodal system, reduced reliance on single-occupant

¹⁸ Source: [2040 General Plan | City of Sacramento](#)

vehicles, streets designed and maintained as places that contribute to quality of life, a safer transportation system, and connections to the regional transportation network that facilitates the movement of people and goods). These goals are supported by 98 policies. As the proposed project's transportation improvements would primarily be in unincorporated Sacramento County, they would not affect these goals and policies. However, several improvements were identified within the City of Sacramento (e.g., improvements at El Centro Road/Arena Boulevard intersection). As such, the City of Sacramento has final authority over whether to approve those projects.

COMMENT 12-27

Regional Growth and VMT Impacts

The DEIR's VMT analysis remains narrowly focused on project-level impacts and does not address our request to examine how the UWSP may redistribute growth away from the City or impact the City's VMT relative to the regional average. We continue to be concerned about potential impacts on the City's growth patterns and overall regional VMT efficiency. We request that the Final EIR include modeling scenarios that evaluate these broader impacts as originally suggested in our NOP comments.

RESPONSE 12-27

This comment requests that the Final EIR include modeling scenarios that examine how the proposed project may redistribute growth away from the City or impact the City's VMT relative to the regional average. Table 2-1 of the Sacramento 2040 General Plan indicates a baseline (2016) of 7,991 miles per person per year. According to this table, a 20 percent reduction in this metric is targeted by 2030 and a 30 percent reduction is targeted by 2040. Thus, the City's VMT reduction targets are not based on a comparison to a regional average.

Page 3-9 of the Sacramento 2040 General Plan indicates that the City expects to add 69,000 new units by 2040, the majority of which would be located in the Opportunity Areas shown on Map LUP-3. These Opportunity Areas are situated in various parts of the city including Downtown, Railyards Specific Plan, and many other parts of the city (both north, south, and east of downtown). Any effort to estimate how future land development patterns would change within the City of Sacramento or regionally with the proposed project developed would be speculative. Since CEQA does not require speculative analyses, no such analysis is presented here. However, it is acknowledged that development of the proposed project could affect (i.e., reduce) the amount of new residential absorption in the City of Sacramento. Depending on the location of that lost absorption, the City's VMT targets could be easier or more difficult to achieve. This comment does not alter the DEIR's conclusion that proposed project impacts on VMT (which were analyzed in a manner consistent with Sacramento County Transportation Analysis Guidelines) would be less than significant.

COMMENT 12-28Ongoing Technical Coordination

While the DEIR mentions some collaboration with the City, it does not outline a specific process for ongoing coordination throughout project development and implementation as we had requested. Given the project's potential impacts on City infrastructure and services, we believe a more detailed plan for continued technical coordination is necessary.

RESPONSE 12-28

This comment requests that a more detailed plan for continued technical coordination be developed given the project's potential impacts on City infrastructure and services. To quickly quantify when specific improvements are needed, Sacramento County required that a "dynamic implementation tool" be developed. This tool will be utilized during collaborations between the City of Sacramento and Sacramento County to identify when and what types of specific improvements are needed as UWSP development occurs, following a process similar to Sacramento County's collaborative efforts related to land development with other cities like Rancho Cordova, for example¹⁹. That program includes certain improvements within the City of Sacramento, demonstrating how this inter-agency coordination is already occurring.

COMMENT 12-29**Water**

In our NOP comments, we identified three potential alternatives for providing domestic water to serve the proposed UWSP area. While the DEIR focuses on Alternative 3 - utilizing City of Sacramento water rights and infrastructure - it does not provide a comprehensive analysis or clear dismissal of Alternatives 1 and 2 involving Natomas Central Mutual Water Company (NCMWC) water rights. We request that the Final EIR include a thorough evaluation of all three alternatives to ensure a complete understanding of the project's water supply and water retailer options.

RESPONSE 12-29

The Draft EIR evaluated the applicant's proposed project, as described in the Draft EIR, Chapter 2, *Project Description*, which proposed provision of water to the UWSP area by the Sacramento County Water Agency (SCWA), via an agreement with the City of Sacramento (see Draft EIR page 2-25). The County recognizes that provision of water from SCWA would require annexation of the project area into SCWA's service area (please see response 12-10, above). The County also acknowledges that such an annexation would be subject to future discussion between the County and the City if the project proceeds. The Draft EIR analyzed the environmental effects of this scenario

¹⁹ <https://planning.saccounty.gov/PlansandProjectsIn-Progress/Documents/Appendix%20TR-2%20Transportation%20Mitigation%20Strategy.pdf>

(see page 20-36 of the Draft EIR) and determined that sufficient water would be available through SWCA to serve the proposed project.

The City's comment requests analysis of a range of alternatives for how water supply may be delivered to the proposed project. Such an analysis is not required in this EIR. As required under CEQA pursuant to California Water Code section 10910, a Water Supply Assessment (WSA) was prepared by the City of Sacramento in 2022 and was included in the Draft EIR as Appendix UT-1. The conclusions of the WSA were (1) that the water demand for the proposed project was included in the City's 2020 Urban Water Management Plan, adopted June 29, 2021; (2) that all the infrastructure necessary to deliver a water supply to the project is in place (excepting distribution facilities required to be constructed and financed by the project applicant); and (3) that there are sufficient water supplies for the proposed project during normal, single-dry and multiple dry years over a 20 year period. Accordingly, there was no requirement that the Draft EIR would need to address alternative water supply sources within its consideration of alternatives. Although there was no requirement to include an evaluation of water supply and retailer options in the Draft EIR, an exploration of such options could be part of a future discussion of issues between the County and the City. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 12-30

Furthermore, our NOP comments requested specific details regarding the water delivery system engineering, including the size of mains, distribution, volume, future capacity, system pressurization, storage capacity, and measures to protect the water supply and prevent contamination of the City's existing system. While the DEIR provides some information about the proposed water delivery system, including a water storage tank and transmission mains, it lacks the level of detail we requested. We urge the County to include more comprehensive information on these aspects in the Final EIR to fully assess the potential environmental impacts and ensure the adequacy of the proposed water infrastructure.

RESPONSE 12-30

The engineering details requested by the City are not required under CEQA (see CEQA Guidelines section 15124 where it is stated that a project description "should not supply extensive detail beyond that needed for review and evaluation of the environmental impact"). Identification of details such as pipe sizes, pressurization requirements, and other system characteristics are not required at this time, and would occur during final design of the project. Any water system developed for the proposed project would be required to abide by existing and long-established County and City design standards and engineering protocols, and compliance with those standards and protocols would avoid potential adverse effects.

COMMENT 12-31**Sewer System**

The City of Sacramento notes the EIR's discussion of new wastewater infrastructure needed to serve the Upper Westside Specific Plan area, including the proposed sewer pump station and force main. However, we note that our previous comment requesting analysis of impacts to the Sacramento Regional County Sewer Interceptor has not been adequately addressed. Specifically, the EIR lacks a comprehensive evaluation of the interceptor system's capacity downstream of the New Natomas Pump Station to accommodate additional flows from this project in combination with buildout of the existing Natomas area and other proposed development in the Natomas Joint Vision area. We remain concerned about the potential cumulative impacts on this critical piece of regional infrastructure and whether it has sufficient capacity to serve all these areas without requiring significant upgrades. The City requests that the EIR be revised to include a thorough analysis of existing and projected flows in the interceptor system, an assessment of its available capacity at key points along its alignment, and an evaluation of whether system upgrades may be necessary to handle the increased wastewater volumes. If upgrades to the interceptor are required, the potential environmental impacts of such improvements should also be discussed.

RESPONSE 12-31

Please see Response 5-4 with respect to capacity in the region interceptor system

COMMENT 12-32**Fire Protection**

The City of Sacramento notes the acknowledgment in the DEIR that the City's Fire Department currently provides and will continue to provide fire protection and emergency medical services to the Upper Westside Specific Plan (UWSP) area under contract with the Natomas Fire Protection District. We also note the inclusion of a site for a new fire station within the proposed plan. However, we find that the DEIR does not adequately address several key concerns raised in our NOP comments.

The DEIR lacks a comprehensive analysis of fire protection services and facilities as requested. While it provides a basic assessment of increased demand and the need for a new station, it falls short of the in-depth analysis needed for a project of this scale. We request a more detailed evaluation of current service levels, response times, equipment needs, and long-term planning for fire protection services. Furthermore, the DEIR does not sufficiently address how the project proponent will mitigate service demand impacts and maintain current levels of service throughout the project's implementation. We request more specific information on phasing, funding mechanisms, and interim measures to ensure consistent service levels during development.

Given the City's extensive experience in providing municipal services, including over 100 years of fire protection services, we reiterate our position that the City is best

equipped to provide a full range of municipal services to the UWSP area. We request that the EIR include a more robust discussion of the City's role in long-term service provision and planning for the area.

RESPONSE 12-32

The County recognizes the City's interest and concerns with respect to the provision of fire protection services for the project, but the level of detail requested by the City is not germane to the requirements of CEQA and the analysis of public service impacts in general. CEQA's treatment of public services impacts is narrowly defined to include only those impacts that would arise from the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental effects. The precise significance criteria used in Chapter 17, *Public Services and Recreation*, of the Draft EIR, and also in CEQA Guidelines Appendix G (XV)(a) states:

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:
 1) Fire protection; 2) Police protection; 3) Schools; 4) Parks; and 5) Other public facilities?

CEQA regulations and applicable case law on this issue demonstrate the threshold concerns only the environmental effects associated with the provision of new or altered physical public service facilities. Response times, service ratios, and other performance objectives are relevant to the analysis only within the context of whether or not new or expanded facilities would be required to meet defined criteria related to those service objectives, and what the environmental effects would be of providing those facilities.

As noted in the City's comment, and also on pages 2-38 and 17-15 of the Draft EIR, the project would create an additional demand for fire protection within the project area that would not be met by existing fire protection facilities and resources. Accordingly, and as stated on page 17-15 of the Draft EIR, a site for a new fire station has been identified in the land use plan for the project, and the station would be constructed as part of Phase 1 of the development plan. The environmental effects of constructing this facility are included as part of the analysis of physical impacts on the environment resulting from development of the proposed project. As discussed in the relevant chapters of the Draft EIR, compliance with mitigation measures and other construction-related regulatory requirements would reduce construction-related effects to the extent feasible. Therefore, the physical impacts of the proposed fire station have been accounted for in the analysis, and the impact was found to be less than significant.

Please see Response 12-12 above regarding the Upper Westside Public Facilities Financing Plan (PFFP) which would address the financing of construction and ongoing operation of public facilities and services, including fire protection.

The analysis in the Draft EIR meets the requirements of CEQA. The issues raised by the City are potential points of future discussion between the County and the City, but they are not required by CEQA, or the information contained in the Draft EIR.

COMMENT 12-33

Law Enforcement

The DEIR fails to adequately address the concerns raised in our NOP comment regarding potential impacts to City of Sacramento police protection services. The DEIR focuses exclusively on Sacramento County Sheriff's Office services without acknowledging or evaluating potential impacts to the City of Sacramento Police Department (SPD). This oversight is particularly concerning given the project's unique geographical context - adjacent to the City but isolated from developed County areas - which could potentially strain City services.

Furthermore, the DEIR does not provide the requested evaluation of how and when law enforcement services and facilities will be provided to ensure no impacts to the City of Sacramento. While plans for a new County sheriff's substation are discussed, this does not address the potential cross-jurisdictional impacts or need for coordinated services with the City.

The California Highway Patrol's role is only briefly mentioned, without fully addressing its responsibilities for state highways, state-owned buildings, and state property within the City, as noted in our NOP comment.

Given the project's location and potential to affect multiple jurisdictions, we reiterate our request for a more comprehensive analysis that considers impacts to both County and City services, as well as inter-agency coordination strategies. This analysis should evaluate how the proposed development's law enforcement needs will be met without adversely impacting existing City services or response times.

RESPONSE 12-33

Please see Response 12-32, above. The Draft EIR evaluated the environmental effects that would arise from providing additional police protection facilities that would be required to serve the project. The analysis in the Draft EIR meets the requirements of CEQA.

Please see Response 12-12 above regarding the Upper Westside Public Facilities Financing Plan (PFFP) which would address the financing of construction and ongoing operation of public facilities and services, including law enforcement.

The issues raised by the City are potential points of future discussion between the County and the City, but they are not relevant to CEQA, or the information contained in the Draft EIR.

COMMENT 12-34**Schools**

We appreciate that the DEIR identifies the existing schools that would serve different portions of the UWSP area, including Witter Ranch Elementary School, Two Rivers Elementary School, Natomas Middle School, Inderkum High School, and Natomas High School. This information adequately addresses which schools would serve residents both inside and outside the specific development plan areas within the UWSP.

However, the DEIR does not fully address our question regarding which schools would serve the area while the proposed schools are being built. While Table PS-2 provides helpful enrollment and capacity data for existing schools, the DEIR lacks a clear explanation of how school services will be provided during the interim period before new schools are operational. We request that the Final EIR include a phasing plan showing when the proposed schools would be constructed relative to residential development, an explicit discussion of which existing schools would absorb students during the construction phases, and an analysis of whether those existing schools have sufficient capacity to handle temporary increases in enrollment. This information is crucial for understanding the full impacts of the project on school services throughout its implementation.

RESPONSE 12-34

Please see Response 12-32, above. The Draft EIR evaluated the environmental effects that would arise from providing additional school facilities that would be required to serve the project. The analysis in the Draft EIR meets the requirements of CEQA.

Please see Response 12-12 above regarding the Upper Westside Public Facilities Financing Plan (PFFP) which would address the financing of construction and ongoing operation of public facilities and services, including public schools.

The issues raised by the City are potential points of future discussion between the County and the City, but they are not relevant to CEQA, or the information contained in the Draft EIR.

COMMENT 12-35**Parks & Recreation Facilities**

The Draft EIR for the UWSP analyzed the project's impact on the existing setting for Parks and Recreation Facilities by considering whether an increase in use of public parks and recreation facilities resulting from the UWSP would cause the substantial physical deterioration of those facilities (e.g., damage to vegetation, accelerated wear on sports facilities and fields, or erosion along trails) or in the need for new or expanded facilities, the construction or operation of which would result in substantial adverse physical effects. This analysis further considers whether implementation of the proposed UWSP would diminish or otherwise adversely affect recreational opportunities and existing facilities within the UWSP area based on facility capacity.

Within a 1-mile radius of the UWSP area, there are approximately 20 parks, most of which are within the City of Sacramento and comprising a total of 160 acres of parklands. The closest parks to the UWSP area include River Otter Park, located directly adjacent to the southeastern edge of the UWSP area across Interstate 80, Peregrine Park, located directly adjacent to the eastern edge of the area, and San Juan Reservoir Park, located directly adjacent to the northwestern edge of the area. The North Natomas Regional Park, at 212 acres, located 1.6 miles northwest of the UWSP serves the entire region.

As stated in the DEIR, the proposed UWSP would facilitate development of up to 9,356 housing units and yield 25,460 residents. The Sacramento County 2030 General Plan, Policy PF-123 requires 5.0 acres of parkland per 1,000 residents. As a result, approximately 127.9 acres of parkland is required to serve the needs of the proposed UWSP. As there are no parks currently located directly within the UWSP area, the 160 acres of nearby parks previously described could be adversely affected by the increase of residents generated by the proposed UWSP. The areas surrounding the UWSP area, in which the existing parks are located, are developed, and contain existing residents that utilize these facilities. Therefore, there is a need for new parks to serve the UWSP area and to alleviate pressure which would occur to nearby parks from increased residential uses in this area.

To accommodate the increase in residents resulting from the proposed UWSP, the plan includes a “parks program,” which outlines the proposed parks and recreational facilities to be implemented in the UWSP area. The proposed UWSP parks program proposes a diverse mix of recreational amenities and public gathering spaces which are sized and distributed to serve the anticipated needs of the residents within the UWSP. A total of 146.6 acres of parks and amenities would be provided in the UWSP area, which accounts for 11 percent of the Development Area. Parks and amenities would include 76.5 of active parks and the 2.6-acre Town Center median park as well as the 15-acre Westside Canal, 34.1 acres of greenbelt space, a 10-acre urban farm, a 12.1-acre West Edge Buffer, and a 14.7-acre Basin Edge Parkways trail.

The UWSP concludes that these facilities would be sufficient to accommodate the 25,460 proposed residents and would meet the requirements for parkland under the Sacramento County 2030 General Plan. Therefore, no additional means would need to be utilized to meet any demands in the UWSP area for parks and recreation services. Objectives for parks and recreation in the UWSP area would be met under the proposed plan, and the impact would be less than significant.

The proposed project’s “parks program” includes 76.5 – 79 acres of parkland which meets the minimum guidelines of 3 acres per 1,000 residents. The 76.5 acres of parkland are considered neighborhood/community serving parks, which will be programmed with active recreation uses. However, the DEIR analyzes the project at the minimum dedication requirement under the Quimby Act of 3 acres per 1,000 residents, less than the County’s (and City’s) policy requirement of 5 acres per 1,000. If the project were to dedicate neighborhood/community parkland at the County standard of 5 acres

per 1,000 resident, the proposed project's parkland dedication requirement would total approximately 128 acres of neighborhood/community serving parks.

The proposed project's "parks program" supplements the 79 acres of parkland with an additional 86 acres of parkland. The 86 acres of parks and recreation facilities are identified as having permanent drainage facilities, a greenbelt without recreation amenities, urban farms that will likely be leased and operated by community based or non-profit organizations, agricultural buffers, and a median with a trail. These types of facilities do not take the pressure off adjacent neighborhood and community parks that do contain active recreation, which is in high demand in the City of Sacramento.

The proposed UWSP is located adjacent to communities of the City of Sacramento; South Natomas and North Natomas. Each community was established and planned to be well-served by neighborhood and community parks that are located within a 10-minute walk of almost all the residential areas. The proposed project's gap of 51.5 acres that are not identified as neighborhood/community parkland will likely result in an adverse physical effect on the nearby parks within the two adjacent communities. Additionally, the proposed 79 acres of parkland will likely be diminished or adversely affected at a quicker rate than industry standards. This would be a significant impact.

The City of Sacramento Youth, Parks, & Community Enrichment Department (YPCE) recommends the project reduce the impacts to existing City parks by adding, or converting, 51.5 acres of neighborhood/community serving parkland in order to meet the 5 acres per 1,000 resident standard. The proposed project should incorporate the City's standards and guidelines for neighborhood and community parks, as adopted by the Parks Plan 2040, a subsequent project of the 2040 General Plan Master EIR. The existing parks within the adjacent communities are well-used, and it can be expected that the UWSP parks will be as well. Additional recommendations for the UWSP's park program are to consider community input from residents within the adjacent communities. They want to see regular enhancements and to the parks, such as lighting, restrooms, outdoor exercise equipment, an all-weather field, and an integrated bicycle network. Residents are also advocating for accessible parks for all ages, drought tolerant landscaping, and the preservation of wildlife habitat.

The UWSP's investment of over \$143 million into the acquisition and development of parks, trails, and open space converts to approximately \$1 million per acre with an annual estimated cost of \$3.5 million to maintain each park facility. These costs exceed the City of Sacramento's Park development impact fee credit limits set for turnkey parks, and the estimated annual maintenance costs currently funded by Community Facilities Districts and Landscape and Lighting Districts within North Natomas. The full development of the UWSP park program will likely result in amenities that are attractive to use, and likely a financial impact on Parks annual workplans to repair and replace in 20 years from development. The proposed project's Public Facilities Finance Plan includes a fee for the provision of repair and replacement of facilities (e.g. parks, pump stations) as well as infrastructure after their useful life. The County may consider funding the long-term repair and replacement costs through a combination of the proposed infrastructure CFDs and through the new services CFD that will fund the

share of urban services not paid for by property taxes. The City encourages the County to include an infrastructure CFD to fund long term repair and replacement costs of park facilities. Additionally, the utilities costs to maintain the 146.6 acres of parkland should also be included in the infrastructure CFD.

The conversion of 51.5 acres to neighborhood/community parkland, incorporation of the parks Plan 2040 standards and guidelines for park and facility development, incorporation of the 2040 General Plan park access policies for South and North Natomas, and funding for long term repair and replacement of facilities will reduce impacts to the existing parks within the adjacent communities and proposed parks within the UWSP.

RESPONSE 12-35

The comment asserts that the proposed UWSP provides insufficient parks and that this would result in residents in the UWSP utilizing existing City parks located off-site and to the east. The comment further asserts that this would in turn result in undue wear on the City parks which could result in a significant impact on City parks. The comment's calculations and interpretation of park credit under the Parks & Open Space Plan presented in Figure 6-1, page 6-7 of the Draft UWSP are not correct.

The proposed UWSP Parks Program has been updated since publication of the Draft EIR to account for changes in population estimates and Quimby factors., and Tables 6-3 and 6-4, page 6-6 of the Draft UWSP.

The UWSP Parks Program (e.g., park locations, park sizes, the amount of active parkland and other parks, and what should receive credit) was reviewed and accepted by County Parks. The program meets the County's Quimby requirement of 3.0 acres/1,000 population, and it meets the County's General Plan goal of providing 5.0 acres per 1,000 population which allows for a mix of park sizes and types (see Sacramento County Code (SCC) section 22.40).

SCC section 22.40 discusses the Quimby requirement and provides factors by housing type to be utilized in determining the required acreage. This results in a 3.0 acre per 1,000 population requirement of 70.5 acres, and the General Plan goal of 5.0 acres per 1,000 population results in a need for 117.4 acres. The proposed UWSP Parks program would provide 79.1 acres of active parkland, and an additional 85.9 acres that would include different types of facilities that would allow for active recreation, for a total of 165.0 acres. Of this total, County Parks allowed a credit of 146.6 acres, which is a surplus of 29.2 acres.

Park facilities, such as the Westside Canal, the Greenbelts with bike trails and distributed Urban Farm nodes, the Urban Farm, the landscaped West Edge hiking trail, and the Parkways around proposed lake basins would provide opportunities for active outdoor recreation and are fair to consider meeting the needs of future residents. These are given full or partial credit to arrive at 146.6 acres, as shown in Table 6-4, page 6-6 of the proposed UWSP.

For reference, the UWSP Parks Program would also meet and exceed the City's Quimby requirement of 3.5 acres per 1,000 population, and the resultant need for 78.2 acres of active parkland. Similarly, the program would exceed the City's 5.0 acres per 1,000 population goal which results in a need for 111.7 acres (see City Municipal Code section 17.512).

COMMENT 12-36

Land Use Planning (City's 2040 General Plan)

On February 27, 2024, the City of Sacramento adopted the new 2040 General Plan. The new General Plan identifies five Special Study Areas that are adjacent to existing City limits and are of interest to the City of Sacramento. Planning for the future of these unincorporated areas requires collaboration between the City and the County.

The proposed Upper Westside Specific Plan (UWSP) is located within the Natomas Basin Special Study Area which bears relation to the planning of the City of Sacramento. The City of Sacramento is projected to see significant growth by 2040 (69,000 new homes, and 76,000 new jobs), and with careful land use planning, new development can help make Sacramento a model of sustainable, equitable growth and community development.

Updating the 2040 General Plan was a major undertaking and a multi-year process in effort to develop a land use framework and policies which provide for strategic growth and change that seek to concentrate new growth within the existing City limits.

The City is concerned about how the UWSP could induce sprawl and redistribute growth away from the City especially if the proposed development does not comport with the City's new land use standards and innovative policies.

The intent of the City's General Plan land use vision is to promote greater integration of uses along the corridors and in centers to broaden the range of housing types in the City, support the vitality of local businesses, lay the foundation for high-frequency transit, and make it easier to provide electric vehicle charging infrastructure and also to get around without a car.

The building intensity standards are intended to provide more flexibility and innovation in building design. Minimum density standards apply in all areas where residential development is permitted and a primarily FAR-based system could incentivize the design and construction of smaller units, potentially resulting in units that are more affordable by design.

For your reference below is a link to the City of Sacramento's new 2040 General Plan. Building intensity standards are shown on **Maps LUP-6, LUP-7, LUP-8**, and **Figure LUP-5**. https://www.Cityofsacramento.gov/content/dam/portal/cdd/Planning/General-Plan/2040-General-Plan/Adopted%202040%20General%20Plan_20240227.pdf

Additionally, below two key innovative policies that support our emission reduction and sustainability goals in the 2040 General Plan. Policy LUP-4.13 requires new or expanded gas stations provide EV charging infrastructure. Policy LUP-4.14 eliminates vehicle parking minimums Citywide.

- **LUP-4.13 Future-Ready Gas Stations.**

The City shall prohibit the establishment of new gas stations or the expansion of new fossil fuel infrastructure at existing gas stations unless the project proponent provides 50kW or greater Direct Current Fast Charger (DCFC) electric vehicle charging stations on site at a ratio of at least 1 new charging station per 1 new gas fuel nozzle.

- **LUP-4.14 Elimination of Vehicle Parking Minimums.**

The City shall not require new or existing development to provide off-street vehicle parking spaces.

RESPONSE 12-36

As discussed in Draft EIR Chapter 14, *Land Use*, the proposed UWSP would meet regional and County visions and plans intended to promote smart growth principles, including compact development, mixed-use development, housing choice and diversity, transportation choice, reduction of vehicle miles travelled (VMT), reduction of greenhouse gas (GHG) emissions, natural resource conservation, and quality design.

More specifically, Draft EIR Impact LU-3 in Chapter 14, *Land Use*, discusses County General Plan Policy LU-120 which is intended to reduce impacts of many different types – such as growth inducement, unacceptable operating conditions on roadways, poor air quality, and lack of appropriate infrastructure – by establishing design criteria for all amendments to the Urban Policy Area (UPA). Policy LU-120 represents a performance-based approach, emphasizing high quality, smart growth criteria rather than business-as-usual approach that repeated historical land use patterns. Policy LU-120 was developed with the primary objective of reducing VMT by identifying sufficiently high densities to support transit; requiring infrastructure, including transit, is put in place at the same time the project is developed; maintaining a jobs-housing balance that reduces the need for long commutes and ensures lower VMT; ensuring a project design that will enable residents to walk, ride bicycles, or take transit to their jobs and schools; and requiring a reasonable amount of mixed-use development. As shown in Table LU-3: on pages 14-29 through 14-31 of the Draft EIR, the proposed UWSP would be consistent with LU-120's performance criteria, scoring 24 out of 24 possible points.

With regard to the concern that the proposed UWSP could induce sprawl and redistribute growth away from the City, the proposed UWSP is immediately adjacent to existing and planned development, including residential uses within the City of Sacramento's North Natomas and South Natomas community that are located to the north and east of the UWSP area. The proposed UWSP project area is closer to the regional core in downtown Sacramento than recently annexed areas of the City such as Northlake and the Panhandle. Impact LU-2 in Draft EIR Chapter 14, *Land Use*, presents

the extensive planning framework for the County lands located near the North Natomas community have established guiding principles for future master planning efforts within the Natomas Joint Vision Area. The impact discusses the ways in which the proposed UWSP's community form responds to this important groundwork and cites Section 1.4 of the draft UWSP that demonstrates how the proposed UWSP would be consistent with County General Plan Policy LU-114, which specifies that development and open space preservation in the Natomas Joint Vision Overlay Area occur in a comprehensive, responsible, and cohesive manner that best addresses land use, economic development, and environmental opportunities and challenges in Natomas.

Finally, the design of the proposed UWSP has been informed by extensive and ongoing coordination between County and City staff, including the following:

- **December 19, 2018:** County Planning and Environmental Review (PER) staff (Leighann Moffitt, Todd Smith, John Lundgren, Todd Taylor) met with City of Sacramento staff (Tom Pace, Cheryle Hodge, Remi Mendoza) to discuss the proposed project and potential issues to be addressed.
- **June 11, 2019:** PER staff conducted an open house on the project and the master plan process. City of Sacramento staff (Cheryle Hodge) attended.
- **October 13, 2020:** PER staff and Department of Transportation (DOT) staff conducted a kickoff meeting regarding the project's transportation analysis. City of Sacramento staff invited to the kickoff and subsequent meetings included Cheryle Hodge, Pelle Clark, Aelita Milatzo, Anis Ghobril, and Michael Hanebutt. The City of Sacramento was requested to provide a list of facilities and development projects to be included in the scope of the transportation analysis. Further technical discussions occurred throughout the completion of the transportation analysis and development of mitigation approaches.
- Other ongoing coordination occurred between Cheryle Hodge and Todd Smith on December 6, 2021, January 3, 2022, January 20, 2022, and July 6, 2022.

The County recognizes that the City of Sacramento in its recently adopted 2040 General Plan identified a number of "special study areas" that are outside of its legally established Sphere of Influence, including all of the unincorporated land in the Natomas Basin other than Sacramento International Airport and Metro Airpark, the fully developed Arden-Arcade community, and the East Study Area. There are no current proposals to add these areas to the City's Sphere of Influence, and the planning for these areas remains the responsibility and within the jurisdiction of the County. The County shares the City's interest in promoting "responsible land and resource-efficient planning" in these areas. While the proposed UWSP is not subject to City of Sacramento plans and policies, the Draft EIR addresses the consistency of the proposed project with regional and County visions and plans intended to promote smart and orderly growth.

The references to the City of Sacramento General Plan land use densities and policies to promote EV charging stations and eliminate parking minimums are noted. The County's recently adopted Climate Action Plan includes provisions to promote EV charging stations as part of new developments and when current gas stations are

improved (see CAP Action GHG-07-f). CAP Measure GHG-10, including associated Actions GHG-10-a through GHG-10-e, requires revision of County parking standards, including the lowering of parking minimums, unbundling parking from associated land uses, and requiring shared parking in some infill development areas.

LETTER 13

Natomas Unified School District (NUSD), local school district, written correspondence; dated October 21, 2024.

COMMENT 13-1

NUSD is very appreciative of the efforts to provide for adequate school sites, central to proposed residential areas, with a focus on convenient and safe active transportation routes between proposed residential development and the proposed school sites. We agree with the need for four schools and believe that the DEIR fundamentally includes them and they are required. The district respectfully requests the County require the evidence of a satisfactory plan that will ensure adequate funding of the schools before approval of the EIR. NUSD wholeheartedly supports the intent of the General Plan and General Plan policies, and we believe that the County's policy framework provides clear guidance for this Specific Plan and implementing documents, including:

Land Use Element, page 43 (Intent): "...Each residential development should access to a variety of local destinations that provide for residents' daily needs, including retail, employment, recreational amenities, schools, and municipal and social services. The resulting non-automobile street activity will promote human contact and a sense of neighborhood, as well as reduce automobile traffic and the associated impacts."

Policy PC-6. Infrastructure Master Plan and Financing Plan (Requirements for Amending the General Plan Land Use Diagram). Required: Inclusion of an Infrastructure Master Plan and Financing Plan that include the following:

- The Infrastructure Master Plan shall identify required public facilities and infrastructure (including roads, transit, water, sewer, storm drainage, schools, fire, park, library, and other needed community facilities) and associated costs for the development of the proposed UPA expansion/Master Plan;
- The Financing Plan shall:
 - Identify the phase or timing for when the facilities are needed;
 - Identify the funding mechanisms proposed to pay for the identified infrastructure and facilities...

Public Facilities Element, page 18 (Intent): "Schools are an important part of any neighborhood. In addition to their central educational role, they serve as a place for meetings, special programs, after-school play, soccer and little league games, and precinct voting. How well the school functions in these various roles depend very much on the school's location with respect to other community uses and how accessible it is... school siting and design should be a key element of a neighborhood planning effort. There remain many opportunities for design innovation and good, sensible planning to achieve neighborhoods which better integrate the school into the fabric of neighborhood life."

Policy PF-29. Schools shall be planned as a focal point of neighborhood activity and interrelated with neighborhood retail uses, churches, neighborhood and community parks, greenways and off-street paths whenever possible.

Policy PF-30. New elementary schools in the urban area should be planned whenever possible so that almost all residences will be within walking distance of the school (one mile or less) and all residences are within two miles of a school.

Policy PF-35. New schools should link with planned bikeways and pedestrian paths wherever possible.

Public Facilities Element, page 20 (Intent): ...from a school facilities perspective, school enrollment and the size of the school site are basic requirements... in growing districts the problems of timely school construction and, above all, funding new school facilities requires resolution in order to achieve this objective.

NUSD greatly appreciates the County's efforts to involve us in reviewing draft versions of the Public Facilities Financing Plan and also for the opportunity to review the Draft Specific Plan and Draft Environmental Impact Report (Draft EIR). As we move from draft to final versions of these documents, NUSD believes that the County's General Plan – particularly the direction related to identifying the cost of required public facilities, identifying when public facilities are required, and providing funding for such public facilities – will be very helpful.

NUSD applauds the County's planning efforts here – particularly the greenbelt system placement relative to school sites (summarized on Draft EIR page 2-23) and the strategic planning of school sites so that “over 90 percent of the proposed residential units would be within three-quarters of a mile of a K-8 school site” (Draft EIR, page 2-53).

In the Final EIR, Final Specific Plan, and Final Public Facilities Financing Plan, it will be important to arrive at mutually agreeable language that ensures funding in adequate amounts, and with the right timing such that school sites can be constructed within the Specific Plan Area when schools are needed by Specific Plan Area residents. This is important to meet expectations expressed in the aforementioned General Plan policies, but also because the analysis presented in the Draft EIR relies on the presence of school sites. For example, on page 8-41 of the Draft EIR is a description of the features of the Draft Specific Plan that would reduce vehicular travel demand and associated greenhouse gas emissions, including a note that “the proposed UWSP would include the development of commercial mixed use and employment/highway commercial uses, as well as schools... [and that]...[b]y providing a range of residential, commercial, and school uses within the UWSP area, approximately 22.9 percent of home-based trips associated with the proposed UWSP would be internal.” The rate of internal trips used in the air quality, greenhouse gas emissions, transportation, and transportation noise analysis in the Draft EIR would need to be adjusted if school construction is ultimately not feasible as presented in the Draft Specific Plan and Draft EIR.

RESPONSE 13-1

This comment expresses appreciation to the County for including NUSD in the planning process and highlights a number of County General Plan policies that related to school planning. This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 13-2

Page ES-15: Toxic Air Contaminants (and page 24-4). On page ES-15, in the Executive Summary table, the toxic air contaminants impact notes that there is a significant impact for exposure of sensitive uses to substantial pollutant concentrations. School uses are identified as being within 1,000 feet of Interstate 80. From the Land Use Plan, it does appear that there is a proposed K- 8 school site within approximately 1,000 feet of Interstate 80, though we only have a PDF version of the Land Use Plan and cannot create an accurate estimate of this distance. Would Mitigation Measure AQ-4c apply to this school site – the mitigation measure that requires installation of high-efficiency filtration systems – to this school site? How would the ongoing maintenance, repair, and replacement of such a system (as described in the second bullet of this mitigation measure) apply to this school site?

RESPONSE 13-2

The referenced discussion in the Executive Summary describes residences and schools as examples of future sensitive uses within 1,000 feet of Interstate 80 that would be subject to Mitigation Measure AQ-4c. As depicted on Draft EIR Plate PD-13, the UWSP Land Use Plan includes a designated K-8 school land use area approximately 1,000 feet from Interstate 80. Depending on ultimate location of any school proposed for development within that area, if the school would be within 1,000 feet of Interstate 80, Mitigation Measure AQ-4c would be applicable to the school and describes the operation and maintenance requirements.

Draft EIR, page 6-52, the second bullet of Mitigation Measure AQ-4c is revised to read:

- Maintain, repair, and/or replace the HVAC system on an ongoing and as-needed basis or prepare an operation and maintenance manual for the HVAC system and the filter. The manual shall include the operating instructions and the maintenance and replacement schedule. This manual shall be included in the Covenants, Conditions, and Restrictions for residential projects and/or distributed to the building maintenance staff. In addition, the applicant shall prepare a separate homeowners' manual. The manual shall contain the operating instructions and the maintenance and replacement schedule for the HVAC system and the filters. **For non-residential uses, the land use permit application shall include the requirements for the operation and maintenance for the HVAC system and MERV 13 or higher filter(s). For**

any subsequent proposed school developed within 1,000 feet of I-80, the NUSD can and should implement the provisions of this measure to maintain, repair, and/or replace the HVAC system on an ongoing and as-needed basis.

COMMENT 13-3

Page ES-64: Greenhouse Gas Reduction Plan. The strategy for reducing GHG emissions relies on the preparation of Greenhouse Gas Reduction Plans for future project tentative maps (Mitigation Measure CC-1b). The District is interested in how this may relate to school facilities master planning as well as more detailed transportation facilities planning and improvements that ensure safe walking and bicycling routes between homes and school sites within the Specific Plan Area.

RESPONSE 13-3

The proposed community college and high school land uses may be served by natural gas infrastructure; therefore, those facilities would be subject to implementation of Mitigation Measure CC-1b to reduce and/or offset all associated natural gas GHG emissions. In addition, all school facilities, including kindergarten through 8th grade (K-8) schools, would be subject to implementation of Mitigation Measure CC-1a to reduce short-term construction-related GHG emissions, and Mitigation Measure CC-1c related to electric vehicle charging requirements.

The mitigation measures described above are an important part of the overall strategy for reducing GHG emissions associated with the proposed school uses; however, the school land uses that would be part of the UWSP would be planned and sited in such a way that would result in the generation of inherently low levels of transportation-related GHG emissions. For example, the proposed three K-8 school sites would be strategically distributed throughout the Development Area so that over 90 percent of the proposed residential units would be within three-quarters of a mile of a K-8 school site (see Draft EIR page 2-54) and a highly connected pedestrian system would be provided to allow residents to conveniently walk to neighborhood schools. As shown in Draft EIR Table 4-1, the proposed UWSP would include sidewalks or shared-use trails present on most project streets, which would allow for safe walking and bicycling routes between homes and school sites.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 13-4

Bullet 2 of Mitigation Measure CC-1b identifies a performance standard of 1.42 metric tons of carbon dioxide equivalent per thousand square feet, measured in a future year. Does the estimate proposed in the Draft EIR include non-residential development proposed for school uses? If so, how would the strategies related to a prohibition on natural gas, on-site renewable energy, purchase of zero GHG electricity, tree planting, etc. apply to the proposed school sites? On page ES-64, there is reference to a strategy

to reduce vehicular travel demand and associated GHG emissions through an “increase access to common goods and services, such as groceries, schools, and daycare.” Would this increase in access be achieved through augmenting the current active transportation plan to increase connectivity and ensure a very low stress active transportation network between proposed homes and school sites? The District is highly supportive of a transportation system that would distribute traffic and provide very low stress and convenient pedestrian and bicycle routes to the school sites, but we are unclear how an increase would be pursued beyond the estimates presented in the Draft EIR.

RESPONSE 13-4

Mitigation Measure CC-1b requires all non-residential development to reduce GHG emissions by 1.42 MTCO₂e per year per thousand square feet, including school uses. As described above in Response 13-3, the proposed community college and high school land uses may be served by natural gas infrastructure; therefore, those facilities would be subject to implementation of Mitigation Measure CC-1b to reduce and/or offset all natural gas-related GHG emissions (which is achieved by meeting the GHG emissions reduction performance standard).

The comment’s reference to Draft EIR page ES-64 is regarding a GHG emission reduction option to reduce vehicle miles travelled that could be part of any combination of options for inclusion in a GHG Emissions Reduction Plan that would be implemented under Mitigation Measure CC-1b. If a GHG Emissions Reduction Plan includes a measure to reduce vehicle travel, the applicant would be required to specify how such reductions would occur relative to the proposed plan and any associated emissions reductions would be required to be quantified in order to be applied to the mitigation measure’s performance standard. Regarding augmentations to existing transportation plans, as described on Draft EIR page 2-16, the proposed UWSP would require a General Plan Amendment to amend the Transportation Plan to include the roadway system as proposed in the UWSP area (see EIR Plate PD-9) and an amendment to the Sacramento County Active Transportation Plan, a policy document of the General Plan, to include the bikeway and trail system as proposed in the UWSP area (see EIR Plate PD-10). It is anticipated that those transportation systems would effectively distribute traffic and provide convenient pedestrian and bicycle routes to the proposed school sites.

COMMENT 13-5

Additionally, since the estimates of GHG emissions rely on the presence of the four proposed school sites, what mechanism would be most effective for ensuring adequate funding for these school sites for the Specific Plan and EIR? How would the future GHG Reduction Plans prepared at the tentative map level guarantee adequate funding to provide for school sites?

RESPONSE 13-5

This comment addresses NUSD concerns related to the funding of school facilities proposed in the UWSP. Please see Response 13-10 regarding school funding.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 13-6

Page ES-98, Subsequent Review for School Parking Lot Noise (and page 15-46).

On this page of the Executive Summary is an overview of an impact related to the placement of proposed noise-sensitive uses near proposed school sites that would have parking areas. Mitigation Measure NOI-4a (page 15-48) suggests that there would be a future acoustical study to evaluate parking lot-generated noise relative to the County's exterior noise performance standards with building placement, buffering through distance, or a sound wall to shield adjacent proposed noise-sensitive uses from parking lot-generated noise. NUSD supports strategies to avoid land use-noise compatibility issues in this Specific Plan – both issues that would affect educational activities at the proposed school sites and issues that could be caused by school-generated noise. However, NUSD is interested in clarifying that, if buffering is required in the future, that this buffer would be required outside of the proposed school sites, if a sound wall is proposed, that this would be constructed by others outside of school property, and that if a sound wall is constructed, that it not interrupt casual surveillance of the area and not interrupt pedestrian and bicycle connectivity in the vicinity of school sites. In addition, it may not be feasible to place buildings in locations that would break the line of site between future parking fields and adjacent noise-sensitive uses.

RESPONSE 13-6

The Sacramento County General Plan addresses the responsibility for noise mitigation in Noise Policy NO-7, which states:

The “last use there” shall be responsible for noise mitigation. However, if a noise-generating use is proposed adjacent to lands zoned for uses which may have sensitivity to noise, then the noise generating use shall be responsible for mitigating its noise generation to a state of compliance with the Table 2 (Table NOI-8 of the Draft EIR) standards at the property line of the generating use in anticipation of the future neighboring development.

As such, if a school is proposed for development after development of noise-sensitive uses on adjacent or nearby properties, then as “the last use there” it would be the responsibility of the NUSD school project to mitigate noise on nearby noise-sensitive uses. If mitigation includes a buffer, the distance to existing buildings could be accounted for in the site design. However, if a noise barrier (e.g., berm, soundwall, etc.) is part of the mitigation, such a feature should be implemented by the NUSD and, thus, on be constructed on the school property.

Further, based on Noise Policy NO-7, if a school were to be proposed prior to development of adjacent properties which are designated for noise-sensitive uses, such as residential, and which could be affected by noise generated at the school, it would also be the responsibility of the NUSD to design the new school in a manner to mitigate

potential noise impacts at the property line of those noise-sensitive use designated adjacent properties.

Further, based on Noise Policy NO-7, if a school were to be proposed prior to development of adjacent properties which are designated for noise-sensitive uses, such as residential, and which could be affected by noise generated at the school, it would also be the responsibility of the NUSD to design the new school in a manner to mitigate potential noise impacts at the property line of those noise-sensitive use designated adjacent properties.

Please also see Response 13-9.

COMMENT 13-7

Page ES-108, Subsequent Review for School Parking Lot Noise (and pages 15-46 and 15- 64). NUSD has the same questions about the school parking lot noise discussion and Mitigation Measure NOI-7h on page ES-108 as we have in relation to the discussion on page ES-98 and Mitigation Measure NOI-4a.

RESPONSE 13-7

Please see Response 13-6 above.

COMMENT 13-8

Page ES-108 and 109, Subsequent Review for School Playground Noise (and page 15-64). The Draft EIR includes an impact related to the placement of proposed residential uses near possible future playground areas within future school sites. NUSD strongly supports the County's goal to avoid land use-noise compatibility issues that could arise but we do feel that this should be balanced with a goal of making sure that school sites are fully integrated into planned residential areas in a way that supports safe and convenient walking and bicycling to school. Mitigation Measure NOI-7i recommends a minimum 90-foot setback between the center of play areas and adjacent "residential boundaries." NUSD assumes this setback would be from the center of future playground activity areas and outdoor gathering spaces associated with future residential developments, rather than 90 feet from the edge of adjacent residential property boundaries, but this clarification could be helpful. In addition, the proposed mitigation seems to suggest that the recommended buffer would be provided by future school site planning. While such a buffer may be feasible, NUSD must consider a broad range of criteria in site planning, and it may not be possible in all cases to ensure such a buffer on the school property. It may be necessary to relax the referenced exterior and interior standards for residential dwellings adjacent to school sites or to consider building orientation and the location of outdoor gathering spaces for future residential development in areas adjacent to school sites.

RESPONSE 13-8

The estimated buffer distance identified in Mitigation Measure NOI-7i is presented to demonstrate that site design represents an available means of ensuring that the potential impact can be mitigated to a less-than significant noise level. Section 6.68.090 (C) of the County Code specifically exempts activities conducted on parks, public playgrounds, and school grounds, provided such parks, playgrounds, and school grounds are owned and operated by a public entity or private school. However, General Plan policies NOI-6 and NOI-7 establish standards for noise mitigation from non-transportation noise sources. Policy NOI-6 states:

Where a project would consist of or include non-transportation noise sources, the noise generation of those sources shall be mitigated so as not exceed the interior and exterior noise level standards of Table 2 (Table NOI-8 of the Draft EIR) at existing noise-sensitive areas in the project vicinity.

Mitigation of school noise on nearby existing residential uses would need to occur in light of the existing built environment. As discussed in Response 13-6, General Plan Policy NOI-7 requires that mitigation of noise on adjacent lands zoned for uses that would be sensitive to noise be achieved at the property line of the use generating the noise, in this case a school.

To reflect the NUSD suggestion, Mitigation Measure Noi-7i, Draft EIR page 15-69, is revised to include the following as a new last sentence:

Alternatively, building orientation and the location of outdoor gathering spaces for future residential development represents an option to also reduce the potential for noise impacts to a less than significant level.

This revision acknowledges that building orientation and the location of outdoor gathering spaces for future residential development represents an option to also reduce the potential for noise impacts to a less-than-significant level.

COMMENT 13-9

Page ES-109, Subsequent Review for School Stadium and Sports Fields Noise (pages 15-64 and 15-65). On this page of the Executive Summary is an overview of an impact related to the placement of proposed noise-sensitive uses near proposed school sites that would have a stadium and sports fields. Mitigation Measure NOI-7j requires an acoustical study demonstrating compliance with County exterior noise performance standards prior to issuance of a building permit for proposed school uses. NUSD has a somewhat different process for school site planning and permitting that does not involve issuance of a building permit from the County. We are also interested in understanding who would prepare this acoustical study, and whether strategies to reduce noise exposure (distance, intervening structures, etc.) would be the responsibility of adjacent proposed residential tentative maps or other form of residential applications. NUSD absolutely supports the goal of avoiding adverse noise impacts associated with special events and use of sports fields. However, we do not believe that future residential

sensitive outdoor areas near the proposed school sites have been identified, and NUSD has not done any programming or site planning for the school sites, either. Therefore, unless the site planning for proposed residential adjacent residential areas occurs in tandem with school site planning and there is flexibility on the placement and methods of noise attenuation, it may be necessary to relax the exterior noise standards for special events and school use of outdoor sports fields. In addition to “operational limits on amplified sound equipment,” it may be possible to reduce noise exposure through design of public address systems, such as through the sizing and placement of loudspeakers, but this option involves additional expense, and NUSD is not in a position at this time to determine definitively whether such additional expense would be feasible for future school sites within the Upper Westside Specific Plan Area.

RESPONSE 13-9

In California, public school districts are required to submit development and building plans to the California Department of General Services, Division of the State Architect, which is the entity that grants building permits for such projects. Because the District's planning and permitting does not involve issuance of a building permit from the County, Draft EIR Mitigation Measures NOI-4a and NOI-4b on pages 15-48 and 15-49, and NOI-7h and NOI-7j on page 15-69 have been revised to read:

NOI-4a ~~During subsequent application review for proposed school uses, when~~ **As part of preparation of** specific development plans **for a school within the UWSP boundaries**, ~~the project applicant shall submit to the County Planning Department~~ **NUSD can and should undertake** an acoustical study prepared by a qualified noise consultant that evaluates the potential noise generated by school component parking activities at the nearest existing noise-sensitive uses and ~~identifies~~ **implement**, as warranted, any noise controls, necessary to meet a project-specific exterior noise performance standard of 55 dB L50/75 dB Lmax, consistent with the County's General Plan requirements. Available methods of achieving this performance standard include provision of an off-school-site buffer distance of 50 feet or more between parking areas and exterior building locations, or erection of a sound wall ~~between~~ along the parking area perimeter shielding the school use. **For any subsequent proposed school development, the NUSD can and should conduct CEQA review at the project level for compliance with noise standards.**

NOI-4b ~~During subsequent application review for proposed high school use sports fields and stadium noise uses, when~~ **As part of preparation of** specific development plans **for a proposed high school stadium and sports fields within the UWSP boundaries** are completed, ~~the project applicant shall submit to the County Planning Department~~ **NUSD can and should undertake** an acoustical study prepared by a qualified noise consultant that includes an analysis of stadium noise exposure at the nearest existing noise-sensitive uses (residential) and ~~identifies~~ **implement** mitigation measures (as appropriate) to reduce stadium noise levels, including crowd

and PA system noise, to a state of compliance with, a project-specific exterior noise performance standard of 55 dB L₅₀/75 dB L_{max}, consistent with the County's General Plan requirements. Available methods of achieving this performance standard include locating sports fields as far from noise sensitive receptors as possible, erecting intervening structures between sports fields and existing noise sensitive receptors, and operational limits on amplified sound equipment. **For any subsequent proposed school development, the NUSD can and should conduct CEQA review at the project level for compliance with noise standards.**

NOI-7h ~~Prior to issuance of a building permit for any proposed school uses, when~~ **As part of the preparation of** specific development plans **for a school within the UWSP boundaries**, the project applicant shall submit to the County Building Department **NUSD can and should undertake** an acoustical study prepared by a qualified noise consultant that evaluates the potential noise generated by school component parking activities at the nearest existing noise-sensitive uses and ~~identifies~~ **implement**, as warranted, any noise controls necessary to meet a project-specific exterior noise performance standard of 55 dB L₅₀/75 dB L_{max}, consistent with the County's General Plan requirements. Available methods of achieving this performance standard include provision of a buffer distance of 50 feet or more between parking areas and exterior building locations of proposed residential uses, or erection of a sound wall along the parking area perimeter shielding the proposed residential use. **For any subsequent proposed school development, the NUSD can and should conduct CEQA review at the project level for compliance with noise standards.**

NOI-7j ~~Prior to issuance of a building permit for proposed school uses, when~~ **As part of preparation of** specific development plans **for a proposed high school stadium and sports fields within the UWSP boundaries** ~~are completed, the project applicant shall submit to the County Building Department~~ **NUSD can and should undertake** an acoustical study prepared by a qualified noise consultant that evaluates the potential noise generated by school stadium and sports field activities at the nearest existing noise-sensitive uses and ~~identifies~~ **implement**, as warranted, any noise controls necessary to meet a project-specific exterior noise performance standard of 55 dB L₅₀/75 dB L_{max}, consistent with the County's General Plan requirements. Available methods of achieving this performance standard include locating sports fields as far from proposed noise sensitive receptors as possible, erecting intervening structures between sports fields and proposed noise sensitive receptors, and operational limits on amplified sound equipment. **For any subsequent proposed school development, the NUSD can and should conduct CEQA review at the project level for compliance with noise standards.**

As the comment points out, at the programmatic-level of detail for the Specific Plan, the proximity of future residential sensitive outdoor areas near the proposed school sites have not been specified. As development under the Specific Plan proceeds, the District's project-level CEQA review of any proposed stadium use should analyze impacts on residential uses that exist at the time of the analysis or those which are reasonably foreseeable in the cumulative analysis. A relaxation of existing noise standard is not warranted. The District may take the cost of any identified measures to reduce potential noise impacts into consideration in determining the overall feasibility of a stadium proposal.

COMMENT 13-10

Page ES-113, School Impacts (and page 17-17). In this portion of the Executive Summary, the Draft EIR explains that “the NUSD has existing capacity for the elementary and middle school students generated by the proposed UWSP, it does not have existing capacity for the high school students generated by the proposed project.” The Draft EIR goes on to explain that school facilities “impacts are included as part of the analysis of physical impacts to the environment.” This is true so long as the school sites that are proposed are developed with school facilities as identified in the Draft Specific Plan and Draft EIR. The Draft EIR assumes the presence of these schools, and impact analysis related to criteria air pollutant emissions, greenhouse gas emissions, transportation noise, and other topics assumes that the proposed school sites are operational for K-8 and high schools. Since the analysis assumes the presence of the planned schools, and since NUSD has provided information on the current cost of school facilities and the need for additional funding to ensure that schools can be provided as identified in the Specific Plan and Draft EIR, it will be important to include language in the County's documents that ensures adequate funding and requires that adequate funding is available for construction of planned schools once they are needed to serve proposed residential development in the Specific Plan Area.

RESPONSE 13-10

The Draft EIR assumes the development of all of the land uses proposed in the UWSP, including school facilities, and discloses the physical adverse environmental effects of construction and/or operation of those land uses. As described in the Draft EIR, Chapter 17, *Public Services and Recreation*, pages 17-7 to 17-8,

Pursuant to California Government Code 65996(a), payment of established school fees are “the exclusive methods of considering and mitigating impacts on school facilities that occur or might occur as a result of any legislative or adjudicative act, or both, by any state or local agency involving, but not limited to, the planning, use, or development of real property or any change of governmental organization or reorganization.” Government Code section 65996(b) goes on to state that payment of such fees is “deemed to provide full and complete school facilities mitigation.”

The August 2024 Public Review Draft UWSP includes a discussion of school funding, which states that

Funding for school facilities comes from four potential sources:

- State Funding
- Development Impact Fees
- School District Bond Measures
- Individual Developer School Mitigation Agreements

Each of these sources and their contribution to school facilities serving the UWSP are evaluated more in depth in the Upper Westside Specific Plan Public Facilities Financing Plan.²⁰

Thus, the UWSP anticipates funding sources beyond the required school impact fees that can be collected by NUSD.

As discussed under Draft EIR Impact PS-3, with payment of required school impact fees the impact related to schools is considered less than significant. Any further issues related to the funding of school facilities area economic in nature. CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that “[e]conomic or social effects of a project shall not be treated as significant effects on the environment.” Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a number of factors considered in addressing the feasibility of an alternative, mitigation measure, or change to the project (see CEQA Guidelines sections 15131(b, c).

This comment addresses NUSD concerns related to the funding of school facilities proposed in the UWSP. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 13-11

Also, in this part of the Executive Summary, the Draft EIR notes that, “compliance with mitigation measures... would reduce construction-related effects to the extent feasible.” NUSD would typically conduct environmental review for proposed school sites, and in the past, NUSD has coordinated this review with Sacramento County as a responsible agency. Assuming NUSD conducts environmental review of the planned school sites within the Specific Plan Area, this environmental review would require feasible mitigation for potentially significant impacts, including construction-related impacts. It may be helpful to understand which mitigation measures specifically are being referenced here for future school sites in the Draft EIR.

²⁰ Sacramento County, Upper Westside Specific Plan, Public Review Draft, August 2024, page 8-10.

RESPONSE 13-11

When moving forward to develop a school within the proposed UWSP project area, the NUSD would be required to implement mitigation measures that are identified in this EIR that are relevant to the particular site and may also depend on the design of the future school. Any mitigation measure that is designed to be implemented by individual project applicants under the UWSP would apply to the NUSD as much as any other development entity. Because many of those mitigation measures are specific to site and design, and may be similarly affected by project schedule, planned construction techniques, and other factors, it is not possible at this time to identify with precision the specific measures that may apply to a particular school proposed in the future. The County encourages the NUSD to review the mitigation measures presented in Draft EIR Table ES-1, pages ES-3 to ES-131.

COMMENT 13-12

Page 2-59, Phasing. The text on page 2-59 suggests that “non-residential development anticipated under Phase 1 includes 1.3 million square feet of office development, an elementary school, and a 33.5-acre community park.” Certainly, the first phase of development will require school facilities, and the analysis in the Draft EIR relies on the presence of school facilities, but it appears that Plate PD-22 shows the southern half only of a proposed K through 8 site rather than a complete school site. Clarification here could be helpful regarding the details of the phasing (and funding) approach for school sites to serve proposed residential development.

RESPONSE 13-12

Based on student generation rates, UWSP Phase 1 would generate approximately 500 elementary school students, only about one half of the student capacity of an elementary school. In light of the current capacity of elementary schools within the NUSD (see Draft EIR Chapter 17, *Public Services and Recreation*, Tables PS-1 and PS-2, page 17-4), it is anticipated that an elementary school would not be needed until Phase 2. During Phase 1 the landowner of the parcel designated ES, in the northwest corner of the Phase 1 area, would dedicate the site, which is about half of the full site anticipated for the elementary school at that location, and would construct the fronting improvements for the south half of the future school site.

In order to provide additional clarity, Draft EIR Chapter 2, *Project Description*, page 2-59, second full paragraph under Phasing, the last sentence is revised to read:

An approximately 295-acre Phase 1 area has been identified to advance the initial construction of a sewer lift station and a 1.7-mile off-site force main, as well as the extension of water mains. The cost of this initial phase of infrastructure is a significant undertaking but would provide backbone systems that are needed to serve the remainder of the Development Area. Residential development contemplated under Phase 1 includes 1,067 single-family units, 404 low-rise apartment units, 914 midrise apartment units, and 816 high-rise apartments while non-residential development anticipated under Phase 1 includes 1.3 million

square feet of office development, ~~an elementary school~~, and a 33.5-acre community park. **In addition, Phase 1 would include reservation of half of the land for an elementary school and construction of fronting improvements on the reserved portion of the future school site.**

COMMENT 13-13

Page 4-18, Lighting Impacts. The Draft EIR discusses the planned high school site and associated outdoor lighting impacts. The Draft EIR identifies that such lighting would be required to comply with “Countywide Design Guidelines and Commercial Lot and Commercial and Institutional Project Development Standards in Chapter 5 of the Zoning Code.” NUSD would typically conduct environmental review for proposed school sites and would include feasible mitigation to address potentially significant impacts. If the future high school site includes outdoor sports lighting standards, and if there could be a potentially significant impact associated with this component of a future high school project, NUSD may indeed require that sports lighting include certain design components to avoid light spillage and glare. However, it would be helpful to have more clarity about any mechanism that would require school sites to comply with the County’s Zoning Code.

RESPONSE 13-13

The County recognizes that the NUSD has responsibilities to comply with CEQA and, if it determines that the information provided in this EIR is insufficient to address issues associated with the final plans and designs of a future school, may require additional CEQA documentation for one or more school sites. The County encourages the NUSD to use this EIR to the maximum extent allowed under the law, but recognizes that the District has the authority and responsibility to exercise its independent judgment in its compliance with CEQA.

It is the County’s understanding that the NUSD may be subject to the provisions of the County Zoning Ordinance pursuant to California Government Code sections 53091 and 53094.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 13-14

Page 5-12, Pesticides. The Draft EIR includes a reference to a requirement for agricultural operators to notify schools if their agricultural operation is within a quarter mile from the school boundary and identify all pesticides to be used during the school year. What pesticides are currently applied during the school year in areas near planned school sites? Please provide documentation that sites designated AG-Cropland near the planned school sites will not use pesticides during the school year once these schools are operational.

RESPONSE 13-14

Chapter 5, *Agricultural Resources*, of the Draft EIR identifies existing agricultural operations in and adjacent to the UWSP area. It is neither not feasible for the Draft EIR to identify which pesticides are would be applied during the school year in areas near planned school sites because pesticides may change over time and because crops and cropping patterns change over time.

Effects of the proposed UWSP related to the interface between planned urban uses (including schools) and existing and ongoing agricultural uses are evaluated in Impact AG-2 on pages 5-23 through 5-24 of the Draft EIR. As discussed in the analysis, the proposed UWSP includes a 30- to 50-foot-wide West Edge Buffer Corridor along the western perimeter of the UWSP project area to alleviate potential future conflicts between agricultural operations and future urban uses.

Moreover, the use of pesticides near school sites is strictly regulated. As provided in Draft EIR, Chapter 5, *Agricultural Resources*, page 5-12, and as referenced in the comment, California Code of Regulations sections 6690-6692 govern the use of pesticides near school sites. This regulation restricts specific pesticide applications Monday through Friday between 6 a.m. and 6 p.m. based on type of application, distance from a school or daycare, and requires agricultural operators to notify schools, if their agricultural operation is within a quarter mile from the school boundary, of all pesticides to be used during the school year. Required compliance these regulations would ensure against improper or unsafe application of pesticides near future school sites in the UWSP area.

COMMENT 13-15

Page 8-40, Greenhouse Gas Reduction Actions in the 2022 Scoping Plan Update.

Appendix D of the 2022 Scoping Plan identifies local actions that can be taken to reduce greenhouse gas emissions, including off-site mitigation (California Air Resources Board 2022 Scoping Plan, Appendix ED, page 30). Among off-site mitigation options is:

“Off-site EV chargers can increase access to EV charging throughout a community. Some examples could include EV chargers in multi-unit dwellings in disadvantaged or low-income areas, public locations (schools, libraries, city centers), workplaces, key destinations (e.g., parks, recreation areas, sports arenas).”

It may be worth considering identifying the funding of EV chargers within the proposed school sites as an additional greenhouse gas emissions mitigation strategy.

RESPONSE 13-15

This comment addresses NUSD concerns related to the funding of EV charging infrastructure for schools proposed in the UWSP. Please see Response 13-10 regarding school funding.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 13-16

Page 15-49, Sound Generation Area of the Pavilion. There is discussion here of a plan for amplified music events at “the pavilion,” but NUSD is unable to find a discussion of this element in the Draft Specific Plan. It may be helpful to understand the location of this planned facility vis-à-vis planned school sites. On page 24-6 of the Draft EIR, there is a discussion of an outdoor pavilion in a proposed 25.8-acre park in the west-central portion of the Specific Plan Area, but NUSD is unable to find any park site of this land area on the Land Use Plan.

RESPONSE 13-16

Draft EIR Chapter 2, *Project Description*, page 2-51, provides a description of Town Center Park. It states, in part, that

An outdoor pavilion area would also be included that would serve as a central gathering space for major outdoor community events such as theater performances, informal concerts, cultural events, special ceremonies, speeches, etc. A PA system would be provided, thus providing opportunities for amplified speaking and music events.

This is consistent with the description of Town Center Park on page 6-10 of the UWSP Public Review Draft from August 2024. As cited in the UWSP document, a concept plan for the Town Center Park is illustrated in Section 2.5.1, page 2-13 of the UWSP Development Standards & Design Guidelines, which also provides a written description that reads:

- B. A covered outdoor stage or bandshell and associated facilities shall be provided in the park’s eastern area, aligned with sightlines from West El Camino Avenue. Its architecture should function as a visual anchor for the Town Center and function as a point of interest for the community. The stage should be oriented toward the ballfields to the west to allow open seating area on lawn areas. A small paved surface for temporary seating directly in front of the stage for small presentations or performances is also encouraged, and could serve to accommodate ADA access.

COMMENT 13-17

Page 17-8, School Downsizing. The Draft EIR includes a statement here that NUSD would like to have clarified: “[t]hrough careful planning, a reduced Plan Area school site could follow the recent trend of school downsizing and meet the Department's criteria.”

RESPONSE 13-17

In Chapter 17, *Public Services and Recreation*, on page 17-8, in the regulatory setting discussion related to the California Education Code, the Draft EIR reflected that the

California Department of Education's School Site Analysis and Development Guidebook establishes site selection standards for school district and addresses situations where sites are acquired which are smaller than recommended in the Guidebook due to unusual or exceptional site conditions. None of those conditions appear to exist within the UWSP. Further, as noted on Draft EIR page 17-9, County General Plan policy PF-38 states that "[l]and dedications or reservations for schools should meet state guidelines for school parcel size."

Draft EIR Chapter 17, *Public Services and Recreation*, page 17-8, third full paragraph, the last sentence is deleted and revised to read:

The Department's 2000 Guide includes exceptions to its recommended site size that allow smaller school sites. Additionally, the Department has the policy that if the "availability of land is scarce and real estate prices are exorbitant" the site size may be reduced. It is the Department's policy that if a school site is less than the recommended acreage required, the district shall demonstrate how the students would be provided an adequate educational program including physical education as described in the district's adopted course of study. ~~Through careful planning, a reduced Plan Area school site could follow the recent trend of school downsizing and meet the Department's criteria.~~

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 13-18

Page 22-63, Construction of K-8 and High Schools. Here, the Draft EIR includes a statement that "[t]he proposed UWSP would construct K-8 schools and a high school to serve the needs of students generated in the UWSP area." It is our understanding that NUSD would be responsible for construction and operation of the proposed school sites, though it is important to clarify the funding mechanisms for the construction of school sites and to include language requiring that such funding is available in amounts and with the right timing to ensure NUSD schools can serve students in the Specific Plan Area once dwelling units are occupied.

RESPONSE 13-18

While there are a variety of methods of delivering schools in a new development, the County concurs that the most likely party to undertake the construction of new schools within the UWSP area would be the NUSD. The cited language indicates that the UWSP would include K-8 schools and a new high school. Please see Response 13-10 above for further discussion of school funding and the consideration of economic issues under CEQA.

LETTER 14

Sacramento County Farm Bureau, non-profit organization, written correspondence; dated October 9, 2024.

COMMENT 14-1

The Sacramento County Farm Bureau has several concerns with the Specific Plan that will develop over 1,532 acres and detrimentally impact the remaining 534 acres left of the 2,066 acres in the project area. The Draft EIR further supports the issues that we address with the proposed project. The Draft EIR identifies multiple significant and unavoidable impacts to agricultural land with the proposed project. All this area needs to be preserved as agricultural lands for flood control, health benefits derived from agricultural lands, wildlife habitat, and a sustainable local food supply.

RESPONSE 14-1

Project-specific and cumulative effects of the proposed UWSP are fully evaluated in the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 14-2

The proposed narrow strip of remaining agricultural land, some as narrow as 700 feet, will be detrimentally impacted by the urban zone. The placement of the elementary school is a poor choice due to the state regulatory requirements placed on agriculture operations. The neighboring school will disrupt production for most of that parcel and will lead to pest and disease outbreaks, food quality and health issues, and crop losses because operational practices including pest management will be blocked due to the school's location. In addition, the 30–50-foot buffer gravel access trail and farm fence is not a conducive buffer to protect the agricultural land against food safety hazards, pest infestations, or maintain quality production while also maintaining public safety. The minimum buffer to protect agricultural production needs to be a quarter mile.

RESPONSE 14-2

No specific evidence is provided to support the claim that agricultural lands adjacent to the proposed UWSP Development Area would be detrimentally impacted by future urban uses proposed under the UWSP. The comment refers to unspecified state regulatory requirements for agriculture operations to assert that the proposed placement of a K-8 school in the west portion of the proposed UWSP Development Area is a poor choice. No specific evidence is provided to support the claim that operation of the proposed school, including pest management, would disrupt agricultural production for most of the adjacent agricultural parcel to the west of the proposed school site and would lead to pest and disease outbreaks, food quality and health issues, and crop losses.

As discussed on page 2-36 of Chapter 2, *Project Description*, of the Draft EIR, K-8 schools that would be located within the UWSP Development Area have been located based on guidance from the Natomas Unified School District (NUSD) and in accordance with NUSD standards and state guidelines.

No evidence is provided to support the assertion that the proposed 30- to 50-foot-wide West Edge Buffer Corridor along the western perimeter of the UWSP Development Area to alleviate potential future conflicts between agricultural operations and future urban uses is not sufficient to protect adjacent agricultural land against food safety hazards, pest infestations, or maintain quality production while also maintaining public safety. No specific evidence is provided to support the assertion that the minimum buffer to protect agricultural production needs to be a quarter mile.

Please see Master Response AR-1: Conversion of Farmland to Nonagricultural Uses, and Master Response AR-2: Interface Between Agricultural and Urban Uses.

COMMENT 14-3

This project area is already the needed flood buffer between the river and the urban city. The County needs to preserve this appropriately sized flood buffer which also consists of mostly prime agricultural land. These lands are classified by the State and County as important for a reason and need to remain intact as such. The county needs to protect the actual agricultural lands already here without trying to mitigate with other land that most likely is already protected or classified as important. Agricultural land cannot be created; what land is here is all that is left. Trying to substitute other land is not an acceptable or equitable mitigation. The county must be cognizant about these classifications to ensure priority is maintained in preserving these limited land resources that cannot be created. Agricultural lands provide numerous benefits to the community including cooler temperatures, cleaner air, a diverse and reliable food supply that often is healthier and cheaper the less distance it must travel, carbon sequestration, producing oxygen essential for humans and wildlife, flood and fire control buffer, groundwater basin sustainability with recharge, and a habitat for wildlife. The technological advances and efficiencies applied to farming practices also assist in improving the environment and food quality.

RESPONSE 14-3

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage.

In addition, impacts of the proposed UWSP related to flood risk are addressed in Impact HAZ-5 on pages 12-21 through 12-25 in Chapter 12, *Hazards and Hazardous Materials*, of the Draft EIR. As discussed in the analysis, in the event of a catastrophic breach of the levee along the Sacramento River, flood flows would be redirected as a result of development allowed under the proposed UWSP. The analysis describes that some low-lying areas could be inundated, depending on water levels in the Sacramento River. However, the inundation study summarized in Impact HAZ-5 concluded that development allowed under the proposed UWSP would not substantially impair emergency response

or evacuation because of the numerous alternate evacuation routes and the substantial number of hours that would be available for evacuation before low-lying areas would reach a one-foot of inundation. Based upon these considerations, the analysis concluded that impacts of the proposed UWSP related to flood risk would be less than significant. Therefore, the Draft EIR appropriately identified that a less-than-significant impact related to flood risk would occur with implementation of the proposed UWSP.

Impacts of the proposed UWSP related to conversion of farmland to nonagricultural uses are addressed in Chapter 5, *Agricultural Resources*, of the Draft EIR. See Master Response AR-1: Conversion of Farmland to Nonagricultural Uses.

COMMENT 14-4

These agricultural lands are full of wildlife. Wildlife and agricultural lands have a symbiotic relationship that benefits wildlife survival because of the agricultural practices on those lands. Agricultural lands provide food sources, a living habitat, protection from predators, functional water resources, and spacing needs for both individuals and species population. The wildlife utilizes this particular area because of the resources the agricultural land provides and allows them to thrive. Moving them to other areas only impacts those other areas that already contain populations of various diverse species. The phasing buildout of this Specific Plan is backwards and will cause major issues for wildlife to be able to migrate from the area and will trap many species in the phasing buildout. Buildout needs to start next to the current existing developed edge and work out from that location to direct wildlife towards the future remaining agricultural land and river. Ultimately, this project causes an overall loss of land; therefore, leaving a substantial small area for all wildlife to concentrate on for the sake of surviving and thriving. Agricultural lands also provide a buffer to limit wildlife impacts within the residential and urban areas.

RESPONSE 14-4

Effects of the proposed UWSP related to biological resources, including effects related to sensitive wildlife species and their associated habitats, are evaluated in Chapter 7, *Biological Resources*, of the Draft EIR. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 14-5

The DEIR mentions that the City of Sacramento is to provide the water to this new development. Where will the water to supply this new development come from? There will be less groundwater to pull from as around 1,500 acres will now be permanently covered, preventing water to infiltrate down into the groundwater basin. This project reduces the amount of water that can recharge this basin and increases the amount of flooding for this and neighboring areas. This land has been in agriculture not only because of its prime soil quality to grow food but also to be a flood buffer for the urban zone. The annual crops grown in this area are grown because the ground is too wet in the winter. It is designated by FEMA as a high-risk flood zone. Developing this low-lying

area puts more people at risk and causes more economic damage when flooding occurs. The narrow strip of agricultural land left to be a flood buffer is not large enough. The DEIR points out under PH-1, the contradictory plans of the General Plan and SACOG which will create a huge unplanned population growth of about 25,460 residents in 9,356 housing units of whom will need water, food, and other vital resources that must be obtained and maintained. In addition, the impact of traffic, noise, carbon emissions that previously were very minimal for the area will be greatly elevated and disruptive to the current rural residents' lifestyle. Their way of life will be destroyed. Even the remaining agricultural zone and wildlife will be heavily disrupted and degraded with the bombardment of trash, traffic congestion, trespassing, and other damaging impacts. The people on these agricultural lands and rural residences value the land and the livelihood with it.

RESPONSE 14-5

Effects of the proposed UWSP related to water supply are evaluated in Chapter 20, *Utilities*, of the Draft EIR. Specifically, as presented in Impact UT-3 on page 20-37, the City of Sacramento would have adequate planned water supply to serve development allowed under the proposed UWSP during normal, single dry, and multiple dry years, as confirmed by the water supply assessment (WSA) prepared for the proposed UWSP (Draft EIR Appendix UT-1). As demonstrated in the Draft EIR, the impact of the proposed UWSP related to water supply resources, including surface water and groundwater supply resources, would be less than significant.

Effects of the proposed UWSP related to groundwater recharge are evaluated in Chapter 13, *Hydrology and Water Quality*, of the Draft EIR. Specifically, as presented in Impact HYD-2 on page 13-21 through 13-23, development under the proposed UWSP, including proposed offsite improvements, would conform to required design and sustainability measures designed to reduce runoff and infiltrate stormwater back into the subsurface, ensuring that development within the UWSP area would not substantially interfere with recharge or impede conditions for groundwater sustainability. In addition, as presented in Impact HYD-2, conformance to required design and sustainability measures would also control site drainage with respect to flood conditions during storm events. As demonstrated in the Draft EIR, impacts related to groundwater recharge and associated flood-risk would be less than significant.

Effects of the proposed UWSP related to flood risk are further evaluated in Chapter 12, *Hazards and Hazardous Materials*, of the Draft EIR. Specifically, as presented in Impact HAZ-5 on page 12-21 through 12-25, development allowed under the proposed UWSP and the offsite improvements would not interfere or impair an emergency response or evacuation plan, and this impact would be less than significant.

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage.

Effects of the proposed UWSP related to population growth are evaluated in Chapter 16, *Population and Housing*, of the Draft EIR. Specifically, as presented in Impact PH-1 on pages 16-11 through 16-14, the proposed UWSP would not be anticipated to induce

substantial unplanned population growth. However, as presented in Impact PH-1, because the UWSP area and the proposed UWSP were not anticipated for development in either the Sacramento Area Council of Governments (SACOG) Blueprint or the current Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS), the impact is considered to be significant and unavoidable. Therefore, the Draft EIR appropriately identifies that a significant and unavoidable impact related to population growth would occur with implementation of the proposed UWSP.

Effects of the proposed UWSP related to transportation are evaluated in Chapter 18, *Transportation*, of the Draft EIR. The Draft EIR has identified that potential impacts of the proposed UWSP related transportation would be reduced to a less-than-significant level through implementation of recommended mitigation measures.

Effects of the proposed UWSP related to noise are evaluated in Chapter 15, *Noise*, of the Draft EIR. The Draft EIR has identified that potential impacts related to an increase in traffic noise at existing sensitive receptors, increase in stationary noise from proposed UWSP components at existing receptors, and increase in stationary noise from proposed UWSP components at proposed sensitive receptors would be significant and unavoidable. Therefore, the Draft EIR appropriately identifies that a significant and unavoidable impact related to noise would occur with implementation of the proposed UWSP.

Effects of the proposed UWSP related to greenhouse gas emissions are evaluated in Chapter 8, *Climate Change*, of the Draft EIR. The Draft EIR has identified that potential impacts related to greenhouse gas emissions would be reduced to a less-than-significant level through implementation of recommended mitigation measures.

Impacts of the proposed UWSP related to agricultural resources are evaluated in Chapter 5, *Agricultural Resources*, of the Draft EIR, as described above. See Master Response AR-1: Conversion of Farmland to Nonagricultural Uses.

Effects of the proposed UWSP related to biological resources, including effects related to sensitive wildlife species and their associated habitats, are evaluated in Chapter 7, *Biological Resources*, of the Draft EIR. The Draft EIR has identified that potential impacts related to biological resources would be reduced to a less-than-significant level through implementation of recommended mitigation measures.

Finally, the comment states that the proposed UWSP would result in destruction of ways of life, bombardment of trash, trespassing, and other unspecified damaging impacts. No evidence is provided to support these claims. Furthermore, neither actual nor purported unlawful actions are considerations under CEQA, and thus they are not addressed in the Draft EIR.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 14-6

Our organization has concerns with the perception the county has of how to protect our local food system. The Project Description states under the Sustainable Community section of incorporating measures that would preserve sensitive habitat and conserve agricultural lands. How can this Specific Plan state that when they will remove 1,324 acres (over 70%) of the agricultural land and the wildlife associated with it? It is contradicting. While small urban farms are important to the diversity of produce, they cannot sustain the region or a large city like the neighboring City of Sacramento. It requires large acreage of good land to grow the quantity and variety of food required to provide a balanced diet and plentiful supply to sustain grocery stores, restaurants, and farmers markets for all residents and guests within the entire region. Relying on other areas for a food supply and sending our dollars to those areas is not a sustainable decision. Quality agricultural land is a finite and priceless resource. The cities that preserve these types of lands now will benefit the best later as food, which is essential for life, becomes a very limited resource in most areas. Preserving agricultural land in our county reduces transportation of those foods allowing for a lower carbon footprint, less pollution, fresher and healthier products, and maintains local control with jobs and economic dollars staying in the area.

RESPONSE 14-6

Impacts of the proposed UWSP related to agricultural resources, biological resources, transportation, air quality, and greenhouse gas emissions are evaluated in the respective technical chapters of the Draft EIR. Pursuant to CEQA Guideline 15131, economic considerations are not considered environmental impacts under CEQA unless a physical impact on the environment resulting from such effects would occur or if such effects would result in the need for the construction of new or physically altered facilities that would result in significant physical environmental impacts.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 14-7

The County needs to understand this agricultural land currently assists with lowering the carbon footprint with carbon sequestration, provide resources for the wildlife on them, and as a buffer for flooding and wildfires. The County is doing a disservice to its current residents and businesses by eliminating agricultural lands from this area. In addition, human health and safety will be threatened. Agricultural lands and managed conservation areas are the key for carbon sequestration. This project will add to the carbon the county emits. The County needs to preserve this project area in its current state to provide aid in balancing its carbon footprint.

RESPONSE 14-7

Impacts of the proposed UWSP related to each of these topics are evaluated in the respective technical chapters of the Draft EIR. The comment will be included as a part

of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 14-8

The County needs to determine the value of all aspects of this project area and not focus on one component that will ruin everything else for the one. In addition, a quick profit for one component but then leaves an entire community in dire straits with potential issues with water availability and quality, food shortages, poor air quality, increased flooding, and climate change is not a valid strategy the County should support. This project area has a lot of State designated Prime Farmland. Most other counties do not have any Prime Farmland. Our county is privileged to have so much abundant prime and statewide important farmland. This makes Sacramento County very valuable as other areas continue to develop more urban centers.

RESPONSE 14-8

The comments about the importance of farmland in Sacramento County are noted. Impacts of the proposed project related to agricultural resources are addressed in Draft EIR Chapter 5, *Agricultural Resources*. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 14-9

The County needs to support Alternative 2: No Project/Existing Zoning as the best option for this area. It has the ideal proper placement, proper growth, proper preservation of resources including land, food, wildlife, water and air quality, and carbon sequestration. As more areas remove agricultural land, the need for food and land to produce food will increase. Preservation of agricultural land for long term options is best in this drastically developing region. Once covered over, the land able to produce food will be gone forever and leaves our county dependent on other areas for the resources vital for human survival. It is a priceless resource we cannot get back.

RESPONSE 14-9

The comment expresses support for Alternative 2. It does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP. The comment is acknowledged for the record and will be forwarded to the decision makers for consideration.

COMMENT 14-10

Absolute consideration of preserving agricultural lands in Sacramento County is imperative to sustain the county with an abundant food supply, carbon sequestration, wildlife habitat, and the local economy. The Draft EIR acknowledges these issues and that this specific plan will lead to an overall loss of farmland. This is deemed

unacceptable. Therefore, the project should not move forward. Please keep the Sacramento County Farm Bureau informed with any updates and future notices.

RESPONSE 14-10

The comment expresses opposition to the proposed project but does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP. The comment is acknowledged for the record and will be forwarded to the decision makers for consideration.

LETTER 15

Environmental Council of Sacramento (ECOS), non-profit organization, written correspondence; dated October 28, 2024.

COMMENT 15-1

- The EIR must be an informational document, not a sales brochure. The Applicant owns just 1.54 percent of the property, 31 of the 2,066 acres proposed for the project. It is difficult to discern the level of involvement of the balance of landowners. It is also difficult to see how owning only 1.54 percent of the property can expect to drive the re-zoning and annexation of such a large area. The DEIR does not say that an agreement with the other landowners has been developed. This project appears to be simple developer-driven speculation.

RESPONSE 15-1

The Draft EIR prepared for the proposed UWSP is an objective, accurate, and complete analysis of the potential environmental impacts that would or could result from construction and operation of the proposed project. Pursuant to CEQA requirements as set forth in the CEQA Guidelines, each environmental resource topic subject to analysis under CEQA has been given careful consideration in light of existing and anticipated future environmental conditions, applicable regulations, the physical and operational characteristics of the proposed project. As required under CEQA, where significant impacts are identified, the Draft EIR describes potentially feasible mitigation measures which could be adopted to substantially lessen or avoid such impacts. In addition, a range of reasonable alternatives are presented and comparatively evaluated in the Draft EIR. If the County Board of Supervisors ultimately determines to approve the proposed project, it would be required to explain the reasons that it considers the significant impacts of the proposed project acceptable in a Statement of Overriding Considerations, which must be based on substantial evidence in the administrative record.

As indicated in on page 2-1 of Chapter 2, *Project Description*, of the Draft EIR, the applicant is Upper Westside LLC. It is typical that such business entities are made up of a number of members at differing levels of investment, with a designated managing member. The make-up of the applicant's business entity, and the relative ownership of the managing member, is not relevant to the adequacy of the EIR under CEQA.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-2

- Housing is a hot button issue in the City and the County. However, it is important to put the need for housing in context. The DEIR does not disclose that the County's General Plan includes already approved and zoned housing units on greenfield sites that will not be fully built out until after the year 2100. It does not disclose that the land use scenario in SACOG's draft 2025 Blueprint does not include the Upper Westside project area.

RESPONSE 15-2

Under CEQA, the purpose of an EIR is to disclose to the decision makers and the public the significant environmental impacts of a proposed action. An EIR is not an economic evaluation nor is it intended to opine as to the advisability of the proposed action. The timing of development in the County and elsewhere in the region is largely a function of economic market forces. Even "approved" projects may never be built. The Draft EIR evaluated the environmental effects of a specific proposed project and also considered the cumulative effects of other reasonably foreseeable development projects in the region. It is not within the purview of the EIR to determine which of those projects might actually be developed because the County has no control over investment decisions made by private developers as determined by market forces.

The Draft EIR recognized this in Table LU-1 on page 14-22 in Chapter 14, *Land Use*, of the Draft EIR, which includes a discussion of consistency with County General Plan Policy LU-114. The discussion states "[t]he UWSP area was not anticipated for development in either the SACOG MTP/SCS or the Blueprint map." There is no disputing that the proposed UWSP is not anticipated for development in the current versions of the Blueprint and MTP/SCS. In fact, in describing how the land use forecast that is included in the MTP/SCS was developed, SACOG stated that it was based on "an inventory of unbuilt capacity for housing and employment uses, based on existing, adopted plans."²¹ The proposed UWSP is not accounted for in the 2020 MTP/SCS or the Blueprint because it currently lies outside of the USB and UPA, and did not meet SACOG's criteria for inclusion in those documents. The 2020 MTP/SCS Appendix D: Land Use Forecast Documentation specifically stated "[o]utside of the current UPA and USB, in the northwestern portion of the county, the county is also currently processing an application for two projects identified as the North Natomas Precinct and the Upper Westside Specific Plan. While many of these areas are consistent with the region's long term growth strategy, the Blueprint, and are in varying stages of the local entitlement process, they are not yet approved by the county."²² If the County approves the proposed project, and in doing so extends the USB and UPA, these factors would be

²¹ Sacramento Area Council of Governments, *2020 Metropolitan Transportation Plan/Sustainable Communities Strategy, Appendix D: Land Use Forecast Documentation*, November 18, 2019, page 4.

²² Sacramento Area Council of Governments, *2020 Metropolitan Transportation Plan/Sustainable Communities Strategy, Appendix D: Land Use Forecast Documentation*, November 18, 2019, page 47

considered in future land use forecasts undertaken by SACOG in preparation of future versions of the MTP/SCS.

That the proposed UWSP is not reflected in the current versions of the Blueprint and/or MTP/SCS does not automatically lead to a determination that the project, if approved, would be inconsistent with the Blueprint. In fact, the MTP/SCS states that “[i]ncluding growth within the MTP/SCS is not a guarantee that it will happen. Likewise, growth in areas outside the MTP/SCS may occur during the planning period. Growth outside the MTP/SCS may or may not be consistent with the smart growth, long-term, Blueprint vision for the region.”²³

COMMENT 15-3

- The EIR must disclose the environmental impacts of the entire proposed Upper Westside project, as well as the cumulative impacts of it with the other proposed developments in the Natomas Basin – Grandpark (5,000 acres) and Airport South Industrial (475 acres). Instead, the DEIR picks and chooses what it discloses. Individually and together, the projects would require changes to a number of foundational agreements and policies – the County’s General Plan, the County’s location of the Urban Service Boundary and Urban Policy Area, and the Natomas Basin Habitat Conservation Plan. These agreements are the result of painstaking compromise between the County, City, California Fish & Wildlife, and U.S. Fish & Wildlife, to guide and control development in the Natomas Basin.

The Upper Westside would make the work of the Natomas Basin Conservancy infinitely more difficult due to the loss of agricultural land in close proximity to Fisherman’s Lake. The three projects together would spell the failure of the Natomas Basin Habitat Conservation Plan.

RESPONSE 15-3

The cumulative effects of the proposed project, including but not limited to the projects listed in Comment 15-3 are evaluated in Chapter 22, *Cumulative Impacts*, of the Draft EIR (see Table CI-1, Cumulative Project List). The Draft EIR includes substantive analysis of the project-level and cumulative effects of the project as it relates to consistency with the County General Plan, as well as potential effects on the Natomas Basin HCP. In particular, see Impacts LU-2 (Conflict with Sacramento County’s Land Use Plans) and LU-3 (Conflict with Sacramento County’s Urban Policy Area/General Plan Growth Management Policy), as well as the discussion of Cumulative Conflicts with Applicable Plans, Policies or Regulations on page 22-43 of the Draft EIR. The Draft EIR includes extensive analysis of potential effects on the Natomas Basin HCP, including Impact BR-14, pages 7-76 to 7-84, and the discussion of Cumulative Conflict with the Provisions of an Adopted Habitat Conservation Plan, Natural Community

²³ Sacramento Area Council of Governments, *2020 Metropolitan Transportation Plan/Sustainable Communities Strategy, Appendix D: Land Use Forecast Documentation*, November 18, 2019, page 3.

Conservation Plan, or Approved Local, Regional, or State Habitat Conservation Plan on pages 22-26 to 22-31 of the Draft EIR. This latter analysis concludes that taking into account the development of the UWSP, including any associated mitigation measures, “84 percent of the lands currently available for acquisition of the TNBC in the Natomas Basin would remain available following build-out of the UWSP area,” and concludes that the cumulative impact on the Natomas Basin HCP and Metro Air Park HCP would be less than significant.

COMMENT 15-4

- The DEIR says the Westside project would have to rely on the City of Sacramento for water and sewer services and infrastructure. However, it does not disclose that the City has an agreement with State and federal wildlife agencies to not develop outside of its Permit area. Questions remain over how emergency services, police, fire, medical as well as park maintenance and recreation programs will be provided, as build-out proceeds over many years. How would infrastructure be built out if property owners are not part of the project and will services be available to non-participating land owners? Would the project area be annexed by the City to facilitate the extension of utilities?

RESPONSE 15-4

The comment incorrectly characterizes some of the public services and utilities that are proposed in the UWSP. The Draft EIR Project Description does include the UWSP proposal that water supply be delivered by Sacramento County Water Agency through a wholesale agreement with the City of Sacramento (see discussion in Draft EIR, Chapter 2, *Project Description*, page 2-44). As is described on pages 2-43 and 2-54, wastewater collection and treatment would be provided by SacSewer, drainage would be provided by Reclamation District 1000, energy infrastructure would be provided by SMUD and PG&E, law enforcement would be provided by the Sacramento County Sheriff’s Department, fire protection would be provided by the Natomas Fire Protection District (which contracts with the City of Sacramento Fire Department), and library services would be provided by the Sacramento Public Library Authority.

The provision of sewer service by SacSewer would require approval by LAFCO of a sphere of influence extension and then annexation to SacSewer.

COMMENT 15-5

- We do not understand why this project is allowed to proceed. Why has the County not stopped it as it teeters on multiple foundational weaknesses? Why is the County entertaining the idea of building a community the size of Galt or El Cerrito, (25,000 people), next to the Sacramento River, with only four exit roads in case of an evacuation?

RESPONSE 15-5

The proposed UWSP is being processed through the County's planning and CEQA process in response to a resolution adopted by the County Board of Supervisors on February 26, 2019.²⁴ In that action, the Board of Supervisors:

- Initiated the Upper Westside Specific Plan process pursuant to the Board-adopted Master Plan Procedures and Preparation Guide and County Code 21.14.060. This includes potential future adoption of a Specific Plan and a General Plan Amendment to move the Urban Services Boundary and the Urban Policy Area within the Natomas Joint Vision Area of the Natomas Basin;
- Approved the proposed Outreach Program with the expectation that it be enhanced to reach a diverse stakeholder group, provide equitable opportunities for input and to ensure transparency of process;
- Determined that the scope of the Study Area for potential plan boundaries is appropriate, with the understanding that actual plan boundaries may be adjusted based on the results of the future technical studies, outreach and planning as part of the Master Planning process;
- Directed the Planning Director to assemble and convene a Technical Advisory Committee consistent with the Board-adopted Master Plan Procedures and Preparation Guide and County Code Section 21.14.060 (F); and
- Authorized the Planning Director to sign the Funding Agreement (Attachment 1) between the County of Sacramento and the Owners' Group.

Regarding emergency evacuation, the Draft EIR, Chapter 18, Transportation, Impact TR-4, page 18-41, included an analysis of Emergency Access. The analysis that the proposed UWSP roadway system would not result in inadequate emergency access. It reflected that "[f]uture driveway and building configurations would comply with applicable fire code requirements for emergency evacuation, including proper emergency exits for visitors and employees." It also noted that future development would be subject to review and approval by the City of Sacramento Fire Department and that California Vehicle Code section 21086 ensures the ability of emergency vehicles to clear a path or avoid traffic through use of opposing traffic lanes. This comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

²⁴ Leighann Moffitt, Planning Director, Office of Planning and Environmental Review, *Board of Supervisors Staff Report, PLNP2018-00284. Initiation of the Upper Westside Specific Plan Process*, February 26, 2019.

COMMENT 15-6

- This project is not Smart Growth, it is rampant speculation. It is not needed given the excess existing housing entitlements in the Sacramento region, and in Sacramento County. The project does not provide extraordinary benefits and should not merit a change to the County's Urban Services Boundary.

RESPONSE 15-6

This comment expresses the opinion on the merits of the project or whether or not the project should be developed. The comment is noted and will be made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-7

- Please see our comments in the pages below and note that our attorney, Patrick Soluri, will submit comments on our behalf separately.

RESPONSE 15-7

Comment noted. Responses to other comments provided in the commenter's letter are provided below. Please also see Responses to Letter 19, provided by the Soluri Meserve law firm on behalf of the Environmental Council of Sacramento, the Friends of Swainson's Hawk, and Brandon Castillo.

COMMENT 15-8**1) Key Information missing in the DEIR**

The DEIR omits considerations that should be key to the County in its decision-making:

- a) Impacts on provisions of the Natomas Basin Habitat Conservation Plan, and on Natomas Basin and other mitigation properties, are not identified nor analyzed;

RESPONSE 15-8

The Draft EIR includes substantial analysis of the potential effects of the proposed UWSP on the Natomas Basin HCP and concluded that the impacts of the proposed project would be less than significant under both project and cumulative conditions. Please see Master Response BR-1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park HCP and Master Response BR-2: Reductions in Agricultural Land Available to NBHCP Covered Species.

COMMENT 15-9

- b) The requirement that the project obtain incidental take permits to reduce impacts to less than significant is not included.

RESPONSE 15-9

As documented in the Draft EIR and further clarified in this Final EIR, adherence to the Mitigation Measures BR-1 to BR-9 would mitigate impacts to special-status species, including NBHCP and MAP HCP Covered Species, to a less-than-significant level. Each of those noted mitigation measures also includes provisions to require the applicant for each phase of build-out to be required to secure relevant permits from CDFW and USFWS; if it is not possible to avoid impacts to those species through implementation of County-approved mitigation. Please also see Draft EIR Mitigation Measure BR-3 (pages 7-46 to 7-47) which addresses impacts to giant garter snake and states that project applicants shall obtain authorization for giant garter snake take from USFWS and CDFW; Response 3-4, which explains how Mitigation Measure BR-7b was revised to clarify that project applicants may need to obtain an ITP if potential take of active Swainson's hawk nest sites cannot be avoided; Response 3-5, which explains how additional text was added to the FEIR regarding the potential need for ITP if potential take of burrowing owl cannot be avoided; and Response 3-6, which explains that a Streambed Alteration Agreement may be needed to cover certain development within the UWSP area.

COMMENT 15-10

- c) Location and policy significance of the County of Sacramento Urban Services Boundary, and associated land use policies, are ignored; also, there is no discussion of the implications for the Urban Services Boundary and Urban Policy Area, and future development in the Natomas Basin, if the project is approved;

RESPONSE 15-10

Physical effects related to land use and planning that would occur with implementation of the proposed UWSP, including effects related to the Urban Services Boundary (USB), the Urban Policy Area (UPA), and applicable land use policies, are fully evaluated in Chapter 14, *Land Use*, of the Draft EIR (also refer to Master Response LU-1: County Urban Services Boundary and Urban Policy Area and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127).

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-11

- d) Analysis of impacts on water quality from storm water drainage from the project area, and cumulative impact from development upstream from the project, is not provided;

RESPONSE 15-11

The comment is incorrect. Water quality effects from storm drainage from the proposed UWSP are addressed in Impact HYD-1 on pages 13-19 through 13-21 in Chapter 13, *Hydrology and Water Quality*, of the Draft EIR. The analysis concludes that the impact would be less than significant because as a permit holder through the Sacramento Stormwater Quality Partnership (SSQP), Sacramento County would require individual projects undertaken pursuant to the proposed UWSP to conform to the standards identified in the SSQP Stormwater Guidance Manual. The water quality impacts of stormwater from cumulative development are addressed on pages 22-40 through 22-42 in Chapter 22, *Cumulative Impacts*, of the Draft EIR. The cumulative analysis draws a similar conclusion regarding the County's requirements for other cumulative projects within its jurisdiction.

Treatment control measures that would be required pursuant to the SSQP Stormwater Guidance Manual could include vegetated filter strips, stormwater planters, infiltration basins, etc. to intercept and treat pollutants, and reduce the volume of runoff. Proprietary devices such as stormwater media cartridge systems may also be allowed (as treatment controls) for development considered under the proposed UWSP and would be subject to local permitting agency review and approval. Verification of long-term maintenance is also required by the County's Municipal Stormwater Permit (MSP) for projects using stormwater treatment controls measures such as vegetated swales and bioretention planters or other treatment control devices. Once treated, sediment and other pollutants would be removed from the stormwater runoff.

To further ensure stormwater is treated, Mitigation Measure HYD-1, Draft EIR page 13-21, is proposed to ensure that water quality impacts are addressed. The measure requires that prior to the approval of future tentative maps the project applicant or future developer(s) submit a drainage study in accordance with the requirements outlined in the Sacramento Stormwater Quality Partnership's 2018 Stormwater Quality Design Manual (or subsequent updates).

COMMENT 15-12

- e) National Annual Particulate Matter (PM) 2.5 standard has changed but this is not acknowledged.

RESPONSE 15-12

Please see Response 15-47 below.

COMMENT 15-13

2) Sacramento County Urban Services Boundary

The Upper Westside project would be located outside of Sacramento County's Urban Services Boundary (USB), yet the DEIR does not address the fact that it encroaches beyond the boundary of the USB. If the Upper Westside project is

approved, apart from the direct impacts to farmland and habitat, it would set a precedent for other development projects in Natomas to encroach beyond the USB.

The DEIR does not address:

- a) the importance of the USB as a land use planning act of regional significance;
- b) the USB as the “ultimate boundary of the urban area” in the unincorporated County, based upon jurisdictional, natural and environmental constraints to urban growth;
- c) the precedent-setting impact of the Upper Westside project encroachment on the USB for other development projects, both in Natomas and east Sacramento County;
- d) the requirements of County General Plan Policy LU-127 for changing the USB;
- e) the two other proposed projects that are outside the USB

Refer to the map at right, FIGURE 1 to see the USB as a blue dotted line, and the other proposed projects that are outside the USB, the Airport South Industrial (475 acres for warehouse space) and Grand Park (5,000 acres for residential / commercial).

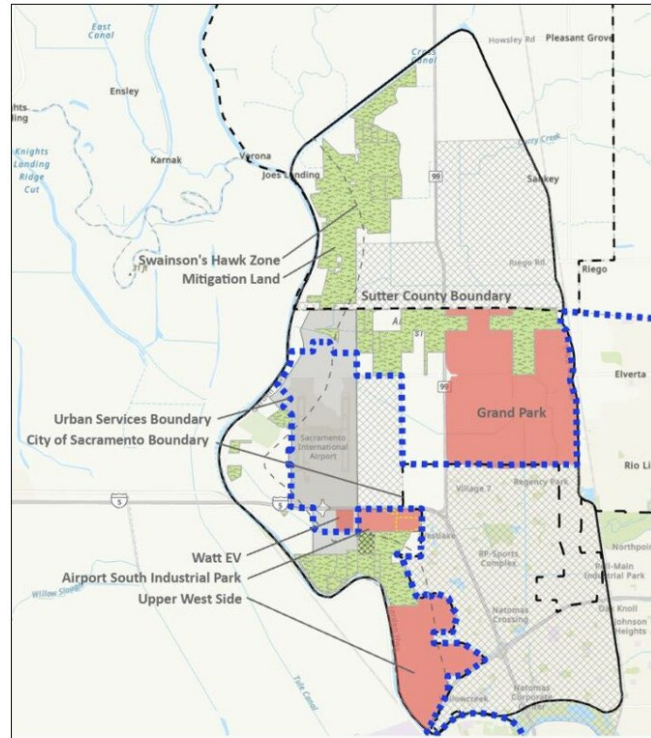

FIGURE 1: Map showing Upper Westside and the two other proposed projects outside USB
Source: ECOS

RESPONSE 15-13

The statement that the UWSP would be outside the USB is incorrect. The County does not allow or approve development outside the USB. While it is true that the proposed UWSP area is currently outside the USB, as stated on page 2-14 in Chapter 2, *Project Description*, of the Draft EIR, required entitlements for the proposed UWSP include a General Plan Amendment to expand the USB and the UPA to include the 1,524-acre Development Area within the 2,066-acre UWSP area. Thus, if approved, the UWSP would be located inside the USB and UPA, and development of the UWSP would be consistent with General Plan requirements that urban development occurs within the USB and UPA (see Master Response LU-1: County Urban Services Boundary and Urban Policy Area).

Effects of the proposed UWSP related to land use and planning, including effects related to the USB, the UPA, and applicable land use policies, are fully evaluated in

Chapter 14, *Land Use*, of the Draft EIR. Effects of the proposed UWSP related to farmland and plant and wildlife habitat are fully evaluated in Chapter 5, *Agricultural Resources*, and Chapter 7, *Biological Resources*, respectively, of the Draft EIR. Regarding the Airport South Industrial Park project and the Grandpark Specific Plan, the physical effects of the proposed UWSP in combination with the physical effects of these and other past, present, and reasonably foreseeable projects are fully evaluated in Chapter 22, *Cumulative Impacts*, of the Draft EIR.

The assertion that the proposed UWSP would set a precedent for other development projects in Natomas to encroach beyond the USB is unsupported. As explicitly stated in the Draft EIR, a General Plan Amendment to expand the USB and the UPA to include the 1,524-acre Development Area within the 2,066-acre UWSP area is a condition of UWSP approval. The County does not allow or approve development outside the USB or the UPA. As discussed in Chapter 14, *Land Use*, of the Draft EIR, the Sacramento County General Plan includes a comprehensive and robust policy framework for acceptance and approval of proposed applications to expand the USB and the UPA. Any and all proposed new development applications to expand the USB and the UPA would be required to meet these same requirements and would be entitled in a process requiring substantial effort (also refer to Master Response LU-1: County Urban Services Boundary and Urban Policy Area and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127).

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-14

The County General Plan includes an Urban Services Boundary, agricultural protection policies and other commitments to maintain the project area in agriculture. These policies in turn underpin regional planning for climate change, air quality, transportation, land use and other urban infrastructure. Permitting urbanization in an area designated by the County General Plan and regional plans as agriculture has profound impacts on the entire region.

The map at right, FIGURE 2, shows the area included within the USB – about 449 square mile area. This area is

FIGURE 2: Area within the USB

Source: Sac County General Plan Land Use Element, Figure 1, USB and UPA Boundaries

<https://planning.sacounty.gov/Documents/B12.%20Land%20Use%20Element%20Amended%202012-13-22.pdf>

about ten times the size of Paris and Washington D.C, and four times the size of the City of Sacramento.

The exact boundary line of the USB was shaped by river watersheds, creeks, the Delta, and FEMA-designated flood areas; by the history of fires and future fire risk; and by the need to preserve important farmland and to protect habitat for threatened plant and animal species. It was also shaped by the edges of existing urbanized areas and cities, and Sacramento International Airport.

Consider what it means to break through the Urban Services Boundary (USB):

This boundary, established in 1993, is defined in the Sacramento County General Plan as the “ultimate boundary of the urban area” in the unincorporated County, based upon jurisdictional, natural and environmental constraints to urban growth; intended to be a permanent growth boundary not subject to modification except under extraordinary circumstances.”

All three of the projects would break through the USB. Changes to the USB are to be made only for “extraordinary projects” and yet there is nothing extraordinary about Upper Westside except that it is close to the City of Sacramento. What is extraordinary about the area is the deep, prime agricultural soil from many years of overflow from the Sacramento River.

RESPONSE 15-14

While the Sacramento County General Plan refers to the Urban Services Boundary as the “ultimate boundary of the urban area” it also recognizes that the USB may change over time. As discussed in Chapter 14, *Land Use*, of the Draft EIR, the Sacramento County General Plan includes a comprehensive and robust policy framework for acceptance and approval of proposed applications to expand the USB and the UPA. The presence of this policy framework indicates the County’s expectation that over time circumstances may emerge where the “ultimate boundary of the urban area” may evolve. Project-specific and cumulative effects of the proposed UWSP are fully evaluated in the Draft EIR. Because the extension of the USB and UPA are part of the package of approvals that would be required to approve the proposed UWSP, it logically follows that the Draft EIR evaluates and discloses the environmental effects of changing the ultimate boundary the County’s urban area (also refer to Master Response LU-1: County Urban Services Boundary and Urban Policy Area and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127).

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-15

Consider the County’s General Plan Policy LU-127 strictures for projects proposing to expand the USB in FIGURE 3 below.

Given the impacts of this project on the region and the Natomas community, the Upper Westside project does not meet the listed requirements, nor does it merit a finding of extraordinary benefits and opportunities by 4/5ths of the Board of Supervisors.

LU-127. The County shall not expand the Urban Service Boundary unless:

- There is inadequate vacant land within the USB to accommodate the projected 25 year demand for urban uses; and
 - The proposal calling for such expansion can satisfy the requirements of a master water plan as contained in the Conservation Element; and
 - The proposal calling for such expansion can satisfy the requirements of the Sacramento County Air Quality Attainment Plan; and
 - The area of expansion does not incorporate open space areas for which previously secured open space easements would need to be relinquished; and
 - The area of expansion does not include the development of important natural resource areas, aquifer recharge lands or prime agricultural lands;
 - The area of expansion does not preclude implementation of a Sacramento County-adopted Habitat Conservation Plan;
- OR
- The Board approves such expansion by a 4/5ths vote based upon on finding that the expansion would provide extraordinary environmental, social or economic benefits and opportunities to the County.

FIGURE 3: General Plan Policy LU-127

Source: Sac County General Plan Land Use Element, page 144

<https://planning.sacounty.gov/Documents/B12.%20Land%20Use%20Element%20Amended%2012-13-22.pdf>

RESPONSE 15-15

The comment expresses opinions about the consistency of the proposed UWSP with the provisions of General Plan Policy LU1-127. Please refer to Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127 for a discussion of this topic.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-16

3) Conflicts with the Natomas Basin Habitat Conservation Plan (NBHCP)

The proposed Upper Westside project conflicts with the NBHCP. Biological resources are inadequately assessed with faulty mitigation measures that do not reduce impacts to less than significant.

- a) The DEIR falsely claims that the project does not conflict with the NBHCP. The DEIR claims that any conflicts with the 2003 NBHCP and the Metro Air Park Habitat Conservation Plan (MAPHCP) which adopted the NBHCP are less than significant impacts. (ES-55)

DEIR MM "BR-14: Conflict With Natomas Basin HCP and Metro Air Park HCP. The Natomas Basin HCP and Metro Air Park HCP are adopted conservation

plans with respective plan areas that cover portions of the Natomas Basin. Implementation of Mitigation Measures BR-1 through BR-9 would avoid and minimize impacts to covered species in the Natomas Basin HCP and Metro Air Park HCP and have been designed to avoid conflicts with the strategies and provisions of the respective HCPs. Given these considerations, the proposed UWSP and required offsite improvements would not conflict with the provisions of existing adopted HCPs, and the overall impact would be less than significant.”

As explained more fully below, the EIR’s analysis fails as an informational document with respect to this impact by conspicuously omitting critical information required to understand the project’s individual and cumulative impacts. Further, the EIR’s finding of less than significant impact is not supported by substantial evidence. The impacts on the HCPs are significant, and evaluation and mitigation for these impacts require compliance with the terms of the NBHCP regarding development in the Basin.

RESPONSE 15-16

Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 15-17

- i) The Natomas Basin Habitat Conservation Plan was created as a basinwide HCP in response to the federal Army Corp of Engineers flood control permit which permitted construction of flood control infrastructure that enabled 17,500 acres of new urban development within designated NBHCP Permit Areas (City, Sutter County, MetroAirPark) in the Basin with basinwide impacts on habitat and endangered species. The basinwide plan was required as a condition of those permits by the US Fish and Wildlife Service. The Corps permit #199200719, pg 4, undated, (**ATTACHMENT 1**)¹ states:

“1. The permit applicant shall not begin construction on the pumping station along the East Main Drain or otherwise complete the proposed project by providing 100-year flood protection for the lower American Basin until the Service first issues an incidental take permit and associated implementing agreement pursuant to Section 10(a) (1) (b) of the Act to the City and County of Sacramento, Sutter County and any other parties necessary to guarantee the successful implementation of a habitat conservation plan for the giant garter snake resident in the American Basin. This plan shall be compatible with and a component of the multispecies habitat management plan otherwise required by the Department of the Army as a condition of permit authorization. The Biological Opinion from the U.S. Fish and Wildlife Service to the U.S. Army Corps of Engineers dated March 11, 1994 is expressly incorporated as a condition of this permit.”

That 1994 USFWS Biological Opinion, March 11, 1994, pg. 5 (**ATTACHMENT 2**)², expressly conditions the USFWS approval of the flood control project on a "multispecies habitat management plan for the 55,000 acre lower American

Basin" (i.e. Natomas Basin in Sacramento and Sutter counties) and issuance of Incidental Take Permit from USFWS and 2081 Permit from CDFW.

While the County of Sacramento did not participate in the HCP process and was not included in the Incidental Take Permit, approval of the Upper Westside project would interfere with these permits. The CDFW's NOP comment letter, pg. 13, made this point with clarity, explaining that the Project "marks an apparent departure by the County" from the Joint Vision MOU that "has been critical to the integrity of the NBHCP." The County must now come into compliance to avoid violation of the terms of the Army Corps of Engineers permits for flood control in the Natomas Basin. A previous private development in the unincorporated area of the County, Metro AirPark, agreed to comply with the NBHCP, and therefore the Metro AirPark HCP was approved by the wildlife agencies and included within the 17,500-acre Permit Areas.

¹ Attachment 1: 1994 Permit Number 199200719 U.S. ARMY ENGINEER DISTRICT.SACRAMENTO CORPS OF ENGINEERS 1325 J STREET SACRAMENTO, CALIFORNIA 95814-2922

² Attachment 2: March 11, 1994, US Fish and Wildlife Service, Endangered Species Act Consultation on the Revised Natomas Area Flood Control Improvement Project (PN 199200719) in Sacramento and Sutter Counties, California

RESPONSE 15-17

Chapter 1 of the NBHCP provides a summary of the history of the HCP's development. Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan for a detailed explanation on why the Project would not conflict with the NBHCP.

COMMENT 15-18

Conflicts with the Natomas Basin Habitat Conservation Plan (NBHCP)

- ii) The NBHCP includes clear guidance as to how development outside the NBHCP and MAPHCP permit areas, totaling 17,500 acres, must be assessed and permitted by the Federal and State wildlife agencies, which agencies can deny permits.

The Implementing Agreement ("IA") (**ATTACHMENT 3**)³ for the 2003 NBHCP requires that: "in the event that future urban development should occur, prior to approval of any related rezoning or prezonning, such future urban development shall trigger a reevaluation of the Plan and Permits, a new effects analysis, potential amendments and/or revisions to the Plan and Permits, a separate conservation strategy and issuance of Incidental Take Permits to the permittee for that additional development and/or possible suspension or revocation of [Permit] in the event that the City or Sutter violates such limitations. " (IA 3.1 (a))."

The DEIR fails to disclose this document and does not identify the impact of the Upper Westside project on the future implementation and viability of this agreement. Nor does it include acknowledgement of the need for mitigation that

will be required to come into compliance with this process for consideration. The DEIR fails to require as mitigation the CDFW take authorization required.

³ Attachment 3: 2003 IMPLEMENTATION AGREEMENT FOR THE NATOMAS BASIN HABITAT CONSERVATION PLAN

RESPONSE 15-18

The commenter claims the DEIR fails to discuss the Implementation Agreement for the NBHCP and how development of the UWSP area affects the future implementation and viability of this agreement. The immediately preceding text to the section of the Implementation Agreement that the commenter quotes states “Thus, City [of Sacramento] and Sutter [County] further agree that...” Thereby, the rest of the quote referenced by the commenter specifically is only applicable to those entities, as they are the permittees under the NBHCP. The County is not a permittee under the NBHCP and it is thereby not subject to the Implementation Agreement referenced by the commenter.

Furthermore, the DEIR did include a detailed analysis of how development of the UWSP would affect the provisions of the NBHCP and MAP HCP. Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan and Master Response BR-2: Reductions in Agricultural Land Available to NBHCP Covered Species.

COMMENT 15-19

- iii) The California Department of Fish and Wildlife NOP Comment letter, November 6, 2020, at page 11, states:

"A robust analysis of whether, in what way, and to what extent the Project may affect future implementation and the continued viability of the NBHCP and MAPHCP in the Natomas Basin is essential to the County's informed review of the Project."

"CDFW appreciates the Project proponent and the County's previous commitment to prepare a related effects analysis as part of the County's review of the Project. The analysis will provide critical information essential to a meaningful understanding of the Project's regional setting. That, in turn, will also help ensure the EIR's environmental analysis is robust and includes all the potentially significant effects on fish and wildlife that may be caused by the Project."

In fact, there is no effects analysis in the DEIR as described by CDFW's letter. Also in CDFW's November 6, 2020 letter, page 12, CDFW recommends that the EIR address, specific to the effects analysis, the following:

- “O Persistence of NBHCP and MAP HCP Covered Species in the Natomas Basin
- Impacts to established reserve land managed by the Natomas Basin Conservancy (TNBC)

- Reduction of available reserve land in the Natomas Basin under the NBHCP and MAPHCP (with appropriate buffers and setbacks as detailed in the NBHCP)
- Reduction of ability for TNBC to establish or enhance Covered Species range and habitats in the southern Natomas Basin
- Continued viability of the land uses in the Natomas Basin as detailed in the NBHCP and MAPHCP
- Financial impacts to TNBC and fee payers under the NBHCP and MAPHCP, including the recent action by TNBC Board of Directors and the Sacramento City Council to address related ongoing financial challenges of continuing to implement the required conservation strategy in the Natomas Basin, and
- Cumulative impact of the Project, in combination with other development in the Natomas Basin approved since 2003 that is outside of the City of Sacramento and Sutter County's permitted area under the NBHCP (e.g., levee improvements by the Sacramento Area Flood Control Agency and the Greenbriar project). A visual representation of the mounting pressure on the continued viability of the NBHCP is shown in Figure 1."

Figure 1 is on page 17 of the CDFW letter and is titled Figure 1. Comparison of proposed land uses in the Natomas Basin (2020 & NBHCP signing in 2003). It reflects 2020 data and should be updated in your analysis to 2024.

The 17,500-acre permit area for the NBHCP is about 50 percent built out, mostly by City of Sacramento and MetroAirpark, with Permitted development in Sutter County's 7,467-acre Permit Area mostly unbuilt but subject to an adopted Specific Plan expected to start construction soon. The DEIR must consider the impacts on the species of all existing and permitted future development (i.e. Sutter Permit Area), as well as the proposed Upper Westside project, on the covered species and the implementation of the NBHCP. The DEIR does not provide this information.

RESPONSE 15-19

The NOP scoping letter from CDFW, dated November 6, 2020, was considered during preparation of the Draft EIR for the proposed UWSP. The impact analysis included in the Draft EIR considered the key points identified by CDFW as they pertain to analyzing to what extent the proposed project could adversely affect future implementation and continued viability of the NBHCP and Metro Air Park HCP. A detailed analysis of the proposed project's potential to result in conflicts with the HCPs are thoroughly covered in the Draft EIR Impact BR-14 and within the cumulative impacts analysis (see pages 22-26 through 22-31. The commenter references Figure 1 on page 17 of the CDFW NOP comment letter which shows proposed land uses in the Natomas Basin and requests that CDFW's prior analysis be updated with current information; the DEIR's Table CI-3 included an evaluation of existing and reasonably foreseeable development in the Natomas Basin. Please also see the Master Response BR-1: Conflict with

Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 15-20

- iv) Federal Court Decision Finds Any Additional Development in the Basin Outside NBHCP Permit Area is a Significant Impact.

The USFWS Biological Opinion for the 2003 NBHCP, June 24, 2003, pp 11-12 (**ATTACHMENT 4**)⁴; the 2003 NBHCP pp. I-3; I-5,6; I-7,8; the 2003 NBHCP Implementation Agreement (IA) §3.1(a) and 3.1.2(c); and the decision of Judge David Levy in *National Wildlife Federation v. Norton*, Civ-S-04-0579 DFL JFM (E.D. Cal. Sep. 8, 2005) pg. 30 (**ATTACHMENT 5**)⁵, clearly state that any additional development in the Basin outside the 17,500 acre permit areas of the NBHCP would constitute a significant departure from the operating conservation plan and thus a significant impact on the NBHCP and the Natomas Basin populations of the species protected by the NBHCP.

The project must apply and receive an Incidental Take Permit from the USFWS and a 2081 permit from CDFW, which these agencies may approve or deny, in order to justify a finding of no significant impact on the NBHCP. Yet the DEIR asserts without evidence that the Upper Westside project would have no significant impact on the NBHCP or MAPHCP.

⁴ Attachment 4: June 24, 2003 United States Department of the Interior FISH AND WILDLIFE SERVICE, Sacramento Fish and Wildlife Office Intra-Service Biological and Conference Opinion on Issuance of a Section 10(a)(1)(B) Incidental Take Permit to the City of Sacramento and Sutter County for Urban Development in the Natomas Basin, Sacramento and Sutter Counties, California.

⁵ Attachment 5: *National Wildlife Federation v. Norton*, Civ-S-04-0579 DFL JFM (E.D. Cal. Sep. 8, 2005)

RESPONSE 15-20

The NBHCP recognizes that within the 50-year permit term of the NBHCP and ITPs, the possibility remains that existing land use outside the Permit Areas and within the Natomas Basin could change over time in a manner that affected Swainson's hawk foraging habitat. The NBHCP's adaptive management program is thus designed to respond to changes in baseline habitat which could occur if undeveloped lands in the Natomas Basin are converted to urban uses.

Impacts to SWHA nests and GGS habitat would be subject to conditions of approval in any take authorizations for those species that would relate to each phase of UWSP development. While the take authorization would proceed under a completely separate process from the prior authorizations under the NBHCP, since Sacramento County is not a signatory to that conservation plan, the take authorization for each phase of UWSP development would nonetheless consider development already authorized under the NBHCP as part of the evaluation of cumulative effects. Approval from USFWS would ensure that adequate measures are implemented to ensure no jeopardy of the

species; any ITP issued from the CDFW would ensure that any impacts to SWHA nests or GGS habitat are fully mitigated.

The comments that reflect the ruling in the *National Wildlife Federal v. Norton* case are not relevant to the Draft EIR and its adequacy under CEQA and the CEQA Guidelines. As required under the law, the County has exercised its independent judgement in assessing the environmental impacts proposed UWSP. The analysis included in Draft EIR Impact BR-14, cited above, complies with the requirement under CEQA to assess the potential for a project to conflict with an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other local, regional, or state habitat conservation plan.

Please see the Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan which explains how complete buildout of the UWSP area as described in the Draft EIR would either have no impact on a given Covered Species or the project's contribution for potential impacts on a Covered Species would be reduced to a less-than-significant level with implementation of avoidance and minimization measures BR-1 to BR-9. Furthermore, the minimum 1:1 mitigation ratio identified in Mitigation Measure BR-3b and the minimum 0.75:1 mitigation ratio identified in Mitigation Measure BR-7b is at least 50 percent greater than the 0.5:1 mitigation ratio identified in the NBHCP Conservation Plan previously considered to be effective.

COMMENT 15-21

As stated above, the NBHCP was prepared to satisfy a condition of an U.S. Army Corp of Engineers permit, with the program implementation under the direction of the U.S. Fish and Wildlife Service, CA Dept of Fish and Wildlife, City of Sacramento, and the County of Sutter. Any project in the Basin must meet the same criteria since the flood control provided as a result of the permit is Basin wide.

As stated in *NWF v. Norton*, *ibid* p. 28, any additional development in the Basin is a federal project requiring a federal permit. *NWF v Norton*, *ibid*. p. 28, states that "through the implementation agreement, the City has committed to ensuring that additional development does not occur in the Basin without federal review. . . any further development will necessarily be a federal action because further federal approval will be required under any scenario that could impair the efficacy of the NBHCP." (emphasis added)

NWF v. Norton affirms that the USFWS relied upon the remaining agricultural areas in the Natomas Basin to provide species protection benefits to issue the incidental take permits for City and Sutter County development in the Natomas Basin. On page 10, the decision references USFWS Biological Opinion (BioOp) to affirm that the NBHCP depends upon several key factors to ensure viability of the Giant Garter Snake population including:

"(3) the maintenance of connectivity between reserve lands; and (4) the continued existence of 16,000 acres of GGS habitat that will remain in the Basin after development;"

Likewise *NWF v. Norton* quotes the USFWS Biological Opinion (BioOp) that the proposed action [NBHCP] will not jeopardize the survival of the Central Valley population of the Swainson's Hawk or the species as a whole because "in part" (2) approximately 13,000 acres of foraging habitat will not be affected." (*NWF v Norton*, *ibid*, p. 11.) On p.12, the court references the USFWS BioOp that harm to Swainson's Hawk will be low because "substantial foraging habitat will exist in the Basin even after the planned development."

These elements are critical to the conservation strategy and would be affected by the Upper Westside project development since the project removes 2000 acres of foraging habitat in the Swainson's Hawk Zone of the NBHCP. Yet the DEIR does not address these important impacts of the project.

Further, "The court notes. . . that the Service and those seeking an ITP in the future will face an uphill battle if they attempt to argue that additional development in the Basin beyond 17,500 acres will not result in jeopardy. The NBHCP, BiOp, EIR/EIS, and Findings and Recommendations are all predicated on the assumption that development in the Basin will be limited to 17,500 acres and that the remaining lands will remain in agricultural use." (*NWF v Norton*, *ibid*, p 30, footnote 13).

RESPONSE 15-21

The comments that reflect the ruling in the *National Wildlife Federal v. Norton* case are not relevant to the Draft EIR and its adequacy under CEQA and the CEQA Guidelines. As required under the law, the County has exercised its independent judgement in assessing the environmental impacts by the proposed UWSP. The analysis included in Draft EIR Impact BR-14, cited above, complies with the requirement under CEQA to assess the potential for a project to conflict with an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other local, regional, or state habitat conservation plan.

The Draft EIR fully evaluates the UWSP's potential to conflict with the NBHCP in the context of a specific proposed project and based on the most current understanding of the biology of the covered species as well as the success of conservation measures undertaken by the City of Sacramento, Sutter County, TNBC, and other relevant parties.

The comment claims that any additional development in the Natomas Basin is a federal project requiring a federal permit. To clarify, not necessarily all future development in the Natomas Basin would be a federal action. In the context of considering potential cumulative effects, the Biological Opinion (pp. 200-201) explained that "any activities in the Natomas Basin that result in take of listed animal species would require either: (1) a Section 10 permit, a federal action...or (2) a Section [7] consultation with the Service if a federal action is involved."

Under Impact BR-14, the Draft EIR provided a detailed analysis of the four main strategies of the NBHCP, including potential project impacts in the context of the UWSP's proposed buffers adjacent to the Cummings Reserve and the Alleghany Reserve. The Draft EIR concluded that, with implementation of avoidance and minimization measures BR-1 to BR-9, the impact of construction and operation of the proposed UWSP on the NBHCP would be less than significant.

In the discussion of Foraging Habitat on page IV-11 of the NBHCP, it was recognized that the foraging opportunities in the vicinity of the reserve system are not under the control of TNBC and are not mitigation included in the NBHCP. Similarly, on page IV-13 of the NBHCP, it is acknowledged that agricultural lands in the Natomas Basin would provide foraging habitat for Swainson's Hawk, and it also recognized that "existing baseline foraging habitat is not considered mitigation" for the NBHCP. Furthermore, the fact that CDFG issued an incidental take permit pursuant to the CESA for the NBHCP indicates their recognition that the mitigation approach described in the NBHCP fully mitigates effects to CESA-protected species such as Swainson's hawk. The foraging habitat currently available within the UWSP area is not the highest quality habitat for the species. The UWSP area includes no alfalfa production, which is the highest quality foraging habitat for Swainson's hawk; whereas, the portion of the Swainson's Hawk Zone outside of the UWSP area includes 644.0 acres of alfalfa production. The potential opportunities for compensatory mitigation under Mitigation Measure BR-7b, Compensate for Permanent Impacts on Swainson's Hawk Foraging Habitat, as amended, include more than 8,000 acres of highest quality foraging habitat (i.e., alfalfa, pasture, field crops, wheat, grain and hay, truck crops, young perennial, and annual grassland) outside, and within 10 miles of, the Natomas Basin. This acreage includes lands near the Sacramento River and Feather River, . Finally, the minimum 1:1 mitigation ratio identified in Mitigation Measure BR-3b for giant garter snake and the minimum 0.75:1 mitigation ratio identified in Mitigation Measure BR-7b for Swainson's hawk is at least 50 percent greater than the 0.5:1 mitigation ratio identified in the NBHCP Conservation Plan previously considered to be effective.

Please also see the Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 15-22

- v) The City may not participate in development beyond the NBHCP Permit Area permitted under the NBHCP, yet the Upper Westside project, located in the County's jurisdiction outside the City, expects to use City sewer services and water rights and services; and project proponents reportedly have stated an intent to annex to the City after the County approves the development.

The UWSP conflicts with City obligations under 2003 NBHCP Implementation Agreement not to approve development beyond the City's NBHCP Permit Area. City's development in the Basin is subject to the 2003 NBHCP, and its Implementation Agreement, an agreement signed by the City, Sutter County and the Federal and State Wildlife Agencies. The 2003 NBHCP Implementation

Agreement ("IA") §3.1.1 provides that "CITY agrees not to approve more than 8,050 acres of Authorized Development and to ensure that all Authorized Development is confined to CITY's Permit Area as depicted on Exhibit B. . . ." (see NBHCP IA, Exhibit B).

The City also agreed in the NBHCP that "in the event that future urban development should occur, prior to approval of any related rezoning or pre-zoning, such future urban development shall trigger a reevaluation of the Plan and Permits, a new effects analysis, potential amendments and/or revisions to the Plan and Permits, a separate conservation strategy and issuance of Incidental Take Permits to the permittee for that additional development and/or possible suspension or revocation of [Permit] in the event that the City or Sutter violates such limitations." ((IA 3.1 (a))."

The DEIR states that City water provision impact would be less than significant on pages ES-125 and ES-129:

"Water Treatment. The City of Sacramento would provide water to development allowed under the proposed UWSP. The City owns and operates two water diversion and treatment facilities: the Sacramento River Water Treatment Plant on the Sacramento River and the Fairbairn Water Treatment Plant on the American River. Enough excess treatment capacity exists at these two facilities to serve development allowed under the proposed UWSP, and thus no additional water treatment capacity would need to be constructed to accommodate the increase in water demand anticipated under the proposed UWSP. This impact would be less than significant."

"UT-2: Result in a Project Water Demand That Cannot Be Met by Supply. The City of Sacramento would provide water to development allowed under the proposed UWSP. The City of Sacramento would have adequate planned water supply to serve development allowed under the proposed UWSP during normal, single dry, and multiple dry years. This impact would be less than significant."

The DEIR at page 2-43 states:

"SacSewer would provide wastewater collection and treatment service to land uses allowed under the proposed UWSP. Wastewater generated within the UWSP area would be conveyed through local sewer systems to the regional interceptor system for treatment at the Sacramento Regional Wastewater Treatment Plant in Elk Grove. As discussed above, the proposed UWSP would require SacSewer annexation."

In fact, provision of water and sewer services by the City to new development outside the Permit area directly violates its obligations to state and federal governments included in the Implementation Agreement for the NBHCP cited above. (IA 3.1.1). These are significant impacts not identified or mitigated in the DEIR.

RESPONSE 15-22

The UWSP project area is located in unincorporated Sacramento County. The project applicant has submitted an application to the County for land use entitlements that would allow the development to be undertaken within the unincorporated County. There is not any current application for annexation to the City of Sacramento, and the County is unaware of any intent of the applicant to make such a proposal in the future.

As described in Chapter 2, *Project Description*, domestic water service to the proposed project would be provided by Sacramento County Water Agency. As proposed, the source of the water that would be provided by SCWA would be through a wholesale agreement with the City of Sacramento. As explained in Response to Comment 12-10, purchase of wholesale water by the SWCA for delivery in the unincorporated County would not be in conflict with the City of Sacramento General Plan. Similarly, a wholesale water contract is not the same as approving development for purposes of the City's obligations under the NBHCP Implementation Agreement. Please also see Response 12-10.

Regarding the delivery of wastewater conveyance and treatment services, the Draft EIR, Chapter 2, *Project Description*, describes the potential future extension of the SacSewer Sphere of Influence boundary, with eventual annexation to SacSewer, on page 2-20. Please also see Response 9-2.

COMMENT 15-23

- vi) The Project would urbanize part of the NBHCP Swainson's Hawk Zone (SHZ), obliterating its conservation value, which is a key element of the NBHCP Conservation Strategy for Swainson's Hawks in the Natomas Basin.

CDFW's NOP comment letter, page 13, (Nov. 6, 2020, in DEIR Appendix "Notice of Preparation") noted that "high value foraging habitat present in a majority of the Project area could contribute to foraging ability for hundreds of Swainson's hawks in the Natomas Basin, as well as those using surrounding nests in Yolo and east and south Sacramento County, and Swainson's hawk migrating through the Project area. (CDFW 2020). This highlights the Natomas Basin's unique contribution in providing valuable nesting and foraging habitat, both of which are essential for the species' life history. As such, a thorough evaluation in the EIR of the Project's impacts to both nesting and foraging habitat as independent factors will be crucial, considering the value of the Natomas Basin for the species."

The November 6, 2020 NOP comment letter by CDFW, page 14, also stated regarding analysis of the SHZ:

"Much of the Project area is mapped within the Swainson's Hawk Zone (SHZ), which the NBHCP describes as the area within one mile of the Sacramento River in the Natomas Basin. The SHZ was derived from the high density of Swainson's hawk nests within this area and scientific evidence for the value of the habitat

(NBHCP 2003). The NBHCP recognizes the importance of the SHZ to this species and the viability of their plan which resulted in substantial effort from the City of Sacramento and Sutter County to replan development outside of this area. Replanning efforts in the SHZ have been vital to preserve the area's ecological value and the overall goals of the NBHCP, despite the associated economic and political opportunity costs. Although the County is not party to the NBHCP, CDFW recommends the County considers the Project's 1) biological impact in an ecologically valuable area and 2) the effect that Project development in the SHZ will have on the continued implementation and viability of the NBHCP, as well as the MAP HCP."

"As such, robust analysis of the Project's potentially significant effects on Swainson's hawk will be a critical part of the development of the EIR. With the Project in the SHZ, there could be several potentially significant effects to the species, both in the project- specific and cumulative context. Creating a feasible mitigation approach should be an early and focal part of the EIR development given the high utilization of the area by the species." CDFW, *ibid*, pg. 14.

"While typical projects often focus on initial surveys, this Project is in a particularly unique area where extensive surveys and biological resource mapping has already been completed. The most recent surveys indicated that 14 Swainson's hawk nests are present within the Project area or within a 0.5-mile radius that Project activities may impact (TNBC 2019, CDFW 2020). Due to the density of known nest sites, CDFW recommends the EIR analyze the individual nesting and foraging behavior patterns associated with each known nest pair and propose avoidance, minimization and mitigation that specifically addresses those patterns, rather than simply acknowledging presence. CDFW also recommends the EIR analyze the Project's regional impacts to the species, both to the overall persistence of Swainson's hawk within the Natomas Basin and indirect impacts to individual Swainson's hawk that may depend on the Project area's foraging habitat. Data from such studies can more effectively inform a mitigation strategy that complies with CESA." CDFW, *ibid* pg. 14.

The DEIR does not provide these analyses of the impacts of the project on nesting Swainson's Hawks in the project area.

RESPONSE 15-23

The DEIR considered the existing information regarding Swainson's hawk nesting and foraging habitat available around the time of the NOP. This included reviewing the best available information regarding Swainson's hawk nesting and foraging behavior. Swainson's hawks are known to forage very large distances from their nests. In the Sacramento Valley, a Swainson's hawk was documented to be foraging approximately 14 miles from its nest (Babcock 1995).

Evaluation of Swainson's hawk home ranges using strictly visual observations are likely prone to underestimate home-size range, since movement distances are long and individual hawks cannot be accurately tracked by the human eye over that range

(Fleishman et al. 2016). Thus, it is more accurate to track Swainson's hawks using GPS trackers. Fortunately, such a study of Swainson's hawk foraging behavior in the Natomas Basin has already been conducted (Fleishman et al. 2016), with researchers physically capturing individual birds and tagging them with trackers. It was considered reasonable to expect that those Swainson's hawk individuals specifically found within or in the vicinity of the project area would exhibit similar foraging ranges and behaviors as those tracked under the study by Fleishman and others. As determined in that study, seasonal home-range sizes were approximately 27,000 acres (range from approximately 2,500 acres to 83,000 acres) in 2011, 42,500 acres (range from approximately 10,000 acres to 353,000 acres) in 2012, and 21,500 acres (range from approximately 19,000 to 84,000 acres) in 2013. Home ranges for feeding Swainson's hawk pairs generally were smallest during the time period when they were caring for young; at this stage tagged individuals were observed to have a median home-range size of about 6,200 acres (smallest of the range was about 500 acres).

Swainson's hawk breeding pairs actively defend their nest areas from other hawk species (Zeiner et al. 1990). Even assuming that Swainson's hawks nesting in the vicinity of the UWSP area maintain a fairly small territory on the scale of 1 to 2.5 square miles, the entire USWP footprint would only support a single pair or two of breeding Swainson's hawks. It is expected that most Swainson's hawk adults forage over a much larger territory than the footprint contained within the UWSP, based on the observations of extensive movements of tagged Swainson's hawk by Fleishman and others. Thus, while conversion of suitable foraging habitat for the Swainson's hawk over the course of UWSP development would reduce the total extent of foraging habitat for Swainson's hawk in the Natomas Basin, as described in the Draft EIR, it would only represent a fraction of the total foraging range of any given Swainson's hawk adult. As shown in Plate BR-4 in the EIR, there would still be a substantial amount of suitable Swainson's hawk foraging habitat that would remain available to Natomas Basin hawks within the Basin proper and in areas outside but close to the Basin boundaries following full buildout of the UWSP area. Finally, as specified in Mitigation Measure BR-7b, conversion of Swainson's hawk foraging habitat under the proposed project would be mitigated at a minimum 0.75:1 ratio (50 percent greater than that required under the NBHCP), with preference for mitigation sites located within one mile of the Sacramento River or Feather River.

COMMENT 15-24

The Swainson's Hawk Zone protects the Swainson's Hawk population which nests along the Sacramento River from urban disturbance and is of particular value as foraging habitat for reproduction of Swainson's Hawks because of its proximity to Swainson's Hawks' nests in tall riparian trees along the river. The success of the NBHCP in mitigating for the impacts of development on the Swainson's Hawk within the NBHCP Permit Areas (City, Sutter County, Metro Air Park) depends in large part on excluding urban uses within the Swainson's Hawk Zone and acquiring permanent preserve lands within the Swainson's Hawk zone. "The NBHCP's primary strategies to mitigate impacts to Swainson's hawks caused by Authorized Development are to avoid development within the Swainson's Hawk Zone" . . . " and to acquire upland

habitat as Mitigation Lands inside the Swainson's Hawk Zone. . . " (NBHCP, IV-28-29. See also NBHCP pp. V-9, -10; V-20; VII-19; -20; NBHCP IA p. 4, §3.1.2; 2003 USFWS Biological Opinion p. 36.) Accordingly, the proposed project directly conflicts with and interferes with the NBHCP conservation strategy for Swainson's Hawks.

The DEIR fails to disclose what percentage of the area of the Swainson's Hawk Zone the project will convert to urban uses or in other ways render the land unavailable or unsuitable for Swainson's Hawk foraging habitat.

This impact needs to be disclosed. What will be the estimated impact on the Basin's Swainson's Hawk population reproductive capacity? How much will the project reduce the population of Swainson's Hawks in the Basin? The DEIR does not disclose the nesting territories within the project area, within one mile of the Upper Westside project area, within two miles of the project area and within five miles of the project area. What has been the typical productivity of those nesting sites over the last 20 years?

RESPONSE 15-24

As described in the EIR, full development within the UWSP area may eventually result in conversion of 1,197 acres of Swainson's hawk foraging habitat. Of this total, 975 acres are located within the Swainson's Hawk Zone as described in the NBHCP, representing approximately less than 10 percent of the foraging habitat in the entire SHZ.

As specified in Mitigation Measure BR-7b (see revisions under Response 3-1), Swainson's hawk habitat mitigation sites would be preferentially sited within 1 mile of the Sacramento River or Feather River to provide the same functional value of the Swainson's Hawk Zone, i.e., foraging habitat located proximal to suitable nesting habitat along major riparian corridors.

The comment includes a request for disclosure of the number of Swainson's hawk nesting territories within one mile, two miles, and five miles of the UWSP area. Pursuant to this comment, CDFW California Natural Diversity Database (CNDDDB) records were queried in February 2025 and the following results represent observations between 1992 and the present:

- Swainson's hawk nests 0 to ≤ 1 miles of the UWSP area: 17
- Swainson's hawk nests >1 to ≤2 miles of the UWSP area: 12
- Swainson's hawk nests >2 to ≤5 miles of the UWSP area: 43

These records represent observations made since 1992 that have been submitted to the CNDDDB and are neither cumulative nor comprehensive. During the 2023 breeding season, the TNBC Annual Monitoring Report reports that 76 percent of nesting Swainson's hawks had one or more alternate nest sites within their territory (ICF 2024); therefore, CNDDDB records likely overstate nesting territories in any given breeding season.

Please also see Master Response BR-4: Impacts on Swainson's Hawk Zone. This information clarifies what was provided in the Draft EIR and does not result in any new or more significant impact.

COMMENT 15-25

- vii) The NBHCP permit area remains partly in habitat and undeveloped at this time so the impact of already permitted but unbuilt development on the performance of the NBHCP in protecting the species is not known.

Over half of the 17,500-acre NBHCP permit area remains in agricultural land as Sutter County is just now beginning to build in its Permit area. The NBHCP has not been fully tested as a conservation program for the species in the Basin. Yet the DEIR fails to fully consider how the already declining Swainson's Hawk population in Natomas will survive with the additional development of the Upper Westside project.

What is the likelihood that the increased reduction in habitat created by Upper Westside will result in the failure of the NBHCP and the reduction in range of the Swainson's Hawk and Giant Garter Snake in California?

RESPONSE 15-25

As shown in Table CI-4 of the UWSP Draft EIR and discussed in Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, approximately 84 percent of the land currently available for acquisition by TNBC would remain available following build-out of the UWSP area. TNBC needs to acquire an additional 3,564 acres of reserve lands to fully mitigate the remaining authorized incidental take areas covered by the NBHCP. Given that there would still be 8,096 acres of potential reserve lands following the full build-out of the UWSP, the ability for the TNBC to achieve the NBHCP Conservation Strategy for Swainson's hawk and giant garter snake would remain intact.

The Biological Effectiveness Monitoring Reports for the NBHCP find the mean total number of Swainson's hawk nest pairs along the Sacramento River over time is relatively stable (ICF 2024). The trends in documented breeding pairs within the Natomas Basin does not support the assertion by the comment that the Swainson's hawk population in Natomas is declining.

The Draft EIR considers both the proposed project's effects on Swainson's hawk nesting habitat as well as on foraging habitat. The Draft EIR states that there could be potential construction-related disturbance to nesting Swainsons' hawk in the USWP area and offsite improvement areas because of direct disturbance of active nests from tree removal and through indirect disturbance to nests through noise, vibration, and increased human activity associated with construction activities. To address this impact, Draft EIR Mitigation Measure BR-2a was identified which would reduce the potential impact on Swainson's hawk by requiring the provision of environmental training for construction personnel; conducting focused pre-construction Swainson's hawk surveys

if construction activities would begin during the nesting season; if active nests are found prior to the start of construction, developing an avoidance and minimization plan, which may include establishing a work schedule and no-disturbance buffer during critical nesting periods; and having a biological monitor conduct regular monitoring of the nest during construction activities and halting construction if construction activities are disturbing the nest.

Additionally, as explained in the Draft EIR, the proposed project would result in permanent loss of 1,197 acres of Swainson's hawk foraging habitat. Mitigation Measure BR-7b would be implemented to provide permanent compensatory mitigation for project-related loss of foraging habitat at a ratio of at least 0.75:1 ratio. The compensatory mitigation for Swainson's hawk foraging habitat would be targeted to areas within 10 miles of the Natomas Basin. Given that Swainson's hawks are known to forage up 10 or more miles away from nest sites, any compensatory mitigation sites pursuant to Mitigation Measure BR-7b would be expected to remain within the foraging habitat range of those Swainson's hawks breeding in the Natomas Basin.

COMMENT 15-26

- b) Surveys for Giant Garter Snake and Swainson's Hawk presence and habitat were incomplete.

Species surveys by Applicant's biologist (Bargas) for presence and habitat of Swainson's Hawk and Giant Garter Snake were limited to 568.7 acres of the 2,066-acre project site, which is incomplete. See DEIR Appendix, Supplemental Biological Resources Assessment by Helix, §§3.2.4, 3.2.5.1, 3.2.5.2, pp 20, 21.

The DEIR fails to disclose impacts on key protected species in the project area.

RESPONSE 15-26

As described in the Draft EIR, while the habitat assessment for giant garter snake was focused on a 568.7 acre portion of the UWSP study area that was accessible by biologists and other surveyors, there were extensive studies conducted within this area. Giant garter snake biologists deployed 400 floating aquatic traps throughout this portion of the study area for a total of 40,703 trap-days. Additionally, samples were analyzed using environmental DNA (eDNA) techniques which allow for the detection of Giant garter snakes in soil or water samples, even when the snakes are not visibly observed. The impacts of the UWSP on giant garter snake and Swainson's hawk are disclosed in Draft EIR Impacts BR-3: Giant Garter Snake and BR-7, Swainson's Hawk, respectively. Cumulative impacts on these species are addressed in Draft EIR Chapter 22, *Cumulative Impacts*. As described in the Draft EIR, construction of the proposed USWP would impact suitable aquatic habitat and suitable upland habitat for the giant garter snake. As called for under Draft EIR Mitigation Measure BR-3, project applicants would be required to conduct preconstruction surveys for giant garter snake presence whenever planning to work within 200 feet of aquatic giant garter snake habitat (e.g., irrigation ditches). This requirement would ensure that the full extent of the UWSP area would be surveyed for the presence of giant garter snake immediately prior to construction,

providing real time information to support implementation of giant garter snake avoidance measures.

As described under Draft EIR Impact BR-7, potential construction-related disturbance to nesting Swainson's hawks could include direct disturbance of active nests during tree removal and indirect disturbance to nests such as noise, vibration, and increased human activity associated with construction activities. These disturbances could cause nest abandonment or interfere with the incubation or feeding of young. In addition, the removal of trees would reduce nesting habitat for Swainson's hawk. Direct impacts to Swainson's hawk nests would be mitigated through implementation of Draft EIR Mitigation Measure BR-7a. Under Mitigation Measure BR-7a, project applicants would be required to have a qualified biologist conduct protocol-level surveys for Swainson's hawk if construction activities are to begin during the nesting season from March 20 to September 15. If Swainson's hawk nests are observed within 0.5-miles of the project footprint, an avoidance and minimization plan will be required which will identify measures to minimize impacts on active Swainson's hawk nests.

For foraging habitat, the Draft EIR disclosed that development of the entire USWP area would result in permanent loss of 1,197 acres of potential Swainson's hawk foraging habitat, which would be mitigated through implementation of Draft EIR Mitigation Measure BR-7b.

COMMENT 15-27

c) Impacts on the Swainson's Hawk

The DEIR claims that "With the implementation of Mitigation Measures BR-2a and BR-7a, the impact on Swainson's hawk nesting habitat would be less than significant." This claim is contrary to recent monitoring data, conflicts with the NBHCP which protects Swainson's Hawk population in the Basin, and cannot be supported by the evidence in the EIR biological resources analysis which is inadequate and covers only a small part of the Upper Westside Specific Plan project area.

Recent monitoring data indicate a downward trend in reproduction in the Basin, and as pointed out earlier, the project interferes with the NBHCP which mitigates impacts within the Basin to less than significant for development already approved and permitted in the Basin. That build out is not complete and impacts of full build out of permitted development are not now known.

Even without build out of all the Swainson's Hawk habitat permitted in the Basin, the species is showing negative impacts. Monitoring data from Natomas Basin Conservancy show that "the number of young produced per occupied territory, per active nest, and per successful nest all now exhibit a statistically significant downward trend over the entire monitoring period (1999-2023. . . ." (p. 4.5, ICF. 2024. Natomas Basin Habitat Conservation Plan Area Biological Effectiveness Monitoring Report: 2023 Annual Survey Results. July. Prepared for the Natomas

Basin Conservancy, Sacramento, CA. Prepared by ICF, Sacramento, CA)
(ATTACHMENT 6)⁶.

SWH nesting productivity has dropped over the last decade. "Since the first precipitous drop in 2011, reproductive metrics have exhibited a high degree of annual variation, suggesting instability in the population." (ICF, *ibid.*, p. 4.5)

"The nesting of the Swainson's Hawk population in Natomas is concentrated in the project area. "Swainson's hawks continued to nest primarily in the southern portion and along the far western and northern edges of the Basin in 2023. The nest sites are predominantly located along the Sacramento River and within approximately 1 mile of the river." (ICF, *Ibid.*, p. 4.5)

The removal of 2,000 acres of foraging habitat from an area directly serving nesting Swainson's Hawks can only further exacerbate that downward trend. The DEIR acknowledges this:

"Conversion of agricultural land to developed/landscaped land in the UWSP area would also potentially result in the loss of nesting territories, displacement of nesting pairs, reduction in reproductive potential, or decreased survival rates, particularly for Swainson's hawk nesting within 1 mile of the UWSP area, but also for Swainson's hawk nesting outside of the UWSP area. A telemetry study of Swainson's hawk nesting in the Natomas Basin found that adult Swainson's hawk travel distances of up to 6 miles from the nest to forage throughout the breeding season (Fleishman et al. 2016). Plate BR-4 shows suitable Swainson's hawk foraging habitat within 10 miles of the Natomas Basin. The impact associated with the loss of foraging habitat would be potentially significant." (DEIR pg. 7-58).

Further exacerbating the downward trend is the seemingly arbitrary ten-mile radius for replacement habitat in the proposed mitigation program. Based on the above, ten miles appears too distant for effective replacement habitat. How was ten miles selected? What is the availability and the quality of foraging habitat within 6 miles of the project area? Isn't six miles the more appropriate radius for assessment of the impact of the project on the foraging habitat available to the nesting pairs in or near the project location?

⁶ Attachment 6: ICF. 2024. Natomas Basin Habitat Conservation Plan Area Biological Effectiveness Monitoring Report: 2023 Annual Survey Results. July. Prepared for the Natomas Basin Conservancy, Sacramento, CA. Prepared by ICF, Sacramento, CA).

RESPONSE 15-27

Biological effectiveness monitoring for the NBHCP indicates that there is an inverse correlation between breeding populations and breeding success of Swainson's hawk in the Natomas Basin. It is recognized that competition with other nesting raptors influences the distribution and abundance of nesting Swainson's hawk pairs (e.g., previously occupied Swainson's hawk territories becoming occupied by red-tailed hawks and great horned owls).

The comment notes the observation of reduced Swainson's hawk reproductive success in the Natomas Basin in recent years, especially in 2023. This report by ICF notes that "the 2019 and 2023 crashes in the reproductive rate are consistent with results from other areas of the Central Valley, particularly the Sacramento Valley (Estep 2020, Estep pers obs.) and not unique to—or based on conditions within—the Basin." Nevertheless, the report finds the mean total number of Swainson's hawk nest pairs along the Sacramento River over time is relatively constant despite disturbances from activities such as tree removal, home construction, and construction activities associated with the SAFCA Natomas Levee Improvement Project (NLIP). This persistence of adult Swainson's hawk numbers over time in the Natomas Basin is supported by documentation of most breeding pairs having alternative nest locations on both the left and right banks of the Sacramento River, which likely affords them flexibility in using nest locations that are further away from seasonal disturbances or intra/interspecies competition.

The comment also includes a request for clarification regarding the basis of Mitigation Measure BR-7b which allows for establishment of Swainson's hawk foraging habitat mitigation sites outside but within 10 miles of the Natomas Basin. The rationale for using a 10-mile radius from the Natomas Basin was based on the findings that Swainson's hawks generally forage within 10 miles of their nest sites (refer to CDFW Staff Report Regarding Mitigation for Impacts to Swainson's Hawk in the Central Valley of California). By establishing off-site foraging habitat mitigation on sites within 10 miles of the Natomas Basin, the mitigation sites would be expected to remain within the foraging habitat range of breeding Swainson's hawk nesting pairs that could be currently foraging within the UWSP project area. This mitigation measure was revised to specify that Swainson's hawk foraging habitat mitigation sites should preferentially be situated within one-mile of either the Sacramento River or Feather River; this refinement to the mitigation measure provides emphasis for mitigation in close proximity to potential nest sites (i.e., riparian trees along the Sacramento and Feather rivers) (See revised mitigation measure included in Response 3-4).

The comment also notes that development under the NBHCP is not yet complete. While it is true that some urban development that was anticipated by the NBHCP has not yet been built-out, the potential impacts of that development on species including the Swainson's hawk were thoroughly evaluated as part of the NBHCP process.

COMMENT 15-28

While the DEIR references the existence of the Natomas Basin Conservancy monitoring surveys of Swainson's Hawk nesting in the Basin, it fails to correctly identify the typical and historical reproductive capacity of these nesting sites. Instead it uses the Bargas surveys in just two recent low nesting success years to identify the number of territories and young fledged (DEIR p. 7-57), an historically low number, limited to only a portion of the plan area. This is an incorrect approach. The environmental document needs to identify the total nesting territories within 6 miles of the project as documented by the NBC over the last decade.

Removal of 2,000 acres of foraging habitat in close proximity to a number of nesting territories is very likely to have a substantial negative impact on reproduction for those nesting territories. The DEIR fails to fully disclose the likely impact and does not mitigate to less than significant.

RESPONSE 15-28

While the Bargas biologists were physically located within a 568.7-acre portion of the UWSP area while conducting the pre-construction Swainson's hawk survey referenced in the Draft EIR, the biologists successfully scanned the full entirety of the UWSP area using Swarovski 8.5x42 binoculars and a Nikon Fieldscope ED 40-75x spotting scope. Furthermore, the findings from the Bargas biologists regarding the number of Swainson's hawk nesting territories within the UWSP area is consistent with the observations of ICF biologists as part of biological effectiveness monitoring for the NBHCP.

The comment includes a request that the EIR identify the total nesting territories within 6 miles of the project site as documented by the TNBC over the last decade. Foraging habitat within the UWSP project area would be expected to be defended by nest pairs breeding in relatively proximal riparian habitat along the Sacramento River within Sacramento or Yolo counties. Swainson's hawk breeding pairs actively defend their nest areas from other hawk species (Zeiner et al. 1990). Even assuming that Swainson's hawks nesting in the vicinity of the UWSP area maintain a fairly small territory on the scale of 1 to 2.5 square miles, the entire USWP footprint would only support a single pair or two of breeding Swainson's hawks. Thus, even if suitable foraging habitat within the UWSP area happened to be within a 6-mile radius of another active Swainson's hawk nest, it is unlikely those individuals from much further away would actively hunt within the USWP footprint. As shown in Plate BR-4 in the Draft EIR, there would still be a substantial amount of suitable Swainson's hawk foraging habitat that would remain available to Natomas Basin hawks within the Basin proper and in areas outside but close to the Basin boundaries following full buildout of the UWSP area.

As described in the Draft EIR, the impact from conversion of Swainson's hawk foraging habitat as a result of development of the UWSP area would be addressed through implementation of Mitigation Measure BR-7b. This measure allows for establishment of Swainson's hawk foraging habitat mitigation sites outside but within 10 miles of the Natomas Basin at a mitigation at ratio of at least 1:1. The mitigation measure also requires that for each development phase over the 20-or-more year anticipated construction of the proposed UWSP, a qualified biologist quantify and map out the extent of suitable foraging habitat that would be permanently impacted by the current development phase, with the result that the extent of suitable Swainson's hawk foraging habitat will be more accurately characterized in real time. Additionally, this mitigation measure was revised to specify that Swainson's hawk foraging habitat mitigation sites will be preferentially situated within one mile of either the Sacramento River or Feather River (See revised mitigation measure included in Response 3-4).

COMMENT 15-29

SWH Mitigation Proposed in the DEIR Is Inadequate and Does Not Mitigate Impacts to Less than Significant:

The proposed mitigation does not identify the requirement that the project obtain a §2081 permit from the California Department of Fish and Wildlife, or an explanation for why such permit would not be required. This is an informational deficiency. The project cannot reduce its impacts on Swainson's Hawks to less than significant absent a §2081 permit from California Department of Fish and Game. Given the existence of a state and federally approved habitat conservation plan to conserve the Swainson's Hawk population in the Natomas Basin, and the conflict between the Upper Westside project and this plan, the project is obligated to obtain a §2081 permit to reduce impacts to less than significant.

RESPONSE 15-29

The need for an Incidental Take Permit is not mitigation under CEQA, it is rather a requirement under Fish & Game Code should development of the project result in incidental take of a State listed species. Please also see Response 3-4.

COMMENT 15-30

Mitigation is described (DEIR pp. 7-60-61) as:

"BR-7b Compensate for Permanent Impacts on Swainson's Hawk Foraging Habitat

Compensation for the permanent loss of foraging habitat shall be determined for each development phase. The applicant for each development phase shall retain a Qualified Biologist to verify, map, and quantify (acres) foraging habitat (including annual grasses and forbs, field crops, grain and hay, partially irrigated crops, and truck crops), that would be permanently impacted by the current development phase."

"Prior to the approval of either grading permits or building permits, whichever is first, project applicants for each construction phase shall compensate for permanent loss of foraging habitat through the preservation of foraging habitat. This compensatory mitigation shall be at a ratio of at least 1:1 (mitigation habitat to permanently lost habitat). Mitigation sites shall be located outside, and within 10 miles of, the Natomas Basin."

"This mitigation may be provided through purchase of credits from a CDFW-approved conservation bank, or through protection of habitat, including acquisition of a conservation easement and funding long-term administration, monitoring, and enforcement of the easement".

"Mitigation provided through acquisition of a conservation easement must satisfy the following requirements":

- "The mitigation site(s) shall be subject to consultation with CDFW and approved by the County.
- "The form and content of the easement shall be acceptable to the County and CDFW, prohibit activities that substantially impair or diminish the land's suitability as Swainson's hawk foraging habitat, and protect any existing water rights necessary to maintain foraging habitat in agricultural production.
- "An endowment in an amount, form, and structure acceptable to the County and CDFW shall be established for administering, monitoring, and enforcing the conservation easement."

This mitigation program has a number of severe defects and fails to comply with CEQA:

- i) Deferral of mitigation guarantees to a future stage is not consistent with CEQA. The EIR fails to provide sufficient information to indicate that mitigation will be effective. Further, piecemeal determination of mitigation requirements within the proposed Upper Westside project area is not consistent with CEQA or with the basinwide habitat conservation plan that the wildlife agencies have agreed to for the Natomas Basin and have found necessary to avoid significant impacts to protected species.
- ii) The DEIR fails to identify suitable, available mitigation land. It appears to rely on unidentified land in Yolo County, but Yolo County Ordinance Chapter 10, "Habitat Mitigation Ordinance" (**ATTACHMENT 7**)⁷ requires a discretionary use permit for mitigation projects exceeding 40 acres intended to mitigate for projects occurring outside of Yolo County. Yolo County may or may not approve a Sacramento County mitigation project in Yolo. Reliance on Yolo County for mitigation land is speculative and infeasible unless Yolo County issues a permit for an Upper Westside mitigation project.
- iii) The DEIR requires only "consultation" with CDFW on the mitigation site on a development phase by development phase basis. In this critical location, where CDFW has already adopted a basin wide conservation plan, the CDFW must have approval on location as well as the endowment and conservation operator for all mitigation properties. The appropriate way to mitigate in this location is to accomplish an amendment to the NBHCP or to obtain state and federal approval for a separate HCP, as was done by Metro Airpark. Less than that cannot reduce impacts to less than significant.

⁷ Attachment 7: Yolo County Ordinance Chapter 10, "Habitat Mitigation Ordinance"

RESPONSE 15-30

The minimum 0.75:1 mitigation ratio identified in Draft EIR Mitigation Measure BR-7b is 50 percent greater than the 0.5:1 mitigation ratio identified in the NBHCP. As described in Response 3-4, Mitigation Measure BR-7b was revised to specify that Swainson's hawk foraging habitat mitigation sites should preferentially be situated within one-mile of

either the Sacramento River or Feather River; this refinement to the mitigation measure functions to prioritize Swainson's hawk foraging habitat mitigation in proximal to potential nest sites (i.e., riparian trees along the Sacramento and Feather rivers).

As stated in the Draft EIR, the compensatory mitigation would be required to be secured in advance of construction for each phase of development within the UWSP project area. Mitigation Measure 7b defines the parameters, timeline, feasibility, and commitment being made by the County to address impacts. The Draft EIR does not improperly defer mitigation. The mitigation measures in Chapter 7, *Biological Resources*, are described in detail, including concrete implementation and verification as part of the building permit review process. Under CEQA, where a significant impact of the proposed project is identified, the EIR is required to "describe feasible measures which could minimize significant adverse impacts." The comment states that "deferral of the formulation of effective mitigation measures subverts the Legislature's purpose" and asserts that any deferral of development of detailed methods of mitigation is improper and inconsistent with the purpose of CEQA. The comment fails to reflect the explicit provisions under CEQA that allow for proper and appropriate development of increasing levels of detail in mitigation measures over time as circumstances evolve. CEQA Guideline section 15126.4(a)(1)(B) states that "[f]ormulation of mitigation measures shall not be deferred until some future time." However, the Guideline goes on to explicitly state that:

The specific details of a mitigation measure, however, may be developed after project approval when it is impractical or infeasible to include those details during the project's environmental review provided that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard and that will be considered, analyzed, and potentially incorporated in the mitigation measure.

Mitigation Measure BR-7b requires that mitigation be implemented ahead of and in proportion to the scale of habitat conversion that would occur under each successive stage of development within the UWSP area as defined in the mitigation measure. The NBHCP effectively follows the same principle for building out the preserve system under its Conservation Strategy; mitigation pursuant to that Conservation Plan is implemented in pieces over the course of decades in proportion to the actual pace of development within the Natomas Basin that is covered under the NBHCP. Some urban development that was anticipated by the NBHCP has not yet been built out; nonetheless the potential impacts of that development on species including the Swainson's hawk were already thoroughly evaluated during development of the NBHCP.

There are adequate opportunities for compensatory mitigation under Mitigation Measure BR-7b as amended in Response 3-4. Please see Master Response BR-4: Impacts on Swainson's Hawk Zone for more information.

COMMENT 15-31**a) Giant Garter Snake Impacts Not Mitigated to Less than Significant; Mitigation Program Inadequate.**

The DEIR identifies a weak and unjustified mitigation program for impacts on the Giant Garter Snake, a federal and state listed threatened species covered by the NBHCP. In particular, the proposed options for a mitigation program outside the Natomas Basin are not compliant with CEQA in that they are speculative, deferred, and inadequate to mitigate for Upper Westside project impacts to the Giant Garter Snake.

The NBHCP defines the conservation strategy for the Giant Garter Snake in the Natomas Basin. However, the proposed Upper Westside project prohibits mitigation within the Natomas Basin, and states that GGS mitigation shall be somewhere in the American Basin. The American Basin is an historic flood basin running along the east side of the Feather and Sacramento Rivers from Oroville southward to the American River, which includes the Natomas Basin. The 2017 USFWS Giant Garter Snake Recovery Plan, page II-8, shows the majority of known GGS recorded locations as being in Natomas Basin, some of which have not been occupied for some years and some of which have been urbanized and no longer provide habitat.

The proposed mitigation is not consistent with the NBHCP conservation strategy; in fact, it undermines and contradicts the provisions of the NBHCP regarding how additional development in the Basin should mitigate for its impacts. Specifically:

- i) the location of mitigation is not identified;
- ii) the requirements and availability of suitable conservation management in perpetuity are not identified;
- iii) the suitability of the habitat is not specified, including water availability, water chemistry and security of availability;
- iv) locating outside the Basin but within the American Basin means locating in an area lacking linked conservation lands already under protection;
- v) the mitigation does not support the existing conservation strategy for Giant Garter Snake;
- vi) piecemeal mitigation is far inferior to a comprehensive conservation strategy;
- vii) there is no explanation as to how the mitigation supports the Giant Garter Snake Recovery Plan;
- viii) the mitigation plan relies on availability of a CDFW approved Giant Garter Snake mitigation bank in the American Basin which does not exist.

RESPONSE 15-31

Draft EIR Mitigation Measure BR-3 includes location requirements for mitigation sites, stating that mitigation sites would be required to be located outside of the Natomas Basin and within the American Basin Recovery Unit as defined in the Recovery Plan for the Giant Garter Snake (*Thamnophis gigas*). The measure includes timing requirements and is a proven compensatory mitigation method used by similar projects in the Central Valley. Mitigation within 10 miles of the border of the Natomas Basin would benefit the American Basin population of giant garter snake, which utilize the Natomas Basin, while also avoiding conflicts with TNBC's efforts to secure giant garter snake habitat mitigation sites within the Natomas Basin. The proposed UWSP would not conflict with the second main strategy of the NBHCP Conservation Plan, creating a system of reserves that would support giant garter snake, as it has been demonstrated that sufficient mitigation lands would still be available for acquisition within the Basin post contraction and build out of the UWSP and other planned projects in the Basin.

COMMENT 15-32

The Giant Garter Snake in the Natomas Basin has suffered decline over the last 25 years of habitat loss, and urban disturbance. The Natomas Basin Conservancy monitoring reports document this problem. According to the NBC Biological Effectiveness Monitoring (ICF 2023: Figure 3-14) the probability of capture of giant garter snakes in HCP reserves steadily declined from 2011 through 2022. No giant garter snakes have been captured in the Fisherman's Lake Reserve since 2017 (Ibid., Table 3-10).

The DEIR fails to disclose and address the very real prospect that further development in the Basin could result in the reduction of the range of Giant Garter Snake in the American Basin by precluding options to expand and improve the southern portion (south of I-5) of conserved lands managed for Giant Garter Snake. The DEIR provides no explanation how the mitigation for this project would avert this possibility. What is needed is strengthening of the habitat values and protections in the Fisherman's Lake preserve area and the connectivity in the Basin. Instead it is more likely that this project will further degrade the Fisherman's Lake preserve area by bringing more people, vehicles and disturbance to the Fisherman's Lake area with its existing GGS habitat preserves. The development likely will preclude the area from ever serving conservation of the Giant Garter Snake, despite millions of dollars of investment in habitat creation and protection by the NBHCP and SAFCA habitat mitigation preserves. The project proponents in this DEIR offer almost nothing to offset this devastating impact on past conservation efforts and the permanent protection of a federally endangered species.

RESPONSE 15-32

Please refer to the Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 15-33

There are nine GGS populations in the Central Valley, in relatively small isolated patches of habitat separated by highly altered landscapes. Studies of genetic differentiation among Central Valley GGS populations have shown significant genetic differentiation between populations of GGS east of the Sacramento River (American, Sutter, and Butte Basins) and the few GGS West of the Sacramento River. The majority of GGS records have been in the Natomas Basin, which has already been impacted by urbanization under the NBHCP and would be further reduced by the Upper Westside project. (Wood, et al, "Defining Population Structure And Genetic Signatures Of Decline In The Giant Gartersnake (*Thamnophis gigas*)" Conservation Genetics (April 11, 2015) p. 10 (**ATTACHMENT 8**)⁸. There is the real possibility that further reduction of GGS in the American Basin resulting from this project individually, in combination with future development in the Basin authorized under NBHCP, could cumulatively reduce the American Basin GGS population to less than viable, potentially leading to a jeopardy determination by USFWS and CDFW, which would halt development under existing permits in Sutter County and City of Sacramento.

The DEIR fails to consider that the current inadequacy of the Giant Garter Snake protections in the Fisherman's Lake preserve must be understood and corrected before any further disturbance and degradation of the habitat in the area can be permitted.

⁸ Attachment 8: Wood, et al, "Defining Population Structure And Genetic Signatures Of Decline In The Giant Gartersnake (*Thamnophis gigas*)" Conservation Genetics (April 11, 2015)

RESPONSE 15-33

The comment expresses an opinion but provides no evidence that development of the UWSP area individually, or in combination with future development in the Natomas Basin authorized under NBHCP, could potentially lead to jeopardy of giant garter snake.

The proposed UWSP is not expected to affect the buffers within existing TNBC reserve lands, including Alleghany, Ann Rudin, and Cummings within the Fisherman's Lake Reserve. Draft EIR Impact BR-14 describes the proposed buffers between the proposed UWSP and the Cummings Reserve and Alleghany Reserve and analyzes potential operational impacts of the project on the reserves; it concludes that the proposed UWSP would not alter the effectiveness of reserve buffers. Furthermore, the Alleghany Reserve does not currently provide any suitable habitat for giant garter snake, per the NBHCP 2022 Annual Monitoring Report.

As described under Mitigation Measure BR-3b, the proposed UWSP would be required to compensate for the permanent loss of giant garter snake habitat at a ratio of at least 1:1 within the American Basin Recovery Unit as described in the U.S. Fish and Wildlife Service's 2017 *Recovery Plan for the Giant Garter Snake (*Thamnophis gigas*)*. The 1:1 mitigation ratio identified under Mitigation Measure BR-3b is double that of NBHCP's

mitigation ratio of 0.5:1. The compensation for permanent loss of giant garter snake habitat by UWSP project applicants will also take place prior to the approval of grading permits, improvement plans, or building permits – whichever of these approvals occurs first. Given these considerations, there is substantial evidence in the Draft EIR to support the conclusion that development of the UWSP area would have a less than significant impact on giant garter snake with implementation of the proposed mitigation measures.

COMMENT 15-34

b) Mitigation Program Is Speculative, Deferred, Unenforceable, Infeasible, Not Compliant with CEQA.

The DEIR must demonstrate that the impacts of the project on protected wildlife are mitigated to less than significant. The DEIR presents no evidence to support that finding. The mitigation program described for impacted species does not meet the requirements of CEQA:

- i) it fails to commit to any deadlines for compliance with mitigation requirements; there is no correlation between destruction of habitat and actual acquisition or protection of compensatory habitat. Mitigation must be acquired and protection guaranteed before the habitat is removed, which is currently a requirement of the NBHCP.
- ii) it fails to identify the amount of habitat to be removed and the amount of habitat to be conserved to mitigate for that loss. The public and wildlife agencies have not had the opportunity to assess whether the amount of mitigation land would be adequate to compensate for the loss because it is not disclosed.
- iii) it fails to identify where mitigation will be achieved, with what guarantees that the habitat is occupied by GGS and capable of sustaining a GGS population in perpetuity. The 2017 Giant Garter Snake Recovery Plan, pg II-8, shows the preponderance of GGS sightings in the American Basin to be in the Natomas Basin. No conservation planning has been done in the rest of the American Basin. GGS planning has been ongoing in the Natomas Basin for almost 30 years under the NBHCP, and the species is declining. The project adds to the factors leading to decline and does nothing to strengthen and bolster conservation efforts where it counts, in the Natomas Basin.
- iv) it defers ultimate mitigation commitments to a potential future permit process with the wildlife agencies, outside the CEQA process and at an open-ended unspecified future date. Instead, the project should have created its mitigation program in consultation with the wildlife agencies and included it in the CEQA document for public review and comment.

RESPONSE 15-34

As addressed in Response 15-30, the mitigation measures in Draft EIR Chapter 7, *Biological Resources*, do not constitute improper deferral of mitigation under CEQA. All compensatory mitigation for planned development areas would be required to be

secured in advance of approval of either grading permits or building permits, whichever is first, for each phase of development within the UWSP area. The mitigation would be achieved through either 1) purchase of credits from a CDFW- and USFWS-approved conservation bank; 2) payment to an existing in-lieu fee program; 3) creation, restoration, or enhancement, and preservation and management of suitable aquatic and associated upland habitat for the impacted species; or 4) preservation and management of existing suitable habitat through acquisition of fee-title or a conservation easement and funding for long-term habitat management at a site. This means that mitigation for the giant garter snake would be in place prior to the development activities that could create the potential impacts.

The extent of suitable giant garter snake habitat within each phase of development would be clearly identified in advance of impacts, because as explicitly stated in Mitigation Measure BR-3, each project applicant would be required to conduct pre-construction habitat surveys and surveys for giant garter snake presence. To compensate for unavoidable permanent loss of aquatic giant garter snake habitat under each phase of development, the project applicants will be responsible to 1) provide giant garter snake habitat at a 1:1 or greater ratio (mitigation acreage to impact acreage); 2) preserve and manage rice fields as habitat for giant garter snake at a 2:1 or greater ratio, and/or 3) provide compensatory giant garter snake habitat of equal or greater ecological value as established in separate authorizations or permits by the USFWS and CDFW.

Under Mitigation Measure BR-3, applicants would be required to target giant garter snake mitigation sites in locations within the American Basin Recovery Unit outside the Natomas Basin. The siting of mitigation locations outside the Natomas Basin would function to avoid future conflicts between USWP applicants with the TNBC for suitable giant garter snake mitigation sites, since the latter is geographically limited by the NBHCP to acquiring habitat reserve sites located within the Natomas Basin. Furthermore, focusing mitigation within the confines of the footprint of the American Basin Recovery Unit is consistent with the USFWS 2017 Recovery Plan for the species. The comment notes that the preponderance of giant garter snake sightings within the American Basin have been in the Natomas Basin, however it should be recognized that such results can be explained by the simple fact that there have been greater efforts to trap and study giant garter snakes in the Natomas Basin than anywhere else in the American Basin as a result of studies undertaken for the NBHCP .

Finally, formal consultation with wildlife agencies pursuant to allowance of incidental take necessarily occurs after the CEQA process, as CDFW cannot issue an incidental take permit without CEQA being complete. If USFWS determines that a future development phase of UWSP would lead to jeopardy for giant garter snake, or if CDFW determines that such development impacts would not be fully mitigated with Mitigation Measure BR-3, those agencies could require additional and/or more stringent measures to protect the species pursuant to the federal and State Endangered Species Acts. The applicant would be required to adhere to those requirements before proceeding with development within giant garter snake habitat.

COMMENT 15-35

The DEIR says that mitigation options for Giant Garter Snake include purchase of credits from a CDFW- and USFWS-approved conservation bank but no such bank exists in the American Basin Recovery Unit;

- i) mitigation options for Giant Garter Snake include payment to an “existing in-lieu fee program” which does not exist; an in-lieu fee program is not a guarantee for habitat protection at the specified mitigation ratios of 1 to 1 or, for rice field mitigation, 2 to 1, and does not meet the requirements of CEQA that mitigation be fully enforceable and feasible. Fees are not habitat conserved.
- ii) mitigation options for Giant Garter Snake include "Creation, restoration, or enhancement, and preservation and management of suitable aquatic and associated upland habitat for giant garter snake" by a non-existent entity.
- iii) mitigation options for Giant Garter Snake include "Preservation and management of existing giant garter snake habitat through acquisition of fee-title or a conservation easement and funding for long-term management of giant garter snake habitat at a site" by a non-existent entity.

This piecemeal mitigation program is inappropriate due to the designation of the entire basin as part of a multispecies state and federal habitat conservation plan in which all the agricultural land in the basin is designated as habitat due to unique and historical factors underlying species occupancy.

A project-by-project mitigation assessment and mitigation program – as described in the DEIR -- is entirely inappropriate for a specific plan that will enable development in an area supporting threatened species through a multi species conservation plan.

The NBHCP relies on an interconnected reserve system within an agricultural landscape. Please refer to the biological opinions referred to above. The DEIR mitigation program disregards this critical context and proposes both out of basin mitigation that is not guaranteed to be available and species by species mitigation measures that are not consistent with the state and federal requirements for multispecies conservation planning to protect wildlife in the Natomas Basin.

Refer to FIGURE 1 (above). This map shows the Upper Westside project and the two other proposed projects, all outside USB; Source: ECOS. This map also shows the mitigation properties (green squiggles) in the Natomas Basin, forming an interconnected system of wildlife preserves managed via agreements with the state and federal wildlife agency permits. It also shows the Permitted development areas (hatched).

RESPONSE 15-35

Mitigation Measure BR-3 would provide for mitigation for giant garter snake to be achieved through either 1) purchase of credits from a CDFW- and USFWS-approved conservation bank; 2) payment to an existing in-lieu fee program; 3) creation, restoration, or enhancement, and preservation and management of suitable aquatic and

associated upland habitat for giant garter snake; or bank; or 4) preservation and management of existing giant garter snake habitat through acquisition of fee-title or a conservation easement and funding for long-term management of giant garter snake habitat at a site.

The reference to use of approved mitigation bank credits is intended to provide flexibility to future applicants developing within the UWSP area as new mitigation banks come online. The advantages of conservation banks are that such banks often protect or restore larger contiguous habitat patches (that typically exceed the mitigation needs for any singular project) that can be more advantageous to species. It also reduces time lags, since the bank credits are only available for purchase after the bank has been established and achieved performance standards. Additionally, while the proposed UWSP project site may currently fall outside the service areas of any already established conservation banks with available credits for purchase, there may be approved banks established in the future that applicants for development within the UWSP area may be able to utilize. The potential to use conservation bank credits, as identified in the Draft EIR, can also signal to mitigation banking entities of the business opportunities to establish a mitigation bank, since it establishes potential customers of the bank credits.

If mitigation occurs through creation, restoration, enhancement, preservation, and management of suitable aquatic and associated upland giant garter snake habitat, it would be the responsibility of the applicant to implement that mitigation to the satisfaction of the County which has the responsibility for CEQA mitigation, and the USFWS and CDFW would need to approve it as part of their respective permit conditions. If mitigation is achieved through acquisition of fee title or a conservation easement, the selection of mitigation site(s), the form and content of the easement, the amount of the endowment for long-term management, and the habitat management plan would need to be approved by the County.

The commenter also expresses a concern that the proposed mitigation program for giant garter snake will have conflicts with the NBHCP. For a detailed explanation for why the Project would not conflict with the NBHCP, please see Master Response BR-1: Conflict the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 15-36

4) Other impacts that Should be Classified as Significant and Unavoidable

Impacts to biological resources and geology should be classified as “significant and unavoidable” in the DEIR. Instead, the DEIR minimizes the irreparable impact that the Upper Westside project would have on them.

RESPONSE 15-36

Please see Responses 15-16 through 15-35 above for a discussion of impacts to biological resources and Responses 15-62 through 15-64 below for a discussion of impacts with respect to geology.

COMMENT 15-37

5) Significant Impacts that Cannot Be Mitigated to Less than Significant

ECOS finds it disturbing that there are so many significant and unavoidable impacts identified for the Upper Westside Project that CANNOT be mitigated. Aesthetics, agriculture, air quality, cultural resources, noise, population and housing, and transportation all matter to the quality of the environment and our quality of life.

ECOS believes there are other impacts as well, including biological resources, the impact on the Natomas Basin Conservancy, and of course, cumulative impacts of developing over 8,000 acres of prime farmland, if Upper Westside, Airport South Industrial, and Grand Park go forward.

RESPONSE 15-37

Please see Responses 15-38 to 15-87 below for a discussion of topics of concern.

COMMENT 15-38

a) Aesthetics

To the residents of Sacramento, being close to and seeing farmland, migrating birds, habitat and open space is one of our area's most cherished traits. Sacramentans list open space as the top reason they like living here.

“Natural spaces, trails, and community assets make the Sacramento region special. In the 2023 poll (and the polls dating back to 2017), people most value the natural places in our region, including parks, trails, waterfronts, and open space.” — 2023 Valley Vision Livability Poll

Many residents of the Natomas Basin live in Natomas because they value seeing fields of sun flowers, rows of corn and pumpkin patches. They like walking in open spaces where they can see migrating birds. They also appreciate the local farm stands which sell local produce. Aesthetics are important to many in the Natomas community.

RESPONSE 15-38

Impacts AE-1 and AE-2 in Chapter 4, *Aesthetics*, of the Draft EIR, address the potential for the proposed UWSP to degrade existing views or to substantially degrade existing visual character or quality. In both cases, the Draft EIR concludes that implementation of the proposed project would result in significant and unavoidable impacts.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-39

b) Agricultural Resources

The loss of agricultural land in the “Farm to Fork Capital” is ironic. Once farmland is lost, it’s lost for good. Agricultural land is so important to the area’s economy, and the world. When you are lucky enough to have the combination of good soil, water and weather, you have a role to preserve that land and produce food to a world struggling with hunger. Other areas have faced crop failure and famine due to drought, floods, war and climate change. We’d also lose the opportunity to sequester carbon, recharge ground water, and cool the climate.

Role of Locally Important Farmland. [Page 5-21] There are 429 acres of farmland of local importance in the project area. The analysis needs to clearly state that farmland of local importance as defined by and for Sacramento County, includes agricultural land that is no longer irrigated that would otherwise be included prime or statewide in significance if it were irrigated. [get proper wording from Conservation Dept]

RESPONSE 15-39

Chapter 5, *Agricultural Resources*, of the Draft EIR, accurately describes the classifications and acreages of existing farmland, including farmland of local importance, in the UWSP area as defined by the County and the effects of the proposed UWSP related to farmland. Impact AG-1, pages 5-21 to 5-23, of the Draft EIR presents the loss of important farmland, including Farmland of Local Importance that would be converted to non-agricultural uses as a result of the proposed project. The impact is identified as significant and unavoidable.

As noted in the comment, the Sacramento County General Plan Agricultural Element states the following regarding Farmland of Local Importance:

For Sacramento County, this classification refers to lands which do not qualify as Prime, Statewide, or Unique designation but are currently irrigated crops or pasture or nonirrigated crops; lands that would be Prime or Statewide designation and have been improved for irrigation but are now idle; and lands which currently support confined livestock, poultry operations, and aquaculture.

The amount of Important Farmland that is identified to be significantly impacted by the proposed project includes approximately 429 acres of Farmland of Local Importance. It is treated equally to other types of important farmland (Prime Farmland, Farmland of Statewide Importance, and Unique Farmland). Mitigation Measure AG-1 requires implementation of mitigation at a ratio of 1:1 for loss of important farmland, including Farmland of Local Importance.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-40

Inconsistency with Policy AG-2. [Page 5-19] The Project is inconsistent with Policy AG-2 pertaining to the acceptance of applications outside the USB which would develop on prime ag lands. The County has already violated this policy by accepting the application for this project. One could argue that the whole process of approving this project, including this EIR, has been inconsistent with County policy from the get-go.

RESPONSE 15-40

General Plan Policy AG-2 states that the County shall not accept applications for General Plan amendments outside the USB redesignating prime, statewide importance, unique and local importance farmlands or lands with intensive agricultural investments to agricultural/residential or urban use (i.e., residential, commercial, industrial) unless the applicant demonstrates that the request is consistent with the General Plan Agriculture-Residential expansion policies. The UWSP proposes no expansions of agricultural-residential uses, agricultural-residential land use designations, or agricultural-residential zoning. As discussed in Chapter 14, *Land Use*, of the Draft EIR, the proposed UWSP establishes a development framework for land use, community design and character, infrastructure improvements, and orderly development that is consistent with the objectives and policies in the Sacramento County 2030 General Plan that guide expansion of the UPA and USB (see Master Response LU-1: County Urban Services Boundary and Urban Policy Area).

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-41

Agricultural Buffer Adequacy. [Page 5-19] The project would designate an agricultural buffer to the west of the developed area. There are several problems with this designation:

- i) Despite the inclusion of a 30-50-foot open space strip (a buffer for the buffer), a hedgerow and a fence, the buffer between development and the agricultural buffer will not eliminate noise, pesticide application and other impacts on neighbors and the resultant pressure for limitations on agricultural operations in the agricultural buffer.

RESPONSE 15-41

Effects of the proposed UWSP related to the interface between planned urban uses and existing and ongoing agricultural uses, including adequate buffers between these uses, are fully evaluated in Chapter 5, *Agricultural Resources*, of the Draft EIR. See Master

Response AR-2: Interface Between Agricultural and Urban Uses for further discussion of this topic.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-42

- ii) There is nothing in the DEIR suggesting that adequate maintenance of the buffer for the buffer be required and funded.

RESPONSE 15-42

The proposed 30- to 50-foot-wide open space buffer would be owned by the County and maintained by a Community Facilities District, as provided for in the UWSP Urban Services Plan.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-43

- iii. None of the parcels included in that buffer are owned by the applicants, and it cannot be assumed that the owners of the buffer parcels will support that designation in the long term. Project development will inflate land prices in the agricultural buffer and lead to requests for residential development. Countless examples from around the country attest to the fact that this is inevitable rather than speculative.
- iv. The only guarantee of permanent protection of the agricultural buffer from more intensive development is to acquire permanent agricultural easements for the buffer parcels. Even if the project is approved with such a condition, it is likely that the project developers will request its subsequent removal, claiming that the buffer landowners were not willing to sell the easements. In the interest of a complete and acceptable DEIR, easement mitigation and its limitations should be included in the analysis.

RESPONSE 15-43

These comments are speculative. As stated on page 2-14 in Chapter 2, *Project Description*, of the Draft EIR, required entitlements for the proposed UWSP include a General Plan Amendment to expand the USB and the UPA to include the 1,524-acre Development Area within the 2,066-acre UWSP area. The agricultural buffer, located west of the Development Area, which is mostly agricultural-residential homes inside of the southwestern boundary, would remain outside of the UPA and USB, providing a transition to Garden Highway. The proposed UWSP would concentrate development within the established UWSP area and would not extend infrastructure to areas beyond the identified growth boundary. Furthermore, infrastructure would not be sized to serve development offsite.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-44

The DEIR notes that the proposed mitigation measure to acquire in-kind agricultural resource protection at a 1:1 ratio does not adequately mitigate the loss of quality farmland. The measure would be significantly strengthened by requiring mitigation within the Natomas Basin, mitigation at a minimum 1:1 ratio, and more specificity at what point in the approval process mitigation will be determined to be adequate. Moreover, given the County's own definition of farmland of local importance, the mitigation should not allow the County to set aside the requirement for farmland of local importance.

Removal of this farmland also increases the likelihood that the Natomas Basin Habitat Conservation Plan (NBHCP) will fail. The NBHCP is designed to promote the continuation of agriculture within the 53,341-acre Natomas Basin, and the development of the ASIP acreage would increase the likelihood of failure for NBHCP's strategy to limit development in the basin. (See discussion of NBHCP impacts).

RESPONSE 15-44

As discussed on Draft EIR page 5-22, Mitigation Measure AG-1 requires that the project proponent mitigate the loss of farmland that would result from implementation of the proposed UWSP at a 1:1 ratio consistent with General Plan Policy AG-5, as amended. As identified in the Draft EIR, even with this mitigation, there would be a substantial net loss of farmland within Sacramento County as a result of the proposed UWSP, and this impact would be significant and unavoidable.

As noted, Mitigation Measure AG-1 already calls for mitigation at a 1:1 ratio.

Moreover, the assertion that Mitigation Measure AG-1 would be significantly strengthened by requiring mitigation within the Natomas Basin is not supported by evidence. The suggested changes in the measure that would affect the location of protected agricultural land would not affect the factors that the courts have determined to be mitigating.

The suggested changes to Mitigation Measure AG-1 that would affect the location of protected agricultural land would be no more effective in mitigating the identified effect in Impact AG-1.

As discussed on Draft EIR page 5-22, under the currently adopted General Plan Policy AG-5, the preservation of farmland at a 1:1 ratio must typically be located within Sacramento County. However, as provided in Appendix PD-1, Proposed General Plan Text Amendments, of the Draft EIR, the UWSP proposes revisions to General Plan Policy AG-5 that would clarify when out-of-county mitigation for agricultural land impacts

might be considered. These text amendments would be implemented with the approval of a General Plan amendment proposed as part of the UWSP.

The proposed revisions provide that the Board of Supervisors would retain the authority to set aside the in-County mitigation requirement for impacts to unique, local, and grazing farmlands, but not with respect to prime and statewide farmlands unless the mitigation land is also providing mitigation for impacts to special-status species. Under those circumstances, revised Policy AG-5 explains, the Board of Supervisors may consider, on a case-by-case basis, the mitigation land required to mitigate for impacts to special-status species as also meeting the requirements for mitigating impacts for loss of farmland, including land outside of Sacramento County. There is no County requirement for land used for agricultural mitigation to be located within the Natomas Basin. Agricultural properties in the Natomas Basin operate within an agricultural economy that extends beyond the County boundaries, extending across the Sacramento Valley, and beyond. Thus, from the perspective of mitigating the effects of incremental conversion of important farmland on the larger structure of the regional agricultural economy, there is no reason to limit mitigation to the County itself. Therefore, Mitigation Measure AG-1 requires that the project proponent shall mitigate the loss of farmland that would result from implementation of the proposed UWSP at a 1:1 ratio consistent with General Plan Policy AG-5, as amended.

As specified in Mitigation Measure AG-1, and consistent with General Plan Policy AG-5, the mitigation would be implemented through the specific planning process or individual project entitlement requests to provide in-kind or similar resource value protection (such as easements for agricultural purposes). The impact acreage requiring offset shall be based on the most current Farmland Mapping and Monitoring Program at the time of the County's approval. Preservation land must be in-kind or of similar resource value. Thus, Mitigation Measure AG-1 establishes the timing for implementation and a clear performance standard based on applicable policy set forth in the General Plan.

The commenter's assertion that the conversion of farmland under the proposed UWSP would increase the likelihood that the NBHCP will fail is unsupported by evidence. Moreover, the NBHCP is a habitat conservation plan and not an agriculture preservation plan. Where the NBHCP addresses the preservation of agricultural lands in the Natomas Basin, it does so in the context of preserving the biological values of those properties and does not state the avoidance of conversion of farmland, per se, as a goal or objective of the plan. Effects of the proposed UWSP related to the NBHCP, are fully evaluated in Chapter 7, *Biological Resources*, of the Draft EIR. Effects of the proposed UWSP related to agricultural resources are fully evaluated in Chapter 5, *Agricultural Resources*, of the Draft EIR. The comment does not present evidence that the Draft EIR analysis was inadequate.

COMMENT 15-45

c) Air Quality

Sacramento has long been challenged with poor air quality due to our geography, climate, and auto-centric design. Despite those challenges, we must meet federal

requirements or face the loss of federal funding. The cost here is too great to ignore.

- i) The DEIR finds a significant and unavoidable conflict with state and federally adopted regional clean air plans but fails to explain the consequences for the County and the Sacramento region, particularly with respect to loss of federal funding for lack of compliance with the Clean Air Act's conformity clause.

RESPONSE 15-45

The possible loss of federal funding because of the project's potential significant and unavoidable conflict with adopted air pollution control plans is not an issue that is required to be addressed in this EIR pursuant to CEQA. However, the comment is included herein for consideration of the decision makers.

COMMENT 15-46

- ii) (p. 15) The statement is made, under "Local Air Quality Monitoring", that the Woodland-Gibson Road monitoring site is the closest to the project site, at approximately 10 miles. This is not correct as the SMAQMD Bercut Drive monitoring station, which records NO₂, is only about 3 miles from the center of the project. Correspondingly, the CARB 13th & T Street monitoring station is approximately 4 miles from the center of the project and is much closer than the Davis-UCD Campus station referenced in the Analysis. These errors should be corrected and Table 4 (Air Quality Data Summary) should be revised accordingly.

RESPONSE 15-46

As described in the first paragraph under the *Existing Ambient Air Quality* discussion on EIR page 6-8, it is acknowledged that the nearest local air quality monitoring stations to the UWSP area are the Bercut Drive (100 Bercut Drive) and Sacramento–T Street (1309 T Street) monitoring stations. Refer to EIR Table AQ-2 (pages 6-9 and 6-10) for three-year summaries of air pollutant concentration data collected at those monitoring stations for ozone, PM₁₀, PM_{2.5}, NO₂, and CO, as well as for the number of days the applicable standards were exceeded during the given year. Corrections to the air quality monitoring data are not necessary.

COMMENT 15-47

- iii) In February, US EPA tightened the PM_{2.5} air quality standard nationwide (from 12 to 9 micrograms per cubic meter), which means that our region is no longer in attainment of this federally mandated standard. SMAQMD will need to come up with a new attainment plan, which would be made more difficult by UWS development.

RESPONSE 15-47

Effective May 6, 2024, the national annual ambient air quality standard for PM_{2.5} was lowered from 12.0 to 9.0 micrograms per cubic meter. The U.S. Environmental Protection

Agency (USEPA) expects to finalize the attainment designations for the new standard by February 2026.²⁵ Since the USEPA has not finalized attainment designations for the new standard, the attainment designation shown in EIR Table AQ-4: Sacramento County Attainment Status, is with respect to the older standard, which is appropriate.

COMMENT 15-48

- iv) (p.63) "Full buildout of the project area would include operations of fast-food and sit-down restaurants...". The analysis fails to identify charbroilers in fast-food restaurants as significant sources of condensable PM_{2.5}. The DEIR needs to be expanded to quantify anticipated PM_{2.5} emissions and impacts from these charbroilers.

RESPONSE 15-48

Although restaurants, including fast-food restaurants, would be allowed for some land uses under the plan, not all fast-food facilities use charbroiling and no specific restaurants with charbroilers are proposed. Therefore, it is speculative to assume that charbroiling would occur, and if it would, given the lack of current information (e.g., type of fuel source, amount of food cooked, etc.), it is not possible to accurately estimate PM_{2.5} emissions from charbroilers that would be associated with the UWSP at this plan-level of review. Emissions associated with charbroiling would need to be evaluated in subsequent CEQA analyses for individual restaurant projects that would propose that method of cooking.

COMMENT 15-49

- v) The DEIR fails to include analyses of battery storage units as mitigation for operation of standby electrical generators, and of afterburners as controls for PM_{2.5} on fast-food charbroilers.

RESPONSE 15-49

Mitigation Measure AQ-1b requires projects under the UWSP to implement best available emissions controls for stationary emergency generators. As required by the measure, when non-diesel-fueled emergency generator technology, such as battery energy storage systems, becomes readily available and cost effective at reducing emissions of diesel particulate matter in the future, non-diesel-fueled generators shall be installed in new buildings. In addition, the proposed UWSP includes a policy to provide energy resilience by encouraging all single-family residential development to provide on-site battery storage to augment power supply and reduce late-afternoon/evening peak-hour demands (see EIR page 2-58).

²⁵ USEPA (U.S. Environmental Protection Agency). 2024b. Federal Register, Volume 89, No. 45, Wednesday, March 6, 2024, Rule and Regulations. Available: <https://www.epa.gov/system/files/documents/2024-04/2024-pm-naaqs-fr-published.pdf>. Accessed November 11, 2024.

Regarding emission controls for charbroiling, no specific restaurants with charbroilers are proposed under the UWSP, so associated emission controls are not warranted at this plan-level of review. Also, please see Response 15-48 above.

COMMENT 15-50

d) Noise

Upper Westside Specific Plan DEIR Comment draft, Noise Element (Section 15) excessively relies on deferred and speculative mitigation measures that basically require future project applicants to perform studies regarding what can be accomplished. This may make sense when individual applicants come before the County, but when over 1500 acres will include numerous, large projects and their components to be built over decades, in unknown configurations, over existing conditions that will vary from year to year, deferred and speculative global mitigation measures for the entire Upper Westside project do not serve the goals of the County as set forth in its General Plan Noise Element on page 9.

The establishment of a school stadium, hospitals, or new roadways, for instance, will increase the noise levels at existing surrounding properties and affect their desirability or market value, lessening the economic value of the Upper Westside project itself.

When environmental impacts are significant and unavoidable, CEQA requires identifying a “range of alternatives” as necessary to permit a reasoned choice and sets forth some broad parameters regarding these alternatives. The EIR must include “feasible” alternatives that foster meaningful public participation and informed decision making.

The General Plan establishes that setbacks and site design can be primary mitigation measures. Accepting deferred and speculative mitigation measures lessens the ability of the County to adhere to its own goals and violates CEQA.

The DEIR doesn’t establish any alternatives for significant or potentially significant noise, and instead it relies on the results of studies to be conducted in the future and fails under CEQA by doing so.

RESPONSE 15-50

The comment suggests mitigation measures addressing potential noise impacts are speculative and represent deferred mitigation. The Draft EIR does not improperly defer mitigation. As discussed further below, the mitigation measures to address significant noise impacts are described in detail, including concrete implementation and verification as part of the subsequent review or building permit review process. Under CEQA, where a significant impact of the proposed project is identified, the EIR is required to “describe feasible measures which could minimize significant adverse impacts.” The comment states that “[a]ccepting deferred and speculative mitigation measures lessens the ability of the County to adhere to its own goals and violates CEQA” and asserts that any deferral of development of detailed methods of mitigation is improper and

inconsistent with the purpose of CEQA. The comment fails to reflect the explicit provisions under CEQA that allow for proper and appropriate development of increasing levels of detail in mitigation measures over time as circumstances evolve.

CEQA Guideline section 15126.4(a)(1)(B) states that “[f]ormulation of mitigation measures shall not be deferred until some future time.” However, the Guideline goes on to explicitly state that:

The specific details of a mitigation measure, however, may be developed after project approval when it is impractical or infeasible to include those details during the project’s environmental review provided that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard and that will be considered, analyzed, and potentially incorporated in the mitigation measure.

It should be noted that all of the mitigation measures addressing noise impacts contain a performance standard. Performance standards based on specific standards are sufficient. The measures are enforceable and not deferred, they give specific direction about how to conduct the work, and the Draft EIR found that the operational noise impacts associated with increases in roadway noise, stadium events, and amplified music events at the outdoor pavilion would remain significant and unavoidable after mitigation. General Plan suggested measures such as setbacks and site design, may still be applied as elements of a menu of measures that may be implemented to reduce noise impacts.

Regarding the effect of increased noise levels on the market value of surrounding properties, this is an economic issue is not a consideration under CEQA. Economic issues are not the focus of an EIR. As part of its consideration of the proposed project, the County will assess the economic and fiscal effects of the proposed project. However, while economic and fiscal impacts are important considerations for the County in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that “[e]conomic or social effects of a project shall not be treated as significant effects on the environment.” Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a number of factors considered in addressing the feasibility of an alternative, mitigation measure, or change to the project (see CEQA Guidelines sections 15131(b, c).

Additionally, with respect to the request that the EIR include “feasible” alternatives that foster meaningful public participation and informed decision making, a range of reasonable alternatives are provided in *Chapter 3, Alternatives*, of the Draft EIR, which considers two versions of a No Action Alternative as well as three other Alternatives. As discussed on page 3-19 of the DEIR, impacts related to noise under Alternative 2 (Existing Zoning) would be reduced when compared to the proposed UWSP, as only a

fraction of the residential development (0.5 percent) and a small portion of the nonresidential development (9.3 percent) allowed under the proposed UWSP would be constructed under this alternative. The impact related to traffic noise at nearby offsite sensitive receptors would be less than significant under Alternative 2, unlike the proposed UWSP, given the substantial reduction in trips generated under this alternative and thus the mitigation measures proposed to address traffic noise would not be necessary.

COMMENT 15-51

- i) NOI-1, general construction noise. Project applicants for any new construction must prepare a Master Construction Noise Reduction Plan that limits daytime construction noise to 10 dBA or less over existing ambient noise in noise-sensitive land areas

The Master Plan shall consider as mitigation measures scheduling limitations, site perimeter barriers of specific materials, best equipment placement, equipment noise local barriers, temporary power sources, exhaust mufflers, restricting truck idling, locating loud construction tools (such as pile driving) away from property lines, using alternative methods of pile driving, and creating a noise liaison and construction noise notification system for residents within 500 feet. Other measures may be needed; for example, large scale construction may need to be curtailed to reduce noise impacts to less than significant.

These measures are potentially noise controlling, but as stated there is no guarantee what specific measures will accomplish, nor whether they are practically feasible and economical.

It is difficult to understand why this overarching measure is considered mitigated to less than significant. It is a “plan to plan” to mitigate, not a mitigation plan. The County must create a real plan for noise mitigation or admit in the DEIR that impacts from noise are significant both during construction and for the project in operation.

RESPONSE 15-51

Construction noise mitigation measures are presented in Mitigation Measure NOI-1 on pages 15-31 through 15-33 of the Draft EIR. These measures are briefly summarized by the commenter, however the summary omits substantial detail that is included in the full mitigation measure. Mitigation Measure NOI-1 is drafted to provide flexibility in the development of specific measures to be applied to each subsequent project because the construction activities that would occur over many years in the construction of a multitude of types of land uses and infrastructure components. These strategies would ensure, to the extent possible, that construction activities comply with the County’s noise standards, minimize localized increases to 10 dBA or less compared to existing daytime ambient noise levels at sensitive receptor locations, and prohibit construction work during nighttime hours.

As discussed on page 15-31 of the Draft EIR, the post-mitigation significance of the construction noise impact is identified as less than significant in light of reduction strategies that would be applied to noise-generating construction activities.

COMMENT 15-52

- ii) NOI-3, increased traffic noise at existing sensitive receptors. The DEIR finds this noise significant and unavoidable. In an attempt to reduce noise, a study is required examining feasible traffic speed reductions and the value of noise barriers. The DEIR admits that lowering vehicle speed would require collaboration with Sacramento County DOT and may not be useful, and that noise barriers are cost prohibitive.

It also requires laying down rubberized asphalt. The Federal Highway Administration, as admitted by the DEIR, does not recognize special wearing roadways because they wear down with use and their noise reducing properties degrade. Given the scale of contemplated increased traffic and noise, the ineffectiveness of the two potential mitigation measures is not acceptable. Other alternatives should be identified and considered.

RESPONSE 15-52

The discussion of potential measures to reduce significant increases in traffic noise are provided on pages 15-40 through 15-42 of the Draft EIR. This discussion examines six potential methods of reducing traffic noise impacts: Reduction in Traffic Volumes, Reduction in Vehicle Speeds, Construction of Noise Barriers, Use of Setbacks, and Engineered Asphalt. Based on professional experience these are the available methods of traffic noise reduction. The commenter does not suggest any other available methods of noise reduction that were not considered in the Draft EIR.

The comment notes the Draft EIR's acknowledgement that the FHWA does not recognize quiet asphalt as a noise abatement measure because of challenges related to maintenance that is required. However, as noted on page 15-41 of the Draft EIR, the Sacramento County Department of Transportation (SACDOT) "has indicated that use of engineered asphalt is standard practice for higher volume roadways."

Despite the conclusion that Impact NOI-3 would be significant and unavoidable, consistent with the requirement to describe all feasible mitigation, the Draft EIR includes two mitigation measures, NOI-3a, which requires the County to consider the feasibility of both speed reductions on El Centro Road, north of Arena Boulevard, and the construction of noise barriers to reduce effects on existing residential uses on Arena Boulevard between El Centro Road and Duckhorn Drive. In addition, Mitigation Measure NOI-3b requires that traffic noise levels are reduced by an average of 4 to 6 dB through the use of rubberized asphalt rubberized hot-mix asphalt (RHMA) or another equally effective type of noise-reducing pavement along (a) future arterial and thoroughfare roadway construction within the plan area and (b) at the time of the next repaving of the roadway segment.

COMMENT 15-53

- iii) NOI-4, increased stationary noise from plan components at existing receptors.
 The DEIR adequately addresses noise impacts from HVAC equipment, car washes, parking lots, and delivery docks. It inadequately addresses noise impacts from school parking lots, high school sports fields and stadiums, and a pavilion area in a proposed park. The DEIR requires acoustical studies before building any of these components and defers to controls that will later be adopted. This is speculative and deferred.

RESPONSE 15-53

The comment suggests that the analysis of operational noise impacts from school parking lots, high school sports fields and stadiums, and a pavilion area in a proposed park impacts is inadequate and that mitigation measures addressing potential noise impacts represent deferred mitigation. The analysis of noise impacts from parking lots is provided on page 15-46 of the Draft EIR. The analysis applies reference noise levels from parking lot activity to predict potential noise levels at distance. The impact is identified as potentially significant and Mitigation Measure NOI-4a is identified to address the impact.

An analysis of noise impacts from high school sports fields and stadiums is provided on page 15-47 of the Draft EIR. The analysis applies reference noise levels from sports stadium activity to predict potential noise levels at distance. The impact is identified as potentially significant and Mitigation Measure NOI-4b is identified to address the impact.

An analysis of noise impacts from amplified music events at the outdoor pavilion is provided on page 15-48 of the Draft EIR. The analysis identifies a distance at which a reference noise level from amplified music could result in a potential noise impact. The impact is identified as potentially significant and Mitigation Measure NOI-4c is identified to address the impact.

It should be noted that all mitigation measures addressing noise impacts contain a performance standard. Performance standards based on specific standards are sufficient. The measures are enforceable and not deferred, they give specific direction about how to conduct the work, and the Draft EIR found that the operational noise impacts associated with increases from stadium events and amplified music events at the outdoor pavilion would remain significant and unavoidable after mitigation. Please also see Response 15-50 above for additional discussion of deferred mitigation.

COMMENT 15-54

Importantly, the DEIR indicates that nighttime crowds at local stadiums will create significant noise. The DEIR incorrectly identifies the maximum nighttime noise permitted under the GP. The level is 50 dB/70 dB, not 55 dB/75 dB. Mitigating to a level below 50/70 dB is more difficult than mitigating to 55/75 dB. Desirable noise limits are 30 dB or less; this extends dissipation to 600 feet from the sound source.

RESPONSE 15-54

The commenter recommends that the nighttime noise standards be applied to the performance standard of Mitigation Measure NOI-4b addressing high school use sports fields and stadium noise uses on page 15-48 and 15-49 of the Draft EIR.

The Sacramento County Noise Control Ordinance is contained in Chapter 6.68 of the Sacramento County Code, Section 6.68.070 of the Code, defines nighttime hours as 10:00 p.m. to 7:00 a.m. High school football games in Sacramento start at 7:00 p.m. and are typically 2 to 3 hours in length. As such, the applicable standard for the vast majority, if not the entirety, of a typical evening sporting event at the proposed high school stadium and/or athletic fields would be the daytime standards cited in Mitigation Measure NOI-4b.

COMMENT 15-55

The DEIR does not cite the decibel level of a school stadium. The average level is about 95 dBA, with maximums over 115 dBA. If this is considered a large stationary source of noise and not a line source, the noise dissipates 6 decibels every 50 feet. A level of 95 dB will dissipate to 50 dB at approximately 500 feet. This can only be reasonably achieved by locating the stadium and its parking lot over 500 feet away from a noise sensitive receptor, such as a residence. The DEIR does not address whether this reasonable alternative is feasible or not.

RESPONSE 15-55

The comment states that the Draft EIR did not cite the noise levels anticipated at a future high school stadium. It goes on to suggest that noise levels from such stadia average at 95 dBA with maximums of over 115 dBA. Both of these statements are incorrect.

In the discussion of Impact NOI-4, the Draft EIR states the following:

High school use sports fields and stadium noise of a public address (PA) system during a stadium event generate a noise level of approximately 70 dB L_{50} and 85 dB L_{max} at a reference distance of 100 feet. Crowd noise in bleachers during a stadium event generates a noise level of approximately 75 dB L_{50} and 90 dB L_{max} at a reference distance of 100 feet. Less intensive (non-stadium) activities generate a noise level of approximately 55 dB L_{50} and 75 dB L_{max} at a reference distance of 50 feet.

The Noise Appendix to the Draft EIR (Appendix 11: Environmental Noise & Vibration Assessment), explains that these estimated noise levels are based on noise measurements conducted by BAC [Bollard Acoustical Consultants] at outdoor facilities in the Sacramento area in recent years as well as noise level data for crowd noise. As an example, BAC conducted noise measurements at football games at Jesuit High

School in Sacramento County. Those measurements reflect noise levels that generally range from 60 to 65 dBA Lmax at reference points around the stadium.²⁶

Noise from a point source attenuates at a rate of 6 dBA per doubling of distance (inverse square law), not at a rate of 6 dBA every 50 feet (Caltrans, 2013). Regardless, the Draft EIR acknowledges on page 15- 47 that, given the overall size of crowds and the potential for nighttime events, noise impacts cannot always be mitigated and the impact of high school use sports fields and stadium noise at existing sensitive uses would be significant and unavoidable.

COMMENT 15-56

The DEIR also identifies amplified events at a proposed park pavilion and analyzes the impact to be the same as that of a stadium. It also would have a significant and unavoidable impact.

RESPONSE 15-56

The commenter is correct. The Draft EIR acknowledges on page 15-48 that amplified music events in the planned pavilion could exceed the County's daytime noise standard if the amplified sound levels were to exceed 80 dBA L₅₀ at a distance of 100 feet from the speakers. This level could be controlled and impacts avoided, but because it cannot be demonstrated with certainty that noise impacts can always be sufficiently mitigated to achieve noise standards, the Draft EIR conservatively concluded that the impact of park activity noise at existing receptors could be significant and unavoidable.

COMMENT 15-57

iv) NOI-7, increase in stationary noise from plan components at proposed sensitive receptors including NOI-7a, commercial parking noise; NOI-7b, truck delivery noise; NOI-7c, commercial HVAC. These noise sources are identified as potentially significant. The DEIR requires an acoustical study to identify noise controls that would mitigate parking noise. It identifies a distance barrier between truck delivery unloading areas and residential boundaries, but if this is not possible, then the noise shall be mitigated by reliance on a noise impact study. Noise from other commercial noises is to be mitigated by ensuring applicants use equipment that conforms to General Plan limits, but also requires an acoustical study to evaluate potential noise generated by mechanical equipment. Studies do not mitigate environmental impacts. This is not a mitigation plan.

RESPONSE 15-57

All mitigation measures addressing noise impacts contain a performance standard. Performance standards based on specific standards are sufficient. The measures are enforceable and not deferred and they give specific direction about how to conduct the

²⁶ Bollard Acoustical Consultants, Inc., Jesuit High School Stadium Lights Project, Environmental Noise Assessment, March 6, 2023, pages D-17 to D-28.

work. Please also see Response 15-50 above for additional discussion of deferred mitigation.

COMMENT 15-58

Other types of stationary noise include: NOI-7d, employment highway parking noise; NOI-7e, truck delivery noise along employment highways; NOI-7f drive through restaurant noise; NOI-7g, car wash; NOI-7h, school parking noise; NOI-7i, school playground noise; NOI-7j, sports school stadium noise; NOI-7k, park activity noise. An acoustical study is all that is initially required to mitigate noise along employment highways near existing noise-sensitive receptors. Truck delivery unloading areas that cannot be located 150 feet from residential areas must be mitigated by a noise impact study. HVAC noise along employment highways is mitigated just as with HVAC and other mechanical noise along commercial highways, i.e., by distance barriers and an acoustical study as part of subsequent application review.

These are deferred measures that can only be speculated to mitigate these noise sources. Studies do not mitigate environmental impacts.

Drive through restaurants will either be located beyond a distance barrier, or an acoustical study will be prepared to evaluate available noise controls. Car wash noise must be addressed by acoustical study to identify feasible noise controls. Similarly, school parking noise will be addressed by an acoustical study identifying noise controls such as distance barriers. School playground noise will be mitigated by setbacks.

As in mitigation identified under NOI-4b, school stadium noise is potentially significant and unavoidable, but noise controls must be identified. Again, applicants must submit acoustical studies. Acoustical studies or something similar will be used to mitigate in seven of the above potentially significant, and significant and unavoidable noise levels. Studying everything is laudable, but these studies are likely to be flawed given the deferred and speculative nature of these components

RESPONSE 15-58

All mitigation measures addressing noise impacts contain a clearly articulated performance standard. Performance standards based on specific standards are sufficient. The measures are enforceable and not deferred and they give specific direction about how to conduct the work. Please also see Response 15-50 above for additional discussion of deferred mitigation.

COMMENT 15-59

e) Population and Housing

Policies and a plan to ensure build-out of affordable housing and “missing middle housing” are not included in the DEIR. They are deferred to the release of a separate Affordable Housing Strategy. By contrast, the DEIR (pg. 2-28) identifies

the mega-houses on Leona Circle, like the one shown in the photo below, as prototypes for the project's 1-acre lots.

RESPONSE 15-59

Although housing affordability is not an issue that pertains to the potential environmental impacts of the project, specific development proposals prepared in the future within the UWSP area would be required to comply with the Sacramento County Affordable Housing Ordinance (Chapter 22.35 of the Sacramento County Code), which requires new development projects to pay an affordability fee on all newly constructed market rate units; comply with the development project's approved affordable housing plan, if one exists; or enter into a development agreement or other form of agreement with the County, which provides for a fee credit for land dedication, construction of affordable dwelling units, or other mechanism which leads to the production of affordable housing, in an amount at least equivalent to the affordability fee established by the County. The proposed UWSP includes an objective to plan for enough units to provide housing choices in varying densities to respond to a range of market segments, including opportunities for rental units and affordable housing.

Furthermore, as discussed on page 2-28 in Chapter 2, *Project Description*, of the Draft EIR, to facilitate the construction of a diverse array of housing types throughout the UWSP area, the UWSP includes a "Missing Middle Housing Incentive" program, which is intended to encourage the construction of attached, "missing middle" housing units (e.g., duplex, triplex, fourplex) within conventional single-family detached neighborhoods (i.e., Low Density Residential [LDR], Low Medium Density Residential [LMDR], Medium Density Residential [MDR]). As shown in Table PD-1 in Chapter 2, *Project Description*, a residential allocation of 300 Missing Middle reserve units have been set aside, which have not been allocated to any parcel. This unit reserve can be used to increase the unit allocation of any LDR, LMDR, and MDR parcel outside the Town Center up to the maximum allowed for a parcel's land use density range, provided that the additional units awarded are used for the construction of attached, missing middle housing units.

As proposed, the UWSP requires the adoption of an Affordable Housing Strategy that discusses the plan for the provision of moderate, low, and very-low-income housing. Since publication of the Draft EIR the applicant has prepared and submitted to the

County an Affordable Housing Strategy (AHS).²⁷ The AHS includes the following key commitments:

- The UWSP would include 4,007 high density residential units on lands with planned densities of 30 units per acre or higher;
- All residential development within the UWSP, except for designated affordable units, would be subject to the County's Affordable Housing Ordinance, Section 22.35.
- An affordable housing obligation that would be fulfilled either through the construction of 852 affordable units or the dedication of 42.6 acres of land.
- Using the AHO guidelines, SHRA calculated the fee for the UWSP affordable housing obligation to be \$75,432,750.
- A maximum of **25% of the fees** can be paid outright along with a combination of either land dedication or affordable unit construction to fulfill the obligation.

The AHS is another aspect of the project that the County will consider in evaluating the merits of the proposed project and deciding whether to approve the project. Please also see Response 15-50 above for a discussion of the appropriate consideration of economic and social effects in an EIR.

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-60

- f) Transportation - There is no transit to the proposed project area at this time. Refer to the 350Sacramento's comment letter.

RESPONSE 15-60

The comment states that there is no transit to the UWSP area at this time and also refers to the 350Sacramento's comment letter. Refer to Master Response TR-1: Transit and Responses 17-16 through 17-19.

COMMENT 15-61

6) Cumulative Setting inadequately described/disclosed/analyzed

Chapter 4.0, Introduction to the Analysis, Page 4.0-4 states:

²⁷ Nick Avdis, Developer Representative, *Affordable Housing Strategy for the Upper Westside Master Plan*, January 16, 2025.

"the cumulative setting for the proposed project is generally considered to be a summary of projections contained in the City of Sacramento 2040 General Plan and the Sacramento County General Plan."

The cumulative setting is not fully disclosed.

It is not clear what is included. It should include the proposed Airport South Industrial and Grand Park projects in Unincorporated Sacramento County in the Natomas Basin.

It should include the traffic impacts of semi-trucks that will use I-5 and its side roads by the truck charging stations at the Watt EV project and the Airport South Industrial warehouse project. When traffic is backed up on I-5, overflow traffic will divert to El Centro Rd.

It should include the buildout of South Sutter County, the Sutter Pointe Specific Plan, which has been approved and has permits from US Fish and Wildlife and California Department of Fish and Wildlife.

It is essential to disclose and evaluate cumulative impacts to the Natomas Basin, including to the NBHCP, as well as impacts to agriculture, air quality, transportation, traffic congestion, flooding, evacuation plans, and wildlife habitat.

RESPONSE 15-61

The comment appears to refer to a document that is not the Draft EIR. Chapter 4 of the Draft EIR addresses Aesthetics, and there is not a chapter titled Introduction to the Analysis in the Draft EIR. Contrary to the comment, Chapter 22, *Cumulative Impacts*, of the Draft EIR provides a full and detailed explanation of the methodology undertaken to assess cumulative impacts. On Draft EIR page 22-1, it states:

In this Draft EIR, a combination of these two methods is used depending upon the specific resource area being analyzed. To evaluate traffic and traffic-related air quality and traffic-related noise impacts, the impacts were evaluated using the projected growth in traffic through 2040 based on SACOG projections. Other impacts, such as construction air and noise impacts, were evaluated using a list of recently approved and/or proposed projects in the vicinity of the UWSP area that are not yet constructed, are not yet occupied, or are very newly constructed.

Table CI-1, pages 22-2 through 22-8, of the Draft EIR, presents a comprehensive list of projects in unincorporated portions of southeast, southcentral, and northwest Sacramento County and incorporated portions of Sacramento County (Elk Grove, Folsom, Rancho Cordova, Sacramento) as well as projects in nearby Placer and Sutter counties that border Sacramento County. In reference to reasonably foreseeable projects listed in the comment, Table CI-1 includes, but is not limited to, the following cumulative projects:

- Airport South Industrial Project – Cumulative Project 50
- Grandpark Specific Plan – Cumulative Project 17

- WattEV – Cumulative Project 23
- Sutter Point Specific Plan – Cumulative Project 50

The cumulative impact analysis is presented in Chapter 22, pages 22-10 through 22-73, of the Draft EIR. The analyses address all of the issues addressed for the proposed project in Chapters 4 through 20. In response to the issues raised in the comment:

- Cumulative impacts related to agricultural resources are discussed on pages 22-13 through 22-15;
- Cumulative air quality impacts are discussed on pages 22-15 through 22-19;
- Cumulative biological resources impacts, including effects on special status wildlife and potential conflicts with the Natomas Basin HCP and the Metro Air Park HCP are discussed on pages 22-15 through 22-31;
- Cumulative impacts related to hazards, including evacuation routes, are addressed on pages 22-38 and 22-39;
- Cumulative impacts related to hydrology, including flooding, is addressed on pages 22-40 through 22-42;
- As required under CEQA, the focus of the cumulative transportation impacts analysis is on VMT and transportation safety. Traffic congestion, in and of itself, is no longer addressed under CEQA. As it relates to I-5, the analysis includes an evaluation of queuing at freeway on-ramps and freeway off-ramps (see pages 22-67 through 22-69).

COMMENT 15-62

7) Geology, Soils, and Paleontology Impacts and Mitigation

Impacts were inadequately assessed. Impact evaluation and mitigation plans are deferred to future individual projects.

- a) “Less than significant” classifications for impacts relating to seismic-related ground failure, soil erosion, unstable soil, and expansive soils are contingent upon site evaluations that have not yet been conducted. Impacts GEO-1–5 are classified as “less than significant” with the condition that construction requires compliance with the California Building Code (CBC), the County code, and the storm water pollution prevention plan (SWPPP). Additionally, Impact GEO-6 indicates that a classification of “potentially significant” impacts relating to paleontological resources would be reduced to “less than significant” impacts based on the involvement of a project paleontologist. Deferred evaluation of the condition of sites and the necessary protocols that would be necessary to ensure code-compliant construction may significantly impact project affordability and regional impacts on the land.

RESPONSE 15-62

This comment expresses concern that the site evaluations that would be conducted for projects implemented under the UWSP constitute deferred mitigation.

The site evaluations being referred to are geotechnical investigations that are conducted in compliance with the California Building Code (CBC). Chapter 16 of the Sacramento County Code constitutes the Sacramento County Building Code. Pursuant to section 16.04.030 of the Sacramento County Code:

The 2022 [California Building Code](#), Title 24, Part 2 of the [California Code of Regulations](#), a portion of the [California Building Standards Code](#) as defined in the California State [Health and Safety Code](#) Sections 17922 and 18901 et seq., (hereinafter referred to as the "Building Code") and Building Code Appendices C (Group U Agricultural Buildings) and O (Emergency Housing), and any rules and regulations promulgated pursuant thereto are hereby adopted and incorporated by reference herein. Except as otherwise provided by this chapter, Chapters [16.02](#) and [16.10](#) of the Sacramento County Code, all construction, alteration, moving, demolition, repair and use of any building or structure within this jurisdiction shall be made in conformance with the Building Code and any rules and regulations promulgated pursuant thereto.

As such, compliance with the CBC and any other provisions of the Sacramento County Building Code is required by law. Through its building inspection and code compliance function, the County enforces compliance with these codes. The Draft EIR's assumption that future projects within the UWSP project area would comply with the requirements of these codes is therefore not deferred mitigation.

The geotechnical investigations would evaluate site geotechnical conditions and provide recommendations to address problematic geotechnical conditions. The CBC and local codes require implementation of those recommendations to address geotechnical conditions. Grading and construction permits would require implementation of those recommendations as a condition of permit approvals. This comment also expresses concern that Mitigation Measure GEO-6, proposed to protect paleontological resources if any are encountered, may significantly impact "project affordability" on the land. Please see Response 15-59 above regarding housing affordability and the consideration of economic and social effects under CEQA.

COMMENT 15-63

- b) The Upper Westside development would likely cause subsidence of the project area and exacerbate risks for natural hazards like flooding. The weight load of construction can have significant impacts on subsidence of an area. A recent study⁹ demonstrates consistently higher rates and amounts of subsidence in areas where the ground has been loaded by urban development. Considering the proposed project area has experienced "moderate to high land subsidence in the past," (DEIR, 11-15) and considering that area consists largely of expansive soils that shrink and expand dynamically, then development-related subsidence

should be expected. In addition to the structural hazards that progressive subsidence poses, further depression of the already low-lying land would increase the intensity and range of flooding in and surrounding the proposed project area.

The EIR must establish standards and protocols to ensure that Upper Westside project designs will fully mitigate the increased subsidence and flooding that construction will cause in the region. Additionally, the EIR should ensure that project proposals evaluate their contribution to regional subsidence and flooding and ensure that existing structures in the surrounding areas will not be compromised as a result of new construction-related subsidence.

⁹ Bateson, L., Novellino, A., Hussain, E., Arnhardt, R., Nguyen, H.K., 2023. Urban development induced subsidence in deltaic environments: A case study in Hanoi, Vietnam. *International Journal of Applied Earth Observation and Geoinformation*, 125.

RESPONSE 15-63

This comment expresses concern that projects implemented under the UWSP may cause subsidence or flooding. As discussed above in Response 15-60, projects implemented under the UWSP would be designed and constructed in compliance with the CBC and local codes. Compliance with the CBC would include the geotechnical evaluation of the potential for subsidence and flooding.

Regarding subsidence, as page 2-45 in Chapter 2, *Project Description*, of the Draft EIR, notes, the proposed UWSP would be served with water purchased from the City of Sacramento, which draws its water supply from the American and Sacramento Rivers and an existing network of groundwater wells. The proposed UWSP would not include the construction of any new wells and would not include the extraction of groundwater or crude oil, two of the most common causes of subsidence.

Chapter 11, *Geology, Soils, and Paleontology*, of the Draft EIR, addresses issues associated with subsidence. On pages 11-4 and 11-4, the environmental setting related to subsidence and ground settlement is described, including recognition that the UWSP area is mapped in an area of medium to high potential for subsidence. It is noted, however, that data gathered by the Department of Water Resources (DWR) indicates that the subsidence rate in the area is relatively minor. The case study cited in the comment refers to a study in Vietnam; as previously discussed, compliance with the CBC and local codes would require project designs that would avoid subsidence.

Draft EIR Impact GEO-4, pages 11-15 to 11-16, addresses potential impacts associated with unstable soils, including subsidence. The analysis recognizes that there is a potential for the UWSP area to be affected by subsidence. However, the analysis shows that compliance with the CBC requirements, including any recommendations provided by the final design-level geotechnical reports related to potential subsidence associated with the footings, foundations and other infrastructure, would reduce the potential impact to a less-than-significant level.

Regarding flooding, please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage.

COMMENT 15-64

- c) Questions about construction design costs and doubts surrounding project buildout:

While safe, code-compliant designs would certainly mitigate the risks that the proposed project area's natural structure poses for construction, the selected method of risk-aversion/preparedness may significantly alter the land itself. Additionally, these methods may be incredibly costly, as the soil type, flood plain status, and proximity to the Hunting Creek-Berryessa fault system would require significant safety precautions in design. How costly would development of CBC- and County-compliant structures be, compared to development in already zoned vacant land within the USB? How do these costs affect the affordability of the housing constructed? Is it financially feasible to construct this infrastructure on a phase by phase basis? Typically, infrastructure is financed over the plan area to reduce individual project costs and to achieve economies of scale.

RESPONSE 15-64

This comment expresses concerns regarding the cost of compliance with the CBC and local codes. There is no evidence that the types of measures that would be required for the implementation of the requirements of the CBC and the Sacramento County Building Code are outside of the scope of construction techniques that are typically implemented in other development within County or City portions of the Natomas Basin. As such, there is no reason to conclude that the measures would be financially infeasible or adversely affect the affordability of the residential units developed in the proposed UWSP. Please also see Response 15-59 above regarding housing affordability and the consideration of economic and social issues in CEQA documents.

COMMENT 15-65

8) Lack of Water Supply Assessment

The UWSP DEIR does not include the required water supply assessment (WSA) and, instead, requests the approval of a WSA for the 1,532-acre Development Area as an entitlement. Without the WSA, the DEIR fails to prove that the City accounted for the Project's water demands and will provide for the area's water needs. The EIR's request for entitlement of a WSA, combined with the claim that the City's urban water management plan (UWMP) accounted for the Project's water demand, as made by the applicant's legal counsel, is misleading and confusing. Moreover, this deferred compliance with CEQA requirements avoids providing information to the public and decision makers.

Please refer to Attorney Patrick Soluri's comments on the DEIR's failure to include a lawful WSA.

RESPONSE 15-65

Chapter 2, *Project Description*, of the Draft EIR, has been revised for consistency with Sacramento County's General Plan Policy PF-2, which requires that municipal and industrial development within the Urban Service Boundary but outside of existing water purveyors' service areas be served by either annexation to an existing public agency providing water service or by creation or extension of a benefit zone of the SCWA [Sacramento County Water Agency]. The revised Project Description is as follows:

The City of Sacramento's ~~through an agreement with the SCWA would~~ **Department of Utilities would serve as the water supply wholesaler to the UWSP. SCWA, as the water retailer, would** provide water service to land uses allowed under the proposed UWSP. The City of Sacramento obtains most of its water supply from surface water in the American and Sacramento rivers, while groundwater obtained from the North American and South American subbasins of the Sacramento Valley Groundwater Basin provides the remainder. As discussed above, the proposed UWSP would require SCWA annexation.

~~Water supply would be delivered to the UWSP area through the~~ **Wholesale treated water would be conveyed to the UWSP area through the City's existing infrastructure east of the UWSP. The** City's water treatment and distribution system, which consists of two water treatment plants, eight pump stations, many storage reservoirs, 28 municipal wells, thousands of hydrants, and nearly 1,800 miles of pipeline. **To deliver the treated water within the UWSP, SCWA, as the water retailer would own, operate and maintain the infrastructure within the UWSP including on-site storage, transmission, and distribution facilities as summarized below.**

Consistent with Policy PF-2, as proposed in the draft UWSP, under an agreement between SCWA and the City of Sacramento, the City would wholesale and convey treated water to SCWA, which then acting as the service provider would deliver to the UWSP project area. Pursuant to the draft UWSP, SCWA or a local community services agency would be responsible for transmission, distribution, and delivery of treated water to customers within the UWSP area through infrastructure that would be funded and constructed pursuant to the proposed UWSP.

In terms of water supplies available to the City of Sacramento, the City's surplus water supply is projected to range from 224,768 AFY in 2025 to 216,258 AFY in 2045 during a single dry year or the first year of a multiple-dry-year drought (see Table UT-5). The buildout of the proposed UWSP is anticipated to occur before 2045, when the City's surplus water supply is projected to be 198,436 AFY in the fifth year of multi-year drought. Therefore, the increase in water demand resulting from development allowed under the proposed UWSP would be approximately 2.17 percent of the City's surplus water supply in 2045. As shown in Table UT-5, the City of Sacramento would have

adequate planned water supply to serve development allowed under the proposed UWSP during normal, single dry, and multiple dry years.

Water demand calculated for the proposed UWSP was compared to water supplies available to the City of Sacramento, in accordance with City of Sacramento procedures, and the City made a determination regarding the sufficiency of supply for the proposed UWSP using the City-prepared WSA (see Appendix UT-1). Based on the City's water use factors discussed above, land uses allowed under the proposed UWSP would generate a water demand of approximately 4,313 AFY (see Table UT-6).

Furthermore, deferred compliance with CEQA requirements did not occur. Pursuant to California Water Code section 10910 through 10912, the public water system that would wholesale treated water to SCWA for delivery to the proposed project, the City of Sacramento, prepared a Water Supply Assessment. The WSA is based on the City's 2020 Urban Water Management Plan (UWMP) which calculated water demand under all water year types including normal, single dry, and multiple dry years over a 20-year planning horizon including projected demand from new development projects, such as the proposed project, in addition to existing and planned future uses, over a 20-year planning period in normal, single-dry, and multiple-dry years (pages 7-10 through 7-15, City of Sacramento, 2020 UWMP (Tables 7-7, 7-8, 7-9, 7-10, 7-11, 7-12), June 2021). As such, the requirements of CEQA that are described in CEQA Guidelines section 15155 have been met and no analysis of water supply and related environmental effects has been improperly deferred. Also see Responses 19-49, 19-51 and 19-52.

COMMENT 15-66

9) Water Management and Drainage Capacity

The cumulative analysis of the drainage impacts presumes that all potential projects will be required to have sufficient detention capacity to eliminate "down-drainage" impacts and, given that, concludes that the cumulative impacts with respect to drainage issues would be less than significant (pg 22-42). But questions remain:

- a) Would the stormwater drainage for other developments in the drainage basin be routed to the same pump station that pumps drainage water into the Sacramento River as that proposed for the Upper Westside project?

RESPONSE 15-66

The drainage system within the UWSP area would use the same RD-1000 pump stations. However, as explained in Chapter 13, *Hydrology and Water Quality*, and in Appendix HYD-1, *Drainage Study*, all stormwater would be captured and routed to reuse, water feature, and infiltration/detention structures to maintain the rate of stormwater discharge to the existing pump stations at their existing flow rate. Stormwater not infiltrated would be routed to the West Drainage Canal at a rate that would not exceed the current rate. The offsite stormwater pump discharge and bank armoring would not alter the existing drainage pattern except to better manage stormwater runoff and reduce the potential for erosion.

Projects located within the UWSP area would route stormwater to the RD 1000 pump stations. Cumulative projects not located within the RD 1000 service area would not route their stormwater to the RD 1000 pump stations. As explained in Chapter 22, *Cumulative Impacts*, development allowed under the proposed UWSP and cumulative projects outside of the UWSP would also be subject to the MSP MS4 requirements, including hydromodification management controls and LID design standards that require the preparation of drainage plans to adequately control run on and runoff to prevent erosion or drainage issues. With compliance with existing regulations, development allowed under the proposed UWSP, and cumulative projects would not cause or contribute to a cumulatively considerable impact with respect to drainage issues, and this cumulative impact would be less than significant.

COMMENT 15-67

- b) In the area of the proposed Upper Westside project, are the drainage systems/basins designed to hold all the water from a 200-year event without any pumping into the Sacramento River? And for how many days? What about a 500-year event?

RESPONSE 15-67

As explained in Chapter 13, *Hydrology and Water Quality*, and in Appendix HYD-1, *Drainage Study*, the Urban Level of Flood Protection (ULOP; Senate Bill 5) requires 200-year flood protection standard in urban or urbanizing areas. The Natomas Basin levees are being designed for 200-year storm events and improvements are expected to be completed by 2025. Improvements to the level of protection to the 200-year flood event would be completed before completion of projects allowed under the proposed UWSP. In addition, projects constructed under the proposed UWSP would include drainage improvements to efficiently route stormwater to treatment and infiltration BMPs, which would reduce the potential for flooding. These include designing the detention basins to the 500-year flood event to attenuate storm flows and designing the foundations and pads of structures built within the UWSP area to the 200-year flood event, as per ULOP requirements.

Furthermore, under no circumstances would pumping to the Sacramento River cease as the system has redundant pumping systems. Pumping would be continuous until the pool elevations in the basins have been restored. As stated in Appendix HYD-1, *Drainage Study*, the longest drain time (from peak to permanent pool elevations) occurs in the East Detention Basin, taking several days to drain the storage volume to starting conditions.

COMMENT 15-68

- c) Are other existing and planned development's drainage systems designed to hold all water from a 200-year event without pumping into the Sacramento River? A 500-year event?

RESPONSE 15-68

As previously explained, projects constructed under the proposed UWSP would include drainage improvements to efficiently route stormwater to treatment and infiltration BMPs, which would reduce the potential for flooding. These include designing the detention basins to the 500-year flood event to attenuate storm flows and designing the foundations and pads of structures built within the UWSP area to the 200-year flood event, as per ULOP requirements. Cumulative projects constructed outside of the UWSP would also be required to comply with same ULOP requirements, including designing the detention basins to the 500-year flood event to attenuate storm flows and designing the foundations and pads of structures to the 200-year flood event.

COMMENT 15-69

- d) What if the pumps that pump water over the levee into the Sacramento River fail, or enough of those pumps fail, so that the ability to pump water out of the basin into the Sacramento River is substantially limited for an x amount of time? What if the Sacramento River is running too high to allow pumping water out of the Natomas Basin into the River?

RESPONSE 15-69

This comment expresses concerns regarding speculative scenarios. If pumps were to fail, the pumps would be repaired or replaced as soon as possible.

The existing RD1000 pump stations have redundant systems to maintain constant pumping. If, in the unlikely event that a pump was to fail, other pumps would continue the pumping and maintain the ability to pump water out of the basin.

COMMENT 15-70

- e) The build-out plan for Upper Westside is phased. Logically, and for safety, the water management and drainage infrastructure for the entire project should be built during the first phase. It cannot be piece-mealed as different land owners decide to join the project. There are accumulating risks to the residents of the Natomas Basin as increasing amounts of open space are paved. The area of Upper Westside is important for holding run off and for water recharge in the Natomas Basin. Levees and drainage systems have the potential to fail, and that potential increases with the increasing impacts of climate change and extreme weather. Adding 25,000 more residents and acres of pavement to a floodplain is an increasingly risky proposition.

RESPONSE 15-70

This comment suggests that all of the water management and drainage infrastructure for the entire project should be built during the first phase. As discussed in Chapter 2, *Project Description*, of the Draft EIR, under Phasing, and in the UWSP Implementation chapter, the drainage system components would be constructed in phases to manage

the stormwater from that developed phase. Undeveloped areas would remain in their current condition with stormwater drainage being managed as it is now. Finally, drainage infrastructure for projects implemented under the proposed UWSP, as well as cumulative projects, would be constructed in compliance with the ULOP.

COMMENT 15-71

10) Public Services

Questions remain over who will provide emergency services, police, fire, medical as well as park maintenance and recreation programs. As build out is proposed to occur over a long period of time, how will these services be provided and how will infrastructure be built out?

a) Police Protection

DEIR states that the Sacramento County Sheriff will service the project area, but all reports from Garden Highway and area residents are that response time is very slow or nonexistent, even for serious traffic accidents. This area is far removed from the majority of unincorporated population of North Highlands and Foothill Farms that are served by the North quadrant, and sheriffs are rarely seen west of the City limits. The County must identify its plan and funding source for service to a new community of 25,000.

b) Fire Protection

If fire and emergency medical response is planned to be provided by the City of Sacramento under contract with the Natomas Fire Protection District, please identify the funding source and evidence that the city of Sacramento will not be subsidizing another unincorporated area of 25,000 and reducing services to city residents and businesses. Mutual aid requirements would require city response to police and fire in a community outside the city limits. The County must demonstrate that the City of Sacramento has agreed to provide fire and emergency medical services to the Upper Westside project area.

c) Public Schools

A representative of the Natomas Unified School District which includes this area, stated at the October 21, 2024 County Planning Commission meeting, that the funds generated by the project are inadequate to build the schools specified within the Upper Westside project plan. The County must explain how educational facilities will be funded for construction, operation, and maintenance.

d) Parks and Recreation

DEIR states that there is no park district serving the Upper Westside project area, and the Sacramento County Regional Parks department does not build or maintain local parks as shown in the Upper Westside plan.

Parks are identified and touted in the Upper Westside plan but no information about who will build these parks and how they will be maintained is provided. The

County must identify what entity will build the parks, who will maintain them, manage recreation programs, and how they will be funded.

The DEIR identifies the benefits of the nearby Sacramento River Parkway, however, it only exists on paper in this area. The access and trails run from Discovery Park to south Sacramento. Given the Upper Westside project's plans for 25,000 more residents, a significant contribution to extend the Parkway would be appropriate. The County must state what the contribution of the Upper Westside project will be to the Sacramento River Parkway.

RESPONSE 15-71

The comment raises numerous questions about the provision of and funding for public services to meet the needs of the proposed UWSP, including law enforcement, fire protection, public schools, and parks and recreation. Chapter 17, *Public Serves and Recreation*, of the Draft EIR, addresses potential effects related to these services. Under CEQA the consideration of public services impacts is limited to only those significant environmental impacts that would arise from the provision of new or physically altered facilities, the construction of which could cause significant environmental effects. This focus is articulated in the significance criteria articulated in Chapter 17, and also in CEQA Guidelines Appendix G (XV)(a) states:

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: 1) Fire protection; 2) Police protection; 3) Schools; 4) Parks; and 5) Other public facilities?

CEQA regulations and applicable case law on this issue demonstrate that the focus of study concerns only the environmental effects associated with the provision of new or altered physical public service facilities. Response times, service ratios, and other performance objectives are relevant to the analysis only within the context of whether or not new or expanded facilities would be required to meet defined criteria related to those service objectives, and what the environmental effects would be of providing those facilities.

The provision of public services, including law enforcement, fire and emergency services, libraries, schools, and parks and recreation facilities is described on pages 2-48 through 2-54 in Chapter 2, *Project Description*, of the Draft EIR. As evaluated in Chapter 17 of the Draft EIR, the proposed UWSP would create an additional demand for public services within the project area that would not be met by existing public service facilities and resources. Accordingly, the project as proposed would provide sites for new public service facilities to serve the project, such as a new fire station, sheriff substation, school sites, and park facilities. The environmental effects of constructing these facilities are included as part of the analysis of physical impacts on the environment.

As discussed in the relevant chapters of the Draft EIR, compliance with mitigation measures and other construction-related regulatory requirements would reduce construction-related effects to the extent feasible. Therefore, the physical impacts of the new public services facilities have been accounted for in the analysis, and the impact was found to be less than significant.

Because under CEQA the purpose of the EIR is to disclose the physical adverse environmental effects of the proposed project, it does not address the financing of these facilities and services. The Draft UWSP, Chapter 8, *Implementation*, addresses the financing of construction and operation of a variety of services. It indicates that ongoing governmental services, such as those listed in the City's comment, may be implemented and financed through a variety of methods, including the creation of a Community Facilities District, developer financing, the creation of a County Service Area, one or more Community Service Districts, Landscape and Lighting Districts, and/or Home Owners Associations.

An Upper Westside Public Facilities Financing Plan (PFFP) is being prepared for the proposed project which is intended to outline the funding and financing mechanisms for construction of public facilities, including backbone roadways and infrastructure. It also will summarize the envisioned phasing of facilities needed to support the development plan, as well as the programs to be employed for on-going public services and maintenance. More specifically, the PFFP will include an Urban Services Plan (USP) which will address the costs of and funding programs for ongoing provision of public services required to serve uses in the Plan Area, including costs for ongoing maintenance of public facilities. The PFFP will be part of the package of proposals included in the UWSP and made available for public review prior to being presented to the Board of Supervisors for its consideration and potential approval.

These economic issues are not the focus of an EIR. As part of its consideration of the proposed project, the County will assess the economic and fiscal effects of the proposed project. However, while economic and fiscal impacts are important considerations for the County in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. In fact, CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that "[e]conomic or social effects of a project shall not be treated as significant effects on the environment." Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a number of factors considered in addressing the feasibility of an alternative, mitigation measure, or change to the project (see CEQA Guidelines sections 15131(b, c).

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-72

11) Inconsistency with City General Plan

The proposed Upper Westside project would rely on the City of Sacramento for water and sewer services, despite its location in Sacramento County. This contradicts the City's General Plan's policies.

RESPONSE 15-72

As discussed in Chapter 2, *Project Description*, of the Draft EIR, the City of Sacramento, through an agreement with the Sacramento County Water Agency (SCWA), would provide water service to land uses allowed under the proposed UWSP. As reflected in Draft EIR Appendix UT-1, the City conducted a Water Supply Assessment and determined that the water supply is sufficient to serve the proposed UWSP. As also discussed in Chapter 2, *Project Description*, the Sacramento Area Sewer District (SacSewer), which currently serves developed portions of the UWSP area, would provide wastewater collection and treatment service to land uses allowed under the proposed UWSP.

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-73

12) Inconsistency with County General Plan

Items in the DEIR that conflict with the County General Plan include:

- a) Agricultural Land Use - The Land Use Diagram (map), FIGURE 4 below, of the County's General Plan, updated in 2017, shows agricultural use at the proposed project site.

Response 15-73 The comment accurately states that the existing County General Plan designates the UWSP project site for agricultural uses. The comment does not specify items in the Draft EIR that conflict with the County General Plan. See Master Response AR-1: Conversion of Farmland to Nonagricultural Uses, and Master Response AR-2: Interface Between Agricultural and Urban Uses. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

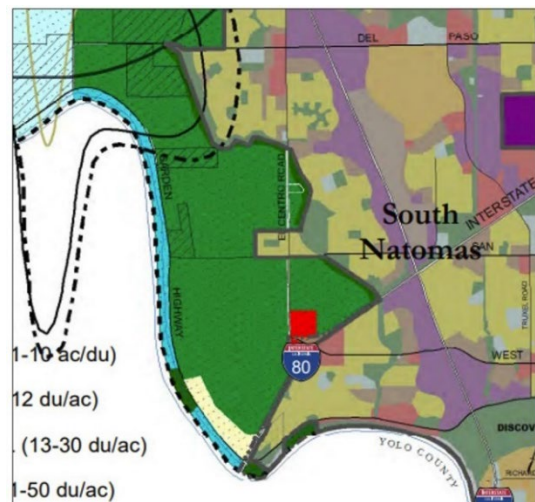

FIGURE 4: Excerpt from County Land Use Diagram from General Plan
Source: https://planning.saccounty.gov/LandUseRegulationDocuments/Documents/General-Plan/GPLU2030_UPDATED_FINAL_0918.pdf

COMMENT 15-74

- b) Urban Services Boundary -The proposed project would change the USB which was established in the Land Use Element of the County's General Plan, updated as recently as 2022, as "the ultimate boundary of the urban area."

RESPONSE 15-74

Please also see Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-75

- c) Requirements for changing the USB - The requirements of County's General Plan Policy LU-127 are not addressed. Refer to Section 2 Sacramento County Urban Services Boundary of this letter.

RESPONSE 15-75

See Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 15-76

- d) Agricultural land protection policies are not adhered to.

RESPONSE 15-76

See Master Response AR-1: Conversion of Farmland to Nonagricultural Uses.

COMMENT 15-77

- e) Housing - The County's General Plan calls for affordable housing, the DEIR merely provides for developing a strategy for affordable housing.

RESPONSE 15-77

Please see Response 15-59 above.

COMMENT 15-78

- f) Noise - See d) Noise in Section 6, Significant Impacts that Cannot Be Mitigated to Less than Significant, of this letter.

See letter from Attorney Patrick Soluri for additional comments.

RESPONSE 15-78

Please see Responses 15-50 through 15-58 above; please also see Response 19-88.

COMMENT 15-79**13) Inconsistency with Regional Planning for Growth**

The proposed Upper Westside project is inconsistent with SACOG's current Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) and the selected land use scenario of the draft 2025 Blueprint, as well as the Air Quality Plan.

RESPONSE 15-79

See Master Response LU-3: SACOG Blueprint and MTP/SCS for discussion of the proposed UWSP in relation to the SACOG Blueprint and MTP/SCS.

The statement that the proposed UWSP is inconsistent with an air quality plan is noted. Impact AQ-1 on pages 6-32 to 6-38 in Chapter 6, *Air Quality*, of the Draft EIR, addresses potential conflicts with or obstruction of implementation of the standards and criteria in the *Sacramento Regional 2008 8-Hour Ozone Attainment and Reasonable Further Progress Plan*, the *Triennial Report and Air Quality Plan Revision*, and the *2016 Annual Progress Report*. As described in Impact AQ-1, construction emissions could be mitigated to a less-than-significant level, however even with implementation of the project Air Quality Mitigation Plan and incorporation of all feasible additional mitigation measures operational emissions would exceed applicable thresholds of significance, rendering the impact significant and unavoidable.

COMMENT 15-80

Inconsistencies with SACOG's draft 2025 Blueprint:

On November 4, 2020, SACOG commented on the Notice of Preparation of the Upper Westside DEIR, stating "implementation of the Blueprint vision depends greatly on the efforts of cities and counties through local plans and projects. . . [and] the Upper Westside project and the project area itself are not anticipated for development in either the MTP/SCS or the Blueprint."

This is still true today. SACOG's selected land use scenario for the draft 2025 Blueprint, dated April 2024, does not include the Upper Westside, or the other proposed developments in the Natomas Basin, the Airport South Industrial and Grand Park projects. The 2025 Blueprint projects no housing units built for the three projects between now and 2050, as shown in FIGURE 5 below.

Attachment A

2025 Blueprint (MTP/SCS) Discussion Scenario
April 2024

Jurisdiction/Community Type	Housing and Business				Spring 20 Discussion Scenario			
	Existing Conditions (2020)		Potential Buildout		2020 - 2025		2025 - 2028

FIGURE 5: Excerpt from SACOG's Attachment A, Discussion Land Use Scenario, April 2024

Source: SACOG <https://www.sacog.org/planning/2025-blueprint/blueprint-land-use>

RESPONSE 15-80

Please see Response 15-83 below. See Master Response LU-3: SACOG Blueprint and MTP/SCS for discussion of the proposed UWSP in relation to the SACOG Blueprint and MTP/SCS.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-81

In November of 2020, SACOG went on to say “The Upper Westside project . . . raises important policy questions for the region’s implementation of the Blueprint. For example, the capacity for growth in existing entitled lands far exceeds expected demand over the next twenty years: collectively, the region’s jurisdictions have entitled, or are in the process of entitling 2.5 times the region’s projected need for the next 20 years. More than half of that capacity—387,000 units—is in greenfield areas that are on the edge of existing development.”

This means there is far more entitled acreage for new homes than the market will bear. The EIR needs to disclose the excess capacity of housing units in Sacramento region and in Sacramento County.

RESPONSE 15-81

Under CEQA, the purpose of an EIR is to disclose to the decision makers and the public the significant physical environmental impacts of a proposed action. The Draft EIR evaluated the environmental effects of a specific proposed project and also considered the cumulative effects of other reasonably foreseeable development projects in the region.

An assessment of the demand for housing over a 20-year time period is an economic analysis of market conditions. The timing of development in the County and elsewhere in the region is largely a function of economic market forces. Such economic issues are not the focus of an EIR. As part of its consideration of the proposed project, the County will assess the economic and fiscal effects of the proposed project. However, while economic and fiscal impacts are important considerations for the County in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. In fact, CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that “[e]conomic or social effects of a project shall not be treated as significant effects on the environment.” Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a number of factors considered in addressing the feasibility of an alternative, mitigation measure, or change to the project (see CEQA Guidelines sections 15131(b, c). Please see Response 15-71.

Please also see Response 15-2 above and Master Response LU-3: SACOG Blueprint and MTP/SCS. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-82

For Sacramento County, the draft 2025 Blueprint does include six developments on greenfield sites with a total capacity of nearly 37,000 housing units. These units are already part of the County’s general plan and are either under construction or in planning/design. Between now and 2050, only 11,600 housing units are projected to be built. And using the rate of build-out projected for the 2020-2050 period, none of these developments will fully build out by 2050. One development may complete in 2066, and two may in 2079. The remaining three won’t fully build out until the next century.

There is no housing need for Upper Westside.

Refer to FIGURE 6 below.

EXCERPT FROM 2025 Blueprint (MTP/SCS) Adopted Land Use Assumptions June 2024										
Jurisdiction/Developing Communities	Baseyear									
	Existing Conditions (2020)	Potential Buildout	2020 - 2035	2020 - 2050 Built	Percentage of Development Built Out by 2050	2020-2050 ave per year	Total built by 2050	Total unbuilt in 2051	Years to complete after 2050	Est Year Complete based on rate of build out 2020-2050
	Housing Units	Housing Units	Housing Units	Housing Units						
Sacramento County Unincorporated										
North Vineyard Station	1,620	6,063	1,165	2,895	74%	97	4,515	1,548	16	2066

RESPONSE 15-82

Please see Response 15-2 above and Response 15-83 below. This comment includes statements of opinion, but it raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 15-83

14) Growth Inducement and Urban Decay

DEIR Chapter 23 provides an analysis of growth inducing impacts. The analysis must include the most significant growth inducing impact, that is, the increase in the value of the land in the Natomas Basin. Increased land values will encourage speculation on agricultural land by development interests and make it more difficult for the Natomas Basin Conservancy to afford mitigation land (acquire the necessary conservation easements to meet the requirements of the NBHCP.)

RESPONSE 15-83

Please see Response 12-17. As required under CEQA, Chapter 23, *Growth Inducement and Urban Decay*, of the Draft EIR, includes an analysis of the growth inducing effects of the proposed UWSP. The analysis explores various aspects of growth inducing effects, including elimination of obstacles to growth, such as provision of infrastructure capacity or removal of regulatory constraints. It also addresses the economic effects that can stimulate additional growth through economic activity, represented by the multiplier effect.

The analysis recognizes that “growth induced directly and indirectly by the proposed UWSP could also affect the greater Sacramento region.” It goes on to disclose that potential environmental effects triggered by induced growth in the region could include increased traffic congestion; increased air pollutant emissions; loss of agricultural land and open space; loss of habitat and associated flora and fauna; increased demand on public utilities and services, such as fire and police protection, water, recycled water, wastewater, solid waste, energy, and natural gas.

Please also see Impact BR-14 and Draft EIR, Chapter 22, pages 22-26 through 22-31 for a discussion of the potential for the proposed project to hinder the implementation of the Natomas Basin HCP.

COMMENT 15-84

The DEIR minimizes the impact that the Upper Westside project would have on growth inducement within and around the project area, stating that, “as the USB and UPA would not be extended to include the adjacent 534-acre Ag Buffer, the pressure to develop properties to the west of the development area would be reduced as any future development in this area would need to show consistency with General Plan Policy LU-120 and seek discretionary approval from the Sacramento County Board of Supervisors.” (DEIR 23-2).

In this statement, the DEIR does not acknowledge the precedent-setting nature of the approval of the Upper Westside on the other two proposed developments -- Grand Park and Airport South Industrial – and related increases to land values and alterations to the USB and UPA, prompting more property owners in the Sacramento portion of the Natomas Basin to seek plan and zoning changes to allow conversion of agricultural land to urban uses. Upper Westside would provide the precedent, rationale, and justification for the approval of subsequent projects that convert agricultural land to urban uses. The DEIR avoids identifying and analyzing this impact.

RESPONSE 15-84

The cumulative analysis in the Draft EIR addresses the environmental effects of the proposed UWSP in combination with the effects of other reasonably foreseeable projects. These projects are presented in detail in Table CI-1 and Figure CI-1, pages 22-2 through 22-8 of the Draft EIR. The proposed Grandpark Specific Plan is identified as Cumulative Project 17, and the Airport South Industrial Project is identified as Cumulative Project 50.

Since the publication of the Draft EIR, the Grandpark Specific Plan has been revised to be two separate, independent projects within the County’s Natomas North Precinct that would plan for development of the same 5,675 acres addressed in the cumulative impact analysis in the Draft EIR. Those projects are in the planning process under the jurisdiction of Sacramento County, and would be subject to evaluation under CEQA and review pursuant to the planning and growth processes of the County General Plan (including General Plan Policies LU-120 and LU-127) as is being undertaken for the proposed UWSP. The County’s decisions related to the cumulative projects located in

the Natomas North Precinct will be based on the evaluation of those projects and will not be affected by the County's decisions related to the proposed UWSP.

The Airport South Industrial Project is currently being processed by the City of Sacramento as a potential annexation to the City. The evaluation for that project would logically include CEQA review as well as evaluation pursuant to the planning and development policies of the City of Sacramento 2040 General Plan. The City's decisions related to the merits of the Airport South Industrial Project will be related to the merits of that project and will not be affected by the County's decisions related to the proposed UWSP.

It should be noted that the cumulative impact analysis presented in Chapter 22 of the Draft EIR also addresses additional reasonably foreseeable projects within the Natomas Basin, including:

- Metro Air Park (Cumulative Project 18)
- Sacramento International Airport Master Plan (Cumulative Project 21)
- Metro Air Park East (Cumulative Project 22)
- WattEV (Cumulative Project 23)
- Innovation Park/CNU Medical Center Campus (Cumulative Project 42)
- Northlake (previously known as Greenbriar) (Cumulative Project 43)
- Commerce Station (Cumulative Project 51)

See Draft EIR, Chapter 22, Table CI-1, for additional information on these projects.

The degree to which approval of the proposed UWSP could set precedence or serve as a rationale for approval or denial of any other cumulative project being considered by the County or the City is entirely speculative. Pursuant to Public Resources Code section 21159 and CEQA Guideline section 15064(f)(5) speculation does not constitute substantial evidence upon which to determine if a project has a significant effect. Pursuant to CEQA Guideline section 15145, if an impact is speculative "the agency should note its conclusion and terminate discussion of the impact." As such, no further consideration of these issues is appropriate.

COMMENT 15-85

15) Alternatives Analysis is Misleading and Deficient

The critical point of the alternatives analysis is whether there is an alternative location within Sacramento County jurisdiction that could accommodate the project and that would have reduced significant impacts.

The alternatives analysis in the DEIR does not adequately address this question by improperly eliminating unincorporated areas of the County that are suitable for similarly scaled development.

There are two major flaws in the Analysis of Project Alternatives:

First, the project objectives are designed to rule out alternative sites that don't meet the objectives – there are 18 very specific project objectives, at least two of which are specific to the project's location:

- Objective 5: Provide residential housing within five miles of the existing job centers of downtown Sacramento and West Sacramento, as well as in close proximity to newly developing or proposed job centers.
- Objective 10: Make efficient use of development opportunity as the project site is bordered on three sides by existing or planned urban development.

These objectives are self-serving. Taken together, they rule out any other area of suitable size that would meet those objectives.

RESPONSE 15-85

CEQA Guidelines section 15126.6(a) provides that an EIR “shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain *most* [emphasis added] of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the alternatives.” Accordingly, the site-specific objectives identified by the commenter need not rule out the consideration of alternative locations so long as most of the identified project objectives could be met. Please also see Response 19-11 for a discussion of the role of the project objectives in determining the range of reasonable alternatives addressed in the Draft EIR.

Please also see Response 19-16 for a discussion of Objective 5, and Response 19-21 for a discussion of Objective 10.

COMMENT 15-86

Second, the document argues that “the applicants only control 292 acres of the UWSP area and an offsite alternative would not be feasible as the project applicants do not control any other properties within Sacramento County.” This is another completely self-serving objective. Whether the applicant controls other lands that would afford a suitable alternative site is irrelevant. In addition, the “project applicants” only control 14 percent of the project area, and so it is difficult to see how the DEIR can rely on this factor to exclude consideration of offsite alternatives.

RESPONSE 15-86

The Draft EIR was prepared in response to a development application advanced by a private sponsor related to properties that the sponsor controls and surrounding properties that the sponsor *may* control at some point in the future. The fact that the sponsor controls portions of the subject site is relevant to the potential future feasibility of the sponsor's proposed project, and thus the Draft EIR evaluated the effects of the project as proposed. This is in contrast to other unidentified sites in other portions of the County that the sponsor does not control and with which the sponsor has no familiarity or financial interest. Please also see Response 19-11.

COMMENT 15-87

The alternative analysis does briefly address the possibility of alternative sites within the County that could accommodate a new planned community, but in a limited way, and only with respect to northwest Sacramento County:

“...while other large vacant properties located adjacent to the City of Sacramento in northwest Sacramento County could feasibly achieve many of the project objectives, those lands are not available as planning applications for these lands have already been filed with the City of Sacramento and with the County of Sacramento. Furthermore, while other large vacant properties are available in other portions of the county that could feasibly achieve many of the project objectives, none are located along a major transportation corridor within proximity of existing job centers in downtown Sacramento and West Sacramento, as well as near newly developing or proposed job centers, which is an objective of the proposed UWSP” [DEIR, pages 3-4,5]

The only reference to other alternative sites in the County that could accommodate a new planned community is in the context of the California State CEQA Guidelines, and the need for addressing them is blithely dismissed without substantive evidence:

“Only those locations that would avoid or substantially lessen any of the significant effects of the project need be considered. If no feasible alternative locations exist, the agency must disclose the reasons for this conclusion. (Section 15126.6[f][2][B].) In this case, alternative sites would entail either the same or new significant environmental effects as those that would occur within the UWSP area. For example, development of the proposed UWSP on any suitable alternative site in or around the County may not avoid or substantially lessen the project’s air quality or greenhouse gas (GHG) impacts, as those impacts would occur no matter where the development is located and could be worse if located farther away from a major transportation corridor or in areas with existing unacceptable traffic levels. Moreover, an alternative site that is not adjacent to already developed lands would likely result in greater aesthetic and utilities impacts than those that would occur within the UWSP area.” [DEIR, page 3-4]

The County is considering three large new community development projects along the Jackson Highway Corridor. Although they may have greater air quality or greenhouse gas impacts, there are other areas of impact that would be reduced: they are within the planned growth area and would be less growth inducing, they are more consistent with existing County and regional plans, they do not involve prime agricultural land loss, they would not adversely impact a Habitat Conservation Plan, and they are in an area with likely fewer archaeological resources. A comparison of these impacts needs to be provided in the alternatives analysis for this project.

RESPONSE 15-87

The explanation for dismissing alternative project locations from further evaluation is provided on pages 3-4 and 3-5 in Chapter 3, *Alternatives*, of the Draft EIR. The

Draft EIR noted that many of the anticipated significant impacts would result from the density and intensity of the development proposed, and that the identified significant impacts of the proposed project would entail either the same or new significant environmental effects as those that would occur within the proposed project area. These include such impacts as those related to aesthetics, farmland, air quality, and traffic noise. Most of these impacts would occur regardless of where the project were to be developed. In some cases, the impact could be more severe, such as a project site located further from employment centers and other urban uses and the result increase in air pollutants and GHG emissions.

The comment vaguely asserts that an alternative location would be superior to the proposed project site, however no specific explanation is provided as to which impacts would be lessened or avoided, and no evidence to support the assertion is provided. The Draft EIR, on the other hand, provided specific reasons why an alternative project location would not materially reduce the proposed project's identified significant and unavoidable impacts.

The comment generally references other major planning efforts underway in the Jackson Highway Corridor in the County. These projects are comprehensively included in the cumulative analysis presented in Chapter 22 of the Draft EIR (see Table CI-1, particularly Cumulative Projects 7, 8, 9, and 10). Information on the environmental consequences of implementation of these projects is contained in the CEQA documents that the County has or is in process of preparing. By virtue of the fact that they are currently proposed by other project sponsors, they are not available to serve as an alternative location for the proposed UWSP project. Further, as explained on page 3-5 of the Draft EIR, "while other large vacant properties are available in other portions of the county that could feasibly achieve many of the project objectives, none are located along a major transportation corridor within proximity of existing job centers in downtown Sacramento and West Sacramento, as well as near newly developing or proposed job centers, which is an objective of the proposed UWSP."

Please also see Response 19-11.

The alternatives analysis in the Draft EIR meets the requirements of CEQA, and this comment does not raise any new environmental issues that have not already been adequately described and evaluated in the Draft EIR.

COMMENT 15-88

Relevant CEQA Requirements:

- (f) Rule of reason. The range of alternatives required in an EIR is governed by a "rule of reason" that requires the EIR to set forth only those alternatives necessary to permit a reasoned choice. The alternatives shall be limited to ones that would avoid or substantially lessen any of the significant effects of the project. Of those alternatives, the EIR need examine in detail only the ones that the lead agency determines could feasibly attain most of the basic objectives of the project. The

range of feasible alternatives shall be selected and discussed in a manner to foster meaningful public participation and informed decision making.

- Feasibility. Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). No one of these factors establishes a fixed limit on the scope of reasonable alternatives. (Citizens of Goleta Valley v. Board of Supervisors (1990) 52 Cal.3d 553; see Save Our Residential Environment v. City of West Hollywood (1992) 9 Cal.App.4th 1745, 1753, fn. 1).
- (Cal. Code Regs., tit. 14, § 15126.6 (Lexis Advance through Register 2024, No. 37, September 13, 2024).)

The Alternatives Analysis has been closely linked to the self-serving objectives of the project, objectives that are designed to exclude all other alternatives. The section should have been written from the perspective of significant impacts that cannot be mitigated - and how alternative sites would have fewer significant impacts.

Refer also to Attorney Patrick Soluri's comment letter on this topic.

RESPONSE 15-88

Please see Responses 15-9 and 19-11 above.

COMMENT 15-89

16) Upper Westside conflicts with State Environmental Initiative

Inconsistency with Nature Based Solutions. Nature-based solutions (NBS) is a California State program established to harness the power of nature to build California's resilience to future climate-driven extremes, protect communities from the climate crisis, and remove carbon from our atmosphere. California State leaders recognize that expanding NBS is essential to meeting California's core climate goals.

In October 2020, Governor Newsom issued the Nature-Based Solutions Executive Order N-82-20, advancing biodiversity conservation as an administration priority and elevating the role of nature in the fight against climate change. As part of this Executive Order, California committed to the goal of conserving 30 percent of our lands and coastal waters by 2030. The initiative is called 30x30.

The Sierra Club has identified four land areas which are critical to accomplishing our Sacramento region's contribution to 30x30. The Natomas Basin is one of these areas.

The Sacramento Region has only conserved seven percent of its land and must conserve an additional 900,000+ acres to meet State planning goals. We are far behind other major metropolitan areas in California. For example, the Bay Area is near thirty percent. The conservation of accessible open lands, and specifically the conservation of lands in Natomas, would readily expand the total protected areas in the Sacramento Region to 19%.

Development of farmland in Natomas removes a key opportunity in Sacramento County to conserve natural and working lands to fulfill this commitment.

The area on which the Upper Westside is proposed is predominantly in agriculture that also serves as habitat for endangered species and a vital ecosystem for carbon sequestration. Development of this land would further encourage speculation of adjacent open lands for development, move us ever further from achieving State goals. The impact related to the goals of 30x30 is not addressed in the DEIR.

RESPONSE 15-89

The County is not aware of any plans to target the project area for formal conservation by any agency or organization, nor is any portion of the project site currently in such a status. This comment includes reference to the Pathways to 30x30 Strategy that was created as the result of passage of SB 337 in 2023 and AB 2440 in 2024. These two statutes established Public Resources Code sections 71450 through 71451, which establish in law the State's goal to conserve 30 percent of California's lands and coastal waters by 2030. They also broadly establish an implementation and reporting framework. In response to the requirements of these laws, in September 2024 the California Natural Resources Agency published the Pathways to 30x30 California Annual Progress Report.²⁸ Neither the text of SB 337 or AB 2440, or PRC sections 71450 through 71452, nor the September 2024 Pathways to 30x30 California Annual Progress Report specifically mention the Natomas Basin or any other specific actions that would pertain to the proposed UWSP or the project site.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

²⁸ California Natural Resources Agency, *Pathways to 30x30 California Annual Progress Report*, September 2024.

LETTER 16

Friends of the Swainson's Hawks (FOSH), non-profit organization, written correspondence; dated October 21, 2024.

COMMENT 16-1

Friends of the Swainson's Hawks concurs with the comments of the Environmental Council of Sacramento (ECOS), forthcoming, which incorporate our concerns about the DEIR as an informational document and address the deficiencies in the DEIR.

We are transmitting via separate attachments to this letter, references not included in the DEIR which are referenced in the ECOS comments. Please include these documents in the record.

The following two documents are included in Appendix J, to the NBHCP, on the Natomas Basin Conservancy website, attached.

RESPONSE 16-1

This comment has been noted. Copies of the referenced documents can be found in Letter 16 in Appendix RTC-1.

LETTER 17

350 Sacramento, non-profit organization, written correspondence; dated October 28, 2024.

COMMENT 17-1

A. THE CLIMATE CRISIS

350 Sacramento's primary focus is local action to accelerate the transition to climate stability, and we are concerned that the UWSP would make reaching that goal more difficult. Temperatures on our planet are now higher than at time since before the last ice age, at least 125,000 years ago and potentially going back at least 1 million years.

To provide further context for these comments, please see [Attachment 1, Current Effects of the Climate Crises](#).

B. THE IMPORTANCE OF LOCAL ACTION

Local Action is critical to effectively address climate change. The two largest sources of greenhouse gas (GHG) emissions are on-road passenger vehicles and building energy, both of which are best and most directly managed through the well-established land-use authorities of local governments. For a Summary of federal, State, Regional, and County guidance. [See Attachment 2 for further substantiation.](#)

C. SACRAMENTO COUNTY'S IMPLEMENTATION HISTORY

Sacramento County has failed consistently to implement adopted climate mitigation measures, including promises made when adopting its:

- 2011 General Plan Update (GPU), re adopting measures into the General Plan;
- 2011 GPU, re adopting a CAP and implementing other climate measures;
- 2011 Phase 1 CAP, "*Strategy and Framework Document*";
- 2012 County Operations Plan; and
- 2020 Climate Emergency Declaration.

See Attachment 4, County Climate Commitment Failures for further substantiation.

RESPONSE 17-1

This comment relays the commenter's general concerns about environmental matters but does not identify any impacts specific to the proposed project or the analysis contained in the Draft EIR. For a discussion of the proposed project effects related to Greenhouse Gas Emissions, please see Draft EIR, Chapter 8, *Climate Change*. The two impacts discussed in that chapter relate to GHG emissions (Impact CC-1) and consistency with the California Air Resources Board's 2022 Scoping Plan (Impact CC-2). In both cases the impacts were determined to be less than significant with implementation of Mitigation Measures CC-1a, CC-1b, and CC-1c.

It should further be noted that on November 6, 2024 the County adopted the County of Sacramento Climate Action Plan for the Unincorporated Sacramento County and County Operations (CAP). The adopted CAP included Measure GHG-17 Carbon Neutral Growth which requires all new growth projects outside of the UPA or USB to achieve carbon neutrality (i.e., net zero GHG emissions) and to demonstrate compliance with all applicable GHG measures in the CAP to ensure that new growth projects support the attainment of the County's GHG reduction targets. The requirements of the CAP, including Measure GHG-17, would apply to the proposed UWSP if it is approved.

COMMENT 17-2

A. THE COUNTY'S GPU FEIR DID NOT EXAMINE OR SUBSTANTIATE THE GPU'S "NEW GROWTH" POLICIES

1. The County's GPU FEIR Included an Alternative 3: "Mixed Use".

The County's April 2010 FEIR considered three project alternatives. Per the certified FEIR, "Alternative 3, Mixed Use":

"...is highly consistent with smart growth principles. [It] directs all development toward the urban core, which will increase densities and support alternative transportation (principle 1); ...directs most growth into areas that are already built up, resulting in more compact growth (principle 3); ...directs all growth toward existing urban areas (principle 5); and avoids any development within the large open space, farmland, and critical environmental areas of the county (principle 7)...does not identify large new growth areas, and relies on revitalizing existing urbanized areas and infill development".^{1,2}

2. The County Adopted a "Modified Mixed Use Alternative"

During the 18 months between the FEIR's April 2010 publication, and the County's November 2011 adoption/certification of the GPU/FEIR, the County developed and did adopt what it called, *"a modified version of the Mixed Use Alternative described in the FEIR"*. The "modified version" varied from the one analyzed in the FEIR by,³

- a. Deleting policies requiring new housing densification.
- b. Reducing the amount of growth assumed within the County's Urban Policy Area growth boundary.⁴
- c. Adding *"new growth management policies"* specifying criteria to be met by new development. The new policies (LU-119 and LU-120) authorize the County to expand the County's adopted UPA growth boundary to accommodate "new growth areas" on a project-specific basis (Section VI.D.1 of these comments reviews the role and importance of the County's growth boundaries).

3. Effect of the County's "Modification"

As detailed in Section III of these comments, the effect of the County's "modifications" to FEIR Alternative 3 has been to invite, approve, and continue to plan multiple large-scale development projects outside the UPA, of which the UWSP is one. Such projects are directly contrary to the intention of the FEIR's Alternative 3 as quoted in section A.1 above, because they:

- a. Are outside, *"the urban core"*
- b. Are not in areas, *"already built up" or "existing urban"*
- c. Do not *"avoid any development within the large open space, farmland, and critical environmental areas of the county"*.
- d. Do, *"identify large new growth areas"*.
- e. Do not, *"rel[y] on revitalizing existing urbanized areas and infill development"*.

The County's 2011 CEQA Findings assert that the decision to modify Alternative 3, and adopt the *"new growth management policies"*,

"...is supported by the environmental analysis provided in the FEIR, because the approved Project falls within the range of physical impacts which were addressed by the EIR".⁵

However, the County provided no substantiation for that assertion.

The County supported its "modification" of Alternative 3 by citing an apparently inapposite legal precedent, Laguna Beach,⁶ quoting from the decision: *"It is not unreasonable to conclude that an alternative not discussed in an EIR could be intelligently considered by studying the adequate descriptions of the plans that are discussed"*.

However, we question whether adoption of measures not at all considered in the FEIR's analysis; the efficacy of which cannot be deduced from the FEIR's findings; and which in fact conflicts with the FEIR's conclusions, properly falls within the decision-space of Laguna Beach.

5. The County Failed to Examine Potential Impacts of the "New Growth Management Policies"

The GPU FEIR did not examine the *"new growth management policies"*, LU-119 and LU-120, which were not proposed until after the FEIR was published. On the contrary, the FEIR found that development outside the UPA would cause significant impacts, mitigable only by phasing development outward from the urban core.

Attachment 3, Sacramento County's Sprawl Mitigation Is Unsupported reviews the FEIR's analysis.

In adopting the *"modified Mixed use alternative"*, and *"New Growth Management Policies"* LU-119 and LU-120, the County included some of the FEIR's

Alternative 3 “smart growth” principles, but discarded its central focus: directing growth to densification of the existing urban area. The County assumed, but did not substantiate, that those principles would suffice to mitigate the environmental impacts of the “*new growth management policies*”.

In fact, the County’s “*new growth management policies*” present a development strategy not contemplated in the FEIR’s examination of Alternative 3, and substantially diverging from it. The GPU FEIR neither examined the potential project-specific and cumulative impacts of Policies LU-119 and LU-120 nor substantiated their claimed mitigation efficacy. To the contrary, as detailed in Attachment 3 the FEIR determined that project - specific expansion of the UPA would result in significant impacts.

The UWSP SEIR references and relies on these policies. Their impacts and mitigation, because never before examined, must be evaluated in the current SEIR.

RESPONSE 17-2

This comment asserts alleged deficiencies in the County’s General Plan Update EIR, which was certified in 2010. Any appeals or lawsuits associated with that action were litigated and resolved, or could have been litigated and resolved long ago, and the issue is not germane to the proposed project and do not address issues in the Draft EIR.

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-3

B. THE GPU FEIR DID NOT EXAMINE OR MITIGATE EFFECTS OF THE COUNTY’S EXCESS ENTITLEMENTS

Section II.A above documents the County’s 2011 claim of “*modified...mixed use*” as the panacea curing the ills of far-flung, disjunct (aka “sprawl” or “leapfrog”) development; and with Attachment 3 demonstrates that the claim is not substantiated by the GPU FEIR.

Here, we additionally assert that the claimed merits of such, “*modified...mixed use*” could not in any case be realized in Sacramento County, because:

- The County has approved, and has in planning, multiple developments with capacity far surpassing housing market demand, and
- Such excess entitlements preclude realizing the mixed-use development the County claims as mitigation.

We substantiate this assertion below.

1. The County’s Approvals Far Exceed Housing Market Demand

The County’s long history of permissively approving developments far in excess of foreseeable market demand was formalized and accelerated with the 2011 adoption of “*new growth management policies*”. In the County’s telling:

“When adopted in 2011, the General Plan added policies to the Land Use Element to allow applicants to request an expansion of the UPA anywhere within the USB regardless of demand or existing capacity. The County’s intent was to let the market determine the need and location for new growth so long as it could meet the “Smart Growth Criteria” of policies LU-119 and LU-120.”⁷

As a result, the County has approved construction of far more housing than the market requires, and is actively preparing to approve more. As the County reports:

“These three master plans [planned outside the UPA and including the UWSP] propose 49,732 additional units. If all of these new master plans are approved, and combined with the potential for infill and the already approved growth areas, the County will have approved growth far exceeding the growth that is projected over the next 20 years. This is apparent given the fact that the County only permitted a total of 5,194 units during the nine years of the last RHNA cycle (2013-2021).”⁸

“In fact, at the most recent rate of permit activity in the unincorporated County from 2020 (which is higher than any of the preceding years in the APR) ... this existing [infill and approved planned projects] and potential capacity of over 109,000 units would represent over 140 years of potential capacity.”⁹

2. Excess Entitlements Preclude Mixed-Use Development as Claimed Mitigation

The County’s historic approval of multiple competing projects, which in their aggregate capacity far exceed market demand, means it is impossible that the competing projects will build-out as quickly or completely as envisioned. In “mixed use” projects, investment in commercial development occurs only after residential growth has built-out enough to support commercial activity.¹⁰ As a direct and foreseeable result of delayed and incomplete build-out, commercial development and the claimed environmental benefits of “mixed use” development (e.g., reduced vehicle miles traveled (VMT) and GHG emissions)

will be delayed indefinitely and perhaps permanently, resulting in unmitigated impacts.

3. Effects of Excess Entitlements on “*New Growth Management*” Policies

As noted above, the County’s “modified Alternative 3” growth management strategy, allowing consideration of UWSP and other development outside the UPA, is effectuated by new GPU Policies LU-119 and LU-120. LU-120 presents five “criteria based” (CB) standards intended to demonstrate compliance with “smart growth” principles. However, the efficacy of all six is sensitive to the effects of delayed, incomplete build-out:

- a. CB-1. Minimum net density. Partial build-out means that planned densities will not be achieved
- b. CB-2. Proximity of residential units to amenities. Incomplete build-out means that commercial, “mixed use” amenities, which would rely on an assumed customer base, will not be built.
- c. CB-3. Mixed use. As with the previous criterion, investment in commercial “mixed use” is based on expectation of a customer base at full build-out, absent which commercial enterprise will not occur.
- d. CB-4. Transit. Transit service is dependent on ridership density, absent which planned transit will not materialize.¹¹
- e. CB-5. Proximity to employment. Mixed use development of a planned size and density is expected to generate a certain amount of on-site employment, with resulting VMT-reduction. Incomplete and delayed build-out means this expectation will not be met.

4. Effects of Excess Entitlements on UWSP Have Not Been Previously Reviewed

- a. The SEIR’s mitigation for VMT assumes, and relies on, complete build-out supporting “mixed use” development and its claimed mitigation benefits.¹², The reality that excess entitlements will constrain such build-out is not examined in either the GPU FEIR or this draft UWSP SEIR.
- b. The UWSP assumes a 20-year build-out.¹³ Build-out period is important, because the mitigation claimed through mixed-use development will only occur, and is only modeled for SEIR analysis, at full build-out. During the build-out period, community population will not support either the planned commercial development or the transit service claimed as VMT mitigation. The longer buildout is delayed, the longer GHG emissions from partial development will be inadequately mitigated. Based on the data presented in Section III of these comments, such build-out is likely to take several generations.
- c. The assumed 20-year build-out rate is not substantiated, and is inconsistent with the County’s historical housing growth rate; SACOG’s growth projections

for the County; and the fact of long-delayed build-out for numerous already-approved projects, as documented in Section III of these comments.

The SEIR must therefore substantiate the assumed buildout period; and model and mitigate GHG and AQ emissions, and any related impacts during the protracted build-out period.

RESPONSE 17-3

For a discussion of the consideration of housing demand and other similar economic and social issues in the Draft EIR, please see Response 15-81.

The Draft UWSP indicates an anticipated 20-year buildout for the project area. As required under CEQA, the Draft EIR included an analysis of the of the built-out UWSP, consistent with the requirement that an EIR addresses the "whole of the action," and does not segment or piecemeal the project into separate parts or approvals. This is consistent with the requirements of CEQA Guidelines section 15126.2(a), which states that "[a]n EIR shall identify and focus on the significant effects of the proposed project on the environment." It would be improper and not required for the EIR to analyze the effects of a partially-built out UWSP. The exact timing, pace or order of development within the UWSP area is unknown and would largely be driven by market conditions, which it is reasonable to assume would vary throughout the built-out period. Making assumptions about such uncertain events would be speculative, and thus inconsistent with the provisions of CEQA Guideline section 15145. Instead, the Draft EIR analyses are based on reasonable assumptions of builtout periods. CEQA Guidelines section 15151 states that "[a]n evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible."

Draft EIR Impact TR-2 addresses the potential VMT impacts of the proposed project. It describes the methods of modeling VMT for a complex land use development such as the proposed UWSP, including the accounting that is made for trips that are internal and external to the project area. Impact TR-2 is determined to be less than significant, and as such there are no mitigation measures identified related to VMT. The references to VMT in the comment appear to relate to reasonable assumptions built into the VMT model which reflect how employee and household travel behaviors are expected to take

place in the development; such assumptions are part of the MTP/SCS model that was developed and validated by SACOG. These assumptions are not mitigation as suggested in the comment.

Finally, it is incorrect to assume that a lengthened buildout period would exacerbate GHG emissions. In fact, all reasonable assumptions suggest that the vehicular fleet will incrementally become cleaner, as will the sources of electricity, which would likely counter-balance any increased GHG emissions associated with travel. The comment includes no evidence to support a conclusion that a significant VMT impact would occur due to changes in the pace or order of development in the proposed UWSP.

Regarding GHG emissions, please also see Response 17-1. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-4

1. SACOG Projected Growth Projections

The Sacramento Area Council of Governments (SACOG) projects regional population, jobs, and housing growth to support mandated regional transportation and land use plans.¹⁴

Table 1. SACOG PROJECTED GROWTH PROJECTIONS

Planning Period	Needed New Housing	No. of Years	Annual Avg
2016-2040	37,230	24	1,551 ⁽¹⁾
2020-2035	16,470	15	1,098 ⁽²⁾
2020-2050	35,610	30	1,187 ⁽²⁾
Median of SACOG's current (June 2024) projections			1,143

¹⁾ SACOG. 2020 MTP/SCS.¹⁵

RESPONSE 17-4

Please see Response 17-3 above. This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-5

B. THE COUNTY'S THREE GROWTH STRATEGIES

*The County's General Plan plans for new growth primarily through the following strategies:*¹⁸

- 1) *infill development in existing communities (including commercial corridors);*
- 2) *buildout of [approved] planned communities; and,*
- 3) *master-planning of new growth areas."*

We review below the available housing capacity in each of these categories:

1. "Infill" Strategy, Including Commercial Corridors

The County reports,

*"Infill is highlighted as a priority in the goals, policies, and implementation measures of multiple General Plan elements... The General Plan estimated that between 10,000 to 18,000 housing units could be accommodated on vacant or underutilized properties in infill areas, and that up to 19,000 housing units could be accommodated by revitalizing commercial corridors."*¹⁹

Accordingly, infill and revitalizing commercial corridors together provide an estimated 29,000-37,000 dwelling units (DU) of available housing capacity.

2. "Buildout of Planned Communities" Strategy

Since 1969 Sacramento County has approved 12 "planned communities" providing 59,175 DU of new housing capacity. None of these have completed build-out – five are in some phase of construction and seven have yet to break ground.²⁰ The County notes:

*"Many of these growth areas have yet to begin construction and offer a stock of land for growth that is anticipated in the unincorporated County."*²¹

Table 3 below, displays the twelve approved projects. Of the approved 59,175 DU, 43,348 DU (73 percent) remain unbuilt, and could provide 66 years of approved, appropriately zoned, growth capacity at the historic growth rate (Table 2 above).

TABLE 3. APPROVED RESIDENTIAL DEVELOPMENT PLANS

Approved Plan	Number of Dwelling Units	When Approved	Buildout Status
Rancho Murieta	5,189	1969	50% BO (est) ²²
North Vineyard Station	6,063	1998	63% BO
Vineyard Springs	5,942	2000	68% BO
Elverta	5,601	2007	Not begun
Easton	1,644	2009	Not begun
Glenborough	3,239	2009	Not begun
Florin Vineyard (Gap)	9,919	2010	28% BO
Cordova Hills (Braden)	8,000	2013	Ground broken
Mather Field	1,291	2016	Not begun
Mather South	3,522	2020	Not begun
NewBridge	3,075	2020	Not begun
Jackson Township	5,690	2022	Not begun
Total	59,175	Avail Un-built Capacity:	43,348

3. “New Growth Areas” Strategy

The County reports,

“When adopted in 2011, the General Plan added policies to the Land Use Element to allow applicants to request an expansion of the Urban Policy Area (UPA) within the Urban Services Boundary...subject to...proposing logical planning boundaries and “Smart Growth” criteria. Since these new growth policies were added to the General Plan, the County has accepted seven applications... for new growth areas. Three master plans amending the UPA have been approved... [shown in Table 3] the four remaining ...are still in-progress....[comprising] a total of 48,495 additional units”

Table 4 shows the four pending plans, the three largest of which lie outside the UPA.

Table 4. PENDING “NEW GROWTH” AREAS

Pending New Growth Plans	Number of Dwelling Units
Upper Westside **	9,356
Grandpark **	21,705
West Jackson *	16,484
Antelope Acres	950
Total Pending	48,495

* Outside the Urban Planning Area (UPA), which is designated in the General Plan as accommodating all growth for the current planning period (2005-2030).

** Outside both the UPA, and the Urban Services Boundary (USB), which is designated in the General Plan as the boundary of ultimate growth beyond which it is intended urban services will never be provided, and which should be modified only under “extraordinary circumstances.”²³

Table 5 below shows the five large projects outside the UPA, two of which are approved and three pending:

TABLE 5. “NEW GROWTH” OUTSIDE UPA

Project	Status	Number of Dwelling Units
NewBridge	Approved	3,075
Jackson Township		5,690
Sub Total - Approved		8,765
West Jackson	Pending	16,484
Upper Westside		9,356
Grandpark		21,705
Sub-Total - Pending		47,545
Total - Approved & Pending		56,310

RESPONSE 17-5

Please see Response 17-3 above and Response 15-86. This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-6

C. THE COUNTY HAS APPROVED FAR MORE HOMES THAN THE MARKET REQUIRES

Sacramento County has ignored housing growth projections and historical growth rates in its development decisions; has allowed planning of every “new growth” project proposed to it; has approved two such projects; and has three more in planning. Added to existing infill capacity and the twelve previously approve protects, the result is a many-fold over-supply of approved homes over market demand, as documented below.

1. Sacramento County – Existing Housing Capacity

The below table displays the County’s current housing capacity in each of its three growth accommodation strategies, and the total available capacity.

TABLE 6. AVAILABLE COUNTY HOUSING CAPACITY

Growth Strategies	Available Growth Capacities (DU)
Infill, incl. Commercial Corridors	29,000-37,000 Median = 33,000
Approved Planned Communities	43,348
Subtotal – Currently Avail Capacity	76,348
Pending “New Growth” Projects	48,495
Total Avail and Planned Capacity	120,843-128,843 Median = ~125,000

2. Growth Capacity Greatly Exceeds Foreseeable Market Demand

As displayed below in Table 7, applying SACOG’s current growth projections, the County has to-date approved 67 years-worth of growth.

Applying the probably more realistic historical County growth rate, and recognizing that Supervisors have historically approved every proposal put before them, and will likely favor approving the currently pending projects, the County is on course to approve almost 200 years-worth of growth.

TABLE 7. YEARS TO BUILD OUT EXISTING AND PLANNED CAPACITIES

Foreseeable Annual Growth Rates (DU)		Years to Build Out	
		Currently Available Capacity (76,348 DU)	Incl. Pending New Growth (125,000 DU)
SACOG Median Projection (Table 1)	1,143	67 years	109 years
County Historical (Table 2)	655	116 years	190 years
County Calculation	—	—	140+ years ²⁴

As previously noted, Sacramento County's 2011 GPU,

"...allow[ed] applicants to request an expansion of the UPA anywhere within the USB regardless of demand or existing capacity...[t]he County's intent was to let the market determine the need and location for new growth...."

However, a 67-190 year timeframe to recoup development investment defies normal market supply/demand dynamics, and suggests the County's "come one, come all" approvals have encouraged speculation on future land values, to the detriment of investment in well-planned, lower VMT infill housing.²⁵

²⁴ Sacramento County. Sacramento County 2030 General Plan 2020 Annual Report, Attachment 1, p. 13.

²⁵ "Locating...growth...within an area dominated by open space and agriculture conflicts with smart growth. ...this superabundance of greenfield growth area is likely to draw development away from the more challenging infill and redevelopment projects..." (GPU FEIR, pp. 3-31 - 3-32).

RESPONSE 17-6

Please see Response 15-2. This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-7

D. LAND USE EFFECTS OF EXCESS ENTITLEMENTS

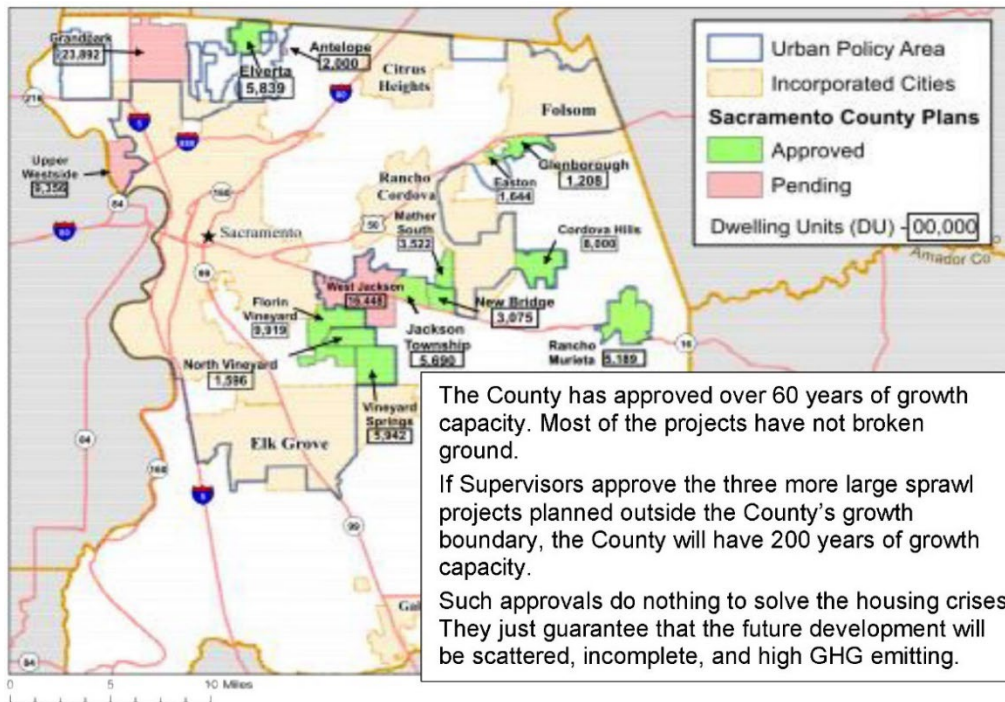

The direct effects of excess entitlements would be scattered, disjunct, incomplete development, incapable of supporting claimed "mixed use" development and transit service.

1. Scattered Sprawl Development

As displayed on the below map, the County's 12 approved and four currently planned sprawl projects are scattered across much of the County. Of the approved projects only the three Vineyard projects and Rancho Murieta are in some phase of construction.

Their remaining capacity, and that of the others awaiting ground-breaking, represent undeveloped, approved, available, housing capacity. Clearly, the County housing crises is not caused by insufficient approvals, nor will it be cured by additional approvals.

Fig 1. COUNTY RESIDENTIAL DEVELOPMENT PROJECTS, APPROVED AND PENDING

2. Incomplete Development

As demonstrated in Table 3, premature land entitlements have resulted in “zombie” subdivisions, lying undeveloped, or at best partially developed, for decades, with adverse social, economic, and environmental effects.²⁶

²⁶ “Local jurisdictions shape the future of their communities through the entitlement of land... When land is entitled and subdivided prematurely, before the market demands new housing, the following problems can result:

“Threats to health and safety. Lots that sit undeveloped for many years can foster ...[environmental] and other health and safety hazards...”

Fiscal threats. ...local...costs... from houses that were planned but remain unconstructed.

“Fragmented development patterns. Remote...poorly located developments ... worsen the environmental impacts of roads and other public services. [and] disrupt wildlife habitat and migration corridors.

“Market flooding and distortions. The oversupply of vacant lots depresses the value of even...well located lots that could and should be serving... demand...”. (Lincoln Institute of Land Policy. Arrested Developments, Combating Zombie Subdivisions and Other Excess Entitlements”, pp. 6-8. January 2014. Online: <https://www.lincolnst.edu/publications/policy-focus-reports/arrested-developments>).

RESPONSE 17-7

The comment broadly refers to adverse effects that could result from partially developed subdivisions. The map provided identifies a number of master planned developments that have been approved and are incrementally developing over time. The vague references to social, economic, and environmental effects do not address the adequacy of the analyses presented in the Draft EIR.

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-8

A. CUMULATIVE EFFECTS CONTRARY TO STATE AND REGIONAL PLANS AND GUIDANCE

The cumulative effects of the County's approved and proposed development outside the UPA to open space, agricultural, and habitat lands would be considerable. Such greenfield development is far more impacting than would be accommodating growth in infill development.^{27,28}

In addition, the State has long and clearly maintained that, notwithstanding future phase-out of gasoline-fueled vehicles, reducing VMT by directing growth into existing communities is critical to meeting the State's GHG ; and avoids a wide variety of other environmental harms. For example (emphases added):

1. SB 375 states:

"Section 1(c). Greenhouse gas emissions from automobiles and light trucks can be substantially reduced by new vehicle technology and by the increased use of low carbon fuel. However, even taking these measures into account, it will be necessary to achieve significant additional greenhouse gas reductions from changed land use patterns and improved transportation. Without improved land use and transportation policy, California will not be able to achieve the goals of AB 32", (emphasis added).

A chief way to achieve "improved transportation" is expanded public transit, which depends heavily on increasing rider density through infill development.

2. CARB's Scoping Document States:²⁹

"...strategies that support more compact development infill areas...have the greatest potential to reduce emissions (p. 5) ... the State has long been clear that urban infill projects, particularly in high-resource and low-VMT areas, would be generally supportive of the State's climate and regional air quality goals" (p. 20).

3. CARB's Priority GHG Reduction Strategies" include:³⁰

"... enable mixed-use, walkable, transit-oriented, and compact infill development", and, "Preserve natural and working lands ... guide development toward infill areas and do not convert "greenfield" land to urban uses (p.12).

4. CARB's SCS Progress Report

SB 375 requires regional agencies like the Sacramento Council of Governments (SACOG) to adopt a regional Sustainable Community Strategies (SCS) to reduce VMT through coordinated transportation, housing, and land use planning. CARB sets VMT reduction targets SCS's and evaluates compliance. Developments consistent with the SCS are relieved of certain CEQA requirements.³¹ However, CARB reports,

"Many local agencies have not successfully advanced infill and climate-friendly development as needed, even with many regions identifying priority areas in the SCSs to do that. Too often growth is still being planned for land outside existing communities or built there first".³²

5. CARB Mitigation Recommendations

In the context of SCS consistency in Sacramento County, CARB has recommended mitigation criteria:³³

"SB 375 GHG emissions mitigation should address diversion of investment from more environmentally sustainable infill ... inclusion of transit and active transportation... does not resolve the negative impacts from continuing those types of longstanding investment patterns. Mitigation should address this by...increasing investment in infill..."

"Over three quarters of Californians see climate change as a threat to our economy and quality of life. The significant and negative impacts of climate change already occurring today on our shared transportation infrastructure and mobility are warnings of the dire future impacts that will occur without consistent and sustained local and regional investment consistent with climate commitments".

6. The Office of Planning and Research states,

"Infill development is critical to... be environmentally- and socially-sustainable.OPR is committed to promoting compact development in order to: Reduce greenhouse gas emissions and improve regional air quality by reducing the distance people need to travel; reduce conversion of agricultural land, sensitive habitat, and open space for new development; reduce costs to build and maintain expensive infrastructure; facilitate healthy and environmentally-friendly active transportation; reduce storm-water runoff resulting in flooding and pollution of waterways; bring vibrancy, community and social connection to neighborhoods".³⁴

RESPONSE 17-8

The Draft EIR considered an Infill Alternative on pages 3-5 through 3-7 in Chapter 3, *Alternatives*, of the Draft EIR. The Draft EIR looked at 14 different potential infill corridors within the unincorporated County. These areas were identified in SACOG's Sacramento Region Metropolitan Transportation Plan/Sustainable Communities Strategy or Blueprint. Four specific corridors (Florin Road Area, North Watt Area, and Stockton Boulevard Central and South Areas) were identified as areas that could feasibly accommodate the 9,356 dwelling units and the approximately 7,944 on-site jobs projected under the proposed project (see Table ALT-1: Infill Corridors, page 3-7 of the Draft EIR).

In explaining why the Infill Alternative was considered but dismissed from further evaluation, the Draft EIR addressed several factors that led to the County's conclusion that the alternative was not feasible:

- The UWSP applicants do not control properties outside of the UWSP area;
- In comparison to the proximity of the UWSP project site to downtown Sacramento and the regional job core, the more distant location of the infill corridors could lead to increased VMT and associated emissions of criteria pollutants and GHG;
- Past land uses in the infill corridors present a greater potential for encountering contaminated soils and other toxic substances; and
- Development along the infill corridors would likely result in the need to demolish existing housing units, necessitating the relocation of existing residents.

The County determined that this alternative would be infeasible to implement. CEQA Guidelines section 15126.6(a) provides that "an EIR is not required to consider alternatives which are infeasible." Based upon these considerations, the Infill Alternative was not selected for further analysis.

In preparing this response, the County further reviewed the analysis of the Infill Alternative and is making the following minor refinements which do not change, and in fact reinforce the conclusion of infeasibility of the Infill Alternative.

Draft EIR, Chapter 3, *Alternatives*, page 3-5, the last paragraph is revised to read:

The Infill Alternative envisions the growth included in the proposed UWSP being directed toward ~~three~~ **four** corridors located within unincorporated Sacramento County: (1) Florin Road **Area**; (2) North Watt **Avenue Area**; and ~~the~~ (3) Stockton Boulevard Central and **(4) Stockton Boulevard South Areas** (see **Plate ALT-1**). Growth within these corridors would be developed based on the “inward expansion model” associated with Pathway 3. According to this model, it is assumed that by 2050, these corridors could support an additional 4,980 jobs and 11,800 housing units, and thus could accommodate the 9,356 dwelling units **but would be insufficient to accommodate** the approximately ~~10,300~~ **8,900 on-site** jobs included in the proposed UWSP (see **Table ALT-1**).

Draft EIR, Chapter 3, *Alternatives*, page 3-8, first partial paragraph, the following is added prior to the last sentence:

In addition, as noted above, the Infill Alternative would have insufficient capacity to accommodate the approximately 8,900 on-site jobs that would be created in the proposed UWSP.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-9

B. CHAPTER 8, CLIMATE CHANGE

Mitigation Measure (MM) CC-1b claims to mitigate operational GHG emissions, but despite a great deal of verbiage avoids imposing substantive GHG-reduction requirements on either the residential or commercial components of the UWSP. We have the following comments.

1. MM CC-1b is Inconsistent with SMAQMD Requirements

SEIR MM CC-1b incorrectly asserts that the UWSP is consistent with the Sacramento Metropolitan Air Quality Management District (SMAQMD)’s best management practices (BMPs) to mitigate GHG emissions³⁵ (the SMAQMD BMPs have also been adopted by Sacramento County³⁶).

SMAQMD’s GHG BMP 1 requires that, “*Projects shall be designed and constructed without natural gas infrastructure*” (SEIR, p. 8-26); whereas SEIR MM CC-1b states, “*Consistent with SMAQMD’s GHG BMP 1, natural gas shall be prohibited in all residential land uses*”.

The assertion of consistency is unfounded, since the UWSP proposes that only residential uses be without natural gas infrastructure; and per the SEIR, natural

gas use in UWSP commercial spaces would emit 5,996 MTCO₂e per year. The key failing is that SMAQMD's BMPs avoid impacts; whereas the UWSP will cause impacts, for which the SEIR proposes various mitigations, the feasibility of which is questioned below in these comments.

The SEIR should explain why it is infeasible to avoid installing natural gas service to commercial spaces as well as residential, in order to prevent the above-cited emissions of 5,996 MTCO₂e per year.

³⁵ SEIR, p. 8-31.

³⁶ "Sacramento County adopted SMAQMD's thresholds of significance...on December 16, 2020, by Resolution #2020-0855" (SEIR, p. 8-24)

RESPONSE 17-9

As discussed in the BMP 1 (Tier 1) discussion on Draft EIR page 8-28, the high-density residential uses and non-residential components of the proposed UWSP could include natural gas infrastructure. Therefore, SMAQMD BMP 1 (projects shall be designed and constructed without natural gas infrastructure) may not be implemented within certain uses in the proposed UWSP and in that circumstance the UWSP would be inconsistent with BMP 1.

It is important however to recognize that SMAQMD BMP 1 does not require projects to be designed and constructed without natural gas infrastructure. Rather, BMP 1 is part of an overall approach developed by SMAQMD to assess the significance for GHG emissions generated during operation of land use development projects. Because operation of some uses within the proposed UWSP could include the use of natural gas and if so would not comply with BMP 1, a significant GHG emissions impact is identified.

To mitigate the significant impact, implementation of Mitigation Measure CC-1b would require either on-site or off-site measures to be implemented to avoid the impact of natural gas combustion. On Draft EIR page 6-35, the first bullet of Mitigation Measure CC-1b requires natural gas to be prohibited in all proposed residential land uses. The mitigation measure does not assert that the UWSP would be consistent with SMAQMD's BMPs; however, it does state that the specific requirement for residential uses would be consistent with SMAQMD's GHG BMP 1, which is correct.

Implementation of Mitigation Measure CC-1b would reduce the significant GHG emissions impact to a less-than-significant level; therefore, the EIR is not required to make a determination as to whether it would be feasible to avoid installing natural gas service to the proposed commercial and residential spaces under the proposed UWSP.

COMMENT 17-10

2. Avoiding Residential Gas Infrastructure is Not Additional

MM CC-1b states, “*Consistent with SMAQMD’s GHG BMP 1, natural gas shall be prohibited in all residential land uses*” (SEIR, p. 8-34). This requirement repeats State Building Code requirements, which strongly dis-incentivize new mixed-fuel residential construction.³⁷

CEQA requires that mitigation be additional to what is already required (Guidelines § 15126.4(c)(3)). To the extent that new construction will avoid natural gas infrastructure due to State regulatory action, the proposed mitigation is not eligible for mitigation credit under CEQA.

³⁷ Natural Resources Defense Council. California Code Takes Another Step Toward Clean Buildings. September 11, 2024. Online: <https://www.nrdc.org/bio/merrian-borgeson/california-code-takesanother-step-toward-clean-buildings>

RESPONSE 17-10

As stated in the Natural Resources Defense Council website linked to the comment, the 2025 Building Energy Efficiency Standards strongly encourage heat pumps for both space and water heating for new homes, which may reduce overall natural gas use associated with new residential uses in California, but they do not appear to prohibit natural gas in all residential land uses as would be prohibited under the UWSP with implementation of Mitigation Measure CC-1b. Therefore, this provision of Mitigation Measure CC-1b is an appropriate component of the County’s overall approach to reduce UWSP GHG emissions associated with natural gas usage under the California Environmental Quality Act.

The comment’s reference to CEQA Guidelines section 15126.4(c)(3) is incorrect. The specific wording of that Guideline section states

Measures to mitigate the significant effects of greenhouse gas emissions may include...[o]ff-site measures, including offsets that are not otherwise required, to mitigate a project’s emission;”

This provision is intended to avoid double counting of GHG offsets, it does not state, as implied in the comment, that implementation of existing regulations cannot be properly included as mitigation.

COMMENT 17-11

3. Procuring Renewable Energy to Mitigate Commercial GHG Emissions Would be Non-Additional.

MM CC-1b identifies numerous options to demonstrate GHG reductions from future commercial uses, the simplest and most direct being, “*Procure renewable energy...via purchases from...SMUD...*” (SEIR, p. 8-36).

The State of California requires all-renewable electricity. SB 100 directs that all electrical utilities generate 100 percent carbon-free (i.e. renewable) electricity on a mandated schedule: 50 percent by 2026; 60 percent by 2020; and 100 percent by 2045. In addition, SMUD has adopted a policy-goal of generating 100 percent of its electrical production renewably by 2030. SMUD is progressing towards that goal, and will almost certainly reach it well before 2045. All these dates are within the UPWSP's 20-year build-out timeframe.

CEQA requires that mitigation be additional to what is already required (Guidelines § 15126.4(c)(3)) or already existing. To the extent that renewable, carbon-free energy is available as a result of State legal requirements and/or SMUD's initiative, it is not eligible for mitigation credit under CEQA. The SEIR should reflect this caution in the SEIR's discussion, and substantiate the feasibility of any such mitigation by describing how mitigation credits (MTCO_{2e} per year) would be calculated over time to reflect the source's increasing renewable energy mix, phasing out non-renewable energy in 2045 or earlier.

RESPONSE 17-11

Draft EIR Chapter 2, Project Description, page 2-60 states that "[i]t is anticipated that buildout of the proposed UWSP would take approximately 20 years." Thus, it is reasonable to assume that some development under the UWSP would become operational prior to years 2030 and 2045, which are the years that SMUD and the State of California have set for goals to achieve 100 percent of their electrical production from renewable sources, respectively. Therefore, the procurement of renewable energy provision of Mitigation Measure CC-1b is an appropriate component of the County's overall approach to reduce UWSP net GHG emissions. To the extent that SMUD and the State of California are successful in achieving 100% renewable energy in the future the GHG emissions of the proposed project from energy use, and thus its mitigation burden under Mitigation Measure CC-1b would be reduced. As such, the inclusion of requirements to procure renewable energy in Mitigation Measure CC-1b provide assurances that GHG reductions would occur appropriately over the approximately 20-year development period for the proposed UWSP.

COMMENT 17-12

4. SEIR Table CC-6 Inaccurately Claims Consistency with CARB's Scoping Plan

Table CC-6 (SEIR, pp. 8-40 - 8-42) purportedly demonstrates that, "the proposed UWSP generally aligns with most of the recommended project attributes outlined in the 2022 Scoping Plan and would be consistent with the state's GHG goals" (SEIR, p. 8-43).

This is incorrect. Notwithstanding the SEIR's rationalizations and claims of equivalency, the UWSP is inconsistent with at least the following of CARB's "key suggested project attributes". As with assertion of consistency with the SMAQMD BMPs, the key failing is that CARB's "project attributes" all avoid impacts;

whereas the UWSP will cause impacts, for which the SEIR proposes various mitigations, the feasibility of which is questioned elsewhere in these comments.

CARB Key Attributes:

- a. CARB Attribute: “Is located on infill sites that are surrounded by existing urban uses and reuses or redevelops previously undeveloped or underutilized land that is presently served by existing utilities and essential public services (e.g., transit, streets, water, sewer).”
 , the UWSP is not infill surrounded by existing urban uses, or on a site with existing utilities and services.
- b. CARB Attribute: “Does not result in the loss or conversion of natural and working lands”.
 , the UWSP will result in the loss or conversion of natural and working lands
- c. CARB Attribute: “Consists of transit-supportive densities (minimum of 20 residential dwelling units per acre), is in proximity to existing transit stops (within a half mile) or satisfies more detailed and stringent criteria specified in the region’s SCS.”
 , the UWSP does not consist of transit-supportive densities (only a portion of the project meets this criterion), and the project site is not in proximity to existing transit.
- d. CARB Attribute: “Uses all-electric appliances without any natural gas connections and does not use propane or other fossil fuels for space heating, water heating, or indoor cooking”.
 , the UWSP would use fossil fuels for commercial property space heating, water heating, or indoor cooking, resulting in emissions of 5,996 MTCO₂e per year.

RESPONSE 17-12

As discussed in Draft EIR Impact CC-2, pages 8-39 to 8-43, including Table CC-6, operation of the proposed UWSP would not align with all of the recommended project attributes outlined in the 2022 Scoping Plan and would not be consistent with the State’s GHG reduction goals. However, with implementation of Draft EIR Mitigation Measures CC-1b and CC-1c, this impact would be reduced to less than significant.

COMMENT 17-13

5. The Mitigation Scheme Conflicts with the Normal Development Cycle

- a. Commercial Space in Early Phases is Unlikely to Build-out.³⁸ MM CC-1b directs that a GHG Reduction Plan by each individual development will demonstrate that its share of commercial space will contribute to the project’s total required GHG reductions. This scheme would require that each

individual project includes, in addition to a portion of the UWSP's residential build-out, a commensurate share of the UWSP's total planned commercial development. However, early stages of residential construction will not provide an adequate customer base to support the commercial build-out envisioned at UWSP completion; and the dedicated space will remain undeveloped until such time as adequate urban mass has accumulated to support commercial activity.

³⁸ UWSP Specific Plan, p. 8-6; see earlier quote and full citation, Section II.

RESPONSE 17-13

The comment appears to indicate that Draft EIR Mitigation Measure CC-1b would require that each individual project would be responsible for a commensurate share of the UWSP's total planned commercial development, regardless of the total amount of each project's proposed non-residential uses. This is not correct. As stated in Mitigation Measure CC-1b, page 8-35, the purpose of the GHG Reduction Plan "is to document GHG emissions reduction for each future development project through project specific GHG reduction measures on-site and to demonstrate that the project would achieve the required reduction of 1.42 MTCO₂e per year per thousand square feet of non-residential development to meet the total reduction of 5,996 MTCO₂e per year upon complete buildout of the proposed UWSP." Consistent with the SMAQMD approach for determining the significance of GHG emissions impacts associated with land use development projects, since implementation of Mitigation Measure CC-1b would prohibit the use of natural gas in all residential land uses, applicants of proposed residential uses would not be required to document on-site emissions reductions and/or offsite emission reductions.

COMMENT 17-14

- b. Lack of Commercial Build-out will Trigger Mitigation Change Requests. The County's excess entitlements would delay build-out of the UWSP and its commercial space long beyond normal investment horizons, and perhaps indefinitely. In response developers will ask the County to modify the Specific Plan, converting the planned commercial space to residential development, thereby further reducing the benefits of mixed-use. This is not a mere speculative possibility – Sacramento County and other jurisdictions have responded, and are responding, favorably to economically-based requests to modify development mitigation conditions.³⁹

³⁹ "On February 28, 2023, the Board adopted a major amendment to the North Vineyard Station Specific Plan to implement the updated North Vineyard Station Transportation Mitigation Strategy. This strategy was well-received by the development community with many acknowledging that it significantly reduces the infrastructure and financial burdens...". Sacramento County is also currently re-considering previously approved mitigation conditions for the Florin Vineyard, Vineyard Springs, and Elverta Specific Plans, regarding roadway improvement, transportation infrastructure, and water supply requirements (Sacramento County, General Plan of 2005-2030 2023 Annual Report, Attachment 1, p. 9).

RESPONSE 17-14

The likelihood and nature of any future modification to the proposed UWSP, if approved, are entirely speculative. The cited changes to other approved specific plans, cited in the comment, relate to issues that are not associated with land use changes. They are focused on the funding and delivery of infrastructure, including roads, water system, and other part of the County transportation network. The acknowledgement that other approved plans have requested adjustments to infrastructure design and funding does not represent a trend or foreseeable circumstance wherein the project applicant would propose changes to the land use plan in the UWSP. In the currently unforeseeable event that such changes would be proposed within the UWSP, the County would be required to consider the effects of such changes on the environment, and would be required to conduct supplemental environmental review necessary to achieve compliance with CEQA.

A potential future request to change the land use mix within the proposed UWSP is not supported by evidence in the record. Cited references to other specific plan project that have requested changes to infrastructure delivery and/or funding is not evidence to support the assertion that the UWSP project applicant would request land use changes. As such, this comment is speculative. CEQA Guidelines section 15145 states that “[i]f, after thorough investigation, a Lead Agency finds that a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact.”

COMMENT 17-15

C. CHAPTER 14, LAND USE – THE SEIR’s RELIANCE ON LU-120 IS UNSUPPORTED

1. The SEIR Relies on GPU Policy LU-120

The SEIR states:

“General Plan Policy LU-120 is intended to reduce impacts of many different types such as growth inducement, unacceptable operating conditions on roadways, poor air quality, and lack of appropriate infrastructure – by establishing design criteria for all amendments to the UPA. A project must be consistent with the policy before it may be considered for approval ...the proposed UWSP would meet the requirements of LU-120. The tables below (Table LU-2 and Table LU-3) summarize how the proposed UWSP complies with ...Policy LU-120. Given that the proposed UWSP has been deemed consistent, impacts related to conflict with growth management policy would be less than significant (SEIR p. 14-23).

2. The Efficacy of Policy LU-120 is Unsubstantiated

As discussed in Section II.A of these comments and Attachment 3, the County’s GPU FEIR did not review Policy LU-120. On the contrary, the GPU FEIR determined that project-specific expansion of the UPA would cause significant impacts.

RESPONSE 17-15

The comment raises questions regarding the Draft EIR's analysis and conclusions related to General Plan Policy LU-120. The growth management policies that are included in Policies LU-119 and LU-120 were adopted by the County in 2011 in lieu of General Plan Update FEIR Mitigation Measure LU-1. These policies represent a performance-based approach emphasizing high quality, smart growth criteria rather than business-as-usual approach that repeated historical land use patterns. LU-119 and LU-120 were developed with the primary objective of (1) reducing VMT by identifying sufficiently high densities to support transit; (2) requiring infrastructure, including transit, is put in place at the same time the project is developed; (3) maintaining a jobs-housing balance that reduces the need for long commutes and ensures lower VMT; (4) ensuring a project design that will enable residents to walk, ride bicycles, or take transit to their jobs and schools; and (5) requiring a reasonable amount of mixed-use development. Draft EIR Table LU-3, pages 14-29 through 14-31, includes a discussion of the consistency of the proposed UWSP with LU-120's performance criteria, scoring 24 out of 24 possible points.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-16

D. CHAPTER 18, TRANSPORTATION

1. Urban Sprawl Induces Increased VMT

That sprawl induces increased VMT is well established.^{40,41,42} As noted elsewhere in these comments, State and regional guidance and the County's own planning documents emphasize the need to change the post-WWII paradigm of auto-centric, dispersed development to an infill approach that helps address numerous environmental problems, including by reducing VMT/GHG emissions.

However, as substantiated in Section III of these comments, Sacramento County continues to approve disjunct greenfield projects remote from existing jobs, services, and infrastructure – i.e. “urban sprawl”.

⁴⁰ Karamangla, S. *What's Your Neighborhood's Climate Impact?* New York Times. February. 6, 2023. Online: <https://www.nytimes.com/2023/02/06/us/california-neighborhood-climate-impact.html>

⁴¹ Sacramento County. See quote at Section V.E.2 of these comments.

⁴² State of California. Senate Bill 375, Section 1. 2008.

RESPONSE 17-16

This comment provides a general commentary on the effects of land development patterns in Sacramento County on VMT. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-17

2. UWSP Mitigation for Induced VMT is Based on Full Build-out.

The SEIR asserts that the UWSP will mitigate induced VMT through the benefits of mixed-use development – residents will reduce or eliminate car travel to and from required goods and services because such amenities will be locally available; commercial development will generate local employment opportunities; and there will be regular transit service to more distant locations with frequent headways and conveniently located bus stops.

However, such benefits are illusory because they are premised on unattainable full and timely project build-out.^{43,44}

⁴³ SEIR, Table TR-1: Project Trip Generation, p. 18-29. Assumed number of homes is 9,356, the UWSP's full build-out (SEIR, p. 18-29).

⁴⁴ "...a GHG Reduction Plan ...[will] document GHG emissions reduction for each future development project through project specific GHG reduction measures...to meet the total reduction ... upon complete buildout of the proposed UWSP (SEIR p. 8-35, emphasis added).

RESPONSE 17-17

This comment asserts that the project's VMT benefits through mixed-use development and available transit are "illusory because they are premised on unattainable full and timely project build-out". With regard to the pace and timing of project buildout, project-generated VMT would actually be reduced if absorption was slower, since growth in VMT is generally proportional to population growth²⁹. The comment offers no supporting evidence why full buildout of the project is 'unattainable'. The SACOG region has nearly one million dwelling units; the comment provides no basis for why an additional 9,300 units would be considered an unattainable buildout. In fact, SACOG's draft Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS) deemed "2025 Blueprint" contemplates 278,000 homes added to the SACOG region by 2045. Project units represent 3 percent of that total.

COMMENT 17-18

3. Excess Entitlements will Delay or Preclude the Proposed Mitigation

As discussed in Section III of these comments, Sacramento County's past and planned approvals of far more development than the housing market can absorb will result in widely scattered, partially built-out projects.

The 'Regional Retail' and local commercial development to which MM CC-1b assigns a major mitigation role will not occur in the timeframe envisioned, if ever.

²⁹ https://www.fhwa.dot.gov/policyinformation/tables/vmt/vmt_forecast_sum.cfm#:~:text=Light%2Dduty%20vehicle%20VMT%2C%20the%20largest%20component%20of,grow%20by%200.4%%20per%20year%20through%202050.&text=This%20outlook%20represents%20a%20move%20towards%20more,a%20an%20average%20rate%20of%202.0%%20annually.

Since GHG-impacts are caused by emissions accumulating in the atmosphere over time, delayed mitigation is a no mitigation.

The normal lack of commercial development during the early phases of project development will be extended indefinitely, precluding the internal “trip capture” benefits of mixed-use development, and resulting in VMT and GHG emissions greater than modeled.

And the presumed transit service will not be in place until full build-out provides the requisite ridership.

RESPONSE 17-18

The comment correctly reflects that conditions in and around the project site will evolve over time during the anticipated 20-year period of development of the proposed project. Nevertheless, the requirements of Mitigation Measure CC-1b are required to be implemented prior to the approval of each tentative map for individual projects within the UWSP area. The measure includes some provisions that are specific and definitive, such as prohibition of natural gas in all residential land uses. Other provisions allow for flexibility in how a specific performance standard is achieved. For example, each future project under the proposed UWSP is required to submit a GHG Reduction Plan which includes a combination of measures that will achieve the performance standard of reduction of 1.42 MTCO₂e per year per thousand square feet of non-residential development. Mitigation Measure CC-1b also provides for the potential purchase of off-site carbon credits in order to meet the performance standard. As such, there is no reason to conclude that early phase development in the UWSP would not be able to effectively implement Mitigation Measure CC-1b.

Regarding effects of the unknown and unknowable changes in the anticipated pace of development of the proposed UWSP, and such effects on VMT, it is common for specific plans to build out with differing levels of absorption of residential versus non-residential uses. However, we cannot know with certainty the type, rate, location of development in the project or outside of the project that would affect travel to/from the project. Consequently, such analysis would be speculative. The transportation analysis, including the analysis of VMT, was conducted following the Sacramento County Transportation Analysis Guidelines (TAG), which includes the analysis of the project under baseline conditions, consistent with the requirements of CEQA even though project development will occur over many years. However, such conditions would not result in a level of external vehicle trips generated that exceeds the total amount expected at project buildout.

COMMENT 17-19

4. Excess Entitlements as a Regional Problem

The Sacramento Area Council of Governments (SACOG) substantiates this concern, in connection with the region’s SB 375-mandated “2025 Sustainable Community Strategy/Metropolitan Traffic Plan” (SCS/MTP). SACOG is required to consider economic constraints (e.g., market demand) in formulating the

SCS/MTP. Applying the growth projections and the traffic analysis model used to develop the SCS/MTP. SACOG calculated VMT profiles for regional projects planned and under-construction, and concluded:

“... many... developing communities...show poor VMT and GHG performance because they are only being partially built out over the timeframe of the plan...[partly because] locally planned housing growth in developing communities greatly outnumbers SACOG’s regional housing demand projection for 2050; there is more than 400,000 units of developing community housing capacity compared to a total of 278,000 additional units anticipated between 2020 and 2050... This small amount of initial growth is usually insufficient to achieve the mix, density, and intensity of land uses ... required to generate the lower VMT performance that many project-specific traffic analyses indicate will be possible at buildout” (emphasis added).⁴⁵

Sacramento County projects analyzed by SACOG are shown below, with their projected percents of current regional per capita VMT through at least 2050 (the current SACOG planning period).

Table 8: Sacramento County Project-Induced VMT with Economically Constrained Build-Out

Sacramento County Project	Projected Percent of Regional VMT
Jackson West *	120-130
Jackson Township *	120-130
Glenborough *	120-130
Grand Park *	120-130
Vineyard Springs	110-120
North Vineyard Station	110-120
South Mather	110-120
Upper West Side *	<u>100-120</u>
Florin Vinyard	85-100

* Projects outside UPA

Due to incomplete build-out caused by the over-supply of entitled, competing developments, nearly all the projects would exceed current per capita VMT, which means they would increase total County GHGs in a greater proportion than the rate of population growth. This directly conflicts with the State’s goal to reduce total GHGs to net zero by 2045, notwithstanding population growth.

The UWSP compares favorably to most of the other projects, but is still substantially higher than the 85 percent below regional per capita VMT target

established in the County's General Plan,⁴⁶ consistent with requirements pursuant to SB 743.

⁴⁵ SACOG. Board of Directors Meeting, Agenda Item No. 15: Staff Report, 2025 Blueprint Discussion Scenario. April 18, 2024.

⁴⁶ Sacramento County. General Plan, Circulation Element, Table CI-1, Significance Thresholds for CEQA Transportation Analysis for Development Projects.

RESPONSE 17-19

The comment addresses a regional issue and presents information developed by SACOG as part of its MTP/SCS process. The UWSP Draft EIR analyzed at a project specific level the VMT impacts of the proposed UWSP (see Draft EIR Chapter 18, *Transportation*, Impact TR-2, pages 18-28 to 18-32). The VMT analysis presented was based on the use of SACOG's SACSIM19 tour-based travel demand model, an improved-upon version of the analytical tool used for the 2020 MTP/SCS. The results of that analysis are presented in Draft EIR Table TR-2, page 18-30 of the Draft EIR. The conclusion of the analysis is that the proposed UWSP would generate Work Tour VMT Per Employee and Household VMT per Capita levels below 85% of the regional average. As such, the proposed UWSP would have a less-than-significant impact on VMT. This represents a more detailed and accurate assessment of VMT than shown in the MTP/SCS.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-20

A. FAILURE TO MITIGATE GHG EMISSIONS BY ADOPTING A CAP

1. Sacramento County Promised to Adopt a CAP

The County's 2011 GPU FEIR committed to adopt a climate action plan (CAP) to mitigate climate change impacts of the GPU:

"Comprehensive plans to address climate change are being adopted by many jurisdictions, and they have come to be called Climate Action Plans.⁴⁷ ...As stated, mitigation...requires County adoption of the AB 32 goal as a General Plan policy, a Climate Action Plan, and development thresholds. In concert with state and federal activities, this mitigation is intended to offset the Project climate change impact, which has been determined to be significant".⁴⁸

The FEIR's explicit GHG mitigation language is presented in Attachment 5. As noted in Section I of these comments, almost none of the County's climate change commitments, including adopting a CAP ("within one year") have been fulfilled.

2. The Advantages of CAPs

The State encourages the use of CAPs for GHG mitigation.^{49,50} As noted in the FEIR, CAPs can be “comprehensive”. As programmatic plans subject to programmatic CEQA review, CAPs can offer better GHG-reduction than project-specific mitigation because they can,

- a. Provide an occasion for a more exhaustive consideration of effects and alternatives than would be practical in an EIR on an individual action;
- b. Ensure consideration of cumulative impacts that might be slighted in a case-by-case analysis;
- c. Avoid duplicative reconsideration of basic policy considerations;
- d. Allow the lead agency to consider broad policy alternatives and program-wide mitigation measures at an early time when the agency has greater flexibility to deal with basic problems or cumulative impacts; and
- e. Allow reduction in paperwork”.⁵¹

Properly done, CAPs can also provide co-benefits such as improved air quality, better health outcomes, energy efficiencies, better mobility options, and more equitable, livable communities.

These environmental advantages of CAPs over project-specific environmental analysis and mitigation are what made the County’s deferred mitigation promise credible as preferable to the CEQA default of project-specific environmental review.

3. The County has Failed to Adopt a CAP

Section I of these comments reviews the County’s 13-year failure to honor its GPU climate commitments, including by failing to adopt a CAP. As a result, the County has since 2011 approved three large-scale development projects, two outside the UPA, totaling 12,287 new dwelling units (DU),⁵² subject to individual, project-specific environmental review – exactly as if the County had failed in 2011 to offer any climate mitigation at all. The approved projects outside the UPA growth boundary relied on the “*new growth management policies*” which in Section II of these comments we assert are of unsubstantiated efficacy.

Consistent with its 2011 mitigation commitments, the County must adopt a CAP to provide comprehensive, programmatic CEQA review and mitigation of GHG emissions, including consideration of the potential cumulative impacts of the enormous amount of growth planned in the County outside the UPA.

⁵² Mather South, 3,522 DU; Newbridge, 3,075 DU; Jackson Township, 5,690 DU.

RESPONSE 17-20

On November 6, 2024, the Sacramento County Board of Supervisors voted 5-0 to approve the *County of Sacramento Climate Action Plan for the Unincorporated Sacramento County and County Operations*. In approving the CAP, the County adopted Measure GHG-17, Carbon Neutral New Growth which requires that all new growth projects outside the UPA or USB achieve carbon neutrality (i.e., net zero GHG emissions). The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-21

B. FAILURE TO IMPLEMENT GP POLICIES PRIORITIZING INFILL

1. GPU Direction on Growth Location is Ambiguously Broad

Sacramento County's General Plan provides broad guidance regarding where County growth will occur, stating that new growth should be directed to, "...*previously urbanized areas, planned growth areas and strategically located new growth areas...*" (GP LU Element, Strategy I., Goal, p. 20). GP Policy LU-3, similarly directs,

"It is the intent of the County to focus investment of public resources on revitalization efforts within existing communities, especially within commercial corridors, while also allowing planning and development to occur within strategic new growth areas". (GP LU Element, p. 25,)

Problems associated with such overly-broad, conflicting direction are discussed below in section V.G of these comments)

2. The GP Prioritizes Infill over "New Growth"

While the GP directs growth broadly, including to "*new growth areas*", it makes clear that infill, corridor revitalization, and buildout of already planned projects has priority:

"Near-term urban development will be accommodated through redevelopment and infill of vacant and underutilized parcels within existing urban communities and buildout of planned communities, because it is in these areas that urban infrastructure and services presently exist. New urban growth areas may also accommodate a portion of anticipated future growth" (GP LU Element, "Growth Accommodation", p. 24, emphasis added).

"...a balance must be achieved so that reinvestment in existing communities is not overshadowed by planning and development activity in new growth areas. The County must ensure that resources are not prematurely shifted away from corridor revitalization efforts and buildout of planned communities" (GP LU Element, "Assumption-Based vs. Proactive Strategies", p. 25, emphasis added).

Similarly, Policy LU-3 directs:

“It is the intent of the County to focus investment of public resources on revitalization efforts within existing communities, especially within commercial corridors, while also allowing planning and development to occur within strategic new growth areas” (GP LU Element, p. 25, emphasis added)

The GP’s “Urban Growth Accommodation Strategy” further states:

“It is the strategy of the County to accommodate as much residential, commercial and employment capacity as feasible within the existing urban area during the timeframe of the Plan” (GP LU Element, p. 26, emphasis added).

Other GP policies similarly direct the County to prioritize its resources to support infill development and commercial corridor redevelopment:

“Give the highest priority for public funding to projects that facilitate infill, reuse, redevelopment and rehabilitation, mixed-use development, and that will result in per person vehicle miles traveled lower than the County average” (GPU Land Use Element, LU-68 p. 71, emphasis added).

“Focus investment of County resources in commercial corridors to facilitate...infrastructure and public amenities to encourage and stimulate private investment” (GPU LU Element, LU-90, p.106, emphasis added).

3. Prioritizing is a Practical Necessity

The GP warns about “prematurely” directing staff to “new growth” because processing major sprawl applications is enormously time-consuming and could dominate County workload, to the detriment of infill, rehabilitating urban corridors, and completing already planned and approved projects:

“...buildout of infill parcels and planned communities [will occur] at existing zoned or planned densities... [and] will be done on a case by case basis... [so] will not often require significant additional County resources....

On the other hand, ...new growth areas...will require significant investment of County resources, including both financial capital and numerous full-time staff...

The County must ensure that resources are not prematurely shifted away from corridor revitalization efforts and buildout of planned communities to plan for development in the new growth areas” (GP LU Element, Assumption-Based vs. Proactive Strategies, p. 25, emphasis added).

For example, staff involvement in the UWSP includes:

“County Accounting and Fiscal Services, County Counsel, Planning and Environmental Review, Transportation, Water Resources, Special Districts Section, Economic Development, Regional Parks, Libraries”, and other departments, “which shall be useful to County in the review and processing of the [UWSP] Specific Plan”.⁵³

Staff is required to extensively negotiate with applicants; develop, oversee, and/or review major planning documents, including 1,000-page environmental analyses and technical appendices; conduct numerous briefings, workshops, and hearings; catalog a voluminous administrative record over a multi-year planning period, and prepare multiple decision documents and entitlements; e.g., for the UWSP staff would be required to:

1. Amend the GP to expand the UPA and USB boundaries.
2. Amend the GP Land Use Diagram
3. Amend the GP Transportation Plan
4. Amend the Bicycle Master Plan
5. Amend GP text and policies to align policies with development in Natomas Joint Vision Area,
6. Amend the Zoning Ordinance
7. Ensure adequacy of and process adoption documents for an Urban Services Plan, Affordable Housing Strategy, Water Supply Master Plan, and Public Facilities Financing Plan Adopt a Water Supply Master Plan.

Further indication of work involved in processing “new growth” projects is outlined on County project websites.^{54 55}

4. The County has Improperly Prioritized New Growth

No GP policies direct that planning “new growth area” projects should have priority over infill, revitalizing urban corridors, and buildout of planned projects. To the contrary, the GP repeatedly warns against prematurely shifting resources to “new growth”, as cited above. GPU Land Use Element Strategy IV, “Built Environment Preservation and Enhancement” discusses infill and corridor revitalization extensively.

But focusing the County’s resources on new growth areas is exactly what the County has done.

The GP’s admonishments have been ignored. As noted in Section III of these comments, the County has in recent years approved three very large, staff-intensive, “new growth area” projects (two outside the UPA), and is currently planning three more outside the UPA, including the UWSP, for a total of 56,310 DU. These recently adopted and planned projects would together provide 86 years of growth capacity at the historical growth rate shown in Table 2 of these comments.

Meanwhile, as shown in Section III of these comments, numerous already-approved “planned communities” await buildout; and since at least 2011 the County’s 2008 infill program - which would have supported, “*revitalization efforts within existing communities*” - has been moribund, and only recently re-activated with non-competitive State grant funds.⁵⁶

The failure to follow the GP's clear direction to prioritize infill has resulted in shifting growth away from more efficient infill development, with low or no GHG, air quality, and open space impacts, to high-impact sprawl, contrary to State plans as, as noted in Section IV.A and elsewhere in these comments.

⁵⁶ Sacramento County. General plan of 2005-2030, 2023 Annual Report, p. 8.

RESPONSE 17-21

The comment asserts the commenter's opinion on County planning processes and priorities but provides no specific indication as to how the analysis in the Draft EIR is deficient. It should be noted that the County is currently considering the application by a private applicant. Staff is currently working to complete the CEQA process and has not at this time made a recommendation regarding approval or denial of the application. Following publication of the Final EIR, staff will prepare an evaluation of the consistency of the proposed UWSP with the goals, objectives and policies of the County General Plan, including those that are mentioned in this comment. This evaluation will be included in the staff report that is presented to the County Planning Commission for their review and recommendation of action. The final determination of the consistency of the proposed UWSP with the County General Plan will be made by the County Board of Supervisors, which will consider all of the policies of the General Plan in making its determination of conformance with the Plan.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-22

C. FAILURE TO ENSURE LOGICAL PROJECT BOUNDARIES

1. The GP Requires Logical Boundaries

As reviewed in Section II.A of these comments, in 2011 the County adopted "*new growth management policies*" allowing project-specific expansion of the UPA, subject to specified conditions. The effectuating "new policies" are Policies LU-119 and LU-120. Policy LU-119 states in part:

"The County shall only accept applications to expand the UPA...if the Board finds that the proposal meets the following:

... Logical, comprehensive, and cohesive planning boundaries: Proposed UPA expansions/Master Plan processes must consist of a contiguous set of parcels that have a regular outside boundary consistent with the logical planning boundary illustrations below..."

LU-119 provides the following diagrams to illustrate “logical boundaries”:

Example of logical planning boundary.

Example of logical planning boundary.

2. The UWSP Boundary is Not Substantiated as “Logical”

UWSP boundaries are shown on the following diagrams:

The diagram on the left (UWSP SEIR, Plate PD-3, “UWSP Area”) displays an arbitrary, conceptual project boundary, evidently designed to comply with LU-119’s “*logical, comprehensive, cohesive, contiguous*” criteria.

The diagram on the right (UWS Specific Plan, Chapter 18, Figure.

Since over 80 percent of the claimed project boundary is in the ownership of nonparticipating owners, absent further substantiation it appears speculative, at best, to assume the proposed boundaries will be realized so as to satisfy the LU-119 criteria.

Absence of “*Logical, comprehensive, and cohesive planning boundaries*”, and an accurate notion of the actual project area, makes it impossible effectively plan for project features, including environmental impact mitigation.

RESPONSE 17-22

In its February 26, 2019 action to initiate the Upper Westside Specific Plan process, the Sacramento County Board of Supervisors determined that “the scope of the Study Area for potential plan boundaries is appropriate, with the understanding that actual plan

boundaries may be adjusted based on the results of the future technical studies, outreach and planning as part of the Master Planning process.”

In its staff report, the County reiterated the requirements of Policy LU-119 that requires that proposals to expand the UPA must “consist of a contiguous set of parcels that have a regular outside boundary consistent with the logical planning boundary” and that “[a]ll parcels within this boundary must be included in the UPA expansion and proposed Master Plan area.” The staff report stated that the UWSP project site is proximate to other urban areas and “has reasonably logical boundaries.” Nevertheless, it recognized that there could be a need to adjust the boundaries may need refinement based on future studies³⁰.

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-23

D. FAILURE TO JUSTIFY USB BOUNDARY CHANGE

1. The Role of County Growth Boundaries

Sacramento County has adopted two growth boundaries, as described below:

“The UPA and USB are the backbone of Sacramento County’s urban planning philosophy. These growth boundaries are intended to protect the County’s natural resources from urban encroachment, as well as to limit costly sprawling development patterns...the USB is intended to be a permanent boundary” (GP LU Element, Strategy I: Logical Progression of Urban Development, p. 19, emphasis added).

“Intent: The Urban Service Boundary (USB)... indicates the ultimate boundary of the urban area in the unincorporated County... based upon jurisdictional, natural and environmental constraints to urban growth. It is intended to be a permanent growth boundary not subject to modification except under extraordinary circumstances...”

...The USB allows for the permanent preservation of agriculture and rangelands, critical habitat and natural resources...” (GP Land Use Element, Logical Progression of Urban Development, p. 20, emphasis added).

³⁰ Leighann Moffitt, Planning Director, Office of Planning and Environmental Review, *Board of Supervisors Staff Report, PLNP2018-00284. Initiation of the Upper Westside Specific Plan Process*, February 26, 2019, page 14.

2. The SEIR Identifies No Justifying “Extraordinary Circumstances”

The SEIR offers no justification for its required project-specific expansion of the USB (p. 14-18). It only:

- a. Provides bland assertions, absent substantiation, that the UWSP would be consistent with GP policies (e.g., pp. 5-19, 5-20, 5-23, 14-21, 14-23, 16-13, 22-60, passim)
- b. Incorrectly asserts that, “*The Sacramento County 2030 General Plan includes a framework for considering requests to expand the USB and UPA and requires any expansion to meet a series of ‘smart growth’ performance criteria*”. (p. 14-21). Such a framework exists only for the UPA, as reviewed in Section II.A of these comments.
- c. Notes that GP Policy LU-120 requires a statement of, “*how the development will connect to other adjacent...development within the USB*”. The question clearly is premised on the assumption that the development itself will be “within the USB.” In response, the SEIR simply ignores its need for an expansion of the existing USB (SEIR Table LU-2, “PC-1”, p. 14-24).

3. The Proposed Change Has Not been Subject to Environmental Review

The GPU states,

“Natomas Joint Vision Area. Subject to the preparation and certification of the appropriate environmental documentation, this development shall be accomplished...by an expansion of the USB...” (GPU LU Element, p. 15).

Neither the GPU FEIR nor the UWSP SEIR provides the requisite “*appropriate environmental documentation*.”

RESPONSE 17-23

Please see Response 17-15 above. Please also see Master Responses LU-1: County Urban Services Boundary and Urban Policy Area, and LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 17-24

E. FAILURE TO IMPLEMENT THE COUNTY’S 2011 PHASE I CAP

1. Policy Role of the Phase 1 CAP

When the County updated its General Plan in 2011, it did not identify substantive mitigation measures to reduce GHG. Instead, it obligated itself to, among other things, adopt a “*Community Climate Action Plan*” within one year, which would present GHG reduction measures.

To help justify its deferral of mitigation and, “*rather than delaying County action*”,⁵⁷ the County adopted, concurrent with the General Plan, a “*Phase I CAP, Strategy and Framework Document*”,⁵⁸ meant to be the “*roadmap*” for the

promised phase 2 Community CAP, which would “flesh out” the Phase 1 strategy.⁵⁹ In adopting the Phase 1 CAP, the Board affirmed its policy role as presenting,

*“...overall strategies and goals... [to] augment and inform the Goals, Objectives, Policies and Implementation Measures of the 2030 General Plan”... [and provide] the foundation for the [Community] CAP components which follow”.*⁶⁰

2. Phase 1 CAP and VMT Reduction

The Strategy document recognizes infill and VMT reduction as critical to reducing GHG emissions within the unincorporated County, e.g.:

“Since transportation accounts for more greenhouse gas emissions than any other sector in the County, reducing transportation-related GHG emissions is critical ... As the land use planning authority for the unincorporated county, Sacramento County determines land use patterns, which in turn affect transportation patterns and therefore associated GHG emissions.

As VMT is directly tied to how communities are planned and developed, reducing VMT will require changes to and coordination of land use and transportation policy and practice. Channeling new development to urban areas...can increase walking, bicycling, and transit use and reduce per capita transportation-related emissions...compact development and ...smart transportation policies, can significantly reduce carbon emissions. For example, compact development clustered around transit lines can reduce VMT per capita from 20% to 40%. (Ewing, 2008 (Ph1-FSD, p. 33)”
(Sacramento County, Strategy and Framework Document, p. 6).

3. County Failure to Implement Phase I CAP’s VMT-Reduction Focus

As noted above, rather than, “Channeling new development to urban areas”, Sacramento County has since 2011 approved construction of 12,287 new dwelling units (DU) in greenfield natural and working lands, and plans to approve 47,545 more such outside the UPA, including the present UWSP. Such sprawl development has far higher environmental impact than the “compact development clustered around transit lines” cited by the Phase 1 CAP, but subsequently ignored by the County in its development approvals.

⁵⁷ Sacramento County, General Plan FEIR, Chapter 2, “Climate Change”, p. 12-33. April 2010., 2011.

⁵⁸ Sacramento County, Phase1 Climate Action Plan Framework and Policy Document. October, 2011. Online: <https://planning.saccounty.gov/PlansandProjectsIn-Progress/Documents/Climate%20Action%20Plan/CAP%20Strategy%20and%20Framework%20Document.PDF>

⁵⁹ Sacramento County. GPU FEIR, p. 12-32. November 2011.

⁶⁰ Sacramento County. Resolution of the Board of Supervisors of the County of Sacramento, State of California Adopting a Strategy and Framework Document. November 9, 2011.

RESPONSE 17-24

The comment addresses Sacramento County's Climate Action Plan: Strategy and Framework Document which was adopted on November 9, 2011; the comment does not address the proposed UWSP project nor the UWSP Draft EIR. On November 6, 2024, the Sacramento County Board of Supervisors voted 5-0 to certify the Final Subsequent Environmental Impact Report (Final SEIR) on the *County of Sacramento Climate Action Plan for the Unincorporated Sacramento County and County Operations (2024 CAP)*.³¹

The County's climate action planning efforts consider growth and associated GHG emissions outside of the UPA and USB in its ability to achieve countywide GHG emission reduction targets. There are many types of land use growth anticipated in the County over the next 20 years, and the CAP employs a comprehensive and varied strategy from reducing GHG emissions from all forms of reasonably foreseeable future growth.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 17-25

F. FAILURE TO COMPLY WITH GPU REQUIREMENTS FOR ORDERLY, LOGICAL, EFFICIENT LAND USE

1. The GPU Directs Orderly, Logical, and Efficient Land Use

The GPU Land Use Element's overarching policy goal is that land use should be orderly, logical, and efficient.

- a. Land Use Element Section II, "Land Use Strategies and Policies", articulates the Land Use Element's fundamental goal (emphases added to quotes in this subsection):

"Goal: An orderly pattern of land use that concentrates urban development... is functionally linked with transit...and protects the County's natural, environmental and agricultural resources".

The Section elaborates:

"Strategies for urban and rural development presented in this Element ...have a common theme: efficient land and resource use. ...achieved by ...land use that concentrates development ... to protect valuable agricultural and rangelands, conserve natural areas..., reduce travel distances, reduce air pollutant emissions, conserve energy, and enhance the efficiency of providing infrastructure. Efficient use of land requires reinvestment in existing communities... Efficiency is the central theme ..." (GPU LU Element, p. 18, emphases added).

³¹ Sacramento County, Climate Action Plan, available at: <https://planning.saccounty.gov/PlansandProjectsIn-Progress/pages/cap.aspx>. Accessed February 2025.

- b. Strategy I: “Logical Progression of Urban Development”, identifies the County’s UPA and USB growth boundaries as the means to support “orderly”, “systematic” development through logical geographic progression.

“Objective: Reserve the land supply to amounts that can be systematically provided with urban services and confines the ultimate urban area within limits established by natural resources”. (GPU LU Element, p. 20).

“The UPA and USB are the backbone of Sacramento County’s urban planning philosophy. ...intended to protect the County’s natural resources from urban encroachment, as well as to limit costly sprawling development ...”. (GPU LU Element, p. 19)

The UPA and the USB are designed to promote maximum efficiency of land uses and protection of the County’s natural resources (GPU LU Element, p. 20).

RESPONSE 17-25

This comment reiterates the General Plan goals in favor of logical, orderly, and efficient development. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

Please also see Response 17-15, above. Please also see Master Responses LU-1: County Urban Services Boundary and Urban Policy Area, and LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 17-26

2. The UWSP Would Not Provide Orderly, Logical, Efficient Land Use

- a. The UWSP would not be “Orderly” because,
 - i. It does not “*concentrate urban development*” - on the contrary, it disperses development onto open space distant from the urban core, claiming to justify its location by pointing to nearby small-scale sprawl, in effect arguing that past land use mistakes would somehow justify or mitigate its vastly increased leapfrog impacts.
 - ii. It is not “*functionally linked with transit*” and likely never will be, as discussed in Sections III.B and IV.C of these comments.
 - iii. It does not “protect the County’s natural, environmental and agricultural resources.”; on the contrary it would diminish them.
 - iv. It would add to the cumulative dis-order resulting from the County’s numerous, scattered, approved projects, and the enormous superfluity of entitled DUs. Future County land use - the timing, location, size, and intensity of future development - will be impossible to predict or plan for,

because contingent on future un-knowable and un-coordinated market decisions by many individual home builders and investors, with a surfeit of entitled locations to choose from. The UWSP, individually and in tandem with other planned sprawl projects, would exacerbate this antithesis of “orderly” development.

RESPONSE 17-26

This comment expresses an opinion about the relationship of the proposed project to the General Plan goals in favor of logical, orderly, and efficient development. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

Please also see Response 17-15, above. Please also see Master Responses LU-1: County Urban Services Boundary and Urban Policy Area, and LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 17-27

- b. The UWSP would not be “Logical”, because it would ignore the UPA and USB boundaries, which are clearly identified in Strategy I as the way the County will achieve the GPU’s primary land use goal: “*an orderly pattern of land use*”.

A fundamental failure of logic is that Sacramento County’s 2011 adoption of Policies LU-119 and LU-120 untethered County land use decisions from both real-world market constraints;⁶¹ and the logic of environmental resource protection as cited in the Land Use Element’s fundamental Goal, and in numerous other sections and policies of the Land Use Element and other GP elements.

⁶¹ “[I]n 2011, the General Plan added policies...to allow applicants to request an expansion of the UPA anywhere within the USB, regardless of demand or existing capacity. The County’s intent was to let the market determine the need and location for new growth...” (Sacramento County, General Plan 2022 Annual Report, See these comments, Attachment 3, Section E.4 for further reference)

RESPONSE 17-27

This comment expresses an opinion about the relationship of the proposed project to the General Plan goals in favor of logical, orderly, and efficient development. The suggestion that any change in the USB or UPA is by definition not logical, orderly, or efficient is contrary to the presence in the County General Plan of a framework of policies that provide for the Board of Supervisors adjusting those boundaries based on specific criteria. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as

a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

Please also see Response 17-15, above. Please also see Master Responses LU-1: County Urban Services Boundary and Urban Policy Area, and LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 17-28

- c. The UWSP would not be “Efficient”, because the County’s helter-skelter approvals, in disregard of the UPA and USB, confound rational long-term planning of infrastructure and protection of natural resources:

“Defining the Urban Policy Area is of key importance in the provision of urban services and infrastructure to the unincorporated County, as it provides the geographic basis for infrastructure master plans, particularly for public water and sewerage, which require large capital investment and relatively long lead time for the installation of capital improvements. ...The UPA and the USB are designed to promote maximum efficiency of land uses and protection of the County’s natural resources.... These two growth boundaries work in tandem to manage and direct future development, as well as provide infrastructure and service providers with intermediate and ultimate growth boundaries to use to plan for future expansion” (GPU LU Element, p. 20, emphasis added). ”

RESPONSE 17-28

The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

Please also see Response 17-15, above. Please also see Master Responses LU-1: County Urban Services Boundary and Urban Policy Area, and LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 17-29

G. THE PROBLEM OF THE GENERAL PLAN’S INCOHERENT GUIDANCE

General Plans represent a jurisdiction’s efforts to balance many competing priorities. As such, total consistency across a plan’s many policies may not always be achieved. Interpretation and reconciliation of inconsistencies is generally about policy issue best left to elected decision-makers most closely in touch with the temper of the community and intent of the plan.

At the same time, it is the purpose of a general plan to provide meaningful guidance to decision makers and the public on what the community values are, and to prevent arbitrary decisions. This the Sacramento County’s GPU fails to do. The reason is

that, as cited elsewhere in these comments, after completion of the 2010 FEIR, Policies LU-119 and LU-120 were added to the GPU, imposing a land use approach at odds with the original draft text that was reviewed by the EIR. In support of those new laissez faire policies, references to “***new growth areas***” were liberally grafted onto the Land Use Element’s prior verbiage. But there was no attempt to reconcile the intrinsic conflicts with the pre-existing text, which was oriented to “*manage and direct*”, “*orderly, logical, efficient*” land use; with growth directed to infill of existing neighborhoods and build-out of approved projects within the UPA, and to protection of natural resources.

As a result, the Land Use element is replete with contradictory non-sequiturs defying sensible interpretation. The overall sense is that everything is possible, that there is no conflict between throwing open the doors to sprawl (with accompanying land speculation) on one hand, and supporting the County’s other growth strategies on the other (infill and buildout of approved projects, as reviewed in Section III.B of these comments).

For example:

*“This Element’s policies...direct future development...toward previously urbanized communities **and strategically-located new growth areas** to:*

- *...improve...existing communities. Plan ...commercial corridor...and protection of natural resource...implementing more compact land use patterns*
- *Infill vacant parcels and intensify development on underutilized lands improve... existing neighborhoods ...relieve growth pressure on the urban fringe.*
- *...reduce automobile dependence,...*
- *Stimulate reinvestment in targeted commercial corridors...*
- *Direct growth toward previously urbanized areas and **strategic new growth areas** to reduce sprawling development, strengthen existing communities, relieve traffic congestion, improve air quality, preserve open space and natural resources, protect valuable agriculture and rangelands, and realize economies of scale for infrastructure and services. GPY Land Use Element, p. 2).*

How directing growth to, “**strategically-located new growth areas**” (all of which are in greenfields outside the UPA) will accomplish any of the diametrically opposed stated objectives is unexplained. The term “strategic” is undefined. With a few crude inserts, the “smart growth” intent of the earlier wording was contradicted and scrambled.

The Land Use Element has numerous such passages, e.g., on pp. 2, 19, 20, 24, 25.

With some sense of reality, the Element cautions that the other growth strategies should be given priority; but as shown in Section V.B of these comments, that caution has been ignored.

Presented with this morass of ill-considered, conflicting guidance, all emanating from policies LU-119 and LU-120 - which as discussed in section II.A of these comments were neither reviewed or substantiated in the GPU FEIR - we believe the most reasonable course is to refer to the Element's fundamental Goal, of orderly, logical, efficient land use, and its "backbone" Strategy I, respecting the UPA and USB.

The UWSP does not comply with either the Goal or the Strategy.

RESPONSE 17-29

The comment addresses and expresses opinions about policies of the Sacramento County General Plan. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

Please also see Response 17-15, above. Please also see Master Responses LU-1: County Urban Services Boundary and Urban Policy Area, and LU-2: Consistency with Sacramento County General Plan Policy LU-127.

LETTER 18

Garden Highway Community Association (GHCA), community organization, written correspondence; dated October 28, 2024.

COMMENT 18-1

EIR's are intended, by law, to present the public and decision-makers with factual, evidence-based, unbiased information about current circumstances and a project's potential impacts. The UWSP EIR throughout contains false, inaccurate, and misleading statements, raising questions about the truthfulness, completeness and accuracy of the entire EIR document. False statements must be deleted. Misleading statements must be clarified. The EIR does not meet legal requirements or serve the public or decision makers if it is not reliably thorough and accurate.

RESPONSE 18-1

This comment raises questions about the veracity of the information in the Draft EIR. The Draft EIR prepared for the proposed project is an objective, accurate, and complete analysis of the potential environmental impacts that would or could result from construction and operation of the proposed UWSP. Pursuant to CEQA requirements as set forth in the CEQA Guidelines, each environmental resource topic subject to analysis under CEQA has been given careful consideration in light of existing and anticipated future environmental conditions, applicable regulations, and the physical and operational characteristics of the proposed project. The information contained in the Draft EIR is based on factual data and analyses that are clearly and objectively presented in the body of the Draft EIR, its Appendices, and the County's administrative record. As required under CEQA, where significant impacts are identified, the Draft EIR describes potentially feasible mitigation measures which could be adopted to substantially lessen or avoid such impacts. The comment contains a broad assertion of inaccuracy in the Draft EIR but provides no specific reference to inaccurate information or that such information led to the omission or understatement of the severity of significant impacts of the proposed project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 18-2

The project applicant does not have the necessary entitlements to proceed with the project. The UWSP EIR identifies changes the project applicant is seeking to the County's 2030 General Plan policies, County zoning, to the Urban Services Boundary, and to the Urban Policy Area, among others. But throughout the EIR, the EIR makes false claims that the project does not conflict with County plans and policies. That is not true. If the UWSP project was already consistent with, and had no conflicts with County plans and policies, then the project would not be seeking amendments and other entitlements in order to be compliant.

RESPONSE 18-2

In Chapter 2, *Project Description*, of the Draft EIR, a clear description is provided of the existing and proposed land use and zoning designations (see pages 2-8 and 2-14 through 2-20, respectively). As is required pursuant to CEQA Guidelines section 15125(d), throughout the Draft EIR are discussions of “any inconsistencies between the proposed project and applicable general plans, specific plans, and regional plans.” It is self-evident that the project is not consistent with the County General Plan; if it were, the policy changes proposed and described in the Project Description would not be required. The perspective of analysis through the Draft EIR is whether the proposed project, if approved and developed, would result in a significant environmental impact. In the same context, the question regarding consistency with plans and policies is whether the proposed project, if approved and implemented, would conflict with the County’s General Plan and related policies. As acknowledged in the comment, if the project is approved as proposed, the County General Plan and relevant policies would be amended such that the project would be consistent.

COMMENT 18-3

Under Agricultural Resources, the EIR says, “the proposed UWSP would not conflict with existing agricultural use and zoning.” That is untrue. The project site is mostly zoned and used for agriculture and would be rezoned for urban uses, a violation of County policy. Under Land Use, the EIR says, “the proposed UWSP would not conflict with Sacramento County’s Land Use Plans.” That is inaccurate. There is a long list of County land use plans, policies and codes that the UWSP project seeks to change in order for the project to comply with and not to be in conflict with County policies.

RESPONSE 18-3

As discussed in Impact AG-2 on pages 5-23 through 5-24 in Chapter 5, *Agricultural Resources*, of the Draft EIR, the proposed changes to the land use designations and allowable uses within the UWSP area would be permitted with approval of a General Plan amendment and approval of related amendments to the County Code, including adoption of the UWSP document to establish land use, zoning, and development standards. Because the entitlements requested as components of the proposed UWSP would change the zoning to make it consistent with the proposal, the proposed UWSP would not conflict with zoning for agricultural use within the UWSP area. Effects of the proposed UWSP related to the interface between planned urban uses and existing and ongoing agricultural uses are also fully evaluated in Impact AG-2. As discussed in the analysis, a 542-acre agricultural buffer is proposed to the west of the proposed UWSP Development Area, which is intended to allow for the continuation of existing agricultural, agricultural-residential, and mitigation uses. In addition, the proposed UWSP includes a 30- to 50-foot-wide West Edge Buffer Corridor along the western perimeter of the Development Area to alleviate potential future conflicts between agricultural operations and future urban uses. In addition, as discussed in Chapter 14, *Land Use*, of the Draft EIR, the proposed UWSP would be implemented in a manner consistent with all applicable County policies and regulations. The assertion that

implementation of the UWSP would violate County policies is inaccurate and unsupported (See Master Response AR-1: Conversion of Farmland to Nonagricultural Uses and Master Response AR-2: Interface Between Agricultural and Urban Uses).

COMMENT 18-4

Under Growth Inducement impacts, the EIR completely fails to address growth inducement impacts directly due to the project applicant's requested changes to County plans, policies and codes.

RESPONSE 18-4

As described on pages 2-14 through 2-16 in Chapter 2, *Project Description*, of the Draft EIR, the proposed UWSP would require a number of entitlements in the form of amendments to the General Plan, establishment of new zoning and development standards, adoption of an Urban Services Plan, Affordable Housing Strategy, Water Supply Master Plan, and the like. Approval of these entitlements would allow for growth within the UWSP and would not affect growth elsewhere in the County. Indirect growth inducement is addressed in Chapter 23, *Growth Inducement and Urban Decay*, of the Draft EIR. Please also see Response 12-17 and Response 18-71 below.

COMMENT 18-5

The EIR is required by law to identify existing conditions and accurately state impacts from a proposed project. The current zoning for the project area is largely agricultural and has not yet changed. The EIR cannot legally assume a proposed project has entitlements it does not have, such as in the Agricultural Resources section where the EIR says, "Because the entitlements requested as components of the proposed UWSP would change the zoning to make it consistent with the proposal, the proposed UWSP would not conflict with zoning for agricultural use within the UWSP area." That statement is grossly inaccurate, violates the legal requirements for an EIR, and it and any similar assumptions in the EIR that the project applicant has entitlements that the project applicant does not have and is seeking, should be removed.

RESPONSE 18-5

The Draft EIR evaluates the physical effects of proposed UWSP, including the physical effects of the requested entitlements of the UWSP that would be conditions of UWSP approval. The assertion that the Draft EIR assumes that the requested entitlements have been granted prior to UWSP approval is incorrect and unsupported. Please see Response 18-3 above for additional discussion.

COMMENT 18-6

Statements in the EIR must be deleted that say or suggest the UWSP project complies with or is consistent with County land use plans, policies and codes when in fact the UWSP does not currently comply with those County policies and when in fact the UWSP is seeking to change those County policy in order to comply.

Any statement that the project agrees in principle with or agrees with objectives in County plans and policies must be restated to make clear that the project does not in fact comply with County plans and policies, and changes would be needed to County plans, policies and codes for the project to comply and not conflict with County policies.

RESPONSE 18-6

Please see Response 18-3 above.

COMMENT 18-7

Mitigation is not Preservation

Throughout the EIR, the County's preservation policies are inaccurately equated with mitigation. The County has policies to preserve habitat and farmland. To preserve means to keep as is, intact. If habitat and farmland that County policy seeks to preserve are lost to urbanization, then there is a significant impact that is not identified in the EIR. Mitigations attempt to replace the loss somewhere else, but that is very different than keeping what exists intact. If the UWSP project is approved, an impact is that the farmland and habitat County policies sought to protect is lost forever. Mitigation may lessen the impact of the environmental harm but does not change the fact that farmland and habitat is not preserved where it currently exists. If I accidentally destroyed a family heirloom you were preserving, I could mitigate the loss by paying you, but the loss would remain.

RESPONSE 18-7

Effects of the proposed UWSP related to farmland and plant and wildlife habitat are fully evaluated in Chapter 5, *Agricultural Resources*, and Chapter 7, *Biological Resources*, respectively, of the Draft EIR. Impacts of the proposed UWSP related to conversion of farmland to nonagricultural uses are fully addressed in Impact AG-1 on pages 5-20 through 5-22 in Chapter 5, *Agricultural Resources*, of the Draft EIR. As discussed in the analysis, the proposed UWSP would result in the loss of approximately 1,372 acres of farmland subject to mitigation pursuant to General Plan Policy AG-5. Implementation of Mitigation Measure AG-1 would require preservation of farmland at a 1:1 ratio. However, the Draft EIR concludes that, even with this mitigation, there would be a substantial net loss of farmland within Sacramento County as a result of the proposed UWSP, and this impact would be significant and unavoidable. Therefore, the Draft EIR appropriately identifies that a significant and unavoidable impact related to the conversion of farmland to nonagricultural uses would occur with implementation of the proposed UWSP.

Regarding wildlife habitat, permanent losses to habitat would occur, as discussed in the Draft EIR; specifically, Swainson's hawk foraging habitat and giant garter snake aquatic and associated upland habitat. Implementation of Mitigation Measure BR-7 would require compensatory mitigation for loss of Swainson's hawk foraging habitat at a ratio of at least 0.75:1 (mitigation habitat to permanently lost habitat) for mitigation sites located within 1 mile of the Sacramento River or Feather River, at a ratio of at least 1:1

for mitigation sites greater than 1 mile from the Sacramento River and Feather River. Mitigation sites would be of equal or greater ecological value as established in separate authorizations or permits by the USFWS and/or CDFW. Implementation of Mitigation Measure BR-3 would require compensatory mitigation for loss of giant garter snake habitat at a minimum 1:1 ratio.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 18-8

Impacts Not Identified

The County's stated General Plan, Urban Services Boundary, and Urban Policy Area policies are intended to reduce urban sprawl and its impacts, preserve habitat and open space, and protect local farming. The UWSP project would have significant environmental impacts that conflict with those policies. These impacts should be and are not fully stated in the EIR.

RESPONSE 18-8

Effects of the proposed UWSP related to land use and planning, including effects related to the USB, the UPA, and applicable land use policies, are fully evaluated in Chapter 14, *Land Use*, of the Draft EIR. Effects of the proposed UWSP related to farmland and plant and wildlife habitat are fully evaluated in Chapter 5, *Agricultural Resources*, and Chapter 7, *Biological Resources*, respectively, of the Draft EIR.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 18-9

Mitigations Outside Sacramento

The EIR fails to state that when mitigations occur outside Sacramento, Sacramento residents lose the benefits of those resources in their community.

RESPONSE 18-9

The Draft EIR does not include such a statement because it is not true. The types of measures that can be accomplished equally or more effectively outside of the County means that mitigation may be available when it would not be available within the County. Pursuant to CEQA Guidelines section 15126.4(a)(1), when a proposed project may have a significant impact, an EIR must describe "feasible measures which could minimize significant adverse impacts." Pursuant to section 15364 of the CEQA Guidelines, feasible means "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, legal, social, and technological factors." Where out-of-county measures meet these criteria, it is appropriate that such measures are described in the EIR. To eliminate description of

measures that meet the definition of feasible but may not be desirable to some would be inconsistent with the requirements of CEQA. A decision as to the approval of the project and the adoption of any mitigation measures is within the discretionary authority of the County Board of Supervisors.

COMMENT 18-10

Tables-Charts

The EIR is intended to be a public information document with clearly presented information. As recommended in CEQA guidelines, graphics help decisionmakers and the public rapidly understand the documents. The UWSP EIR would greatly benefit from more charts and tables where existing conditions and proposed changes are easier to see and compare, such as for commercial and retail square footage discussed under Urban Decay, in sections on agricultural acreage, housing units and elsewhere in the EIR where there are presentations of a lot of numbers that should be presented in tables for easy comparison.

RESPONSE 18-10

The comment asserts that the Draft EIR prepared for the proposed project could have been presented in a more readily understandable manner through the inclusion of additional graphics, charts and tables. The Draft EIR was written and compiled to be consistent with the direction provided in CEQA Guidelines sections 15140 (Writing) and 15147 (Technical Support), which direct that EIRs be written “in plain language” and at a level of detail that summarizes technical information “sufficient to permit full assessment of significant environmental impacts by reviewing agencies and members of the public.” CEQA Guidelines section 15140 specifically notes that an EIR “may use appropriate graphics so that decision makers and the public can rapidly understand the document.” The Draft EIR includes a total of 42 graphics (figures) and presents technical information in a total of 88 tables. These are tools that support the many pages of written explanation, which was carefully crafted by the County to meet the needs of experts and the public. The comment neither asserts nor makes a specific claim that the format of the information interferes with the disclosure or understanding of the environmental impacts of the proposed UWSP. This comment is noted and will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 18-11

Aesthetics

- The EIR notes that nighttime lighting from the UWSP project would have a permanent impact in the area. But the EIR fails to adequately address the harmful impacts of nighttime lighting on human health and on wildlife, including migratory birds using the Pacific Flyway.
- The EIR fails to identify possible nighttime lighting mitigations, such as establishing a minimum one-half mile setback between the UWSP project and any rural

areas (i.e. Garden Highway), with the setback to include a minimum 100-foot-wide densely planted tree buffer of tall native evergreen trees at the western project boundary, with the setback established and the tree buffer installed before the first stage of project construction.

RESPONSE 18-11

Effects of the proposed UWSP related to migratory birds are evaluated in Impact BR-12 (page 7-75) in Chapter 7, *Biological Resources*, of the Draft EIR. The Draft EIR addresses the effects of project construction activities on wildlife movement, including those of migratory bird species. The analysis concludes that removal of vegetation during earthmoving could result in the removal of vegetation while an active bird nest is present. In addition, the analysis notes that increased human presence could result in noise, vibration and visual disturbance to such species.

Response 19-77, below, further discusses and amplifies the analysis of impacts on migratory birds with additional analysis of bird-window collisions, including those contributed to by night lighting. It acknowledges that development of new buildings with glazed surfaces and night-lighting could result in increased potential for bird-window collisions and related mortality of birds. A new Mitigation Measure BR-12 is identified which would require the implementation of standards for bird-safe buildings. Implementation of Mitigation Measure BR-12 would reduce the potential for bird-window collisions in the proposed UWSP project.

The comment provides no evidence regarding harmful effects of nighttime lighting on human health. LED lights are electric lights that produce light using one or more light-emitting diodes (LEDs). LED lights have a substantially longer lifespan than traditional incandescent lamps and are more efficient than most fluorescent lamps. The use of LED lighting for street and outdoor lighting has increased steadily in recent decades in numerous cities on the U.S, in part because LED lights are significantly more energy efficient than other types of lighting.

As the use of LED lighting has increased in recent years, there have been studies that address the potential effects of LED lighting as compared to incandescent, fluorescent, or other conventional lighting types; the results of these studies is that there is no consensus on the potential effects on human health of such lighting.

The health effects of the use of LED lights remain subject to disagreement as of the publication of this Draft EIR, and there is no scientific consensus regarding the health effects of exposure to LED lights. As a result of the lack of scientific consensus on the issue of health effects of exposure to LED lights, further analysis would be speculative. CEQA Guidelines section 15145 states that “[i]f, after thorough investigation, a Lead Agency finds that a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact.”

Effects of the proposed project related to light and glare are fully evaluated in Chapter 4, *Aesthetics*, of the Draft EIR. As discussed in Impact AE-3 (Draft EIR pages 4-17

through 4-19), because the proposed plan complies with applicable policies and standards aimed at minimizing adverse light and glare, and because of the scale of proposed development, no additional feasible mitigation is available to further reduce the impact related to light and glare, and the impact would be significant and unavoidable. This conclusion is consistent with common sense observations that urban development introduced into an undeveloped area will introduce new nighttime light, even if the newest technologies are used.

The commenter's suggested inclusion of a one-half mile setback between the UWSP area and any rural areas provides no explanation as to how distance would reduce created light. The impact described in the Draft EIR and determined to be less than significant is not spillover light onto specific rural properties; rather it involves the introduction of new light into an area that is largely dark under current nighttime conditions. This effect would not be reduced by the introduction of a buffer or setback.

COMMENT 18-12

Agricultural Resources

- The proposed UWSP project site is currently primarily farmland classified as prime farmland, farmland of statewide importance, unique farmland, and farmland of local importance. The EIR fails to state clearly that the UWSP project violates County policies that say the County shall protect these types of farmlands located outside of the Urban Services Boundary from the urban encroachment represented by the UWSP project.

RESPONSE 18-12

Effects of the proposed UWSP related to farmland are fully evaluated in Chapter 5, *Agricultural Resources*, of the Draft EIR. Effects of the proposed UWSP related to land use and planning, including effects related to the USB, the UPA, and applicable land use policies, are fully evaluated in Chapter 14, *Land Use*, of the Draft EIR. No specific evidence is provided to support the claim that the proposed UWSP violates County policies. Please see Master Response AR-1: Conversion of Farmland to Nonagricultural Uses, Master Response LU-1: County Urban Services Boundary and Urban Policy Area, and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 18-13

- The UWSP is requesting a General Plan amendment to rezone prime farmland for urban use. The EIR fails to state clearly that the UWSP request conflicts with existing County policy which says the County shall not accept applications for General Plan amendments outside the Urban Services Boundary redesignating valuable farmland for urban use.

RESPONSE 18-13

There is no County policy which categorically states that the County shall not accept applications for General Plan amendments outside the Urban Services Boundary redesignating valuable farmland for urban use. County General Plan Policy AG-2 specifies that the County shall not accept applications for General Plan amendments outside the USB redesignating prime, statewide importance, unique and local importance farmlands or lands with intensive agricultural investments to agricultural/residential or urban use (i.e., residential, commercial, industrial) unless the applicant demonstrates that the request is consistent with the General Plan Agriculture-Residential expansion policies.

Effects of the proposed UWSP related to farmland are fully evaluated in Chapter 5, *Agricultural Resources*, of the Draft EIR. The UWSP proposes no expansions of agricultural-residential uses, agricultural-residential land use designations, or agricultural-residential zoning. As discussed in Chapter 14, *Land Use*, of the Draft EIR, the proposed UWSP establishes a development framework for land use, community design and character, infrastructure improvements, and orderly development that is consistent with the objectives and policies in the Sacramento County 2030 General Plan that guide expansion of the UPA and USB. Please see Master Response AR-1: Conversion of Farmland to Nonagricultural Uses, Master Response LU-1: County Urban Services Boundary and Urban Policy Area, and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 18-14

- The EIR fails to adequately assess impacts from changes the UWSP is proposing to County policies regarding farmland preservation.

RESPONSE 18-14

As discussed in Impact AG-1 (pages 5-20 through 5-23) in Chapter 5, *Agricultural Resources*, of the Draft EIR, under the currently adopted General Plan Policy AG-5, the preservation of farmland at a 1:1 ratio must typically be located within Sacramento County. However, as provided in Appendix PD-1, Proposed General Plan Text Amendments, of the Draft EIR, the UWSP proposes revisions to General Plan Policy AG-5 that would clarify when out-of-county mitigation for agricultural land impacts might be considered. These text amendments would be implemented with the approval of a General Plan amendment proposed as part of the UWSP. The proposed revisions provide that the Board of Supervisors would retain the authority to set aside the in-County mitigation requirement for impacts to unique, local, and grazing farmlands, but not with respect to prime and statewide farmlands unless the mitigation land is also providing mitigation for impacts to special-status species. Under those circumstances, revised Policy AG-5 explains, the Board of Supervisors may consider, on a case-by-case basis, the mitigation land required to mitigate for impacts to special-status species as also meeting the requirements for mitigating impacts for loss of farmland, including

land outside of Sacramento County. In addition, the UWSP proposes revisions to General Plan Policy AG-1 to specify that the County shall protect prime, statewide importance, unique, and local importance farmlands located outside of the USB from urban encroachment, consistent with General Plan policies (e.g., LU-114, LU-119 – LU-128) authorizing amendment of the Land Use Diagram in the interest of the public health, safety, and welfare of the residents of Sacramento County.

The evaluation of proposed UWSP effects related to farmland in Chapter 5, *Agricultural Resources*, of the Draft EIR, considers the physical effects of the proposed revisions to General Plan policies that would be implemented with approval of a General Plan amendment proposed as part of the UWSP. The comment does not specify what impacts related to the proposed revisions to General Plan policies the Draft EIR purportedly fails to address.

COMMENT 18-15

- The EIR says, “the proposed UWSP would not conflict with existing agricultural use and zoning.” That is not true and must be deleted. The UWSP would conflict with existing agricultural use and zoning, turning farmland to urban use.

RESPONSE 18-15

Please see Response 18-2 above.

COMMENT 18-16

- The EIR says, “Because the entitlements requested as components of the proposed UWSP would change the zoning to make it consistent with the proposal, the proposed UWSP would not conflict with zoning for agricultural use within the UWSP area.” That statement is inaccurate, violates the legal requirements for an EIR, and should be removed. The project does not have requested entitlements. Project impacts must be assessed based on existing conditions.

RESPONSE 18-16

Please see Response 18-2 above.

COMMENT 18-17

- The EIR fails to make clear that County policy is focused on farmland rather than on land zoned for agriculture. Land zoned for agriculture may or may not be used for farming. The EIR should more clearly present the current number of acres available for farming, the number acres of farmland the UWSP project would rezone to urban uses, the number of acres of land available for farming if the project is approved, and the number of acres of farmland (land available for farming) that would be lost if the project is approved.

RESPONSE 18-17

The Draft EIR clearly identifies the existing land use designations and zoning within the UWSP area and the proposed changes to the land use designations and zoning within the UWSP area that would be permitted with approval of a General Plan amendment and approval of related amendments to the County Code. Impacts of the proposed UWSP related to conversion of farmland to nonagricultural uses are fully addressed in Impact AG-1 on pages 5-20 through 5-22 in Chapter 5, *Agricultural Resources*, of the Draft EIR and in accordance with the requirements set forth in the County General Plan. As discussed in the analysis, the proposed UWSP would result in the loss of approximately 1,372 acres of farmland subject to mitigation pursuant to General Plan Policy AG-5. Implementation of Mitigation Measure AG-1 would require preservation of farmland at a 1:1 ratio. However, the Draft EIR concludes that, even with this mitigation, there would be a substantial net loss of farmland within Sacramento County as a result of the proposed UWSP, and this impact would be significant and unavoidable. Therefore, the Draft EIR appropriately identifies that a significant and unavoidable impact related to the conversion of farmland to nonagricultural uses would occur with implementation of the proposed UWSP.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 18-18

- The UWSP EIR gives the inaccurate impression that 534 acres of the UWSP would remain as farmland. That is not correct. The EIR must make a clear distinction between the acreage of land that can be farmed if the project is approved, and the acreage of agriculturally zoned open space land (buffer) that will not be used for farming.

RESPONSE 18-18

The Ag Buffer is clearly described in the Draft EIR. As presented on page 2-52 of Chapter 2, *Project Description*, the approximately 542-acre Ag Buffer consists of two key components: an approximately 505-acre area designated for Ag Residential and Ag Cropland land uses and an approximately 36.6-acre Open Space buffer. The approximately 505 acres of Ag use are currently utilized for small-scale farming and for habitat mitigation. The approximately 36.6-acre Open Space buffer is located along the west and north edges of the Development Area. This buffer consists of a 250-foot-wide open space buffer along the northwest edge of the plan area, adjacent to the southern edge of Fisherman's Lake, and a 30- to 50-foot-wide open space corridor along the west edge of the Development Area. Impacts of the proposed UWSP related to conversion of farmland to nonagricultural uses are fully addressed in Impact AG-1 on pages 5-20 through 5-22 in Chapter 5, *Agricultural Resources*, of the Draft EIR and in accordance with the requirements set forth in the County General Plan.

COMMENT 18-19

- The EIR fails to identify that land in the UWSP area that would remain available for farming will be long and narrow, just 700 feet wide in some areas, bisected in 4 places by heavily trafficked project roads, and within 30-50 feet of UWSP urban activity conflicts, which together could make the remaining farmland impractical for any commercial farming. If that happened, it would mean the project would wipe out 100% of the farmland in that area –farmland County policy seeks to preserve.

RESPONSE 18-19

Please see Response 18-18 above, Master Response AR-1: Conversion of Farmland to Nonagricultural Uses, and Master Response AR-2: Interface Between Agricultural and Urban Uses.

COMMENT 18-20

- If County zoning has setback requirements between farming and urban activity, those setbacks should be clearly identified in the EIR. If the County does not have such setback requirements, the EIR team should contact an appropriate government agency or reputable nonprofit organization that has studied what setbacks should occur between farming and urban activity in order to avoid urban conflicts, and the findings of that research should be included in the EIR next to the proposed setback. The proposed setback of 30-50 feet, basically the width of a rural roadway, seems wholly inadequate.

RESPONSE 18-20

Please see Master Response AR-2: Interface Between Agricultural and Urban Uses.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 18-21

In considering impacts, the EIR fails to make clear that farmland provides multiple community benefits such as health benefits associated with open space, wildlife habitat, fresh food produced locally, as a food resource when there are disruptions to the food distribution system such as happened during the pandemic, and as a flood protection area between the Sacramento River and the Sacramento community.

RESPONSE 18-21

The Draft EIR fully evaluates the physical effects on the environment that could result with implementation of the proposed UWSP in accordance with the requirements of CEQA, including effects related to agricultural resources, biological resources, land use, and flood hazards. Community health benefits and the availability of food are not topics addressed under CEQA.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 18-22

Air Quality

- The EIR asserts, with no evidence, that the majority of employment related vehicle trips, and the pollution they create, will be to downtown Sacramento. It is wrong for the EIR to present VMT data as fact when it is not based on evidence. Focusing so much on VMT to downtown Sacramento serves to minimize air pollution generation data. The EIR should have considered VMT more realistically to multiple job centers. While downtown Sacramento is a job center, Sacramento County has more jobs than downtown, as noted in the EIR. Yolo County and Placer County are also job centers.

RESPONSE 18-22

For the basis and evidence used to estimate the vehicle miles traveled (VMT) data used to inform the GHG emissions and transportation EIR analyses, please see the Transportation Impact Analysis prepared by Fehr and Peers for the proposed UWSP which is included in Draft EIR Appendix 12. The Transportation Impact Analysis, which followed the Governor's Office of Planning and Research (OPR)'s guidelines and Sacramento County's Transportation Analysis Guidelines, used the Sacramento Area Council of Governments' SACSIM19 travel demand model and adapted for trip length variations within and beyond the region.

COMMENT 18-23

- The EIR fails to adequately address that project related air pollution and its resulting serious health impacts, as well as project construction dust, could be more severe on Garden Highway because of the prevailing wind that blows toward Garden Highway. Again, this impact could be partially mitigated by establishing a minimum one-half mile setback between the UWSP project and any rural areas (i.e. Garden Highway), with the setback to include a minimum 100-foot-wide densely planted tree buffer of tall native evergreen trees at the western project boundary, with the setback established and the tree buffer installed before the first stage of project construction.

RESPONSE 18-23

The comment includes an assumption about wind direction that is not based on evidence. Residences along Garden Highway are located to the west and south of the UWSP area. The prevailing wind in the area is southerly southwest most months of the year, with northerly prevailing winds during winter months.³² Based on the prevailing

³² National Oceanic and Atmospheric Administration Technical Memorandum NWS WR-272, Climate of Sacramento, California, Revised June 2005. https://www.weather.gov/media/wrh/online_publications/TMs/TM-272.pdf

wind direction, air pollutants generated by UWSP would generally disperse northward, away from Garden Highway.

Health impacts associated with exposure of project-generated criteria pollutant emissions and toxic air contaminant (TAC) emissions to nearby receptors are described in the EIR Health Effects of Criteria Pollutants discussion on pages 6-45 through 6-7 and the Impact AQ-4: Exposure of Sensitive Receptors to Toxic Air Contaminants discussion on Draft EIR pages 6-47 through 6-52. Localized health risks to nearby residential receptors, including residents living along Garden Highway, and considering prevailing wind patterns, are assessed in Impact AQ-4 (additional detail is presented in Appendix AQ-1). As described under Impact AQ-4, the proposed project would result in significant and unavoidable air quality impacts related to a conflict with an applicable air quality plan during project operation, emissions of criteria air pollutants and precursors during project operation, and exposure of sensitive receptors to toxic air contaminants (TACs) during project operation. The EIR identifies all feasible mitigation to reduce these impact, as required by CEQA.

COMMENT 18-24

- The EIR fails to adequately address that project related air pollution and its resulting serious health impacts would directly impact children in UWSP area schools.

RESPONSE 18-24

Health impacts associated with exposure of project-generated criteria pollutant emissions and TAC emissions to nearby receptors, including nearby existing schools and children in new UWSP school areas, are described in the EIR Health Effects of Criteria Pollutants discussion on Draft EIR pages 6-45 through 6-7 and under Impact AQ-4: Exposure of Sensitive Receptors to Toxic Air Contaminants discussion on Draft EIR pages 6-47 through 6-52. Localized health risks to nearby receptors, including school children, are assessed in Impact AQ-4 (additional detail is presented in Appendix AQ-1). The proposed project would result in a significant and unavoidable air quality impact related exposure of sensitive receptors to toxic air contaminants (TACs) during project operation. The EIR identifies all feasible mitigation to reduce this impact, as required by CEQA. For a discussion of the methodology and assumptions used to assess health risk impacts at schools, refer to EIR pages 6-29 through 6-31.

COMMENT 18-25

Biological Resources

- Sacramento County's 2030 General Plan and Urban Services Boundary explicitly state the purposes of the plans, in part, are to preserve habitat and open space. The UWSP project would violate those County goals. The EIR fails to state those violations clearly and fails to clearly and honestly identify impacts from the UWSP violation of those goals.

RESPONSE 18-25

The Sacramento County General Plan establishes a policy framework that address a wide variety of concepts important to the County related to such diverse issues as land use, economic growth, employment opportunities for County residents and businesses, meeting the housing needs of an economically diverse population, transportation and mobility, resource conservation, and delivery of essential public services. The General Plan states that it addresses “the wide variety of issues and proactive actions to be taken by the County to enhance and preserve the quality of life for County residents, enhance our economic strengths, and preserve our agricultural heritage.”

The comment focuses in on one aspect of the County General Plan policy framework related to habitat preservation, but in doing so ignores that there are many other policy goals which the County seeks to address in a balanced manner. As an example, the General Plan states that “the County and City of Sacramento have been engaging for many years in the Natomas Joint Vision planning process, which envisions a plan for both new communities within the unincorporated portion of the basin and permanent protection of existing open space.” This is further articulated in General Plan Policy LU-114, which states

“It is the policy of Sacramento County that development and open space preservation in the Natomas Joint Vision Overlay Area occur in a comprehensive, responsible and cohesive manner that best addresses land use, economic development and environmental opportunities and challenges in Natomas.”

The Land Use Element’s primary role is to ensure that the County’s land resources are utilized in the most efficient, equitable and productive manner possible to provide a high quality of life for both current and future residents. As such, the Land Use Element’s policies and programs direct future development and investment to create communities such as the proposed UWSP that include housing, jobs and retail amenities to reduce automobile dependence, support local commercial and employment opportunities, and create a jobs/housing balance.

For additional discussion of the consistency of the proposed UWSP with the growth management policies in the County General Plan, specifically Policies LU-120 and LU-127, please see Responses 18-33 and 18-60 below, and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 18-26

- Sacramento County policy says planning and development of new growth areas should be consistent with Sacramento County-adopted Habitat Conservation Plans and other efforts to preserve and protect natural resources. The UWSP project would put urban activity in a habitat conservation corridor in violation of County policy. The UWSP is not currently consistent with the Natomas Basin Habitat Conservation Plan and the Metro Airpark Habitat Conservation Plan. The UWSP conflicts with habitat conservation plans and conflicts with County policy are not clearly identified in the EIR and should be explicitly stated.

RESPONSE 18-26

The Natomas Basin Habitat Conservation Plan is not a County-adopted habitat conservation plan and therefore this policy is not applicable to the UWSP. The EIR describes the potential for conflicts with the Natomas Basin Habitat Conservation Plan and the Metro Air Park Habitat Conservation Plan under Impact BR-14: Conflict with Natomas Basin HCP and Metro Air Park HCP on pages 7-76 through 7-84 of the UWSP DEIR. Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 18-27

- The EIR fails to discuss the UWSP project impacts to the Sacramento River riparian area by putting urban development so close to the Sacramento River and its unique biological resources, habitat, and provision of a habitat corridor.

RESPONSE 18-27

As is discussed on Draft EIR page 7-39, no riparian habitat or other sensitive natural community is present in the UWSP area, and thus no direct impacts to the Sacramento River riparian corridor are expected as a result of implementation of the proposed UWSP. Further, no indirect impacts are anticipated due to the inclusion of an Agricultural Buffer (Ag Buffer) and existing development along the entire western edge of the proposed UWSP. As described in the Draft EIR Project Description, the Ag Buffer would range in width from 700 feet to the south to over 2,700 feet, or one-half mile, to the north, providing a substantial buffer to Garden Highway and the Sacramento River.

COMMENT 18-28

- Sacramento County policy is to actively plan to protect, as open space, areas of natural resource value, which may include but are not limited to wetlands preserves, riparian corridors, woodlands, and floodplains associated with riparian drainages. The EIR fails to point out that the UWSP project area is in the Sacramento River corridor, less than 1,000 feet from the Sacramento River. The EIR says, "No wetlands preserves, riparian corridors or floodplains associated with riparian drainages are present in the UWSP area so none will be affected by the project's development." That is incorrect. The farmland soils, wildlife and other biological resources present within the UWSP area are associated with proximity to the river and are part of the Sacramento River corridor.

RESPONSE 18-28

The Draft EIR accurately reflects the proximity of the proposed UWSP project area to the Sacramento River in text and graphics (see Chapter 2, *Project Description*, page 2-8, and Plates PD-2 through PD-5 (pages 2-4 through 2-7)). Draft EIR Chapter 7, *Biological Resources*, addresses potential impacts to wetlands and avoidance and minimization measures to avoid such impacts under Impact BR-11. As shown in Table BR-1 and Plate BR-1, a 1-acre strip of Fremont cottonwood is present between Interstate 80 and

El Centro Road at the southern edge of the proposed UWSP. These trees are separated from the Sacramento River by 0.3 miles of developed landscape. The USFWS defines riparian areas as plant communities contiguous to and affected by surface and subsurface hydrologic features of rivers, streams, lakes, or drainage ways, and are typically transitional areas between wetland and upland.³³ The Fremont cottonwood trees are not contiguous to hydrologic features and are better described as nonriparian woodland. As such, Table BR-1 of Chapter 7 is modified as follows:

Table BR-1: Proportion of Land Cover Classifications Within the UWSP Area and Crosswalk with NBHCP Land Cover Classifications

Land Cover Classification	Corresponding NBHCP 2003 Land Cover Classifications	Acres	Proportion (%)
Annual Grasses and Forbs	Grassland	17.31	0.79
Deciduous	Orchard	4.38	0.20
Field Crops	Non-Rice Crops	334.71	15.22
Fremont Cottonwood	<u>NonRiparian Woodland</u>	1.00	0.05
Grain and Hay	Alfalfa	792.79	36.05
Partially Irrigated Crops	Non-Rice Crops	272.50	12.39
Pasture	Pasture	17.91	0.81
Ruderal	Ruderal	285.50	12.98
Truck Crops	Non-Rice Crops	74.44	3.38
Urban/Developed (General)	Urban	258.18	11.74
Valley Oak	Tree Groves	34.66	1.58
Vineyard	--	17.23	0.78
Water	Canals	45.08 ^a	2.05
SAFCA Wetland Creation		43.62	1.98
Total		2,199.00	100.00
<p>NOTES:</p> <p>NBHCP = Natomas Basin Habitat Conservation Plan; SAFCA = Sacramento Area Flood Control Agency; UWSP = Upper Westside Specific Plan</p> <p>a Land cover calculation includes all drainage ditches in farmland.</p> <p>SOURCE: HELIX 2024</p>			

³³ U.S. Fish and Wildlife Service. 2025. Definition of "riparian" in on-line Glossary. Available at <https://www.fws.gov/glossary/riparian#:~:text=Riparian%20areas%20are%20plant%20communities,transitional%20between%20wetland%20and%20upland..> Accessed in February 2025.

In its discussion of Issues Not Discussed in Impacts, the Draft EIR Biological Resources chapter states that “No riparian habitat or other sensitive natural community is present in the UWSP area. Therefore, no impact would occur, and this issue is not evaluated further in this EIR.” This statement is consistent with Draft EIR Table BR-1, as amended, within the Environmental Setting presented in Chapter 7, *Biological Resources*.

Although there is no riparian habitat within the project area, there are species that nest in or otherwise utilize the nearby riparian habitat along the Sacramento River. The effects of the proposed project on those species, including the Swainson’s hawk, are addressed in the impact analysis presented in the Draft EIR. Potential impacts to wetlands and wildlife are addressed under Impacts BR-1, BR-3, BR-4, BR-5, BR-6, BR-7, BR-8, BR-9, BR-11, and BR-12 of the Draft EIR.

COMMENT 18-29

- The UWSP EIR falsely equates the County’s stated goals of habitat preservation with habitat mitigation. The EIR says the project’s approach for habitat and biological resources present within the UWSP area is to provide compensatory mitigation. Mitigation is very different from the County’s goal of preservation. Preservation means to keep as is, in place. Mitigation means to make a significant impact, such as loss of habitat, less severe. Making an environmental impact less severe still means there is an impact. The EIR should make clear the distinction between preservation and mitigation. The EIR should also make clear that even with compensatory mitigation, the UWSP project would still have a significant negative impact on existing area habitat and wildlife, and that loss would be permanent.

RESPONSE 18-29

The EIR never equates habitat preservation with habitat mitigation. Instead, it describes how the UWSP would avoid impacts through design (such as incorporating the Agricultural Buffer), consistent with County policy, and then goes on to disclose the residual impacts and how those impacts would be mitigated.

The Habitat Protection and Management discussion in Sacramento County’s 2030 General Plan Conservation Element chapter describes habitat mitigation as a means to mitigate impacts on natural resources through replacement of a resource or via other means of compensation by providing “permanently protected areas across a species’ range” (p. 33). Policies supporting the habitat mitigation objective include CO-59 (Ensure mitigation occurs for any loss of special status species habitat).

To mitigate for potential significant impacts, CEQA requires that mitigation measures not just make the impact “less severe”, but that they reduce impacts to less than significant, if feasible. Compensatory mitigation for permanent impacts to habitat is a well-established means of reducing impacts to less than significant, as stated in the Habitat Mitigation discussion in the County’s General Plan (page 33).

Mitigation Measure BR-7b, Compensate for Permanent Impacts on Swainson’s Hawk Foraging Habitat requires compensatory mitigation at a ratio of at least 0.75:1

(mitigation habitat to permanently lost habitat) for mitigation sites within 1 mile of the Sacramento River or Feather River. Compensatory mitigation for mitigation sites greater than 1 mile from the Sacramento River and Feather River would be at a ratio of at least 1:1, or of equal or greater ecological value as established in separate authorizations or permits by the USFWS and/or CDFW, Mitigation Measure BR-3, which includes compensation for permanent impacts on giant garter snake habitat, requires mitigation through creation, restoration, or enhancement, and preservation and management, of suitable aquatic and associated upland giant garter snake habitat, or purchase of credits for aquatic and associated upland habitat suitable for giant garter snake (e.g., constructed marsh) at a ratio of at least 1:1 (mitigation aquatic and upland habitat to permanently lost aquatic and upland habitat), and mitigation through preservation and management of rice fields at a ratio of at least 2:1. Mitigation Measure BR-11, Avoidance of Impacts on Wetlands and Waters, requires compensation for permanent impacts on wetlands and waters to be provided at a 1:1 ratio in the form of permanent on-site or off-site creation, restoration, enhancement, or preservation of habitat, or agency-approved mitigation/conservation credits. Implementation of these measures would reduce the impacts on these habitats and biological resources to less than significant.

COMMENT 18-30

Hydrology and Water Quality

- Sacramento County policy is to actively plan to protect, as open space, areas of natural resource value, which may include but are not limited to riparian corridors and floodplains associated with riparian drainages. The EIR fails to point out that the UWSP project area is in the Sacramento River corridor, less than 1,000 feet from the Sacramento River. The EIR says, “No wetlands preserves, riparian corridors or floodplains associated with riparian drainages are present in the UWSP area so none will be affected by the project’s development.” That is incorrect. Farmland soils, wildlife and other biological resources, and tribal cultural resources present within the UWSP area are associated with proximity to the river and are part of the Sacramento River corridor. The EIR fails to provide this information.

RESPONSE 18-30

Please see Response 18-28 above. If the proposed UWSP is approved, the implementation of mitigation measures would be overseen by the County pursuant to an approved Mitigation Monitoring and Reporting Program that is required by Public Resources Code 21081.6(a)(1) and CEQA Guideline section 15097. Please also see Response 19-86 below.

COMMENT 18-31

The EIR fails to identify that the proposed UWSP would put new urban development in the Sacramento River floodplain. In addition to exposing new populations to flooding, the impervious surfaces associated with urbanization increase flood risk beyond the project area. While the new Natomas levee is expected to provide 200-year flood

protection from the Sacramento River, climate change increases the chance of extreme flooding. Recent flooding in Ashville, North Carolina is proof of that. Around the United States, communities are starting to reserve land near waterways to use as open space for flood protection. Current open space and farmland in the UWSP project area provides an additional level of community flood protection. The EIR fails to indicate that the proposed UWSP project would eliminate this community flood protection.

RESPONSE 18-31

As discussed in Draft EIR Chapter 13, *Hydrology and Water Quality* (see page 13-3), and in Appendix HYD-1, *Drainage Study* (see page 1), the UWSP area is currently located in the 100-year flood zone. A remapping effort is currently underway, which would conditionally remove portions of the site from the flood zone designation, pending completion of the Natomas Levee Improvement Project. The flood control and levee improvement projects are anticipated to be completed by end of 2025 and will provide protection from the 200-year design storm event. The 200-year flood zone, or the Urban Level of Flood Protection (ULOP) was established by the State of California in response to events such as Hurricane Katrina. It was established as a requirement in the Central Valley Flood Protection Act of 2008, enacted by Senate Bill (SB) 5 in 2007. According to the State:

DWR developed the *Urban Level of Flood Protection Criteria* in a manner that would satisfy the legislative requirements without interfering with local land-use authority, provide reasonable details and flexibility for viability, and promote prudent floodplain management in concert with other State law provisions related to smart growth and climate change adaptation strategies.³⁴

Development within the UWSP area would not commence until after the levee upgrades are complete. Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage for further discussion. Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage.

As discussed in Chapter 2, *Project Description*, of the Draft EIR, stormwater from each of the drainage water sheds would be directed to detention basins within each watershed prior to being routed to drainage canals. In addition, development projects implemented under the UWSP would incorporate water quality measures (e.g., amended soils, bio-retention, water quality basins) as required by the County's *Storm Water Quality Design Manual*.

As discussed in DEIR Appendix HYD-1, *Drainage Study*, projects implemented under the UWSP will be required to comply with the Sacramento Area-wide NPDES Municipal Stormwater Permit (Order No. R5-2008-0142), which addresses post-construction flow

³⁴ California Department of Water Resources, *Urban Level of Flood Protection Criteria*, November 2013, page 1-3.

reduction and treatment requirements. The requirements include Low Impact Development (LID) flow reduction and treatment control measures. LID measures are typically integrated into site landscaping (including open space, yards, streetscapes, road medians, and parking lot and sidewalk planters) or into the design of paved and other impervious areas (e.g., open space, disconnected impervious areas, porous pavement, bioswales, trees). LID BMPs reduce the increase in runoff volume that would otherwise be expected from a development. Reducing runoff using LID measures reduces the amount of runoff that needs to flow into treatment BMPs.

Finally, projects constructed under the proposed UWSP would include designing the detention basins to the 500-year flood event to attenuate storm flows and designing the foundations and pads of structures built within the UWSP area to the 200-year flood event, as per ULOP requirements. Note that the existing level of community flood protection is lower than the conditions once the levee upgrades are completed by the end of 2025. Therefore, with completion of the above-described improvements of the levee system that are independent of the UWSP and the construction and operation of the drainage systems for projects implemented under the UWSP, flood protection would be improved over existing conditions. In addition, current flood planning for the basin does not include use of the project area for flood storage, the basin is not considered or managed as a detention basin, and the area does not serve as community flood protection. Instead, the existing levees and pump stations serve that purpose.

COMMENT 18-32

Violations of County Plans and Policies

- Sacramento County's 2030 General Plan was intended to promote the efficient use of land, encourage economic vitality and reduce urban sprawl and its impacts, preserve habitat and open space, and protect local farming. The Urban Services Boundary was intended to implement that vision and promote orderly growth within the County. The EIR fails to state that the UWSP project violates the County's 2030 General Plan, County zoning, the Urban Services Boundary, the Urban Policy Area, and SACOG's Blueprint for regional development. The EIR fails to clearly and honestly identify impacts from the UWSP violation of those goals and fails to identify impacts from proposed changes to County policies.

RESPONSE 18-32

The Draft EIR fully evaluates the physical effects on the environment that could result with implementation of the proposed UWSP in accordance with the requirements of CEQA, including effects related to agricultural resources, biological resources, land use, and flood hazards.

Please see Master Response AR-1: Conversion of Farmland to Nonagricultural Uses, Master Response LU-1: County Urban Services Boundary and Urban Policy Area, Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127, and Master Response LU-3: SACOG Blueprint and MTP/SCS.

COMMENT 18-33

- The EIR falsely says, “the proposed UWSP would not conflict with Sacramento County’s Land Use Plans.” That is not true. The UWSP violates the County’s General Plan land use policies, as well as the Urban Services Boundary, the Urban Policy Area, and zoning policies. False statements do not belong in the EIR and should be removed.

RESPONSE 18-33

No specific evidence is provided to support the claim that the proposed UWSP violates County policies or that the Draft EIR includes false statements. As discussed in Chapter 14, *Land Use*, of the Draft EIR, the proposed UWSP meets both regional and County visions and plans intended to promote smart growth principles, including compact development, mixed-use development, housing choice and diversity, transportation choice, reduction of vehicle miles travelled (VMT), reduction of greenhouse gas (GHG) emissions, natural resource conservation, and quality design. As discussed in Impact LU-3 in Chapter 14, *Land Use*, of the Draft EIR, County General Plan Policy LU-120 is intended to reduce impacts of many different types – such as growth inducement, unacceptable operating conditions on roadways, poor air quality, and lack of appropriate infrastructure – by establishing design criteria for all amendments to the Urban Policy Area (UPA). Policy LU-120 represents a performance-based approach emphasizing high quality, smart growth criteria rather than business-as-usual approach that repeated historical land use patterns. Policy LU-120 was developed with the primary objective of reducing VMT by identifying sufficiently high densities to support transit; requiring infrastructure, including transit, is put in place at the same time the project is developed; maintaining a jobs-housing balance that reduces the need for long commutes and ensures lower VMT; ensuring a project design that will enable residents to walk, ride bicycles, or take transit to their jobs and schools; and requiring a reasonable amount of mixed-use development. Draft EIR Table LU-3, pages 14-29 through 14-31, includes a discussion of the consistency of the proposed UWSP with LU-120’s performance criteria, scoring 24 out of 24 possible points.

Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area, and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 18-34

- County policy says planning and development of new growth areas should be consistent with Sacramento County adopted Habitat Conservation Plans and other plans and policies to preserve and protect natural resources within an existing community. The EIR then falsely says the UWSP proposes development that would be consistent with the County’s growth management policies. The UWSP project violates current County General Plan, Urban Services Boundary and Urban Policy Area growth management policies. False statements must be removed from the EIR.

RESPONSE 18-34

No specific evidence is provided to support the claim that the proposed UWSP violates County policies or that the Draft EIR includes false statements. Please see Response 18-33 above, Master Response LU-1: County Urban Services Boundary and Urban Policy Area, and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 18-35**USB Violation**

- The UWSP EIR does not present or discuss that Sacramento County has an Urban Services Boundary policy that says the County shall not expand the Urban Service Boundary unless there is inadequate vacant land within the USB to accommodate the projected 25-year demand for urban uses..." The EIR does not state clearly under Land Use that there is adequate vacancy inside the Urban Services Boundary for the number of housing units and commercial space the project proposes.

RESPONSE 18-35

Please see Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127. The Draft EIR fully evaluates the physical effects on the environment that could result with implementation of the proposed UWSP in accordance with the requirements of CEQA. The Draft EIR is not required to make a determination as to whether there is adequate vacancy inside the Urban Services Boundary for the number of housing units and commercial space proposed under the UWSP. This determination is made by the Board of Supervisors.

COMMENT 18-36

- The EIR offers no rationale for the County approving urban development outside the Urban Services Boundary.

RESPONSE 18-36

Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area, and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 18-37

- One of the goals of the Urban Services Boundary was to encourage infill development. Infill development advantages residents inside the new development and infill development adds vitality and benefits to the nearby community, maximizes the cost-efficiency of urban services such as transit, and reduces environmental impacts

associated with urban sprawl. The EIR fails to discuss ways in which allowing development outside the Urban Services Boundary discourages infill development and disadvantages communities inside the Urban Services Boundary.

RESPONSE 18-37

Please see Response 18-33 above, Master Response LU-1: County Urban Services Boundary and Urban Policy Area, and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 18-38

River Corridor Conflicts

New Urban-Rural Land Use Conflicts

- Other than changing the aesthetics and rural character of the area, the EIR fails to address impacts from putting urban development within 700 feet of rural residential zoning, changing the expectations for area rural residents choosing to live in a rural residential zone (this is true for Garden Highway rural residential homeowners and homeowners on UWSP area farmland).

RESPONSE 18-38

The comment does not specify the physical impacts the DEIR purportedly failed to address. The Draft EIR fully evaluates the physical effects on the environment that could result with implementation of the proposed UWSP in accordance with the requirements of CEQA.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 18-39

- The EIR should and does not identify feasible mitigations that might reduce urban-rural conflicts for a project like UWSP near rural residential areas like Garden Highway, such as requiring that the 20–30-year UWSP project construction begin closest to existing urban uses (i.e. near El Centro road), reaching rural areas last (i.e. Garden Highway), and this impact could be partially mitigated by establishing a minimum one-half mile setback between the UWSP project and any rural residential areas (i.e. Garden Highway), with the setback to include a minimum 100-footwide densely planted tree buffer of tall native evergreen trees at the western project boundary, with the setback established and the tree buffer installed before the first stage of project construction.

RESPONSE 18-39

The Draft EIR fully evaluates the physical effects on the environment that could result with implementation of the proposed UWSP in accordance with the requirements of CEQA. The comment does not specify the urban-rural conflicts the Draft EIR

purportedly fails to address. As a result, mitigation to reduce urban-rural conflicts is not required.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 18-40

- If County zoning has setback requirements between rural residential zoning and urban activity, those setbacks should be clearly identified in the EIR. If the County does not have such setback requirements, the EIR team should contact an appropriate government agency or reputable nonprofit organization that has studied what setbacks should occur between rural residential zoning and urban activity in order to avoid conflicts, and the findings of that research should be included in the EIR next to the proposed setbacks.

RESPONSE 18-40

Setback standards for all zoning districts, including agricultural, agricultural-residential, residential, commercial, mixed-use, and industrial zoning districts are set forth in Chapter 5, *Development Standards*, of the Sacramento County Zoning Code (available at <https://planning.saccounty.gov>). The Development Standards define the dimensional requirements that apply to structures built within each of the land use zoning districts, including required lot sizes, lot coverage; setbacks; building and structure heights; and other requirements related to the building envelope, location, and configuration of buildings and structures. Development standards in Zoning Code are structured by topic areas and ensure projects within each of the County's zoning districts are compatible and sensitive to the context of the existing community. The EIR is not required to identify all County setback requirements between rural residential zoning and urban activity.

As discussed extensively throughout the Draft EIR development under the proposed UWSP would be required to be consistent with applicable land use plans, policies, and regulations, including the Sacramento County 2030 General Plan and the County Zoning Code. Physical effects related to compatibility or potential conflicts between proposed UWSP land uses and adjacent land uses are fully evaluated in the applicable technical chapters of the Draft EIR, including Chapter 5, *Agricultural Resources*, Chapter 14, *Land Use*, and Chapter 15, *Noise*. Please also see Master Response AR-2: Interface Between Agricultural and Urban Uses.

This comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 18-41

Noise

- The EIR fails to adequately address the impacts from a proposed stadium, which would be close to residences in and all around the UWSP project area, including

Garden Highway. Stadium traffic, noise, and light do not belong in or near residential areas. Stadium noise can travel miles. County and City Code Enforcement offices and Sacramento stadium operators can confirm stadium conflicts with residential areas. Any stadium should be miles from any homes.

RESPONSE 18-41

An analysis of noise impacts from high school sports fields and stadiums is provided on page 15-47 of the Draft EIR. The analysis applies reference noise levels from sports stadium activity to predict potential noise levels at distance. The impact is identified as potentially significant and Mitigation Measure NOI-4b is identified to address the impact. There are numerous examples in Sacramento County of high schools and associated sports fields and stadiums coexisting in proximity to residential neighborhoods. As described in Response 15-59, typical noise levels from high school stadiums are at levels that are considered generally acceptable in residential neighborhoods. Nevertheless, as stated in the Draft EIR, previous studies have indicated that while available noise control mitigation for noise from stadium events may reduce associated noise levels, given the overall size of crowds and the potential for nighttime events, and the protective noise thresholds established in the County Code, noise impacts cannot always be mitigated and the impact of high school use sports fields and stadium noise at existing sensitive uses is identified as significant and unavoidable.

COMMENT 18-42

- The EIR fails to adequately address the impacts from amplified sound from the UWSP area, such as at the outdoor pavilion. Amplified sound should be prohibited in all residential areas. In the past, developers and the County have said that amplified sound can be regulated to minimize impacts. That has proven to be untrue. Over time, sound equipment and the location of the speakers can change and noise makers like bull horns and portable sound systems can be introduced, resulting in uncontrolled noise that can travel more than 2 miles.

RESPONSE 18-42

An analysis of noise impacts from amplified music events at the outdoor pavilion is provided on page 15-48 of the Draft EIR. The analysis identifies a distance at which a documented noise level from an amplified music source could result in a potential noise impact. The impact is identified as potentially significant and Mitigation Measure NOI-4c is identified to address the impact. However, because it cannot be demonstrated with certainty that noise impacts can always be sufficiently mitigated to achieve noise standards, the impact of park activity noise at existing receptors is identified as significant and unavoidable.

COMMENT 18-43

- The EIR fails to identify the health impacts of traffic noise, school and park noise, and amplified noise from the outdoor pavilion and stadium.

RESPONSE 18-43

The following text is hereby added following the discussion of Mitigation Measure NOI-4c on page 15-49 of the Draft EIR:

POTENTIAL HEALTH EFFECTS OF SIGNIFICANT OPERATIONAL NOISE IMPACTS

As discussed above, operational noise levels from traffic noise, school and park noise, and amplified noise from the outdoor pavilion and stadium would result in significant and unavoidable noise impacts under CEQA.

Although operational noise would be reduced by Mitigation Measures NOI-3a, NOI-3b, NOI-4a, NOI-4b and NOI-4c, the residual impacts could still be significant and unavoidable.

With respect to the health impacts of noise exposure, short-term noise levels constituting the thresholds of pain and hearing damage are 120 dB and 140 dB, respectively (Kinsler, 1982). Noise levels up to 90 dBA Lmax at 100 feet could be generated by stadium events. This predicted level is substantially below the thresholds of pain and hearing damage. The Occupational Safety and Health Administration require hearing conservation plans when noise levels continuously exceed 85 dBA over an 8-hour period; The predicted noise levels at the nearest receptors would not exceed 85 dBA, outside of the stadium. In fact, as explained in Response 15-59 of this FEIR, average noise levels at nearby homes would be expected to be in the range of 60-65 dB. Consequently, the significant and unavoidable noise impact is not generated by virtue of noise levels that would be considered harmful but, rather, as a result of the magnitude of the increase over existing ambient noise levels at certain receptor locations. Therefore, operational noise impacts would not result in adverse health effects related to pain, the onset of hearing loss or other significant health effects.

COMMENT 18-44

- The EIR fails to adequately address that project related noise, as well as project construction noise, could be serious impacts on Garden Highway residents because of the prevailing wind that carries sound toward Garden Highway.

RESPONSE 18-44

The quantitative analysis of unmitigated construction and operational noise impacts in the DEIR conservatively assumes direct line-of-sight between source and receiver with no intervening structures or topography. The analysis also assumes the closest potential distances between source and receiver.

With respect to wind effects on noise propagation, refraction of soundwaves creates a noise shadow (reduction) upwind of the source and a noise concentration (increase) downwind of the source. The prevailing wind in the area is southerly southwest most

months of the year, with northerly prevailing winds during winter months.³⁵ Based on the prevailing wind direction, air pollutants generated by UWSP would generally disperse northward, away from Garden Highway. Further, as stated in Caltrans guidance document, *Technical Noise Supplement to the Traffic Noise Analysis Protocol Analysis*, “present policies and standards ignore the effects of wind on noise levels. Unless wind conditions are specifically identified, noise levels are always assumed to be for zero wind. Noise analyses are also always made for zero-wind conditions” (Caltrans, 2013). Because of this, it is industry practice to assume zero-wind conditions in the analysis of potential noise impacts under CEQA as was done in the Draft EIR.

COMMENT 18-45

Population and Housing

- The EIR should, and does not make clear that the UWSP has no commitment to a specific number or percentage of the type of housing Sacramento needs, including very affordable, affordable, missing middle duplexes and triplexes, senior housing and handicapped housing all located near transit.

RESPONSE 18-45

Please see Response 15-59.

COMMENT 18-46

- The EIR should and does not make clear that the UWSP has no commitment to including affordable housing as part of each housing development, so affordable housing is integrated in each phase of development, and not targeted for one area of the project, or built in the last phase of development in 20-30 years.

RESPONSE 18-46

Please see Response 15-59.

COMMENT 18-47

- The EIR should and does not make clear that the UWSP is unlikely to result in the development of any housing for at least 7 years (the projected time for construction of Phase 1). This project will not help with Sacramento’s urgent housing needs.

RESPONSE 18-47

Please see Response 15-59.

³⁵ National Oceanic and Atmospheric Administration Technical Memorandum NWS WR-272, Climate of Sacramento, California, Revised June 2005. https://www.weather.gov/media/wrh/online_publications/TMs/TM-272.pdf

COMMENT 18-48**Public Services and Recreation**

- The EIR fails to mention that County policy says the County shall not provide urban services beyond the Urban Policy Area (UPA), because it is the intent of the County to focus investment of public resources on revitalization efforts within existing communities. The EIR fails to mention that the UWSP project violates this policy, and the EIR fails to identify impacts from the UWSP's violation of this policy.

RESPONSE 18-48

As is described on page 2-14 of Chapter 2, *Project Description*, of the Draft EIR, the project proposes an amendment to the General Plan that would “expand the USB and UPA to include the 1,524-acre Development Area within the 2,066-acre UWSP area.” If approved by the Board of Supervisors, the Urban Policy Area would be extended to include the portion of the project area planned for urban development, and thus when such development is proposed it would not violate the County’s policy to not provide urban services outside of the UPA. The General Plan provides specific policies that establish the process that the County must go through to consider changes to the Urban Services Boundaries and the Urban Policy Area. If the County, when adopting the General Plan, determined that the USB and UPA boundaries were permanent and inviolate, such policies that establish criteria and processes for changes to those boundaries would not have been included. Because the proposed UWSP would only proceed, and would only require the extension of urban services, if the County determines to extend both the USB and the UPA as part of approving the project, the assertion that the proposed UWSP would violate the County policy that prohibits urban services delivery outside of the UPA is incorrect.

COMMENT 18-49

- The EIR fails to indicate that the extension of public services to the project area is unanticipated and unplanned.

RESPONSE 18-49

The UWSP Draft EIR does not describe the provisions of public services to the proposed project as “unanticipated and unplanned” because it is not true. As is described in Chapter 2, *Project Description*, of the Draft EIR, planning for development of the project area extends back for more than 20 years to the coordinated City/County Joint Vision for Natomas. More than 12 years ago, the County initiated a Master Plan process that considered the potential for movement of the USB and UPA to include the four precincts articulated in the Joint Vision, including the UWSP project area. In 2018, the property owners that make up the UWSP project area filed an application with the County, and in February 2019 the County approved their request to initiate planning for the project area. The planning for the project has gone on for more than 5 years, and has included multiple public and agency meetings, extensive planning within the many departments

of the County, as well as preparation of a full EIR under CEQA, addressing all of the environmental resource topics relevant to the project and project site.

COMMENT 18-50

- The EIR fails to say the UWSP has no control over when some of the services and recreation areas would be available in the project area, which would, at least, increase vehicle trips to access services in other areas.

RESPONSE 18-50

The comment pertains to the timing of services and recreation areas within the UWSP and expresses concerns over increased vehicle trips to access services in other areas. It is common for specific plans to build out with differing levels of absorption of residential versus non-residential uses. However, we cannot know with certainty the type, rate, location of development in the project or outside of the project that would affect travel to/from the project. Consequently, such analysis would be speculative. The transportation analysis was conducted following the Sacramento County Transportation Analysis Guidelines (TAG), which includes the analysis of the project under baseline conditions, consistent with the requirements of CEQA even though project development will occur over many years. However, such conditions would not result in a level of external vehicle trips generated that exceeds the total amount expected at project buildout.

COMMENT 18-51

- The EIR fails to identify harms caused by the unplanned extension of public infrastructure and services to accommodate the UWSP outside the Urban Services Boundary and the Urban Policy Area, particularly the harms to the County's efforts to focus investment of public resources on revitalization efforts within existing communities.

RESPONSE 18-51

As described in Response 18-49, the proposed UWSP has been undergoing planning evaluation and consideration for many years. If the County determines that it is consistent with County policy to adopt the proposed UWSP it would do so in light of a wide range of considerations, including fiscal and economic factors that may affect the County's budget. Any particular changes to the investment of public resources within existing communities would be discretionary decisions made by Board of Supervisors, which is responsible for adoption of the County budget. Thus, it would be speculative to identify any particular future decisions about the expenditure of County resources. Under CEQA an EIR is to avoid speculation. Pursuant to CEQA Guidelines section 15145, "If, after thorough investigation, a Lead Agency finds that a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact."

COMMENT 18-52**Transportation**

- The project EIR says traffic safety is a key consideration. However, the EIR fails to adequately address the severe and dangerous impacts UWSP traffic would have on the Garden Highway roadway and existing Garden Highway roadway users. The EIR suggests the project could add 4,000 trips a day on Garden Highway. Garden Highway is a rural 2-lane, undivided, elevated roadway. Garden Highway is half the width it should be for traffic safety. It has blind curves, no shoulders and no guard rails. The greatest safety issue on Garden Highway, which the EIR fails to identify, is the mixed use of the road by personal vehicles, semitrucks, agricultural equipment, cars pulling boats, golf carts, individual and groups of cyclists, pedestrians, and wildlife, any of which can enter the roadway unexpectedly from farm roads, driveways, and the riverbank. Adding traffic to Garden Highway has life safety consequences which cannot be mitigated.

RESPONSE 18-52

Refer to Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 18-53

- The EIR fails to identify that a mitigation to serious Garden Highway traffic and other rural road safety impacts identified in the EIR is to reroute UWSP traffic to avoid and actively discourage UWSP traffic from using rural roads including Garden Highway.

RESPONSE 18-53

Refer to Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 18-54

- The EIR fails to identify that adding traffic to Garden Highway would change the physical safety characteristics and make recreational use of Garden Highway too dangerous for cyclists and for vehicle clubs such as antique car clubs and motorcycle groups, eliminating a valuable Sacramento recreational opportunity.

RESPONSE 18-54

Refer to Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 18-55

- The EIR fails to highlight that the UWSP would introduce freeway and rural roadway traffic hazards for Sacramentans for which the project applicant has no ability to compel or control mitigations. That could subject Sacramento roadway and freeway users to increased traffic safety hazards, potentially for many years.

RESPONSE 18-55

This comment asserts that the proposed project would introduce freeway and rural roadway traffic hazards for which the project applicant has no ability to compel or control mitigations. Project-added traffic to rural roadways, most notably Garden Highway, is discussed in detail in Master Response TR-2: Garden Highway Safety Considerations. Regarding freeways, the comment does not identify any specific freeway segments or ramps, does not explain why the traffic safety hazard would occur and offers no other basis for the assertion. Pages 18-39 and 18-40 present the results of a safety review analysis of I-5 and I-80, concluding that project impacts on collision rates on these facilities would be less than significant.

COMMENT 18-56

- The EIR asserts, with no evidence, that most employment-related vehicle trips will be to downtown Sacramento. It is wrong for the EIR to present VMT data as fact when it is not based on evidence. Focusing so much on VMT to downtown Sacramento serves to minimize VMT. The EIR should have considered VMT more realistically to multiple job centers. While downtown Sacramento is a job center, Sacramento County has more jobs than downtown, as noted in the EIR. Yolo County and Placer County are also job centers.

RESPONSE 18-56

The comment asserts that the Draft EIR “presented VMT data as fact when it is not based on evidence”, “focused so much on VMT to downtown Sacramento serves to minimize VMT”, and “should have considered VMT more realistically to multiple job centers.” The VMT results presented in the Draft EIR are derived from SACOG’s SACSIM travel demand model. This is the same model that is used for its Metropolitan Transportation Plan/Sustainable Communities Strategy (MTP/SCS), which includes numerous VMT calculations and outputs. The Draft EIR did not disclose the specific locations of the project’s home-to-work vehicle trips as this is rarely presented in such analyses.

However, in response to this comment, the SACSIM model was utilized to quantify and demonstrate visually the UWSP project’s resident external work destinations. As project buildout will take place over an extended period, the cumulative year version of the SACSIM model was used for this purpose. **Image 6** shows a color-coded map highlighting which Traffic Analysis Zones (TAZs) were home-based work destinations for project residents. TAZs with darker colors indicate larger numbers of home-based work trips destined for that zone. It is apparent from Image 6 that the project’s home-based work trips are broadly distributed throughout the region including in Sacramento County, Yolo County, and Placer County.

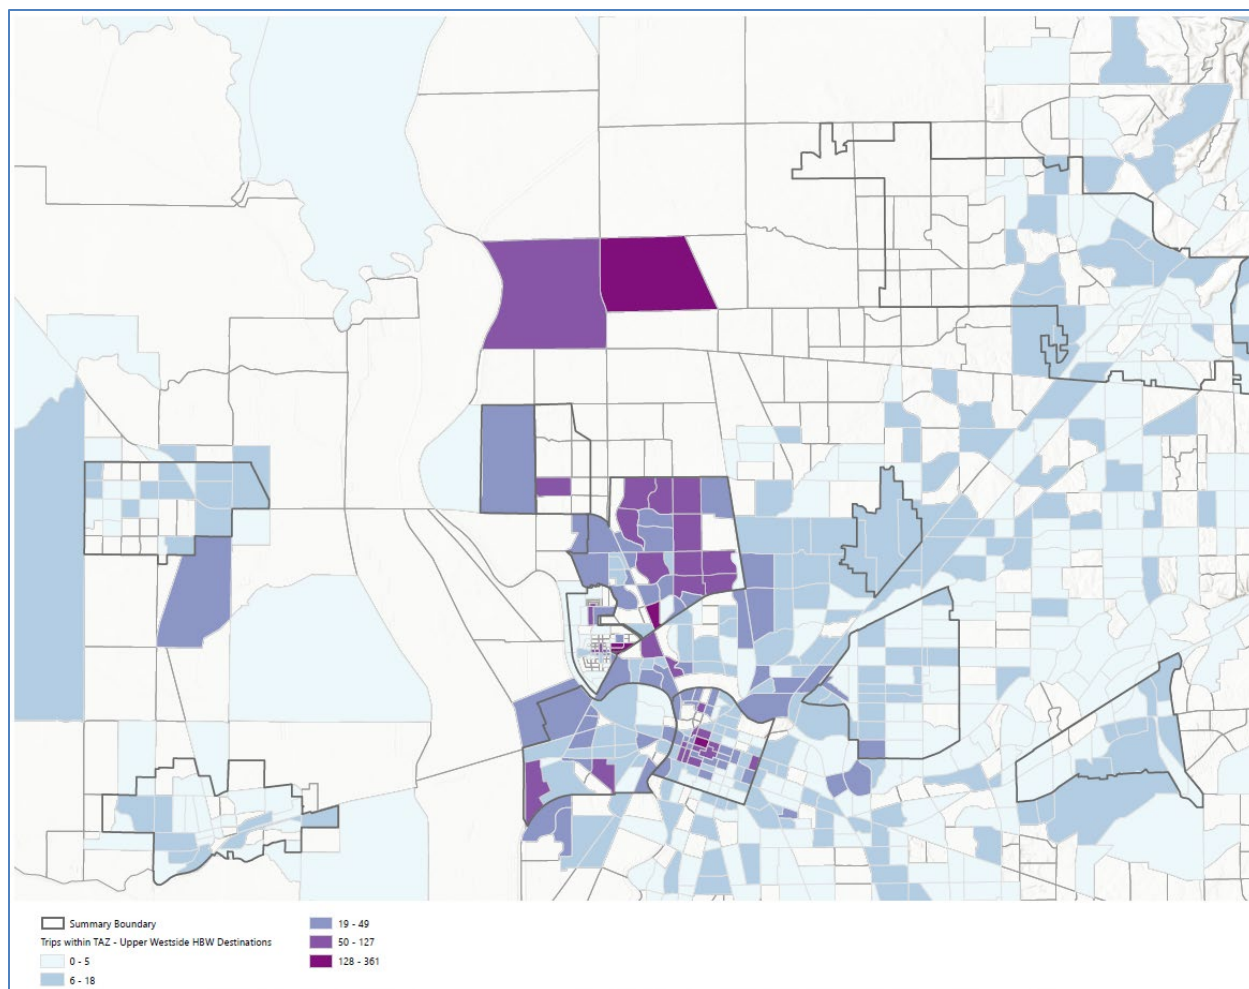

Image 6: Home-based work destinations for Upper Westside Specific Plan residents.

Table 2 was developed using the SACSIM model outputs to show the percentage of UWSP external home-based work trips to specific destinations. As shown, 20 percent of these trips have work destinations in Downtown Sacramento. This implies that four out of five UWSP residents who work outside the plan area do not work in Downtown Sacramento. They are distributed across a broad array of job centers in Natomas, unincorporated Sacramento County, West Sacramento, Roseville, Woodland, and other locations. Note that these jobs entail all varieties including service workers in areas such as Natomas Marketplace, Arden Fair Mall, etc. In summary, Table 2 clearly illustrates that the component of the project's VMT related to work travel did not overemphasize Downtown Sacramento as a work destination but was instead based on a reasonable and geographically diverse set of work destinations in various job centers.

**Table 2: Common Destinations for Upper Westside Specific Plan
Home-Based Work Trips**

Destination	Percentage of External UWSP Home-Based (HBW) Work Trips to Destination
Downtown Sacramento	20%
North Natomas	19%
Metro Airpark	6%
West Sacramento	5%
Roseville	3%
Arden/Arcade	2.5%
Woodland	2%
Rancho Cordova	1%
Davis / UC Davis	1%
McClellan	< 0.5%
Sacramento Intl. Airport	< 0.5%
Other	40%
<p>NOTES:</p> <ol style="list-style-type: none"> 1 Percentages consider external daily home-based work trips only. Home-based work trips that remain within UWSP are excluded. 2 Ranked from higher to lower levels of home-based work destinations. 3 Source of results is the cumulative version of the SACSIM travel demand model. 4 Results do not sum exactly to 100% due to rounding. <p>SOURCE: Fehr & Peers, 2025.</p>	

COMMENT 18-57

- The EIR fails to consider traffic impacts on the surrounding area from the UWSP stadium, outdoor pavilion, or schools.

RESPONSE 18-57

This comment asserts the Draft EIR did not consider traffic impacts on the surrounding area from the “stadium, outdoor pavilion or schools”. The stadium referred to in the EIR would be associated with the high school and is not intended for a professional sports franchise. While it could attract trips from adjacent communities for high school football games, such traffic generation is part of a high school and often generated during non-peak commute periods. The outdoor pavilion area would be included within the Town Center Park and would serve as a central gathering space for major outdoor community events such as theater performances, informal concerts, cultural events, special ceremonies, speeches, etc. Similar to a high school stadium, the pavilion’s function as

an attractor for community events is aligned with the intent of a Town Center Park. Neither the high school pavilion nor outdoor pavilion have evolved to a site planning level where attendee capacity values are known. School traffic was explicitly considered in the project's trip generation estimates and thus included in the analysis.

COMMENT 18-58

- The EIR fails to suggest traffic mitigations such as locating UWSP traffic generating uses (e.g. stadium, outdoor pavilion or schools) near major roadways and commercial uses to reduce traffic dangers, congestion, noise and air pollution in residential areas.

RESPONSE 18-58

The comment states that the Draft EIR fails to suggest traffic mitigations such as locating UWSP traffic generating uses (e.g. stadium, outdoor pavilion or schools) near major roadways and commercial uses to reduce traffic dangers, congestion, noise and air pollution in residential areas. The DEIR investigates how potential lighting and noise associated with the outdoor stadium could affect adjacent residents. For reasons described in Response 20-57, a detailed analysis of special events at the stadium and outdoor pavilion was not performed because such analysis would be speculative given the lack of known details for each amenity. Accordingly, no traffic mitigations were suggested for activities at either site.

COMMENT 18-59

- The EIR fails to mention that County policy says the County shall not provide urban services, such as road improvements and transit, beyond the Urban Policy Area (UPA), because it is the intent of the County to focus investment of public resources on revitalization efforts within existing communities. The EIR fails to present the impacts from the UWSP violation of this policy and the impacts from the changes to this policy proposed by the project applicant.

RESPONSE 18-59

Please see Responses 18-48 and 18-49 above for discussion of the proposed UWSP's relationship to policies of the Sacramento County General Plan related to amendments to the land use diagram, including the USB and UPA.

Irrespective of the interpretation of County policies, the Draft EIR addresses all of the adverse physical environmental effects of the proposed project. Pursuant to CEQA requirements as set forth in the CEQA Guidelines, each environmental resource topic subject to analysis under CEQA has been given careful consideration in light of existing and anticipated future environmental conditions, applicable regulations, the physical and operational characteristics of the proposed project. As required under CEQA, where significant impacts are identified, the Draft EIR describes potentially feasible mitigation measures which could be adopted to substantially lessen or avoid such impacts. In

addition, a range of reasonable alternatives are presented and comparatively evaluated in the Draft EIR.

COMMENT 18-60

- The EIR fails to identify impacts caused by the unplanned extension of public infrastructure and services, such as transit and roadway improvements, to accommodate the UWSP outside the Urban Services Boundary and the Urban Policy Area, particularly the harms to the County's efforts to focus investment of public resources on revitalization efforts within existing communities.

RESPONSE 18-60

The comment reflects the intention of County that is articulated in County General Plan Policy LU-3, which states that "[i]t is the intent of the County to focus investment of public resources on revitalization efforts within existing communities, especially within commercial corridors, while also allowing planning and development to occur within strategic new growth areas."

As described in Chapter 2, *Project Description*, of the Draft EIR, in order to be approved and developed, the proposed project would be required to be consistent with Sacramento County General Plan Policy LU-120. To be consistent with that policy, the proposed project would need to meet the requirements of a number of planning criteria, labeled PC-1 through PC-10. PC-7, which requires that the UWSP include a Services Plan that demonstrates:

- that provision of services to the proposed UPA expansion/Master Plan are cost-neutral to the County's General Fund and existing ratepayers;
- that the operations and maintenance costs stemmed from the required public facilities and infrastructure for the development of the proposed UPA expansion/Master Plan are cost-neutral to the County's General Fund and existing ratepayers, and;
- that existing levels of municipal services will not be negatively impacted by approval and buildout of the proposed UPA expansion/Master Plan.

Consistent with PC-7, Chapter 8 of the proposed UWSP includes a range of policies that are required pursuant to California Government Code 65451 and which present implementation mechanisms, including phasing and financing, that will guide the development of the UWSP area. UWSP Policy 8-H would "[r]equire the full cost of both on- and off-site public infrastructure and public facilities needed for development of the UWSP to be funded from revenues generated by development within the Specific Plan area." Further, as it relates to ongoing operations and maintenance costs, UWSP Policy 8-K would "[r]equire that development in the UWSP provide funding for the maintenance of public facilities within the Plan Area as outlined in the PFFP for parks, open space areas, drainage basins, water quality features, landscape corridors, gateways and entries, and similar public-use facilities."

Thus, if the proposed UWSP is approved, the County would have assurances that the development of the project would not adversely affect the availability of funds that the County intends for investment in revitalizing existing communities.

Please also see Response 18-59 above.

COMMENT 18-61

Tribal Cultural Resources

- While the UWSP would have a holistic impact on the tribal cultural landscape, the EIR fails to identify priority sites for tribal resource protection within the UWSP area.

RESPONSE 18-61

Given the programmatic nature of the EIR, the identification of priority sites for tribal cultural resources protection would be completed when specific development within the UWSP area is proposed. The County will implement Mitigation Measure TCR-1a, which requires that upon submittal of subsequent development applications, the project proponent shall coordinate with the County and consulting Native American tribes (United Auburn Indian Community, Wilton Rancheria, and Shingle Springs Band of Miwok Indians – collectively referred to as tribes) for each project-specific area. During consultation tribes shall be offered the opportunity to identify portions of the UWSP area that could be sensitive or potentially sensitive for tribal cultural resources and if tribal cultural resources are identified the tribes will be consulted on the best approach to avoid or develop treatment plans for the resource. In addition, TCR-1b requires that in the event that remain-in-place measures are infeasible for disturbed human remains, the project proponent, in consultation with tribes and County representatives, shall identify an on-site repatriation location within a conservation easement. The EIR adequately addresses this comment.

COMMENT 18-62

Utilities

- The EIR fails to state that the UWSP violates the County's Urban Services Boundary policy which says that the County shall maintain an Urban Services Boundary (USB) that defines the long-range plans (beyond twenty-five years) for urbanization and extension of public infrastructure and services. The EIR fails to identify impacts associated with this violation and UWSP impacts associated with proposed changes to the County's Urban Services Boundary policy.

RESPONSE 18-62

If approved, the proposed project would not violate the County's policies regarding expansion of the USB and/or UPA. Please see Responses 18-48 and 18-49 above regarding the proposed extension of the USB and UPA.

Contrary to the assertion in the comment, the UWSP Draft EIR presents a comprehensive analysis of the potential significant environmental impacts associated with approval and implementation of the proposed project, which includes proposed extensions of both the USB and UPA. Pursuant to CEQA requirements as set forth in the CEQA Guidelines, each environmental resource topic subject to analysis under CEQA has been given careful consideration in light of existing and anticipated future environmental conditions, applicable regulations, and the physical and operational characteristics of the proposed project. As required under CEQA, where significant impacts are identified, the Draft EIR describes potentially feasible mitigation measures which could be adopted to substantially lessen or avoid such impacts. In addition, a range of reasonable alternatives are presented and comparatively evaluated in the Draft EIR.

COMMENT 18-63

- The EIR fails to mention that County policy says the County shall not provide urban services beyond the Urban Policy Area (UPA), because it is the intent of the County to focus investment of public resources on revitalization efforts within existing communities. The EIR fails to identify UWSP impacts associated with this violation and impacts associated with proposed changes to the County's Urban Policy Area policy.

RESPONSE 18-63

As noted above, the County would not provide urban services to the UWSP unless or until the USB and UPA would be revised to include the project site. As such, implementation of the proposed project would not be inconsistent with County policies that limit provision of urban services to properties within the UPA.

COMMENT 18-64

- The EIR fails to identify harms caused by the unplanned extension of public infrastructure and services, such as utility services, to accommodate the UWSP outside the Urban Services Boundary and the Urban Policy Area, particularly the harms to the County's efforts to focus investment of public resources on revitalization within existing communities.

RESPONSE 18-64

Please see Response 18-63 above.

COMMENT 18-65

Other Resource Topics- Wildfire

- The EIR says the UWSP is outside an area where CalFire establishes fire hazard zones. Then the EIR makes the misleading statement that the project area is not in a fire hazard zone. It is wrong to say, and dishonest to leave the impression that the area has been assessed for fire hazard when it has not been assessed by CalFire or any other fire agency. The EIR should delete incorrect and misleading information and just say the area has not been assessed for wildfire risk and the wildfire risk is unknown.

RESPONSE 18-65

The comment is incorrect. It is true that the project site is not located within a State or Federal Responsibility Area. However, Government Code 51175-89 directs the California Department of Forestry and Fire Protection (CAL FIRE) to identify areas of very high fire hazard severity zones within Local Responsibility Areas (LRA). Mapping of the areas, referred to as Very High Fire Hazard Severity Zones (VHFHSZ), is based on data and models of, potential fuels over a 30-50 year time horizon and their associated expected fire behavior, and expected burn probabilities to quantify the likelihood and nature of vegetation fire exposure (including firebrands) to buildings. Based on the most recent mapping of fire hazard severity zones within LRAs in Sacramento County, the project site is designated non-VHRHSZ.³⁶

COMMENT 18-66

- The EIR is also incorrect about area conditions that could contribute to a wildfire hazard. There is heavy wooded growth adjacent to the river, less than 1,000 feet from the project area, from Sacramento up into rural wildfire hazard areas in Butte County. There are also at different times of the year dried crops and hay bales on farmland on both the Yolo and Sacramento sides of the Sacramento river that could and have caught fire (hay bales can be seen in EIR photos). A wind driven fire could easily jump the river as it has jumped freeways. The 2017 Tubbs fire burned into the City of Santa Rosa where more than a dozen people lost their lives and more than 2500 homes and one Hilton Hotel were destroyed. Wildfire could happen in the project area.

RESPONSE 18-66

Please see Response 18-65 above.

COMMENT 18-67

Cumulative Impacts

- The UWSP projects a 20–30-year buildout. The EIR fails to address ongoing impacts from construction noise, dust, traffic, etc. on area residents over an extensive period of time during which time mitigations the project applicant does not control may not be available to diminish impacts on existing area residents and new project area residents.

RESPONSE 18-67

The Draft EIR, Chapter 2, *Project Description*, includes a description of project phasing which clearly presents that anticipated 20-year horizon of development and construction, including an average annual construction of 468 dwelling units and about 155,000 square feet of non-residential space per year. Each of the environmental resource chapters

³⁶ LRA Fire Hazard Severity Zone Maps | OSFM (<https://osfm.fire.ca.gov/what-we-do/community-wildfire-preparedness-and-mitigation/fire-hazard-severity-zones/fire-hazard-severity-zones-maps>)

addresses the impacts and associated measures required to mitigation those impacts through the construction period for the project. For example, Draft EIR, Chapter 6, Air Quality, Impact AQ-4, Table AQ-12, page 6-47, includes analysis of the potential construction-related health risks due to exposure to toxic air contaminants for on-site receptors during construction of subsequent phases. As a further example, Draft EIR, Chapter 15, Noise, Impact NOI-1, addresses impacts from construction noise, and notes that “the potential exists for occupants of earlier phases of the project to also be impacted by construction activities associated with latter phases of construction.”

In most cases, construction effects are temporary as they take place during construction of a particular part of the development, in a particular location, for a finite period of time. As such, construction effects would be limited and would occur in different parts of the UWSP area over time. If the proposed UWSP were to be approved, it would be the responsibility of the County to ensure implementation of construction-related mitigation measures through implementation of the Mitigation Monitoring and Reporting Program that would be adopted as part of the proposed project approvals.

COMMENT 18-68

Growth Inducement and Urban Decay

- The EIR fails to accurately identify the UWSP project as unplanned urban development. The UWSP is unplanned – not included or anticipated in the County’s General Plan, or the Urban Services Boundary, or the SACOG Blueprint for regional development or plans for transit, regional roadway improvements, utility services extensions, or air quality improvement.

RESPONSE 18-68

If approved by the County Board of Supervisors, the proposed project would have been subject to a planning and environmental review process that spanned a period of more than 5 years. If approved, it would be added to the County’s General Plan through amendments to land use designations and other related policies, would be within the County’s Urban Services Boundary, and would be considered as an approved project in SACOG’s preparation of a land use forecast for its next updated version of the Blueprint. Similarly it would be accounted for in continuing updates of regional agencies responsible for transportation systems and other infrastructure delivery. As such, it would be not appropriate for the EIR to characterize the project as “unplanned.”

The growth inducing effects of the proposed project are presented in Draft EIR Chapter 23, *Growth Inducement and Urban Decay*. As it relates to the Elimination of Obstacles to Growth, the Draft EIR, pages 23-1 and 23-2, acknowledges that “[t]he proposed UWSP would result in the elimination of an obstacle to growth by extending the Urban Services Boundary and Urban Policy Area to serve the 1,524-acre Development Area,” but also recognizes that through consistency with Sacramento County General Plan Policy LU-120, the project meets the County’s requirements for future planned growth. So, while the plan area has not previously been designated for

urban development, the project as proposed meets the requirements established in the County's policies for planned growth outside of the current USB and UPA.

In addition, Draft EIR Chapter 16, Population and Housing, Impact PH-1 addresses the potential for the proposed UWSP to induce substantial unplanned population growth. The analysis concludes that proposed UWSP would be consistent with the policies related to urban growth and expansion of the USB and UPA in the Sacramento County 2030 General Plan, and "[c]onsequently, the proposed UWSP would not induce substantial unplanned population growth as identified in the Sacramento County 2030 General Plan." Further, because the proposed UWSP would have a jobs-housing relationship that is largely balanced and because the proposed UWSP would provide housing in close proximity to the regional job center, "the proposed UWSP would not be anticipated to induce substantial unplanned population growth." Nevertheless, because the proposed UWSP was not recognized as anticipated for development within the SACOG Blueprint or the current MTP/SCS, the potential inducement of substantial amounts of population growth was considered significant and unavoidable.

COMMENT 18-69

- In violation of CEQA, the EIR entirely fails to include in this section the long list of changes the UWSP project would require to County plans, policies, codes, etc., and the growth inducement impacts of changing those County plans and policies and codes.

RESPONSE 18-69

The Draft EIR, Chapter 2, *Project Description*, pages 2-14 through 2-20, presents an extensive list of requested entitlements including amendment to the General Plan Land Use Diagram, the Transportation Plan, the Active Transportation Plan, as well as "text amendments to align County policies in various General Plan Amendments regarding development in the Natomas Joint Vision Area." As discussed in prior responses, under CEQA the purposes of an EIR is to disclose the potential significant environmental impacts of the proposed project. The UWSP Draft EIR accomplishes this purpose. If the County considers approval of the proposed project, the requested comprehensive list of any required changes to various County plans, policies, and ordinances would be part of the staff report prepared for the Board of Supervisors, and as appropriate would be accounted for in approval resolutions. Revisions to other County plans, policies or codes would not alter the nature of the environmental impacts of the proposed UWSP which have been comprehensively disclosed in this EIR.

Growth inducement associated with the proposed UWSP has been addressed in Draft EIR Chapter 23. The potential effects of policy changes that are adopted for the purposes of approval of the proposed UWSP are currently unknown and speculative in nature. Such speculation is not appropriate in an EIR, pursuant to CEQA Guideline section 15145, which states "If, after thorough investigation, a Lead Agency finds that a particular impact is too speculative for evaluation, the agency should note its conclusion and terminate discussion of the impact."

COMMENT 18-70

- Sacramento County's 2030 General Plan and the County's Urban Services Boundary (USB) explicitly state that one of their purposes is to reduce unplanned urban development and its impacts outside the Urban Services Boundary. The EIR fails to clearly state that the UWSP violates the County's policies to prevent urban sprawl.

RESPONSE 18-70

Please see Response 18-68 above.

COMMENT 18-71

- The EIR fails to clearly identify all growth inducement impacts from the UWSP's development outside the County's Urban Services Boundary.

RESPONSE 18-71

The comment is incorrect. As required under CEQA, the Draft EIR, Chapter 32, *Growth Inducement and Urban Decay*, includes an analysis of the growth inducing effects of the proposed UWSP. The analysis explores various aspects of growth inducing effects, including elimination of obstacles to growth, such as provision of infrastructure capacity or removal of regulatory constraints. It also addresses the economic effects that can stimulate additional growth through economic activity, represented by the multiplier effect.

The analysis recognizes that "growth induced directly and indirectly by the proposed UWSP could also affect the greater Sacramento region." It goes on to disclose that potential environmental effects triggered by induced growth in the region could include increased traffic congestion; increased air pollutant emissions; loss of agricultural land and open space; loss of habitat and associated flora and fauna; increased demand on public utilities and services, such as fire and police protection, water, recycled water, wastewater, solid waste, energy, and natural gas.

COMMENT 18-72

- The EIR falsely says, "the proposed UWSP is consistent with Sacramento County General Plan Policy LU-120, which is intended to reduce impacts of many different types – such as growth inducement, unacceptable operating conditions on roadways, poor air quality, and lack of appropriate infrastructure." As stated in the EIR, the UWSP creates unacceptable operating conditions on roadways, poor air quality, currently lacks appropriate infrastructure, and in most cases the project applicant cannot compel, and does not control possible mitigations. False statements should be removed from the EIR.

RESPONSE 18-72

The Draft EIR, Chapter 14, Land Use, Impact LU-3 and Tables LU-2 and LU-3, address a comparison of the proposed UWSP with the provisions of County General Plan Policy

LU-120. The conclusion of the County staff's analysis of the provisions of Policy LU-120, it determined that "[b]ased on characteristics outlined in the UWSP, the proposed UWSP would meet the requirements of LU-120." The final determination of the consistency of the proposed project with the County General Plan, including Policy LU-120, will be further addressed in the County staff report and would be made by the County Board of Supervisors.

COMMENT 18-73

- The EIR falsely claims the pressure for future development in the area would be reduced because of the need to show consistency with the County General Plan and to receive approval from the Sacramento County Board of Supervisors. Those impediments are not enough to stop the UWSP project applicant. Why would they stop other project applicants? The EIR does not say, and should say, that if the Sacramento County Board of Supervisors approves the project, other similar urban development projects may also be approved using the same criteria.

RESPONSE 18-73

The comment addresses a statement on page 23-2 of the UWSP Draft EIR within a discussion of the extent to which the proposed project could be considered growth inducing as a result of removal of obstacles to growth. The specific statement to which the comment refers is "[f]urthermore, as the Urban Services Boundary and Urban Policy Area would not be extended to include the adjacent 542-acre Ag Buffer, the pressure to develop properties to the west of the development area would be reduced as any future development in this area would need to show consistency with General Plan Policy LU-120 and seek discretionary approval from the Sacramento County Board of Supervisors." In the context of this chapter of the Draft EIR, the language is reflecting the fact that 542-acres of the UWSP project site is proposed to remain in an Ag Buffer and to be outside of the USB and UPA boundaries. It acknowledges the high bar that General Plan Policy LU-120 creates for new urbanization.

LETTER 19

Soluri Meserve, a law corporation, on behalf of ECOS and FOSH, and Natomas resident Brandon Castillo, written correspondence; dated October 28, 2024.

COMMENT 19-1

After extensive review,¹ we conclude that the DEIR is woefully inadequate as an informational document. This letter also transmits expert comments on biological resource issues prepared by Shawn Smallwood, PhD ([Exhibit 1](#)), expert comments on transportation impacts by Dan Smith ([Exhibit 2](#)), and expert comments on air quality by SWAPE ([Exhibit 3](#)), which are all incorporated by reference. The County of Sacramento (“County”) must prepare and recirculate a new DEIR that addresses the many shortcomings identified in this comment letter and other comment letters. The County must also seriously consider how to prepare a new EIR that complies with its legal duty to objectively analyze the Project and project alternatives including the no project alternative.

¹ While we have expended extraordinary efforts reviewing the DEIR within the allotted 60 days, the DEIR’s pervasive informational deficiencies in a variety of resource areas prevent us from confidently representing that all such defects have been identified. We therefore reserve the right to supplement these comments. (*Galante Vineyards v. Monterey Peninsula Water Management Dist.* (2007) 60 Cal.App.4th 1109, 1121.)

RESPONSE 19-1

This comment asserts that the Draft EIR is “inadequate” and includes “informational deficiencies,” implying that it does not meet the requirements of CEQA. To the contrary, the Draft EIR prepared for the proposed UWSP is an objective, accurate, and complete analysis of the potential environmental impacts that would or could result from construction and operation of the proposed project. Pursuant to CEQA requirements as set forth in the CEQA Guidelines, each environmental resource topic subject to analysis under CEQA has been given careful consideration in light of existing and anticipated future environmental conditions, applicable regulations, and the physical and operational characteristics of the proposed project. As required under CEQA, where significant impacts are identified, the Draft EIR describes potentially feasible mitigation measures which could be adopted to substantially lessen or avoid such impacts. In addition, a range of reasonable alternatives are presented and comparatively evaluated in the Draft EIR. If the Board of Supervisors ultimately determines to approve the proposed project, it will be required to explain the reasons that it considers the significant impacts of the proposed project acceptable in a Statement of Overriding Considerations, which must be based on substantial evidence in the administrative record.

Regarding the assertion that a new Draft EIR should be recirculated, pursuant to CEQA Guidelines section 15088.5(a), if significant added information is added to the EIR after publication of the Draft EIR but before certification, some or all of the EIR may be

required to be recirculated for public review and comment. The term “significant new information” is precisely defined under CEQA to include:

- A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
- A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
- A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project’s proponents decline to adopt it.
- The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded.

In particular, CEQA Guidelines section 15088.5(b) clarifies that “[r]ecirculation is not required where the new information added to the EIR merely clarifies or amplifies or makes insignificant modifications in an adequate EIR.”

This Final EIR provides responses to all written comments on the Draft EIR. In responding to those comments, the County has at points provided additional clarification or expanded upon information and analyses provided in the Draft EIR. In several locations, minor edits have been made to the language of the Draft EIR in order to correct inadvertent errors, to provide clarification, or reflect information provided by commenters. However, neither the content of the responses, nor the editorial changes made to the language of the Draft EIR constitute “significant new information” as defined in CEQA Guidelines section 15088.5(a). Therefore, there is no requirement for recirculation of the EIR.

The comment’s reference to the submission of additional comments is noted. Pursuant to CEQA Guidelines section 15105, the County was required to circulate the Draft EIR for a period of 45 days. It chose to extend the circulation period to 60 days, an increase of 33 percent, in recognition of the public interest in the project and the magnitude of the content of the Draft EIR. As noted in CEQA Guidelines section 15087(e), the time for public review as set forth under CEQA is deemed “sufficient.”

COMMENT 19-2

As a threshold matter, the unprecedented scope of the Project’s acknowledged significant impacts should give one pause when considering “why” it is proposed. The Project’s acknowledged significant and purported unavoidable impacts include:

- Degradation of Existing Views and Visual Quality
- Substantially Degrade Existing Visual Character or Quality
- New Sources of Light
- Conversion of Farmland to Nonagricultural Uses

- Conflict with or Obstruct Implementation of an Applicable Air Quality Plan During Project Operation
- Long-term Operational Emissions of Criteria Air Pollutants and Precursors
- Exposure of Existing Off-site Sensitive Receptors to Toxic Air Contaminants During Operation
- Exposure of Future On-site Sensitive Receptors to Toxic Air Contaminants During Operation
- Historical Resources
- Archaeological Resources
- Human Remains
- Increase in Traffic Noise at Existing Sensitive Receptors
- Increase in Stationary Noise from Plan Components at Existing Receptors
- Increase in Stationary Noise from Plan Components at Proposed Sensitive Receptors
- Induce Substantial Unplanned Population Growth
- Conflict with a Program, Plan, Ordinance or Policy Addressing the Circulation System
- Hazards Due to Design or Incompatible Uses • Degradation of Existing Views and Visual Quality [cumulative]
- Substantially Degrade Existing Visual Character or Quality [cumulative]
- New Sources of Light [cumulative]
- Conversion of Farmland to Nonagricultural Uses [cumulative]
- Long-term Operational Emissions of Criteria Air Pollutants and Precursors [cumulative]
- Exposure of Existing Sensitive Receptors to Toxic Air Contaminants [cumulative]
- Exposure of Future Sensitive Receptors to Toxic Air Contaminants [cumulative]
- Historical and Archaeological Resources, including Human Remains [cumulative]
- Exceedance of Established Noise Standards – Traffic [cumulative]
- Population Growth [cumulative]
- Program, Plan, Ordinance or Policy Addressing the Circulation System [cumulative]
- Hazards Due to Design or Incompatible Uses [cumulative]

RESPONSE 19-2

As required under CEQA Guidelines section 15124(b), the UWSP Draft EIR includes a description of the objectives of the proposed project, which articulate the reasons that the project is currently proposed. The comment further asserts that the significant impacts identified in the Draft EIR are “unprecedented.” To the contrary, the impacts that are presented in the Draft EIR are not inconsistent with the range of impacts that are typically identified in CEQA documents for large-scale master plans in the Sacramento region.

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guidelines section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 19-3

The sheer breath of these significant and unavoidable impacts alone demonstrates that the Project is fundamentally misguided. This is precisely why the CEQA Guidelines advise, “Where there are impacts that cannot be alleviated without imposing an alternative design, their implications and ***the reasons why the project is being proposed, notwithstanding their effect, should be described.***” (CEQA Guidelines, § 15126.2, subd. (c), emphasis added.) It is telling that the DEIR makes no attempt to “explain why the project is being proposed” notwithstanding the unprecedented significant and unavoidable impacts. As will be explained more fully below, the Project’s “why” is not to serve any legitimate land use goals – the record amply establishes that the Project is inconsistent with all land use planning in the area – but rather to maximize the financial return on the applicant’s speculation on 31 acres of agricultural land.

RESPONSE 19-3

As required pursuant to CEQA Guidelines section 15124(b), the Draft EIR, Chapter 2, includes a statement of the objectives of the proposed project. The purpose of the Project Objectives is to “help the lead agency develop a reasonable range of alternatives to evaluate in the EIR and will aid the decision makers in preparing findings or a statement of overriding considerations, if necessary.” It is further noted that the Guideline goes on to state that “[t]he statement of objectives should include the underlying purpose of the project and may discuss the project benefits.”

The Project Objectives are presented on pages 2-13 and 2-14 in Chapter 2, *Project Description*, of the Draft EIR. Among the 18 objectives that are presented include:

3. Provide a comprehensively planned, high quality, large-scale, residential-based community in northwestern Sacramento County, directly northwest of the City of Sacramento, with a balanced mix of uses, employment opportunities, a wide variety of housing types, park and open space, and supporting public and quasi-public uses.

5. Provide residential housing within five miles of the existing job centers of downtown Sacramento and West Sacramento, as well as in close proximity to newly developing or proposed job centers.
6. Create a development that has an overall positive economic impact on Sacramento County and achieves a neutral to positive fiscal impact on the County's finances and existing ratepayers.
10. Make efficient use of development opportunities as the project site is bordered on three sides by existing or planned urban development.
11. Plan for enough units to provide housing choices in varying densities to respond to a range of market segments, including opportunities for rental units and affordable housing, and significant commercial uses, consistent with the General Plan and Housing Element.

If the Board of Supervisors ultimately determines to approve the proposed project, it will be required to explain the reasons that it considers the significant impacts of the proposed project acceptable in a Statement of Overriding Considerations, which must be based on substantial evidence in the administrative record, including information on project objectives and significant impacts that are articulated in the EIR.

Please also see Response 19-2. The comment expresses opinions related to the merits of the project, and will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 19-4

Moreover, conspicuously absent from the DEIR is any mention, much less analysis, of County General Plan Land Use Policy LU-127, which provides:

The County shall not expand the Urban Service Boundary unless:

- There is inadequate vacant land within the USB to accommodate the projected 25-year demand for urban uses; and
- The proposal calling for such expansion can satisfy the requirements of a master water plan as contained in the Conservation Element; and
- The proposal calling for such expansion can satisfy the requirements of the Sacramento County Air Quality Attainment Plan; and
- The area of expansion does not incorporate open space areas for which previously secured open space easements would need to be relinquished; and
- The area of expansion does not include the development of important natural resource areas, aquifer recharge lands or prime agricultural lands;
- The area of expansion does not preclude implementation of a Sacramento County-adopted Habitat Conservation Plan;

OR

- The Board approves such expansion by a 4/5ths vote based upon on finding that the expansion would provide extraordinary environmental, social or economic benefits and opportunities to the County.

(Emphasis added.)

One of the Project's defining characteristics is that it consists almost entirely of prime farmland located outside of the County's urban service boundary ("USB"), and therefore require expansion of the USB. LU-127 articulates, in clear prohibitory language, the County's policy to prohibit expansion of the USB involving: (i) "development of important natural resource areas," (ii) "aquifer recharge lands," or (iii) "prime agricultural lands." The Project would involve all three of these triggers for prohibiting USB expansion. Even the most cursory reference to LU-127 reveals why the Project is wholly fundamentally misguided—which begs the question why LU-127 was inexcusably omitted from any reference in the DEIR.

RESPONSE 19-4

Please refer to Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 19-5

Applicants are free to seek land use entitlements for their proposed land development projects—no matter how fundamentally flawed and misguided. However, it is the legal and duty of the local land and CEQA lead agency, here the County, to perform an objective analysis of the Project's impacts, mitigation measures, and project alternatives. As will be explained more fully below, the DEIR wholly fails to discharge the County's legal duty to perform that objective analysis. Here, the DEIR is not a document of objective analysis and accountability, but rather a document of advocacy on behalf of the Project applicant.

RESPONSE 19-5

Please see Response 19-1 above.

COMMENT 19-6

The Project would destroy approximately 2,000 acres of productive important farmland² that also serves as important habitat for sensitive species, will result in roadway safety hazards to existing and future residents (including families with their driveways on the Garden Highway), and even increased cancer risks to existing and future Natomas residents. Maximizing profit from the applicant's purchase of 31 acres

does not override these impacts, and any marginal benefit resulting from increased development in the unincorporated County areas can easily be achieved from alternative locations widely available within the USB.

² Expert comments from the Sacramento County Farm Bureau establish that the so called “ag buffer” will not result in continued productive agricultural uses of that land.

RESPONSE 19-6

The issues raised in this comment are issues addressed in the Draft EIR. More specifically, Impact AG-1 in Chapter 5, *Agricultural Resources*, of the Draft EIR, addresses the potential impacts of the proposed UWSP to agricultural resources, including loss of important farmland. The comment overstates the conclusions of the Draft EIR related to loss of important farmland. As discussed on page 5-21 and presented in Table AG-3, the project site contains approximately 1,805 acres of farmland as defined in the County General Plan Policy AG-5. Table AG-3 provides a breakdown of the 1,372.05-acres of important farmland that would be permanently converted to non-agricultural uses.

Draft EIR Chapter 6, *Air Quality*, includes extensive analysis of the potential health effects of air pollutant emissions that would result from development of the proposed UWSP and cumulative development in the region. Impact AQ-3 addresses the operational emissions of criteria air pollutants, and the discussion on Draft EIR pages 6-44 through 6-46, including Table AQ-11, includes analysis of the health effects of such pollutant emissions. Draft EIR Impact AQ-4, pages 6-46 through 6-51, including Tables AQ-12 through AQ-14, addresses the potential for the proposed project to result in exposure of sensitive receptors to toxic air contaminants and to result in exposures that would result in cancer risks in excess of the established threshold of significance.

Impacts BR-1 through BR-9, and BR-12 through BR-14 include extensive analysis of the potential impacts of the proposed UWSP on sensitive species and their habitats, including giant garter snake, northwestern pond turtle, special-status bird species, burrowing owl, Swainson’s hawk, pallid bat, and valley elderberry longhorn beetle. Draft EIR Table BR-2, pages 7-13 through 7-27, includes a thorough evaluation of the potential for occurrence of numerous sensitive species of plants and animals.

Impact TR-3 in Chapter 18, *Transportation*, of the Draft EIR, presents information related to roadway safety, including on Garden Highway. Where potentially significant impacts are identified, a range of mitigation measures are identified (see Mitigation Measures TR-3[a-e]). The analysis concludes that available measures could reduce the impacts to a less-than-significant level; however, because some of the measures would require approval by Caltrans, an agency that is outside the authority of the County, the County cannot guarantee their implementation and thus the Draft EIR recognizes that these could be significant and unavoidable. The measures specifically addressing issues on Garden Highway are not within the jurisdiction of Caltrans and thus are determined to be less than significant after mitigation.

For a response to the footnoted reference to the Sacramento County Farm Bureau comments on the Ag Buffer, please see Responses to Comment 14-2 and 14-3.

Pursuant to CEQA, it is not the purpose of the EIR to present an argument for or against the proposed project. If the Board of Supervisors ultimately determines to approve the proposed project, it will be required to explain the reasons that it considers the significant impacts of the proposed project acceptable in a Statement of Overriding Considerations, which must be based on substantial evidence in the administrative record.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 19-7

I. PROJECT BACKGROUND

The DEIR purports to describe the “Project Background.” (DEIR, p. 2-11.) The DEIR unfortunately presents an incomplete and misleading background to the Project. Further, the DEIR dismisses otherwise feasible alternative locations expressly because they are not “controlled” by the applicant. Thus, it is necessary to present a more complete and accurate background of the Project that also sets forth facts relevant to “control.”

The project applicant here is an entity named Upper Westside, LLC (“Upper Westside”). Upper Westside was formed on March 15, 2018 (Exhibit 4, Upper Westside LLC articles.) Upper Westside owns a 31.64-acre parcel within the 2,066-acre Project site that it purchased on May 14, 2019, for a price of \$909,500. (Exhibit 5, Property Details.) Upper Westside owns no other land within the 2,066-acre Project area.

Upper Westside is managed solely by Yolo County developer Steve Gidaro. (Exhibit 6, Upper Westside Statement of Information.) No other ownership or management of Upper Westside is disclosed. That said, Upper Westside has been delinquent in filing its updated statement of information since 2022, and so it is possible that Mr. Gidaro has transferred his interest in Upper Westside since that time without any public disclosure. (Exhibit 7, CA Secretary of State database entry.)

In short, the applicant for the Project is an entity wholly controlled by a single person, who purchased merely 31.64 acres for \$909,500 back in 2019, and now seeks to leverage that slim ownership (1.53 percent) in order to dictate urban development of 2,066 acres of important and productive farmland.

This DEIR conspicuously fails to disclose this information, instead suggesting that the Project’s “applicants” include a larger “ownership group” that owns “292 acres or 14 percent of the UWSP area.” This is false and misleading. The NOP plainly asserts that the “Applicant” is “Upper Westside, LLC.” This is repeated in the DEIR: “The project applicant is Upper Westside LLC.” (DEIR, p. 2-1.) These other parties are not “applicants,” but instead merely “participating properties.” (DEIR, Plate PD-4.) The DEIR asserts, “[T]he project applicant owns and/or controls 10 parcels totaling approximately 292 acres,

or 14 percent of the plan area.” (DEIR, p. 2-2.) The DEIR provides no information demonstrating such “control” of these properties by Mr. Gidaro. That said, whether Mr. Gidaro controls 1.53 percent or 14 percent of the Project site is of no matter; the vast majority of the Project site, either 86 or 98.47, is not controlled by Mr. Gidaro. This is important because the DEIR relies on the absence of Mr. Gidaro’s “control” of alternative locations to dismiss them without any consideration.

RESPONSE 19-7

Information regarding the business structure of the project applicant is not required in the EIR and would not affect the analyses of the potential environmental effects of the proposed UWSP project. An alternative project location is addressed on pages 3-4 and 3-5 in Chapter 3, *Alternatives*, of the Draft EIR. As required under CEQA (see Guidelines section 15126.6(a)(1) and 15126.6(f)(2)(B), the Draft EIR includes a discussion of “Alternatives Considered but Dismissed from Further Evaluation” which includes a discussion of Alternative Project Location. The comment suggests that the dismissal of this alternative “relies” on the applicant’s limited control of land within the UWSP project area. This is not correct. As presented in the Draft EIR, the primary reasons that are given for not further considering an alternative project location in the Draft EIR include:

- Alternative sites would entail either the same or new significant environmental effects as those that would occur within the UWSP area;
- An alternative site that is not adjacent to already developed lands would likely result in greater aesthetic and utilities impacts than those that would occur within the UWSP area;
- Other large vacant properties located adjacent to the City of Sacramento in northwest Sacramento County that could feasibly achieve many of the project objectives are not available as planning applications for these lands have already been filed with the City of Sacramento and with the County of Sacramento;
- Other large vacant properties are available in other portions of the County that could feasibly achieve many of the project objectives are not located along a major transportation corridor within proximity of existing job centers in downtown Sacramento and West Sacramento, as well as near newly developing or proposed job centers, which is an objective of the proposed UWSP.

Thus, the conclusion of the Draft EIR is that there are not reasonably available sites elsewhere in the County which would meet the requirements of CEQA that alternatives “shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project” (CEQA Guidelines section 15126.6(b)). As stated in CEQA Guidelines section 15126.6(f)(2)(A), “[o]nly locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR.” Since such locations that meet the definition of feasible provided in CEQA Guidelines section 15126.6(f)(1) are not available, the Draft EIR dismisses an Alternative Project Location from further consideration.

COMMENT 19-8

Finally, the DEIR's "Project Background" includes a discussion of the Natomas Joint Vision, which it describes as a "Master Plan process for a proposal to move the Urban Services Boundary (USB) and the Urban Policy Area (UPA)." The DEIR suggests that the Project is an outgrowth of the Natomas Joint Visions. Not so. As explained by the California Department of Fish and Wildlife ("CDFW") in response to the NOP:

The Projects marks an apparent departure by the County from the principles detailed in its shared vision with the City. The County's web page reads currently, for example, that the Joint Vision project has been withdrawn and individual landowners are moving forward with their own projects, including this Project.

Indeed, CDFW is correct that the County's webpage now asserts, "The Natomas Joint Vision project has been withdrawn and individual landowners have moved forward with their own projects." (Exhibit 8, County website for the Natomas Vision.) As CDFW further explains, "The MOU, importantly, recognizes the City as the agent of development in the Sacramento portion of the basin and **the County as the agent of permanent open space, habitat, and farmland/ranchland preservation.**" (Emphasis added.) Thus, it is misleading for the DEIR to suggest that the Project is somehow an extension of the Natomas Joint Vision. As explained more fully below, the Project is inconsistent with the Joint Vision as well as decades of land use planning for the Natomas basin.

RESPONSE 19-8

The Project Background reflects that past 30 years of discussion of planning for lands within the County in the Natomas Basin. The initial collaborative effort between the County and the City included a planning precinct referred to as "The Boot," the boundaries of which were essentially the same as those of the proposed UWSP. The Draft EIR provides this brief background discussion based on facts of activities that have taken place over the past three decades. It does not suggest that the proposed project is a specific "extension of the Natomas Joint Vision" as stated in the comment.

Further, as presented on page 2-11 in Chapter 2, *Project Description*, of the Draft EIR, the Joint Vision was "a Memorandum of Understanding between the City and County that outlined a joint vision for land use and revenue sharing principles in Natomas." In 2011 the County adopted the Sacramento County 2030 General Plan which designates the unincorporated Natomas community as the "Natomas Joint Vision Area" on the Land Use Diagram in recognition of many years of coordination and collaboration with the City of Sacramento, landowners, and other stakeholders. This combining land use designation recognizes the potential expansion of the Urban Services Boundary (USB) along with associated Land Use (LU) Element Policy LU-114 which states:

It is the policy of Sacramento County that development and open space preservation in the Natomas Joint Vision Overlay Area occur in a comprehensive, responsible and cohesive manner that best addresses land use, economic development and environmental opportunities and challenges in Natomas.

The associated Implementation Measure C states the following:

Pursue comprehensive and collaborative planning in the Natomas Joint Vision Overlay Area; either through the continued participation in the Natomas Joint Vision Memorandum of Understanding (MOU) or, if determined appropriate, with the County serving as the lead agency for development and open space preservation.

As such, the consideration of the application for the proposed UWSP is consistent with County policy related to the Natomas Joint Vision Area for the last 15 or more years.

COMMENT 19-9

II. THE DEIR'S PROJECT DESCRIPTION AND ASSOCIATED CEQA REVIEW STRATEGY ARE FUNDAMENTALLY FLAWED

The CEQA Guidelines explain, "The statement of objectives should include the underlying purpose of the project." (CEQA Guidelines, § 15124, subd. (b).) The leading CEQA treatise advises, "To avoid claims the project objectives are too narrow, the statement of objectives should not simply repeat the EIR's description of the proposed project, but instead should be based on the project's underlying purpose." (Kostka & Zischke, Practice Under the Cal. Environmental Quality Act (Cont.Ed.Bar 2024) § 12.13, p. 12-23 ["Kostka"].) Here, the EIR fails to comply with both recommendations: (i) the DEIR asserts a list of manipulated "objectives" that merely describes the nature of the Proposed Project, and (ii) the DEIR fails to identify the Project's underlying purpose.

The Project's background will reveal precisely why the DEIR conspicuously fails to identify an underlying purpose of the Project. This is unsurprising because the Project serves no underlying purpose other than to generate revenue for the project applicant. This is demonstrated with clarity by reviewing the Project's background.

RESPONSE 19-9

Please see Response 19-3. The assertions in this comment that the Project Objectives presented in Draft EIR Chapter 2 were "manipulated" and fail to "identify the Project's underlying purpose" are vague and not supported by evidence or specific critique. No further response is possible.

COMMENT 19-10

A. Expansion of the USB and UPA Is Not Necessary to Accommodate the County's Share of Future Regional Population Growth

While the Project does not have an underlying purpose (other than maximizing return for the applicant's land speculation), the DEIR's first objective asserts that "expanding the USB and UPA" is required to "accommodat[e] the County's share of future regional population growth." This Project Objective is not supported by substantial evidence. To put it bluntly, no planning documents by the County or the Sacramento Area Council of Governments ("SACOG") support the DEIR's false assertion that expansion

of the USB is necessary to accommodate the County's share of future regional population growth. In fact, SACOG plainly stated in response to the Project's NOP, "Throughout much of the Sacramento region, the capacity for growth in existing entitled lands far exceeds expected demand for new growth over the next twenty years." SACOG's conclusion is amply supported by the County's Housing Element, which identifies a Regional Housing Needs Allocation ("RHNA") allocation of 21,272 units and supply of 23,653 units. The identified supply number does not account for literally tens of thousands of additional residential units that are part of master plan and specific plan communities virtually identical to the Project. The Housing Element explains:

The Vineyard Springs Comprehensive Plan, North Vineyard Station Specific Plan, Florin Vineyard Comprehensive Plan, Glenborough at Easton and Easton Place are approved Master Plan with sites that may have been included in prior Housing Elements. The County has also recently approved two additional Master Plans with sites included in this inventory: the Mather South Community Master Plan (Mather South) on January 28, 2020 and the NewBridge Specific Plan (NewBridge) on October 6, 2020.

(Housing Element, p. 134.)

More specifically, Mather South would provide 3,522 units, Newbridge would provide 3,075 units, Cordova Hills would provide 8,000 units, and Easton Place and Glenborough at Easton would provide 4,883. (Housing Element, pp. 134–148.)³

While it is true that the Housing Element identifies a deficit of 2,884 units of lower-income units, the Project is not providing lower-income housing. One of the Project's requested entitlements is an "Affordable Housing Strategy that discusses the plan for the provision of moderate, low, and very-low-income housing." The applicant chose not to prepare that Affordable Housing Strategy along with the DEIR, which could have demonstrated a commitment to constructing. This is of no consequence, however, because the lack of any commitment by the applicant is revealed in the draft Specific Plan.⁴ Unlike other master and specific plan developers in the unincorporated County, the applicant here makes no commitment to constructing affordable housing—which is the one type of housing that is arguably needed in the County. (Compare Housing Element, p. 132 ["Nine sites are in locations where there is an adopted Master Plan, or Specific Plan that guarantees certain sites will be set aside for the construction of deed restricted affordable housing projects"].)

In short, substantial evidence does not support the DEIR's first project objective that expansion of the USB and UPA are required to "accommodat[e] the County's share of future regional population growth." There is a surplus of entitled sites within the existing USB and UBA to accommodate the County's share of regional population growth. To put the matter bluntly, the project serves no actual purpose other than increasing the project applicant's profit from his \$900,000 land speculation on a 30-acre parcel within 2,000 acres of important farmland.

³ Several of these projects also provide “a balanced mix of uses, employment opportunities” through commercial and residential areas. (Ibid; compare Project Objective 3.) Contrary to the DEIR’s improper advocacy, there is nothing novel about including commercial and residential uses in a large specific plan. In particular, see the Cordova Hills and Easton Place land use maps. (Housing Element, pp. 144–146.)

⁴ The draft Specific Plan states that the Project would “allocate[] 4,007 residential units to high density residential uses (on both residential [791 VHDR] and mixed-use [3,216 CMU] designated lands) with planned densities of 30 du/ac or higher.”

RESPONSE 19-10

As described elsewhere in this Final EIR, under CEQA the purpose of an EIR is to disclose the significant adverse physical environmental impacts of the proposed project. While the Statement of Objectives articulates a wide range of objectives, some of which are environmental in nature and others are related to social, economic, planning or other factors, it is not the purpose of an EIR to present a comprehensive analysis of the degree to which a proposed project would achieve its stated objectives. Similarly, while the CEQA document appropriately considers the consistency of the proposed project to plans and policies that are adopted for the purposes of protecting or avoiding adverse effects on the environment, the range of issues that the County will consider in making a determination about the consistency of the proposed project with the County General Plan, and deciding whether the benefits of approving the project outweigh the potential adverse effects of the project, are much broader than those appropriately addressed in the EIR. While the question of the capacity of the County to absorb the housing proposed in the UWSP is one that the County will consider, it is not an issue that is required to be addressed in the EIR.

Please see Response 15-59 for a discussion of the proposed UWSP Affordable Housing Strategy. Please also see Response 19-17 below for a discussion of the appropriate consideration of social and economic effects in an EIR. In addition, please also see Master Response LU-2: Consistency with Sacramento General Plan Policy LU-127 for a discussion of the policy framework which provides that the Board of Supervisors may approve an expansion of the USB with a 4/5 vote in favor if it finds that the proposed USB expansion would provide extraordinary environmental, social, or economic benefits and opportunities to the County.

COMMENT 19-11

B. The EIR’s Project Objectives are Not Supported by Substantial Evidence and Manipulated to Avoid Otherwise Feasible Project Alternatives

The Project’s background, described above, reveals why the DEIR conspicuously fails to identify an underlying purpose of the Project. This is unsurprising because no serious planning document that includes the Natomas basin—the County’s Land Use Element, the County’s Housing Element and SACOG’s Blueprint—find urban uses necessary or even appropriate for the Project site. Thus, the Project serves no underlying purpose other than to generate a return on investment for the applicant’s 31-acre land speculation.

Rather than identify a legitimate underlying purpose for the Project, the DEIR instead identifies several project “objectives” that are not supported by substantial evidence and are otherwise manipulated in order to exclude from consideration otherwise feasible project alternatives. The first project objective is addressed in detail immediately above. All of the DEIR’s project objectives are addressed in detail below.

RESPONSE 19-11

The CEQA Guidelines, section 15124(b) requires that the description of the project include, among other elements, “[a] statement of the objectives sought by the proposed project.” The statement of objectives is intended to assist the lead agency develop a reasonable range of alternatives and to aid the decision makers in preparing Findings of Fact and/or a Statement of Overriding Considerations if they choose to approve the proposed project. The objectives “include the underlying purpose of the project and may discuss the project benefits.”

The Project Objectives for the proposed UWSP project are described on pages 2-13 to 2-14 in Chapter 2, *Project Description*, of the Draft EIR. There are a total of 18 project objectives presented. The objectives address a range of overall goals for the proposed project, including objectives related to:

- Accommodating future County growth and being consistent with the County’s General Plan, especially policies related to expansion of the USB and UPA;
- Planning for a mixed-use, master planned community that can be developed in an orderly manner;
- Developing a mix of housing types and densities housing in proximity to regional employment centers, and supporting the County’s Housing Element;
- Creating a positive economic impact on the County;
- Minimizing impacts to wetlands and agricultural uses and operations;
- Meeting the goals of SACOG’s Blueprint principles and avoiding adverse effects on existing adopted HCPs; and
- Planning for and protecting open spaces.

As noted in the comment, under CEQA, objectives should avoid being so narrow as to limit consideration of alternatives to only the project. The Draft EIR evaluated four alternatives. Two alternatives include similar but smaller versions of the proposed project. Alternative 3 is a reduced density alternative which would reduce residential and commercial densities by 25 percent, and Alternative 4 is a reduced footprint alternative, which would reduce the developed land area of the project by 25 percent. Both of these alternatives meet or partially meet the objectives of the proposed project, and the Draft EIR identified Alternative 4: Reduced Footprint as the environmentally superior alternative. Only the No Project alternatives were dismissed because they do not meet any of the project objectives.

The project objectives did not exclude feasible alternatives from consideration. Rather, as required by CEQA, the EIR considered a reasonable range of alternatives that would feasibly attain most of the basic project objectives. As is described on pages 3-4 to 3-8 in Chapter 3, *Alternatives*, of the Draft EIR, three alternatives were considered and not carried forward for full evaluation. Those alternatives included an Alternative Project Location, an Infill Alternative, and an alternative that would increase the housing unit count in the project by 3,240 units by converting the commercial component of Commercial Mixed Use (CMU) designation to residential at average densities of 80du/acre. As explained in the discussion in Chapter 3, these three alternatives were eliminated because (1) they would fail to meet the basic purpose of a CEQA alternative to “avoid or substantially lessen any of the significant effects of the project” (see CEQA Guidelines section 15126.6(a)), or (2) they were determined to be infeasible. The alternatives considered but not carried forward for full evaluation were not excluded based on their ability to achieve the project objectives.

The project objectives included in the UWSP EIR assisted the County in formulating a range of reasonable alternatives.

While the comment asserts that as a result of the project objectives “otherwise feasible alternatives” were not considered in the EIR, the commenter provides no suggestion or description of alternatives that could or should have been considered in the Draft EIR. The EIR considered a reasonable range of alternatives.

The Project Objectives are appropriate and consistent with the provisions of CEQA.

Please also see Response 19-3 above.

COMMENT 19-12

1. Formulate a specific plan and related land use planning documents and regulatory approvals for the UWSP area as a means of expanding the USB and UPA in an orderly manner and accommodating the County’s share of future regional population growth.

- This object is both manipulated and unsupported by substantial evidence. First, formulating a specific plan and related land use planning documents “for the UWSP area” is a transparent attempt to exclude otherwise-feasible off-site project alternatives. Second, as explained above, “expanding the USB and UPA” is unsupported by substantial evidence. Further, expansion of the USB and UPA are themselves not legitimate objectives since General Plan policy is to prohibit expansion involving destruction of farmland, habitat for species, and areas of groundwater recharge.

RESPONSE 19-12

Please see Response 19-11 above.

COMMENT 19-13

2. Create a land use plan that satisfies County policies, regulations, and expectations, as defined in the General Plan, including Policies LU-114, LU-119, and LU-120.

- This objective is transparently manipulated and not supported by substantial evidence. First, any development project will be required to meet County policies, regulations and expectations. Indeed, the DEIR here reveals that the Project fails to achieve consistency with County policies for growth. Finally, the objective is manipulated because it wholly ignores the most important County Land Use Policy, LU-127.

RESPONSE 19-13

Please see Response 19-11 above.

COMMENT 19-14

3. Provide a comprehensively planned, high quality, large-scale, residential-based community in northwestern Sacramento County, directly northwest of the City of Sacramento, with a balanced mix of uses, employment opportunities, a wide variety of housing types, park and open space, and supporting public and quasi-public uses.

- Again, this objective is manipulated by requiring a community “in northwestern Sacramento County, directly northwest of the city of Sacramento.” Further, the balance of the project objective can be satisfied by developments at other locations. As explained by SACOG, “[T]he capacity for growth in existing entitled lands far exceeds expected demand over the next twenty years: collectively, the region’s jurisdictions have entitled, or are in the process of entitling 2.5 times the region’s projected need for the next 20 years. More than half of that capacity—387,000 units—is in greenfield areas that are on the edge of existing development.

RESPONSE 19-14

Please see Responses 19-7 and 19-11 above.

COMMENT 19-15

4. Develop a master-planned community that can be efficiently served by existing infrastructure or proposed infrastructure that would encourage logical, orderly development and would discourage leapfrog or piecemeal development and sprawl.

- This is arguably a legitimate objective, but one that is not met by this Project (including with particularity inadequate transportation infrastructure) and yet can be met by other locations throughout the County. Moreover, substantial evidence does not support this objective since it fails to explain “piecemeal development and sprawl.” The Project arguable represents “sprawl” by requiring expansion of the USB and UPA to accommodate development that is not required in the County’s Land Use Element or Housing Element, or SACOG’s Blueprint. Indeed,

the DEIR identifies as a significant and unavoidable impact the Project's contribution to growth-inducement. As explained by SACOG, "[T]he capacity for growth in existing entitled lands far exceeds expected demand over the next twenty years: collectively, the region's jurisdictions have entitled, or are in the process of entitling 2.5 times the region's projected need for the next 20 years. More than half of that capacity—387,000 units—is in greenfield areas that are on the edge of existing development."

RESPONSE 19-15

The comment expresses an opinion regarding the proposed project's achievement of a stated project objective. This comment does not raise environmental issues or an issue specific to the evaluation of environmental impacts presented in the Draft EIR. Please also see Responses 19-7 and 19-11 above.

COMMENT 19-16

5. Provide residential housing within five miles of the existing job centers of downtown Sacramento and West Sacramento, as well as in close proximity to newly developing or proposed job centers.

- This objective is manipulated and not supported by substantial evidence. While providing residential housing within existing job centers is arguably valid, the same is not true for the undefined terms "newly development or proposed job centers." If a "proposed job center[]" is not approved then what is the value of providing nearby housing? Also, the DEIR fails to explain what is meant by "newly developing" job centers. As explained by SACOG, "[T]he capacity for growth in existing entitled lands far exceeds expected demand over the next twenty years: collectively, the region's jurisdictions have entitled, or are in the process of entitling 2.5 times the region's projected need for the next 20 years. More than half of that capacity—387,000 units—is in greenfield areas that are on the edge of existing development.

RESPONSE 19-16

The comment expresses an opinion regarding the proposed project's achievement of a stated project objective. This comment does not raise environmental issues or an issue specific to the evaluation of environmental impacts presented in the Draft EIR. Please also see Responses 19-7 and 19-11 above.

COMMENT 19-17

6 Create a development that has an overall positive economic impact on Sacramento County and achieves a neutral to positive fiscal impact on the County's finances and existing ratepayers.

- This finding is not based on any specific location for a "positive economic impact on Sacramento." Further, if it is feasible for the Project to achieve this goal (based

on “control” of only 1.53 or 14 percent), then it is feasible for alternative locations to achieve the goal.

RESPONSE 19-17

As described above, an objective is an aspirational statement of a goal of the proposed project and does not represent an analytical conclusion of the effect of a project. As part of its consideration of the proposed project, the County Board of Supervisors will assess the economic and fiscal effects of the proposed project. However, while economic and fiscal impacts are important considerations for the Board of Supervisors in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. CEQA Guidelines section 15131 states that “[e]conomic or social effects of a project shall not be treated as significant effects on the environment.” Consideration of economic and social effects is limited to (1) “effects of a project that may be used to determine the significance of *physical* changes caused by the project,” (italics added) or (2) “in deciding whether changes in a project are feasible to reduce or avoid the significant effects on the environment identified in the EIR” (see CEQA Guidelines sections 15131(b), (c)). Please also see Responses 19-7 and 19-11 above.

COMMENT 19-18

7. Create a community that can be logically and efficiently phased to allow the orderly build-out of the community.

- This objective is arguably valid, but substantial evidence does not support a finding that the Project meets this objective. First, the record establishes that the Project only includes “preliminary” phasing that may be altered at any time without any review or approval by the County or any other public agency. Thus, the Project does not include phasing of any kind, local or otherwise. Second, the Project’s “preliminary” project phasing is in no way local or orderly because it would first place high-density urban development in the middle of 2,000 acres of prime farmland. This is not logical or orderly; it is based instead on the project applicant’s incredibly small ownership of the specific plan area. The Project’s phasing is therefore the opposite of logical, efficient and orderly.

RESPONSE 19-18

Please see Responses 19-7 and 19-11 above.

COMMENT 19-19

8. Provide a safe and efficient circulation system that interconnects land uses and promotes pedestrian and bicycle circulation and transit options that will encourage non vehicular trips, thereby reducing vehicle miles traveled (“VMT”).

- This is arguably a legitimate project objective, but one that is required by the County’s General Plan policies and so would be met by any development in the area. That said, as explained below and in the comments by Dan Smith, the Project does not provide a safe and efficient circulation system. As just one

example, the Project would result in unsafe conditions for existing families living on the Garden Highway.

RESPONSE 19-19

Transportation safety and associated hazards are addressed in Impact TR-3 on pages 18-33 to 18-41 in Chapter 18, *Transportation*, of the Draft EIR. Also, please see Responses 19-37, 19-40, and 19-104 through 19-118 below which address comments from Smith Engineering & Management.

COMMENT 19-20

9. Incorporate parks and open space, including an urban farm-greenbelt and canal, into the project design in a manner that provides community connectivity and encourages walking and bicycle use.

- This is a manipulated project objective that does nothing more than “repeat the EIR’s description of the proposed project.” (Kostka, *supra*, § 12.13.)

RESPONSE 19-20

Please see Responses 19-7 and 19-11 above.

COMMENT 19-21

10. Make efficient use of development opportunities as the project site is bordered on three sides by existing or planned urban development.

- First, this is a manipulated project objective that does nothing more than “repeat the EIR’s description of the proposed project.” (Kostka, *supra*, § 12.13.) Further, a development at any location would be able to “make efficient use of development opportunities” from nearby development. As explained by SACOG, “[T]he capacity for growth in existing entitled lands far exceeds expected demand over the next twenty years: collectively, the region’s jurisdictions have entitled, or are in the process of entitling 2.5 times the region’s projected need for the next 20 years. More than half of that capacity—387,000 units—is in greenfield areas that are on the edge of existing development.”

RESPONSE 19-21

Please see Responses 19-7, 19-10 and 19-11 above.

COMMENT 19-22

11. Plan for enough units to provide housing choices in varying densities to respond to a range of market segments, including opportunities for rental units and affordable housing, and significant commercial uses, consistent with the General Plan and Housing Element.

- While a potentially legitimate objective, this objective can be achieved by a development at any location. What is more, alternate locations—unlike the Project—may actually be consistent with the County’s General Plan and Housing Element. Neither the County’s General Plan Land Use Element nor Housing Element call for any residential development at the Project site.

RESPONSE 19-22

Please see Response 19-7 above.

COMMENT 19-23

12. Design a land use plan where the development footprint avoids impacts to wetland resources to the extent feasible.

- This is not a legitimate project objective since it simply restates applicable law and can be achieved at any location.

RESPONSE 19-23

Please see Response 19-11 above.

COMMENT 19-24

13. Develop a specific plan that respects existing agricultural land uses and operations to the west of the proposed 1,532-acre Development Area.

- This is a manipulated project objective that does nothing more than “repeat the EIR’s description of the proposed project.” (Kostka, *supra*, § 12.13.) Further, substantial evidence does not support that the Project satisfies this objective by directly destroying approximately 1,500 acres of prime farm land and indirectly destroying the rest by ill-conceived “ag buffer” that does not result in productive agricultural operations.

RESPONSE 19-24

Please see Response 19-11 above.

COMMENT 19-25

14. Provide for development that meets the seven identified SACOG Blueprint principles, including provision of transportation choice, compact development, mixed use development, housing choice and diversity, use of existing assets, natural resource conservation, and quality design.

- This is a manipulated project objective that does nothing more than “repeat the EIR’s description of the proposed project.” (Kostka, *supra*, § 12.13.) A legitimate project objective would be for a development that is consistent with SACOG’s Blueprint. As SACOG explains, “The Upper West Side project and the project area itself are not anticipated for development in either the MTP/SCS or the

Blueprint.” Further, substantial evidence does not support a finding that the Project is consistent with Blueprint principles. The Project is far from “compact,” and is in no conserves natural resources by destroying prime farmland that provides important habitat for numerous special-status species.

RESPONSE 19-25

Please see Response 19-11 above. The proposed UWSP is not anticipated for development in the current versions of the Blueprint and MTP/SCS. SACOG stated that the land use forecast that is included in the MTP/SCS was developed based on “an inventory of unbuilt capacity for housing and employment uses, based on existing, adopted plans.”¹ The proposed UWSP is not accounted for in the 2020 MTP/SCS or the Blueprint because it currently lies outside of the USB and UPA, and did not meet SACOG’s criteria for inclusion in those documents. The 2020 MTP/SCS Appendix D: Land Use Forecast Documentation specifically stated “[o]utside of the current UPA and USB, in the northwestern portion of the county, the county is also currently processing an application for two projects identified as the North Natomas Precinct and the Upper Westside Specific Plan. While many of these areas are consistent with the region’s long term growth strategy, the Blueprint, and are in varying stages of the local entitlement process, they are not yet approved by the county.”² If the County approves the proposed project, and in doing so extends the USB and UPA, these factors would be considered in future land use forecasts undertaken by SACOG in preparation of future versions of the MTP/SCS.

That the proposed UWSP is not reflected in the current versions of the Blueprint and/or MTP/SCS does not automatically lead to a determination that the project, if approved, would be inconsistent with the Blueprint. The MTP/SCS states that “[i]ncluding growth within the MTP/SCS is not a guarantee that it will happen. Likewise, growth in areas outside the MTP/SCS may occur during the planning period. Growth outside the MTP/SCS may or may not be consistent with the smart growth, long-term, Blueprint vision for the region.”³

COMMENT 19-26

15. Develop the project and any associated on- and/or off-site mitigation to complement the Natomas Basin Habitat Conservation Plan (“NBHCP”) and the Metro Airpark Habitat Conservation Plan.

¹ Sacramento Area Council of Governments, *2020 Metropolitan Transportation Plan/Sustainable Communities Strategy, Appendix D: Land Use Forecast Documentation*, November 18, 2019, page 4.

² Sacramento Area Council of Governments, *2020 Metropolitan Transportation Plan/Sustainable Communities Strategy, Appendix D: Land Use Forecast Documentation*, November 18, 2019, page 47

³ Sacramento Area Council of Governments, *2020 Metropolitan Transportation Plan/Sustainable Communities Strategy, Appendix D: Land Use Forecast Documentation*, November 18, 2019, page 3.

- This is a manipulated project objective that does nothing more than “repeat the EIR’s description of the proposed project.”

RESPONSE 16-26

Please see Response 19-11 above.

COMMENT 19-27

16. Designate open space preserves along the south side of Fisherman’s Lake Slough or along the West Drainage Canal (Witter Canal) that provide natural buffer to these features, and along the westerly edge of the proposed 1,532-acre Development Area to provide a transition between residential and agricultural designations to the west, which will provide a regional benefit for habitat, resources, and open space amenities.

- This is a manipulated project objective that does nothing more than “repeat the EIR’s description of the proposed project.”

RESPONSE 19-27

Please see Response 19-11 above.

COMMENT 19-28

17. Balance development with resource protection in an inter-connected, permanent open space.

- This is a legitimate project objective that can be accomplished at any location. Indeed, other locations that do not include 2,000 acres of prime farmland and habitat for special-status species are far better at striking an appropriate balance.

RESPONSE 19-28

Please see Responses 19-7 and 19-11 above.

COMMENT 19-29

18. Create multi-functional habitat within open space corridors that provide on-site habitat and contribute to water quality.

- This is a manipulated project objective that does nothing more than “repeat the EIR’s description of the proposed project.” Further, it is nonsensical. Urban development should be located as far away as possible from habitat and open space corridors. The need to “create multi-functional habitat within open space corridors” arises precisely because urban development is proposed for areas that will have a negative impact on existing habitat. The legitimate objective would be therefore to locate urban uses in areas that avoid existing habitat and so there is no need to create habitat.

RESPONSE 19-29

Please see Response 19-11 above.

COMMENT 19-30

In sum, the DEIR's project objectives are clearly manipulated in order to justify finding that any alternative other than the Project is infeasible.

RESPONSE 19-30

Please see Responses 19-7 through 19-28 above.

COMMENT 19-31

- C. The DEIR Purports to Analyze the Project Based on a "Phasing Plan" that is Both Arbitrary and Not Enforceable.

An "accurate and stable project description" is a bedrock requirement of CEQA—the *sine qua non* (that without which there is nothing) of an adequate CEQA document:

Only through an accurate view of the project may affected outsiders and public decision-makers balance the proposal's benefit against its environmental cost, consider mitigation measures, assess the advantage of terminating the proposal (i.e., the "no project" alternative) and weigh other alternatives in the balance. An accurate, stable and finite project description is the *sine qua non* of an informative and legally sufficient EIR.

(*Inyo v. Los Angeles* (1977) 71 Cal.App.3d 185, 192–93 [Inyo].)

The courts have consistently held that the ability of informed citizens to participate in environmental review is a key component of CEQA. (*Washoe Meadows v. Dept. of Parks and Rec.* (2017) 17 Cal.App.5th 277, 285 ["Informed public participation is essential to environmental review under CEQA."]; *Inyo, supra*, 71 Cal.App.3d at 192 ["The EIR process facilitates CEQA's policy of supplying citizen input."].) An interrelated bedrock CEQA principle of informed public participation is that all aspects of a proposed project, i.e., the "whole of the action," must be analyzed in an EIR. (See CEQA Guidelines, § 15378, subd. (a) [a project is the "whole of an action" which may result in direct or indirect physical changes to the environment].) This requires an EIR to include analysis of "all phases of a project" and all "reasonably foreseeable consequences" of a project. (CEQA Guidelines, § 15126 [EIR's impact analysis must consider all phases of a project]; *Laurel Height Improvement Assn. v. Regents of the Univ. of Cal.* (1988) 47 Cal.3d 376 [*Laurel Heights I*] [EIR must analyze "reasonably foreseeable consequence" of a project].)

The DEIR violates these principles with respect to its so-called "phasing plan." The DEIR repeatedly asserts that the Project would be developed in "phases," beginning with "Phase I," and followed by Phases 2 through 4. A careful review of the DEIR, however, reveals this project description to be inaccurate:

A preliminary phasing plan is illustrated in **Plate PD-22** but would be subject to change as development occurs in response to market demand over time. Changes to the sequencing of individual development phases are permitted without an amendment to the proposed UWSP, provided that the improvements in each phase adequately support the associated development. This includes the ability for the Town Center to commence construction in an earlier phase than is identified on the preliminary phasing plan exhibit. Ultimate development phasing would be coordinated with and approved by County staff with processing of subsequent improvement plans for construction of public facilities.

The above-quoted language rebuts the DEIR's express assumption that "phase 1" will be constructed first, and the EIR's resulting methodology to analyze "Phase I" at a greater level of detail than future phases.⁵ Since phases 2 through 4 may ultimately be constructed before Phase 1 "without amendment to the proposed UWSP" and corresponding CEQA review, then the EIR must analyze all phases of the Project at the same level of detail.

⁵ As just one example, the EIR's analysis of biological resources includes biological surveys for only 586.7 acres of the Project's 2,066 total acres. What is more, the majority of this limited survey area includes the so-called "ag buffer" area that would not be subject to development. (DEIR, p.7-45 [Plate BR-3].) The vast majority of the Project area, primarily "phases" 2 through 4, has not been surveyed for biological resources.

RESPONSE 19-31

The proposed UWSP is not "based upon" a phasing plan. As described in Chapter 2, *Project Description*, of the Draft EIR, the proposed UWSP is a detailed set of proposed land use designations and infrastructure plans for mobility, wet and dry infrastructure, public spaces and services, offsite improvements, sustainability, and phasing. The components are established as requirements of specific plans as established in California Government Code section 65451, which states:

- (a) A specific plan shall include a text and a diagram or diagrams which specify all of the following in detail:
 - (1) The distribution, location, and extent of the uses of land, including open space, within the area covered by the plan.
 - (2) The proposed distribution, location, and extent and intensity of major components of public and private transportation, sewage, water, drainage, solid waste disposal, energy, and other essential facilities proposed to be located within the area covered by the plan and needed to support the land uses described in the plan.
 - (3) Standards and criteria by which development will proceed, and standards for the conservation, development, and utilization of natural resources, where applicable.
 - (4) A program of implementation measures including regulations, programs, public works projects, and financing measures necessary to carry out paragraphs (1), (2), and (3).

- (b) The specific plan shall include a statement of the relationship of the specific plan to the general plan.

The phasing program that is described on page 59 of the Project Description is part of the implementation program required under the Code.

The fact the proposed UWSP provides that the initial phasing plan may be revised over time in response to economic and market conditions does not run contrary to the requirement of CEQA that a project description be “accurate, stable and finite.” The description of the proposed UWSP is accurate and finite in its articulation of the type of development planned under each zoning category proposed under the land use map. The plans for infrastructure are clearly presented so as to allow for environmental analysis. The description of the project has remained stable throughout the CEQA process.

CEQA requires that an EIR be prepared “at the earliest possible time in the environmental review process.”⁴ This means that invariably there is a certain degree of prediction and forecasting that is required. CEQA acknowledges that forecasting the future with complete accuracy is not possible. CEQA Guideline section 15144 states that “[d]rafting an EIR or preparing a Negative Declaration necessarily involves some degree of forecasting. While foreseeing that the unforeseeable is not possible, an agency must use its best efforts to find out and disclose all that it reasonably can.” There is nothing in CEQA that requires that long-term plans be developed exactly as predicted at the time that an EIR is prepared. In fact, the provisions outlined in Public Resources Code 21166, and codified in CEQA Guidelines sections 15162, 15163 and 15164 expressly provide a path to account for what happens if conditions or the project changes over time.

Regarding the footnoted comment that biological surveys were conducted exclusively on 586.7 acres of the project site, this is incorrect. As documented in the Chapter 7, *Biological Resources*, of the Draft EIR, and Appendices 4 and 5, a variety of surveys were undertaken as part of the characterization of biological resources on the project site. Some surveys were at a greater level of detail, and others were at a lesser level of detail. There is no requirement under CEQA which establishes a specific level of detail for biological surveys, nor is there a requirement that all surveys be at an equal level of detail. CEQA requires that the setting is described so as to “give the public and decision makers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts.” As described in the Draft EIR, the environmental setting for biological resources was based on a combination of reconnaissance level surveys of the entire UWSP area, more detailed surveys of portions of the area, and research of existing resources such as the State’s Natural Diversity Database. These efforts meet the CEQA requirement for characterizing the existing conditions sufficiently to form the basis of analysis of environmental impacts.

⁴ California Public Resources Code section 21003.1(a).

As is stated under Impact BR-1, because the development of the proposed UWSP is anticipated to take place over an estimated 20-year period, conditions could change relative to the land cover, land use, and plant and wildlife habitat that exist at the actual time of development. As such, Mitigation Measure BR-1 provides that supplemental surveys be undertaken prior to construction phase development applications being deemed complete. The information in these surveys will help guide the County in determining which of the suite of mitigation measures that are identified in the Draft EIR must be implemented for each specific development application.

COMMENT 19-32

The informational defects associated with the Project's sham "phasing" are wide ranging. The DEIR repeatedly justifies its perfunctory and inadequate environmental analysis by claiming more detailed review will occur in future "phases." As just one example, the DEIR asserts with respect with Impact BR-1:

Because the proposed UWSP is anticipated to be built out in phases by different applicants over an estimated 20 years, different suites of mitigation measures may be required specific to the potential biological resources associated with phases of the build-out. In addition, land cover, land use, and consequently, plant and wildlife habitat may change during the intervening years relative to what is documented in this EIR. To identify whether, when, and where each measure applies, Mitigation Measure BR-1 is provided below, which requires that **a pre-construction baseline biological resources report be prepared for each phase of development.**

(DEIR, p. 7-40, emphasis added.)

The EIR makes similar representations regarding weed control and greenhouse gas ("GHG") emissions. (DEIR, p. 7-41 ["Prior to the issuance of a grading permit, the applicant for each phase of the UWSP area development shall prepare a weed control plan for review and approval by the Environmental Coordinator."], p. 8-29 ["As required by Mitigation Measure CC-1b, the applicant would be required to reduce GHG emissions associated with each phase of the proposed UWSP"].) Contrary to the promises of future CEQA review for these "phases," the Project does not identify any County approvals associated with Project "phases." (Draft Specific Plan, pp. 8–6 [Preliminary Development Phasing], 8–15 [Subsequent Entitlements].) Nor is there any identifiable CEQA review associated with these non-existent future Project "phases." (*Ibid.*) In other words, the EIR's claim of future review associated with future Project "phases" is unsupported by the record. There is no County review and approval of "phases," and certainly no identifiable CEQA review associated with such "phases." Accordingly, the EIR may not defer this analysis.

In short, a careful review of the DEIR and draft Specific Plan reveals that any claimed Project "phasing" and associated future CEQA review is misleading to say the least. The "preliminary phasing plan" is expressly subject to revision at any time without any amendment to the Specific Plan, which also does not provide for actual project "phases" triggering preparation of the deferred environmental analysis that is offered by

the EIR to justify the present inadequate review. The EIR's project description and strategy of deferred CEQA review based on that claimed phasing are therefore contrary to CEQA's mandates.

RESPONSE 19-32

The proposed UWSP Preliminary Development Phasing, presented in section 8.5 of the UWSP, provides a general phasing strategy but also recognizes that the pace of development "is subject to economic cycles, which could alter the pace of development." It also acknowledges that while residential development typically predates commercial development, there are some types of commercial development that could be implemented earlier due to unique demands that could be coming from downtown Sacramento, proximity to I-80, or other factors. As noted on page 8-6 of the UWSP, the preliminary phasing plan "is subject to change as development occurs in response to market demand over time."

While the plan provides that "[c]hanges to the sequencing of individual development phases are permitted without an amendment to the UWSP," that does not imply that the County would be without discretion regarding future actions or that subsequent review pursuant to CEQA would not occur. As is discussed in UWSP section 8.3, Effectuation of Development Entitlements, although land use designations and LAFCO approvals would occur with adoption of the UWSP, "[t]o effectuate development entitlements, parcels must be rezoned to an allowable zoning district that is consistent with its land use designation." Development entitlements would include, but may not be limited to, rezones and tentative subdivision maps. Each of these are discretionary actions, which would require the County to undertake CEQA review. Such CEQA review by the County would include examination to determine whether the effects of the subsequent action were fully disclosed in this EIR, including whether surveys undertaken for the EIR were sufficient. As such, the County would retain its authority and responsibilities under CEQA to evaluate future actions pursuant to CEQA.

Please also see Response 19-31 above.

COMMENT 19-33

A. The DEIR Fails to Analyze Countywide Impacts Resulting from General Plan Text Amendments

The DEIR fails to analyze the Project's impacts that extend well beyond the Project's boundaries. Specifically, the Project includes a General Plan text amendment to eliminate County requirement that replacement agricultural land must be within the County. (General Plan Policies AG-1, AG-5). Nothing limits the scope of these text amendments to the Project. Accordingly, the County has a duty under CEQA to analyze all impacts associated with text amendments that would apply to all remaining agricultural lands throughout the County. The DEIR does not even recognize the broad scope of these text amendments, much less provide a good faith analysis of their countywide impacts. The DEIR simply ignores that these General Plan text

amendments would apply countywide and makes no attempt to analyze the impact of the countywide effects on the remaining agricultural lands in the County.

RESPONSE 19-33

As discussed in Impact AG-1 (pages 5-20 through 5-23) in Chapter 5, *Agricultural Resources* of the Draft EIR, under the currently adopted General Plan Policy AG-5, the preservation of farmland at a 1:1 ratio must typically be located within Sacramento County. However, as provided in Appendix PD-1, Proposed General Plan Text Amendments, of the Draft EIR, the UWSP proposes revisions to General Plan Policy AG-5 that would clarify when out-of-county mitigation for agricultural land impacts might be considered. These text amendments would be implemented with the approval of a General Plan amendment proposed as part of the UWSP. The proposed revisions provide that the Board of Supervisors would retain the authority to set aside the in-County mitigation requirement for impacts to unique, local, and grazing farmlands, but not with respect to prime and statewide farmlands unless the mitigation land is also providing mitigation for impacts to special-status species. Under those circumstances, revised Policy AG-5 explains, the Board of Supervisors may consider, on a case-by-case basis, the mitigation land required to mitigate for impacts to special-status species as also meeting the requirements of for mitigating impacts for loss of farmland, including land outside of Sacramento County. In addition, the UWSP proposes revisions to General Plan Policy AG-1 to specify that the County shall protect prime, statewide importance, unique, and local importance farmlands located outside of the USB from urban encroachment, consistent with General Plan policies (e.g., LU-114, LU-119 – LU-128) authorizing amendment of the Land Use Diagram in the interest of the public health, safety, and welfare of the residents of Sacramento County.

The evaluation of proposed UWSP effects related to farmland in Chapter 5, *Agricultural Resources* of the Draft EIR considers the physical effects of the proposed revisions to General Plan policies that would be implemented with approval of a General Plan amendment proposed as part of the UWSP. The comment references unspecified countywide impacts that could result from the proposed revisions to General Plan policies that the Draft EIR purportedly fails to address. However, there is no evidence that the proposed revisions to General Plan policies would result in new or increased adverse impacts. Specifically proposed revisions to General Plan Policy AG-5 provide that the Board of Supervisors may consider, on a case-by-case basis, the mitigation land required to mitigate for impacts to special-status species as also meeting the requirements of for mitigating impacts for loss of farmland, including land outside of Sacramento County. Nothing in the proposed revisions direct or facilitate new or increased adverse countywide impacts. Rather, the proposed revisions allow for additional flexibility in addressing mitigation for impacts to farmland as warranted by project-specific circumstances and on a case-by-case basis. Finally, evaluating potential impacts of policy changes that allow the Board to make context-based choices on a case-by-case basis would be speculative.

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record

and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 19-34

B. The DEIR Fails to Disclose and Analyze General Plan Land Use Policy LU-127 that Prohibits the Project in Order to Protect Prime Farmland

The DEIR further fails as an informational document by conspicuously ignoring the County General Plan land use policy directly related to conserving agricultural resources, LU-127, which provides, “The County ***shall not expand*** the Urban Service Boundary unless . . . The area of expansion does not include the development of important natural resource areas, aquifer recharge lands or ***prime agricultural lands***.” (Emphasis added.) The impact of LU-127 is unmistakable, and not subject to dispute. County policy is to prohibit expansion of the USB unless proposed development “does not include the development of . . . prime agricultural lands.” Here, the DEIR acknowledges that the Project includes 1,207 acres of prime farmland, which represents approximately 1.4 percent of all prime farmland within the County. General Plan policy is clear that this is disqualifying. The County’s wholesale failure to disclose LU-127, much less address it, renders the DEIR deficient as an informational document.⁶

⁶ The DEIR’s omission of any reference to LU-127 strongly suggests an intent to mislead since LU-127 was expressly referenced by County staff when the County approved the commencement of master planning for the area: “While Policy LU-119 addresses Master Plan initiation, there are other policies such as LU-120, ***LU-127*** and LU-15 which will be utilized by County staff, later in the Master Plan process, to determine whether or not the Master Plan could be recommended for approval. Initiation of the Master Plan process is only the first step and is not a guarantee of approval. The County strongly cautions that the applicants proceed at their own risk.” (Emphasis added.)

RESPONSE 19-34

See Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 19-35

Finally, the informational deficiency resulting from the DEIR’s wholesale failure to mention LU-127 is not limited to agricultural impacts. On its face, LU-127 is intended to protect agricultural production as well as biological resources that rely on agricultural lands for habitat and water quality since agricultural lands also facilitate groundwater recharge. Thus, the DEIR’s failure to address LU-127 results in informational deficiencies running throughout the DEIR including at minimum, the project description, agricultural impacts, biological impacts, hydrology and water quality, land use and project alternatives.

RESPONSE 19-35

See Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 19-36**C. The “Ag Buffer” Is Inadequate to Minimize and Mitigate Significant Impacts Associated with the Loss of Agricultural Production.**

The DEIR asserts that the so-called “ag buffer” will “allow or the continuation of existing agricultural, ag-residential, and mitigation uses.” (DEIR, p. 2-27.) Accordingly, the DEIR relies on the “ag buffer” to dismiss, minimize and mitigate significant impacts. A few non-exclusive examples include agricultural impacts (DEIR, p. 5-19), biological impacts (DEIR, pp. 7-80-82) and growth inducement (DEIR, p. 23-2.) However, the Sacramento County Farm Bureau letter provides expert testimony that the so-called “ag buffer” is inadequate due to its size and location to allow for ongoing agricultural operations. Accordingly, the “ag buffer” is not effective mitigation for impacts, and may not be relied upon to dismiss, minimize and mitigate significant impacts.

RESPONSE 19-36

See Master Response AR-2: Interface Between Agricultural and Urban Uses.

COMMENT 19-37**IV. THE DEIR FAILS AS AN INFORMATIONAL DOCUMENT WITH RESPECT TO BIOLOGICAL RESOURCE IMPACTS**

Other commenters, including expert comments by Shawn Smallwood (Exhibit 1) have explained in detail the DEIR’s failure to analyze in good faith the Project’s impacts on biological resources, including species and habitat addressed by the NBHCP. Those comments do not need to be repeated here. Rather, this comment focuses on the informational deficiency resulting from the DEIR’s failure to disclose—and even affirmative misrepresentations regarding—the NBHCP’s relevance to this Project.

As part of its analysis of impacts, an EIR must disclose related environmental review and consultation requirements of other jurisdictions and integrate these related requirements into CEQA review. (CEQA Guidelines, § 15124, subd. (d)(1)(C); see *Banning Ranch Conservancy v. City of Newport Beach* (2017) 2 Cal.5th 918, 936 [*Banning Ranch*].) Thus, agencies are encouraged to consult with responsible agencies before and during preparation of an EIR so that the document will meet the needs of all the agencies which will rely on it. (CEQA Guidelines, § 15006, subd. (g); *Banning Ranch, supra*, 2 Cal.5th at 936.) Such information is not only necessary for analysis of environmental impacts, but also project alternatives and mitigation measures. (*Banning Ranch, supra*, 2 Cal.5th at 937.) Failing to discuss other regulatory and permitting regimes with authority over the project violates the information disclosure requirements of CEQA and is a prejudicial error depriving the public of a full understanding of a project. (*Banning Ranch, supra*, 2 Cal.5th at 942.) The coordination between lead agencies and other permitting authorities “serves the laudable purpose of minimizing the chance the [lead agency] will approve the Project, only to have later permits for the project denied . . .” (*Cal. Native Plant Society v. City of Rancho Cordova* (2009) 172 Cal.App.4th 603, 642.)

Banning Ranch is instructive. There, the lead agency failed to identify potential environmentally sensitive habitat areas (“ESHA”) and analyze the impacts of the project on those areas, which are governed by the Coastal Commission under the Coastal Act. (*Banning Ranch, supra*, 2 Cal.5th at 935–936.) Doing so undermined the EIR as an informational document. (Id. at 941–942.) The County’s informational deficiency here is significantly worse than in *Banning Ranch*. When the County initially agreed to conduct planning for development in this area, staff explained:

Development in the Natomas Basin has been met with challenges from environmental groups due to the presence of numerous threatened, endangered or special status species. Two of the species of greatest concern are the giant garter snake and the Swainson’s hawk. There have been several lawsuits filed over past environmental approvals associated with the NBHCP and the MAPHCP. A final ruling by United States District Judge David F. Levi on September 7, 2005 (Attachment 8) declared the HCPs valid and cleared the way for development. . . . [W]ith respect to the issues of potential future growth in Sacramento County, Judge Levi ruled the following:

The NBHCP and BiOp [Biological Opinion (BiOp) utilized by the Secretary of the Interior and United States Fish and Wildlife Service] do assume that development in the basin will be limited to the 17,500 acres [15,517 acres under the NBHCP and 1,983 acres from the previously approved MAPHCP to total 17,500 acres cumulatively] in the permit areas and relies on that assumption in concluding that sufficient habitat will remain for the covered species. This assumption is based on the current land use plans of Sacramento County. The NBHCP, BiOp, and EIR/EIS also conclude that because any future development in the Basin not covered by the HCP and ITPs [Incidental Take Permit allowing for “take” of an endangered species] would likely result in injury to listed species, any future development in the Basin would require new federal approvals. Any such approvals would in turn require a new HCP and ITP for the particular project, and could also lead to revision of the existing NBHCP, were the additional development to exceed assumed limits.

Judge Levi went on to say,

The NBHCP anticipates that development by the City and Sutter will be limited to 15,517 acres – 8,050 acres within the City [of Sacramento] and 7,467 acres in Sutter County – and provides that approval of any development beyond this limit – whether by the City and Sutter or by other entities – will trigger reevaluation and possible amendment of the plan, and could result in suspension or revocation of the City and Sutter permits.

With regard to the City/County Natomas Joint Vision, which plaintiffs claimed would fatally undermine the NBHCP, Judge Levi ruled the following:

The Service, and the court, are entitled to assume at this point that future development will not be permitted if sufficient mitigation land is unavailable and the development will result in jeopardy.

The Judge footnoted the above sentence with the following:

The court notes, however, that the Service and those seeking an ITP in the future will face an uphill battle if they attempt to argue that additional development in the Basin beyond 17,500 acres will not result in jeopardy. The NBHCP, BiOp, EIR/EIS, and Findings and Recommendations are all predicated on the assumption that development in the Basin will be limited to 17,500 acres and that the remaining lands will remain in agricultural use.

Staff recognizes that any new development in the Natomas Basin above the 17,500 acres already approved and permitted by the Natomas Basin and Metro Air Park HCPs ***will require careful coordination and consideration of existing approved developments, their mitigation strategies, and the regional conservation context.***

(Exhibit 9, 2019 County Staff Report, emphasis added.)

Following County staff's express acknowledgement of the "uphill battle" that will require "careful coordination and consideration," the DEIR is now conspicuously silent regarding this history and, critically, the detrimental impact that the Project may have on the existing habitat conservations plans. The DEIR fails as an informational document by not addressing these critical interrelationships—as County staff previously promised to do at the beginning of this process.

RESPONSE 19-37

The Natomas Basin HCP is addressed at length in the Draft EIR and in this Final EIR. Draft EIR Chapter 7, *Biological Resources*, includes a description of the NBHCP and MAP HCP in the Environmental Setting, pages 7-37 and 7-38, and Impact BR-14, pages 7-76 through 7-84, is focused on addressing potential conflicts between the proposed project and the NBHCP. Draft EIR, Chapter 22, *Cumulative Impacts*, includes an extensive discussion of the potential for the proposed project in conjunction with all reasonably foreseeable cumulative projects, to create a significant impact as a result of a conflict with the NBHCP or MAP HCP.

The comments that reflect the ruling in the *National Wildlife Federal v. Norton* case are not relevant to the Draft EIR and its adequacy under CEQA and the CEQA Guidelines. As required under the law, the County has exercised its independent judgement in assessing the environmental impacts from the proposed UWSP. The analysis included in Draft EIR Impact BR-14, cited above, complies with the requirement under CEQA to assess the potential for a project to conflict with an adopted Habitat Conservation Plan,

Natural Community Conservation Plan, or other local, regional, or state habitat conservation plan.

For additional discussion of these issues, please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, and Response 15-20.

COMMENT 19-38

V. THE DEIR'S TWO TRANSPORTATION ANALYSES VIOLATE CEQA AND REVEAL VIOLATIONS OF GENERAL PLAN POLICIES REQUIRING PROJECT DENIAL

A. The DEIR Violates CEQA by Not Adequately Analyzing the Project's VMT and Transportation Safety Impacts

Transportation Engineer Dan Smith reviewed the DEIR's technical transportation studies and prepared comments identifying numerous deficiencies. (Exhibit 2.) These comments are incorporated by reference and do not require repetition here.

RESPONSE 19-38

Please see Responses 19-104 through 19-118 below.

COMMENT 19-39

B. The Local Transportation Analysis Reveals Violations of the County's General Plan LOS Standards

The local transportation analysis reveals that the Project would be inconsistent with the County's General Plan. Specifically, Table 12 discloses that the Project would individually result in unacceptable level of service ("LOS" F) conditions at no fewer than 13 different intersections.

The DEIR dismisses this violation of General Plan standards by asserting: Consistent with Policy CI-9, the proposed roadway system included in the proposed UWSP would be designed in a manner that meets level of service operating standards ***with just a few exceptions***. In instances where operating standards are not met, physical improvements to increase capacity (e.g., widening El Centro Road to an eight-lane cross section) ***have been deemed by Sacramento County to be either infeasible or would be inconsistent*** with the proposed UWSP's goal of creating an environment conducive to walking and bicycling.

(DEIR, p. 18-19, emphasis added.)

The problem is that the Project's "just a few exceptions" to the County's LOS E standard for urban roadways means that the Project is not "consistent" with General Plan Policy CI-9. While it is true that Policy CI-9 allows for deviation from these

standards when “it is infeasible to implement project alternatives or improvements that would achieve” the LOS standards, the DEIR does not support its assertion that specific physical improvements necessary to provide an adequate LOS for the Project already “have been deemed by Sacramento County to be either infeasible or would be inconsistent with the UWSP’s goal of creating an environment conducive to walking and bicycling.” The DEIR does not disclose when the County previously made this determination regarding the Project’s circulation plan, much less any information documenting the feasibility determination. Further, it is unclear whether any such determination of feasibility is properly made before project approval and even release of the DEIR.

RESPONSE 19-39

This comment begins by pointing out that Table 12 in Appendix TR-1 lists 13 different intersections that would operate at an unacceptable LOS F. Based on this, the comment then asserts that the project would be inconsistent with the Sacramento County General Plan. Each of these assertions is evaluated in detail in this response.

Table 12 lists the existing plus project intersection operations results prior to any identified improvements being recommended or implemented. According to this table, 10 intersections (#1, 17, 45, 61, 62, 63, 68, 69, 74, and 89) under the jurisdiction of Sacramento County would operate at LOS F during the AM and/or PM peak hours under existing plus project conditions. Any comparison of a project’s consistency with an applicable general plan LOS policy should consider resulting traffic operations with recommended improvements in place. The identified improvements are listed in Table 20 and their operational benefits are shown on Table 21. According to Table 21, the identified improvements would result in all Sacramento County study intersections operating acceptably with the exception of 8 intersections (#17, 61, 62, 63, 68, 74, 83 and 89). Of these eight locations, three intersections (#17, 61, and 63) are signalized, while the remainder feature stop-control. **Image 7** shows their location. As indicated, they are each situated along El Centro Road or Farm Road, in close proximity to the West El Camino Avenue/El Centro Road intersection. All eight intersections experience degraded LOS operating conditions as a direct consequence of queue spillbacks from the West El Camino Avenue/El Centro Road intersection (#17). The identified improvements for this intersection are shown on Figure 20.

Although the improvements result in reduced delays, average vehicle delays are 89 seconds per vehicle during the AM peak hour and 86 seconds per vehicle during the PM peak hour, which is slightly above the LOS E/F threshold of 80 seconds of delay. Additional extraordinary improvements to this intersection (e.g., grade-separated movements, eliminating pedestrian crossings, etc.) were contemplated during the development of the Draft EIR but were found to be detrimental to pedestrian and bicyclist movements and safety, would result in downstream vehicle weaving areas, or would conflict with other general plan policies relating to other modes of travel. Moreover, the intersection’s close proximity to Interstate 80 and its interchange with West El Camino Avenue further limits the range of design solutions. Thus, the Draft EIR concluded that it would not be feasible to restore traffic operations at these intersections to LOS E or better.

Sacramento County General Plan Policy CI-9 states the following (in part): Plan and design the roadway system in a manner that meets Level of Service (LOS) D on rural roadways and LOS E on urban roadways, unless it is infeasible to implement project alternatives or improvements that would achieve LOS D on rural roadways or LOS E on urban roadways. The Draft EIR correctly concluded that it is not feasible to construct additional improvements (beyond those shown on Figure 20) to the West El Camino Avenue/El Centro Road intersection without adversely affecting other modes of travel and overall roadway safety. The introduction of grade-separated turn lanes or removal of pedestrian crossings would be at odds with the Town Center's intent of being a smart growth, walkable downtown environment.

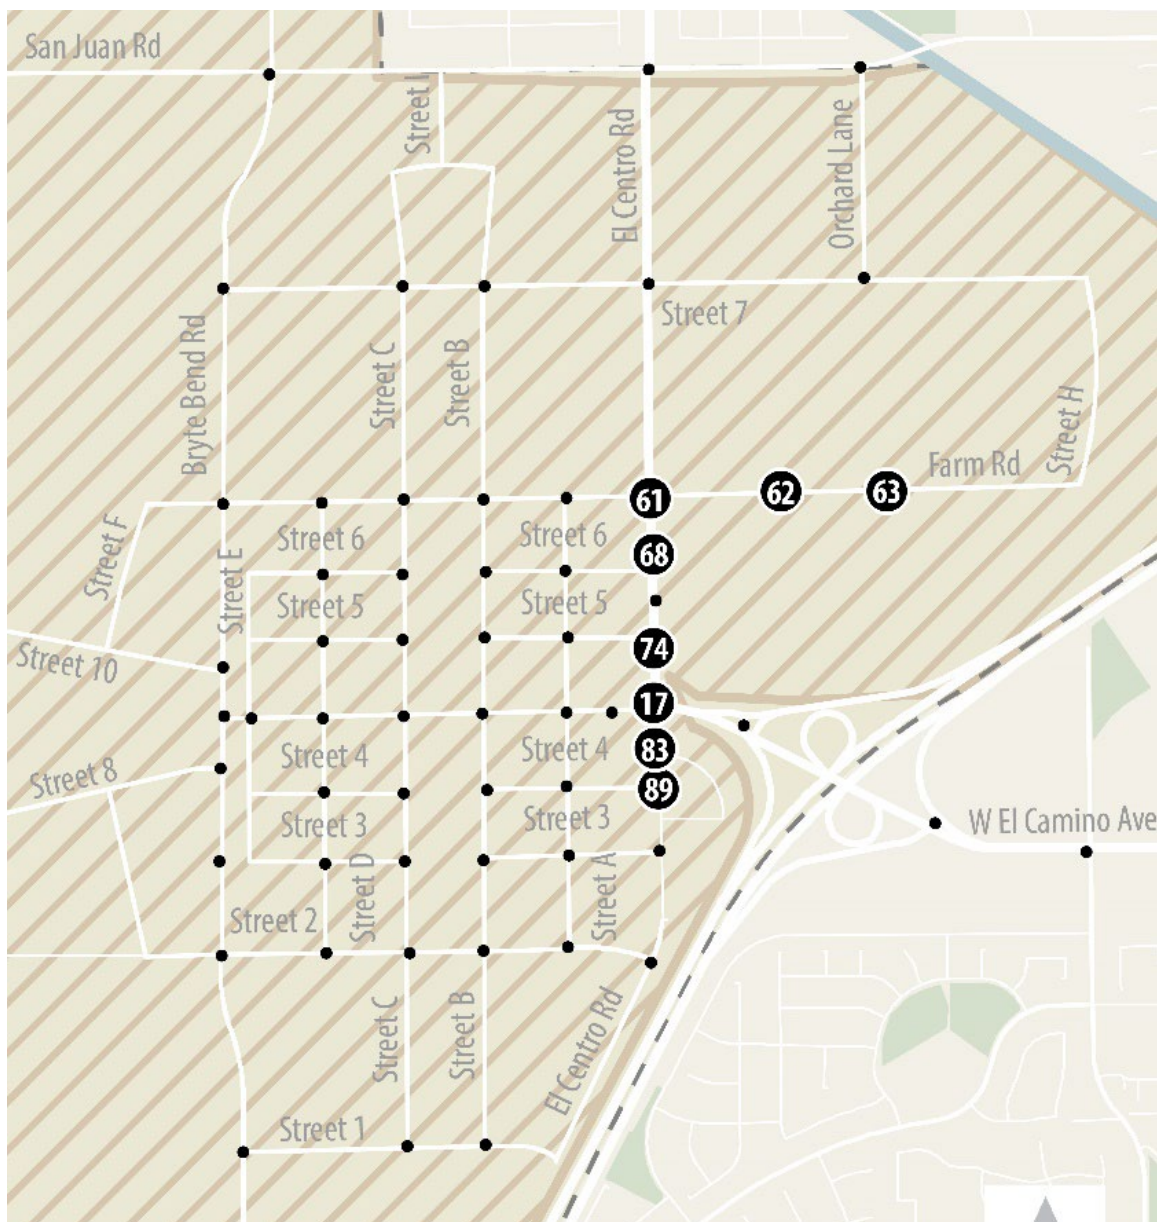

Image 7: Identification of eight study intersections under the jurisdiction of Sacramento County that would operate unacceptably under existing plus project conditions with recommended improvements in place

COMMENT 19-40

What is more, the language of CI-9 does not support violating the County's LOS standards on the basis that physical improvements "would be inconsistent with the proposed USWSP's goal of creating an environment conducive to walking and bicycling." Even if this is a proper basis for violating the County's LOS standards (the plain language of CI-9 contradicts this), the DEIR fails to provide any analysis identifying the proposed physical improvements or how they are inconsistent with the stated goal.

RESPONSE 19-40

General Plan Policy CI-9 uses the following exact language when referencing conditions in which the urban LOS E standard cannot be met: "unless it is infeasible to implement project alternatives or improvements that would achieve LOS E on urban roadways." Section 21061.1 of the CEQA statute defines feasible as "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors." Response 19-39 clearly articulated that achieving LOS E at the main project access intersection (from which queue spillback and delays extend to various upstream intersections) would have detrimental environmental effects on other modes of travel and adverse safety consequences due to worsened downstream vehicle conflicts. Additionally, economic considerations such as the added cost to grade-separated turn movements and the visual blight such facilities would have on the viewshed of the Town Center were also considered as part of the conclusion that improving operations to LOS E was not feasible.

COMMENT 19-41

Finally, even if the County can credibly explain how physical improvements to existing intersections are not feasible (perhaps due to right-of-way constraints), it strains logic to suggest that the same is true regarding intersections not presently in existence. (See Table 12, intersections 61, 63, 68, 69.) The DEIR fails to explain how it is infeasible to design new intersections at a minimum LOS E.

RESPONSE 19-41

Refer to Responses 19-39 and 19-40.

COMMENT 19-42

In summary, the Project's roadway system patently violates the County's General Plan LOS standards, and the County fails to explain how it is infeasible to construct a system that meets the minimum LOS E standards. The Project's General Plan inconsistencies will increase cut-through traffic on other roadways such as along Garden Highway thereby further increasing undisclosed congestion and roadway hazards to existing residents.

RESPONSE 19-42

Refer to Responses 21-38 and 21-39. As noted in Response 21-38, with identified improvements at the West El Camino Avenue/El Centro Road intersection in place, the intersection would operate with an average delay per vehicle that is within 10 seconds of LOS E. The comment alleges that diversion of traffic to Garden Highway will increase due to the LOS E operating goal not being met. But in reality, the most direct alternative route to access Garden Highway from West El Camino Avenue (without passing through the West El Camino Avenue/El Centro Road intersection) is Orchard Lane to Garden Highway, which would be at least one mile longer than traveling through the project site.

COMMENT 19-43

C. The EIR Fails as an Informational Document Regarding the Project's Proposed Transit System, Impacts and Mitigation

The DEIR claims that the Project employs “smart growth” principles that include “Transportation Choices – Development should encourage people to walk, bike, use public transit, or carpool to their destination.” Nothing could be further from the truth. In fact, the EIR fails as an informational document with respect to the Project’s impact and mitigation regarding transit impacts.

As a threshold matter, buried in the DEIR’s appendix is the revelation that “[U]se of transit for travel to external destinations is estimated at two percent for the purposed project.” The DEIR fails to explain how this abysmal transit mode share is consistent to its claim that the Project is somehow “encouraging” transit use.⁷ In fact, the Project fails to provide adequate transit facilities, and the DEIR fails to adequately disclose this to the public and decision-makers.

⁷ The DEIR’s transportation appendix indicates that its assumed transit trip generation is more than the “base” rate assumed for a “suburban” development but fails to identify the assumed “base” transit trip generation number.

RESPONSE 19-43

Refer to Master Response TR-1: Transit.

COMMENT 19-44

The DEIR notes that the Project would result in a significant transportation impact if it “[s]ubstantially increase[s] transit demand and fail[s] to provide adequate transit service.” (DEIR, p. 18–16.) Although the transit mode split of 2.0 – 2.3 percent is well below the split for an infill or “smart growth” project, the mode split would still result in 3,576 daily transit trips. The DEIR fails to set forth enforceable mitigation to address this transit demand. The DEIR acknowledges this failure:

[T]he proposed UWSP would substantially increase transit ridership demand that may not be fully accommodated by the proposed transit service as

described in the transit plan that has been prepared for the Specific Plan. Specifically, severe congestion along El Centro Road between West El Camino Avenue and Farm Road would cause substantial delays to bus service that would operate along this route as part of the UWSP. Additionally, the lack of planned fixed-route bus service may lead to an unmet demand for transit service.

RESPONSE 19-44

Refer to Master Response TR-1: Transit.

COMMENT 19-45

The DEIR fails to describe the Project's transportation network. The DEIR asserts, "Plate TR-5 shows the proposed transit system included in the proposed UWSP, which would include an on-site shuttle that would operate along key roadways during peak periods." Plate TR-5, however, fails to reveal the on-site shuttle, much less provide any information regarding its operation.

RESPONSE 19-45

Pages 18-16 through 18-20 of the DEIR include an extensive discussion of the project's roadway, bicycle, pedestrian, and transit systems, which collectively represent its transportation network. Page 18-19 incorrectly mentioned that Plate TR-5 shows the alignment of an on-site shuttle. In fact, Plate TR-5 does not show any shuttle service as no such service is proposed. The Final EIR corrects this error

COMMENT 19-46

Setting aside its failure to describe the proposed transit network, the DEIR proposes to mitigate the Project's failure to provide for the Project's transit demand with mitigation measure TR-1b, which requires the Project applicant to "coordinate with the County and SacRT" to provide the transit "assumed" in the DEIR's transportation analysis "or a cost-effective equivalent." However, the EIR fails to identify with any specificity the specific transit infrastructure that would be required to handle 3,576 daily external transit trips. Compounding this informational failure, funding for this uncertain transit plan would be by "annexation to County Service Area 10, formation of a transportation services district, or other secured funding mechanism."

RESPONSE 19-46

Refer to Master Response TR-1: Transit.

COMMENT 19-47

An EIR may not simply label an impact significant without describing the severity of the significant impact and identifying all feasible mitigation measures to reduce it to less than significant. The DEIR's failure to adequately describe the transit plan, coupled with the uncertainty regarding its funding, renders the DEIR defective as an informational

document with respect to transit impacts. Moreover, the DEIR's analysis and mitigation for transit impacts, including its vague transit plan, fails to support a finding that the Project "promotes . . . transit options that will encourage non-vehicular trips."

RESPONSE 19-47

Refer to Master Response TR-1: Transit.

COMMENT 19-48

VI. THE DEIR FAILS TO INCLUDE A LAWFUL WATER SUPPLY ASSESSMENT FOR THE PROJECT

The project requires a water supply assessment ("WSA") pursuant to SB 610. No such WSA appears to have been prepared for the Project, much less attached to the EIR as required by law. (Wat. Code, 10911, subd. (b).) Rather than the legally mandated WSA for the Project, the EIR includes a "water supply analysis" form prepared by the applicant's legal counsel. This form fails to provide the information required for a legally-adequate WSA set forth in Water Code section 10910, subdivisions (d), (e), (f), and (g). Indeed, the only information in the "water supply analysis" prepared by the applicant's counsel is information about the Project's proposed water demand. This falls well short of the information required for a WSA. As a result, the EIR fails as an informational document regarding whether an adequate water supply is available to support the Project.

RESPONSE 19-48

Please see Response 15-65.

COMMENT 19-49

While a WSA may incorporate information from a water supplier's urban water management plan ("UWMP") into a project's WSA, that was not done here. The "water supply analysis" makes no attempt to set forth information required by subdivisions (d), (e), (f) and (g), much less reference where that information is provided in the City's UWMP.

RESPONSE 19-49

Please see Response 15-65. Furthermore, the UWSP project area is within the City of Sacramento's American River Place of Use (POU), giving the City of Sacramento the authority to convey water via the American River to customers in the POU.

A current Urban Water Management Plan (UWMP), if available, is the foundational document for preparation of a WSA; as such, a WSA may incorporate a water supplier's UWMP "[i]f the projected water demand associated with the proposed project was accounted for in the most recently adopted urban water management plan." (Wat. Code, §10910, subd. (c)(2).) While the City of Sacramento UWMP did not directly map the UWSP area into its 2020 UWMP, the projected demand estimates in the 2020 UWMP

accounted for growth in demand through 2050 and would accommodate the demand from the proposed UWSP when added to the other demand in the city. In fact, as stated in the 2020 UWMP

To meet the 20-year planning requirement for future water supply assessments (Senate Bill 610), the City has decided to include demand projections to the year 2050 in its 2020 UWMP. The City's projected 2050 retail demands are 155,000 AF potable water and 1,000 AF recycled water for a total retail demand of 156,000 AF. The City's projected 2050 wholesale water demand is 97,060 AF. The future projections are anticipated to evolve over time with the implementation of conservation measures and will be reevaluated when long-range planning documents are updated (pages 7-10 through 7-15, City of Sacramento, 2020 UWMP (Tables 7-7, 7-8, 7-9, 7-10, 7-11, 7-12), June 2021).

As demonstrated in 2020 UWMP Tables 6-23 and 6-2, the City projected its available retail water supplies to be as high as 368,000 AFY in 2045 as compared to projected demand in 2045 of 132,942 AFY in average water years; demands in dry years would be less as conservation measures would be in place.

In preparing the WSA, the City compared water demand for the proposed UWSP to water supplies available to the City and a determination was made by the City that water supplies would be sufficient to supply the proposed UWSP (see Appendix UT-1). As shown in Table UT-1 and discussed above, the City has surface water rights to divert up to 326,800 AFY from the American and Sacramento Rivers and had a groundwater pumping capacity of 20,429 AFY in 2020. Thus, the total available water supply for the City of Sacramento in 2020 was more than 346,000 AFY. The increase in water demand under the proposed UWSP would represent an increase of approximately 0.05 percent relative to the City of Sacramento's total 2020 water demand of 100,483 AF. In single dry years and multiple dry years demand is expected to be reduced through conservation measures (demand reductions) while supply remains relatively constant through 2045. It should be noted that groundwater supplies are assumed to be drought resistant and can be relied on in drought years when surface water supplies could be reduced. As such, City water supplies are sufficient to meet demand generated by the proposed UWSP in all water year types.

COMMENT 19-50

Moreover, a WSA may incorporate a water supplier's UWMP "[i]f the projected water demand associated with the proposed project was accounted for in the most recently adopted urban water management plan." (Wat. Code, §10910, subd. (c)(2).) The applicant's legal counsel checked a box asserting that the City's UWMP accounted for the Project's water demand. This representation is demonstrably false. Nothing in the City's UWMP indicates that the Project's demand was accounted for in the City's UWMP. (See Exhibit 10, chapters 3 and 4 of the City's UWMP.) Indeed, all evidence points to the opposite conclusion. The City's UWMP determines its demand projections based upon a combination of its retail and wholesale demands. (Exhibit 10, pp. 3-11–3-18; 4-3–4-10.) The Project site is located outside the City's retail service area, and so

it is not a retail customer of the City. (Exhibit 10, Figure 3-1.) Moreover, the Project site is presently served by Natomas Central Mutual Water Company, which is not a wholesale customer of the City. (Exhibit 10, p. 3-18.) Since the Project site is neither a retail nor wholesale customer of the City, nothing from the City's UWMP demonstrates that it accounted for any water demand from the Project site, much less the 4,242 AFY set forth in the applicant's "water supply analysis."

RESPONSE 19-50

Please see Response 15-65 and Response 19-49 above.

COMMENT 19-51

Implicitly acknowledging that the Project's water demand is not "accounted for," the City's approval of the applicant's "water supply analysis" engages in obfuscation, asserting, "The area addressed in this WSA *lies within an area contemplated* by the City's 2020 Urban Water Management Plan demand forecast and within the legal boundaries of the City's water rights entitlement." (Exhibit 11, City staff report dated December 6, 2022, Consent Item 14, emphasis added.) That a project site (notably not the specific Project demand) is only somehow merely "contemplated"—whatever that term may mean—is not the same as affirmatively "accounting for" a specific water demand. The same is true regarding the City's irrelevant finding that the Project area is "within the legal boundaries" of the City's water right. That the City may lawfully provide water to a parcel is in no way the same as demonstrating that the City affirmatively accounted for the parcel's water demand, much less and increased water demand from a proposed (and unapproved) development project.

RESPONSE 19-51

Please see Response 15-65 and Response 19-49 above.

COMMENT 19-52

In short, the Project's proposed demand of 4,242 AFY was not "accounted for" in the City's UWMP, and so information from the UWMP may not be incorporated into a WSA for the Project—even if one had been prepared (it has not). A reviewing court will have no difficulty disapproving the County's reliance on the false and misleading "water supply analysis" prepared by the applicant.⁸ A lawful WSA will need to be prepared for the Project along with a recirculated DEIR.

⁸ While the City purported to approve the "water supply analysis" back in 2022, a legal challenge to its adequacy is not ripe unless and until it is relied upon by the County to approve the Project. (*California Water Impact Network v. Newhall County Water Dist.* (2008) 161 Cal.App.4th 1464.)

RESPONSE 19-52

Please see Response 15-65 and Response 19-49 above.

COMMENT 19-53**VII. THE DEIR FAILS AS AN INFORMATIONAL DOCUMENT REGARDING AIR QUALITY EMISSIONS AND RESULTING HUMAN HEALTH IMPACTS**

The Project would result in significant air quality emissions and human health impacts resulting from air emissions. The DEIR fails as an informational document by not adequately disclosing such impacts. Expert comments by SWAPE are attached as Exhibit 3, incorporated by reference, and do not require repetition here.

RESPONSE 19-53

For responses to the commenter's specific comments on the Draft EIR, refer to Responses 19-51 through 19-57. For responses to SWAPE comments, refer to Responses 19-119 through 19-125.

COMMENT 19-54

A. The DEIR Fails to Disclose All Human Health Impacts Resulting from Acknowledged Significant Toxic Air Contaminant Emissions

The DEIR discloses that operation of the Project would result in significant cancer risk to both existing residents and future occupants of the Project. (DEIR, p. 6-49.) Indeed, the cancer risk to maximally exposed residents is greater than 44 increased cancer risks, which is more than four times the relevant significance standard of ten increased cancer risks. While this human health impact to residents is itself shocking, it unfortunately comes nowhere near to telling the whole story regarding the human health implications from the Project's toxic air emissions ("TAC").

In addition to TAC emissions, the DEIR fails as an informational document by failing to adequately address the human health impacts associated with the Project's contribution to ultrafine particulate ("UFP") emissions.

The DEIR's local transportation analysis reveals that the Project will increase auto and heavy-truck trips along I-80 and I-5, including increased vehicle queuing and resulting vehicle braking. This will exacerbate UFP emissions. (Exhibit 12 ["Very fine and ultrafine iron, nickel, copper, and zinc were identified as vehicular, with the most probable sources being brake drums and pads and the lubrication oil additive zinc thiophosphate . . . The braking systems of cars and trucks must now be considered along with direct exhaust emissions in estimating the health impacts from traffic."].) The DEIR fails as an informational document by not adequately analyzing the human health impacts of increased UFP emissions on nearby residents, including existing residents and future occupants of the Project.

The human health impacts resulting from UFP emissions are very real, and include:

- Early heart attacks from ultra-fine metals from the upwind braking,

- Increases in cancer from diesels exhaust . . .
- High rates of childhood asthma
- Rapid and permanent loss of lung function in children from ultra-fine metals, with 18 year olds having the lung function of 70 year olds.

(Exhibits 12,13,14,15.)

These health impacts, and others, are documented in several peer-reviewed technical studies. (Exhibits 12,13,14,15.) A peer-reviewed study entitled, “Prenatal Air Pollution and Newborns’ Predisposition to Accelerated Biological Aging” found that mothers “with higher residential exposure to PM2.5 . . . gave birth to newborns with significantly lower telomere length [a maker for biological aging] that could not be explained by other factors.” (Exhibit 14.) Another peer-reviewed study found that health impacts, including mortality, can be correlated to UFP exposure. (Exhibit 12.)

Notwithstanding the serious health impacts resulting from UFP emissions—particularly at particulate emissions giving rise to such high cancer risks—the DEIR makes no mention whatsoever of UFP emissions, much less the resulting health risk exposure. The DEIR’s failure to disclose health risk from UFP emissions violates CEQA. The California Supreme Court has held that an EIR must correlate air emissions to human health effects if it is feasible to do so. (*Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502 [*Sierra Club*].) *Sierra Club* addressed a challenge to an EIR’s air quality discussion that, as here, simply listed various health conditions with no attempt to correlate those impacts to air emissions. The court explained:

The EIR’s discussion of health impacts of the named pollutants provides only a general description of symptoms that are associated with exposure to the ozone, particulate matter (PM), carbon monoxide (CO), and nitrogen dioxide (NOx), and the discussion of health impacts regarding each type of pollutant **is at most a few sentences of general information**. The disclosures of the health effects related to PM, CO, and sulfur dioxide **fail to indicate the concentrations at which such pollutants would trigger the identified symptoms**.

(*Id.* at 519, emphasis added.)

The defect identified in *Sierra Club* applies with equal force here. The DEIR in *Sierra Club* at least disclosed potential health risks. Here, by contrast, human health impacts are ignored. A new DEIR will need to be prepared, and that new DEIR will need to disclose the Project’s increased UFP emissions and correlate those UFP emissions to human health impacts if it is feasible to do so. If it is not feasible to correlate UFP emissions to health impacts, the DEIR must plainly state so and support that conclusion with substantial evidence.

RESPONSE 19-54

As stated in the Draft EIR, Impact AQ-4, *Exposure of Sensitive Receptors to TACs*, the cancer risk associated with the proposed project was found to be significant and all feasible mitigation measures are recommended to reduce this risk. In addition to reducing PM_{2.5} and diesel particulate matter exposure, implementation of Draft EIR Mitigation Measure AQ-4a would introduce buffer requirements between receptors and roadway sources of ultrafine particulates (ultrafines), and implementation of Mitigation Measures AQ-4b and AQ-4c would require the installation of MERV filters that would also reduce exposure to ultrafines.

In addition to the cancer risk, the EIR also evaluates the Project's TAC-related chronic risk and annual average PM_{2.5} concentrations. Ultrafines are less than 0.1 micron in diameter and PM_{2.5} particulates are less than 2.5 microns in diameter. Since PM_{2.5} emissions include ultrafines, the toxic air contaminants (TAC) health effects analysis of PM_{2.5} concentrations includes analysis of ultrafines (see EIR Impact AQ-4, Tables AQ-12 through AQ-14). Since the Sacramento Metropolitan Air Quality Management District (SMAQMD), which is the expert air quality agency with jurisdiction in the Project area, does not have established significance thresholds or methods specifically for analysis of PM_{2.5} concentrations that include ultrafines, the Project's PM_{2.5} concentration were evaluated using a significance threshold of 0.3 µg/m³ that is based on substantial evidence documented by the Bay Area Air Quality Management District (BAAQMD).⁵ The PM_{2.5} concentration threshold of 0.3 µg/m³ is based on several different types of health outcomes from exposure, including mortality, asthma, etc.

In addition, the Draft EIR also evaluates health effects of criteria pollutants, including respiratory PM_{2.5} health endpoints for asthma-related emergency room visits and for hospital admissions for asthma and other respiratory issues. Since PM_{2.5} emissions include ultrafines, the health effects of PM_{2.5} as a criteria pollutant are also applicable to ultrafines (see Draft EIR Impact AQ-3, Table AQ-11). This health effects analysis of criteria emissions is based on SMAQMD guidance,⁶ includes consideration of particulate emissions from brake and tire wear, and is representative of health effects from exposure to ultrafines.

Although the SMAQMD and BAAQMD do not have established significance thresholds or other guidance to specifically address the effects of ultrafines in CEQA analyses, as discussed above, the Draft EIR analyses of TAC cancer and PM_{2.5} concentrations, and the analysis of criteria pollutant PM_{2.5} health effects, incorporate adopted significance thresholds for cancer risk and PM_{2.5} concentrations and recommended guidance established for CEQA reviews, respectively. Since PM_{2.5} emissions include ultrafines,

⁵ Bay Area Air Quality Management District, Air Quality Guidelines Appendix A: Thresholds of Significance Justification, Section 3.2.1, Scientific and Regulatory Justification. 2022. Available: <https://www.baaqmd.gov/plans-and-climate/california-environmental-quality-act-ceqa/updated-ceqa-guidelines>

⁶ Sacramento Metropolitan Air Quality Management District, Guidance to Address the Friant Ranch Ruling for CEQA Project in the Sac Metro Air District. Draft. June 2020.

these analyses also address effects caused by project-generated ultrafines. Therefore, the Draft EIR adequately discloses the health effects of the project to the public and preparation of new Draft EIR is not necessary. However, the Draft EIR has been revised to show the relationship between ultrafines and PM_{2.5} emissions in the Environmental Setting, Air Pollutants of Concern discussion; and in the Impact AQ-2 and Impact AQ-3 discussions.

For clarification, the studies cited in the comment (presented as Exhibits 12 through 15) appear to be inconclusive and/or demonstrate a correlation between ultrafine particulates and health outcomes like mortality, but they do not offer proof of causation. There could be confounding variables leading to the outcomes that the study authors have not corrected for. For example, people living closer to sources of ultrafines like freeways may have economic, nutritional, or healthcare disadvantages compared to other populations, and these variables could be causing adverse health outcomes beyond those caused by the presence of ultrafines. Below are brief summaries of the cited studies:

- Exhibit 12. The study is inconclusive regarding ultrafines: “while not conclusive, strongly supports the hypothesis that very fine and ultrafine... are a causal factor”
- Exhibit 13. The study supports a causal relationship: “the inference of a causal relationship is supported...” and relationship between PM_{2.5} and health outcomes;
- Exhibit 14. PM_{2.5} exposure is addressed: “ We theorize that biological aging is associated with PM_{2.5} air pollution exposure...”
- Exhibit 15. Transport and dispersion are only addressed, health effects are not studied.

COMMENT 19-55

B. The DEIR Fails to Set Forth All Feasible Mitigation for Acknowledged Human Health Impacts

As set forth above, the Project will significantly increase the risk of cancer to existing and future residents. Although exposing residents to more than four times the significance threshold for cancer risk, the DEIR purports to rely on mitigation that is ineffective rather than effective mitigation strategies.

DEIR acknowledges a significant operational health risk to existing residents located south of I-80. The only proposed mitigation is to install MERV 13 or greater air filters. The DEIR fails to explain, however, that this mitigation strategy is ineffective unless the HVAC system is actually running with all doors and windows closed. A study cited in the DEIR explains:

In the province of Ontario, building construction and equipment is regulated by NBC and the Ontario Building Code (OBC) [4], [5]. These codes establish the limiting design factors such as minimum ventilation rates per person, minimum building envelope insulation values and

guidance on use of filters for safety and fire protection purposes. Residential buildings adopting the building codes typically install Heat Recovery Ventilators (HRVs). Future revisions of NBC include possible reduction of PM2.5 using air cleaning devices in the HVAC system if the outdoor air pollution levels are above ambient threshold levels.

In addition to the above mentioned building codes, the R-2000 standard is a voluntary standard meant to exceed building code requirements, regulating and promoting high energy efficiency and improved air quality initiatives by offering incentives on retrofit and new construction. ***Typical R-2000 houses have high-efficiency heating and ventilation systems (e.g. installation of HRV and exhaust fans certified by the Home Ventilating Institute), additional insulation, and an airtight building envelope.***

(Emphasis added.)⁹

According to the DEIR's own reference material, an "airtight building envelope" is required for the air filter to actually be effective at reducing TAC exposure inside the home. This means that all doors and windows must be closed, and the HVAC must be running. Further, and importantly, the study indicates specialized high-efficiency heating and ventilation systems are required in order to obtain any benefit, and so simply installing a MERV 13 air filter into a random gas furnace as suggested by the DEIR is not effective to reduce the cancer risk. Effective mitigation would include a program to pay the costs for high-efficiency heating and ventilation systems and airtight building envelopes.

⁹ <https://www.sciencedirect.com/science/article/abs/pii/S0360132315001171>

RESPONSE 19-55

There are no additional feasible mitigation options for reducing exposure of existing off-site residents to the project's TAC emissions beyond what is already recommended by the Draft EIR mitigation measures. As described in Draft EIR Impact AQ-4, Mitigation Measure AQ-4b recommends the installation of MERV 13 filters in the heating, ventilation, and air conditioning (HVAC) systems for the existing sensitive receptors to the south of the project site, across Interstate 80, to reduce the cancer risk for those receptors. However, because installation of such filters in the existing residences would require resident approval, neither Sacramento County nor the project applicant can legally impose such improvements on private properties that are not part of the project. Therefore, the mitigation approach as outlined in Mitigation Measure AQ-4b would only be effective for residents who select to participate in the program, and it would be speculative to predict what the participation level would be. Although this mitigation measure could be considered infeasible for enforceability reasons, its implementation is recommended because it could help some homeowners reduce TAC exposure. For these reasons, the health risk to existing sensitive receptors would remain significant and unavoidable even with implementation of mitigation.

Similarly, neither the County nor the applicant can force residents to use the filters properly, upgrade their HVAC systems, or to always run their systems with all doors and windows closed. However, running any HVAC system with exterior windows and doors open will not serve the purpose of the HVAC system, which is to heat or cool an interior space, so it is reasonable to assume that most of the time people use HVAC systems properly to maximum comfort and to be financially efficient.

The comment suggests that mitigation should be required to pay the costs for high-efficiency heating and ventilation systems and airtight building envelopes for existing residents. This mitigation approach would be cost prohibitive and economically infeasible. In addition, offering such financial assistance would not guarantee that homeowners would make the recommended changes, nor would it ensure that residents would properly use their HVAC systems and MERV 13 filters.

Operational TACs and health risks are largely a result of vehicle emissions generated by residents, employees, customers, visitors, vendors, etc., personal or business vehicles driving to and from the project site and within the project site. Neither the County nor the applicant would have control over these vehicles or the driver's behaviors. Most of the other Draft EIR air quality and climate change mitigation measures would contribute to reducing the project's direct and indirect vehicular emissions, including TACs. Although the mitigation measures would not reduce the health risk impact on existing residents to a less-than-significant level, they warrant mentioning here:

- Mitigation Measure AQ-1a would reduce construction diesel particulate matter emissions through the use of Tier 4 Final engines.
- Mitigation Measure AQ-1b would reduce operational diesel particulate matter and PM_{2.5} from: transportation sources through implementation of a Transportation Management Association program that would reduce project-related vehicle miles travelled; generator diesel particulate matter emissions through the use of Tier 4 engines; operational truck diesel particulate matter and other PM_{2.5} emissions through the use of electric truck transport refrigeration units; and installation of EV charging infrastructure.
- Climate change Mitigation Measures CC-1a through CC-1c would also reduce operational TACs: anything reducing fuel combustion to reduce greenhouse gas emissions would also reduce TAC emissions.

COMMENT 19-56

The DEIR also proposes as mitigation to “include consideration of recommendations in land use siting found in CARB’s Air Quality and Land Use Handbook: A Community Health Perspective.” (Mitigation Measure AQ-4a.) This is patently ineffective and unenforceable since requiring “consideration of recommendations” provides no performance standard.

RESPONSE 19-56

Draft EIR Mitigation Measure AQ-4a has been revised (presented below) to clarify that the standards of the UWSP shall include the identified recommendations instead of consideration of the identified recommendations.

AQ-4a The specific plan design guidelines and development standards of the proposed UWSP shall include ~~consideration of~~ recommendations in land use siting **as applicable using CARB's "Strategies to Reduce Air Pollution Exposure Near High Volume Roadways" Technical Advisory and the AQMD's "Mobile Sources Air Toxics Protocol" or applicable AQMD guidance to establish buffer distances. These include the following:**

- Prohibit siting new sensitive land uses within 500 feet of urban roads carrying 100,000 vehicles per day.
- Prohibit siting new sensitive land uses within 300 feet of a large gasoline station (defined as a facility with a throughput of 3.6 million gallons per year or greater). A 50-foot separation is recommended for typical gasoline-dispensing facilities.
- Prohibit siting new sensitive land uses within 300 feet of any dry-cleaning operation using perchloroethylene. For operations with two or more machines, provide 500 feet. For operations with three or more machines, consult the local air district. Do not site new sensitive land uses in the same building with dry-cleaning operations that use perchloroethylene.
- Obtain facility-specific information where there are questions about siting a sensitive land use close to an industrial facility, including the amount of pollutant emitted and its toxicity, distance to nearby receptors, and types of emissions controls in place.

COMMENT 19-57

With respect to the cancer impact to on-site residents, the DEIR continues to offer ineffective mitigation. While the Project application can control design and construction, the DEIR does not require residential construction to include non-opening windows, which is required for increased air filtration to be effective. Similarly, the DEIR asserts as mitigation "Prohibit siting new sensitive land uses within 500 feet of urban roads carrying 100,000 vehicles per pay," and yet the Project's site plan plainly violates this proposed mitigation measure. (See DEIR Plate PD-13, which proposes residential land uses adjacent to I-80.)

RESPONSE 19-57

A requirement that the proposed residential uses would have to be constructed with non-opening windows would not be practicable for most homeowners and would be infeasible due to the impact it would have on the market/financial value of the

residences. In addition, as described in Response 19-55, it is reasonable to assume that most of the time people operate HVAC systems properly with exterior windows closed for comfort and financial reasons. Therefore, such a requirement would have limited effect of increasing the efficiency of the measure.

It is acknowledged that Plate PD-13 identifies areas for proposed residential land uses within 500 feet of Interstate 80; however, implementation of Mitigation Measure AQ-4a would prohibit new sensitive land uses from being constructed in those areas because they would be within 500 feet of an urban road that carries more than 100,000 vehicles per day.

COMMENT 19-58

VIII. THE EIR FAILS TO ANALYZE A REASONABLE RANGE OF ALTERNATIVES

CEQA requires that lead agencies consider alternatives at two stages in the EIR process. First, a DEIR must analyze a range of reasonable alternatives to the project. (CEQA Guidelines, § 15126.6.) Later, when the agency considers whether to approve or carry out the project as proposed, it cannot do so if a feasible alternative would substantially reduce significant effects. (CEQA Guidelines, § 15092, sub. (b)(2)(A).)

To explore ways for a project to meet as many goals as possible while protecting the environment, EIRs thus must evaluate alternatives that accomplish “most” basic objectives. (CEQA Guidelines, § 15126.6 (a).) Alternatives warrant study in the EIR process if they can reduce or avoid impacts and are “potentially feasible.” (CEQA Guidelines, §§ 15126.6. subds. (a), (c), (f); *Watsonville Pilots Association v City of Watsonville* (2010) 183 Cal.App.4th 1059, 1087 [*Watsonville Pilots*].) As to whether an EIR has analyzed an adequate range of reasonable alternatives, “[e]ach case must be evaluated on its facts . . . in light of the statutory purpose.” (*Watsonville Pilots, supra*, 183 Cal.App.4th at 1086.) The nature and scope of the alternatives to be studied are governed by the rule of reason. (CEQA Guidelines, § 15126., subd. (a).)

Feasible alternatives are allowed to “impede to some degree the attainment of the project objectives, or . . . be more costly.” (CEQA Guidelines, § 15126.6, subd. (b).) An “alternative that is potentially feasible should not be excluded from an EIR simply because it may not further all of the agency’s policy objectives.” (*Watsonville Pilots, supra*, 183 Cal.App.4th at 1087.) *Watsonville Pilots* found legal error when a draft EIR failed to evaluate a reduced development because it failed to meet two of twelve objectives: “The City’s argument on this issue is premised on its claim that no discussion of an alternative is required if that alternative would not meet a project objective. This premise is mistaken.” (*Ibid.*)

Finally, CEQA requires consideration of “alternative locations” for a project based on the answer to a “key question”:

The key question and first step in analysis is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations that would avoid or substantially

lessen any of the significant effects of the project need be considered for inclusion in the EIR.

(CEQA Guidelines, § 15126.6, subd. (f)(2)(A).)

Many of the Project's unprecedented laundry list of significant and unavoidable impacts would be avoided or substantially lessened by an alternative location, i.e., one that is within the County's USB and UPA and does not consist of productive farmland that also provide habitat for special-status species. CEQA therefore requires analysis of alternative locations. Rather than comply with its legal duty to analyze offsite locations, the DEIR instead refuses to do so based on three specious arguments: (i) any alternative location would "entail either the same or new significant environmental effects as those that would occur within the UWSP area," (ii) alternative sites that "could feasibly achieve many of the project objectives [are] not available as planning applications for those lands have already been filed with the City of Sacramento and with the County of Sacramento," and (iii) an offsite alternative would not be feasible as the project applicants do not control any other properties within Sacramento County." All of these are without merit.

RESPONSE 19-58

Please see Response 19-7 above.

COMMENT 19-59

A. The DEIR Fails to Support Its Assertion That All Alternative Sites Would Have the Same or New Significant Impacts

The DEIR broadly asserts that any alternative location would result in the same or new significant impacts, and then purports to support that claim with a few "examples." This applies an incorrect standard because consideration of an alternative location is required if any significant impact is reduced or lessened. Here, the DEIR acknowledges that the Project would result in an incredible 29 different significant and unavoidable impacts. CEQA requires considering an alternative if any of these 29 significant impacts would be reduced. Alternative locations not consisting of prime farmland outside of the USB have reduced impacts associated with agricultural land conversion and inducing unplanned growth. These are just the impacts that are acknowledged in the DEIR. An objective analysis of the Project would disclose significant impacts associated with biological resources and land use consistency that would also be reduced by an alternative location.

Indeed, the DEIR acknowledges there are "other large vacant properties located adjacent to the City of Sacramento that could feasibly achieve many of the project objectives." (DEIR, p. 3-4.) At minimum, the DEIR must disclose and analyze these alternative locations since the DEIR acknowledges that they are potentially feasible.

RESPONSE 19-59

The Draft EIR addresses an Alternative Project Location in Draft EIR Chapter 3, Alternatives, pages 3-4 to 3-5, within a discussion of Alternatives Considered but Dismissed from Further Evaluation. As explained in that discussion, there are a number of reasons that an Alternative Project Location was eliminated from further consideration. These reasons generally fall into two categories.

First, because of the proximity of the project site to the regional employment hub in downtown Sacramento and major transportation corridors such as Interstate-5 and Interstate-80, with the resultant low average VMT, other locations would not avoid and would likely exacerbate impacts on air quality and greenhouse gas emissions. In addition, an alternative site that is not adjacent to already developed lands would likely result in greater aesthetic and utilities impacts than those that would occur within the UWSP area.

Second, and more importantly, there are not other similarly-sized properties that are feasible in terms of site control and achievement of basic project objectives. As explained on Draft EIR pages 3-4 and 3-5,

- Other large vacant properties located adjacent to the City of Sacramento in northwest Sacramento County that could feasibly achieve many of the project objectives are not available as planning applications for these lands have already been filed with the City of Sacramento and with the County of Sacramento;
- Other large vacant properties are available in other portions of the County that could feasibly achieve many of the project objectives are not located along a major transportation corridor within proximity of existing job centers in downtown Sacramento and West Sacramento, as well as near newly developing or proposed job centers, which is an objective of the proposed UWSP.

To further reinforce this conclusion, the County further considered the potential for other locations in the County that could accommodate the development capacity of the proposed UWSP. Assuming similar densities as the proposed project, a contiguous 1,500 acres of land would be required as a reasonable alternative location. As discussed above, such properties are not available in the Natomas Basin because the other portions of the Basin within Sacramento County are either in the City of Sacramento, or are part of the Metro Air Park development, the land controlled by the Department of Airports, the Natomas Conservancy, or are part of current on-going planning applications being considered by the County. Such available land is not available in unincorporated Sacramento County north of Interstate-80 other than land that has already been entitled within the Elverta and Rio Linda communities.

South of Interstate-80, the South Sacramento County HCP, of which the County is a Permittee, limits development to an established Urban Development Area (UDA). Within the UDA, the only area that could accommodate the proposed UWSP land uses is generally located east of Grantline Road and north of the approved Cordova Hills Specific Plan. There are properties of sufficient size in this area, but development

capacity in this area is highly limited by extensive vernal pool habitat, lack of nearby infrastructure, as well as the operations of nearby aggregate quarries. While an alternative in this area would avoid impacts to the Swainson's Hawk Zone within the Natomas Basin, it would exacerbate effects on protected vernal pool habitat, would create new impacts related to VMT and related air quality and GHG emissions, would require substantial extensions of urban infrastructure with concomitant effects on the environment, and would fail to achieve several basic objectives of the project, including Objectives 3, 5, 8, 10, and 12. As such, the County does not consider this area to be feasible as an Alternative Project Location alternative for the proposed UWSP.

As such, while there may be property in the east County that could accommodate the development planned in the proposed UWSP and which could avoid some individual, site-specific impacts associated with the proposed UWSP, none of those sites meet the definition of feasible included in CEQA Guidelines section 15126.6(f)(1).

In order to expand upon and provide additional clarity to the discussion in the Draft EIR, the Draft EIR, page 3-5, first full paragraph is revised to read:

Finally, although the project applicants only control 292 acres or 14 percent of the UWSP area, an offsite alternative would not be feasible as the project applicants do not control any other properties within Sacramento County, and no other known properties of sufficient size to accommodate the proposed development could feasibly meet the basic objectives of the proposed UWSP. As such, for the multiple reasons described above, and in light of the definition of feasible provided in CEQA Guidelines section 15126.6(f)(1), there are no feasible alternative project locations appropriate for further evaluation in the Draft EIR.

Please see also Response 19-7 above.

COMMENT 19-60

B. The Existence of Otherwise Feasible Alternative Locations Demonstrates That the No Project Alternative Is Feasible

It is very rare that a “no project alternative” is also a feasible alternative. This is one of those cases. As indicated above, the DEIR acknowledges the existence of “other large vacant properties located adjacent to the City of Sacramento that could feasibly achieve many of the project objectives.” Thus, these projects satisfy the test for “potential feasibility” and must be analyzed in the DEIR. (*Watsonville Pilots, supra*, 183 Cal.App.4th at 1087.) Also, and importantly, the existence of other projects that satisfy most of the DEIR's project objectives squarely supports the “no project” alternative as a feasible alternative. To put it simply, the DEIR's concession that other projects will satisfy most of the DEIR's project objectives means that the County can deny the Project and still achieve the majority of its project objectives through other developments.

Implicitly recognizing this conclusion, the DEIR asserts that these other projects do not achieve one of the Project's objectives, but this is not the relevant standard for determining feasibility. (*Watsonville Pilots, supra*, 183 Cal.App.4th at 1087 [“alternative

that is potentially feasible should not be excluded from an EIR simply because it may not further all of the agency's policy objectives"].¹⁰

¹⁰ This analysis sets aside that the referenced project objective is manipulated and impermissibly narrow as explained above.

RESPONSE 19-60

The comment misquotes and takes out of context language presented in the Draft EIR. Draft EIR Chapter 3, *Alternatives*, page 3-4, states:

In addition, while other large vacant properties located adjacent to the City of Sacramento *in northwest Sacramento County* could feasibly achieve many of the project objectives, *those lands are not available as planning applications for these lands have already been filed with the City of Sacramento and with the County of Sacramento [emphasis added]*.

More specifically, the “other large vacant properties located adjacent to the City of Sacramento in northwest Sacramento County” include property controlled by the County Department of Airports, or properties that are included in the Natomas Joint Vision North Precinct, including the proposed Grandpark Southwest Specific Plan area and the proposed Grandpark Brookfield Specific Plan area. These latter areas have been for more than two decades been owned by other development entities and have been subject to study for planning purposes for over a decade, and most recently were approved for planning processes by the Sacramento County Board of Supervisors on February 25, 2025. As such, none of these areas is available as an alternative site for the UWSP. Pursuant to CEQA Guidelines section 15126.6(f)(1), a factor that may be taken into account in determining the feasibility of an alternative, including an alternative location, can be “whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent).” The ownership of these properties by other developers and their active planning processes are evidence that such properties cannot be reasonably acquired, controlled, or reasonably accessed by the UWSP proponents. Thus, they cannot be reasonably considered to be feasible alternative locations for the proposed UWSP.

Please also see Responses 19-7 and 19-59, above.

COMMENT 19-61

Finally, that planning applications for these alternative locations have already been filed by developers other than Mr. Gidaro is of no consequence since CEQA does not provide guarantees to any specific developer. (*Citizens of Goleta Valley v. Board of Supervisors* (1988) 197 Cal.App.3d 1167, 1179 [“Ownership of the land used and the identity of the developer are factors of lesser significance”] [*Goleta I*].) County staff made this point with clarity in 2019 by explaining, “Initiation of the Master Plan process is only the first step and is not a guarantee of approval. The County strongly cautions that the applicants proceed at their own risk.” The DEIR now unfortunately represents a dramatic departure

by transparently advocating for the Project, and even relying on unlawful reasons to avoid any consideration of feasible alternatives including the no project alternative.

RESPONSE 19-61

Please see also Responses 19-60, above.

COMMENT 19-62

C. Alternative Sites May Not Lawfully Be Dismissed from Consideration Because They are Not “Controlled” by the Applicant

The DEIR’s final argument for rejecting consideration of any alternative location is that they are not “controlled” by the “project applicants.” As a threshold matter, the DEIR’s reference to “project applicants” is false and misleading since there is only one project applicant, Upper Westside, which owns merely 1.53 percent of the Project area. The “participating properties” are not project applicants, and the DEIR provides nothing supporting its assertion that Mr. Gidaro controls these other properties for purposes of land development. That said, even if Mr. Gidaro actually controlled these “participating” properties, this would translate to merely 14 percent control over the 2,066-acre Project area.

In other words, Mr. Gidaro does not control the vast majority (either 98.47 percent or 86 percent) of the Project area. This is critical because the DEIR fails to explain how zero percent control makes a project infeasible whereas 1.53 percent (or 14 percent) control somehow makes a project feasible. In both instances the vast amount of contemplated development is wholly outside the control of the project applicant.

RESPONSE 19-62

Please see Response 19-60, above.

COMMENT 19-63

In any event, the DEIR’s reliance on “control” to dismiss alternative locations is contrary to CEQA since it is merely one consideration out of many. Although misquoted in the DEIR, the relevant CEQA Guideline explains:

Among the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). Not one of these factors establishes a fixed limit on the scope of reasonable alternatives.

(CEQA Guidelines, § 15126.6, subd. (f)(1).) Further, caselaw rejects assertions of inability to acquire alternate locations to avoid consideration of alternative locations. (*Goleta I*, supra, 197 Cal.App.3d at 1179 [“Ownership of the land used and the identity of the developer are factors of lesser significance”].)¹¹

¹¹ While *Goleta I* was distinguished in *Save Our Residential Environment v. City of West Hollywood* (1992) 9 Cal.App.4th 1745, 1753, the court’s analysis was based on its finding that “in order to meet the objectives of the General Plan, the project was required to be located within a very limited geographical area.” This analysis does not apply here since the Project is admittedly inconsistent with the County’s General Plan. There is no argument that the General Plan requires Mr. Gidaro’s proposed urban development “within a very limited geographic area.”

RESPONSE 19-63

As discussed in Responses 19-59 and 19-60, above, the Draft EIR provides several reasons for eliminating the Alternative Project Location from further consideration. The lack of ability to gain control of other locations within the Natomas Joint Vision area is one reason, but other reasons are provided for why locations in other parts of Sacramento County are also provided.

COMMENT 19-64

Finally, and importantly, allowing EIRs to dismiss consideration of alternative locations under these facts would eviscerate CEQA’s requirement to consider alternative locations. While Mr. Gidaro is free to acquire property at a discount price (precisely because the land is unsuitable for urban develop), Mr. Gidaro is not allowed to rely on his discounted land acquisition as a shield to prevent the County’s DEIR from considering whether alternate locations (i.e., locations that are more appropriately zoned for urban development and therefore commanding a higher price) would result in reduced environmental impacts. This is precisely what the DEIR’s alternatives analysis purports to do, and it flagrantly violates CEQA’s mandate to consider alternative locations where significant impacts are associated with the proposed project’s location.

RESPONSE 19-64

Please see Response 19-59 and 19-60, above. The cost of land acquisition was not a consideration in the determination of the feasibility of an Alternative Project Location alternative.

COMMENT 19-65

The County will need to prepare a new alternatives analysis that objectively analyzes the feasibility of the no project alternative as well as alternative locations.

RESPONSE 19-65

The UWSP Draft EIR includes full analysis of two versions of the No Project Alternative. In Alternative 1, the No Project Alternative involves no development and a continuation of existing conditions on the project site into the future. Alternative 1 was initially identified as the environmentally superior alternative because it would avoid all of the

significant impacts of the proposed UWSP. The Draft EIR concludes, however, that Alternative 1 would meet none of the basic objectives of the project. Alternative 1 is addressed in Draft EIR Chapter 3, *Alternatives*, pages 3-9 to 3-12.

A second No Project Alternative, Alternative 2, was analyzed, and is presented in Draft EIR Chapter 3, *Alternatives*, pages 3-12 to 3-22. This version of the No Project Alternative, the No Project/Existing Zoning Alternative, assumes that future development within the UWSP area would occur consistent with existing County zoning designations, which would allow for the development of up to 288,629 square feet of non-residential uses and 46 new dwelling units. This version of the No Project Alternative would avoid some of the significant impacts associated with the proposed UWSP, however some significant impacts of the proposed UWSP would remain, including:

- Potential for impacts to known historical resources, archaeological resources, and/or human remains, as well as the discovery of unknown historical resources, archaeological resources, and/or human remains during ground-disturbing activities would remain significant and unavoidable;
- The danger to residents, employees, and structures associated with seismic risks, geologic hazards, and soil conditions found in the UWSP area would remain potentially significant;
- Potential impacts on paleontological resources would remain significant;
- Impacts as a result of exposure to construction noise at locations east of El Centro Road would remain potentially significant;
- VMT, which is based on trip length as opposed to number of trips, could increase under Alternative 2, as new residents under this alternative may have to drive farther to access retail services and employment; and
- Potential impacts to known tribal cultural resources during ground disturbing activities associated with this alternative would remain the same as under the proposed plan.

As described on Draft EIR page 3-22, under Alternative 2 only one of the project objectives (Objective 5) would be achieved. As such, Alternative 2 would not “feasibly attain most of the basic objectives of the project” as required in CEQA Guideline section 15126.6(a).

For discussion of an Alternative Project Location, please see Responses 19-7, 19-59 and 19-60, above.

COMMENT 19-66

IX. THE DEIR FAILS TO SATISFY THE COUNTY'S DUTY TO OBJECTIVELY ASSESS THE PROJECT, ITS IMPACTS, MITIGATION MEASURES AND PROJECT ALTERNATIVES

As the CEQA lead agency for the Project, the County has a legal duty to prepare an EIR that objectively analyzes the Project. (*Citizens for Ceres v. Superior Court* (2013) 217 Cal.App.4th 889, 918–919 [*Ceres*].) *Ceres* provides:

It is this neutral role which could cause [the agency] to reject the project or certify an EIR supporting one of the project alternatives or calling for mitigation measures to which the applicant is opposed. The agency's unbiased evaluation of the environmental impacts of the applicant's proposal is the bedrock on which the rest of the CEQA process is based.

...
This means that the product of the agency's efforts in conducting environmental review must reveal the true impacts of the proposed project, no matter how unattractive. The agency must unblinkingly include all significant impacts in the EIR and consider them with an open mind when deciding on project approval.

...
The relationship between a lead agency and project applicant is unique. Before project approval, the agency must *objectively judge* whether the project as proposed is environmentally acceptable and therefore must make a decision about *whether* it will align itself with the applicant in part, in whole, or not at all. (*Ceres*, *supra*, 217 Cal.App.4th at 918–919.)

(*Ceres*, *supra*, 217 Cal.App.4th at 918–919.)

As *Ceres* explains, an objective analysis of a Project is one that may support rejection of the Project or selection of a Project alternative. An objective analysis is not one that transparently advocates for applicant's proposed project by, as here, attempting to sweep troublesome issues under the rug or avoid consideration of feasible project alternatives.

While the law presumes the agency acts in accordance with its legal duty to be objective, the law is settled that the presumption can be overcome by evidence. Some of the DEIR's most egregious violations of CEQA described above— ignoring General Plan Policy LU-127, ignoring the Project's impact on existing habitat conservation plans, reliance on lack of applicant "control" to justify dismissing alternative locations, falsely asserting that expansion of the USB is necessary to accommodate the County's share of future population growth —strongly suggest the DEIR was not prepared to advance the County's duty to objectively analyze the Project but rather to promote the Project and avoid consideration of alternatives.

RESPONSE 19-66

This comment asserts that the Draft EIR is not objective and was prepared so as to advocate for the project. The Draft EIR prepared for the proposed UWSP is an objective, accurate, and complete analysis of the potential environmental impacts that would or could result from construction and operation of the proposed project. Pursuant to CEQA requirements as set forth in the CEQA Guidelines, each environmental resource topic subject to analysis under CEQA has been given careful consideration in light of existing and anticipated future environmental conditions, applicable regulations, the physical and operational characteristics of the proposed project. As required under CEQA, where significant impacts are identified, the Draft EIR describes potentially feasible mitigation measures which could be adopted to substantially lessen or avoid such impacts. In addition, a range of reasonable alternatives are presented and comparatively evaluated in the Draft EIR. If the County Board of Supervisors ultimately determines to approve the proposed UWSP, it would be required to explain the reasons that it considers the significant impacts of the proposed project acceptable in a Statement of Overriding Considerations, which must be based on substantial evidence in the administrative record.

Impact BR-14 contains an extensive analysis of the potential effect of the proposed UWSP on the Natomas Basin HCP and Metro Airpark HCP (see Chapter 7, *Biological Resources*, pages 7-76 to 7-84; and Chapter 26, *Cumulative Impacts*, pages 22-26 to 22-31).

Please see discussion of the consideration of an Alternative Project Location in Response 19-7.

Please see discussion of the consideration of County General Plan Policy LU-127 in Response 19-4.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 19-67

SITE VISIT

To prepare my testimony, I visited the site to complete a reconnaissance survey to sample the wildlife community. On 23 October 2024, from 07:00 to 08:42 hours, I surveyed from San Juan Road, scanning for wildlife with use of binoculars. After 1 hour and 42 minutes, I relocated to Radio Road because a tractor-drawn disk assembly covered my survey area with dust. I surveyed at my second site until 10:50 hours. I recorded all species of vertebrate wildlife we detected, including those whose members flew over the site or we saw nearby, off the site. Animals of uncertain species identity were either omitted or, if possible, recorded to the Genus or higher taxonomic level.

Conditions were clear with no wind and temperatures of 47–66° F. Most of the site is in agriculture, which is irrigated by canals and interspersed by ditches, annual grassland

and small stands of trees including willows, oaks and Fremont cottonwoods (Photos 1 through 4).

I completed my survey was too late in the season for detecting Swainson's hawks, as by October 1st the last of the local Swainson's hawks would have departed on their annual winter migration to Mexico. However, I have seen Swainson's hawks on the Specific Plan area many times before.

Photos 1 and 2. Western king amid a stand of willows on the project site, 14 May 2024.

Photos 3 and 4. *Mallards on one of the water channels on the project site, 14 May 2024.*

On the Specific Plan area, I observed two pairs of white-tailed kites and a peregrine falcon (Photos 5 and 6), California ground squirrels and sign of bobcat (Photos 7 and 8), coyotes (Photo 9), American kestrels and Anna's hummingbirds (Photos 10 and 11), California scrub-jays and yellow-rumped warblers (Photos 12 and 13), Dark-eyed juncos and house finches (Photos 14 and 15), Great egrets and northern flickers (Photos 16 and 17), song sparrows and lesser goldfinches (Photos 18 and 19), white-crowned sparrows and golden-crowned sparrows (Photos 20 and 21), Lincoln's sparrows and Nashville warbler (Photos 22 and 23), and many more species (Table 1).

Among the 73 species I detected, 17 (23%) are special-status species (Table 1), including tricolored blackbird, which is listed as Threatened under the California Endangered Species Act, white-tailed kite, which is a California Fully Protected Species. Combining my results with those of Bargas (2022) and Helix (2024), we have detected 119 species of vertebrate wildlife on the Specific Plan area, 100 of which were detected by Bargas over their 40 surveys spanning more than two years, three additional species detected by Helix and 16 more detected by myself (Table 1). Our combined 119 species include 26 special-status species, including two Threatened species under CESA.

Although I saw 73 species of vertebrate wildlife during my brief 3.83-hour survey, the species of wildlife I detected comprised only a sampling of the species that were present during our survey, as was evidenced by the Bargas and Helix surveys. Reconnaissance surveys, such as the one I completed at the project site, cannot support determinations of species' absence, but they can confirm species' presence. Such surveys can also be useful for estimating the number of species that were not detected, thereby revealing the degree to which the survey sampled the local wildlife community that was available at the time of the survey. One way to do this is to model the pattern in species detections with time into a survey. The cumulative number of species' detections increases with increasing survey time, but eventually with diminishing returns (Figure 1). In the case of my survey on the project site, the pattern in the data predicts that had I spent more time on the site, or had I help from more biologists, I would have detected 135 species of vertebrate wildlife during the morning of 23 October 2024, or 62 more species than I actually detected.

The pattern in my data also indicates that my rate of species detections at the project site far exceeded the upper bound of the 95% confidence interval I estimated from 52 surveys at other project sites that I have surveyed in the Sacramento-San Joaquin Valley since 2019 (Figure 1). In other words, wildlife species richness at the project site far exceeds the species richness my surveys indicated at other project sites in the region, despite the agricultural activities on the Specific Plan area.

The Specific Plan area supports many species of wildlife, including many more than I could detect during a brief reconnaissance survey. However, although this modeling approach is useful for more realistically representing the species richness of the site at the time of a survey, it cannot represent the species richness throughout the year or across multiple years because many species are seasonal or even multi-annual in their movement patterns and in their occupancy of habitat. I surveyed only in October, and therefore I was unlikely to see some of the species that would use the site in winter, spring or summer.

Table 1. Species of wildlife observed by Bargas during 40 surveys from March 2019 to July 2021, by Helix on 7 and 8 March 2023, and by myself (KSS) 3.83 hours on the morning of 23 October 2024.

¹ Listed as FT or FE = federal threatened or endangered, CT or CE = California threatened or endangered, CFP = California Fully Protected (CFG Code 3511), SSC = California Species of Special Concern, BCC = U.S. Fish and Wildlife Service Bird of Conservation Concern with priorities 1, 2 and 3, TWL = Taxa to Watch List (Shuford and Gardali 2008), and BOP = Birds of Prey (California Fish and Game Code 3503.5). ² Eric Hansen detected eDNA on site.

Figure 1. Actual and predicted relationships between the number of vertebrate wildlife species detected and my elapsed survey time on 23 October 2024.

At least a year's worth of surveys would be needed to more accurately report the number of vertebrate species that occur at the Specific Plan area, but I only my one brief diurnal survey. However, by use of an analytical bridge, a modeling effort applied to a more expansive data set from a research site can predict the number of vertebrate wildlife species that likely make use of the Upper Westside Specific Plan area over the longer term. As part of my research, I completed 41 diurnal surveys on the Kassis property in Rancho Cordova, California. I used binoculars and otherwise the methods were the same as the methods I used on the Specific Plan area. I selected the Kassis data set as the basis of an analytical bridge because the species richness I detected there in my initial survey was similar to that of the Upper Westside Specific Plan area. I tallied new species detected with each sequential survey, and then related the cumulative species detected to the hours used to accumulate my counts of species detected. I used combined quadratic and simplex methods of estimation in Statistica to estimate least-squares, best-fit nonlinear models of the number of cumulative species detected regressed on hours of survey: $\hat{R} = \frac{1}{1/a + b \times (\text{Hours})^c}$, where \hat{R} represented cumulative species richness detected. The coefficient of determination, r^2 , was 0.98, indicating the model was an excellent fit to the data (Figure 2).

Figure 2. Cumulative number of species of vertebrate wildlife detected with increasing number of hours of survey at the Kassis site in Rancho Cordova, California, which was surveyed 41 times from 3 December 2020 through 27 October 2023.

The model-predicted asymptote of species richness at the Kassis site was 180 following many more hours of visual-scan surveys than I actually completed. On average I would have detected 53.8 species over my first 3.83 hours of surveys at Kassis (3.83 hours to match the 3.83 hours I surveyed at the Upper Westside Specific Plan area during daylight), which composed 29.9% of the predicted total number of species I would detect with a much larger survey effort at Kassis. Given the example illustrated in Figure 2, the 73 species I detected after 3.83 hours of diurnal survey on the Upper Westside Specific Plan area likely represented 29.9% of the species to be detected after many more visual-scan surveys over another year or longer. With many more repeat surveys through the year, I would likely detect $73 / 0.299 = 244$ species of vertebrate wildlife on the Upper Westside Specific Plan area. Assuming my ratio of special-status to nonspecial-status species was to hold through the detections of all 244 predicted species, then continued surveys would eventually detect 54 special-status species of vertebrate wildlife.

I applied the same analytical approach to special-status species, where at Kassis I detected 34 special-status species after 157 hours across 41 surveys. The model-predicted asymptote of special-status species richness at Kassis was 36 following many more hours of visual-scan surveys than I actually completed (Figure 3). On average I would have detected 6.45 special-status species over my first 3.83 hours of surveys at Kassis (again, the 3.83 hours used here is to match the 3.83 hours I surveyed on the Upper Westside Specific Plan area), which composed 17.9% of the predicted total number of special-status species I would detect with a much larger survey effort at Kassis. Given the example illustrated in Figure 3), the 17 special-status species I detected after 3.83 hours of survey on the Upper Westside Specific Plan area likely represented 17.9% of the special-status species to be detected after many more visual-

scan surveys over another year or longer. With many more repeat surveys through the year, I would likely detect $17/0.179 = 95$ special-status species of vertebrate wildlife on the Upper Westside Specific Plan area.

Figure 3. Cumulative number of special-status species of vertebrate wildlife detected with increasing number of hours of survey at the Kassis site in Rancho Cordova, California, which was surveyed 41 times from 3 December 2020 through 27 October 2023.

Because my predictions of 244 species of vertebrate wildlife including 54 to 95 special-status species of vertebrate wildlife are derived from daytime visual-scan surveys, and would detect few nocturnal mammals such as bats, the true number of species composing the wildlife community of the Upper Westside Specific Plan area must be larger. My reconnaissance survey combined with the surveys of Vargas (2022) and Helix (2024) have so far detected fewer than half of the vertebrate wildlife species that occur on the Specific Plan area, and between a third to half the number of special-status species that occur there. The wildlife community has yet to be inventoried, and therefore has yet to be accurately characterized as part of the existing environmental setting. More surveys are needed, as the wildlife community is far richer in species than depicted in Helix (2024) and the DEIR.

Known for certain is that the project Upper Westside Specific Plan area supports Swainson's hawk and tricolored blackbird, both species of which are listed as Threatened under the California Endangered Species Act. Helix (2024) also reports the presence of the federally- and state-listed threatened giant gartersnake on the Specific Plan area. It also supports yellow warbler, which is considered by the California Department of Fish and Wildlife to be a Species of Special Concern with priority level 2. Also certainly present is Bullock's oriole, which is listed by the U.S. Fish and Wildlife Service as a Bird of Conservation Concern. Double-crested cormorants are present, as are multiple species protected under California's Birds of Prey statute. As my modeling suggests,

many additional special-status species use the site, but I just did not have the fortune to see them on the project site during my survey.

RESPONSE 19-67

Pursuant to CEQA Guidelines section 15125, the environmental setting in a draft EIR must include a description of the physical environmental conditions at the time the Notice of Preparation was filed. The environmental setting in the UWSP meets the requirements of CEQA and was based on the best available data at the time the Draft EIR was written. Sources are outlined on pages 7-2 and 7-3 and noted in Table BR-2: Special-Status and NBHCP and MAP HCP Covered Species Evaluated for Potential Occurrence in the UWSP Area in the UWSP Draft EIR. This approach is consistent with the requirements of CEQA Guidelines Section 15125.

The comment presents information from a biologist hired by the commenter during the Draft EIR public review period. Table 1 indicates that the commenter's biologist recorded species that were observed in surveys conducted by Bargas and/or Helix in support of the Draft EIR, as well as a few species that were observed by the commenter but not observed in the Bargas and/or Helix surveys. Such variability is to be expected in random surveys as seasonality of species activity and survey methods are reasonably expected variables. Such variability does not invalidate the surveys upon which the environmental setting was based. Furthermore, the potential to occur tables in the EIR are not based solely on observations, but on habitat suitability and geographic range of species as well.

Most of the species that were observed by the commenter, but which were not identified in the surveys conducted by Bargas and/or Helix were common species that are not considered sensitive, such as Northern shoveler, raccoon, coyote and striped skunk. The commenter indicates that s/he observed two special status species that were not identified in the surveys conducted for the Draft EIR; each of these species, however, was identified as a potential species and addressed in the Draft EIR impact analyses. Tricolored blackbird is identified in Table BR-3 as having suitable habitat present. Potential impacts to special status bird species were addressed in Draft EIR Impact BR-5 and measures that would avoid or reduce the magnitude of impacts to insignificance include Mitigation Measures BR-1, BR-2a, and BR-5.

American peregrine falcon, a protected raptor, was observed by the commenter but not in the Bargas or Helix surveys. Nevertheless, similar to Tricolored blackbird, potential impacts to special status bird species were addressed in Draft EIR Impact BR-5 and measures that would avoid or reduce the magnitude of impacts to insignificance include Mitigation Measures BR-1, BR-2a, and BR-5.

These examples demonstrate that while the surveys that were undertaken to characterize the environmental setting have a to-be-expected degree of variability, the analysis of impacts was based on the types of habitats that exist and the types of species that would be expected to be present in those habitats, and not just observed species. This methodology is conservative and protective of biological resources that

could be adversely affected by the implementation of the proposed project. The evidence provided in this comment validates and reinforces the adequacy of the assessment of impacts to biological resources presented in Chapter 7, *Biological Resources*, of the Draft EIR.

The fact that the comment includes a survey approach and statistical analysis that differs in some fashion from the approach undertaken for the Draft EIR does not invalidate the analysis in the Draft EIR. CEQA Guidelines section 15151 states that “[d]isagreement among experts does not make an EIR inadequate,” and “courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure.” The discussion of the environmental setting for biological resources in the Draft EIR meets this standard.

COMMENT 19-68

Environmental Setting Informed by Field Surveys

To CEQA’s primary objective to disclose potential environmental impacts of a proposed project, the analysis should be informed of which biological species are known to occur at the project site or nearby, and which special-status species are likely to occur, as well as the limitations of the survey effort directed to the site. Analysts need this information to characterize the environmental setting as a basis for opining on, or predicting, potential project impacts to biological resources.

Bargas (2022) committed to a serious survey effort of the Specific Plan area and documented the presence of multiple special-status species. It is unfortunate, however, that Bargas (2022) refers the reader to other reports that purportedly include the details of study methods. These other reports are not provided with the DEIR, so I am unable to assess the methods, which makes it very difficult to assess Bargas’s findings.

Helix (2024) surveyed the Specific Plan area only on two consecutive days, and like Bargas, fails to report survey start times and survey duration, which are critical methodological details that the reader needs in order to assess the survey findings. Helix detected fewer than half the number of species detected by Bargas, but it is unreported exactly where Helix surveyed or for how long. Nonetheless, Helix (2024) detected three more species of wildlife that Bargas did not.

Although 102 species of vertebrate wildlife were detected by Bargas (2022) and Helix (2024), the DEIR does not summarize the survey findings into a coherent characterization of the wildlife community as part of the existing environmental setting. Most of the species that truly occur in the area are never mentioned, nor is the species richness or biological diversity of the area summarized. The result is an unfortunate insinuation that the Specific Plan area is of low overall value to wildlife. My survey results indicate the opposite, which is that despite the annual disking of most of the acreage on the Specific Plan area, the area is inherently species-rich.

RESPONSE 19-68

The survey findings, as presented by Bargas (2020) and Helix (2024), along with other best available existing data on special-status species (including species occurrence data within the CNDDDB and an analysis of habitat suitability), was used to establish the biological setting and to form the basis of the analysis of species' potential to occur in the UWSP area, as described under the Special-Status Species discussion on pages 7-10 to 7-12 of the Draft EIR. This meets the requirements of CEQA. Please also see Response 19-67 above.

COMMENT 19-69

Environmental Setting Informed by Desktop Review

The purpose of literature and database review, and of consulting with local experts, is to inform the reconnaissance-level survey, to augment it, and to help determine which protocol-level detection surveys should be implemented. Analysts need this information to identify which species are known to have occurred at or near the project site, and to identify which other special-status species could conceivably occur at the site due to geographic range overlap and site conditions. This step is important because the reconnaissance surveys are not going to detect all of the species of wildlife that make use of the site. This step can identify those species yet to be detected at the site but which have been documented to occur nearby or whose available habitat associations are consistent with site conditions. Some special-status species can be ruled out of further analysis, but only if compelling evidence is available in support of such determinations.

First Bargas (2022:22) and then Helix (2024:18-19) established an initial pool of special-status species considered for inclusion in their respective analyses of occurrence based on queries of CNDDDB occurrence records. It is unclear to what spatial extent the CNDDDB queries were made, but regardless this screening step is flawed. CNDDDB is not designed to support absence determinations or to screen out species from characterization of a site's wildlife community. As noted by CNDDDB, "The CNDDDB is a positive sighting database. It does not predict where something may be found. We map occurrences only where we have documentation that the species was found at the site. There are many areas of the state where no surveys have been conducted and therefore there is nothing on the map. That does not mean that there are no special status species present." And in its letter of 6 November 2020 to the County, CDFW writes, "Please note that CDFW's CNDDDB is not exhaustive in terms of the data it houses, nor is it an absence database. CDFW recommends that it be used as a starting point in gathering information about the *potential presence* of species within the general area of the Project site." Bargas (2022), Helix (2024) and the DEIR misuse CNDDDB.

CNDDDB relies entirely on volunteer or permit reporting from biologists who were allowed access to whatever properties they report from. Many properties have never been surveyed by biologists. Many properties have been surveyed, but the survey outcomes never reported to CNDDDB. Many properties have been surveyed multiple times, but not all survey outcomes reported to CNDDDB. Furthermore, CNDDDB is interested only in the findings of special-status species, which means that species more recently assigned special status will have been reported many fewer times to CNDDDB than were species assigned special status since CNDDDB's inception. The lack of CNDDDB records for species only recently assigned special status would have been due to insufficient time having elapsed since the assignments. And because negative findings are not reported to CNDDDB, CNDDDB cannot provide the basis for estimating occurrence likelihoods, either. The DEIR's analysis of special-status species occurrence likelihoods is fundamentally flawed.

The DEIR is also internally inconsistent in its occurrence likelihood determinations (Table 2). Bargas (2022) analyzes the occurrence potential of only 22 species of vertebrate wildlife, whereas Helix (2024) does so for 30 species and the DEIR does so for 36 species. Bargas, Helix and the DEIR agree that five species are unlikely to occur, and they agree on four species known or suspected to be present, but determinations of occurrence likelihood vary among the other species considered. Bargas's determinations mostly comport with my analysis of occurrence records, although Bargas's determination of low likelihood of giant gartersnake occurrence does not comport with its own finding of eDNA evidence of the snake right in the middle of the Specific Plan area. Helix determines 15 species will not occur or are not expected, yet three of these are assigned moderate potential by Bargas and I saw two of these species on the Specific Plan area on October 23rd. In my assessment of database review and site visit, 102 special-status species of wildlife are known to occur near enough to the Specific Plan area to be analyzed for potential to occur at one time or another (Table 2). Of these 102 species, 31 (30%) have been documented on the Specific Plan area (I confirmed 17 of these), and 23 (22.5%) have been documented in databases within 1.5 miles of the Specific Plan area ('Very close'), 20 (19.6%) within 1.5 and 4 miles ('Nearby'), and another 23 (22.5%) within 4 to 30 miles ('In region'). Three quarters (74) of the special-status species in Table 2 have been reportedly seen within 4 miles of the Specific Plan area. Therefore, the Specific Plan area supports multiple special-status species of wildlife, and likely supports many more.

Table 2. Occurrence likelihoods of special-status bird species at or near the proposed project site, according to eBird/iNaturalist records (<https://eBird.org>, <https://www.inaturalist.org>) and on-site survey findings, where ‘Very close’ indicates within 1.5 miles of the site, “nearby” indicates within 1.5 and 4 miles, and “in region” indicates within 4 and 30 miles, and ‘in range’ means the species’ geographic range overlaps the site. Entries in Bold identify species I detected.

Common name	Species name	Status ¹	Occurrence potential

- ¹ Listed as FT or FE = federal threatened or endangered, FC = federal candidate for listing, BCC = U.S. Fish and Wildlife Service Bird of Conservation Concern, CT or CE = California threatened or endangered, CCT or CCE = Candidate California threatened or endangered, CFP = California Fully Protected (California Fish and Game Code 3511), SSC = California Species of Special Concern (not threatened with extinction, but rare, very restricted in range, declining throughout range, peripheral portion of species' range, associated with habitat that is declining in extent), SSC1, SSC2 and SSC3 = California Bird Species of Special Concern priorities 1, 2 and 3, respectively (Shuford and Gardali 2008), WL = Taxa to Watch List (Shuford and Gardali 2008), and BOP = Birds of Prey (CFG Code 3503.5), and WBWG = Western Bat Working Group with priority rankings, of low (L), moderate (M), and high (H).

RESPONSE 19-69

CEQA does not require any particular method of characterization of the environmental setting, and does not require or recommend presence/absence surveys be conducted in support of the Biological Resources Environmental Setting discussion. Table BR-2: Special-Status and NBHCP and MAP HCP Covered Species Evaluated for Potential Occurrence in the UWSP Area (PTO Table) incorporates all species included in the Bargas and Helix PTO tables, as well as NBHCP and MAP HCP Covered Species, and the NBHCP Area Biological Effectiveness Monitoring Report 2022 Annual Survey Results. As described under the Special-Status Species discussion on pages 7-10 to 7-12, the Draft EIR incorporates, but does not adopt, the results of the Biological Resources Assessments written by Bargas (2020) and Helix (2024) in the analysis of which species have potential to occur in the Draft EIR study area. This approach is consistent with CEQA Guidelines section 15125.

If approved, the proposed UWSP would be built in phases over perhaps several decades. Prior to construction, implementation of pre-construction surveys (BR-1, BR-2c, BR-3, BR-4, BR-5, BR-6, BR-7, BR-8, BR-9, BR-10a) will be conducted to assess presence of sensitive biological resources and inform the implementation of Avoidance and Minimizations Measures as needed.

Please also see Response 19-67 above.

COMMENT 19-70**INTERFERENCE WITH EXISTING HCPS**

The DEIR fails to consider the need for the Natomas Basin Habitat Conservation Plan (NBHCP) to be reevaluated and new incidental take permits (ITPs) issued with a new conservation strategy. According to the DEIR (p. 7-37), “While the UWSP area is in the Natomas Basin, the County is not a participant in either the NBHCP or the MAP HCP. Therefore, the applicant (and any future applicants for buildout of the UWSP area) is not eligible for the take coverage granted by USFWS and CDFW under the NBHCP or MAP HCP. The proposed UWSP is also outside of the planned development areas of the NBHCP and MAP HCP and potential impacts resulting from development allowed under the proposed UWSP were not considered in the NBHCP.” These conclusions, however, lack the analysis of whether the Specific Plan would require a reevaluation of the NBHCP. The 2003 NBHCP Implementation Agreement states, “...prior to approval of any related rezoning or prezoning, such future urban development shall trigger a reevaluation of the Plan and Permits, a new effects analysis, potential amendments and/or revisions to the Plan and Permits, a separate conservation strategy and issuance of Incidental Take Permits to the permittee for that additional development...”

The need for a reevaluation of NBHCP’s conservation strategy was recognized by Leighann Moffitt, County Planning Director, in a 26 November 2019 letter to the County Supervisors regarding PLNP2018-00284. Initiation of the Upper Westside Specific Plan Process. The County’s letter cites United States District Judge David F. Levi’s 7 September 2005 warning that “The NBHCP anticipates that development by the City

and Sutter will be limited to 15,517 acres – 8,050 acres within the City [of Sacramento] and 7,467 acres in Sutter County – and provides that approval of any development beyond this limit – whether by the City and Sutter or by other entities – will trigger reevaluation and possible amendment of the plan, and could result in suspension or revocation of the City and Sutter permits.” The letter goes on to conclude that “Staff recognizes that any new development in the Natomas Basin above the 17,500 acres already approved and permitted by the Natomas Basin and Metro Air Park HCPs will require careful coordination and consideration of existing approved developments, their mitigation strategies, and the regional conservation context.” Despite this recognition of the need for NBHCP reevaluation, it appears that no such reevaluation has occurred.

The need to reevaluate the NBHCP in the face of the proposed Upper Westside Specific Plan is obvious considering the frontloading of development and the holding of only 5,185.78 acres of mitigation land in the Natomas Basin as of 2023 (see the Conservancy’s 2023 audit). The Upper Westside Specific Plan occurs within the Natomas Basin and it supports special-status species that are covered by the NBHCP’s ITP. The land of the Upper Westside Specific Plan therefore provides candidate mitigation opportunities for the NBHCP to meet its mitigation obligations.

RESPONSE 19-70

Please see Master Response 1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park HCP.

COMMENT 19-71

The NBHCP’s conservation strategy was not formulated with the proposed Specific Plan in mind. There was no effects analysis inclusive of the Specific Plan when the NBHCP’s conservation strategy was planned out, nor does the DEIR provide the needed effects analysis inclusive of the Specific Plan’s development of 1,532 acres and the NBHCP planned development of 17,500 acres. This is important because the Specific Plan would degrade the existing NBHCP’s conservation strategy. Indeed, ICF (2023:3-21; <https://natomasbasin.org/wp-content/uploads/2014/05/2004-ggs-monitoringreport.pdf>) posits, “The most significant corridors spanning the Basin from north to south are the primary drainages managed by Reclamation District 1000; these include ... West Drainage Canal (including Fisherman’s Lake) ...” It is the West Drainage Canal that abuts the northern and eastern sides of the Specific Plan area. ICF (2024) identifies giant gartersnake habitat within the Specific Plan area. The Specific Plan would eliminate land that remains available for mitigation from within the Natomas Basin, and direct and indirect takings of giant gartersnake would impair the NBHCP’s conservation strategy for giant gartersnake, which according to ICF (2023) is “to create a system of reserves that contain both wetland and upland components that will support viable populations of Swainson’s hawk (*Buteo swainsoni*), giant gartersnake (*Thamnophis gigas*), and other species covered under the Plan.”

The requirements of the 2003 NBHCP Implementation Agreement must be taken seriously. As revealed by Biological Effectiveness Monitoring, there is no room for

additional mistakes in the NBHCP's conservation strategy. The covered species given highest priority in the NBHCP – giant gartersnake and Swainson's hawk – are showing signs of steady decline and of population stress, respectively. According to Biological Effectiveness Monitoring (ICF 2024: Figure 3-14), the probability of capture of giant gartersnakes in HCP reserves steadily declined from 2011 through 2022. Estimating a trend line through the mean probability of capture in Figure 3-14 reveals a 40% decline in only 11 years. Similarly, estimating a trend line to the mean number of monitored sites occupied by giant garter snake from 2011 through 2022 reveals a 43% decline in only 11 years (ICF 2024: Figure 3-15).¹

Because ICF (2024: Figure 3-15) did not fit a trend line to the change in indicators of giant gartersnake abundance, I fit a linear regression model to their data, specifically to the mean number of sites occupied by giant gartersnakes in the Natomas Basin (Figure 4). A model fit to the data is useful for prediction, so long as the prediction is not made too far beyond the scope of inference of the model. In this case, the model predicts that based on its current trend, giant gartersnake will be extirpated from the Natomas Basin by the year 2045, or 8 years short of the end of its permit period. It is possible, the linear pattern of decline will change. The rate of decline might slow should conditions improve for giant gartersnakes in the Natomas Basin. Alternatively, the rate of decline might accelerate if the species' habitat is lost, degraded or further fragmented by development projects such as the proposed project.

Figure 4. Mean number of sites occupied by giant gartersnakes in the Natomas Basin by year. Data source: ICF (2024).

¹ Examining the trend in relative abundance indicators since the start of monitoring in 2002 is not possible based on current reporting, because the metrics of abundance changed from density in 2002-2004 to capture probability and site occupancy in 2011-2022, and because no reports are posted for the years 2005 through 2010. Only use of a common metric would enable examination of the population trend of giant gartersnakes within the Natomas Basin from 2002 through the present.

RESPONSE 19-71

Please see Master Response 1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan. Draft EIR Chapter 7, *Biological Resources*, Table BR-2, page 7-20, notes that “[c]anals in the UWSP area provide marginally suitable habitat that is connected to higher quality habitat. Recent trapping surveys in the UWSP area entailing 40,703 total trap days yielded no giant garter snake captures (HELIX 2024). Canals in the UWSP area likely support the species on a transitory basis based on positive eDNA samples for the species at one location in the study area and three locations in ditches surrounding the study area over two years (HELIX 2024).” Draft EIR Impact BR-3 acknowledges a potentially significant impact on giant garter snake habitat. As noted in the EIR, proposed mitigation for giant garter snake contained in Mitigation Measures BR-2a and BR-3, are consistent with CDFW and USFWS guidelines, including securing authorization from the USFWS and CDFW for the incidental take of giant garter snake, avoidance and minimization of impacts on giant garter snake, and compensatory mitigation within the American Basin Recovery Unit for permanent impacts on giant garter snake habitat. Implementation of these measures would reduce the potential impact to giant garter snake habitat to insignificance.

Please also see Master Response 3: Impacts on Giant Garter Snake Habitat, and Response 15-26. Please also see Response 19-67 above regarding disagreement among experts.

COMMENT 19-72

According to Biological Effectiveness Monitoring (ICF 2024: Figure 4-7), the number of Swainson’s hawk nest sites increased steadily from 2001 through 2022, from 46 nest sites to 68 – a 48% increase. However, over the same period, the number of Swainson’s hawks fledged per successful nest declined steadily from an average of 1.79 in 1999 to 1.14 in 2022, which was a 36% decrease. These data are displayed along with a best-fit linear regression model in Figure 4-9 of ICF (2024). Projecting the linear regression model forward to 2028, the number of fledglings per successful nest is predicted to be half of what it was in 1999. According to the data, the average number of fledglings per successful nest four years from now will be only 50% of what it was 25 years ago, but nevertheless there will be more occupied territories (nest sites).

More revealing than the graphs in ICF (2024), the data collected via Biological Effectiveness Monitoring reveal an important functional relationship between Swainson’s hawk productivity and the number of successful nests within the Natomas Basin (Figure 5). Because the number of fledglings per successful nest varies much less interannually than does the number of successful nests, it is the latter that contributes most to the local Swainson’s hawk population. Even though the number of nest territories (nest sites) has increased through the period of monitoring (ICF 2024: Figure 4-7), the number of fledglings per nest site has not. This is because the annual number of successful nests relates negatively with the annual number of nests without success, especially after excluding data from the years 1999 and 2000, which are

obvious outliers (Figure 6). (Data were likely collected using different methods in the outlier years.) Since the earliest years of the NBHCP, the annual number of nests without success have increased in the Natomas Basin, and have increased in variation between years (Figure 7). This increasing variation in the annual number of nests without success has resulted in increasingly greater variation in the annual number of successful nests and hence the annual variation in productivity.

Figure 5. Annual number of Swainson's hawk young raised to fledging regressed on the annual number of successful nests within the Natomas Basin reveals a near constant 1.43 fledglings per successful nest. Data source: ICF (2024).

Figure 6. Annual number of Swainson's hawk successful nests regressed on the annual number of nests without success within the Natomas Basin, including the years 1999 and 2000 (left graph) and excluding the years 1999 and 2000 (right graph). Data source: ICF (2024).

Figure 7. Annual number of Swainson's hawk nests without success by year. Data source: ICF (2024).

The increased annual number of Swainson's hawk nest sites reflects well on the NBHCP, but the functional relationship between the annual number of successful nests and the annual number of nests without success, and the less-varying number of fledglings per successful nest, indicate that the productive capacity of the NBHCP reserve lands has been reached, and that the number of successful nests can be suppressed by overcrowding of Swainson's hawks of breeding age within the Natomas Basin.

Swainson's hawks maintain breeding territories, the integrity of which is more stable than is the availability of forage. In other words, even with surplus forage available on enhanced habitat, only so many breeding territories can be established within the available space to exploit the enhanced forage. With the number of breeding territories relatively fixed based on the available space, the more the number of nonbreeding adults crowded into that space, the fewer of the nest attempts will succeed because there will be a lesser share of forage to convert into fledglings. The Specific Plan would further crowd the remaining habitat in the Natomas Basin with more Swainson's hawk refugees.

I note, however, that Fleishman et al. (2016), after tracking telemetered Swainson's hawks throughout the Natomas Basin, came to a different conclusion. Fleishman et al. (2016) hypothesized that the availability of suitable nest substrate is the primary limiting factor of the Swainson's hawk population in the Natomas Basin. My argument against their hypothesis is that the number of occupied territories continued to increase since Fleishman et al. (2016) published their hypothesis, and this increase would serve to indicate there was more available nest substrate than Fleishman et al. realized, at least within the Natomas Basin. The trends in Figures 5–7 suggest to me that lands available for foraging is more limiting within the Natomas Basine, and dispersing Swainson's hawks are finding fewer opportunities for breeding outside the Natomas Basin. The Specific Plan would worsen this situation.

To more effectively conserve Swainson's hawks in the Natomas Basin, a change to the conservation strategy of the NBHCP might be warranted. Needed is more habitat within and without the Natomas Basin. Young Swainson's hawks need to be able to find breeding opportunities outside their natal areas. However, Swainson's hawks are rapidly losing breeding habitat in San Joaquin County and Yolo County, much of it to development and much of it to agricultural conversions to nut orchards and vineyards. Furthermore, changes to more intensive agricultural practices and increased efforts to poison ground squirrels are diminishing forage across large portions of the areas used by Swainson's hawks for decades.

RESPONSE 19-72

The commenter opines that the reproductive capacity of Swainson's hawk in Natomas Basin may have been reached and is limited by the availability of forage, rather than the availability of nesting sites/territories, and that build-out of the proposed UWSP will result in nearby breeding Swainson's hawks foraging near breeding pairs in other areas of the Basin. The commenter also states that more habitat is needed within and outside of the Basin, especially San Joaquin County and Yolo County. As described in Response 15-27 and Master Response BR-4: Impacts on Swainson's Hawk Zone, Mitigation Measure BR-7b will be modified accordingly (added text underlined):

- "...Prior to the approval of either grading permits or building permits, whichever is first, project applicants for each construction phase shall compensate for permanent loss of foraging habitat through the preservation of foraging habitat. ~~This compensatory mitigation shall be at a ratio of at least 1:1 (mitigation habitat to permanently lost habitat). Mitigation sites shall be located outside, and within 10 miles of, the Natomas Basin~~ **Mitigation sites shall be located outside, and within 10 miles of, the Natomas Basin. Compensatory mitigation located at mitigation sites within 1 mile of the Sacramento River or Feather River shall be at a ratio of at least 0.75:1 (mitigation habitat to permanently lost habitat). Compensatory mitigation for mitigation sites greater than 1 mile from the Sacramento River and Feather River shall be at a ratio of at least 1:1 (mitigation habitat to permanently lost habitat), or of equal or greater ecological value as established in separate authorizations or permits by the USFWS and/or CDFW.**

By establishing foraging habitat mitigation on sites outside, and within 10 miles of, the Natomas Basin, the mitigation sites would be expected to remain within the foraging habitat range of breeding Swainson's hawk nesting pairs that could be currently foraging within the UWSP project area. Furthermore, the compensatory mitigation ratios in the revised mitigation measure incentivize siting Swainson's hawk foraging habitat mitigation lands within one mile of suitable nesting habitat along the Sacramento and/or Feather rivers.

In addition, the opportunities for compensatory mitigation under Mitigation Measure BR-7b, Compensate for Permanent Impacts on Swainson's Hawk Foraging Habitat, as amended above, include more than 8,000 acres of highest quality foraging habitat (i.e.,

alfalfa, pasture, field crops, wheat, grain and hay, truck crops, young perennial, and annual grassland) outside, and within 10 miles of, the Natomas Basin. This acreage includes lands near the Sacramento River and Feather River.

The comment also addresses the commenters' observations and analysis of the effectiveness of the NBHCP. An HCP is a plan for avoiding legal jeopardy to a species over time as a result of actions of the permittee parties. An HCP can be distinguished from EIR which is an evaluation of the potential significant impacts of a particular proposed project and includes measures that can avoid or reduce to insignificance the potential project-level and cumulative significant impacts of that project. Beyond the specific impacts of a project, a relevant question under CEQA is whether a proposed project would conflict with an adopted HCP. In the Draft EIR that question is addressed in Impact BR-14 as well as in the cumulative impact analysis presented in Chapter 22, *Cumulative Impacts*. In each case, the Draft EIR concludes, based on substantial evidence in the record, that the proposed project would not have a significant adverse impact on the NBHCP or the MAP HCP. Please also see Master Response 1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park HCP.

COMMENT 19-73

In addition to giant gartersnake, multiple species covered by the NBHCP are showing signs of decline. According to ICF (2023), species on the decline from 2005 through 2022 include northern harrier, loggerhead shrike and burrowing owl. The trend of Pacific pond turtle is unknown because counts of turtles combine individuals of Pacific pond turtles and red-eared slider. It is also difficult to determine the trends of whitefaced ibis and tricolored blackbird, partly due to inconsistent trends between metrics and partly due to lack of reported confidence intervals. I did not find any monitoring results for bank swallow, cackling goose, western spadefoot, Valley elderberry longhorn beetle, or multiple other species.

Complicating interpretation of the trends of the other covered species was the change in field methods, which shifted the seasonal weightings of survey results averaged per year. All tracts within NBHCP reserves had been surveyed once per month through 2017, but afterwards the tracts were surveyed twice per month during April through June, once per month during July and August, never more during September through November, and – but only on tracts with rice fields and wetlands – monthly during December through February (whether surveys were completed in March is unreported). Any species more detectable in spring would have been over-represented in the years following 2017 compared to the years 2005–2017. The same was true for any species partial to rice or wetlands in winter. For example, the graphed increases in white-faced ibis and tricolored blackbird were likely due to the change in field methods (see Figures 5-8 and 5-9 in ICF 2023).

Along with the other covered species, wildlife species not covered by the NBHCP were expected to benefit from the conservation of the two umbrella species – giant gartersnake and Swainson's hawk. However, the effectiveness monitoring suggests declines of waterfowl as a group, neotropical migrants as a group, shorebirds as a

group, and yellow-billed magpie. Again, without reported confidence intervals, some of the trends are difficult to ascertain. Overall, however, very little of the monitoring data indicates the NBHCP and MAPHCP are achieving their conservation objectives. The only covered species that has substantially benefitted from the mitigation measures of the NBHCP is Swainson's hawk, and this species has benefitted to the maximum degree that it can unless and until more reserve land is acquired and converted to habitat within the Natomas Basin, or more breeding substrate and foraging habitat becomes available in the Sacramento Valley outside the Natomas Basin.

Considering the foregoing, I concur with CDFW (6 November 2020 letter to Todd Smith, Sacramento County Planning, from Kelley Barker, California Department of Fish and Wildlife), where CDFW's Kelley Barker writes "robust analysis of whether, in what way, and to what extent the Project may affect future implementation and the continued viability of the NBHCP and MAP HCP in the Natomas Basin is essential to the County's informed review of the Project." I entirely agree with Kelley Barker's recommendations that the effects analysis should include the following:

- Persistence of NBHCP and MAP HCP Covered Species in the Natomas Basin
- Impacts to established reserve land managed by the Natomas Basin Conservancy (TNBC)
- Reduction of available reserve land in the Natomas Basin under the NBHCP and MAP HCP (with appropriate buffers and setbacks as detailed in the NBHCP)
- Reduction of ability for TNBC to establish or enhance Covered Species range and habitats in the southern Natomas Basin.
- Continued viability of the land uses in the Natomas Basin as detailed in the NBHCP and MAP HCP
- Financial impacts to TNBC and fee payers under the NBHCP and MAP HCP, including the recent action by TNBC Board of Directors and the Sacramento City Council to address related ongoing financial challenges of continuing to implement the required conservation strategy in the Natomas Basin, and
- Cumulative impact of the Project, in combination with other development in the Natomas Basin approved since 2003 that is outside of the City of Sacramento and Sutter County's permitted area under the NBHCP (e.g., levee improvements by the Sacramento Area Flood Control Agency and the Greenbriar project)

I reiterate that the requirement of the 2003 NBHCP Implementation Agreement that a project such as the Upper Westside Specific Plan triggers a reevaluation of the original NBHCP's Plan and Permits

RESPONSE 19-73

Please see the Master Response 1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 19-74

PRODUCTIVE CAPACITY REDUCED BY HABITAT LOSS

Development of the Specific Plan Area would contribute substantially to habitat loss and to habitat fragmentation, which together pose serious problems to wildlife in the region. Habitat fragmentation and habitat loss have been recognized as the most likely leading causes of a documented 29% decline in overall bird abundance across North America over the last 48 years (Rosenberg et al. 2019). Habitat loss not only results in the immediate numerical decline of wildlife, but it also results in permanent loss of productive capacity. Habitat fragmentation multiplies the negative effects of habitat loss on the productive capacities of biological species by isolating habitat patches from recruitment and by leaving some patches too small to support functionally important demographic units (Smallwood 2001, 2015). None of these impacts, however, are adequately addressed in the DEIR.

In the case of birds, two methods exist for estimating the loss of productive capacity that would be caused by the Specific Plan. One method would involve surveys to count the number of bird nests and chicks produced. The alternative method is to infer productive capacity from estimates of total nest density elsewhere. Two study sites in grassland wetland-woodland complexes had total bird nesting densities of 32.8 and 35.8 nests per acre (Young 1948, Yahner 1982). However, whereas these estimates might apply to portions of the Project site, they were acquired from far away. To acquire total nest densities closer to conditions in California, I surveyed two research sites through the breeding seasons of 2023 and 2024. I surveyed in grassland, woodlands, wetlands, and thickets of blackberry, elderberry, ornamentals and fig at the two sites in east Yolo County and in Rancho Cordova. I applied total nest density estimates from ground cover types in my studies that best matched the mapped ground cover types of the Specific Plan area (Table 3). Based on these acreages, I estimate the Specific Plan area supports 11,748 nest sites (Table 3).

However, the impact does not end with the immediate loss of nest sites as nest substrate is removed and foraging grounds graded in preparation for impervious surfaces. The reproductive capacity of the Upper Westside Specific Plan would be lost with the loss of nest sites. Assuming 1.39 broods per nest site, which is the average among 322 North American bird species I asked my daughter, Noriko Smallwood, to review, I predict the project would cost California 16,330 nest attempts/year.

The average number of fledglings per nest attempt in Young's (1948) study was 2.9. Assuming Young's (1948) study site typifies bird productivity, the Specific Plan would prevent the production of 47,356 fledglings per year. Assuming an average bird generation time of 5 years, the lost capacity of both breeders and annual fledgling production can be estimated from an equation in Smallwood (2022): $\{(nests/year \times chicks/nest \times number\ of\ years) + (2\ adults/nest \times nests/year) \times (number\ of\ years \div years/generation)\} \div (number\ of\ years) = 52,055\ birds\ per\ year\ denied\ to\ California\ from\ the\ build-out\ of\ the\ Upper\ Westside\ Specific\ Plan.$ The impact of these losses of avian productivity would be significant, but they are not considered in the DEIR.

Table 3. Estimated numbers of nests by ground cover vegetation types on the area of the Upper Westside Specific Plan

Cover	Acres	Nesting Density	No. of Nests (rounded)	Source
Annual Grassland	17.31	5.08	88	1
Deciduous Orchard	4.38	14.38	63	2
Vineyard	17.23	7.19	124	3
Annual field crops	681.65	1.77	1,207	4
Grain and hay (alfalfa)	792.79	2.54	2,014	5
Pasture	17.91	3.81	68	6
Ruderal	285.5	5.08	1,450	7

RESPONSE 19-74

As described in the Draft EIR, Chapter 7, *Biological Resources*, environmental setting section for biological resources, protection of movement corridors and habitat linkages are tied to reducing the adverse effects of habitat fragmentation. Analysis of the effects of development of the UWSP area on wildlife movement, in particular that of giant garter snake and migratory birds, is addressed in the Draft EIR under Impact BR-12. In summary, the Draft EIR identifies potential impacts to wildlife movement of both types of wildlife, and concludes that the impacts would be mitigated to a less-than-significant level through implementation of Mitigation Measures BR-2a (Worker Environmental Awareness Program), BR-3 (Compensate for Permanent Impacts to Giant Garter Snake Habitat), and BR-6 (Avoid and Minimize Impacts on Nesting Birds).

The comment addresses potential effects on nesting birds. An analysis of potential impacts to nesting birds is included in the Draft EIR under Impacts BR-5, BR-6, and BR-7,

focuses on bird species identified as candidate, sensitive, or special status in local or regional plans, policies, or regulations, by the CDFW or USWFS. The analyses in the Draft EIR determined that impacts to special status bird species, including burrowing owl and Swainson's hawk, birds protected by the Migratory Bird Treaty Act, and Nesting Raptors would be potentially significant. With implementation of Mitigation Measures BR-5, BR-6, BR-7a, BR-7b, and BR-7c, the Draft EIR concluded that all of these impacts would be reduced to less than significant.

While the comment includes an alternative method of examining the question of effects of the project on habitat fragmentation and associated wildlife movement, the comment does not present evidence that the analysis in the Draft EIR is inaccurate or that the mitigation measures identified would be inadequate. Please also see Response 19-67 above regarding disagreement among experts.

COMMENT 19-75

INTERFERENCE WITH WILDLIFE MOVEMENT IN THE REGION

One of CEQA's principal concerns regarding potential project impacts is whether a proposed project would interfere with wildlife movement in the region. The DEIR devotes very little analysis to the question of whether the Specific Plan would interfere with wildlife movement in the region, limiting discussion to the Pacific Flyway's role as a migration corridor for birds, and to the roles of canals and ditches in channeling movement of several special-status species. Other than mention of the ditches and canals, missing from the analysis is any consideration of wildlife movement within the region of the Specific Plan area. Birds fly through the local aerosphere of the Specific Plan area, and mammals walk across it.

Neither Bargas (2022) nor Helix (2024) implemented any sort of program of observation capable of characterizing movement patterns or determining how and to what degrees wildlife use the Specific Plan area for movement. No methods are described of how Bargas or Helix might have assessed the site in the field for its role in wildlife movement in the region. Other than speculation, there is no analysis. And in fact, I saw plenty of wildlife movement across the project site, mostly of birds headed north or south. I saw hundreds of blackbirds flying across the project site, including red-winged blackbirds, yellow-headed blackbirds and tricolored blackbirds. I saw hundreds of horned larks and American pipits flying across the site, as well as Canada geese, double-crested cormorants and white-faced ibises. The 119 species of wildlife detected by Bargas, Helix and myself would not have been on the Specific Plan area had their members not been able to move to it. The Specific Plan area is obviously important to wildlife movement in the region, and the project would obviously interfere with wildlife movement in the region.

Whether the Specific Plan area includes or is within a wildlife movement corridor is not the only consideration when it comes to the standard CEQA Checklist question of whether the project would interfere with wildlife movement in the region. The primary phrase of the CEQA standard goes to wildlife movement regardless of whether the movement is channeled by a corridor. In fact, a site such as the Specific Plan area is

critically important for wildlife movement because it composes an increasingly diminishing area of open space within a growing expanse of anthropogenic uses, forcing more species of volant wildlife to use the area for stopover and staging during migration, dispersal, and home range patrol (Warnock 2010, Taylor et al. 2011, Runge et al. 2014). The Specific Plan, due to its elimination of 1,532 acres of open space, would cut wildlife off from expansive stopover and staging opportunities in the Specific Plan area, forcing volant wildlife to travel even farther between remaining stopover sites. This impact would be significant, and as the project is currently proposed, it would be effectively unmitigated. In fact, the impact would be worse than usual should Phase 1 of the Specific Plan be sited in the middle of the Specific Plan area, or along the western edge of it. Such siting of Phase 1 would sever existing movement pathways, including of birds using the aerosphere (Photos 24 and 25) and of terrestrial animals moving along the ground (Photo 26). I saw nothing in the DEIR that would prevent this type of siting of Phase 1, resulting in habitat fragmentation.

RESPONSE 19-75

The analysis of potential impacts to well-understood wildlife corridors, such as the Pacific Flyway and waterways, and species movement was addressed in the Draft EIR under Impact BR-12, which analyzes substantial interference with movement of wildlife species utilizing the network of agricultural ditches and with established migratory corridors (e.g., the Pacific Flyway). The analysis explained that

Construction-related direct impacts on migratory birds could result from the removal of vegetation while an active bird nest is present. In addition, earthmoving, operation of heavy equipment, and increased human presence could result in noise, vibration, and visual disturbance. These conditions could indirectly result in nest failure (disturbance, avoidance, or abandonment that leads to unsuccessful reproduction), or could cause flight behavior that would expose a migratory adult to predators. These activities could cause birds that have established a nest before the start of construction to change their behavior or even abandon an active nest, putting their eggs and nestlings at risk for mortality.

This analysis concluded that without mitigation, the impact on wildlife movement could be significant. As required under CEQA, all feasible mitigation measures were identified, including Mitigation Measures BR-2a, BR-3, and BR-5. These measures include implementation of a Worker Environmental Awareness Program training to avoid construction impacts to special status species, avoidance and minimization measures for nesting birds, and compensatory mitigation for long-term impacts to giant garter snake habitat. With the implementation of these measures, the potential impacts would be less than significant. Please also see Response 19-67 above regarding disagreement among experts.

Project phasing is described in the Project Description and a Preliminary Phasing Plan is shown on Plate PD-22. Phase I would primarily be developed in the southern portion of the UWSP and includes the build-out of backbone systems supporting water delivery

for the entire UWSP area. Irrespective of construction phasing, the UWSP includes an agricultural buffer between the Sacramento River, which is a very likely movement corridor for volant and terrestrial wildlife, and the western edge of UWSP.

COMMENT 19-76

HOUSE CAT DEPREDAATION

Considering national trends, it is safe to assume that house cats would be introduced to the Upper Westside Specific Plan Area by residents of the proposed residential units. This is significant because house cats serve as one of the largest sources of avian mortality in North America (Dauphiné and Cooper 2009, Blancher 2013, Loss et al. 2013, Loyd et al. 2017). Loss et al. (2013) estimated 139 million cats in the USA in 2013 (range 114 to 164 million), which killed an estimated 16.95 billion vertebrate wildlife annually (range 7.6 to 26.3 billion). In 2012 there were 0.44 house cats per human, and 122 vertebrate animals were killed per cat, free-ranging members of which killed disproportionately larger numbers of vertebrate wildlife. The DEIR predicts there would be 25,578 new residents in the Specific Plan. The above rates of cat ownership applied to this number of new residents **would predict 11,254 new cats, which would kill 1,373,027 vertebrate wildlife per year**. Many of the wildlife fatalities caused by house cats would be in neighboring open spaces.

House cats also contribute to downstream loading of *Toxoplasma gondii*. According to a UC Davis wildlife health research program, *"Toxoplasma gondii is a parasite that can infect virtually all warm-blooded animals, but the only known definitive hosts are cats – domesticated and feral house cats included. Cats catch the parasite through hunting rodents and birds and they offload it into the environment through their feces... and ...rain that falls on cement creates more runoff than rain that falls on natural earth, which contributes to increased runoff that can carry fecal pathogens to the sea"* (<http://www.evotis.org/toxoplasma-gondii-sea-otters/>).

Impacts to wildlife from the introduction of house cats into the environment would be highly significant, and yet these impacts are not considered in the DEIR. A fair argument can be made for the need to revise the DEIR with more meaningful review of potential impacts to wildlife due to depredation by free-ranging house cats introduced by residents of the projects in the Specific Plan. An obvious mitigation measure would be to constrain house cat ownership such as requiring cats to remain indoors.

RESPONSE 19-76

The comment raises concerns about adverse effects of domestic cat predation on wildlife. The urban development on the UWSP project site would result in a corresponding increase in the presence of domestic animals in an area where few currently exist. Dogs and cats, as well as urban adapted wildlife species (e.g., raccoons) can disturb nesting or roosting sites and disrupt the normal foraging or movement activities of wildlife. Feral cats and house cats can cause substantial damage to the species composition of natural areas, including the populations of special-status species, through predation. A recent article published in the *Frontiers of Veterinary*

Science (Turner, 2022) concluded that “published studies purporting to show that cats are a main culprit for the disappearance of endemic wildlife on the species level, on the continents as opposed to small oceanic islands, should be questioned.” The article indicated that the studies that have pointed to domestic cats were not sufficient to draw conclusions about effects of domestic cat predation on native habitat. Key points included:

- The habitat type and general housing density (rural, suburban, urban) are key considerations not addressed in prior studies. “What one sees in urban or suburban areas is not necessarily representative or problematic.”
- They make the point that cats have replaced other predators in the prey-predator cycle and that much of the prey of domestic cats are species that have been “inadvertently favored by past human settlements and have unnaturally high populations,” like house sparrows, house mice, and rats.
- Rough estimates of total mortality caused by cats are reported independent of even “a rough estimate of the total population size of a prey species (supposedly being threatened by cat predation) or the yearly reproduction and replacement of lost individuals.” They make the point that while free-ranging cats may be killing 10-15% of the population of birds annually, “that is not exceptional for a normal predator-prey relationship and is insufficient to eliminate a prey species.”

Other studies have suggested that the movement range of domestic cats depends on the health of the coyote population in the surrounding area and that, where coyotes are present, cats are still likely to cause impacts on wildlife within 100 to 200 feet of the urban/wildland edge. Cats that range farther than 100 to 200 feet from the urban edge are more likely to be killed by coyotes than those that stay close to residential yards. It is worth noting that the commenter’s own observations of the study area indicated the presence of coyote, bobcat, and fox, all of which are known to predate on domestic cats when given the opportunity. Thus, given the evidence of populations of coyote, fox and bobcat in the project area, it is not unlikely that such predators would predate on domestic cat populations.

Further, in Sacramento County owners of cats over the age of 4 months must spay or neuter their cat. Sacramento County Code section 8.24.030(b) states

No owner shall possess or harbor within the county any dog or cat over the age of four (4) months that has not been sterilized, unless such person holds an unaltered license, unaltered license with reduced fee, or is otherwise exempted as set forth in Section 8.08.030 or 8.24.030(m). Upon written certification of a veterinarian that a dog or cat has been surgically sterilized, the amount of license fee shall be one-half or less than the fee established for intact dogs or cats.

This regulation has a positive effect in reducing the number of feral cats that live in urban areas.

The analysis put forth in the comment is not based in any evidentiary-based analysis that could tie cat predation to effects on the species that are the focus of the analyses in

the EIR. To the extent that domestic cats may predate in the future on common local urban species, it would not constitute a significant impact. To conclude that cats in the future UWSP would predate in a material way on special status species is entirely speculative.

COMMENT 19-77

WINDOW COLLISION MORTALITY

The Upper Westside Specific Plan would add 9,356 residential units to open space that is currently habitat to many birds. These new residences would present glass windows to birds attempting to use an essential portion of their habitat – that portion of the gaseous atmosphere that is referred to as the aerosphere (Davy et al. 2017, Diehl et al. 2017). The aerosphere is where birds and bats and other volant animals with wings migrate, disperse, forage, perform courtship and where some of them mate. Birds are some of the many types of animals that evolved wings as a morphological adaptation to thrive by moving through the medium of the aerosphere. The aerosphere is habitat. Indeed, an entire discipline of ecology has emerged to study this essential aspect of habitat – the discipline of aeroecology (Kunz et al. 2008). Many special-status species of birds have been recorded at or near the aerosphere of the Upper Westside Specific Plan area, and I saw many birds using the aerosphere while I surveyed the site. Bird-window collision mortality is a potentially significant impact that warrants analysis.

Window collisions are often characterized as either the second or third largest source or human-caused bird mortality. The numbers behind these characterizations are often attributed to Klem's (1990) and Dunn's (1993) estimates of about 100 million to 1 billion bird fatalities in the USA, or more recently by Loss et al.'s (2014) estimate of 365-988 million bird fatalities in the USA or Calvert et al.'s (2013) and Machtans et al.'s (2013) estimates of 22.4 million and 25 million bird fatalities in Canada, respectively. The proposed Project would impose windows in the airspace normally used by birds.

Glass-façades of buildings intercept and kill many birds, but these façades are differentially hazardous to birds based on spatial extent, contiguity, orientation, and other factors. At Washington State University, Johnson and Hudson (1976) found 266 bird fatalities of 41 species within 73 months of monitoring of a three-story glass walkway (no fatality adjustments attempted). Prior to marking the windows to warn birds of the collision hazard, the collision rate was 84.7 per year. At that rate, and not attempting to adjust the fatality estimate for the proportion of fatalities not found, 4,574 birds were likely killed over the 54 years since the start of their study, and that's at a relatively small building façade. Accounting for the proportion of fatalities not found, the number of birds killed by this walkway over the last 54 years would have been about 14,270. And this is just for one 3-story, glass-sided walkway between two college campus buildings.

Klem's (1990) estimate was based on speculation that 1 to 10 birds are killed per building per year, and this speculated range was extended to the number of buildings estimated by the US Census Bureau in 1986. Klem's speculation was supported by fatality monitoring at only two houses, one in Illinois and the other in New York. Also, the basis of his fatality rate extension has changed greatly since 1986. Whereas his

estimate served the need to alert the public of the possible magnitude of the bird-window collision issue, it was highly uncertain at the time and undoubtedly outdated more than three decades hence. Indeed, by 2010 Klem (2010) characterized the upper end of his estimated range – 1 billion bird fatalities – as conservative. Furthermore, the estimate lumped species together as if all birds are the same and the loss of all birds to windows has the same level of impact.

By the time Loss et al. (2014) performed their effort to estimate annual USA bird-window fatalities, many more fatality monitoring studies had been reported or were underway. Loss et al. (2014) incorporated many more fatality rates based on scientific monitoring, and they were more careful about which fatality rates to include. However, they included estimates based on fatality monitoring by homeowners, which in one study were found to detect only 38% of the available window fatalities (Bracey et al. 2016). Loss et al. (2014) excluded all fatality records lacking a dead bird in hand, such as injured birds or feather or blood spots on windows. Loss et al.'s (2014) fatality metric was the number of fatalities per building (where in this context a building can include a house, low-rise, or high-rise structure), but they assumed that this metric was based on window collisions. Because most of the bird-window collision studies were limited to migration seasons, Loss et al. (2014) developed an admittedly assumption-laden correction factor for making annual estimates. Also, only 2 of the studies included adjustments for carcass persistence and searcher detection error, and it was unclear how and to what degree fatality rates were adjusted for these factors. Although Loss et al. (2014) attempted to account for some biases as well as for large sources of uncertainty mostly resulting from an opportunistic rather than systematic sampling data source, their estimated annual fatality rate across the USA was highly uncertain and vulnerable to multiple biases, most of which would have resulted in fatality estimates biased low.

In my review of bird-window collision monitoring, I found that the search radius around homes and buildings was very narrow, usually 2 meters. Based on my experience with bird collisions in other contexts, I would expect that a large portion of bird-window collision victims would end up farther than 2 m from the windows, especially when the windows are higher up on tall buildings. In my experience, searcher detection rates tend to be low for small birds deposited on ground with vegetation cover or woodchips or other types of organic matter. Also, vertebrate scavengers entrain on anthropogenic sources of mortality and quickly remove many of the carcasses, thereby preventing the fatality searcher from detecting these fatalities. Adjusting fatality rates for these factors – search radius bias, searcher detection error, and carcass persistence rates – would greatly increase nationwide estimates of bird-window collision fatalities.

Buildings can intercept many nocturnal migrants as well as birds flying in daylight. As mentioned above, Johnson and Hudson (1976) found 266 bird fatalities of 41 species within 73 months of monitoring of a four-story glass walkway at Washington State University (no adjustments attempted for undetected fatalities). Somerlot (2003) found 21 bird fatalities among 13 buildings on a university campus within only 61 days. Monitoring twice per week, Hager et al. (2008) found 215 bird fatalities of 48 species, or 55 birds/building/year, and at another site they found 142 bird fatalities of 37 species for 24 birds/building/year. Gelb and Delacretaz (2009) recorded 5,400 bird fatalities under

buildings in New York City, based on a decade of monitoring only during migration periods, and some of the high-rises were associated with hundreds of fatalities each. Klem et al. (2009) monitored 73 building façades in New York City during 114 days of two migratory periods, tallying 549 collision victims, nearly 5 birds per day. Borden et al. (2010) surveyed a 1.8 km route 3 times per week during 12-month period and found 271 bird fatalities of 50 species. Parkins et al. (2015) found 35 bird fatalities of 16 species within only 45 days of monitoring under 4 building façades. From 24 days of survey over a 48-day span, Porter and Huang (2015) found 47 fatalities under 8 buildings on a university campus. Sabo et al. (2016) found 27 bird fatalities over 61 days of searches under 31 windows. In San Francisco, Kahle et al. (2016) found 355 collision victims within 1,762 days under a 5-story building. Ocampo-Peñuela et al. (2016) searched the perimeters of 6 buildings on a university campus, finding 86 fatalities after 63 days of surveys. One of these buildings produced 61 of the 86 fatalities, and another building with collision-deterrent glass caused only 2 of the fatalities, thereby indicating a wide range in impacts likely influenced by various factors. There is ample evidence available to support my prediction that the proposed Upper Westside Specific Plan would result in many collision fatalities of birds.

Bird-window impact prediction

I have reviewed and processed results of bird collision monitoring at 213 buildings and façades for which bird collisions per m² of glass per year could be calculated and averaged (Johnson and Hudson 1976, O'Connell 2001, Somerlot 2003, Hager et al. 2008, Borden et al. 2010, Hager et al. 2013, Porter and Huang 2015, Parkins et al. 2015, Kahle et al. 2016, Ocampo-Peñuela et al. 2016, Sabo et al. 2016, Barton et al. 2017, Gomez-Moreno et al. 2018, Schneider et al. 2018, Loss et al. 2019, Brown et al. 2020, City of Portland Bureau of Environmental Services and Portland Audubon 2020, Riding et al. 2020). These study results averaged 0.073 bird deaths per m² of glass per year (95% CI: 0.042-0.102). This average and its 95% confidence interval provide a robust basis for predicting fatality rates at a site of a proposed new project.

I found no information on the extent of glass windows on the proposed new residential units. I therefore relied on another source for estimating the extent of glass windows in the Upper Westside Specific Plan. I have maintained a database of the extent of glass windows relative to the extents of floor space among other projects for which I have prepared expert testimony. For 25 recently proposed California residential projects, the ratio of m² of windows to ft² of floor space was 0.017 (95% CI: 0.0088–0.0253). Assuming 2,000 sf per residential unit, the 9,356 residential units anticipated in the Upper Westside Specific Plan would total 18,712,000 sf, which multiplied against the ratio reported above would predict 318,104 m² (95% CI: 164,666–473,414 m²). Applying the mean fatality rate (above) to my estimate of 318,104 m² of glass in the Upper Westside Specific Plan, **I predict annual bird deaths of 23,253 (95% CI: 13,806–32,701)**. I could update this prediction if I was to see more details about the Specific Plan. With or without more details, however, a bird-window collision mortality of this predicted magnitude would be highly significant. My analysis, updated or not, reveals that the impacts of bird-window collision mortality would be highly significant in the Upper Westside Specific Plan. This impact is not considered in the DEIR. The DEI

needs to be revised with a more meaningful review of potential impacts to wildlife due to collisions with windows.

RESPONSE 19-77

As is discussed on Draft EIR page 7-1, the UWSP project area is located within the Pacific Flyway, one of the four major bird migration routes in North America. A large bird migration corridor between Alaska and South America, the Pacific Flyway is approximately 4,000 miles in length and 1,000 miles across that encompasses states of the intermountain west and those that border the Pacific Ocean, in the United States including all of California, Oregon, Washington, Idaho, Utah, Nevada, Alaska, and Hawaii, as well as parts of Montana, Wyoming, Colorado, and New Mexico. Bird migration along the Pacific Flyway occurs in a north-south direction. Primary migration routes in California occur along the coast for ocean-going species, and through the Central Valley and eastern deserts of southern California. The Sacramento metro region is one of many large urban metroplexes that occur in the Pacific Flyway along the west coast of the US. Important habitats and stopovers for migrating birds in the Pacific Flyway include protected coastal waters like San Francisco Bay, as well as interior wetlands and waters like the many refuges that exist in the Central Valley and features such as the Salton Sea in the southern California desert. In the context of extensive habitat areas to the west, north and south, neither the UWSP project area nor the adjacent developed, urbanized portions of the Sacramento region provide important habitat for migrating birds in the Pacific Flyway.

Draft EIR Impact BR-5, on pages 7-52 through 7-54, addressed potential impacts of the proposed project on special-status bird species that have the potential to nest and/or forage in the UWSP area including tricolored blackbird, loggerhead shrike, song sparrow ("Modesto" population), purple martin, yellow warbler, yellow-headed blackbird, American white pelican, northern harrier, and white-tailed kite. The analysis further considered the effects of the proposed project on active nests and nesting birds protected by the Migratory Bird Treaty Act, or MBTA, and California Fish and Game Code, or CFGC, that have potential to occur in the UWSP area, including species like Cooper's hawk, osprey, white-faced ibis, and many other species of songbirds, waterbirds, and waterfowl. Impact BR-5 concluded that with the implementation of Mitigation Measures BR-2a and BR-5 the proposed project would not have a substantial adverse effect, either directly or through habitat modifications, on special status bird species, birds protected by the Migratory Bird Treaty Act, and nesting raptors.

As such, following a thorough description of the biological characteristics of the project site, and a detailed analysis of potential impacts of the proposed project on biological resources, including avian species, the Draft EIR concluded that there would be no significant impacts on bird species as a result of the construction and operation of the proposed project.

In addition, the Draft EIR addresses the effects of project construction activities on wildlife movement, including those of migratory bird species. The analysis concludes that removal of vegetation during earthmoving could result in the removal of vegetation

while an active bird nest is present. In addition, the analysis notes that increased human presence could result in noise, vibration and visual disturbance to such species.

The comment provides information related to effects on birds of urban buildings with windows based on studies that have been undertaken over the last 35 years that document bird mortality associated with collisions with the built environment. The studies cited in the comment, along with many other available studies, document the frequency of bird mortality from window collisions. The data provided by the commenter is general in nature, and is not calibrated to the location and conditions of the project area, the species of birds that are documented to be in the area, or the specific designs of structures that would be developed within the project area.

The most recent study cited in the comment reported on a study in northern California.⁷ This study is unique among the cited studies in that it examined bird strikes in the Pacific Flyway. Among other things, that study validated that migratory species were more likely than local resident species to be involved in fatal bird-window collisions. It also validated that there were more bird-window collisions in large windows than smaller windows, stating that in the study “large paned windows have almost 17 times higher strike rate per unit glass than small paned windows.” Similar results from multiple studies are also cited by the American Bird Conservancy.⁸ Based on this information, the construction of new buildings with reflected glazed surfaces (e.g., windows) could increase the potential for bird-window collisions and related mortality of birds, including potentially special status species and birds protected under the Migratory Bird Treaty Act.

As such, the following text below is added to Impact BR-12 and a new mitigation measure, Mitigation Measure BR-12, would avoid and minimize potential impacts associated with bird-window collisions in the proposed UWSP project.

Draft EIR, Chapter 7, Impact BR-12, page 7-75, the first full paragraph is revised to read:

The UWSP area is within the Pacific Flyway, and as such supports some migratory bird species. Construction-related direct impacts on migratory birds could result from the removal of vegetation while an active bird nest is present. In addition, earthmoving, operation of heavy equipment, and increased human presence could result in noise, vibration, and visual disturbance. These conditions could indirectly result in nest failure (disturbance, avoidance, or abandonment that leads to unsuccessful reproduction), or could cause flight behavior that would expose a migratory adult to predators. These activities could cause birds that have established a nest before the start of construction to

⁷ Kahle LQ, Flannery ME, Dumbacher JP (2016) Bird-Window Collisions at a West-Coast Urban Park Museum: Analyses of Bird Biology and Window Attributes from Golden Gate Park, San Francisco. PLoS ONE 11(1): e0144600. doi:10.1371/journal.pone.0144600

⁸ Sheppard, C and G Phillips (2015). Bird-Friendly Building Design, 2nd Ed. (The Plains, VA: American Bird Conservancy)

change their behavior or even abandon an active nest, putting their eggs and nestlings at risk for mortality. ~~Without mitigation, this impact on migratory birds is potentially significant.~~

The development of new buildings with glazed surfaces and night-lighting could result in operational impacts on movement of migratory birds. Although it is not possible, and would be speculative, to accurately predict the precise number or species of birds affected, recent studies in other locations, including studies within the Pacific Flyway, support the conclusion that there would be an increase in bird-window collisions as a result of development of buildings with large glazed surfaces and/or high visibility night lighting near dark areas in the UWSP project area. It is possible that some of the affected birds could be special status species or birds protected under the Migratory Bird Protection Act.

Despite the current lack of certainty of nest locations or the propensity of special status birds to strike windows, or ability to predict whether the effects on such species would be substantial, for the purposes of this EIR without mitigation this impact would be considered a potentially significant.

Draft EIR, Chapter 7, Impact BR-12, page 7-75, the second full paragraph is revised to read:

Previously identified Mitigation Measures BR-2a and BR-5 would reduce the potential impact on nesting birds by requiring the provision of environmental training for construction personnel; limiting construction to the non-nesting season when feasible or, if avoiding the nesting season is not feasible, conducting pre-construction surveys for nesting birds and establishing no-disturbance buffers around any active nests to ensure they are not disturbed by construction; and repeating the pre-construction surveys when work resumes after being suspended for seven days.

In addition, Mitigation Measure BR-12 would ensure that new structures built in close proximity to agricultural lands that may be attractive to nearby resident or migratory bird populations are designed to avoid the potential for significant bird-window collisions and that highly visible up-lighting is prohibited in these areas. In addition, buildings with large-scale uninterrupted glazed surfaces include treatments that increase their visibility to birds. These measures would minimize the potential for bird-window collisions.

As a result, with the implementation of these mitigation measures, the impact on migratory birds would be **less than significant**.

Draft EIR, Chapter 7, Impact BR-12, page 7-75, the following is added after Mitigation Measure BR-5:

BR-12 Implement Standards for Bird-Safe Buildings

- Except as provided for residential buildings below, all buildings within 300 feet of land designated on the General Plan Land Use Diagram as General Agriculture, Agricultural Cropland, Natural Reserve, Agricultural Urban Reserve, or Recreation, apply bird-safe building treatments to glazed segments of the façade facing the designated land-use up to 60 feet from grade.
 - For glazed segments measuring less than 24 square feet, 90% of the surface shall be treated.
 - For uninterrupted glazed segments 24 square feet or larger, 100% of the surface shall be treated.
- Bird-Safe Glazing Treatment may include fritting, netting, patterned window films (but not decals or tape which are not permanent), frosted glass, exterior screens, physical grids placed on the exterior of glazing or UV patterns visible to birds. To qualify as Bird-Safe Glazing Treatment, vertical elements of window patterns should be at least 1/4 inch wide at a maximum spacing of 4 inches or horizontal elements at least 1/8 inch wide at a maximum spacing of 2 inches.
- Residential buildings that are less than 45 feet in height and have an exposed facade facing the designated land use comprised of less than 50% glass are exempt from facade glazing requirements. Bird-Safe Glazing Treatment, including permanent exterior screens, may be used to reduce the amount of untreated glass to less than 50% for purposes of satisfying this measure.
- Residential buildings that are less than 45 feet in height but have a facade facing the designated land use with surface area composed of more than 50% unscreened glass, shall provide Bird-Safe Glazing Treatments as described below for 95% of all large, unbroken glazed segments that are 24 square feet and larger.
- In buildings within 300 feet of land designated on the General Plan Land Use Diagram as General Agriculture, Agricultural Cropland, Natural Reserve, Agricultural Urban Reserve, or Recreation minimal lighting shall be used. Lighting shall be shielded. No uplighting shall be used.

Several communities around the country have adopted standards based on the best practices of the USFWS Division of Migratory Bird Management⁹. Example cities in northern California include San Francisco, San Jose, Cupertino, Mountain View, Alameda, Oakland, Richmond, and others. Outside of California, such bird-safe standards have been adopted in New York City, Highland Park (Illinois), Madison (Wisconsin), Portland (Oregon), Washington D.C., and others.

The provisions of Mitigation Measure BR-12 are generally consistent with the Standards for Bird-Safe Buildings adopted in the City of San Francisco in 2000, and area consistent with the LEED Bird Collision Deterrence credit system, and the USFWS Division of Migratory Bird Management best practices. Implementation of Mitigation Measure BR-12 would reduce the potential for operational impacts on resident or migratory bird species to less than significant.

The addition of clarifying and amplifying language in the discussion of Impact BR-12 and the addition of Mitigation Measure BR-12 do not require recirculation of any part of the Draft EIR. Pursuant to Public Resources Code section 21092.1 and CEQA Guideline section 15088.5 establish that recirculation is only required where “significant new information” is added to the EIR after circulation of the Draft EIR. Pursuant to Guidelines section 15088.5, the following would constitute significant new information:

1. A new significant environmental impact would result from the project or from a new mitigation measure proposed to be implemented.
2. A substantial increase in the severity of an environmental impact would result unless mitigation measures are adopted that reduce the impact to a level of insignificance.
3. A feasible project alternative or mitigation measure considerably different from others previously analyzed would clearly lessen the environmental impacts of the project, but the project’s proponents decline to adopt it.
4. The draft EIR was so fundamentally and basically inadequate and conclusory in nature that meaningful public review and comment were precluded. (*Mountain Lion Coalition v. Fish and Game Com.* (1989) 214 Cal.App.3d 1043).

The added language enhances the discussion of effects of the proposed UWSP on migratory birds that already exists in the discussion of Impact BR-12. The mitigation measure BR-12 would be adopted if the proposed project is approved. Because none of the conditions outlined in Guideline section 15088.5 would occur, there is no requirement to recirculate the Draft EIR.

⁹ US Fish and Wildlife Services Division of Migratory Bird Management, *Nationwide Avoidance & Minimization Measures for Birds*, July 2024.

COMMENT 19-78

ROAD COLLISION MORTALITY

The DEIR fails to consider impacts on wildlife from road collision mortality. Project-generated traffic would endanger wildlife that must, for various reasons, crossroads used by the project-generated traffic (Photos 27—30), including along roads far from the villages. Vehicle collisions have accounted for the deaths of many thousands of amphibian, reptile, mammal, bird, and arthropod fauna, and the impacts have often been found to be significant at the population level (Forman et al. 2003). Across North America traffic impacts have taken devastating tolls on wildlife (Forman et al. 2003). In Canada, 3,562 birds were estimated killed per 100 km of road per year (Bishop and Brogan 2013), and the US estimate of avian mortality on roads is 2,200 to 8,405 deaths per 100 km per year, or 89 million to 340 million total per year (Loss et al. 2014). Local impacts can be more intense than nationally.

Photo 27. A coyote uses the crosswalk to cross a street and was fortunate that one driver showed the good grace to stop for it, 2 February 2023. Not all drivers stop, nor do all animals use the crosswalk. Too often, animals are injured or killed when they attempt to cross roads. Increased traffic volume increases collision risk to wildlife.

Photo 28. A Gambel's quail dashes across a road on 3 April 2021. Such road crossings are usually successful, but too often prove fatal to the animal. Photo by Noriko Smallwood.

Photo 29. Mourning dove killed by vehicle on a California road. Photo by Noriko Smallwood, 21 June 2020.

Photo 30. Raccoon killed on Road 31 just east of Highway 505 in Solano County. Photo taken on 10 November 2018.

The nearest study of traffic-caused wildlife mortality was performed along a 2.5-mile stretch of Vasco Road in Contra Costa County, California. Fatality searches in this study found 1,275 carcasses of 49 species of mammals, birds, amphibians and reptiles over 15 months of searches (Mendelsohn et al. 2009). This fatality number needs to be adjusted for the proportion of fatalities that were not found due to scavenger removal and searcher error. This adjustment is typically made by placing carcasses for searchers to find (or not find) during their routine periodic fatality searches. This step was not taken at Vasco Road (Mendelsohn et al. 2009), but it was taken as part of another study next to Vasco Road (Brown et al. 2016). Brown et al.'s (2016) adjustment factors for carcass persistence resembled those of Santos et al. (2011). Also applying searcher detection rates from Brown et al. (2016), the adjusted total number of fatalities was estimated at 12,187 animals killed by traffic on the road. This fatality number over 1.25 years and 2.5 miles of road translates to 3,900 wild animals per mile per year. In terms comparable to the national estimates, the estimates from the Mendelsohn et al. (2009) study would translate to 243,740 animals killed per 100 km of road per year, or 29 times that of Loss et al.'s (2014) upper bound estimate and 68 times the Canadian estimate. An analysis is needed of whether increased traffic generated by the project would similarly result in local impacts on wildlife.

For wildlife vulnerable to front-end collisions and crushing under tires, road mortality can be predicted from the study of Mendelsohn et al. (2009) as a basis, although it would be helpful to have the availability of more studies like that of Mendelsohn et al. (2009) at additional locations. My analysis of the Mendelsohn et al. (2009) data resulted in an estimated 3,900 animals killed per mile along a county road in Contra Costa County. Two percent of the estimated number of fatalities were birds, and the balance was composed of 34% mammals (many mice and pocket mice, but also ground squirrels, desert cottontails, striped skunks, American badgers, raccoons, and others), 52.3% amphibians (large numbers of California tiger salamanders and California redlegged frogs, but also Sierran treefrogs, western toads, arboreal salamanders, slender salamanders and others), and 11.7% reptiles (many western fence lizards, but also skinks, alligator lizards, and snakes of various species). VMT is useful for predicting

wildlife mortality because I was able to quantify miles traveled along the studied reach of Vasco Road during the time period of the Mendelsohn et al. (2009), hence enabling a rate of fatalities per VMT that can be projected to other sites, assuming similar collision fatality rates.

Animal-vehicle collision mortality prediction

The DEIR does not directly predict annual VMT, but at p. 23-8 it predicts 7,575 non-resident employees and 25,460 residents, and earlier it predicted daily VMT of 15.31 per employee and 14.34 per resident. Extended over the period of a year, these predictions would predict 175,590,422 annual VMT resulting from the project. During the Mendelsohn et al. (2009) study, 19,500 cars traveled Vasco Road daily, so the vehicle miles that contributed to my estimate of non-volant fatalities was $19,500 \text{ cars and trucks} \times 2.5 \text{ miles} \times 365 \text{ days/year} \times 1.25 \text{ years} = 22,242,187.5 \text{ vehicle miles}$ per 12,187 wildlife fatalities, or 1,825 vehicle miles per fatality. This rate divided into the above-predicted annual VMT would predict 96,214 vertebrate wildlife fatalities per year. Even if the mortality is half this rate, it would be highly significant. Even if the mortality is a tenth of this rate, it would be highly significant.

Based on my analysis, the project-generated traffic from and within the Upper Westside Specific Plan project area would cause substantial, significant impacts to wildlife. Given the predicted level of traffic-caused mortality, and the lack of any proposed mitigation, it is my opinion that the proposed project would result in potentially significant adverse biological impacts. However, these impacts are not considered in the DEIR

RESPONSE 19-78

The comment opines that the Draft EIR is inadequate because it does not address the impacts to wildlife from animal-vehicle collisions. The comment includes an analysis of animal-vehicle collisions based on a study of animal mortality on Vasco Road, which connects the cities of Brentwood and Livermore through rural Contra Costa County. Vasco Road through most of its length, is a high-speed two-lane road carrying high levels of traffic and is surrounded by open wildlands. It has few, if any, street lights and a speed limit of 55 miles per hour over a majority of its length.

Conversely, the new roads that would be developed within the proposed UWSP would be a combination of local thoroughfares, arterials, arterial/collectors, and residential streets. In all cases, these streets would be built to urban standards, as described in the draft UWSP, including sidewalks, street lights, and would be largely in an urbanized setting with typical speed limits of 20-35 miles per hour. To the extent that additional traffic would be travelling on existing arterial streets such as El Centro Road and San Juan Road, these roads exist today, but in some ways similar to Vasco Road, are largely unlit and travel through open lands. With the additional improvements to El Centro Road shown in Figures 4-4 to 4-6 and 4-10 of the draft UWSP, it is likely that animal-vehicle collisions may decrease.

The data and methodology in the comment is not relevant to evaluation of streets planned to be part of an urban community. Further, any attempt to tie animal-vehicle

collisions to the thresholds of significance in the EIR is speculative. It is impossible to predict any increase in mortality rates of special status or other protected species as a result of collisions with vehicles. As such, any assessment of the significance of impacts associated with animal-vehicle collisions would be entirely speculative.

COMMENT 19-79

CUMULATIVE IMPACTS

The DEIR asserts that the Specific Plan, as well as all the other development projects within the DEIR's defined geographic scope of cumulative impacts analysis, must meet the mitigation requirements of the Sacramento County 2030 General Plan, the Endangered Species Act, and other existing regulations, permits, and requirements. The DEIR concludes that the permanent loss of habitats to various special-status species of wildlife would be potentially significant, but implies that compliance with existing regulations would minimize cumulative impacts. Because I had seen this same argument made in CEQA reviews prepared by many of California's Cities and Counties, I decided to test it (Smallwood and Smallwood 2023).

To measure the impacts of habitat loss to wildlife caused by development projects, and to measure cumulative impacts of development, Noriko Smallwood and I revisited 80 sites of proposed projects that we had originally surveyed in support of comments on CEQA review documents (Smallwood and Smallwood 2023). We revisited the sites to repeat the survey methods at the same time of year, the same start time in the day, and the same methods and survey duration in order to measure the effects of mitigated development on wildlife. We structured the experiment in a before-after, control-impact experimental design, as some of the sites had been developed since our initial survey and some had remained undeveloped. All of the developed sites had included mitigation measures to avoid, minimize or compensate for impacts to wildlife. Nevertheless, we found that mitigated development resulted in a 66% loss of species on site, and 48% loss of species in the project area. Counts of vertebrate animals declined 90%. We reported that "Development impacts measured by the mean number of species detected per survey were greatest for amphibians (-100%), followed by mammals (-86%), grassland birds (-75%), raptors (-53%), special-status species (-49%), all birds as a group (-48%), non-native birds (-44%), and synanthropic birds (-28%). Our results indicated that urban development substantially reduced vertebrate species richness and numerical abundance, even after richness and abundance had likely already been depleted by the cumulative effects of loss, fragmentation, and degradation of habitat in the urbanizing environment," and despite all of the mitigation measures and existing policies and regulations.

The DEIR's implication that existing regulations would minimize cumulative impacts is also largely inconsistent with the CEQA. According to the CEQA Guidelines §15064(h)(3), "When relying on a plan, regulation or program, the lead agency should explain how implementing the particular requirements in the plan, regulation or program ensure that the project's incremental contribution to the cumulative effect is not cumulatively

considerable.” The DEIR does not explain how any of its cited laws or regulations would minimize the Specific Plan’s contributions to cumulative impacts.

The DEIR does cite its own mitigation measures as they might relate to cumulative impacts. However, a Worker Environmental Awareness Program, weed surveys, and preconstruction surveys for wildlife are not going to prevent or even minimize the Specific Plan’s contributions to cumulative impacts. The DEIR includes no specific mitigation measure to avoid, minimize or compensate for the Specific Plan’s contributions to cumulative impacts.

RESPONSE 19-79

The comment oversimplifies and confuses the analysis of cumulative impacts related to biological resources, and the commenter’s conclusion that the Draft EIR does not provide mitigation for the proposed project’s contribution to cumulative impacts on biological resources is incorrect.

The cumulative effect on biological resources is discussed Draft EIR pages 2-20 and 2-21, wherein it states that

Cumulative development within the Natomas Basin (see Table CI-1 and Plate CI-1) would result in the permanent loss of annual grasslands, annual croplands, and other upland habitat that serve as habitat for a range of special-status species found in the Natomas Basin and broader Sacramento region, including Swainson’s hawk, giant garter snake, and northwestern pond turtle.

The cited plans and regulations relevant to the proposed UWSP’s potential impacts to sensitive biological resources, including the Sacramento County General Plan, Sacramento County’s Swainson’s Hawk Impact Mitigation, as well as the relevant State and federal regulations, permits and requirements are described in detail in the Regulatory Setting Section of the Draft EIR. Discussion of the potential for these plans, policies, and regulations to mitigate the effects of cumulative development does not mean that the Draft EIR assumed that their presence would avoid any impacts. In fact, the Draft EIR cumulative analysis goes on to state that

the implementation of previously approved and reasonably foreseeable future development projects listed in **Table CI-3** are expected to result in permanent conversion of annual grasslands, agricultural areas, and other biologically significant upland habitat within the Natomas Basin. As shown in Table CI-3, more than half of the 53,537-acre footprint of the Natomas Basin is either already developed or approved for development. Furthermore, reasonably foreseeable future projects listed in Table CI-3 are anticipated to result in approximately 7,600 acres of development in the Natomas Basin, including annual grasslands and agricultural areas that are potentially existing suitable habitat for special-status species such as Swainson’s hawk. The cumulative impact of the development within the Natomas Basin summarized in Table CI-3 on special-status species would be potentially significant.

Pursuant to CEQA Guidelines section 15130(a), “[a]n EIR shall discuss cumulative impacts of a project when the project’s incremental effect is cumulatively considerable.” The term “cumulatively considerable” is defined in CEQA Guidelines section 15065(a)(3), which states: “‘Cumulatively considerable’ means that the incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.” Finally, CEQA Guidelines section 15130(a)(3) states that “An EIR may determine that a project’s contribution to a significant cumulative impact will be rendered less than cumulatively considerable and thus is not significant.”

The Draft EIR describes the nature and significance of the proposed project’s cumulative impact on biological resources, and the analysis on pages 22-21 through 22-24 addresses the extent to which the mitigation measures that are identified in Chapter 7, *Biological Resources*, Mitigation Measures BR1 through BR-9b would reduce the proposed project’s contribution to the cumulative impact. This discussion is consistent with the impact and mitigation discussions provided in Chapter 7 under Impacts BR-1 through BR-14 that describe how each mitigation measure would avoid, minimize and compensate for the project’s impacts on sensitive biological resources. In some cases, implementation of the mitigation would avoid impacts. Mitigation Measures BR-3 and BR-7b would compensate for impacts to giant garter snake and Swainson’s hawk, respectively; these measures would offset losses of habitat for those species resulting from development of the UWSP area. In some cases, compliance with State or federal regulations and permit requirements are an articulated component of a mitigation measure, but the measures do not defer to the State or federal government the responsibility for mitigating the contribution of the proposed UWSP to cumulative impacts; under CEQA that is the responsibility of the County and is contained in the language of the mitigation measures cited above. The conclusion of the analysis is that “[w]ith implementation of these mitigation measures, the proposed UWSP’s contribution to cumulative impacts to special-status species would not be cumulatively considerable, and the cumulative impact associated with the proposed UWSP with respect to special-status species would be **less than significant**.”

COMMENT 19-80

BR-1 Pre-construction Baseline Biological Resources Report *Before the construction phase—specific development applications are deemed complete by the County, a qualified biologist shall prepare a Baseline Biological Resources Report documenting current land cover, land use, plant and wildlife habitat, and the locations of potential jurisdictional aquatic resources, native and non-native trees, and any other biological resources needed to reach a conclusion regarding which of the following mitigation measures are required for the specific project phase.*

The baseline biological resources report is the characterization of the biological portion of the existing environmental setting that is required by the CEQA. This measure is flawed, however, by shifting the timing of the characterization of the existing environmental setting from before the public circulation of the DEIR to after FEIR certification. The CEQA never intended the characterization of the existing

environmental setting to be completed by preconstruction surveys. The methods and results of preconstruction surveys would not undergo public review, as even the formulation of the survey methods are deferred until after FEIR certification. Furthermore, preconstruction surveys do not carry anywhere close to the same probabilities of detections of plant and wildlife species as do surveys designed to characterize the environmental setting for the purpose of informing the public and decision-makers in an EIR. This measure is inconsistent with the CEQA's primary objectives.

RESPONSE 19-80

The project would be built in phases, likely over decades, during which time conditions are reasonably expected to change from the conditions described in the environmental setting whether or not the project is approved and constructed. As such, the Draft EIR reflects the County's understanding that the presence or absence of any particular species at the time of surveys in support of the preparation of the Draft EIR is insufficient to properly mitigate the proposed project's effects on biological resources. Mitigation Measure BR-1 ensures that sensitive biological resource baseline information for each development phase is current and appropriately informs implementation of the subsequent avoidance and minimization measures (BR-2 through BR-14).

The Draft EIR does not improperly defer mitigation. The mitigation measures in Chapter 7, *Biological Resources*, are described in detail, including concrete implementation and verification as part of the building permit review process. Under CEQA, where a significant impact of the proposed project is identified, the EIR is required to "describe feasible measures which could minimize significant adverse impacts." CEQA Guidelines section 15126.4(a)(1)(B) states that "[f]ormulation of mitigation measures shall not be deferred until some future time," but:

The specific details of a mitigation measure, however, may be developed after project approval when it is impractical or infeasible to include those details during the project's environmental review provided that the agency (1) commits itself to the mitigation, (2) adopts specific performance standards the mitigation will achieve, and (3) identifies the type(s) of potential action(s) that can feasibly achieve that performance standard and that will be considered, analyzed, and potentially incorporated in the mitigation measure.

Mitigation Measure BR-1 requires that a pre-construction Baseline Biological Resources Report be prepared for each phase of development documenting current land cover, land use, plant and wildlife habitat, and the locations of potential jurisdictional aquatic resources, native and non-native trees, and any other biological resources relating to any of the subsequent mitigation measures in the Biological Resources chapter. The County would not deem phase-specific development applications complete until it receives the Baseline Biological Resources Report. The specific performance standard the measure achieves is the documentation of any biological resources that would trigger implementation of any mitigation measure described in the Final EIR. The

potential action that would feasibly achieve the performance standard is the pre-construction survey that would inform the Baseline Biological Resources Report.

COMMENT 19-81

BR-2a Worker Environmental Awareness Program *All project personnel involved in ground-disturbing activities will receive a comprehensive Worker Environmental Awareness Program (WEAP) presentation on the first day on a site prior to the initiation of construction provided by a qualified biologist. ...*

I concur with the measure should the project go forward, but I must point out that its conservation benefits are far outweighed by the project's potential impacts to wildlife. BR-2a would do very little to avoid direct impacts, and would do nothing to avoid, minimize or compensate for losses of the productive capacity of the Specific Plan area to wildlife.

RESPONSE 19-81

The comment is an opinion and does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 19-82

BR-2b Weed Control Plan *Prior to the issuance of a grading permit, the applicant for each phase of the UWSP area development shall prepare a weed control plan for review and approval by the Environmental Coordinator. ... shall only apply to UWSP properties that are within 100 feet of NBHCP and SAFCA reserve areas (e.g., the Alleghany Reserve and the Cummings Reserve) and the levee for the West Drainage Canal (Witter Canal) toe drain ...*

I concur with the measure should the project go forward, but I must point out that its conservation benefits are far outweighed by the project's potential impacts to plants and wildlife. BR-2b would do very little to avoid, minimize or compensate for weed invasions of the areas targeted for protection, which are themselves very small relative to the extent of the Specific Plan area.

RESPONSE 19-82

The comment is an opinion and does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 19-83

BR-2c Avoid and Minimize Impacts on Rare Plant Species *Adequate measures shall be taken to avoid inadvertent take of Sanford's arrowhead (*Sagittaria sanfordii*) and*

other special-status plants by ... conduct[ing] a properly timed special-status plant survey ... [that] follow the CDFW Protocols for Surveying and Evaluating Impacts to Special Status Plant Populations and Sensitive Natural Communities (CDFW 2018) ...

Measure BR-2c misrepresents the CDFW (2018) rare plant survey guidelines as a form of preconstruction survey. Preconstruction surveys are take-avoidance surveys, and as such they are a form of mitigation. The CDFW (2018) survey guidelines are intended to guide reconnaissance surveys for rare plants, and as such they are intended to support the characterization of the existing environmental setting as part of CEQA review. The DEIR misappropriates CDFW (2018).

RESPONSE 19-83

The CDFW (2018) rare plant survey guidelines are the standard survey protocol used for pre-construction rare plant surveys to determine whether rare plants are present and where to inform subsequent avoidance and minimization steps as outlined in BR-2c, and is an effective method to detect and therefore minimize impacts to rare plants.

COMMENT 19-84

BR-3 Avoid, Minimize, and Compensate for Impacts on Giant Garter Snake Project *applicants shall obtain authorization for take of giant garter snake from USFWS and CDFW and implement all measures required therein to avoid, minimize, and compensate for impacts to giant garter snake. In addition, ... where construction activities will be conducted within 200 feet of aquatic giant garter snake habitat, project applicants shall:*

- [Implement] BR-2a, "Worker Environmental Awareness Program";*
- Restrict construction activities to the giant garter snake active season;*
- Conduct pre-construction habitat surveys;*
- Dewater aquatic habitat prior to construction;*
- Conduct pre-construction surveys for giant garter snake presence;*
- Minimize vegetation clearing and avoid retained habitat;*
- Monitor ground-disturbing construction activities; and/or*
- Remove temporary fill and construction debris. To compensate for unavoidable permanent loss of aquatic giant garter snake habitat, project applicants shall either:*
 - (i) create, restore, or enhance, and preserve and manage suitable aquatic and associated upland habitat to provide giant garter snake habitat at a 1:1 or greater ratio (mitigation acreage to impact acreage),*
 - (ii) preserve and manage rice fields as habitat for giant garter snake at a 2:1 or greater ratio, and/or*
 - (iii) provide compensatory giant garter snake habitat of equal or greater ecological value as established in separate authorizations or permits by the USFWS and CDFW. Mitigation to compensate for losses of giant garter snake habitat may be fulfilled through a combination of these options, assuming minimum ratios are met. These mitigation measures are described further below.*
- Secure Authorization from the USFWS and CDFW for the Incidental Take of Giant Garter Snake ...*

Unless take authorizations from CDFW or USFWS require compensatory mitigation of equal or greater ecological value to giant garter snake, compensatory mitigation shall be as follows. ♣ Compensatory mitigation shall be provided through creation, preservation, and management of suitable aquatic and associated upland habitat for giant garter

snake; and/or preservation and management of rice fields or other suitable aquatic habitat, as habitat for giant garter snake. ♣ Mitigation sites shall be located outside of the Natomas Basin and in the American Basin Recovery Unit as defined in the Recovery Plan for the Giant Garter Snake (Thamnophis gigas) (USFWS 2017a. This mitigation may be provided through: • Purchase of credits from a CDFW and USFWS-approved conservation bank; • Payment to an existing in-lieu fee program; • Creation, restoration, or enhancement, and preservation and management of suitable aquatic and associated upland habitat for giant garter snake; or • Preservation and management of existing giant garter snake habitat through acquisition of fee-title or a conservation easement and funding for long-term management of giant garter snake habitat at a site. ... • The selection of mitigation site(s) shall be approved by the County in coordination with CDFW and USFWS. • The form and content of the easement, and the amount of the endowment for long-term management, shall be acceptable to the County, CDFW, and USFWS, and the easement shall prohibit any activity that substantially impairs or diminishes the land's capacity as suitable giant garter snake habitat and protect any existing water rights necessary to maintain giant garter snake habitat, in accordance with then-current water allocations and in coordination with USFWS. ... For mitigation that creates, restores, or enhances suitable aquatic and associated upland giant garter snake habitat, a restoration plan shall be developed, approved by the USFWS, CDFW, and the County. ...

The NBHCP effectiveness monitoring (ICF 2024) shows that the measures of BR-3 are not working to conserve giant gartersnakes in the Natomas Basin. The giant gartersnake is disappearing from NBHCP Reserves, and at the present rate the species will be extirpated from the Natomas Basin by 2014. Given the current trend, it is unlikely the USFWS is going to approve the Specific Plan's BR-3. BR-3 therefore presents only a speculative disposition of mitigation measures in lieu of any reevaluation of the NBHCP's conservation strategy directed to giant gartersnake.

RESPONSE 19-84

The Draft EIR is not required to, nor does it, evaluate past effectiveness of the NBHCP. The comment regarding USFWS' future actions is speculative and does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 19-85

BR-4 Avoid and Minimize Impacts on Northwestern Pond Turtle *As recommended in the Natomas Basin Habitat Conservation Plan or NBHCP, take of the northwestern pond turtle as a result of habitat destruction during construction activities, including the removal of irrigation ditches and drains, and during ditch and drain maintenance, will be minimized by the dewatering requirement described under BR-3. In addition: • For sites that contain northwestern pond turtle habitat, no more than 24 hours prior to start of construction activities (site preparation and/or grading), the project area shall be*

surveyed for the presence of northwestern pond turtle. ... • Clearing shall be confined to the minimal area necessary to facilitate construction activities. If a live northwestern pond turtle is found during construction activities, the biological monitor shall immediately notify USFWS and CDFW. ... The biological monitor shall also report any northwestern pond turtle mortality within one working day to USFWS. Any project-related activity that results in northwestern pond turtle mortality shall cease so that this activity can be modified to the extent practicable to avoid future mortality. ...

Should the project go forward, this measure should be implemented. However, it does not avoid the reduction productive capacity of northwestern pond turtles that would result from habitat loss. Northwestern pond turtles require upland areas for nesting.

RESPONSE 19-85

As described in the EIR, if present in the UWSP area, suitable northwestern pond turtle nesting habitat would be limited to the periphery of irrigation ditches, and would be of limited quantity and quality relative to the aquatic and associated upland mitigation habitat required under Mitigation Measure BR-3 for giant garter snake. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 19-86

BR-5 Avoid and Minimize Impacts on Nesting Birds *Mitigation Measure BR-5 applies to projects that include removal of trees or vegetation, tree trimming, or use of heavy equipment (e.g., earthwork, demolition).*

Some bird species, including special-status species of some birds, are ground-nesters. Examples include northern harrier and western snowy plover. BR-5 ignores these species.

RESPONSE 19-86

Mitigation Measure BR-5 does not ignore the habitat of ground-nesting special-status bird species. The measure requires pre-construction surveys for “suitable habitat” of “any active passerine” and “any active raptor nests”. The pre-construction survey would be triggered by ground disturbance and tree work associated with construction of development within the proposed UWSP. Because some of the relevant species are ground-nesters, the required surveys would necessarily include surveying for active nests of ground nesting birds.

COMMENT 19-87

BR-5 Avoid and Minimize Impacts on Nesting Birds *A qualified wildlife biologist shall conduct pre-construction nesting surveys during the avian nesting breeding season (approximately February 1 to August 31) within 7 days prior to construction. ... If bird nests are found, an adequate no-disturbance buffer shall be established around the nest location and construction activities shall be restricted within the buffer until the*

qualified biologist has confirmed that any young birds have fledged and are able to leave the construction area. Required setback distances for the no-disturbance zone shall be established by the qualified biologist and may vary depending on species, line of sight between the nest and the construction activity, and the birds' sensitivity to disturbance. ...

This mitigation language allows a single individual to make a subjective decision, outside the public's view, to determine the buffer area for any given species. This measure lacks objective criteria, and is unenforceable.

RESPONSE 19-87

Bird behaviors vary substantially from species to species and individual to individual. For example, some individual birds are highly sensitive to urban noise, and other individuals can be readily observed foraging or nesting within the immediate vicinity of major freeways and high-volume throughfares. Rather than assuming a singular behavior pattern within a species or category of birds, which could be over- or under-protective, Mitigation Measure BR-5 requires that a qualified wildlife biologist use their observations of a particular bird or nest, and based on their professional experience and scientific understanding of the species' life history requirements and tolerance for human disturbance, recommend site-specific measures to protect nesting birds.

Mitigation Measure BR-5 includes clear performance criteria based on which the County can determine whether or not the measure has been fully and properly implemented. As an example, the measure:

- Specifically identifies the timeframe for implementation of the survey: within 7 days of start of construction during the established breeding season of February 1 through August 31;
- No construction activities within the established no-disturbance zone.

This approach is appropriate under CEQA.

COMMENT 19-88

BR-5 Avoid and Minimize Impacts on Nesting Birds *Any birds that begin nesting within the project area and survey buffers amid construction activities shall be assumed to be habituated to construction-related or similar noise and disturbance levels and no disturbance zones shall not be established around active nests in these cases; however, should birds nesting within the project area and survey buffers amid construction activities begin to show disturbance associated with construction activities, no-disturbance buffers shall be established as determined by the qualified wildlife biologist.*

The more realistic assumption to apply to birds that begin nesting after construction activities begin is that the breeding birds are demonstrating strong nest site fidelity, which is common. This assumption can be supported by ample scientific evidence, whereas the DEIR's assumption is merely convenient to the developer and the lead agency.

RESPONSE 19-88

Mitigation Measure BR-5 is a standard measure that CDFW regularly approves to minimize impacts to the species. Please also see Response 19-87 above. The comment is an opinion and does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP.

COMMENT 19-89

BR-5 Avoid and Minimize Impacts on Nesting Birds *Any work that must occur within established no-disturbance buffers around active nests shall be monitored by a qualified biologist. If adverse effects in response to project work within the buffer are observed and the biologist determines the activities are likely to compromise the nest's success, work within the no-disturbance buffer shall halt until the nest occupants have fledged. If the qualified biologist determines that the activities are unlikely to compromise the nest's success, work can continue.*

This mitigation language allows a single individual to make a subjective decision, outside the public's view, to determine the buffer area for any given species. This measure lacks objective criteria, and is unenforceable.

RESPONSE 19-89

Mitigation Measure BR-5 requires that a qualified wildlife biologist use their professional knowledge, experience, observations, and understanding of the species' life history requirements and tolerance for human disturbance to protect nesting birds, whose behaviors vary substantially from species to species and individual to individual. This is a common approach to protecting nesting birds during construction projects. The measure would be enforceable as articulated under the third bullet of BR-5, which requires that the surveying biologist submits the findings of the pre-construction survey to the County for review and approval prior to initiation of construction within the no-disturbance zone during the nesting season.

If the proposed UWSP is approved, the implementation and enforcement of mitigation measures would be overseen and recorded by the County pursuant to an approved Mitigation Monitoring and Reporting Program that is required by Public Resources Code 21081.6(a)(1) and CEQA Guideline section 15097. Please also see Response 19-87 above.

COMMENT 19-90

BR-6 Avoid and Minimize Impacts on Western Burrowing Owl *... A qualified biologist shall conduct focused burrowing owl surveys in suitable habitat in the area ... in accordance ... Appendix D of CDFW's Staff Report on Burrowing Owl Mitigation (Staff Report), published March 7, 2012. ... If nest sites are found, CDFW shall be contacted regarding suitable mitigation measures, which may include on-site avoidance ... or implementation of a relocation effort ... Take avoidance surveys may also be conducted. ... Where on-site avoidance is not possible, disturbance and/or destruction*

of occupied burrows shall be offset through development of suitable habitat on upland reserves. Such habitat shall include creation of new burrows with adequate foraging area (a minimum of 6.5 acres) or 300 feet radii around the newly created burrows. Additional habitat design and mitigation measures are described in the Staff Report.

The DEIR inaccurately characterizes breeding season detection surveys as a mitigation measure. CDFW (2012) clearly intends for these surveys to be completed in support of the preparation of the environmental review document, and not as a mitigation measure.

I must also point out that CDFW (2012) warns that burrowing owl relocations can be interpreted as a form of take. Furthermore, the DEIR identifies no candidate locations to where burrowing owls might be relocated.

Finally, following a unanimous vote of the California Fish and Game Commission, the burrowing owl is now a candidate species for listing under the California Endangered Species Act. Burrowing owls have sharply declined in the Sacramento region, and are near extirpation (Miller 2024). It is imperative that the surveys be implemented as CDFW (2012) recommends, which is prior to the circulation of the DEIR.

RESPONSE 19-90

Appendix D of CDFW's Staff Report on Burrowing Owl Mitigation (Staff Report), published March 7, 2012, is the standard protocol for conducting burrowing owl preconstruction surveys that are required under Mitigation Measure BR-6. Under CEQA, there is no requirement that protocol-level surveys are required to characterize the environmental setting for biological resources. CEQA Guidelines section 15125(a) states that "[a]n EIR must include a description of the physical environmental conditions in the vicinity of the project." It goes on to qualify the level of detail required by stating that "[t]he description of the environmental setting shall be no longer than is necessary to provide an understanding of the significant effects of the proposed project and its alternatives." The level of detail required is addressed in CEQA Guidelines section 15151, which states that "[a]n evaluation of the environmental effects of a proposed project need not be exhaustive, but the sufficiency of an EIR is to be reviewed in the light of what is reasonably feasible," and that "[t]he courts have looked not for perfection but for adequacy, completeness, and a good faith effort at full disclosure." The surveys and other research upon which the environmental setting for biological resources is established and documented are sufficient and meet the requirements of CEQA.

The second part of this comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

As described under Response 3-5, the burrowing owl's listing status has been amended in Table BR-2: Special-Status and NBHCP and MAP HCP Covered Species Evaluated

for Potential Occurrence in the UWSP Area, and Mitigation Measure BR-6 has been amended to include the potential need for an incidental take permit for burrowing owl.

COMMENT 19-91

BR-7a Avoid and Minimize Impacts on Nesting Swainson's Hawk *Project applicants for each construction phase shall avoid, minimize, and compensate for impacts on Swainson's hawk ... If construction activities will begin during the Swainson's hawk nesting season ..., a qualified biologist shall conduct surveys in accordance with ... Swainson's Hawk Technical Advisory Committee 2000 ... If an active Swainson's hawk nest is found on or within 0.5 mile of the project footprint, a survey report shall be submitted to the County and CDFW, and an avoidance and minimization plan shall be developed and implemented ...*

Should the Specific Plan go forward, I concur with BR-7a. However, BR-7a would not prevent the permanent loss of productive capacity caused by Swainson's hawk habitat destruction. Nor would BR-7a shift the need to reevaluate the NBHCP conservation strategy. With the number of unsuccessful nests increasing in the Natomas Basin (Figure 7), the Upper Westside Specific Plan must trigger the reevaluation of the NBHCP conservation strategy

RESPONSE 19-91

The comment expresses an opinion of concurrence with Mitigation Measure BR-71. Please see the Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, and Master Response BR-4: Impacts on Swainson's Hawk Zone.

COMMENT 19-92

BR-7b Compensate for Permanent Impacts on Swainson's Hawk Foraging Habitat *Compensation for the permanent loss of foraging habitat shall be determined for each development phase. ... project applicants ... shall compensate for permanent loss of foraging habitat through the preservation of foraging habitat ... at a ratio of at least 1:1 ... Mitigation sites shall be located outside, and within 10 miles of, the Natomas Basin ... through purchase of credits from a CDFW-approved conservation bank, or through protection of habitat, including acquisition of a conservation easement and funding long-term administration, monitoring, and enforcement of the easement.*

A 1:1 mitigation ratio assures a 50% net loss of Swainson's hawk habitat and of Swainson's hawks. Additionally, BR-7b is flawed for not identifying where Swainson's hawk habitat can be found and protected within 10 miles of the Natomas Basin. Failing to show where Swainson's hawk habitat can be protected within 10 miles of the Natomas Basin calls into question whether 1,538 acres of Swainson's hawk habitat can be found and protected.

RESPONSE 19-92

Please see the Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, and Master Response BR-4: Impacts on Swainson's Hawk Zone.

COMMENT 19-93

BR-8 Avoid and Minimize Impacts on Pallid Bat *A qualified biologist who is experienced with bat surveying techniques (including auditory sampling methods), behavior, roosting habitat, and identification of local bat species shall be consulted prior to building or bridge demolition, building relocation activities, or tree work to conduct a pre-construction habitat assessment of the project area (focusing on buildings to be demolished or relocated) to characterize potential bat habitat and identify potentially active roost sites. ... The following measures shall be implemented should potential roosting habitat or potentially active bat roosts be identified ...: ... initial bridge or building demolition, relocation, and any tree work (trimming or removal) shall occur when bats are active ... to the extent feasible. ... If seasonal avoidance of potential roosting habitat is infeasible, the qualified biologist shall conduct pre-construction surveys of potential bat roost sites identified during the initial habitat assessment no more than 14 days prior to bridge or building demolition or relocation, or any tree trimming or removal. ...*

There was no reason not to survey for bat activity and bat roost sites prior to the public circulation of the DEIR. Instead, the DEIR defers the surveys until after EIR certification, which is after the time when the public and decision-makers needed an accurate characterization of the wildlife community, disclosure of potential project impacts to bats, and the survey-informed formulation of mitigation measures.

Moreover, the measure fails to avoid or compensate for reduced productive capacity of bats that would result from habitat destruction

RESPONSE 19-93

A draft EIR should usually include a description of the physical environmental conditions at the time the Notice of Preparation was filed. The Environmental setting in the UWSP meets the requirements of CEQA and was based on the best available data at the time the Draft EIR was written. Please also see Response 19-90 above.

COMMENT 19-94

BR-9a Avoid and Minimize Impacts on Valley Elderberry Longhorn Beetle *A pre-construction survey will be conducted by a qualified biologist prior to construction-related ground disturbance. If such a survey determines that valley elderberry longhorn beetle habitat is present, ... the County shall require ... to avoid and minimize take of individuals: ... a 100-foot wide avoidance buffer ... Compensatory mitigation for adverse effects may include the transplanting of elderberry shrubs during the dormant season ... to an area protected in perpetuity as well as required additional elderberry and*

associated native plantings as approved by the USFWS. ... If elderberry plants cannot be avoided, or if project activities will result in the death of stems or the entire shrub, they shall be transplanted during the dormant season ... to an area protected in perpetuity and approved by the USFWS. ... Replacement seedling plants will be provided at a ratio of 2 to 1 to 5 to 1 depending on the extent of valley elderberry longhorn beetle utilization of the plants moved or lost. An 1,800-square-foot area will be provided for each transplanted elderberry shrub or every five elderberry seedling plants.

In my experience, translocations of VELB-inhabited elderberry shrubs tend to fail to provide habitat to VELB (Morrison et al. 2002). The measure translocations and plants new elderberry shrubs, but not necessarily where they can support VELB. The measure also includes no monitoring of the outcome directly related to VELB, and there are no consequences for failures of translocated or planted elderberry shrubs to support VELB.

Wildlife Movement: The following measures are listed as supposed mitigation of potential project impacts to wildlife movement in the region:

BR-2a Worker Environmental Awareness Program – See Impact BR-2: Special Status Plant Species.

BR-3 Compensate for Permanent Impacts to Giant Garter Snake Habitat – See Impact BR-3: Giant Garter Snake.

BR-5 Avoid and Minimize Impacts on Nesting Birds – See Impact BR-5: Special Status Bird Species (Other Than Burrowing Owl and Swainson’s Hawk), Birds Protected by the Migratory Bird Treaty Act, and Nesting Raptors.

None of these measures would avoid, minimize or compensate for project impacts to wildlife movement in the region. None of these measures nor any other measures can mitigate such impacts without there first being some understanding of how wildlife move within and beyond the Specific Plan area.

RESPONSE 19-94

In response to the comment regarding translocations/plantings of elderberry shrubs, BR-9b is amended as follows, consistent with the Bay Delta Conservation Plan Conservation Guidelines for the Valley Elderberry Longhorn Beetle (1999) and the USFWS Framework for Assessing Impacts to the Valley Elderberry Longhorn Beetle (2017b).

BR-9b Transplant Elderberry Shrubs

- If elderberry plants cannot be avoided, or if project activities will result in the death of stems or the entire shrub, they shall be transplanted during the dormant season (November 1 to February 15) to an area protected in perpetuity and approved by the USFWS.
- **Exit-hole surveys shall be completed immediately before transplanting. The number of exit holes found, GPS location of**

the plant to be relocated, and the GPS location of where the plant is transplanted shall be reported to the Service and to the California Natural Diversity Database (CNDDDB).

- **A qualified biologist shall be on-site for the duration of transplanting activities to assure compliance with avoidance and minimization measures and other conservation measures.**
- The elderberry shrub ~~will~~**shall** be cut back 3 to 6 feet from the ground or to 50 percent of its height (whichever is taller) by removing branches and stems above this height. The trunk and all stems measuring 1 inch or greater in diameter at ground level will be replanted. Any leaves remaining on the plant will be removed.
- A hole ~~will~~**shall** be excavated of adequate size to receive the transplant.
- The elderberry shrub ~~will~~**shall** be excavated using a Vermeer® spade, backhoe, front-end loader, or other suitable equipment, taking as much of the root ball as possible, and will be replanted immediately. The plant will only be moved by the root ball. The root ball will be secured with wire and wrapped with damp burlap. The burlap will be dampened as necessary to keep the root ball wet. Care will be taken to ensure that the soil is not dislodged from around the roots of the transplant. Soil at the transplant site will be moistened prior to transplant if the soil at the site does not contain adequate moisture.
- **The planting area shall be at least 1,800 square feet for each elderberry transplant. The root ball should be planted so that its top is level with the existing ground. Compact the soil sufficiently so that settlement does not occur. As many as five (5) additional elderberry plantings (cuttings or seedlings) and up to five (5) associated native species plantings (see below) may also be planted within the 1,800 square foot area with the transplant. The transplant and each new planting shall have its own watering basin measuring at least three (3) feet in diameter. Watering basins shall have a continuous berm measuring approximately eight (8) inches wide at the base and six (6) inches high.**
- **The soil shall be saturated with water. Fertilizers or other supplements shall not be used, nor shall the tips of stems be painted with pruning substances since the effects of these compounds on the beetle are unknown.**
- **Transplanted shrubs shall be monitored to ascertain if additional watering is necessary. If the soil is sandy and well-drained, plants may need to be watered weekly or twice monthly. If the soil is clayey and poorly-drained, it may not be necessary to water after the initial saturation. However, most transplants require watering through the first summer. A drip watering system and timer is**

ideal. However, in situations where this is not possible, a water truck or other apparatus may be used.

- **Trimming shall occur between November and February and shall minimize the removal of branches or stems that exceed 1 inch in diameter.**
- Replacement seedling plants shall be provided at a ratio of 2 to 1 to 5 to 1 depending on the extent of valley elderberry longhorn beetle utilization of the plants moved or lost. An 1,800-square-foot area shall be provided for each transplanted elderberry shrub or every five elderberry seedling plants.

In response to the comment regarding wildlife movement corridors, Mitigation Measure BR-12 has been amended to include avoidance and minimization of impacts on birds related to building collisions, as described in Response 19-77.

COMMENT 19-95

BR-14 Conflict with Natomas Basin HCP and Metro Air Park HCP Mitigation Measures BR-1 and BR-10a through BR-10c ... would contribute to protection of species covered under the NBHCP and MAP HCP.

As I commented on most of these mitigation measures above, BR-1 through BR-10 cannot eliminate the interference of the Specific Plan with the NBHCP. The geographic scope of the NBHCP's conservation strategy is the entire Natomas Basin. As County Staff (Todd Smith) wrote to Scott Johnson, Senior Planner, City of Sacramento on 4 April 2022, "In the Natomas Basin, any future development not covered by an existing Habitat Conservation Plan (HCP) must obtain take authorization under the Endangered Species Act (ESA). The NBHCP along with the MAP HCP require that a total of 8,750 acres of mitigation be located within Natomas Basin and the mitigation must adhere to specific requirements of the HCP. The HCPs provide a conservation strategy for the protection of 22 covered species, and their implementation has been underway for over 20 years." (Airport South Industrial Project Notice of Preparation of Environmental Impact Report (Project P21-017).) The County must know that BR-14 is inadequate.

RESPONSE 19-95

Please see the Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 19-96

RECOMMENDED MEASURES

Construction Phasing: Should the Specific Plan go forward, construction phasing should begin with land nearest existing residential or commercial uses, and it should proceed sequentially from there. The way I read the DEIR, the developer can decide at

any time prior to initial construction to construct Phase 1 anywhere within the Specific Plan area. Siting Phase 1 in the middle of the Specific Plan area, or farthest to the west toward the River would disrupt wildlife movement across the Specific Plan area, and if another economic crisis was to arrive, Phase 1 could be stranded for many years or even permanently. Siting Phase 1 far from existing development would also increase wildlife-automobile collision mortality as residents drive rural roads between their homes and the City, intersecting wildlife attempting to travel across roads on the only open spaces that remain. Already, there exists considerable commuter traffic on San Juan Road, as commuters seek shortcuts around the crowded arterial roads and highways. And already there are animals dead on the road – I found a road-killed desert cottontail and raccoon on the Specific Plan area.

RESPONSE 19-96

Please see Response 19-75 above. The comment is a recommendation that does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 19-97

Preconstruction Surveys: Following the completion of protocol-level detection surveys to inform a revised DEIR, take-avoidance surveys should be performed for special-status species and breeding birds prior to construction. For the most part, these surveys are already required by the DEIR, but they need to follow properly implemented detection surveys for the purpose of informing the DEIR. Whereas Bargas (2022) performed detection surveys for giant gartersnake and Swainson's hawk, its surveys are up to five years old, and therefore are outdated and should be repeated. Lastly, a report of preconstruction surveys and their outcomes should be prepared and made available to the public

RESPONSE 19-97

Draft EIR, Impact BR-1 and Mitigation Measure BR-1, page 7-40, require pre-construction surveys prior to construction-phase development applications are complete. Regarding the suggestion that a revised Draft EIR be recirculated, please see Response 19-1 above which explains why there is no significant new information that has been added to the Draft EIR and thus there is no requirement for recirculation of a revised Draft EIR.

The comment is a recommendation that does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 19-98

Habitat Loss: If the Specific Plan goes forward, compensatory mitigation is warranted for the acres of habitat that would be lost. At minimum, an equal area of open space should be protected in perpetuity close to any new developments.

Substantial upland buffers are needed to protect wetland areas. I recommended at least 600 feet of clearance between the wetland features and the nearest impervious surface. Buffered areas should be restored to natural vegetation cover appropriate to the area.

RESPONSE 19-98

Please see the discussion of Conservation Strategy for Upland Habitat in Draft EIR Impact BR-14 and Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan for discussion of compensatory mitigation and requirements for 1:1 mitigation ratios.

Regarding mitigation for wetland habitats, please see Mitigation Measure BR-11, Draft EIR pages 7-71 to 7-74, as well as Mitigation Measure BR-3, which provides for inclusion of upland habitat for giant garter snake in creation, restoration, enhancement, or preservation and management-related mitigation or compensatory mitigation.

The comment is a recommendation that does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 19-99

Pest Control: The Specific Plan should commit to no use of rodenticides and avicides. It should commit to no placement of poison bait stations outside commercial buildings and residential units.

RESPONSE 19-99

This comment includes a recommendation of prohibition of use of rodenticides and avicides in the proposed project, but it does not tie the recommendation to a specific impact or mitigation measure. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 19-100

House Cats: If the Specific Plan goes forward, homeowners should not be allowed to let their cats range free. A fund should be established for long-term management of house cats in the Specific Plan. Management could include public education about the environmental effects of outdoor and free-ranging cats. It could also include a program

to spade and neuter cats, especially free-ranging cats. It could also involve some removals of feral cats.

RESPONSE 19-100

Please see Response 19-76 above. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 19-101

Minimize Bird-Window Collision Mortality: If the Project goes forward, it should adhere to available Bird-Safe Guidelines, such as those prepared by American Bird Conservancy and New York and San Francisco. The American Bird Conservancy (ABC) produced an excellent set of guidelines recommending actions to: (1) Minimize use of glass; (2) Placing glass behind some type of screening (grilles, shutters, exterior shades); (3) Using glass with inherent properties to reduce collisions, such as patterns, window films, decals or tape; and (4) Turning off lights during migration seasons (Sheppard and Phillips 2015). The City of San Francisco (San Francisco Planning Department 2011) also has a set of building design guidelines, based on the excellent guidelines produced by the New York City Audubon Society (Orff et al. 2007). The ABC document and both the New York and San Francisco documents provide excellent alerting of potential bird-collision hazards as well as many visual examples.

New research results inform of the efficacy of marking windows. Whereas Klem (1990) found no deterrent effect from decals on windows, Johnson and Hudson (1976) reported a fatality reduction of about 69% after placing decals on windows. In an experiment of opportunity, Ocampo-Peñuela et al. (2016) found only 2 of 86 fatalities at one of 6 buildings – the only building with windows treated with a bird deterrent film. At the building with fritted glass, bird collisions were 82% lower than at other buildings with untreated windows. Kahle et al. (2016) added external window shades to some windowed façades to reduce fatalities 82% and 95%. Brown et al. (2020) reported an 84% lower collision probability among fritted glass windows and windows treated with ORNILUX R UV. City of Portland Bureau of Environmental Services and Portland Audubon (2020) reduced bird collision fatalities 94% by affixing marked Solyx window film to existing glass panels of Portland's Columbia Building. Many external and internal glass markers have been tested experimentally, some showing no effect and some showing strong deterrent effects (Klem 1989, 1990, 2009, 2011; Klem and Saenger 2013; Rössler et al. 2015). For example, Feather Friendly® circular adhesive markers applied in a grid pattern across all windows reduced bird-window collision mortality by 95% in one study (Riggs et al. 2023) and by 95% in another (de Groot et al. 2021). Another study tested the efficacy of two filmshades to be applied exteriorly to windows prior to installations: BirdShades increased bird-window avoidance by 47% and Haverkamp increased avoidance by 39% (Swaddle et al. 2023).

Monitoring and the use of compensatory mitigation should be incorporated at any new building project because the measures recommended in the available guidelines remain

of uncertain efficacy, and even if these measures are effective, they will not reduce collision mortality to zero. The only way to assess mitigation efficacy and to quantify post-construction fatalities is to monitor newly constructed buildings or homes for fatalities.

RESPONSE 19-101

Please see Response 19-77 above.

COMMENT 19-102

Road Mortality: Compensatory mitigation is needed for the increased wildlife mortality that would be caused by regional road traffic generated by the Specific Plan. I suggest that this mitigation be directed toward funding research to identify fatality patterns and effective impact reduction measures such as reduced speed limits and wildlife under-crossings or overcrossings of particularly dangerous road segments. Compensatory mitigation can also be provided in the form of donations to wildlife rehabilitation facilities (see below).

RESPONSE 19-102

Please see Response 19-78 above.

COMMENT 19-103

Fund Wildlife Rehabilitation Facilities: Compensatory mitigation ought also to include funding contributions to wildlife rehabilitation facilities to cover the costs of injured animals that will be delivered to these facilities for care. Many animals would likely be injured by collisions with automobiles and windows and by depredation attempts by house cats and dogs.

RESPONSE 19-103

The comment is a recommendation that does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 19-104

Landscaping: If the Project goes forward, California native plant landscaping (i.e., grassland and locally appropriate scrub plants) should be considered to be used as opposed to landscaping with lawn and exotic shrubs and trees. Native plants offer more structure, cover, food resources, and nesting substrate for wildlife than landscaping with lawn and ornamental trees. Native plant landscaping has been shown to increase the abundance of arthropods which act as importance sources of food for wildlife and are crucial for pollination and plant reproduction (Narango et al. 2017, Adams et al. 2020, Smallwood and Wood 2022.). Further, many endangered and threatened insects require native host plants for reproduction and migration, e.g., monarch butterfly. Around the world, landscaping with native plants over exotic plants increases the abundance and

diversity of birds, and is particularly valuable to native birds (Lerman and Warren 2011, Burghardt et al. 2008, Berthon et al. 2021, Smallwood and Wood 2022). Landscaping with native plants is a way to maintain or to bring back some of the natural habitat and lessen the footprint of urbanization by acting as interconnected patches of habitat for wildlife (Goddard et al. 2009, Tallamy 2020). Lastly, not only does native plant landscaping benefit wildlife, it requires less water and maintenance than traditional landscaping with lawn and hedges.

RESPONSE 19-104

The comment is a recommendation that does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 19-105

The DEIR Identifies Significant Safety Issues Related To Excessive Freeway Off and On Ramp Queues At Several Interchanges In the Project Vicinity. Because Of Serious Nature Of the Issues Involved The Project Should Not Be Approved For Construction Until There Is Clear Agreement Among The Agencies Having Jurisdiction As To What The Actual Mitigation Plans Are, How Full Funding Will Be Accomplished And When Construction Will Take Place.

The DEIR discloses that the Project would have direct significant impacts on excessive queuing and related safety on the I-80 eastbound and westbound off ramps to West El Camino Avenue. It would have direct impact as well as, in the AM peak the southbound I-5 Off ramp to J Street. In addition, it discloses that the Project would have cumulatively significant impacts related to unsafe off ramp queue buildups at the interchanges of I-5 with Del Paso Road and with Garden Highway (ramps in both northbound and southbound directions at both interchanges) and at I-5 with Arena Boulevard (northbound off ramp only).

At the I-80 / West El Camino interchange, the Project proposes to reconstruct the interchange, widening West El Camino from 2 to 4 lanes extending the queue storage capacity to 1500 feet on each of the impacted ramps. This it finds mitigate the Existing + Project condition and, with minor signal timing modifications, would mitigate the Cumulative + Project condition. However, as a bicycle/pedestrian network connectivity and safety measure, the interchange reconstruction mitigation proposal includes construction of a two-way bike/pedestrian path paralleling the westbound side of El Camino Avenue and extending from El Centro Road easterly through the interchange to Orchard Lane in the City of Sacramento and suggests abandonment of the eastbound on-street bike lane on the other side. These proposed changes are features the safety aspects of which both Caltrans and the City may view with askance.

RESPONSE 19-105

It is unrealistic to expect all applicable agencies to agree in advance of the project's approval to the precise mitigation, cost, and how full funding will be achieved. Caltrans typically does not become involved in these types of discussions until a proposed improvement is formally initiated through the Caltrans project development process.

COMMENT 19-106

What, if anything, the Project would do to mitigate its direct significant impact on the I-5 southbound off ramp queue at J Street is unexplained, a key flaw in the document.

RESPONSE 19-106

The project does not cause a significant impact at this off-ramp. Therefore, mitigation is not required. Refer to Response 4-5 for more information.

COMMENT 19-107

At the I-5 interchanges with Arena Boulevard, Del Paso Road and Garden Highway, the DEIR concludes that the excessive off ramp queuing is caused by backups from adjacent cross-street intersections that impair movements from the exit ramps. The DEIR proposes at DEIR page 22-68 to pay fair share funds toward improvements to the intersections of Arena with El Centro and Arena with East Commerce Way which, according to the analysis, would allow the off ramps to operate without hazardous queue spill-backs onto the I-5 mainline.

The text on DEIR page 22-68 continues as follows:

“With respect to the off-ramp queues at the two remaining study interchanges (I-5/Arena Boulevard¹ and I-5/Garden Highway) a variety of potential surface street improvements were tested along the roadways leading to this [sic] facility. This involved collaboration with staff from the City of Sacramento regarding the viability of certain improvements. Improvements such as lane restriping, adding lanes or modifying signal phasing were either found to not to be effective or could also cause the need for additional right-of-way. At both interchanges the following conclusions were reached. First, there are no known improvements planned at either interchange. Second, the feasibility of any surface street improvements that could reduce off-ramp queuing is not known.”

What this says is that the preparers were not considering all feasible improvements as CEQA requires. Such feasible improvements could involve widening or lengthening the off ramps to provide sufficient queue storage without hazardous back-ups onto the freeway main lines. The preparers are evidently only considering cheap improvements that don't require significant construction or right-of-way acquisition (which may not be necessary to lengthen or multi-lane the ramps).

¹ We think the authors meant to say I-5/Del Paso Road here.

RESPONSE 19-107

Table 15 of the CEQA TIA shows that under cumulative plus project conditions, a maximum vehicle queue of 2,525 feet on the southbound off-ramp and a maximum vehicle queue of over one mile on the northbound off-ramp is expected at the I-5/Arena Boulevard interchange. The interchange and its nearby surface street intersections were modeled using the SimTraffic microsimulation model, which takes into consideration how downstream queue spillback can adversely affect upstream operations. Table 16 of the LTA indicates that the Arena Boulevard surface street intersections on either side of the interchange (i.e., at El Centro Road, Stemmler Drive, Duckhorn Drive, and East Commerce Way) each operate at LOS F under cumulative plus project conditions. Vehicle queues spill back from these intersections into the interchange, causing queue spillback on the off-ramps. The northbound off-ramp features dual left-turn and dual right-turn lanes each with 850 feet of storage. A two-lane off-ramp is also provided. The southbound off-ramp features a dual left-turn and a single right-turn lane, and also a two-lane off-ramp. If an alternative mitigation strategy consisting of widening and lengthening the off-ramps were to have been pursued, the resulting weave sections on northbound I-5 between its interchange with I-80 and Arena Boulevard and on southbound I-5 between its interchange at Del Paso Road and Arena Boulevard would both need to be reduced a considerable distance given the degree of queue spillback expected. This would likely be infeasible due to adverse traffic operations and safety implications on this section of I-5 and could also potentially be inconsistent with design standards pertaining to weave section distances, as documented in the Highway Design Manual (Caltrans, 2020). Additionally, the added off-ramp storage would effectively function as storage for queued vehicles. In lieu of this approach, the recommended mitigation targets the source of the queue spillbacks, which are the Arena Boulevard/El Centro Road and Arena Boulevard/East Commerce Way intersections. In summary, the recommended mitigation measures are more targeted, more cost efficient, and would more effectively address the queuing issues than adding more off-ramp vehicle storage, since the queuing on the off-ramp is not due to the capacity of the off-ramp but due to the capacity of adjacent surface street intersections.

COMMENT 19-108

The DEIR also discloses that the project would have significant direct and cumulative safety impacts related to excessive on ramp queues at the I-5 southbound loop on ramp from Garden Highway² and the diagonal on ramp to southbound I-5 from Del Paso Road. This latter impact is not evident in the representation on Appendix TR-1, Table 17 that shows the queue in the subject on ramp from Del Paso to be 1950 feet in the cumulative condition and only 200 feet in the cumulative plus project condition. The confusion is because, contrary to the representations at other on ramp locations analyzed in the subject table, in the case of the on ramp from Del Paso the added on ramp lane provided for in what is described as Mitigation TR-8 in Appendix TR-1 and as Mitigation Measure C-TR-3 in the DEIR itself is assumed to be in place in the case of the southbound on ramp from Del Paso but similar added lanes provided for under the

same mitigation measure are not assumed in place in the analysis of southbound loop on ramp from Garden Highway or the southbound diagonal ramp from West El Camino.

Because mitigation of all of the impacts above include modifications to State highway facilities and sometimes to facilities under jurisdiction of the City of Sacramento and because some mitigations may require the participation of other fair share payers neither the Applicant nor the County can guarantee the full funding, approvals and implementation of those mitigations. Therefore, the DEIR has characterized these impacts as significant and unavoidable.

There is a tendency to be dismissive of impacts categorized as significant and unavoidable based on jurisdictional issues and funding uncertainties. It is common to regard provision of housing and fostering economic growth as overriding considerations to impacts categorized significant and unavoidable due to what is perceived as mere administrative nuisance. However, the severity of the impacts involved must be considered. Take for example the freeway off ramp deficiencies at the I-5/Del Paso interchange. In the northbound direction during the PM peak hour, the Cumulative No Project queue would be 4200 feet; the Cumulative With Project would be 5025 feet. The ramp is only 1300 feet to the gore point. So the With Project queue will extend back south on the main line 3725 feet beyond the gore point. Del Paso Road is separated from the next interchange south, Arena Boulevard, along the Alignment of I-5 by slightly less than one mile. However, the distance from the gore point at the northbound exit to Del Paso to the merge point of the northbound on ramp from Arena is only about 2640 feet. So the exit queue will extend south past the merge point from the on ramp. This situation will lead to abrupt merges and lane changes sure to produce frequent collisions.

² Queues on the diagonal ramp from Garden Highway to I-5 northbound also exceed capacity in the existing and cumulative conditions but the Project is not projected to add any traffic to this movement.

RESPONSE 19-108

Page 18-34 of the Draft EIR describes how the project would worsen southbound loop on-ramp ramp meter queuing that already spills back to Garden Highway. According to Table 14 of the CEQA TIA, the maximum queue for this movement is 775 feet during the AM peak hour and 1,450 feet during the PM peak hour, exceeding the 625 feet of available storage. The project would worsen these queue lengths to 1,075 feet during the AM peak hour and 1,525 feet during the PM peak hour, thereby exacerbating the unacceptable condition. Mitigation Measure TR-3b requires the applicant to make a fair share contribution toward improvements to this on-ramp. The fair share requirement is applicable as conditions are currently deficient, and new development is not legally permitted to be required to pay for existing deficiencies.

As evidenced by Table 14 of the CEQA TIA, the maximum queue for the I-5 southbound on-ramp from Del Paso Road is contained by the available storage under both existing and existing plus project conditions. However, on-ramp queuing becomes an operational problem under cumulative conditions. Mitigation Measure C-TR-3 on Draft EIR page 22-

69 requires the project applicant to pay its proportionate fair share percentage toward improvements at the I-5 southbound diagonal on-ramp at Del Paso Road. The rationale for this improvement is summarized below:

- Page 63 of the CEQA TIA states that the cumulative plus project scenario “assumed a second metered lane at the I-5 southbound on-ramp at Del Paso Road in order to avoid severely over-capacity conditions along Del Paso Road and El Centro Road”. It is acknowledged that reviewers of Table 17 of the CEQA TIA could be confused by the result shown for this on-ramp ramp meter location. Specifically, it shows a queue of 1,950 feet under cumulative no project AM peak hour conditions, but only 200 feet under cumulative plus project AM peak hour conditions. This is a direct result of the no project scenario consisting of a single on-ramp lane and the proposed project scenario consisting of two on-ramp lanes. A fair share contribution was recommended because this improvement was assumed under the proposed project scenario. The need for this improvement occurs without or with the project.

COMMENT 19-109

A similar situation will exist on the southbound I-5 off ramp to Del Paso. The projected PM peak queue is 4500 feet in the Cumulative No Project condition, 4525 feet in the Cumulative Plus Project condition. The ramp queue storage length is 1300 feet so the exit queues will extend 3200 and 3225 feet north on the main line beyond the ramp gore point. However, the merge point of the ramp from State Routes 70/99 to I-5 southbound is only about 1500 feet north of the Del Paso exit gore. So queued exiting traffic will overlap the entry point from 70/99. Again, this situation will cause abrupt merge and lane change maneuvers that will surely cause frequent collisions.

RESPONSE 19-109

According to Table 17 of the CEQA TIA, the project would increase the southbound loop on-ramp volume maximum queue from 900 feet to 1,575 feet under cumulative AM peak hour conditions. Since the on-ramp only has 625 feet of storage, the excess queuing would occur on Garden Highway which has a combined 800 feet of storage in the eastbound left-turn and westbound right-turn lanes at the intersection. Thus, all but six vehicles would be stored on the on-ramp or in a turn lane under the maximum queue condition. Since this is a condition only expected under the cumulative scenario, it can be monitored over time and, if warranted, advanced signage could be positioned in advance of the I-5 southbound ramps/Garden Highway intersection. This condition is not new to the City of Sacramento as it occurs on other roadways approaching freeways such as westbound Richards Boulevard (at I-5), northbound Stockton Boulevard (at US 50) and westbound Arden Way (at Capital City Freeway). The commentor’s concerns about the severity of these impacts appear overstated given the above. According to Figures 17a and 19a, the proposed project would result in a reduction in on-ramp traffic using the southbound I-5 on-ramp at Del Paso Road (1,403 to 1,266 vehicles during the AM peak hour and 898 to 860 vehicles during the PM peak hour). Thus, the project would not worsen any queuing or safety issues at this on-ramp. It would actually improve conditions.

COMMENT 19-110

Both of the deficiencies at the Del Paso interchange appear to be capable of mitigation by adding additional exit ramp lanes since the existing right-of-way appears sufficient for this purpose although the DEIR fails to disclose that as an option. However, to the point of the serious safety related nature of the impacts, the County (as well as the City in its northern development areas) should condition that building permits for various portions or stages of this and other projects be tied to implementation of an explicit item by item list of successful mitigation measures where transportation-related safety impacts have been categorized as significant and unavoidable for jurisdictional and funding reasons.

RESPONSE 19-110

Deficient LOS conditions occur at this interchange under only cumulative conditions, both without and with the project. The project would increase average delays at the southbound and northbound ramps intersections by 11 and 2 seconds, respectively. Cumulative off-ramp queuing impacts were identified on page 22-68 of the DEIR because Sacramento County cannot compel the City of Sacramento to construct certain improvements within its jurisdiction along Arena Boulevard and also because no known improvements are planned at the I-5/Del Paso Road and I-5/Garden Highway interchanges. Caltrans was consulted in that determination. Additionally, Caltrans' Draft EIR comment letter did not include any questions or references to widening off-ramps on I-5 at Del Paso Road or Garden Highway.

COMMENT 19-111

The DEIR Finds the Project Would Have Cumulatively Significant Traffic Safety Impact On Garden Highway, Requiring Lane Widening and Paved Shoulder Improvements and Also Requiring Lane Additions To Project Intersections With Garden Highway. It Indicates a Plan By Others To Add A 12 Foot Wide Bike/ Pedestrian Facility Alongside the Roadway. How All This Can Fit Within the Apparent 40 Foot Right-Of-Way or Why the Residents and Property Owners Along Garden Highway Should Experience Property Takings to Allow Improvements For a Project From Which They Do Not Benefit, Why the Residential Properties Are Not Evaluated For Residential Traffic Impacts Or Why The DEIR Does Not Identify the Project As Impactful for Precluding The Development of the Bike/Pedestrian Trail.

Garden Highway is a two-lane road with lanes of approximately 10 feet width, no paved shoulders except where residents have paved streetside areas for residential parking purposes, and in most cases open drainage with an apparent right-of-way of only 40 feet. This is below County standards for roadways carrying more than 6000 ADT. The DEIR indicates that in the Cumulative + Project condition Garden Highway would carry more than 6000 ADT and the Project would add more than 600 vehicles to the total. Hence, it exceeds the criterion for upgrading the roadway to minimum County standards of 12 foot lane widths and 6 foot paved shoulders. In addition, it indicates that additional turn lanes would be required at Project intersections with Garden Highway. The DEIR states that the Project would make fair share contribution to the lane widenings and shoulder improvements on the roadway segments and pay for the

intersection improvements. Also, DEIR Plate PD 15 Bikeway Master Plan indicates development of a 12 foot wide Class 1 Bikeway within the roadway right-of-way by others (the County?). Please explain how the 24 feet of traffic lanes, 12 feet of shoulders and 12 feet of Class 1 Bike lanes and extra feet of adding lanes at intersections can be fit in the 40 feet of right-of-way, and where the takings of right-of-way would be, who would be responsible for the cost, why the Project is not identified as potentially interfering with a planned bikeway development and why the Project is not identified in having neighborhood impacts on the residential development on the west side of Garden Highway. These are deficiencies in the DEIR. In addition, as an alternative to the proposed mitigation measures, the DEIR is deficient in failing to consider leaving the connections from the developed areas of the Project through the improperly titled Agricultural Buffer³ to Garden Highway as the gated private roads that currently exist, thereby avoiding the need for widening at intersections and perhaps the upgrading of Garden Highway to current County minimum standards.

³ The characterization of lands at the west side of the Project area as Agricultural Buffer is improper. This land so described is Agricultural. A buffer is a significant open space between urban/suburban development and agricultural use. This is necessary to avoid overspill of impacts of agricultural operations including pesticide spraying, dust and noise of cultivation and lighting and noise of nighttime harvesting and other night agricultural work impacting residential areas. The only buffer between agricultural and residential use in the proposed plan is a proposed 30 to 50 foot wide open space corridor between the residential uses and the agricultural use at the west side of the Development Area, an open space too narrow to effectively buffer between the residential and agricultural uses.

RESPONSE 19-111

Refer to master response TR-2: Garden Highway Safety Considerations.

COMMENT 19-112

It also seems likely that, given the congestion forecast along I-5 and at surface street locations, significant numbers of knowledgeable travelers would choose a calming drive in the pleasant, scenic surroundings of Garden Highway, even though a tense drive on the congested routes would remain faster. This product of human preference could result in considerably more impactful traffic on Garden Highway than predicted in transportation models that tend to assign traffic to the fastest routes.

RESPONSE 19-112

The comment offers no basis for the forecast worsening congestion on I-5. While the Draft EIR does describe how queuing is expected to worsen at freeway off-ramps, it does not describe current or forecast mainline operating conditions. The comment offers no evidence in support of significant numbers of travelers purposefully choosing a slower route over a faster one. There are numerous purposes for traveling on I-5 between Downtown Sacramento and north of Sacramento International Airport. Many such trips are made by trucks. Others have work purposes (e.g., Woodland to Downtown). Still others are traveling to/from the airport. Trucks are unlikely to divert to Garden Highway. Travelers heading to the airport often have hard travel deadlines and would not select a route that increases travel time. And often employees with longer commutes prioritize minimizing travel times by leaving home early, carpooling, etc.

Finally, it is noted that motorists are often also considered about driving on unfamiliar roads in rural areas. Thus, the commentor's assertion that more diversion will occur on Garden Highway is not based on any substantial evidence. Typical driver behaviors, trip purposes, and overall conditions present in the area suggest this will not occur.

COMMENT 19-113

The DEIR Underestimates the Project's External Trip Generation In Numerous Ways. Consequently It Underestimates the Project's VMT Per Capita, Its Contribution To Safety Related Hazardous Queue Problems on Freeway Ramps Discussed In Sections Above and Its Contribution To Issues Discussed In DEIR Appendix T-2, the Local Transportation Analysis.

First, the DEIR presents no statistical evidence that it offers a greater mix of land uses, greater overall density, greater walkability, bikeability and transit accessibility that would make it likely to have more internal and fewer external motor vehicle trips than recently developed, comparably sized areas to the north and east of the Project site. Assertions to this effect are merely flowery statements of urban planner rhetoric and ideals.

In furtherance of this notion, the DEIR's transportation analysts adjusted initial trip generation estimates for the Project based on data from the Institute of Transportation Engineers formerly authoritative publication *Trip Generation Manual, 10th Edition*,⁴ by applying a procedure called MXD+ that is purported to account for the special qualities of travel in mixed use developments.

⁴ We say 'formerly authoritative' because in September, 2021 the Institute released *Trip Generation Manual, 11th Edition* that supercedes the 10th Edition.

RESPONSE 19-113

This is a general comment. Refer to Responses 19-114 through 19-117 below for why this comment is inaccurate.

COMMENT 19-114

As is explained in Final Technical Appendix to DEIR Appendix TR-1, the current version of MXD+ was calibrated to 2019 data from 12 mixed use sites. Per Table 1 of the Technical Appendix, the 12 calibration sites ranged in size from 4 acres to 221 acres, averaged 50 acres and had a median size of 19 acres. They had a range of dwelling units of 8 to 1841, an average of 563 units and a median of 414 units. By footnote it is indicated that over 95 percent of the units are multi-family and that the site with only 8 units also included a 315 person student dormitory. The sites retail component ranged from 0 to 753,000 square feet of retail with an average of 168,000 square feet and a median of 38,000 square feet. The sites office components ranged from 0 to 1,084,000 square feet with an average of 212,000 square feet and a median of 41,000 square feet. By contrast, the UWSP project encompasses 2,066 gross acres and 1,532 Development Acres, 9,356 dwelling units and over 3,000,000 square feet of commercial, retail and office development. Obviously, it dwarfs all of the mixed use sites whose data the MXD+

procedure was calibrated to. Also, the residential component is much more evenly split between single family detached units (4367 du) and multi-family units (4989 du) in contrast to the over 95 percent multi-family units in the calibration sites. There is every reason to believe that the MXD+ process is biased toward the travel characteristics of much smaller mixed use projects with predominantly multi-family housing as opposed to the scale and balance of housing types in the subject UWSP Project.

The Technical Appendix to DEIR Appendix T-1 also describes validation of the MXD+ process to 4 additional mixed use developments. The validation sites ranged in size from 4 acres to 3,000 acres with 3 of the 4 sites being less than 80 acres. The residential components at these sites ranged from 120 dwelling units to 7,704 with the total at the largest site being over 88 percent single family detached while the 3 smaller site had predominantly multi-family residential. At the largest site, the office component totaled only 80,000 square feet, the general retail component only 387,000 square feet, 15,000 square feet of restaurant, and 54,000 square feet of supermarket so this site is more like a typical suburban neighborhood than a truly mixed use community. The Technical Report claims that the recalibrated MXD+ procedure was reasonably validated at all four sites, but in the case of the largest this is dependent on certain assumptions about other traffic at the gateways.

RESPONSE 19-114

Page 16-13 of the Draft EIR indicates that the project would have a 0.91 jobs per housing unit ratio and that the proposed project “would largely be balanced”. Adjacent areas to the north and east do not exhibit nearly the same degree of blending of residential and non-residential uses to allow for walking and biking trips between those uses. A comparative analysis of the degree to which the project versus nearby areas has these attributes is largely irrelevant. At issue is whether the Draft EIR properly took those attributes into consideration when analyzing transportation conditions. As noted in the responses that follow, those attributes were carefully considered in the transportation analysis.

The original equations used to develop MXD+ are described in Traffic Generated by Mixed-Use Developments—Six-Region Study Using Consistent Built Environmental Measures (Ewing, Greenwald, Zhang, Walters, Feldman, Cervero, Frank, and Thomas, Journal of Urban Planning and Development, 2011). The report authors included four professors from well-respected universities, a policy analyst from EPA, and three transportation planners/consultants. The following passage from the article summarizes the dataset used in the development of MXD:

A total of 239 MXDs were identified. Site characteristics ranged from compact infill sites near the region’s core to low-rise freeway-oriented developments. The 239 survey sites varied in population and employment densities, mix of jobs and housing, presence or absence of transit, and location within the region. The sites ranged in size from less than five acres to over 2,000 acres, and over 15,000 residents and employees.

A total of 22 validation sites were used to test the goodness of fit for the MXD equations. They included several large mixed-use areas such as the entire Town of Moraga, CA,

South Davis, CA, and Town of Celebration, Florida. Image 8 compares predicted and observed trips for the 22 validation sites. This chart shows a strong association between observed and predicted trips. There is not any type of obvious bias toward smaller projects, as is suggested by the commentor. Such a bias would be apparent from this chart if data points were systematically over or under the dashed line under either low or high predicted trip conditions. This is not the case here.

Table TR-1 on page 18-29 of the Draft EIR indicates that the proposed project would have an internal trip percent of 22.5 percent on a daily basis. External daily trips made by walking, biking, or taking transit was estimated at 2.7 percent. This implies that about 75 percent of gross project trips would be external vehicle trips. The original 239 MXD calibration data sites showed an overall average of 17.8 percent internal trips and 13.9 percent external non-auto trips. This implies 68.3 percent of their gross daily trips were external auto trips. Thus, the proposed project's reductions for internal trips and external non-auto trips is actually lower than the average from the original database. This offers further evidence that using MXD did not bias the results. Finally, it is noted that the Mixed-Use Trip Generation (MXD+) Model Recalibration and Validation to 2019 Conditions (Fehr & Peers, 2020) report in Draft EIR Technical Appendix (available online) included the community of Southport in the City of West Sacramento as a validation site. This 3,000-acre area includes 6,800 single-family units, 890 multi-family units, over 1.1 million square feet of office, retail, and manufacturing, and various schools. Southport generated 75,191 external daily vehicle trips. MXD+ predicted it would have an internal trip percent of 26.8 percent on a daily basis. External daily trips made by walking, biking, or taking transit was estimated at 2.1 percent (as area is not well-served by transit). After these reductions, MXD+ estimated the project would generate 74,138 daily trips, which is 1.4 percent less external trips than were measured in the field. This provides further evidence that MXD+ can accurately predict external vehicle trips at larger mixed-use sites.

Image 8: Scatterplot of predicted versus observed external vehicle counts for mixed-use sites studied in original MXD Research

COMMENT 19-115

The DEIR indicates at page 18-30, Table TR-2, that when the UWSP project data is processed through the SACOG SACSIM19 regional transportation model, the results indicate that 15.4 percent of the Projects residential trips would be internal to the Project. If processed through the MXD+ process, the result is 22.9 percent internal trips. The DEIR's transportation analysts arbitrarily choose to interpret the more favorable to the Project MXD+ results rather than those of the highly refined SACSIM tour-based model. This causes a critical understatement of the Project's VMT per capita analysis. If the more conservative and likely more reliable SACSIM19 output is relied upon, the resultant VMT per capita for the Project would be 15.41 miles per capita instead of 14.34. Since 15.41 is above the significance threshold of 14.83 miles per capita, the Project would be found to have significant VMT impact and require mitigation.

RESPONSE 19-115

This comment begins by comparing internal trip-making between MXD+ and SACOG's SACSIM19 travel demand model. Specifically, the comment mentions Table TR-2 of the Draft EIR showing that the SACSIM model estimated that 15.4 percent of the project's home-based household trips would be internal to the site and that this is considerably lower than the 22.9 percent according to MXD+. While footnote 5 of Table TR-2 does make this comparison, it should have also included an additional caveat that a direct comparison would be misleading because MXD+ considers all trips including those that are non-home-based, school trips, etc., which are more often internal to a site. Footnote 5 does explain how SACSIM is a regional travel demand model. But it stops short of describing SACSIM's principal purpose, which is to support SACOG's efforts in developing its MTP/SCS. SACSIM was not built with the purpose of accurately estimating internal trips at the parcel or plan area level. It is regional in scale, covering the vast majority of the entire six-county area represented by SACOG. This comment offers no data or evidence in support of why the SACSIM model produces more accurate project travel characteristic estimates than MXD+. In contrast, the previous multi-page response articulated the strong technical rigor of MXD+ for use in this exercise. In summary, there is no supporting data or basis for this comment's assertion that the project would have a significant VMT impact.

COMMENT 19-116

Another way the DEIR understates Project external trip generation is by assuming that trip deductions for attracting traffic already passing by retail, restaurant and similar uses are allowable at percentages suggested by the Institution of Transportation Engineers' publication *Trip Generation Handbook*. There are two problems with this. Most of the roadways internal to the Project have zero or close to zero existing traffic. Hence, there is no existing traffic to sustain those attracted passerby percentages assumed. Ergo, attracted passers-by would have to come from traffic generated within the Project itself. However, the DEIR analysis has already deducted for hefty estimates of internal trips. So discounting for attracted passers-by is in essence double discounting of the same

trips. This double discounting amounts to about 5.7 percent of the DEIR's Table TR-1 estimate of Project external trips.

RESPONSE 19-116

This comment is not accurate. As master-planned communities are developed, residential typically occurs first, followed by retail. By the time the retail is set to be constructed, there is already a sufficient volume of traffic on adjacent streets from which pass-by trips into the retail center can be taken. This is exactly how the UWSP transportation analysis was performed. The comment asserts that “the DEIR analysis has already deducted for hefty estimates of internal trips. So, discounting for attracted passers-by is in essence double discounting of the same trips.” This is not accurate as evidenced by the following example: page 81 of the LTA indicates that the supermarket generates 6,359 gross daily trips. On a daily basis, 18 percent of those trips are expected to be pass-by. But the pass-by reduction was 857 trips, and not the 1,145 trips that would result from the product of 6,359 daily trips and 18 percent pass-by. This is because the pass-by reductions were only applied to non-internalized retail, restaurant, and supermarket trips. Had they been incorrectly applied to gross trips, then double-counting of new trip reductions would have occurred.

COMMENT 19-117

Another problem with the DEIR's analysis is the fact it relies on *Trip Generation Manual, 10th Edition*. As noted in a footnote above, the 10th Edition was superseded by the 11th Edition in September 2021, in plenty of time for the DEIR analysts to have relied on it for the UWSP work. One of the primary advantages of the newer editions of *Trip Generation Manual* is that they have been successively improved by getting rid of very old data and adding in more current data, providing data on new land use categories, and disaggregating data from dense urban sites from general urban/suburban sites.

RESPONSE 19-117

It is readily apparent from the date of the “existing plus project” intersection LOS worksheets in the LTA Technical Appendix that technical analysis was well underway as of June 2021. That analysis necessarily relied on 10th Edition Trip Generation Manual trip generation rates as the 11th edition update was not available at that time (was not released until that fall). A decision to update the technical analysis to reflect 11th edition trip generation rates would have required literally thousands of updated intersection and roadway LOS calculations, numerous modified figure and table edits, and modification to other chapters of the EIR that relied on this data.

Notwithstanding the above, the project's trip generation was recalculated using the 11th Edition of the Trip Generation Manual. Care was taken to be as consistent as possible with how the 10th Edition rates were applied including land use category selected, use of equation versus average rate, use of MXD+ for internal and external non-auto trips, and approach to pass-by and diverted-link trips. **Image 9** shows the side-by-side comparison. As shown in the bottom right corner, the 11th Edition would have generated 4 percent fewer new daily vehicle trips and 1 percent fewer new PM peak

hour vehicle trips than the 10th Edition. However, use of 11th Edition trip rates would generate 5 percent more new AM peak hour trips than the 10th Edition. This increase is attributable almost exclusively to the professional office category whose gross AM peak hour trip generation increased from 1,689 trips to 2,254 trips, a 33 percent increase. This resulted from a decision made by ITE to remove the 'peak hour of generator' for the office category in the 11th Edition and to merge that data with 'peak hour of adjacent street' data points. The net result was large increases in the AM peak hour (and also the PM peak hour, at 23 percent) trip rates in the 11th Edition update. However, this situation is largely irrelevant at this point because continued post-COVID work-from-home preferences have resulted in employment center trip generation rates being about 40 percent below ITE rates.

10th Edition ITE TGM					11th Edition ITE TGM					CHANGE in AM Peak Hour Trips

Image 9: Comparison of project trip generation using 10th Edition versus 11th Edition trip generation rates for Trip Generation Manual (Institute of Transportation Engineers, 2017 and 2021).

COMMENT 19-118

One of the problems that professionals noted of the 10th Edition and those that preceded it is that Category 820, Shopping Center, included data from tiny retail establishments of a few thousand square feet to regional shopping centers over a million square feet. The disparity of the trip characteristics from the very small to very large caused problems with the representative of weighted averages and fitted curves at the opposite ends of the size scale.

RESPONSE 19-118

The introduction of new retail land use categories and new trip rates led to modest increases in gross trips generated by this land use (see Image 9) on a daily basis and during the AM peak hour, and no change during the PM peak hour. No further response

is needed given that the shopping center's trips were considered in the overall change in project external vehicle trips discussed in the previous response.

COMMENT 19-119

The 11th Edition solved this by splitting the smaller sized retail into two new use categories and reserving the 820 shopping center category for retail centers over 150,000 square feet. The implication for the DEIR is this. The DEIR is relying on the wrong data set and is relying on a version of MXD+ calibrated to adjust the wrong data set.

RESPONSE 19-119

The extensive responses contained in the prior pages demonstrate that this statement is not accurate.

COMMENT 19-120

We have reviewed the August 2024 Draft Environmental Impact Report ("DEIR") for the Upper Westside Specific Plan ("Specific Plan") located in the City of Sacramento ("City"). The Specific Plan allows for the future development of 9,356 housing units and over 3,000,000-square-feet ("SF") of commercial, retail, and office uses on the 2,066-acre site.

Our review concludes that the DEIR fails to adequately evaluate the Specific Plan's air quality impacts. As a result, emissions and health risk impacts associated with operation of future projects under the proposed Specific Plan may be underestimated and inadequately addressed. A revised Environmental Impact Report ("EIR") should be prepared to adequately assess and mitigate the potential air quality impacts that the future projects may have on the environment.

RESPONSE 19-120

For responses to the commenter's specific comments on the Draft EIR, please see Responses 19-121 through 19-126 below.

COMMENT 19-121

Air Quality

Failure to Implement All Feasible Mitigation to Reduce Emissions

The DEIR estimates that the Specific Plan's operational reactive organic gas ("ROG"), nitrogen oxides ("NO_x"), particulate matter 10 ("PM₁₀"), and particulate matter 2.5 ("PM_{2.5}") emissions would exceed the applicable Sacramento Metropolitan Air Quality Management District thresholds (see excerpt below) (p. 6-42, Table AQ-9).

Table AQ-9: Unmitigated Maximum Project Operation Emissions¹

	ROG (lbs/day)	NO_x (lbs/day)	PM₁₀ (lbs/day)	PM_{2.5} (lbs/day)	PM₁₀ (tpy)	PM_{2.5} (tpy)
Existing Conditions (2045)	21	11	10	3	1.8	0.5
Proposed UWSP (2045) ²	631	241	443	125	77.7	21.9
Net change in Emissions ³	610	230	432	122	75.8	21.4

RESPONSE 19-121

The commenter does not express an opinion on the merits of the project, does not raise new significant environmental issues, or specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 19-122

The DEIR implements mitigation measure (“MM”) AQ-1b, which “require[s] that the project applicant comply with the provisions of the AQMP, and provides a list of all feasible measures that the proposed UWSP can implement to reduce operational emissions” (p. 6-34).

Even with the inclusion of MM AQ-1b, however, the DEIR concludes that impacts associated with the operation of future projects would be significant-and-unavoidable. Specifically, the DEIR states:

“Although the mobile sources that would be associated with the proposed UWSP are not specifically delineated from the other proposed UWSP sources in Tables AQ-9 and AQ-9, implementation of Mitigation Measure AQ-1b would achieve the 35 percent reduction in NO_x and ROG mobile-source emissions feasibility goal relative to unmitigated emissions (see Appendix AQ-1 model outputs). However, as shown in Table AQ-10, emission levels would still exceed the applicable thresholds of significance relative to all criteria pollutants and precursors evaluated, and therefore, the impact would remain significant and unavoidable” (p. 6-44).

According to California Environmental Quality Act (“CEQA”) Guidelines § 15096(g)(2):

“When an updated EIR has been prepared for a project, the Responsible Agency shall not approve the project as proposed if the agency finds any feasible alternative or feasible mitigation measures within its powers that would substantially lessen or avoid any significant effect the project would have on the environment.”¹

The DEIR is required under CEQA to implement all feasible mitigation to reduce impacts to the greatest extent viable. While the DEIR implements MM AQ-1b, the DEIR fails to implement all feasible mitigation. The DEIR’s conclusion that Specific Plan’s air quality emissions would be significant-and-unavoidable may therefore be unsubstantiated.

To reduce future projects’ air quality impacts to the maximum extent possible, additional feasible mitigation measures should be incorporated, such as those suggested in the section of this letter below titled “Feasible Mitigation Measures Available to Reduce Emissions.” The Specific Plan should not be approved until a revised EIR is prepared, incorporating all feasible mitigation to reduce emissions to the greatest extent possible.

Mitigation

Feasible Mitigation Measures Available to Reduce Emissions

The DEIR is required under CEQA to implement all feasible mitigation to reduce the future projects’ potential impacts, as referenced above. As the Specific Plan would result in potentially significant operational air quality impacts, we propose additional mitigation measures for the DEIR to consider.

First, to reduce ROG emissions associated with the operation of future projects, we recommend the DEIR consider incorporating the following mitigation used by other land use development projects to address maintenance-related volatile organic compounds (“VOC”)/ROG emissions:²

- Recycle leftover paint. Take any leftover paint to a household hazardous waste center; do not mix leftover water-based and oil-based paints.
- Keep lids closed on all paint containers when not in use to prevent VOC emissions and excessive odors.
- For water-based paints, clean up with water only. Whenever possible, do not rinse the cleanup water down the drain or pour it directly into the ground or the storm drain
- Use compliant low-VOC cleaning solvents to clean paint application equipment.
- Keep all paint- and solvent-laden rags in sealed containers to prevent VOC emissions.

- Use high-pressure/low-volume paint applicators with a minimum transfer efficiency of at least 50 percent or other application techniques with equivalent or higher transfer efficiency.

¹Cal. Code Regs. tit. 14 § 15096." California Legislature, *available at*: <https://casetext.com/regulation/californiacode-of-regulations/title-14-natural-resources/division-6-resources-agency/chapter-3-guidelines-forimplementation-of-the-california-environmental-quality-act/article-7-eir-process/section-15096-process-for-a-responsible-agency>.

² "Banning Commerce Center Project." Kimley-Horn and Associates, Inc., June 2024, *available at*: <https://ceqanet.opr.ca.gov/2022090102/2>; Draft Environmental Impact Report, p. 1-7.

RESPONSE 19-122

As described in the EIR, Mitigation Measure AQ-1b includes a requirement for the use of super-compliant VOC architectural coatings (i.e., paint) during operation of the project. Each of the suggested mitigation measures identified in the comment to reduce maintenance-related volatile organic compounds (VOC) emissions are addressed below:

- Recycle leftover paint: There is no evidence provided about how or why this would reduce project-generated VOC emissions associated with painting.
- Keep lids closed on all paint containers when not in use: This measure would not be enforceable. In addition, leaving containers with paint uncovered would not be expected to be a large source of VOC emissions because it would not be practical or financially efficient to do so because it would degrade the painter's ability to use the contained paint due to dryness. In other words, reasonable incentive already exists for painters to keep paint container lids closed.
- For water-based paints, clean up with water only. There is no evidence provided about how or why this would reduce project-generated VOC emissions associated with painting.
- Use compliant low-VOC cleaning solvents to clean paint application equipment. As described in the EIR air quality regulatory setting, Sacramento County General Plan Policy 13 already requires the use of California State Air Resources Board (CARB) and SMAQMD guidelines for the use of solvents.
- Keep all paint- and solvent-laden rags in sealed containers to prevent VOC emissions. This measure would not be enforceable; however, Mitigation Measure AQ-1b has been revised to require homeowner rules and bylaws and tenant agreements to encourage its implementation.
- Use high-pressure/low-volume paint applicators with a minimum transfer efficiency of at least 50 percent or other application techniques with equivalent or higher transfer efficiency. This measure would not be enforceable; however, Mitigation Measure AQ-1b has been revised to require homeowner rules and bylaws and tenant agreements to encourage its implementation.

COMMENT 19-123

Second, the Environmental Protection Agency explains that NO_x emissions originate from “motor vehicle internal combustion engines and fossil fuel-fired electric utility and industrial boilers” and sources of PM₁₀/PM_{2.5} emissions include “combustion of gasoline, oil, [and] diesel fuel.”^{3,4} To reduce the NO_x, PM₁₀, PM_{2.5} emissions associated with the operation of future projects, we recommend the DEIR consider incorporating several mitigation measures (see list below).

The California Air Resources Board (“CARB”) recommends the following:⁵

- Require tenants to use the cleanest technologies available, and to provide the necessary infrastructure to support zero-emission vehicles and equipment that will be operating on site.
- Requiring all service equipment (e.g., yard hostlers, yard equipment, forklifts, and pallet jacks) used within the project site to be zero-emission. This equipment is widely available and can be purchased using incentive funding from CARB’s Clean Off-Road Equipment Voucher Incentive Project (CORE).
- Require future tenants to exclusively use zero-emission light and medium-duty delivery trucks and vans.
- Require all heavy-duty trucks entering or on the project site to be zero-emission vehicles, and be fully zero-emission. A list of commercially available zero-emission trucks can be obtained from the Hybrid and Zero-emission Truck and Bus Voucher Incentive Project (HVIP). Additional incentive funds can be obtained from the Carl Moyer Program and Voucher Incentive Program.
- Require the installation of vegetative walls or other effective barriers that separate loading docks and people living or working nearby.

³ “Proposed Revisions to the National Ambient Air Quality Standards for Nitrogen Dioxide.” EPA, July 2009, available at: <https://www.gpo.gov/fdsys/pkg/FR-2009-07-15/pdf/E9-15944.pdf>.

⁴ “Inhalable Particulate Matter and Health (PM_{2.5} and PM₁₀).” CARB, available at: <https://ww2.arb.ca.gov/resources/inhalable-particulate-matter-andhealth#:~:text=Emissions%20from%20combustion%20of%20gasoline,a%20significant%20proportion%20of%20PM10>.

⁵ “Recommended Air Pollution Emission Reduction Measures for Warehouses and Distribution Centers.” CARB, August 2023, available at: <https://ww2.arb.ca.gov/sites/default/files/2023-08/CARB%20Comments%20-%20NOP%20for%20the%20%20Oak%20Valley%20North%20Project%20DEIR.pdf>; Attachment A, p. 5 – 8.

RESPONSE 19-123

Each of the suggested mitigation measure bullets identified in the comment to reduce project emissions of NO_x, PM₁₀, and PM_{2.5} emissions are addressed in the respective bullet discussions, below:

- A mitigation measure to “require tenants to use the cleanest technologies available” is unspecific and not enforceable. However, regarding infrastructure to

support zero-emission vehicles and equipment, Mitigation Measure AQ-1b already includes provisions to equip all truck delivery bays with electrical hook-ups for diesel trucks at loading docks to accommodate plug-in electric truck transport refrigeration units or auxiliary power units during project operations, as well as the installation of electric vehicle charging infrastructure.

- The following measure has been added to Mitigation Measure AQ-1b:
“Zero Emissions Service Equipment. Homeowner rules and bylaws and tenant agreements shall encourage all service equipment (e.g., yard hostlers, yard equipment, forklifts, and pallet jacks) used within the project site to be zero-emission.”

This measure is not enforceable as described by the commenter; however, its implementation is encouraged.

- A measure that would require future tenants to exclusively use zero-emission light and medium-duty delivery trucks and vans would not be enforceable or legally feasible. However, as described above in the first bullet, Mitigation Measure AQ-1b includes provisions to support zero-emissions vehicles.
- A measure that would require all heavy-duty trucks entering or on the project site to be zero-emission vehicles would not be enforceable or legally feasible. However, as described above in the first bullet, Mitigation Measure AQ-1b includes provisions to support zero-emissions vehicles.
- A measure that would require the installation of vegetative walls or other effective barriers that separate loading docks and people living or working nearby would not be effective at reducing NOx, PM10, or PM2.5 emissions associated with the operation of future projects.

COMMENT 19-124

In addition to recommending similar mitigation as the above-mentioned measures from CARB, the California Department of Justice (“CA DOJ”) suggests:⁶

- Constructing zero-emission truck charging/fueling stations proportional to the number of dock doors at the project.
- Running conduit to designated locations for future electric truck charging stations.
- Oversizing electrical rooms by 25 percent or providing a secondary electrical room to accommodate future expansion of electric vehicle charging capability.
- Constructing and maintaining electric light-duty vehicle charging stations proportional to the number of employee parking spaces (for example, requiring at least 10% of all employee parking spaces to be equipped with electric vehicle charging stations of at least Level 2 charging performance).

- Running conduit to an additional proportion of employee parking spaces for a future increase in the number of electric light-duty charging stations.
- Sequent future projects under the Proposed Specific Plan shall install Level 2 EV charging stations in 15% of all parking spaces for multi-family developments and pre-wiring to allow for a Level 2 EV charging stations in all single-family residential garages.

⁶ "Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act." State of California Department of Justice, September 2022, *available at*: <https://oag.ca.gov/system/files/media/warehouse-best-practices.pdf>, p. 8 – 10.

RESPONSE 19-124

Each of the suggested mitigation measure bullets identified in the comment are addressed below in the respective bullet discussions, below:

- The *Operational Truck Emissions Reduction* bullet of Mitigation Measure AQ-1b has been revised to require all truck delivery bays to be equipped with electrical vehicle charging stations, as shown below:
 - Equip all truck delivery bays with electrical **vehicle charging stations and electrical** hook-ups for diesel trucks at loading docks to accommodate plug-in electric truck transport refrigeration units (TRUs) or auxiliary power units during project operations.
- A measure that would require running conduit to designated locations for future electric truck charging stations is not necessary given that all truck delivery bays would be equipped with electrical vehicle charging stations as required per the revisions made to Mitigation Measure AQ-1b (see previous bullet).
- A measure that would require oversizing electrical rooms by 25 percent or providing a secondary electrical room to accommodate future expansion of electric vehicle charging capability is not necessary given that all truck delivery bays would be equipped with electrical vehicle charging stations as required per the revisions made to Mitigation Measure AQ-1b (see first bullet of this response).
- Pursuant to the *Electric Vehicle Charging Infrastructure* bullet of Mitigation Measure AQ-1b, the project applicant would already be required to demonstrate compliance with the 2022 CALGreen Tier 2 voluntary electric vehicle charging requirements or the mandatory requirements of the most recently adopted version of the County building code, whichever is more stringent.
- A measure that would require running conduit to an additional proportion of employee parking spaces for a future increase in the number of electric light-duty charging stations would not in itself reduce vehicle emissions.
- Refer to the fourth bullet of this response, above.

COMMENT 19-125

Additionally, the Specific Plan allows plans for future development of restaurants on the proposed site. South Coast Air Quality Management District (“SCAQMD”) Rule 1138 outlines the following requirements for projects that include fast-food charbroilers:⁷

- No person shall operate a new or existing chain-driven charbroiler unless it is equipped and operated with a catalytic oxidizer control device, and the combination charbroiler/catalyst has been tested and certified by the Executive Officer.
- Catalytic oxidizers or other control devices shall be maintained in good working order to minimize visible emissions to the atmosphere, an operated, cleaned, and maintained in accordance with the manufacturer's specifications in a maintenance manual or other written materials supplied by the manufacturer or distributor of the catalyst or other control device, or chain-driven charbroiler.

Note that while the Specific Plan is not located within the jurisdiction of the SCAQMD, compliance with Rule 1138 would nonetheless decrease future projects' emissions.

⁷ “Rule 1138. Control Of Emissions from Restaurant Operations.” SCAQMD, November 1997, *available at*: <https://www.aqmd.gov/docs/default-source/rule-book/reg-xi/rule-1138.pdf>, p. 2 – 3.

RESPONSE 19-125

Emission controls for charbroiling are not warranted at this plan-level of review because no specific restaurants with charbroilers are proposed under the UWSP. Please also see Response 15-48.

COMMENT 19-126

We have provided several mitigation measures that would reduce the Specific Plan's ROG, NO_x, PM₁₀, and PM_{2.5} emissions, gathering from sources including CARB, the CA DOJ and others. These measures offer a cost-effective, feasible way to incorporate lower-emitting design features into future projects.

A revised EIR should be prepared that includes all feasible mitigation measures, as well as an updated air quality analysis to ensure that the necessary mitigation measures are implemented.

Disclaimer

SWAPE has received limited discovery regarding this project. Additional information may become available in the future; thus, we retain the right to revise or amend this report when additional information becomes available. Our professional services have been performed using that degree of care and skill ordinarily exercised, under similar circumstances, by reputable environmental consultants practicing in this or similar localities at the time of service. No other warranty, expressed or implied, is made as to

the scope of work, work methodologies and protocols, site conditions, analytical testing results, and findings presented. This report reflects efforts which were limited to information that was reasonably accessible at the time of the work, and may contain informational gaps, inconsistencies, or otherwise be incomplete due to the unavailability or uncertainty of information obtained or provided by third parties.

RESPONSE 19-126

For responses to the specific comments, please see Responses 19-121 through 19-125 above. Two of the comments warranted minor revisions to EIR Mitigation Measure AQ-1b (please see Responses 19-22 and 19-23); however, those revisions would not trigger the criteria to require the Draft EIR to be recirculated.

LETTER 20

Amanda Johnson, member of the community, email correspondence; dated September 9, 2024.

COMMENT 20-1

Hello,

Here are my comments with regards to the Upper Westside Natomas plan.

I HATE IT!!!

Urban sprawl often leads to increased traffic congestion, longer commutes, and a higher cost of living. I don't want Sacramento to become Roseville or Elk Grove. Rather than expanding into our precious farmland, we should focus on building walkable, mixed-use neighborhoods. Only 38% of the world's land can be used for farmland. Sacramento is "farm to fork" and you want to get rid of our farms?

RESPONSE 20-1

The commenter expresses an opinion on the merits of the project. This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 20-2

Preserving green spaces should also be a top priority. Green spaces improve our mental and physical well-being and offer vital habitats for animals. This is a flood zone, I know because I live here, this isn't the place to build more suburban development. By protecting these areas from development, we safeguard our environment, contribute to climate resilience, and provide sanctuary for wildlife that is increasingly displaced by unchecked growth.

RESPONSE 20-2

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR assessment of flood protection and storm drainage.

COMMENT 20-3

Suburban developments once they are completed are the best they are ever going to be. After that they decay, they cost the city more because they never adapt or grow. Never allowing more people to move into a neighborhood. Encouraging mixed-use zoning for current existing areas would allow for affordable housing options that are sorely needed, especially for low income residents who are often priced out of traditional suburban developments. Why expand when we can do better and make Sacramento less like Elk Grove and Roseville and more like downtown.

RESPONSE 20-3

As discussed on pages 2-34 to 2-36 in Chapter 2, *Project Description*, of the Draft EIR, the proposed project includes a Commercial Mixed Use (CMU) district that would include multi-story buildings providing approximately 2.18 million square feet of non-residential uses and 3,216 residential units. These units would provide for both a mix of for-sale and for-rent units in support of the UWSP's affordable housing strategy.

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 20-4

I ask you to protect Natomas' farmland and instead prioritize urban planning strategies that emphasize walkability, mixed-use development, affordable housing, public transportation, and environmental conservation. Let's create a city where people and nature thrive together, rather than one where unchecked development diminishes the quality of life for all.

RESPONSE 20-4

See page 2-43 of Chapter 2, *Project Description*, of the Draft EIR, for a description of the proposed project's pedestrian network and transit services. The proposed project would include a highly connected pedestrian system that would allow residents to conveniently walk to neighborhood schools, parks, and open spaces, and travel between neighborhoods and commercial centers, while 88 percent of residential units would be located within one-half mile of a crosstown bus stop. Please see Response 20-3 above for a discussion of the Commercial Mixed Use (CMU core).

Please see Response 19-10 for a discussion of the Affordable Housing Strategy submitted to the County by the project applicant.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 21

Mark D'Elicio, member of the community, email correspondence; dated September 10, 2024.

COMMENT 21-1

I am writing to express my strong opposition to the Upper Westside Specific Plan (UWSP). As a resident of Sacramento County, I am deeply concerned about the significant and unavoidable impacts this project would have on our community.

RESPONSE 21-1

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 21-2

The Draft Environmental Impact Report (DEIR) has clearly identified numerous areas where the UWSP would cause irreversible damage. These impacts include:

- Aesthetics
- Agricultural resources
- Air quality
- Cultural resources
- Noise
- Tribal cultural resources

The fact that the county itself acknowledges these unavoidable impacts is alarming. It is unacceptable to sacrifice the well-being of our community and environment for the sake of development.

RESPONSE 21-2

The County's purpose in preparing the Draft EIR was to disclose the significant environmental impacts of the proposed project, in compliance with CEQA. The EIR will be considered by the County Planning Commission and Board of Supervisors, as well as other Responsible Agencies, in making their decisions regarding approval of the proposed project.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 21-3

In addition to the concerns raised in the DEIR, I am also deeply troubled by two critical issues:

1. The increased traffic generated by the UWSP will only exacerbate existing congestion, leading to longer commute times, increased air pollution, and a decline in overall quality of life.

RESPONSE 21-3

The commenter expresses an opinion on environmental impacts disclosed in the Draft EIR. Transportation impacts of the proposed project are discussed in Draft EIR Chapter 18, *Transportation*, and air quality impacts are discussed in Chapter 6, *Air Quality*. Quality of life, mentioned in the comment, is a broad concept that could include a variety of environmental impacts. Noise impacts are addressed in Draft EIR Chapter 15, Public Services are discussed in Draft EIR Chapter 17, and Aesthetic impacts are discussed in Draft EIR Chapter 4.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 21-4

2. The land slated for development serves as a crucial spillway, designed to alleviate flooding in the event the Sacramento Weir is opened to protect the city. Building in this area not only compromises its intended function but also significantly increases the risk of property damage and potential loss of life during major flood events. The development would essentially constrict the natural flow of water, potentially exacerbating flooding in other areas and undermining the effectiveness of the Weir system.

RESPONSE 21-4

It is incorrect to characterize the project site as a “crucial spillway.” The entire Natomas Basin is protected from flooding by a system of levees and flood control features that are designed to keep flood waters outside of the basin. When the Sacramento Weir is opened during high flows on the Sacramento River, flood waters are redirected from the Sacramento River to the Yolo Bypass, west of the Sacramento River. As described in Chapter 13, *Hydrology and Water Quality*, of the Draft EIR, the proposed project would have no effect on flows in the Sacramento or American River floodways.

Please also see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR assessment of flood protection and drainage.

COMMENT 21-5

Beyond these specific issues, I believe the UWSP is fundamentally flawed. It prioritizes short-term gains over long-term sustainability. It disregards the voices of residents who have expressed their opposition. It sets a dangerous precedent for future development projects in our county.

RESPONSE 21-5

The comment expresses an opinion on the merits of the project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 21-6

I urge you to protect our community from this harmful project. I believe that together, we can create a future for Sacramento County that is both prosperous and sustainable.

RESPONSE 21-6

The comment expresses an opinion on the merits of the project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 22

Albert Plantilla, member of the community, email correspondence; dated September 10, 2024.

COMMENT 22-1

I support this development project. Sacramento has growing needs for housing with a growing population. It appears to have high density housing which will help to keep the market rate for housing down by increasing supply. The county should look for means to improve transit options to reduce traffic load as more population moves out of the central Sacramento area.

RESPONSE 22-1

The comment expresses support for the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 23

Marvin Fontanilla, member of the community, email correspondence; dated September 11, 2024.

COMMENT 23-1

I am writing to express my support for the Upper Westside Specific Plan. While I acknowledge the environmental challenges outlined in the Draft Environmental Impact Report, I believe this development is crucial for addressing our housing needs and creating sustainable communities. This plan undoubtedly will attract affluent residents, potentially leading to improved schools and increased community safety, much like the successes seen in Elk Grove and Roseville. These developments make our region more attractive to families and individuals looking for vibrant, well-rounded communities.

Sacramento is changing. It's time to recognize that and lean in—to the future.

Thank you for considering my support for this important project.

RESPONSE 23-1

The comment expresses support for the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 24

Amy Rodrigues, member of the community, written correspondence; dated September 12, 2024.

COMMENT 24-1

I am a homeowner and proud resident of the Gateway West neighborhood that borders the proposed project site. I strongly oppose this development because it will significantly harm wildlife, local farms, and the existing community.

RESPONSE 24-1

The commenter expresses opposition to the proposed project. This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 24-2

Habitat Conservation

This region provides vital habitat for wildlife including migratory and resident birds, mammals, reptiles and insects. Consider protecting these lands as part of a mitigation bank rather than developing, to maintain open space and support Swainson hawk, VELB, western pond turtle and other threatened species. This area provides contiguous habitat along the Sacramento River and Bypass Wildlife Areas that should be protected. Open space bordering our Garden Highway levee provides flood protection for greater Natomas, and permeable surfaces promote groundwater recharge.

RESPONSE 24-2

The Draft EIR fully evaluates the physical effects on the environment that could result with implementation of the proposed UWSP, including effects related to biological resources, including special-status species, sensitive natural communities, and wetlands.

The commenter expresses an opinion on the merits of the proposed project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 24-3

Prime Farmland

The existing farms on these lands feed our community and people around the world. My family enjoys watching the tomatoes, sunflowers, pumpkins, and corn grow in the fields down the street, and shopping at the Cuevas stand on El Centro for the freshest

produce. Sacramento prides itself on being the Farm-to-Fork capitol. Please don't pave over these iconic family farms.

RESPONSE 24-3

The commenter expresses an opinion on the merits of the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 24-4

Impacts to Locals

The 49er Travel Plaza is also a cornerstone of our community, serving travelers and truckers for more than 50 years. Their proximity to the I-5 and I-80 junction and being just offset from residential tracts is ideal. Don't build around them and force them out.

RESPONSE 24-4

The current location of the 49er Travel Plaza would be designated Employment/Highway Commercial under the proposed UWSP. The current uses at that site would be permitted under this designation.

The commenter expresses an opinion on the merits of the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 24-5

I do not want the added noise and air pollution, strain on our infrastructure and utilities, increased traffic, loss of wildlife, loss of existing community & tradition, and destruction of natural resources. Open space is precious and disappearing quickly. Let the developer go elsewhere to get rich. It's already a nightmare trying to get homeowner's and flood insurance in this area. Build somewhere else. Please protect these farms that are the symbol and heart of Sacramento, and the reason I chose to live here.

RESPONSE 24-5

The commenter offers an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 25

RJ, member of the community, email correspondence; dated September 24, 2024.

COMMENT 25-1

I live in Natomas and oppose the Upper Westside Specific Plan. This area is not vacant, neglected lots in need of rehab. It is family farms and productive working lands. I'm not making plans for what to do with your wife after you're out of the picture, don't insult our landowners by making plans for what to do with their soil after they've been pushed out.

RESPONSE 25-1

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 25-2

Emotions aside, the Upper Westside Specific Plan does not align with the City of Sacramento's [2040 General Plan](#) and I urge you to scrap it and protect our farms.

RESPONSE 25-2

The proposed UWSP is located in Sacramento County and is not subject to City of Sacramento land use policies, including the 2040 General Plan. Please see Response 12-36.

COMMENT 25-3

Highlights from the 2040 Plan to keep in mind:

Sustainable and Responsible Growth lists as its #1 objective "Concentrate new growth within Sacramento's existing footprint to promote a compact development pattern that supports efficient delivery of public services and infrastructure, while protecting surrounding open space lands." Appendix A, Vision and Guiding Principles.

RESPONSE 25-3

Please see Response 25-2 above.

COMMENT 25-4

The Upper Westside Specific Plan falls within an area the City identifies as a "Special Study Area" currently composed of "Prime Farmland" and "Other Farmland." 3-3 p61

RESPONSE 25-4

Please see Response 12-36. Effects of the proposed UWSP related to agricultural resources are fully evaluated in Chapter 5, *Agricultural Resources*, of the Draft EIR.

COMMENT 25-5

Land Use and Placemaking highlights Sacramento's "1.5 million acres of some of the most fertile farmland in the United States," and as such, "planning efforts are guided by 'smart growth' principles that aim to promote a compact development footprint, helping to minimize urban sprawl and pollution." 3-2 p60

RESPONSE 25-5

Please see Response 12-36. Effects of the proposed UWSP related to agricultural resources are fully evaluated in Chapter 5, *Agricultural Resources*, of the Draft EIR. Effects of the proposed UWSP related to land use are fully evaluated in Chapter 14, *Land Use*, of the Draft EIR.

COMMENT 25-6

The Community Issues and Opportunities section of the plan notes that "North Natomas has some of Sacramento's biggest opportunities for infill and redevelopment," pointing out that "vacant and underutilized properties along the I-5 corridor, Del Paso Road, and Truxel Road are opportunities for infill development that make use of existing infrastructure and community resources." 11-NN-5 p367

RESPONSE 25-6

Please see Response 12-36.

COMMENT 25-7

The 2040 Plan does not endorse expanding the urban services boundary or rezoning agriculture to residential or commercial use.

RESPONSE 25-7

Please see Response 12-36.

COMMENT 25-8

When mentioning the proposals for the Upper Westside and Grandpark Specific Plans, community feedback showed "North Natomas residents want to see preservation of natural areas, including wildlife habitats and corridors within the unincorporated area consistent with the HCP; and want new development to have a compact form, integrated with existing development within the city so as to minimize traffic impacts and utility demand, and take advantage of opportunities for improved bicycle and pedestrian connectivity." 11-NN-5 p367-8

RESPONSE 25-8

The Draft EIR fully evaluates the physical effects on the environment that could result with implementation of the proposed UWSP in accordance with the requirements of CEQA, including effects related to biological resources, land use, transportation, and utilities.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 25-9

Environmental Resources and Constraints objective #2 is “Thriving rivers, wildlife, and natural open spaces that contribute to public health, livability, and protection of the environment for future generations.” 6-3 p131

RESPONSE 25-9

The Draft EIR fully evaluates the physical effects on the environment that could result with implementation of the proposed UWSP in accordance with the requirements of CEQA, including effects related to biological resources, land use, transportation, and utilities.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 25-10

Sprawling beyond the City's current boundary to pave over food production and destroy wildlife habitat is not what we want. The Upper Westside Specific Plan is a direct contradiction to the goals and wishes of our community.

RESPONSE 25-10

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 25-11

Stop this nonsense. Your time and resources are better spent elsewhere.

RESPONSE 25-11

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 26

Ashley Cajigas, member of the community, email correspondence; dated October 3, 2024.

COMMENT 26-1

I am sending this email in opposition to the Upper Westside Specific Plan that threatens our environment, wildlife habitat, and our community. As the Draft Environmental Impact Report clearly states, the project would result in **SIGNIFICANT** and **UNAVOIDABLE** impact on the aesthetics, agricultural resources, air quality, cultural and historical resources, noise, population and housing, transportation, and tribal cultural resources. It will further impact climate change, geology, soils, hydrology, drainage, water quality, public services, and water supply to name just a few of the impacts on our region and community.

RESPONSE 26-1

The comment expresses opposition to the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 26-2

As a homeowner on Garden Highway, my family and neighbors have already seen the destruction of habitat, increased traffic, noise, impact on our water supply, and pollution resulting from the levee project. We have seen public safety response times decrease in addition to increased crime. I am deeply concerned about the additional pressure and burdens placed on our community if the Upper Westside Specific Plan moves forward.

RESPONSE 26-2

The commenter expresses an opinion on the merits of the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 26-3

Those of us who live in and around Natomas enjoy living in close proximity to locally owned and operated farms and farm stands, such as Cuevas Garden Hwy Gardens and Nick & Ray's Pumpkin Patch, formerly known as Goblin Gardens Pumpkin Patch at Bastiao Farms, that have been operating for generations. THIS is what community looks like; not some overly modernized grid developed by greedy developers.

RESPONSE 26-3

The commenter expresses an opinion on the merits of the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 27

Residents of Creekside, Gateway West, Natomas Crossing, Natomas Park, Sundance Lake, Village 7, Westlake, and Willow Creek, members of the community; written correspondence; dated October 3, 2024.

COMMENT 27-1

1. Impact on Vernal Pools and Wetlands

The Upper Westside area is home to vernal pools, wetlands, and unique ecosystems that support a wide array of native species, including several threatened and endangered species such as the Vernal Pool Fairy Shrimp and Giant Garter Snake. The DEIR acknowledges significant impacts on these sensitive habitats, yet the mitigation measures proposed do not adequately ensure the preservation of these fragile ecosystems. These ecosystems serve critical ecological functions, including water filtration, flood control, and providing habitat for migratory birds.

It is essential that development in this area be halted or scaled back to protect these vital wetland habitats. There are insufficient guarantees that the mitigation banking proposed will fully offset the habitat destruction caused by the UWSP. Once these ecosystems are lost, they're gone.

RESPONSE 27-1

The commenter acknowledges the Draft EIR discussion of significant impacts to Biological Resources and expresses an opinion on the merits of the proposed project. As described under Mitigation Measure BR-11, permanently impacted jurisdictional wetlands or waters of the U.S., or waters of the State, will be compensated for at a 1:1 ratio or as required by the agencies that regulate such wetlands and waters (CDFW, USACE, and the Central Valley RWQCB, as applicable), and will be subject to performance standards, which will be outlined in an enforceable Mitigation and Monitoring Plan developed prior to the start of construction and in coordination with the applicable permitting regulatory agencies listed above.

COMMENT 27-2

2. Flood Risks

The Natomas Basin is highly flood-prone, and the area identified for the UWSP sits within a FEMA-designated floodplain. Although the DEIR discusses levee improvements, the increased urbanization of this area would exacerbate flood risks and strain existing infrastructure. Climate change is expected to intensify the frequency and severity of extreme weather events, which could lead to catastrophic flooding, particularly as the Sacramento River and its tributaries swell.

Increased development in a flood-prone area runs counter to the region's commitment to climate resilience and puts both future residents and current taxpayers at risk, as

levee failures or extreme floods would require significant public funding to mitigate the damage.

RESPONSE 27-2

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIRs assessment of flood protection and drainage.

COMMENT 27-3

3. Increased Traffic and Air Pollution

The proposed UWSP would lead to an increase in vehicle traffic, contributing to greater air pollution and greenhouse gas emissions. The DEIR suggests that roadway improvements and public transportation will address these issues, but realistically, the majority of residents will rely on personal vehicles. With climate change already affecting California, adding thousands of new car trips per day will only exacerbate the region's air quality problems and hinder the state's ability to meet its emissions reduction goals under SB 32.

RESPONSE 27-3

The comment is correct that the UWSP would lead to an increase in vehicle traffic. Transportation impacts of the proposed project are discussed in Draft EIR Chapter 18, *Transportation*, air quality impacts are discussed in Draft EIR Chapter 6, *Air Quality*, and greenhouse gas emission impacts are addressed in Draft EIR Chapter 8, *Climate Change*.

COMMENT 27-4

4. Water Supply and Sustainability Concerns

The region is already experiencing significant water supply challenges due to prolonged droughts and over-extraction of groundwater. The Upper Westside Specific Plan would place additional stress on water resources, further threatening the long-term sustainability of the Sacramento Valley's water supply. The DEIR's analysis of water resources fails to adequately address how the proposed development will impact both surface and groundwater in the long term, particularly in light of recent droughts and climate forecasts predicting decreased water availability in the region.

RESPONSE 27-4

Please see Response 15-65. The Draft EIR analysis of water supply impacts of the proposed project, included in Chapter 20, *Utilities*, of the Draft EIR, meets all CEQA requirements of the analysis of water in an EIR. The Draft EIR presented the water supply demand associated with the proposed project, the availability of water supplies (surface and groundwater) that could meet projected demand from the proposed project and existing plus future demand in all water year types including, single dry, critical dry and multiple dry years. As explained previously, the SCWA would provide water service

to the development within the proposed project, delivering water supply that would be purchased through a wholesale agreement from the City of Sacramento. The City's Urban Water Management Plan, as required by the California Department of Water Resources, prepared a drought risk assessment that will be implemented under drought conditions or other water shortages. The Water Supply Assessment, included in the Draft EIR in Appendix UT-1, documents the availability of water supply from the City of Sacramento under normal, single dry, critical dry and multiple dry year scenarios including cumulative demands over a 20-year horizon period.

COMMENT 27-5

5. Inconsistent with Regional Conservation and Smart Growth Principles

The UWSP is inconsistent with the Sacramento Area Council of Government's (SACOG) Blueprint for Smart Growth, which emphasizes compact, transit-oriented - development that conserves open space and minimizes environmental impacts. The vast scale of the proposed development contradicts these principles and sets a dangerous precedent for unchecked urban sprawl, threatening not only natural habitats but also agricultural lands in the region.

Instead of encouraging suburban sprawl, Sacramento County should focus on infill - development and increasing density within existing urban areas, where infrastructure can be more sustainably managed, and impacts on natural landscapes are minimized.

RESPONSE 27-5

Please see Master Response LU-3: SACOG Blueprint and MTP/SCS. In addition, please see discussion of the SACOG Blueprint in Responses 12-17, 15-2, 17-8, and 19-25.

The commenter expresses an opinion on the merits of the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project

LETTER 28

Lisa Boyle, member of the community, email correspondence; dated October 4, 2024.

COMMENT 28-1

I am sending this email in opposition to the Upper Westside Specific Plan that threatens our environment, wildlife habitat, and our community. As the Draft Environmental Impact Report clearly states, the project would result in **SIGNIFICANT** and **UNAVOIDABLE** impact on the aesthetics, agricultural resources, air quality, cultural and historical resources, noise, population and housing, transportation, and tribal cultural resources. It will further impact climate change, geology, soils, hydrology, drainage, water quality, public services, and water supply to name just a few of the impacts on our region and community.

RESPONSE 28-1

The comment expresses opposition to the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 28-2

As a homeowner on Garden Highway, my family and neighbors have already seen the destruction of habitat, increased traffic, noise, impact on our water supply, and pollution resulting from the levee project. We have seen public safety response times decrease in addition to increased crime. I am deeply concerned about the additional pressure and burdens placed on our community if the Upper Westside Specific Plan moves forward.

RESPONSE 28-2

The commenter expresses an opinion on the merits of the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 28-3

Those of us who live in and around Natomas enjoy living in close proximity to locally owned and operated farms and farm stands, such as Cuevas Garden Hwy Gardens and Nick & Ray's Pumpkin Patch, formerly known as Goblin Gardens Pumpkin Patch at Bastiao Farms, that have been operating for generations. THIS is what community looks like; not some overly modernized grid developed by greedy developers.

RESPONSE 28-3

The commenter expresses an opinion on the merits of the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 29

Liz Bergeron, member of the community, written correspondence; dated October 7, 2024.

COMMENT 29-1

I am writing to express my strong opposition to the Upper Westside Specific Plan as outlined in the Draft Environmental Impact Report (DEIR), dated August 2024. The project presents significant and unacceptable environmental and community impacts that cannot be sufficiently mitigated. Specifically, I am concerned about the increase in traffic, deterioration of air quality, irreversible loss of agricultural land, destruction of critical habitat for endangered species, and disruption of migratory bird patterns.

RESPONSE 29-1

This comment expresses opposition to the proposed project, it raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 29-2

1. Unacceptable Increase in Traffic

The proposed development will result in a substantial and unavoidable increase in traffic congestion. The DEIR's acknowledgment of traffic impacts, including the projected rise in vehicle miles traveled (VMT), is deeply concerning. The existing infrastructure is ill-equipped to handle the dramatic increase in population and vehicular traffic, particularly along critical roads like El Centro Road and West El Camino Avenue. This will lead to worsened commute times, increased air pollution from vehicle emissions, and heightened risks of accidents.

The mitigation measures outlined in the DEIR, such as improvements to local roads and intersection upgrades, are inadequate given the scale of the development. No amount of roadway expansion can fully address the significant traffic burden this project will impose. I strongly oppose the project on the grounds that it will create unmanageable traffic conditions, further degrading the quality of life for existing residents.

RESPONSE 29-2

Contrary to the comment's assertion, the project's VMT impacts were not found to cause a significant impact. The Draft EIR discloses how the project would increase queuing at freeway off-ramps and on-ramp ramp meters, which could have detrimental safety effects. Mitigations are recommended to address those conditions.

Please also see Master Response TR-3: Traffic Congestion.

COMMENT 29-3

More specifically, as a resident of Swallows Nest (at the corner of Garden Highway and Orchard Lane), I travel Garden Highway frequently. It is a narrow two-lane road that cannot be widened. The impact on Garden Highway alone should be significant cause for concern. Cars already exceed the 40 MPH speed limit and unsafely pass other cars on a regular basis. The significant increase in traffic on Garden Highway because of this project will surely lead to an increase in fatal accidents.

RESPONSE 29-3

Please see Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 29-4

The other significant impact will be the overpass of West El Camino Avenue at Interstate 80. It sounds as though the mitigation measure in the DEIR may or may not happen. The overpass is also a two-lane roadway that is already bumper to bumper on a regular basis. If this project is approved, widening of this key overpass should be a requirement prior to beginning development.

RESPONSE 29-4

Reconstruction of the I-80/West El Camino Avenue interchange is identified as an improvement under Mitigation Measure TR3a and is included (at 90 percent of the total cost) in the UWSP Public Facilities Financing Plan. It would take many years of development to result in the impacts from vehicular traffic that would require mitigation. Thus, there is no need to implement this improvement prior to the start of development of the proposed project. Implementation of this mitigation measure would be funded from development of the project. The exact timing of the improvement would be established based on the pace of development and the design approval process that would involve the County, the City, and Caltrans.

COMMENT 29-5**2. Detrimental Impact on Air Quality**

The construction and operation of the Upper Westside Specific Plan will lead to a sharp increase in air pollution, exacerbating already poor air quality in the region. The DEIR acknowledges significant emissions of particulate matter (PM_{2.5}), nitrogen oxides (NO_x), and other harmful pollutants. The nearby residential communities, particularly vulnerable populations such as children and the elderly, will suffer the health consequences of this increased pollution.

The proposed mitigation measures, while helpful, are not sufficient to protect public health or meet the necessary air quality standards. The scale of development is simply too large for effective mitigation, and I oppose this project due to its unacceptable risks to air quality and public health.

RESPONSE 29-5

The comment is correct that the UWSP would lead to an increase in emissions of PM_{2.5} and NO_x, as disclosed in Draft EIR Chapter 6, *Air Quality*. The Draft EIR fully evaluated air quality impacts in Draft EIR Chapter 6. The proposed project would result in significant and unavoidable air quality impacts related to a conflict with an applicable air quality plan during project operation, emissions of criteria air pollutants and precursors during project operation, and exposure of sensitive receptors to toxic air contaminants (TACs) during project operation. More specifically, Draft EIR Impact AQ-4, Exposure of Sensitive Receptors to TACs, evaluates health risk impacts during construction and operation of the UWSP, and discusses the long-term operational health risk impacts that were determined to be significant and unavoidable. The EIR identifies all feasible mitigation to reduce these impacts, as required by CEQA.

COMMENT 29-6**3. Irreversible Loss of Farmland**

The Upper Westside Specific Plan will result in the permanent conversion of 1,372 acres of valuable farmland to urban uses. This represents a tragic and irreversible loss for Sacramento County's agricultural industry, a key component of the local economy. The mitigation measures proposed in the DEIR, such as the 1:1 farmland preservation ratio, do not compensate for the destruction of prime agricultural land that has sustained our community for generations.

Sacramento County's farmland is a finite resource, and this project's large-scale urban sprawl will permanently destroy it. This loss is unacceptable, and I oppose the project for its unsustainable consumption of irreplaceable agricultural land.

RESPONSE 29-6

Please see Master Response AR-1: Conversion of Farmland to Nonagricultural Uses.

COMMENT 29-7**4. Destruction of Habitat for Endangered Species**

The project will have devastating effects on critical habitats for several endangered and threatened species, including the giant garter snake and Swainson's hawk. Despite the mitigation measures outlined in the DEIR, the destruction of habitat will lead to a decline in these species, undermining years of conservation efforts in the region.

Urbanization on such a large scale is incompatible with the preservation of sensitive ecosystems. Habitat corridors and conservation easements are insufficient to counteract the profound disruption this development will cause to wildlife. I oppose the project because of its irreversible harm to endangered species and their habitats.

RESPONSE 29-7

The commenter noted that the project will result in a permanent loss of habitat for endangered species, including giant garter snake and Swainson's hawk, and expresses concern that the habitat loss could result in species declines. Note that there is no critical habitat, as defined by the United States Fish and Wildlife Service, present in the UWSP area for any listed species.

The analysis presented in the Draft EIR determined that development of the entire UWSP area would result in the loss of approximately 21.9 acres of suitable aquatic habitat for giant garter snake and 1,197 acres of Swainson's hawk foraging habitat. Mitigation Measure BR-3 would require compensatory mitigation for permanent impacts to giant garter snake habitat at a minimum 1:1 ratio. Mitigation Measure BR-7 would require compensatory mitigation for permanent impacts to Swainson's hawk foraging habitat at a minimum 1:1 ratio. The analysis in the Draft EIR finds that implementation of these mitigation measures would reduce the impact to giant garter snake and Swainson's hawk habitat to a less than significant level.

For a further response regarding the effects on giant garter snake and Swainson's hawk resulting from approval and development of the UWSP area, please see Master Response BR-3: Impacts on Giant Garter Snake Habitat, and Master Response BR-4: Impacts on Swainson's Hawk Zone.

COMMENT 29-8

5. Disruption of Migratory Bird Patterns

The project area serves as a crucial stopover for migratory birds protected under the Migratory Bird Treaty Act (MBTA). The DEIR outlines significant risks to nesting and migratory patterns, which are vital to the survival of many bird species. The loss of open space and wetlands will severely impact these birds, whose populations are already in decline.

The seasonal restrictions on construction and other mitigation measures mentioned in the DEIR are inadequate to protect the migratory bird populations. I oppose the project because it will cause significant and irreversible harm to these important avian species.

RESPONSE 29-8

As disclosed in the EIR, the Sacramento Valley is an important stopover area for migrating waterfowl, geese, shorebirds, and waterbirds that utilize flooded wetlands and flooded agricultural fields, primarily rice. However, the UWSP area includes little flooded habitat, which is limited to approximately 18 acres of pasture in the very southeast edge of the UWSP area. The pasture land cover is discontinuous and interspersed with ruderal, urban/developed, and valley oak land covers. Post-construction, this portion of the UWSP would be residential land use.

As the commenter points out, the Draft EIR analyzes impacts on nesting and migratory birds under Impact BR-5. Impact BR-5 evaluates the construction-related direct impacts

in the UWSP area and offsite improvements on migratory birds. To address this impact, Mitigation Measures BR-2a and BR-5 would reduce the potential impact on nesting birds by requiring the provision of environmental training for construction personnel; limiting construction to the non-nesting season when feasible or, if avoiding the nesting season is not feasible, conducting pre-construction surveys for nesting birds and establishing no-disturbance buffers around any active nests to ensure they are not disturbed by construction; and repeating the pre-construction surveys when work resumes after being suspended for seven days. Furthermore, mitigation for SWHA would result in additional conservation of agricultural lands within the region which could also be used by migratory birds. With implementation of these mitigation measures, the Draft EIR finds that impacts to nesting and migratory birds would be reduced to a less than significant level.

Please also see Response 19-77 regarding the effects of bird-window collisions on migratory birds.

COMMENT 29-9

Conclusion

In conclusion, I strongly oppose the Upper Westside Specific Plan. The project will have severe, long-lasting, and irreversible impacts on traffic, air quality, agricultural land, endangered species, and migratory birds. The proposed mitigation measures are insufficient to address the scale of harm this project will cause. I urge Sacramento County to reconsider and ultimately reject this unsustainable development.

Thank you for considering my opposition to the project. I hope that the County will prioritize long-term environmental and community health over short-term development interests.

RESPONSE 29-9

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 30

Linn Hom, member of the community, email correspondence; dated October 12, 2024.

COMMENT 30-1

I oppose the Upper Westside Plan. This project greatly threatens our environment, wildlife habitat and our community. As the draft Environmental Impact Report states that this project would result in **significant** and **unavoidable** impact on the aesthetics, precious resources (such as agricultural, cultural, historical and tribal), air quality, noise, population, and transportation.

RESPONSE 30-1

The comment expresses opposition to the proposed project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 30-2

I object to the paving over farmland which will increase traffic congestion on Interstate 5 and 80 and its connecting roads, along with increasing the poor air quality from cars and trucks.

RESPONSE 30-2

The commenter expresses an opinion on the merits of the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

Please also see Master Response TR-3: Traffic Congestion.

COMMENT 30-3

Another threat of this project is to public safety because it increases flood danger to current residents.

I urge the members of the CPAC to **reject** this project.

RESPONSE 30-3

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR assessment of flood protection and drainage.

LETTER 31

Josh W. Harmatz, member of the community, written correspondence; dated October 13, 2024.

COMMENT 31-1

Traffic Impacts and Roadway Conditions

The roads in question, including Garden Highway, are currently narrow, single-lane roads that do not meet current county standards, with lane widths ranging from 8 feet to 10 feet. According to the Local Transportation Analysis (March 2022), these roads are already at or near capacity in peak travel times, and the additional traffic from the proposed 25,000 new residents, heavy commercial vehicles, and workers commuting to the commercial spaces at Metro Air Park will severely exacerbate the existing problems.

RESPONSE 31-1

This comment mischaracterizes several of the findings from the LTA (Table 11 of the LTA, see Appendix TR-2). In contrast to the comment, no roads in the study area have lane widths as narrow as 8 feet. The following roadway segments in the study area have less than 24 feet of pavement width and less than a six-foot shoulder and are consider substandard: Del Paso Road; San Juan Road; Powerline Road; Garden Highway; and Bayou Way. These roadways operate at acceptable levels (i.e., 6,000 or fewer vehicles per day) and are not at or near capacity as suggested by the comment. In addition, the proposed UWSP would not cause these roadways to exceed average daily traffic of 6,000 vehicles and would not add 600 or more vehicle trips to a substandard rural roadway that already carries 6,000 or more daily vehicles.

Furthermore, level of service and other measures of delay is no longer considered an impact under CEQA. Please see Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 31-2

The Draft EIR acknowledges the requirement to widen Garden Highway to 12 feet in each direction, with a 6-foot shoulder. However, the current development proposal does not provide adequate solutions for how this widening will be funded or executed. Recent improvements to the levee system along Garden Highway, including setback levees and power pole relocations, have already been completed without considering the road widening necessary for this project. Additionally, neither the U.S. Army Corps of Engineers nor the Central Valley Flood Protection Board have been consulted regarding these modifications, which are crucial to ensure both traffic safety and flood protection.

RESPONSE 31-2

Please see Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 31-3

Recommendation: I strongly urge the Board to delay approval of the Upper Westside Specific Plan until the necessary road improvements are fully funded and coordinated with the U.S. Army Corps of Engineers and the Central Valley Flood Protection Board. This coordination is essential to prevent conflicts with existing flood protection measures and to ensure that these roads can safely accommodate the additional traffic load.

RESPONSE 31-3

This comment requests the County to delay approval of the proposed project, It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project. Please see Response to Comment 31-1. These roadways operate at acceptable levels (i.e., 6,000 or fewer vehicles per day) and are not at or near capacity as suggested by the comment. In addition, the proposed UWSP would not cause these roadways to exceed average daily traffic of 6,000 vehicles and would not add 600 or more vehicle trips to a substandard rural roadway that already carries 6,000 or more daily vehicles.

COMMENT 31-4

Request for Updated Freeway and Local Road Impact Study

The current traffic analysis does not adequately address the potential for freeway congestion along highways I-5 and 99 to divert traffic onto local roads such as Powerline Road and Garden Highway. During peak congestion, vehicles, including heavy trucks, often reroute through these roads to access I-80 or downtown Sacramento. With future developments such as 3 million square feet of commercial space at Metro Air Park, the Watt EV project, Sacramento Airport expansion, Airport South Industrial Project, and the Upper Westside development, freeway congestion and traffic rerouting will worsen significantly and were not adequately modeled in the 2022 traffic study.

Recommendation: A revised comprehensive freeway impact study should be commissioned to evaluate the rerouting effects during peak traffic times. The study should assess how increased traffic from these developments will impact Powerline Road and Garden Highway and provide mitigation measures to prevent traffic volumes from exceeding road capacity. It is critical to address these freeway impacts before development moves forward.

RESPONSE 31-4

Freeway mainline traffic operations were not analyzed in either the LTA or CEQA TIA because it is not required under CEQA. Furthermore, Caltrans policies do not require such analyses. The LTA did consider how changes in conditions between current and future year conditions would affect background traffic and the distribution of project trips.

This includes the new I-5/Metro Air Parkway interchange, additional development in Metro Air Park, and the effects of increased traffic on freeways. Some diversion of traffic to local streets is expected and is evidenced by the projected increases in traffic on local streets such as Garden Highway, Power Line Road, San Juan Road, Power Line Road, and Del Paso Road. Please see Response to Comment 31-1. These roadways operate at acceptable levels (i.e., 6,000 or fewer vehicles per day) and are not at or near capacity as suggested by the comment. In addition, the proposed UWSP would not cause these roadways to exceed average daily traffic of 6,000 vehicles and would not add 600 or more vehicle trips to a substandard rural roadway that already carries 6,000 or more daily vehicles.

Please also see Master Response TR-3: Traffic Congestion.

COMMENT 31-5

Sand Cove Park and Beach – Environmental Impact on Salmon Population

Sand Cove Park, located at 2005 Garden Highway, will likely experience a sharp increase in visitors due to the 25,000 new residents joining the Upper Westside community. The EIR fails to address how this increased activity will impact the park's resources, such as parking, trash management, and safety, as well as the environmental impact on the Sacramento River and its protected salmon populations.

The Sacramento River is home to several protected salmon species under federal and state regulations. Increased human access to the river through the park could lead to pollution, illegal fishing, and habitat disruption, potentially harming these vulnerable species.

Recommendation: I urge the County to conduct a thorough study on the expected increase in visitors to Sand Cove Park, other riverside beach access areas, and its impact on the river's salmon population. This study should also include a plan for increased funding for trash management, parking, and enforcement of fishing regulations to protect the ecosystem. The potential harm to native fish populations due to increased human activity needs to be fully assessed and mitigated.

RESPONSE 31-5

The commenter expresses concern that the project would result in increased usage of Sand Cove Park, which may in turn affect the park's resources. The commenter also raises a concern that increased public usage of park resources along the Sacramento River could negatively affect salmon. The comment requests that impacts of the project on native fish populations due to increased human activity be fully analyzed.

As noted in the EIR, the proposed project includes a parks program, which outlines the proposed parks and recreational facilities to be implemented in the UWSP area. The proposed UWSP parks program proposes a diverse mix of recreational amenities and public gathering spaces which are sized and distributed to serve the anticipated needs of the residents within the UWSP. Furthermore, Sand Cove Park is managed by the City

of Sacramento under its Park Master Plan, which includes actively managing park use levels and natural resources. The CDFW manages inland fishing through its Freshwater Sport Fishing Regulations while salmon fishing is managed under the Recreational Ocean Salmon Regulations. These regulations include take limitations and seasonal closures, thereby ensuring salmon populations are not unduly impacted by overfishing.

COMMENT 31-6

Class 1 Bike Path on Garden Highway Setback Levee

The proposed Class 1 bike path along the Garden Highway setback levee raises concerns. A Class 1 bike path must meet specific standards, such as providing an 8-12 foot wide paved right-of-way for exclusive bicycle and pedestrian use, with a 2-foot shoulder on each side. However, the Draft EIR lacks details on funding, the construction timeline, and coordination with the Central Valley Flood Protection Board and the U.S. Army Corps of Engineers to remove existing barriers like power poles and steel barriers.

Recommendation: The County should require a fully developed plan for the Class 1 bike path, detailing how it will meet Sacramento County's design standards. This plan must include specific funding sources and commitments from the Central Valley Flood Protection Board and the U.S. Army Corps of Engineers to remove existing obstacles. Additionally, the timeline for the bike path's construction should align with the overall development project to ensure that it is built in a timely manner.

RESPONSE 31-6

Please see Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 31-7

Safety Concerns for Pedestrians and Residents

The increased traffic, particularly from large commercial vehicles (over 7 tons) that the project will bring, will pose significant safety risks to pedestrians, cyclists, and local residents along Garden Highway, Powerline Road, and West Del Paso Road. These roads are currently not suitable for high-traffic volumes, and the narrow widths, lack of proper shoulders, and deteriorating conditions make them dangerous for both motorists and non-motorists.

The Draft EIR acknowledges that operational deficiencies and potential safety issues at key intersections will remain significant and unavoidable, even with proposed mitigation measures. However, the plan does not provide adequate detail on how safety improvements will be implemented or who will fund these measures.

Recommendation: I urge the County to require the developer to provide detailed safety mitigation measures, including specific funding commitments and timelines for road widening, signage upgrades, and pedestrian infrastructure. Additionally, there should be traffic calming measures to slow down vehicles and protect non-motorists.

RESPONSE 31-7

Please see Master Response TR-2: Garden Highway Safety Considerations regarding Garden Highway cross-section, collision history, signage, and planned improvements. With regard to Power Line Road and “West Del Paso Road”. According to the LTA, the project would increase traffic levels on Power Line Road from 2,500 to 4,800 ADT, causing operations to worsen from LOS C to D. However, the roadway would continue to operate acceptably (i.e., would not exceed 6,000 vehicle per day with the proposed UWSP).. Mitigation TR-1 would require the applicant for pay their fair share of the cost of improving Power Line Road from Bayou Way to Garden Highway, and Garden Highway from Power Line Road to San Juan Road, to current County design standards. Payment for improvements would be made by the applicant to Sacramento County, which would be responsible for making the improvements. The proposed project would not add any traffic to Del Paso Road east of Garden Highway. Accordingly, no improvements were identified.

Contrary to the comment’s assertion, the Draft EIR clearly describes the improvements which would be required as project-specific responsibilities, and those which would be fair share responsibilities. The mitigation measures describe how the improvement is to be implemented, which party implements it, and then describes the residual significance of the impact after the mitigation is implemented.

Regarding the comment requesting detailed safety mitigation measures, it is not clear whether this pertains to Garden Highway (the topic of much of this comment) or general roadways within and adjacent to UWSP. Regarding safety on Garden Highway, please see Master Response TR-2: Garden Highway Safety Considerations. Regarding safety of the roadway system planned for the proposed UWSP, it is noted that traffic calming measures and pedestrian infrastructure (e.g. sidewalks, crosswalks) intended to ensure safe and dedicated facilities for vulnerable road users would be required to be included in subdivision maps and improvement plans that would be submitted to the County. The Sacramento County Department of Transportation (DOT) reviewed the applicability of traffic calming measures for Garden Highway and determined that such measures are appropriate due to the roadway’s geometrics.

COMMENT 31-8

Impact on Emergency Response Times

The increased traffic and congestion from this development will also affect emergency response times. Garden Highway is a critical access route for emergency services, and increased congestion could significantly delay response times for fire, medical, and law enforcement services. The relocation of the primary fire station that serves the area compounds this concern.

Recommendation: The County should require an updated traffic study that addresses emergency vehicle access and response times under increased traffic conditions. This analysis should ensure that emergency services can maintain current response times, particularly during peak congestion periods.

RESPONSE 31-8

The proposed UWSP would not be expected to appreciably increase travel times on Garden Highway. This is evidenced by Table 12 of the LTA, which indicates that the proposed project would cause delay increases of less than five seconds per vehicle at intersections along Garden Highway near the project including at Del Paso Road, San Juan Road, Radio Road, Bryte Bend Road, and Orchard Lane. The proposed project would include a new fire station near the Town Center. This new fire station would be considerably closer to existing residences along Garden Highway west of the UWSP project site than either existing Fire Stations #15 or #43 located in the City of Sacramento.

COMMENT 31-9

Quality of Life and Long-Term Impacts

The projected traffic increases will not only affect road safety and emergency services but will also significantly reduce the quality of life for existing residents. Increased noise levels, air pollution, and the constant flow of large vehicles will make the area less livable and more hazardous for residents. The lack of current infrastructure to support this level of development will worsen congestion, leading to longer commute times and decreased property values.

Recommendation: The County should require a more current and detailed transportation study that takes into account post-pandemic traffic conditions, and the project should be delayed until all necessary infrastructure improvements are fully funded and approved. Additionally, any future development should include provisions for mitigating long-term impacts on air quality, noise, and local traffic congestion.

RESPONSE 31-9

Pages 15-35 to 15-39 in Chapter 15, *Noise*, of the Draft EIR, contain an analysis of traffic noise impacts. Significant traffic noise impacts were identified for six existing roadway segments. Mitigations strategies to address these significant traffic noise impacts are discussed on pages 15-40 and 15-41, and feasible mitigation measures (MM NOI-3a and MM NPO-3b) are identified on page 15-42.

Please see Response 31-8 above regarding emergency response times.

The comment pertaining to the 'constant flow of large vehicles' presumably is referring to project-related trucks using existing and new streets. Garden Highway is not identified as a truck route on either the City of Sacramento or Sacramento County truck route maps. Both maps identify West El Camino Avenue west of I-80 and El Centro Road between West El Camino Avenue and San Juan Road as truck routes.

It is acknowledged that the area lacks the roadway infrastructure required to accommodate full buildout of the project. Draft EIR Plate TR-3 illustrates the various six-lane thoroughfares, four-lane arterials, and two-lane arterial/collector streets that would be constructed to support the project. In addition, the I-80/West El Camino Avenue

interchange would be reconstructed. Please see Table ES-1 of LTA for full list of off-site improvements.

The suggestion to take into account post-pandemic traffic conditions would likely lead to the identification of fewer off-site roadway improvements required of the project (due to the project generating fewer trips, as remote work continues and traffic volumes in many areas have remained below pre-COVID levels).

The request to delay the project until all necessary infrastructure improvements are “fully funded and approved” is not feasible. First, agencies are often able to find a matching state or federal share of funds for a project that is partially funded by local revenue sources. But that match is often not identified for years after a project is approved. Second, approval of improvements requires more detailed studies, often involving agencies other than Sacramento County (i.e., Caltrans or City of Sacramento).

COMMENT 31-10

In conclusion, the Upper Westside Specific Plan, as currently proposed, will have severe and unavoidable impacts on traffic, safety, emergency services, and the overall quality of life for existing residents. These issues are not adequately addressed in the Draft EIR, and there is a clear need for more comprehensive planning and coordination before this project can proceed.

I respectfully urge the Board of Supervisors to delay approval of the project until the following conditions are met:

1. Completion of a fully funded and detailed plan for widening Garden Highway to County standards (12 feet wide lanes with 6-foot shoulders) in coordination with the U.S. Army Corps of Engineers and the Central Valley Flood Protection Board.
2. Commissioning of a revised freeway impact study to analyze rerouting effects from post-pandemic traffic and nearby developments in the approval and development process, and their impacts on Powerline Road and Garden Highway.
3. Implementation of clear and specific safety measures for pedestrians, cyclists, and motorists, with funding commitments from the developer.
4. Completion of a current, updated urban road traffic study that takes into account post-pandemic traffic patterns and ensures that the roadways can handle the projected traffic volumes.
5. Coordination with emergency services to ensure that response times are not adversely affected by increased traffic and congestion.
6. A comprehensive study on the environmental impacts to Sand Cove Park and the Sacramento River to assess increased human activity's effects on the protected salmon population, with mitigation measures to address trash management, fishing regulations, and park infrastructure.

7. A fully developed plan for the proposed Class 1 bike path, detailing the design, funding sources, and agency commitments necessary to remove existing barriers.

RESPONSE 31-10

Please see Responses 31-1 through 31-9 above.

LETTER 32

Angie Sawaya, member of the community, email correspondence; dated October 13, 2024.

COMMENT 32-1

I am writing to express my strong opposition to the Upper Westside Specific Plan as currently proposed. While I recognize the need for urban development, the proposed project fails to adequately address the significant environmental concerns posed by its proximity to the Natomas Basin and Fisherman's Lake, critical habitats for several protected species, including the **Swainson's Hawk (*Buteo swainsoni*)** and the **Giant Garter Snake (*Thamnophis gigas*)**. Both species are listed as threatened under California and federal laws, and this project poses severe risks to their populations, as well as to the broader ecosystem of the region.

RESPONSE 32-1

Please also see Responses 32-2 to 32-4 below.

COMMENT 32-2

1. Inadequate Buffer Zones and Encroachment on Habitat

The proposed development plans to extend dangerously close to the boundaries of the Natomas Basin and Fisherman's Lake. For species like the Swainson's Hawk and the Giant Garter Snake, maintaining appropriate buffer zones is critical for minimizing disturbances. The Swainson's Hawk relies on open grasslands for nesting and foraging, and the close proximity of residential and commercial development will drastically reduce the available habitat and increase the risk of disturbance. Urban encroachment within **0.5 miles** of Swainson's Hawk nesting sites can lead to nest abandonment and population decline, yet the plan does not offer adequate setbacks from known nesting areas.

RESPONSE 32-2

Buffers within and adjacent to the Natomas Basin Conservancy's reserve lands are addressed under Impact BR-14 on pages 7-76 to 7-84 in the Draft EIR. The proposed UWSP would not affect the buffers within existing reserve lands, including Alleghany, Ann Rudin, and Cummings within the Fisherman's Lake Reserve. In addition, Impact BR-14 describes the proposed buffers between the proposed UWSP and the Cummings Reserve and Alleghany Reserve and analyzes potential operational impacts of the project on the reserves and concludes that the proposed UWSP would not alter the effectiveness of reserve buffers.

Mitigation Measure BR-3 requires compensatory mitigation for permanent impacts to giant garter snake habitat, which can be achieved through either 1) purchase of credits from a CDFW- and USFWS-approved conservation; 2) payment to an existing in-lieu

fee program; 3) creation, restoration, or enhancement, and preservation and management of suitable aquatic and associated upland habitat for giant garter snake; or bank; or 4) preservation and management of existing giant garter snake habitat through acquisition of fee-title or a conservation easement and funding for long-term management of giant garter snake habitat at a site.

Similarly, Mitigation Measure BR-7b requires compensatory mitigation for permanent impacts to Swainson's hawk foraging habitat and nesting habitat (for the latter, please see Response 3-4). Mitigation measure BR-7a describes avoidance and minimization impacts on nesting Swainson's hawks during construction by avoiding construction during the nesting season or, if that is not possible, establishing a no-disturbance buffer, conducting nest monitoring to ensure work does not threaten to cause a nest failure, and halting construction if nesting birds area disturbed.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 32-3

Similarly, the Giant Garter Snake depends on wetland habitats, and the project's proximity to these sensitive wetlands risks both habitat destruction and fragmentation. Current research indicates that this species requires extensive wetland corridors for foraging and migration, and buffer zones of at least **300 feet** from wetland edges are necessary to preserve this habitat. The Upper Westside Specific Plan fails to provide sufficient protection for these wetland areas, leading to potential habitat loss and further population declines.

RESPONSE 32-3

Because construction of the proposed UWSP requires permanent removal (filling) of irrigation ditches and development of associated upland habitat, Mitigation Measure BR-3 would require the proposed UWSP to provide compensatory mitigation for permanent impacts to giant garter snake habitat. TNBC's Annual Effectiveness Monitoring for the Natomas Basin Habitat Conservation Plan Area within the Fisherman's Lake Reserve, including the Alleghany, Cummings, Natomas Farms, Rosa Central, Rosa East, Souza, and Anne Rudin properties, has not detected giant garter snake since 2017 and reports that the Reserve is likely not demographically connected to the Central Basin Reserve and North Basin Reserve.

Mitigation Measure BR-3 would require compensatory mitigation for permanent loss of giant garter snake habitat due to construction of the proposed UWSP. Mitigation sites would be located outside of the Natomas Basin and in the American Basin Recovery Unit as defined in the *Recovery Plan for Giant Garter Snake (Thamnophis gigas)*, which could improve demographic connectivity with the North Basin Reserve and thereby result in population increases.

Please also see Response 32-4 below.

COMMENT 32-4**2. Long-term Construction Disturbance and Habitat Degradation**

The multi-year construction process associated with a development of this scale will have a prolonged and cumulative impact on the wildlife in and around Fisherman's Lake. Noise, light pollution, and physical disturbances caused by heavy machinery will disrupt the natural behaviors of both the Swainson's Hawk and Giant Garter Snake, particularly during critical periods such as nesting, foraging, and migration. Continuous construction activities may lead to nest abandonment for the hawk, and could displace or even kill Giant Garter Snakes during their active season.

RESPONSE 32-4

As described in Draft EIR Chapter 2, *Project Description*, the proposed UWSP would include a non-landscaped, 250-foot-wide open space buffer corridor along the south side of Fisherman's Lake Slough, as shown in Plate PD-13. No construction would occur within 250 feet of Fisherman's Lake and very low density residential development would be constructed more than 250 feet from Fisherman's Lake.

Mitigation Measure BR-3 includes avoidance and minimization measures for giant garter snake that are specific to construction activities within 200 feet of aquatic giant garter snake habitat to avoid and mitigate harm to the species.

Mitigation Measure BR-7a includes avoidance and minimization impacts on nesting Swainson's hawks during construction by avoiding construction during the nesting season or, if that is not possible, establishing a no-disturbance buffer, conducting nest monitoring to ensure work does not threaten to cause a nest failure, and halting construction if nesting birds area disturbed.

COMMENT 32-5**3. Traffic Congestion and Infrastructure Strain**

The DEIR acknowledges that the introduction of thousands of housing units and commercial space will increase traffic in the area, yet the mitigation strategies outlined in the report are insufficient to address the scale of the congestion that will follow. The surrounding freeway systems, including major interchanges, are already heavily trafficked, and the addition of this development will exacerbate an already strained infrastructure. Without significant upgrades to these systems and the development of alternative transportation solutions, traffic congestion will become a major quality-of-life issue for both existing and new residents.

RESPONSE 32-5

Please see Master Response TR-3: Traffic Congestion.

COMMENT 32-6

The DEIR does not adequately account for the impact on nearby interchanges, particularly those connecting to the I-5 and I-80 corridors, which will experience heightened congestion as a direct result of this project. Further evaluation and traffic impact studies need to be conducted to provide a more realistic picture of how this development will affect commuting patterns and regional traffic flows.

RESPONSE 32-6

Please see Master Response TR-3: Traffic Congestion.

COMMENT 32-7**4. Noise Pollution from Sacramento International Airport**

The proximity of this development to Sacramento International Airport introduces a significant noise pollution risk that has not been fully addressed in the DEIR. The noise generated by airport traffic, including both passenger and cargo flights, will have detrimental effects on residents' health and quality of life, particularly in the absence of appropriate mitigation measures.

Despite recognition of noise as a potential issue, the DEIR does not offer robust solutions for how to mitigate airport noise for the thousands of new residents expected in the area. Sound insulation and other building standards need to be enforced to ensure that homes are adequately protected from constant aircraft noise. Additionally, establishing more comprehensive buffer zones between the airport and residential areas is critical. I urge Sacramento County to ensure that all possible measures to minimize noise pollution are fully considered and implemented before any further development takes place.

RESPONSE 32-7

The impact of airport noise on the proposed residential receptors is addressed in Impact NOI-5 on pages 15-49 and 15-50 in Chapter 5, *Noise*, of the Draft EIR. The UWSP area is well outside of the 60 dB CNEL noise contours for the airport and is not located within the Noise Impact Area. However, as the UWSP area is located within Referral Area 2 of the Airport Influence Area, noise from aircraft overflights does have the potential to be a nuisance and could generate objections by residents and other sensitive receptors (such as schools, churches, theaters, etc.) within the UWSP area. Therefore, as stated in the Draft EIR and consistent with General Plan Policy NO-4, the following conditions have been placed on the Project as a condition of approval and would be applicable to all proposed residential uses within the UWSP:

- Provide minimum noise insulation to 45 dB CNEL within new residential dwellings, including detached single-family dwellings, with windows closed in any habitable room.

- Notification in the Public Report prepared by the California Department of Real Estate disclosing the fact to prospective buyers that the parcel is located within an Airport Policy Area.
- An Avigation Easement prepared by the Sacramento County Counsel's Office granted to the County of Sacramento, recorded with the Sacramento County Recorder, and filed with Department of Airports. Such Avigation Easement shall acknowledge the property location within an Airport Planning Policy Area and shall grant the right of flight and unobstructed passage of all aircraft into and out of the subject Airport.

COMMENT 32-8

Given the numerous environmental risks posed by this project, I urge the County of Sacramento and all relevant stakeholders to:

- Increase the size of buffer zones to **at least 0.5 miles** for Swainson's Hawk nesting sites and **300 feet** for wetlands critical to the Giant Garter Snake.

RESPONSE 32-8

The buffer zone for Swainson's hawk is 0.5 miles. As described in the Draft EIR, Mitigation Measure BR-7a requires preconstruction surveys during the Swainson's hawk nesting season within 0.5 mile of the proposed project footprint. Should an active Swainson's hawk nest be identified within 0.5 mile of the proposed project during any phase of construction, Mitigation Measure BR-7a stipulates that an Avoidance and Minimization Plan shall be developed and implemented in accordance with CDFW to protect the nesting hawks.

Mitigation Measure BR-3 restricts construction activities to the giant garter snake active season, generally May 1 – September 30 and requires pre-construction surveys for giant garter snake within 200 feet of suitable aquatic habitat for the species. This buffer distance is consistent with the Avoidance and Minimization Measures in the NBHCP (USFWS, 2017a). The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 32-9

Given the numerous environmental risks posed by this project, I urge the County of Sacramento and all relevant stakeholders to:

- Conduct further studies on the long-term impacts of construction and postconstruction habitat degradation on these sensitive species, and revise the DEIR to reflect these findings.

RESPONSE 32-9

The comment requests additional study and recirculation of the Draft EIR. Please see Response 19-1.

The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 32-10

Given the numerous environmental risks posed by this project, I urge the County of Sacramento and all relevant stakeholders to:

- Implement stronger, locally-focused mitigation measures, including on-site habitat restoration and enhancements, rather than relying on off-site mitigation banks.

RESPONSE 32-10

In general, mitigation bank credits are viewed as ecologically superior to permittee-responsible on-site restoration, as banks are located in areas with high species richness and habitat connectivity (see the 2008 Mitigation Rule that the USACE and EPA uses for reference).

COMMENT 32-11

Given the numerous environmental risks posed by this project, I urge the County of Sacramento and all relevant stakeholders to:

- Address the projected traffic impacts more comprehensively, focusing on the major freeways and interchanges affected by the new developments.

RESPONSE 32-11

Please Master Response TR-3: Traffic Congestion.

COMMENT 32-12

Given the numerous environmental risks posed by this project, I urge the County of Sacramento and all relevant stakeholders to:

- Enforce soundproofing measures in buildings near the airport and implement larger buffer zones to mitigate the adverse effects of noise pollution.

RESPONSE 32-12

Please see Response 32-7 with respect to the enforcement of soundproofing measures in buildings near the airport and the implementation of larger buffer zones to mitigate the adverse effects of noise pollution.

COMMENT 32-13

In conclusion, the Upper Westside Specific Plan, as currently proposed, presents significant risks to the Swainson's Hawk, Giant Garter Snake, and other wildlife that depend on the habitats within and around Fisherman's Lake. The environmental impacts of this development are far-reaching and potentially irreversible. The plan also fails to provide sufficient solutions to the significant increases in traffic and noise pollution. For these reasons, I strongly urge you to reject this plan or substantially revise it to prioritize the protection of the sensitive ecosystems, mitigate traffic concerns, and implement robust noise pollution controls before proceeding.

RESPONSE 32-13

The commenter expresses opposition to the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 33

Kaushal Sharma, member of the community, email correspondence; dated October 17, 2024.

COMMENT 33-1

1. Traffic: Since this development will tremendously increase the flow of traffic, what are the plans to overcome that congestion?

RESPONSE 33-1

Please see Master Response TR-3: Traffic Congestion.

COMMENT 33-2

2. Environmental Impact: Are there any native species that will be impacted by the project? If so, how are you mitigating it? Aren't we decreasing the natural habitat for those species?

RESPONSE 33-2

Draft EIR, Chapter 7, *Biological Resources*, includes an analyses of impacts on species identified as a candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS. Please see the analysis of impacts and mitigation measures for such species under Draft EIR Impacts BR-1 through BR-9, pages 7-40 through 7-84.

COMMENT 33-3

3. Flood Impact: Will this project decrease the area for groundwater recharge? Will the project increase the chance of flooding during a high water event? Will more impervious layers create high risk of flooding?

RESPONSE 33-3

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage.

COMMENT 33-4

4. Wildlife Impact: This project will cause significant and long term impact on existing wildlife habitat.

RESPONSE 33-4

The commenter expresses an opinion on the merits of the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant

to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

Please also see Response 33-2 above.

LETTER 34

Don Fraulon and Melissa Brown, members of the community, email correspondence; dated October 21, 2024.

COMMENT 34-1

1. Public hearings on expanding the Urban Services Boundary are necessary.

This project is outside the Urban Services Boundary. Before considering any development outside the Urban Services Boundary, the County should pause development applications outside the Urban Services Boundary and hold hearings on whether the Urban Services Boundary should be expanded and consider the significant negative impacts on the environment and Sacramento County residents far beyond the Upper Westside project area.

RESPONSE 34-1

The statement that the UWSP would be developed outside the USB is incorrect. While the UWSP project site is currently located outside the USB and is not designated for development, as stated on page 2-14 in Chapter 2, *Project Description*, of the Draft EIR, required entitlements for the proposed UWSP include a General Plan Amendment to expand the USB and the UPA to include the proposed UWSP Development Area. Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area.

COMMENT 34-2

2. This project's urban sprawl is unacceptable. The County's 2030 General Plan, County zoning, the Urban Services Boundary, the Urban Policy Area, and SACOG's Blueprint for regional development all seek to avoid. The land use strategies and policies of the Sacramento County 2030 General Plan were designed to promote the efficient use of land, encourage economic vitality and reduce urban sprawl and its impacts, preserve habitat and open space, and protect local farming. The Urban Services Boundary was intended to implement that vision and promote orderly growth within the County. The proposed project violates the County's 2030 General Plan, County zoning, the Urban Services Boundary, the Urban Policy Area, and SACOG's Blueprint for regional development. There is no rationale is presented in the EIR, for approving this project outside the Urban Services Boundary.

RESPONSE 34-2

As discussed in Chapter 14, *Land Use*, of the Draft EIR, the proposed UWSP meets both regional and County visions and plans intended to promote smart growth principles, including compact development, mixed-use development, housing choice and diversity, transportation choice, reduction of vehicle miles travelled (VMT), reduction of greenhouse gas (GHG) emissions, natural resource conservation, and quality design.

As discussed in Impact LU-3 in Chapter 14, *Land Use*, of the Draft EIR, County General Plan Policy LU-120 is intended to reduce impacts of many different types – such as growth inducement, unacceptable operating conditions on roadways, poor air quality, and lack of appropriate infrastructure. Policy LU-120 represents a performance-based approach emphasizing high quality, smart growth criteria. Draft EIR Table LU-3, pages 14-29 through 14-31, includes a discussion of consistency of the proposed UWSP with the performance criteria of Policy LU-120.

As discussed in Chapter 14, *Land Use*, of the Draft EIR, the UWSP area and the proposed UWSP are not anticipated for development in the SACOG Blueprint. However, as discussed in Impact LU-4 on pages 14-23 through 14-33 of the Draft EIR, the proposed UWSP aligns with many of the principles contained in the Blueprint, including compact development, mixed-use development, housing choice and diversity, transportation choice, reduction of VMT, reduction of GHG emissions, natural resource conservation, and quality design. Moreover, the Blueprint is intended to be advisory and to guide the region's transportation planning and funding decisions. As discussed in Chapter 14, while an EIR may provide information regarding land use and planning issues, CEQA does not consider inconsistency with land use plans and policies to be a physical effect on the environment unless the plan or policy was adopted for the purpose of avoiding or mitigating a significant environmental effect.

Regarding the assertion that the proposed UWSP could induce sprawl, the proposed UWSP is immediately adjacent to existing and planned development, including residential uses within the City of Sacramento's North Natomas and South Natomas community that are located to the north and east of the UWSP area. As discussed in Chapter 14, *Land Use*, of the Draft EIR, extensive planning efforts for the County lands located near the North Natomas community have established guiding principles for future master planning efforts within the Natomas Joint Vision Area. As discussed in Chapter 14, the proposed UWSP's community form responds to this important groundwork, and the proposed UWSP has been determined to be consistent with County General Plan Policy LU-114, which specifies that development and open space preservation in the Natomas Joint Vision Overlay Area occur in a comprehensive, responsible, and cohesive manner that best addresses land use, economic development, and environmental opportunities and challenges in Natomas.

General Plan Policy LU-127 specifies that expansion of the USB is subject to the discretion of the Board of Supervisors. Accordingly, the Board will consider the proposed expansion of the USB in its decision whether to approve the proposed UWSP in accordance with Policy LU-127 and CEQA. Please see Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 34-3

3. This project harms the entire Sacramento community because of the loss of open space, and habitat and their associated recreational benefits; the loss of farmland; a significant increase in roadway dangers because of increased traffic on rural roads and increased congestion and conflicts at freeway on and off ramps which may not be able

to be mitigated for some time; and a significant increase in area air pollution which has health consequences for the entire Sacramento area. **The EIR fails to recognize that the project reduces Sacramento recreational opportunities**, because increased traffic in the project area, would make it unsafe for individual cyclists and cycling clubs, as well as motorcycle clubs and antique or specialty car clubs that use Garden Highway for recreation.

RESPONSE 34-3

The Draft EIR includes full analyses of the significant impacts of the proposed project on Agricultural Resources (see Chapter 5), Biological Resources (see Chapter 7), Parks and Recreation (see Chapter 17), Transportation (see Chapter 18), and Air Quality (see Chapter 6). Each of these issues is addressed in the context of reasonably foreseeable cumulative projects in Chapter 22, *Cumulative Impacts*. For further discussion of potential traffic safety issues on Garden Highway, please see Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 34-4

4. The EIR falsely claims that the project does not violate habitat conservation plans. We agree with the Environmental Council of Sacramento that the proposed project does violate approved habitat conservation plans and would lead to the permanent destruction of open space, habitat and wildlife.

RESPONSE 34-4

Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 34-5

5. The EIR fails to identify that river corridors are rare and valuable resources to residents of any community, and are particularly valued by Sacramento County residents for recreation, open space, wildlife, and local farmland. The proposed project introduces permanent harms by urbanizing a river corridor, putting urban activity within about 700 feet of Garden Highway and the river. River corridors need to be protected for current and future area residents.

RESPONSE 34-5

The Draft EIR accurately reflects the proximity of the proposed UWSP project area to the Sacramento River in text and graphics (see Chapter 2, *Project Description*, page 2-8, and Plates PD-2 through PD-5 (pages 2-4 through 2-7)). In its discussion of Issues Not Discussed in Impacts, the Draft EIR Biological Resources chapter states that “No riparian habitat or other sensitive natural community is present in the UWSP area. Therefore, no impact would occur, and this issue is not evaluated further in this EIR.”

This statement is consistent with the Environmental Setting presented on Chapter 7, *Biological Resources*, pages 7-3 to 7-28 of the Draft EIR. As summarized in Draft EIR Table BR-1, page 7-5, the total acreage within the project site is comprised of the following habitat (land cover) types: annual grasses and forbs, deciduous, field crops, Fremont cottonwood, grain and hay, partially irrigated crops, pasture, ruderal, truck crops, urban/developed, valley oak, vineyard, water, and SAFCA wetland creation. The site is setback from the Sacramento River corridor by an agricultural buffer of varying distance.

Although there is no riparian habitat within the project area (see Response 18-28 for further clarification), there are species that nest in or otherwise utilize the nearby riparian habitat along the Sacramento River. The effects of the proposed project on those species, including the Swainson's hawk, are addressed in the impact analysis presented in the Draft EIR. Potential impacts to wetlands and wildlife are addressed under Impacts BR-1, BR-3, BR-4, BR-5, BR-6, BR-7, BR-8, BR-9, BR-11, and BR-12 of the Draft EIR.

COMMENT 34-6

6. The proposed project changes the existing one-mile river corridor protection buffer to 700 feet. Years ago, during County hearings on the Urban Services Boundary, many residents argued for a miles wide protection buffer for the Sacramento River corridor to protect recreation, open space, habitat and local farmland. The County settled on a one-mile buffer. This project would reduce that buffer to a wholly inadequate 700 feet in some areas, up to a maximum of one-half mile.

RESPONSE 34-6

The existing USB was established in the 1993 General Plan and was continued to be reflected as is in the existing 2030 General Plan (prepared in 2010). The current proposal is to move the USB as described in Draft EIR Chapter 2, *Project Description*, and the Draft EIR analyzes the significant environmental impacts of the proposed change to the USB.

Please also see Master Responses BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, and BR-4: Impacts on Swainson's Hawk Zone.

COMMENT 34-7

7. The proposed project would result in the significant and permanent loss of open space, habitat, already diminished local farmland, and floodplain protections. Once these community resources are gone, they are gone forever.

RESPONSE 34-7

Effects of the proposed UWSP related to farmland and plant and wildlife habitat are fully evaluated in Chapter 5, *Agricultural Resources*, and Chapter 7, *Biological Resources*,

respectively, of the Draft EIR. Refer to Master Response AR-1: Conversion of farmland to nonagricultural uses, for a discussion of impacts to farmland. Please see the discussion of Conservation Strategy for Upland Habitat in Draft EIR Impact BR-14 and Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan for discussion of compensatory mitigation and requirements for 1:1 mitigation ratios. Please see Response 14-3 which addresses flood risks.

COMMENT 34-8

8. Mitigation for loss of farmland, wildlife and wildlife habitat would most likely occur beyond the Sacramento area, depriving Sacramento County residents of those benefits. The project applicant says loss of farmland, wildlife, and wildlife habitat would be mitigated outside the Natomas Basin. People in Sacramento value and find benefit in farmland, wildlife, and the open space that serves as wildlife habitat. **The EIR fails to identify the communitywide loss of farmland, wildlife and wildlife habitat resources as community assets.** If the project is approved farmland and wildlife mitigations should be required within the Natomas basin where those resources would continue to benefit community residents.

RESPONSE 34-8

Effects of the proposed UWSP related to farmland are evaluated in Chapter 5, *Agricultural Resources*, of the Draft EIR.

The Draft EIR neither specifies nor presents a likelihood that loss of farmland would be mitigated outside the Natomas Basin or the County. The commenter's assertion that the project applicant has made statements to this effect are unclear and unsupported. Moreover, there is no County requirement for land used for agricultural mitigation to be located within the Natomas Basin. As discussed on Draft EIR page 5-22, under the currently adopted General Plan Policy AG-5, the preservation of farmland at a 1:1 ratio must typically be located within Sacramento County. However, as provided in Appendix PD-1, Proposed General Plan Text Amendments, of the Draft EIR, the UWSP proposes revisions to General Plan Policy AG-5 that would clarify when out-of-county mitigation for agricultural land impacts might be considered. These text amendments would be implemented with approval of a General Plan amendment proposed as part of the UWSP. The proposed revisions provide that the Board of Supervisors would retain the authority to set aside the in-County mitigation requirement for impacts to unique, local, and grazing farmlands, but not with respect to prime and statewide farmlands unless the mitigation land is also providing mitigation for impacts to special-status species. Under those circumstances, revised Policy AG-5 explains, the Board of Supervisors may consider, on a case-by-case basis, the mitigation land required to mitigate for impacts to special-status species as also meeting the requirements of for mitigating impacts for loss of farmland, including land outside of Sacramento County. Therefore, Mitigation Measure AG-1 requires that the project proponent mitigate the loss of farmland that would result from implementation of the proposed UWSP consistent with General Plan Policy AG-5, as amended.

Effects of the proposed UWSP related to biological resources, including effects related to wildlife and wildlife habitat, are evaluated and mitigated where necessary in accordance with applicable regulations, policies, and standards in Chapter 7, *Biological Resources*, of the Draft EIR. Specifically, the commenter asks for clarification regarding the rationale for mitigating permanent impacts to agricultural land available to NBHCP covered species with mitigation lands outside of Natomas Basin. Compensatory mitigation for the conversion of Swainson's hawk foraging habitat and giant garter snake aquatic and associated upland habitat is proposed to occur outside of Natomas Basin to avoid conflicts with the Natomas Basin Habitat Conservation Plan. Please also see Master Response BR-1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 34-9

9. The EIR fails to identify that the proposed project could result in a total loss of project area farmland. Most of the project area is currently farmland that would be converted to urban uses. In the past 10 years Sacramento has lost more than 14,000 acres of farmland. This project could result in the permanent loss of another 1500 acres or more of high-value, productive local farmland. The project applicant says 534 acres of farmland would remain, but about 130 acres of that is intended as buffer land that will not be useable for farming. The remaining 400 acres of farmland is a long narrow space (some just 700 feet wide), and just 30 to 50 feet from potential urban conflicts, which may make the remaining farmland impractical to use for commercial farming.

The recent pandemic made clear that farmland is important community infrastructure. **The EIR fails to address the loss of area farmland as a community food resource** when there are disruptions to the food distribution system

RESPONSE 34-9

Please see Master Response AR-1: Conversion of Farmland to Nonagricultural Uses, and Master Response AR-2: Interface Between Agricultural and Urban Uses.

COMMENT 34-10

10. The EIR fails to identify that the proposed project could reduce existing floodplain protection. Around the United States, communities are starting to reserve land near waterways to use as open space for flood protection. This project puts housing in a floodplain close to the river. While the new Natomas levee is expected to provide 200-year flood protection, climate change increases the chance of extreme flooding. Recent flooding in Asheville, North Carolina is proof of that. Current open space and farmland near the river provides urban areas with an additional level of flood protection. The proposed project would eliminate this protection.

RESPONSE 34-10

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage.

COMMENT 34-11

11. This project has an unacceptably long list of significant and unavoidable impacts, many that are harmful, permanent, and cannot be mitigated, including unplanned growth, urbanization of a rural area, increased traffic and roadway hazards, increased air pollution, increased noise, loss of wildlife, loss of habitat, loss of productive farmland, and the permanent loss of an important landscape for indigenous communities of Sacramento County.

RESPONSE 34-11

This comment expresses an opinion, but it raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 34-12

20. The project significantly and unacceptably increases air pollution, possibly exceeding thresholds of significance for everyone, and posing serious health risks, including an increased risk of cancer. In addition, operation of the proposed project would significantly conflict with and obstruct implementation of the Sacramento Metropolitan Air Quality Management District air quality improvement efforts.

RESPONSE 34-12

The Draft EIR fully evaluated air quality impacts in Chapter 6, *Air Quality*, of the Draft EIR. The Project would result in significant and unavoidable air quality impacts related to a conflict with an applicable air quality plan during project operation, emissions of criteria air pollutants and precursors during project operation, and exposure of sensitive receptors to toxic air contaminants (TACs) during project operation. More specifically, Impact AQ-4, Exposure of Sensitive Receptors to TACs, evaluates health risk impacts during construction and operation of the UWSP, and discusses the long-term operational health risk impacts that the Draft EIR concluded to be significant and unavoidable. These significant and unavoidable impacts are also summarized in the Draft EIR's Executive Summary. The EIR identifies all feasible mitigation to reduce these impacts, as required by CEQA.

This comment expresses an opinion about the significant impacts disclosed in Draft EIR Chapter 6, *Air Quality*. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as

a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 34-13

13. Sacramento does need affordable housing, but **the EIR fails to note that this project makes no commitment to a specific number of very affordable, affordable, and missing middle housing (duplexes, etc.) units** or a specific percentage of affordable housing units. In addition, the buildout of this project will take 20-30 years, and the first phase will take 7 years. So, there would not be housing from this project for many years. If the project is approved it should have specific affordable housing requirements, with a high percentage of affordable housing units in each housing development.

RESPONSE 34-13

Please see Response 15-59 for a discussion of the proposed UWSP Affordable Housing Strategy.

COMMENT 34-14

14. **The EIR fails to adequately address the severe and dangerous impacts project traffic would have on Garden Highway** and existing Garden Highway users. The EIR suggests the project could add 4,000 trips a day to Garden Highway. Garden Highway is a rural 2-lane, undivided road. Garden Highway is an elevated roadway on top of a levee, so widening is not feasible. Garden Highway is half the width it should be for traffic safety. It has blind curves, no shoulders and no guard rails. The project EIR emphasized concerns about traffic safety, including hazardous conditions at Garden Highway intersections. However, the EIR fully failed to address the greatest safety issue on Garden Highway, which is the mixed use of the road by personal vehicles, semitrucks, agricultural equipment, cars pulling boats, golf carts, individual and groups of cyclists, pedestrians, and wildlife, any of which can enter the roadway unexpectedly from farm roads, driveways, and the riverbank. Adding traffic to Garden Highway is unacceptably dangerous. If the project is approved, a new traffic circulation plan should be required and agreed to by the Garden Highway Community Association, that discourages project vehicle traffic on Garden Highway.

RESPONSE 34-14

See Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 34-15

15. **The EIR fails to adequately address the impacts from a proposed stadium,** which would be close to residences all around the project, including Garden Highway. Stadium traffic, noise, and light do not belong in/near residential areas. Stadium noise can travel miles. County and City Code Enforcement offices and Sacramento stadium operators can confirm stadium conflicts with residential areas. Any stadium should be

miles from any residences. We already experience amplified noise, travelling miles with concert events such as Aftershock and the CHP Firing Range across the river in West Sacramento. If the project is approved, no amplified sound should be permitted (except at school sites for emergencies).

RESPONSE 34-15

The Draft EIR analyses the noise impacts associated with outdoor venues planned in the proposed UWSP, including a high school sports stadium and an outdoor gathering and performance venue in Town Center Park. Comparisons to the Aftershock heavy metal concert festival that takes place at Discovery Park and the HCP Firing Range are incorrect because the facilities identified in the proposed UWSP would not be permitted for those type of uses.

An analysis of noise impacts from high school sports fields and stadiums is provided on page 15-47 in Chapter 15, *Noise*, of the Draft EIR. The analysis applies reference noise levels from sports stadium activity to predict potential noise levels at distance. The impact is identified as potentially significant and Mitigation Measure NOI-4b is identified to address the impact. In addition, an analysis of noise impacts from amplified music events at the outdoor pavilion in Town Center Park is provided on page 15-48 of the Draft EIR. The analysis identifies a distance at which a reference noise level from amplified music could result in a potential noise impact. The impact is identified as potentially significant and Mitigation Measure NOI-4c is identified to address the impact.

In the cases of both high school sports stadium and the outdoor venues in Town Center Park, the Draft EIR analyses recognize that while available noise control mitigation for noise from events at such facilities may reduce associated noise levels, given the overall size of crowds and the potential for nighttime events, and depending on the proximity of sensitive receptors, noise impacts cannot always be mitigated. Thus, as stated on page 15-48, the impacts of amplified sound from stadium and outdoor park venues at existing sensitive uses are considered to be significant and unavoidable.

COMMENT 34-16

The EIR notes that nighttime lighting would have a permanent impact on the area. **But the EIR fails to adequately address the harmful impacts of nighttime lighting on human health and on wildlife**, including migratory birds using the Pacific Flyway. **The EIR fails to provide adequate light mitigations for humans and wildlife.** If the project is approved, there should be a minimum one-half mile buffer between the project and Garden Highway that includes a minimum 100 foot wide densely planted tree buffer adjacent to the project. The tree buffer must include tall native evergreen trees planted at the beginning of project construction.

RESPONSE 34-16

Please see Response 18-11.

COMMENT 34-17

16. The EIR fails to adequately address that project related air pollution and its resulting serious health impacts, as well as construction dust, could be more severe on Garden Highway because of the prevailing wind that blows toward Garden Highway.

RESPONSE 34-17

See response 18-23 for a discussion of air quality impacts to nearby residential receptors, including residents along Garden Highway. Air quality impacts, including dust from construction, were fully analyzed in Chapter 6, *Air Quality*.

LETTER 35

Arthur Gibson Howell, member of the community, written correspondence; dated October 21, 2024.

COMMENT 35-1

1. Agricultural Resources: The loss of local farmland and local produce (1805 acres) is very significant and irreplaceable. Mitigation Measure AG-1 (replacing on a 1:1 ratio) does not guarantee local farmland will be replaced "locally", with similar "prime soil", or even be actively farmed. Does the developer plan on buying currently unused "prime soil" land locally (1:1) and pay farmers to ensure it is actively farmed as it is today?

RESPONSE 35-1

Draft EIR Mitigation Measure AG-1 requires that the project proponent mitigate the loss of farmland that would result from implementation of the proposed UWSP at a 1:1 ratio consistent with General Plan Policy AG-5, as amended. The proposed project includes Proposed General Plan Text Amendments as shown in Draft EIR Appendix PD-1. The proposed revisions would grant the Board of Supervisors the authority to set aside the in-County mitigation requirement for impacts to unique, local, and grazing farmlands, but not with respect to prime and statewide farmlands unless the mitigation land is also providing mitigation for impacts to special-status species. Under those circumstances, the Board of Supervisors would be allowed to consider, on a case-by-case basis, the mitigation land required to mitigate for impacts to special-status species as also meeting the requirements of for mitigating impacts for loss of farmland, including land outside of Sacramento County.

The focus of the mitigation is the impact associated with the conversion of important farmland. There is no requirement that the land is being farmed today, nor would there be a requirement that the mitigation land be farmed in the future. The decisions to farm are independently made by farmers.

COMMENT 35-2

2. Cultural Resources: The land planning on being developed in the UWSP was originally part of the watershed for the Sacramento River before the levee was built and was a known area of historical tribal activity and burial site. When any construction on Garden Hwy is planned there is a requirement to investigate "on a parcel by parcel" basis for any historic-era archaeological resources even though all the land on Garden Hwy was elevated by dredging from the river and fill from elsewhere to build the aforementioned levee. Any development in the UWSP will have to excavate into the original watershed to the actual depth (and below) of these culturally significant areas, potentially causing irreparable harm. Is there a plan to investigate via Mitigation Measure CUL-2a and CUL-2b on a "plot by plot" basis based on the size of each new parcel (home/apartment) being built?

RESPONSE 35-2

The commenter notes that the UWSP area “was originally part of the watershed for the Sacramento River before the levee was built and was a known area of historical tribal activity and burial site.” The commenter also notes that when any construction is planned there is a requirement to investigate “on a parcel by parcel.” However, the commenter incorrectly states that the investigation would be for “any historic-era archaeological resources even though all the land on Garden Hwy was elevated by dredging from the river and fill from elsewhere to build the aforementioned levee.”

Draft EIR Mitigation Measure CUL-2a requires that before each individual development phase or off-site improvement, the project proponent must conduct an inventory of significant evaluation of archaeological resources (including both indigenous and historic-era archaeological resources). This inventory would be required to include identification, evaluation, and treatment of archaeological resources during project planning, as well as possible monitoring and implementation of an inadvertent discovery protocol during construction. Furthermore, Draft EIR Mitigation Measure CUL-2b lists steps to take to protect archaeological resources if they are discovered during construction and/or operation.

COMMENT 35-3

3. Noise: The increased traffic noise on Garden Hwy (and other previously low-use roads) will be substantially increased according to the UWSP DEIR. Speed reductions have been tried before but have not been effective and there is no room for any kind of noise wall / barrier. Other than “rubberized asphalt” how does the developer plan on reducing this new, unacceptable noise? The plan proposal of a stadium in the flat geometry of the previous farmland would greatly increase the noise levels as it travels unhindered across the new project.

RESPONSE 35-3

The Draft EIR Chapter 15, *Noise*, Impact NOI-3 on pages 15-35 to 15-39 presents an analysis of traffic noise impacts. Significant traffic noise impacts were identified for six existing roadway segments, none of which are Garden Highway. Draft EIR Table NOI-13, page 15-38, presents the noise increases on seven segments of Garden Highway and the noise increases were all found to be less than significant. Mitigations strategies to address the significant traffic noise impacts on the six impacted roadways are discussed on pages 15-40 and 15-41 and feasible mitigation measures (MM NOI-3a and MM NPO-3b) are identified on page 15-42.

An analysis of noise impacts from high school sports fields and stadiums is provided on Draft EIR page 15-47. The analysis applies reference noise levels from sports stadium activity to predict potential noise levels at distance. The impact is identified as potentially significant and Mitigation Measure NOI-4b is identified to address the impact. As stated on page 15-47, the impact of high school use sports fields and stadium noise at existing sensitive uses would be significant and unavoidable.

COMMENT 35-4

4. Population and Housing: This project envisions population density equivalent to the most crowded parts of New York City of ~18,000 people per sq mile (taking into account most of the housing will be within 1 sq mile), with no real mass transit and a “job geography” that requires most people to drive. The DEIR states they believe a significant portion of residents will work in the project footprint and walk, bike, Uber, or carpool - but that does not reflect the reality of life in California. Directly from page 15 of the agenda proposal, the proposed UWSP “is ultimately inconsistent with SACOG plans, and thus would be considered to directly induce substantial unplanned population growth in the region.” This in itself is reason enough to stop this ill-conceived project. The SACOG Blueprint was developed for a reason, stick to it. The County’s Urban Services Boundary document says, “The County shall not expand the Urban Service Boundary unless there is inadequate vacant land within the USB.” There is adequate vacancy inside the Urban Services Boundary for the number of housing units and commercial space the project proposes. Before considering this project, I urge you to hold public hearings on expanding the Urban Services Boundary if truly deemed necessary.

RESPONSE 35-4

Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area, Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127, and Master Response LU-3: SACOG Blueprint and MTP/SCS.

COMMENT 35-5

5. Transportation: The proposed addition of substantial traffic to an already bottlenecked I-5/I-80 via the already sub-par and “landlocked” West El Camino interchange is the Achilles heel of this entire project. Based on their “Traffic Conceptual Feasibility Analysis”, this project is already not feasible. It shows going from 16,000 daily traffic on the West El Camino / I-80 interchange (which is already gridlocked at certain times of day) to 69,000 with a LOS (Level of Service) of “F”. Does this even account for all the new housing recently built to the east of the interchange? The DEIR envisions West El Camino being enlarged to 6 lanes (+ bike, pedestrian). This would also require increasing the width of the on/off ramps to 2 lanes, which there does not appear to be room for based on development already completed surrounding the interchange. Furthermore, what is the point of increasing the capacity of an interchange to a frequently gridlocked freeway that can't handle that capacity? All this development would exacerbate the use of surface roads to find alternate access to freeways away from the gridlock. The UWSP DEIR states on page 22-67 that traffic on Garden Hwy from Powerline to San Juan would double from 3300-4700 ADT to 7000-9500 ADT. Many commuters continue down Garden Hwy south of San Juan and thus I believe the additional traffic would constitute all of Garden Hwy from Powerline Rd to the I-5 interchange (near Chevy's restaurant). This is especially so considering all the proposed traffic to Garden Hwy from the new entrances (Radio Rd, Farm Rd [renamed Street 9 since no Farms], and Brytle Bend Rd [by I-80 bridge]) that the UWSP proposes. The DEIR states this volume exceeding

6000 ADT would necessitate a widening of Garden Hwy to conform with current County design standards. This widening could possibly have occurred when the adjacent levee was built in the last 10 years, but the County did not fund it and USACE would not approve it. The USACE has very strict levee guidelines and they would not authorize the new power poles to extend into the new widened levee "foot print" past where they currently are. Hundreds of these poles were removed and replaced in the last 10 years for the widened levee, and without removing and replacing them again (which the USACE won't allow) there is no room to upgrade Garden Hwy to the required County standards. The DEIR also states many of their other "required" transportation mitigation strategies require approval from other various agencies outside of County jurisdiction. Does the County plan on approving the UWSP before approval of all required agencies is assured? If this plan is approved, I believe we are setting ourselves up for Los Angeles style gridlock on our decidedly smaller Sacramento roads.

Unless the aforementioned issues can be resolved and a feasible design for the projected exponential traffic increase can be proven and paid for, any further time and money spent on this project is unwarranted.

RESPONSE 35-5

This comment consists of numerous questions and assertions on a variety of transportation topics, as discussed below.

The ADT values cited on West El Camino Avenue west of I-80 do not match the existing volumes and forecasts from the LTA. The project would result in this segment of West El Camino Avenue experiencing an increase in traffic from 14,200 ADT (LOS E) to 83,300 ADT (LOS F). This growth represents project-only trips. When background land use growth is considered, the volume increases to 88,700 ADT. The added traffic would require the I-80/West El Camino Avenue interchange to be upgraded including a wider overcrossing and wider on- and off-ramps. Caltrans typically establishes a large right-of-way dedicated for its facilities; however, it is unknown at this time whether additional right-of-way would be required.

In contrast to the comment, the section of I-80 connecting to the West El Camino Avenue interchange is typically free-flow and uncongested. Sections of I-80 become congested near the Yolo Causeway to the west and east of I-5 to the east. The extent to which existing trips and project trips use surface streets to find alternate routes was considered in the LTA by virtue of using a regional travel demand model. Table 10 of the LTA indicates that surface streets such as El Centro Road (south of Arena Boulevard) would experience a 19,100 ADT increase. The extent to which background traffic will use Garden Highway to a greater degree than current is reflected in the LTA. Specifically, the LTA shows this road and Power Line Road experiencing 1,200 to 2,000 additional ADT between existing and cumulative no project conditions.

Please see Master Response TR-2: Garden Highway Safety Considerations regarding widening of Garden Highway.

Approval of improvements outside of the jurisdiction of the lead agency is rarely attained prior to project approval, as doing so typically requires more detailed engineering and design studies. It is not practical to request proposed projects undergoing CEQA review to have gained approvals for all needed improvements prior to approval. As the principal agency approving the project, it is the responsibility of the County, as the CEQA Lead Agency, to complete CEQA prior to the actions of other Responsible Agencies which have the authority and/or responsibility to approve more limited actions under their authority.

LETTER 36

Christine Olsen, member of the community, email correspondence; dated October 21, 2024.

COMMENT 36-1

Hundreds of Sacramento residents, interest groups, experts, and government agencies have come together repeatedly, over many years, and spent thousands of hours in workshops and hearings to tell the County we don't want sprawl. We want planned growth that makes life better for everyone. The Upper Westside development is urban sprawl.

RESPONSE 36-1

This comment expresses an opinion, but raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 36-2

Sacramento County's 2030 General Plan was designed to promote the efficient use of land, encourage economic vitality and reduce urban sprawl and its impacts, preserve habitat and open space, and protect local farming. The Urban Services Boundary was intended to implement that vision and promote orderly growth within the County. The Upper Westside project unnecessarily violates those County plans as well as the Urban Policy Area, County zoning and other County codes, SACOG's Blueprint for regional development, and agreed upon habitat conservation plans.

RESPONSE 36-2

Please see Master Response AR-1: Conversion of Farmland to Nonagricultural Uses, Master Response LU-1: County Urban Services Boundary and Urban Policy Area, Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127, and Master Response LU-3: SACOG Blueprint and MTP/SCS.

COMMENT 36-3

On behalf of all the Sacramento County residents who worked to ensure the countywide benefits of planned growth, you are urged to pause consideration of any projects outside the Urban Services Boundary and hold public hearings on whether the Urban Services Boundary should be expanded. If one project is approved beyond the Urban Services Boundary, other developments will surely follow, and the Urban Services Boundary will no longer function as intended to preserve open space, habitat and prime farmland, or to encourage infill development. Changing the Urban Services Boundary

will have irreparable negative impacts on the County's environment, and on Sacramento County residents far beyond the Upper Westside project.

RESPONSE 36-3

The assertion that the proposed UWSP would lead to other development beyond the USB is unsupported and speculative. As discussed in Chapter 14, *Land Use*, of the Draft EIR, the Sacramento County General Plan includes a comprehensive and robust policy framework for acceptance and approval of proposed applications to expand the USB. All proposed new development applications to expand the USB would be required to meet these same requirements and would be entitled in a process requiring substantial effort. General Plan Policy LU-127 specifies that expansion of the USB is subject to the discretion of the Board of Supervisors. Accordingly, the Board will consider the proposed expansion of the USB in its decision whether to approve the proposed UWSP in accordance with Policy LU-127 and CEQA.

Please also see Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 36-4

Getting planning right ensures a community we love to live in and a community that works for everyone. The Upper Westside project is the sprawl we all want to avoid. The County made a commitment to the people of Sacramento that the County would not expand the Urban Service Boundary unless there was inadequate vacant land within the USB to accommodate the demand for urban uses. There is, today, more than ample land within the Urban Services Boundary for the number of housing units and the amount of commercial space the Upper Westside Project proposes.

RESPONSE 36-4

Please see Responses 36-3 above.

COMMENT 36-5

Allowing development outside the Urban Services Boundary harms the Sacramento community outside and inside the Urban Services Boundary. An important achievement of infill development is that it not only advantages residents inside the new development, it adds vitality and benefits to the nearby community, maximizes the cost-efficiency of urban services such as transit, and reduces environmental impacts associated with urban sprawl. The Upper Westside applicant may have no interest in infill development and that is their prerogative, but their proposed project outside the Urban Services Boundary is unnecessary and harmful far beyond the project area.

RESPONSE 36-5

Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area, Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127, and Master Response LU-3: SACOG Blueprint and MTP/SCS.

This comment expresses an opinion about the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 36-6

If the County does permit development outside the Urban Services Boundary, please at least protect a minimum one-mile-wide river corridor. River corridors are unique and highly valued by Sacramentans for recreation, for open space that provides a respite from urban environments, for wildlife and unique wildlife habitats and corridors, for prime farmland, for flood protection buffers, and as important tribal cultural landscapes.

RESPONSE 36-6

The County does not allow or approve development outside the USB. Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area, and Response 188-12 regarding the proximity of the UWSP area to the Sacramento River corridor and related effects.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 36-7

With regard to the Upper Westside EIR, the EIR is fundamentally flawed and should be rejected. EIR's are intended, by law, to present the public and decisionmakers with factual, evidence-based information about a project's potential impacts. The Upper Westside EIR identifies changes the project applicant is seeking to the County's 2030 General Plan, County zoning, to the Urban Services Boundary, and to the Urban Policy Area, among others. Then, throughout the EIR, the EIR makes that the project does not conflict with County land use policies. For example, under Agricultural Resources, the EIR says, "the proposed UWSP would not conflict with existing agricultural use and zoning," That is profoundly untrue. The project site is mostly zoned and used for agriculture and would be rezoned for urban uses. The project may totally wipe out local farming because the remaining 400 acres that could be used for farming is a long narrow space (some just 700 feet wide), and just 30 to 50 feet from urban conflicts, which may make the remaining farmland impractical for commercial farming.

RESPONSE 36-7

The assertion that the Draft EIR is and makes false claims is unsupported by evidence. This comment asserts that the Draft EIR is “fundamentally flawed” and includes “false claims,” and that it does not meet the requirements of CEQA. To the contrary, the Draft EIR prepared for the proposed UWSP is an objective, accurate, and complete analysis of the potential environmental impacts that would or could result from construction and operation of the proposed project. Pursuant to CEQA requirements as set forth in the CEQA Guidelines, each environmental resource topic subject to analysis under CEQA has been given careful consideration in light of existing and anticipated future environmental conditions, applicable regulations, and the physical and operational characteristics of the proposed project. As required under CEQA, where significant impacts are identified, the Draft EIR describes potentially feasible mitigation measures which could be adopted to substantially lessen or avoid such impacts. In addition, a range of reasonable alternatives are presented and comparatively evaluated in the Draft EIR. If the Board of Supervisors ultimately determines to approve the proposed project, it will be required to explain the reasons that it considers the significant impacts of the proposed project acceptable in a Statement of Overriding Considerations, which must be based on substantial evidence in the administrative record.

As discussed in Impact AG-2 on pages 5-23 through 5-24 in Chapter 5, *Agricultural Resources*, of the Draft EIR, the proposed changes to the land use designations and allowable uses within the UWSP area would be permitted with approval of a General Plan amendment and approval of related amendments to the County Code, including adoption of the UWSP document to establish land use, zoning, and development standards. Because the entitlements requested as components of the proposed UWSP would change the zoning to make it consistent with the proposal, the proposed UWSP would not conflict with zoning for agricultural use within the UWSP area.

Effects of the proposed UWSP related to farmland are evaluated in accordance with applicable regulations, policies, and standards in Chapter 5, *Agricultural Resources*, of the Draft EIR. Impacts of the proposed UWSP related to conversion of farmland to non-agricultural uses are addressed in Impact AG-1 on pages 5-20 through 5-22 of the Draft EIR.

Effects of the proposed UWSP related to the interface between planned urban uses and existing and ongoing agricultural uses are evaluated in Impact AG-2 on pages 5-23 through 5-24 in Chapter 5, *Agricultural Resources*, of the Draft EIR. As discussed in the analysis, though a significant portion of land in the UWSP area would be rezoned toward non-agricultural uses, such rezoning would not conflict with agricultural uses. As discussed in the analysis, a 542-acre agricultural buffer is proposed to the west of the Development Area, which is intended to allow for the continuation of existing agricultural, ag-residential, and mitigation uses. In addition, the proposed UWSP includes a 30- to 50-foot-wide West Edge Buffer Corridor along the western perimeter of the Development Area to alleviate potential future conflicts between agricultural operations and future urban uses. Please also see Master Response AR-2: Interface Between Agricultural and Urban Uses.

Please see Master Response AR-1: Conversion of Farmland to Nonagricultural Uses, Master Response AR-2: Interface Between Agricultural and Urban Uses, Master Response LU-1: County Urban Services Boundary and Urban Policy Area, and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 36-8

The EIR says the proposed project would not conflict with existing habitat conservation plans. That is also untrue as detailed by the Environmental Council of Sacramento. Under Land Use, the EIR says, “the proposed UWSP would not conflict with Sacramento County’s Land Use Plans,” despite the long list of County land use plans, policies and codes that the project seeks to change.

RESPONSE 36-8

Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 36-9

Under Growth Inducement impacts, no rationale is presented for approving urban development outside the Urban Services Boundary and the EIR completely fails to address the growth inducement impacts due to the project applicant’s requested changes to County plans, policies and codes. Developers have a right to spin the truth in their communication with Planning Commissioners and County Supervisors, but deceit and spin has no place in an EIR.

RESPONSE 36-9

Please see Response 12-17.

COMMENT 36-10

More detailed EIR comments will be submitted to the County. Here I want to highlight serious impacts the project would have on Garden Highway, where I live. The proposed project would come within 700 feet of Garden Highway. The EIR suggests the Upper Westside project could add 4,000 vehicle trips a day to Garden Highway. Intersection improvements on Garden Highway are discussed in the EIR, but there is no discussion of traffic safety impacts on the Garden Highway roadway. Garden Highway is a rural 2-lane, undivided and elevated roadway. Garden Highway is half the width it should be for traffic safety. It has blind curves, no shoulders and no guard rails. The greatest traffic safety issue on Garden Highway is the mixed use of the roadway by personal vehicles, semitrucks, agricultural equipment, cars pulling boats, golf carts, individual and groups of cyclists, pedestrians, and wildlife, any of which can enter the roadway unexpectedly from farm roads, driveways, and the riverbank. Adding traffic to Garden Highway has life safety consequences and should be rejected as unnecessary and too dangerous.

RESPONSE 36-10

Please see Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 36-11

The EIR does not identify or suggest mitigations that might reduce urban-rural conflicts for a project like Upper Westside and a rural residential area such as Garden Highway. The project proposes a stadium close to residences all around the project, including Garden Highway. Stadium traffic, noise, and light do not belong in or near residential areas. Stadium noise can travel miles. County and City Code Enforcement offices and Sacramento stadium operators can confirm stadium conflicts with residential areas.

RESPONSE 36-11

An analysis of noise impacts from high school sports fields and stadiums is provided on page 15-47 in Chapter 15, *Noise*, of the Draft EIR. The analysis applies reference noise levels from sports stadium activity to predict potential noise levels at distance. Because of uncertainty about the final location and design of the high school stadium, and the proximity to sensitive receptors, the impact is identified as potentially significant and Mitigation Measure NOI-4b is identified to address the impact. As stated on page 15-47, the impact of high school use sports fields and stadium noise at existing sensitive uses could be significant and unavoidable.

COMMENT 36-12

Traffic and noise generating land uses, such as schools and an outdoor pavilion, should be located close to major roadways and commercial uses to reduce all residential impacts. Amplified sound should be prohibited in all residential areas. In the past, developers and the County have determined that amplified sound can be regulated to minimize impacts. That has proven to be untrue. Over time, sound equipment and the location of speakers can change and noise makers like bull horns can be introduced, resulting in uncontrolled noise that can easily travel more than 2 miles (based on real life experience). The EIR fails to address impacts from putting urban development within 700 feet of rural residential zoning on Garden Highway and fails to identify mitigations such as requiring that project construction begin closest to existing urban uses, reaching rural areas last.

RESPONSE 36-12

An analysis of noise impacts from noise generating land uses is provided in Impact NOI-4 on pages 15-42 through 15-49 in Chapter 5, *Noise*, of the Draft EIR. Mitigation Measures NOI-4a, NOI-4b and NOI-4c are identified to address significant noise impacts and are inclusive of buffer distances as a strategy.

An analysis of noise impacts from amplified music events at the outdoor pavilion is provided on page 15-48 in Chapter 5, *Noise*, of the Draft EIR. The analysis identifies a distance at which a reference noise level from amplified music could result in a potential

noise impact. The impact is identified as potentially significant and Mitigation Measure NOI-4c is identified to address the impact. As stated on page 15-48, the impact of amplified sound from park uses at existing sensitive uses would be significant and unavoidable.

Please see Response 36-11 above for a discussion of the noise impacts associated with activities at the planned high school sports stadium.

Impacts related to land use are identified in *Chapter 14, Land Use*, of the Draft EIR.

COMMENT 36-13

The EIR says nighttime lighting is an impact, but fails to address the harmful impacts of nighttime lighting on human health and on wildlife, including migratory birds using the Pacific Flyway. And the EIR fails to identify possible light mitigations, such as establishing a minimum one-half mile setback between the project and any rural areas (i.e. Garden Highway), with the setback to include a minimum 100-foot-wide densely planted tree buffer of tall native evergreen trees at the western project boundary, with the setback established and the tree buffer installed at the beginning of project construction.

RESPONSE 36-13

Please see Response 18-11.

COMMENT 36-14

The proposed Upper West project is unnecessary and harmful. The EIR fails to honestly present impacts from changing County plans, policies and codes. The EIR highlights an unacceptably long list of significant, harmful and unavoidable impacts countywide that cannot be mitigated, including unplanned growth, urbanization of a rural area and a river corridor, increased costs for taxpayers and ratepayers because of the unplanned extension of urban services, increased traffic and roadway hazards, increased air pollution, loss of wildlife, loss of habitat, loss of productive farmland, and the permanent loss of an important landscape for indigenous communities of Sacramento County.

RESPONSE 36-14

Please see Response 36-7 above regarding the adequacy and objectivity of this EIR.

COMMENT 36-15

For the benefit of current and future Sacramento County residents, the County should reject all development outside the Urban Services Boundary, including the Upper Westside project. What is the point of urban development if a project like Upper Westside can violate so many County plans and policies and still be approved.

RESPONSE 36-15

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 37

Amreen Gill, member of the community, email correspondence; dated October 22, 2024.

COMMENT 37-1

My name is Amreen Gill and I am a homeowner in Westshore and have been here since 2020. We are so excited about this project and the tremendous value that it will bring to our community. I listened to the public comments that were made yesterday and realized that the majority of those opposing this project are the elderly population who are not ready for change. The voices from our younger generation are really what we should be listening to as this project will probably take about 10-20 years to complete and will be the population frequenting this location.

As a new younger family with a toddler, we are so excited to hear about the schools, parks and housing developments this project will bring. Retail structure in this area would be amazing. It's difficult to find things to do in Natomas so we often find ourselves visiting downtown Sacramento or Roseville for entertainment. We would love to put our money spent back into our own community. We would fully support local business and want to be proud of our community aesthetics and show our friends the beautiful Westside canal and Town Center.

RESPONSE 37-1

The commenter expresses support of the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 37-2

The infrastructure should be addressed including roadways to support this level of traffic and the levees to prevent flooding. As long as there are solutions for these issues, we are in full support of the Upper Westside Project.

RESPONSE 37-2

In addition to the CEQA-required analysis of VMT and traffic safety included in Chapter 18, Transportation, of the Draft EIR, the Draft EIR also contained a Local Transportation Analysis (LTA) in Appendix TR-2. The LTA was based on travel demand modeling using SACOG's SACSIM model. The LTA's traffic analyses of roadway segment and intersection operations were provided for the purposes of mobility planning, but pursuant to Public Resources Code section 20199(b)(2), these analyses were not evaluated in the Draft EIR. Nonetheless, the LTA traffic study was comprehensive in nature, applied state-of-the-practice analysis methods, and appropriately identified the physical improvements that would be needed to accommodate the addition of project trips.

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR assessment of flood protection and drainage.

LETTER 38

Harriet Steiner, member of the community, email correspondence; dated October 24, 2024.

COMMENT 38-1

First, to the best of my knowledge, the DEIR does not analyze the impact of conversion of agricultural lands and conservation lands by this project because it is located outside of the Urban Services Boundary. In addition, there are other projects that also want to develop that are located outside of the Urban Services Boundary, including Airport South Industrial and Grand Park.. All of these developments are inconsistent with existing and long established policies of the County, its general plan; the City of Sacramento and the Natomas Basin Plan. All of these projects need to be analyzed together for their cumulative impact on agriculture, wildlife conservation, the Pacific Flyway, air quality, flooding and traffic. None of these projects should proceed until a separate EIR on modification of the Urban Services Boundaries and the County's General plan are analyzed and the County has made a decision whether to proceed with any changes to the Urban Services Boundary and the General Plan. Taking any one of these projects separately will not disclose the full cumulative impacts of these projects and will result in piecemeal analysis that underestimates the impact of urbanization outside of the Urban Services Boundaries.

RESPONSE 38-1

The Draft EIR addresses the effects of the proposed UWSP on agricultural lands at the project-level in Chapter 5, *Agricultural Resources*, in particular in Impact AG-1, pages AG-21 to AG-24, and in the context of other reasonably foreseeable cumulative development in Chapter 22, *Cumulative Impacts*, pages 22-13 to 22-15. Other cumulative projects that are mentioned in the comment are included in the analysis of cumulative impacts. As identified and described in Table CI-1, the Grandpark Specific Plan project is identified as Cumulative Project #17, and the Airport South Industrial Project is identified as Cumulative Project #50. It should be noted that the Airport South Industrial Project would not technically require a change to the Urban Services Boundary because it is being proposed to be annexed to the City of Sacramento; if approved by the City, there would be no requirement for the County to amend the Urban Services Boundary.

The project-level and cumulative impacts of the proposed UWSP on wildlife conservation, the Pacific Flyway, and other biological effects are addressed in Draft EIR Chapter 7, *Biological Resources*, and in Chapter 22, *Cumulative Impacts*, pages 22-19 to 22-31. Please also see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan for additional discussion of impacts of the proposed project on conservation planning in the Natomas Basin. Please see Response 19-77 for additional discussion of impacts on migratory and other birds.

The project-level and cumulative impacts of the proposed UWSP on air quality are addressed in Draft EIR Chapter 6, *Air Quality*, and in Chapter 22, *Cumulative Impacts*, pages 22-15 to 22-19.

The project-level and cumulative impacts of the proposed UWSP on flooding are addressed in Draft EIR Chapter 13, *Hydrology and Water Quality*, and in Chapter 22, *Cumulative Impacts*, pages 22-40 to 22-42.

Pursuant to Public Resources Code section 21099(b)(2) traffic congestion is no longer considered a significant impact under CEQA. Please see Master Response TR-3: Traffic Congestion.

COMMENT 38-2

The DEIR also needs to analyze whether the factual bases for any of the findings in LU-127 can be made. If analyzed it is unlikely that the findings can be made and the Project(s) will then have, at a minimum, additional unavoidable significant adverse impacts that have not yet been disclosed. This analysis could warrant recirculation of the DEIR.

RESPONSE 38-2

Please see Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 38-3

The DEIR should also analyze the impact of this Project on the Natomas Basin Habitat Conservation Plan and its ability to meet its goals and the goals of the HCP permits and the County's Climate Action Plans. Further, the County has not met the goals of the 30 by 30 Executive Order. Conversion of the land within the Upper Westside project, alone and with the other proposed projects will increase conversion of land to urban uses, could result in urban sprawl, and premature conversion of agricultural lands while still leaving un or underdeveloped lands in the urban areas. These facts will result in more unavoidable impacts not yet disclosed in the DEIR.

RESPONSE 38-3

Please see Master Response 1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

Regarding the ability for the Project to meet the goals of the County's Climate Action Plan (CAP), the County's 2012 CAP was adopted prior to the passing of SB 32 or AB 1279 and does not present a 2030 community GHG target based on the SB 32 statewide emissions reduction goal for 2030, nor does it address the state's emissions reduction targets for 2045 pursuant to AB 1279. Therefore, it was not used in the DEIR to determine the project's GHG emissions impacts (see page 8-25). However, in November 2024 after the release of the DEIR, the County adopted the County of

Sacramento Climate Action Plan for the Unincorporated Sacramento County and County Operations. For discussion of the new CAP's goals that are applicable to the Project, refer to Responses 179-1 and 240-3.

COMMENT 38-4

To the extent that the Project proposes to mitigate the loss of over 2000 across of farmland with strips of land along the inner land side of the levee, this proposal has not been adequately analyzed. The DEIR should analyze whether this land, in the after condition, can be feasibly and economically farmed. If not, then this mitigation land is not feasible and the applicants should be required to provide land that can be farmed. If not, then there should be an alternative plan for the lands and that alternative should be analyzed in the DEIR. In the alternative, the Project should be denied because of the conversion of agricultural lands not needed for the next 20 years of more for urban uses. (See SACOG land estimate for housing referenced above.)

RESPONSE 38-4

The issues raised in this comment are issues addressed in the Draft EIR. More specifically, Impact AG-1 in Chapter 5, *Agricultural Resources*, of the Draft EIR, addresses the potential impacts of the proposed UWSP to agricultural resources, including loss of important farmland. The comment overstates the conclusions of the Draft EIR related to loss of important farmland. As discussed on page 5-21 and presented in Table AG-3, the project site contains approximately 1,805 acres of farmland as defined in the County General Plan Policy AG-5. Table AG-3 provides a breakdown of the approximately 1,372 acres of important farmland that would be permanently converted to non-agricultural uses. The commenter's statement that the project proposes to mitigate the loss of farmland with "strips of land along the inner land side of the levee" is incorrect. As specified in Mitigation Measure AG-1, the project proponent shall mitigate the loss of farmland within the plan area, except as otherwise specified in General Plan Policy AG-5 (as amended with UWSP approval), based on a 1:1 ratio through the specific planning process or individual project entitlement requests to provide in-kind or similar resource value protection (such as easements for agricultural purposes). The impact acreage requiring offset shall be based on the most current Farmland Mapping and Monitoring Program at the time of the County's approval. Preservation land must be in-kind or of similar resource value. Mitigation Measure AG-1 does not specify the location of the preservation land. As discussed in Chapter 5, *Agricultural Resources*, a 542-acre agricultural buffer is proposed to the west of the proposed UWSP Development Area, which is intended to allow for the continuation of existing agricultural, agricultural-residential, and mitigation uses. In addition, the proposed UWSP includes a 30- to 50-foot-wide West Edge Buffer Corridor along the western perimeter of the UWSP Development Area to alleviate potential future conflicts between agricultural operations and future urban uses. The agricultural buffer is not considered mitigation for loss of farmland in the UWSP Development Area.

Please also see Master Response AR-2: Interface Between Agricultural and Urban Uses. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 38-5

The DEIR should analyze the impacts of flooding in the Natomas area if the Upper Westside lands are developed and paved. Sacramento has been lucky that it has not had a major flooding event since the 1986 and 1994 floods. However, regional floods will occur in the future. More that shoring up the levees in needed to be ready for the flooding that is surely coming. We should take climate change, the significant changes to the wildfire season and the lessons of Hurricanes Helene and Milton, among others, for the increased risk of back to back storms, to analyze and determine the flooding risks associated with urbanization of thousands of acres of farmland. Included in that analysis should be work on how saturated the lands within the Natomas Basin are now, their ability to absorb more drainage and the added risks to the developed areas.

RESPONSE 38-5

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage.

COMMENT 38-6

The DEIR should also analyze the impact of development of the Upper Westside project in the County as opposed to the City. Existing policies call for development of urban lands in cities. Here, in Natomas the City provides all urban services, is responsible to the existing roads, for flooding and utilities. If the County moves forward, all new services must be built and maintained, such as were and water services. The impacts of Upper West side will all be felt in the City and there is currently no plan to pay/mitigate the traffic, air quality, aesthetics and other impacts on the city and its residents. Further, annexation to the City should be required as it is inappropriate to have neighbors some in the City and others in this new county area having different obligations for maintenance and public services and structures. The DEIR should analyze and consider the impacts of having this large project developed in the County and should look at the impacts of other projects built in the county that are adjacent to urban lands in the City and whether the past difficulties or servicing urban areas that are surrounded by city lands can be avoided or mitigated.

RESPONSE 38-6

The Draft EIR has evaluated and disclosed the significant impacts of development of the project as proposed, within unincorporated Sacramento County, adjacent to the North Natomas community in the City of Sacramento. As it does for urban uses in other unincorporated areas, the County would be responsible for providing public services and utilities to the proposed project. As described, it is proposed that SCWA would provide water services to the proposed project, with wholesale water from the City of Sacramento. Wastewater services would be provided by SacSewer. Drainage services

would be provided through County Service Area 10, and regional flood protection would be overseen by SAFCA. Electrical power would be provided by SMUD. Roads would be built and maintained by the County. As such, it is incorrect to state that all urban services would be provided by the City.

Pursuant to CEQA Guideline section 15126.6(a), “[a]n EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives.” The comment does not identify nor provide evidence that any environmental impacts would be avoided or made substantially less severe if the proposed project were annexed to and developed within the City of Sacramento. As such, there is no need to consider annexation to the City of Sacramento as an alternative to the proposed project

The comment expresses opinions about the appropriateness of the proposed UWSP being developed in unincorporated Sacramento County. These opinions do not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR’s analysis of the proposed UWSP’s physical environmental impacts. The comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 38-7

Lastly, the DEIR should be revised to review the traffic impacts of this proposed project on the existing roads in Natomas and on the Garden Highway. It is my understanding that the Garden Highway cannot be widened and is already overburdened with traffic. Similarly the roads in the South Natomas, all of which are inside the city, need to be considered and the impacts mitigated. In addition, the interchange at El Camino already appears to be at capacity. I-5 headed in both directions is often just gridlock. The Upper westside Project with a proposed a large shopping area, a community college and the housing will add significant traffic to this area that is already saturated with traffic. further, because this Project is not in the County or the City’s general Plans for development the traffic generated is not included in any modeling nor are there any plans to provide additional infrastructure to offset the traffic impacts. The DEIR should do a deeper analysis including all the surface streets and the freeways and determine what mitigation is possible. If there is no feasible mitigation the county should deny this project.

RESPONSE 38-7

Please see Master Response TR-2: Garden Highway Safety Considerations, and Master Response TR-3: Traffic Congestion.

COMMENT 38-8

While i fully understand that we have an affordable housing crisis, this project does not address affordable housing. If housing is the justification for this project, then the

housing needs to actually provide the housing needed. As noted by SACOG, the region currently has 2.5 times the land needed for the next 20 years of housing growth. Therefore just providing single family and high end rental housing is not needed and does not warrant approving this project.

Please respond to these comments along with the many other comments received in a revised EIR. Given the depth and breadth of the comments, the DEIR should be recirculated.

RESPONSE 38-8

Please see Response 19-10, which addresses the proposed UWSP Affordable Housing Strategy.

Please see Response 19-1 for a discussion of the requirements for recirculation of a Draft EIR established under Public Resources Code section 21166 and CEQA Guidelines section 15088.5. Pursuant to those legal standards, there is no need to recirculate the Draft EIR.

LETTER 39

Edward Costa, member of the community, sworn declaration; dated October 28, 2024.

COMMENT 39-1

3. On October 21, 2024, I testified before the county Planning Commission. I told them that in my 83 years being associated and living on this property, I have never seen a Swanson Hawk on the property, and challenged the planning commission and county staff to tell me if they had ever seen a Swanson Hawk on the property. To this date no one has responded.
4. Some people from the audience spoke up and said they had seen Swanson Hawks on the Garden Highway---some one and a half miles away from my property. However, others who live on the Garder Highway, testified that the big trees a-long-side the river where the Swanson Hawks like to hang out were being cut down.

RESPONSE 39-1

The environmental setting for biological resources, including the Swainson's hawk, was assembled based on a range of sources that are documented on Draft EIR pages 7-10 to 7-12. Draft EIR Table BR-2, page 7-22, reports that there is a high potential for the Swainson's hawk to occur on the project site, noting that the species was observed nesting and foraging in the study area during biological surveys in 2019, 2020 and 2021, and that there are numerous occurrences of the Swainson's hawk on the project site reported in the California Natural Diversity Database.

COMMENT 39-2

5. From 1966 to 1969 I worked for the Reclamation district 1000 where among other things, I operated the drag line that was used to clean out the canals. In so doing, I came across thousands of Giant Garden Snakes---all in the water. Knowing this and studding survey research at U.C. Davis, I seriously challenge the methodology used in counting Giant Garder Snakes. I will stop short of saying I have never seen a Giant Garder Snakes non the property, but, if so, no more than a couple, but only in the winter when the ground is wet.

RESPONSE 39-2

The environmental setting for biological resources, including the giant garter snake, was assembled based on a range of sources that are documented on Draft EIR pages 7-10 to 7-12. Draft EIR Table BR-2, page 7-20, reports that there is a high potential for the giant garter snake to occur on the project site, noting that there are numerous occurrences of the giant garter snake in the vicinity of the project site reported in the California Natural Diversity Data Base, including along the West Drainage Canal at the northern edge of the UWSP project area.

LETTER 40

Christine Olsen, member of the community, email correspondence; dated October 28, 2024.

COMMENT 40-1

Issues Throughout the EIR

Falsehoods, Inaccuracies, Misrepresentations

EIR's are intended, by law, to present the public and decision-makers with factual, evidence-based, unbiased information about current circumstances and a project's potential impacts. The UWSP EIR throughout contains false, inaccurate, and misleading statements, raising questions about the truthfulness, completeness and accuracy of the entire EIR document. False statements must be deleted. Misleading statements must be clarified. The EIR does not meet legal requirements or serve the public or decisionmakers if it is not reliably thorough and accurate.

The project applicant does not have the necessary entitlements to proceed with the project. The UWSP EIR identifies changes the project applicant is seeking to the County's 2030 General Plan policies, County zoning, to the Urban Services Boundary, and to the Urban Policy Area, among others. But throughout the EIR, the EIR makes false claims that the project does not conflict with County plans and policies. That is not true. If the UWSP project was already consistent with, and had no conflicts with County plans and policies, then the project would not be seeking amendments and other entitlements in order to be compliant.

Under Agricultural Resources, the EIR says, "the proposed UWSP would not conflict with existing agricultural use and zoning." That is untrue. The project site is mostly zoned and used for agriculture and would be rezoned for urban uses, a violation of County policy. Under Land Use, the EIR says, "the proposed UWSP would not conflict with Sacramento County's Land Use Plans." That is inaccurate. There is a long list of County land use plans, policies and codes that the UWSP project seeks to change in order for the project to comply with and not to be in conflict with County policies.

Under Growth Inducement impacts, the EIR completely fails to address growth inducement impacts directly due to the project applicant's requested changes to County plans, policies and codes.

The EIR is required by law to identify existing conditions and accurately state impacts from a proposed project. The current zoning for the project area is largely agricultural and has not yet changed. The EIR cannot legally assume a proposed project has entitlements it does not have, such as in the Agricultural Resources section where the EIR says, "Because the entitlements requested as components of the proposed UWSP would change the zoning to make it consistent with the proposal, the proposed UWSP would not conflict with zoning for agricultural use within the UWSP area." That statement is grossly inaccurate, violates the legal requirements for an EIR, and it and any similar

assumptions in the EIR that the project applicant has entitlements that the project applicant does not have and is seeking, should be removed.

Statements in the EIR must be deleted that say or suggest the UWSP project complies with or is consistent with County land use plans, policies and codes when in fact the UWSP does not currently comply with those County policies and when in fact the UWSP is seeking to change those County policy in order to comply.

Any statement that the project agrees in principle with or agrees with objectives in County plans and policies must be restated to make clear that the project does not in fact comply with County plans and policies, and changes would be needed to County plans, policies and codes for the project to comply and not conflict with County policies.

Mitigation is not Preservation

Throughout the EIR, the County's preservation policies are inaccurately equated with mitigation. The County has policies to preserve habitat and farmland. To preserve means to keep as is, intact. If habitat and farmland that County policy seeks to preserve are lost to urbanization, then there is a significant impact that is not identified in the EIR. Mitigations attempt to replace the loss somewhere else, but that is very different than keeping what exists intact. If the UWSP project is approved, an impact is that the farmland and habitat County policies sought to protect is lost forever. Mitigation may lessen the impact of the environmental harm but does not change the fact that farmland and habitat is not preserved where it currently exists. If I accidentally destroyed a family heirloom you were preserving, I could mitigate the loss by paying you, but the loss would remain.

Impacts Not Identified

The County's stated General Plan, Urban Services Boundary, and Urban Policy Area policies are intended to reduce urban sprawl and its impacts, preserve habitat and open space, and protect local farming. The UWSP project would have significant environmental impacts that conflict with those policies. These impacts should be and are not fully stated in the EIR.

Mitigations Outside Sacramento

The EIR fails to state that when mitigations occur outside Sacramento, Sacramento residents lose the benefits of those resources in their community.

Tables-Charts

The EIR is intended to be a public information document with clearly presented information. As recommended in CEQA guidelines, graphics help decisionmakers and the public rapidly understand the documents. The UWSP EIR would greatly benefit from more charts and tables where existing conditions and proposed changes are easier to see and compare, such as for commercial and retail square footage discussed under Urban Decay, in sections on agricultural acreage, housing units and elsewhere in the EIR where there are presentations of a lot of numbers that should be presented in tables for easy comparison.

Comments Specific to EIR Sections

Aesthetics

- The EIR notes that nighttime lighting from the UWSP project would have a permanent impact in the area. But the EIR fails to adequately address the harmful impacts of nighttime lighting on human health and on wildlife, including migratory birds using the Pacific Flyway.
- The EIR fails to identify possible nighttime lighting mitigations, such as establishing a minimum one-half mile setback between the UWSP project and any rural areas (i.e. Garden Highway), with the setback to include a minimum 100-foot-wide densely planted tree buffer of tall native evergreen trees at the western project boundary, with the setback established and the tree buffer installed before the first stage of project construction.

Agricultural Resources

- The proposed UWSP project site is currently primarily farmland classified as prime farmland, farmland of statewide importance, unique farmland, and farmland of local importance. The EIR fails to state clearly that the UWSP project violates County policies that say the County shall protect these types of farmlands located outside of the Urban Services Boundary from the urban encroachment represented by the UWSP project.
- The UWSP is requesting a General Plan amendment to rezone prime farmland for urban use. The EIR fails to state clearly that the UWSP request conflicts with existing County policy which says the County shall not accept applications for General Plan amendments outside the Urban Services Boundary redesignating valuable farmland for urban use.
- The EIR fails to adequately assess impacts from changes the UWSP is proposing to County policies regarding farmland preservation.
- The EIR says, “the proposed UWSP would not conflict with existing agricultural use and zoning.” That is not true and must be deleted. The UWSP would conflict with existing agricultural use and zoning, turning farmland to urban use.
- The EIR says, “Because the entitlements requested as components of the proposed UWSP would change the zoning to make it consistent with the proposal, the proposed UWSP would not conflict with zoning for agricultural use within the UWSP area.” That statement is inaccurate, violates the legal requirements for an EIR, and should be removed. The project does not have requested entitlements. Project impacts must be assessed based on existing conditions.
- The EIR fails to make clear that County policy is focused on farmland rather than on land zoned for agriculture. Land zoned for agriculture may or may not be used for farming. The EIR should more clearly present the current number of acres available for farming, the number acres of farmland the UWSP project would rezone to urban uses, the number of acres of land available for farming if the project is approved, and the

number of acres of farmland (land available for farming) that would be lost if the project is approved.

- The UWSP EIR gives the inaccurate impression that 534 acres of the UWSP would remain as farmland. That is not correct. The EIR must make a clear distinction between the acreage of land that can be farmed if the project is approved, and the acreage of agriculturally zoned open space land (buffer) that will not be used for farming.
- The EIR fails to identify that land in the UWSP area that would remain available for farming will be long and narrow, just 700 feet wide in some areas, bisected in 4 places by heavily trafficked project roads, and within 30-50 feet of UWSP urban activity conflicts, which together could make the remaining farmland impractical for any commercial farming. If that happened, it would mean the project would wipe out 100% of the farmland in that area – farmland County policy seeks to preserve.
- If County zoning has setback requirements between farming and urban activity, those setbacks should be clearly identified in the EIR. If the County does not have such setback requirements, the EIR team should contact an appropriate government agency or reputable nonprofit organization that has studied what setbacks should occur between farming and urban activity in order to avoid urban conflicts, and the findings of that research should be included in the EIR next to the proposed setback. The proposed setback of 30-50 feet, basically the width of a rural roadway, seems wholly inadequate.
- In considering impacts, the EIR fails to make clear that farmland provides multiple community benefits such as health benefits associated with open space, wildlife habitat, fresh food produced locally, as a food resource when there are disruptions to the food distribution system such as happened during the pandemic, and as a flood protection area between the Sacramento River and the Sacramento community.

Air Quality

- The EIR asserts, with no evidence, that the majority of employment related vehicle trips, and the pollution they create, will be to downtown Sacramento. It is wrong for the EIR to present VMT data as fact when it is not based on evidence. Focusing so much on VMT to downtown Sacramento serves to minimize air pollution generation data. The EIR should have considered VMT more realistically to multiple job centers. While downtown Sacramento is a job center, Sacramento County has more jobs than downtown, as noted in the EIR. Yolo County and Placer County are also job centers.
- The EIR fails to adequately address that project related air pollution and its resulting serious health impacts, as well as project construction dust, could be more severe on Garden Highway because of the prevailing wind that blows toward Garden Highway. Again, this impact could be partially mitigated by establishing a minimum one-half mile setback between the UWSP project and any rural areas (i.e. Garden Highway), with the setback to include a minimum 100-foot-wide densely planted tree buffer of tall native evergreen trees at the western project boundary, with the setback established and the tree buffer installed before the first stage of project construction.

- The EIR fails to adequately address that project related air pollution and its resulting serious health impacts would directly impact children in UWSP area schools.

Biological Resources

- Sacramento County's 2030 General Plan and Urban Services Boundary explicitly state the purposes of the plans, in part, are to preserve habitat and open space. The UWSP project would violate those County goals. The EIR fails to state those violations clearly and fails to clearly and honestly identify impacts from the UWSP violation of those goals.

- Sacramento County policy says planning and development of new growth areas should be consistent with Sacramento County-adopted Habitat Conservation Plans and other efforts to preserve and protect natural resources. The UWSP project would put urban activity in a habitat conservation corridor in violation of County policy. The UWSP is not currently consistent with the Natomas Basin Habitat Conservation Plan and the Metro Airpark Habitat Conservation Plan. The UWSP conflicts with habitat conservation plans and conflicts with County policy are not clearly identified in the EIR and should be explicitly stated.

- The EIR fails to discuss the UWSP project impacts to the Sacramento River riparian area by putting urban development so close to the Sacramento River and its unique biological resources, habitat, and provision of a habitat corridor.

- Sacramento County policy is to actively plan to protect, as open space, areas of natural resource value, which may include but are not limited to wetlands preserves, riparian corridors, woodlands, and floodplains associated with riparian drainages. The EIR fails to point out that the UWSP project area is in the Sacramento River corridor, less than 1,000 feet from the Sacramento River. The EIR says, "No wetlands preserves, riparian corridors or floodplains associated with riparian drainages are present in the UWSP area so none will be affected by the project's development." That is incorrect. The farmland soils, wildlife and other biological resources present within the UWSP area are associated with proximity to the river and are part of the Sacramento River corridor.

- The UWSP EIR falsely equates the County's stated goals of habitat preservation with habitat mitigation. The EIR says the project's approach for habitat and biological resources present within the UWSP area is to provide compensatory mitigation. Mitigation is very different from the County's goal of preservation. Preservation means to keep as is, in place. Mitigation means to make a significant impact, such as loss of habitat, less severe. Making an environmental impact less severe still means there is an impact. The EIR should make clear the distinction between preservation and mitigation. The EIR should also make clear that even with compensatory mitigation, the UWSP project would still have a significant negative impact on existing area habitat and wildlife, and that loss would be permanent.

Hydrology and Water Quality

- Sacramento County policy is to actively plan to protect, as open space, areas of natural resource value, which may include but are not limited to riparian corridors and floodplains associated with riparian drainages. The EIR fails to point out that the UWSP project area is in the Sacramento River corridor, less than 1,000 feet from the Sacramento River. The EIR says, “No wetlands preserves, riparian corridors or floodplains associated with riparian drainages are present in the UWSP area so none will be affected by the project’s development.” That is incorrect. Farmland soils, wildlife and other biological resources, and tribal cultural resources present within the UWSP area are associated with proximity to the river and are part of the Sacramento River corridor. The EIR fails to provide this information.
- The EIR fails to identify that the proposed UWSP would put new urban development in the Sacramento River floodplain. In addition to exposing new populations to flooding, the impervious surfaces associated with urbanization increase flood risk beyond the project area. While the new Natomas levee is expected to provide 200-year flood protection from the Sacramento River, climate change increases the chance of extreme flooding. Recent flooding in Ashville, North Carolina is proof of that. Around the United States, communities are starting to reserve land near waterways to use as open space for flood protection. Current open space and farmland in the UWSP project area provides an additional level of community flood protection. The EIR fails to indicate that the proposed UWSP project would eliminate this community flood protection.

Land Use

Violations of County Plans and Policies

- Sacramento County’s 2030 General Plan was intended to promote the efficient use of land, encourage economic vitality and reduce urban sprawl and its impacts, preserve habitat and open space, and protect local farming. The Urban Services Boundary was intended to implement that vision and promote orderly growth within the County. The EIR fails to state that the UWSP project violates the County’s 2030 General Plan, County zoning, the Urban Services Boundary, the Urban Policy Area, and SACOG’s Blueprint for regional development. The EIR fails to clearly and honestly identify impacts from the UWSP violation of those goals and fails to identify impacts from proposed changes to County policies.
- The EIR falsely says, “the proposed UWSP would not conflict with Sacramento County’s Land Use Plans.” That is not true. The UWSP violates the County’s General Plan land use policies, as well as the Urban Services Boundary, the Urban Policy Area, and zoning policies. False statements do not belong in the EIR and should be removed.
- County policy says planning and development of new growth areas should be consistent with Sacramento County-adopted Habitat Conservation Plans and other plans and policies to preserve and protect natural resources within an existing community. The EIR then falsely says the UWSP proposes development that would be consistent with the County’s growth management policies. The UWSP project violates

current County General Plan, Urban Services Boundary and Urban Policy Area growth management policies. False statements must be removed from the EIR.

USB Violation

- The UWSP EIR does not present or discuss that Sacramento County has an Urban Services Boundary policy that says the County shall not expand the Urban Service Boundary unless there is inadequate vacant land within the USB to accommodate the projected 25-year demand for urban uses..." The EIR does not state clearly under Land Use that there is adequate vacancy inside the Urban Services Boundary for the number of housing units and commercial space the project proposes.
- The EIR offers no rationale for the County approving urban development outside the Urban Services Boundary.
- One of the goals of the Urban Services Boundary was to encourage infill development. Infill development advantages residents inside the new development and infill development adds vitality and benefits to the nearby community, maximizes the cost-efficiency of urban services such as transit, and reduces environmental impacts associated with urban sprawl. The EIR fails to discuss ways in which allowing development outside the Urban Services Boundary discourages infill development and disadvantages communities inside the Urban Services Boundary.

River Corridor Conflicts

- The UWSP project is within 1,000 feet of the Sacramento River. The UWSP's location in the river corridor should be but is never mentioned in the EIR. River corridors are unique land areas in a community, providing rich habitat, habitat corridors, farmland, open space, important tribal cultural landscapes, and flood mitigation specifically associated with proximity to the river.
- River corridors are rare and valuable resources to residents of any community, and are particularly valued by residents throughout Sacramento County for the health benefits of open space as a respite from the urban environment, for the opportunity to see wildlife in their community, and for the benefits of locally grown food in soils enriched by centuries of river overflow. The loss of these river corridor benefits are not presented and discussed as impacts in the EIR and should be.
- Current Sacramento County policy has a goal to actively plan to protect, as open space, areas of natural resource value, which may include riparian corridors and floodplains associated with riparian drainages. The EIR fails to point out that the UWSP project area is in the Sacramento River corridor, less than 1,000 feet from the Sacramento River. The EIR says, "No wetlands preserves, riparian corridors or floodplains associated with riparian drainages are present in the UWSP area so none will be affected by the project's development." That is incorrect. False statements should be removed from the EIR. The farmland soils, wildlife and other biological resources, and tribal cultural resources present within the UWSP area are associated with proximity to the river and are part of the Sacramento River corridor.

- The UWSP EIR fails to identify impacts from locating UWSP urban development in a river corridor.
- The EIR fails to identify that river corridor degradation can only partially be mitigated in other river corridor areas. Loss of habitat corridor, loss of existing open space health benefits to local residents, loss of farmland and farm produce for Sacramentans in their community, loss of existing river overflow flood protection, and loss of a tribal cultural landscape will not be mitigated.
- The policies of the County's 2030 General Plan and the Urban Services Boundary protect a one-mile-wide river corridor, protecting river corridor habitat, farmland, tribal resources, and floodway overflow protection. The EIR fails to state that the UWSP would destroy those protections.

New Urban-Rural Land Use Conflicts

- Other than changing the aesthetics and rural character of the area, the EIR fails to address impacts from putting urban development within 700 feet of rural residential zoning, changing the expectations for area rural residents choosing to live in a rural residential zone (this is true for Garden Highway rural residential homeowners and homeowners on UWSP area farmland).
- The EIR should and does not identify feasible mitigations that might reduce urban-rural conflicts for a project like UWSP near rural residential areas like Garden Highway, such as requiring that the 20–30-year UWSP project construction begin closest to existing urban uses (i.e. near El Centro road), reaching rural areas last (i.e. Garden Highway), and this impact could be partially mitigated by establishing a minimum one-half mile setback between the UWSP project and any rural residential areas (i.e. Garden Highway), with the setback to include a minimum 100-foot-wide densely planted tree buffer of tall native evergreen trees at the western project boundary, with the setback established and the tree buffer installed before the first stage of project construction.
- If County zoning has setback requirements between rural residential zoning and urban activity, those setbacks should be clearly identified in the EIR. If the County does not have such setback requirements, the EIR team should contact an appropriate government agency or reputable nonprofit organization that has studied what setbacks should occur between rural residential zoning and urban activity in order to avoid conflicts, and the findings of that research should be included in the EIR next to the proposed setbacks.

Noise

- The EIR fails to adequately address the impacts from a proposed stadium, which would be close to residences in and all around the UWSP project area, including Garden Highway. Stadium traffic, noise, and light do not belong in or near residential areas. Stadium noise can travel miles. County and City Code Enforcement offices and Sacramento stadium operators can confirm stadium conflicts with residential areas. Any stadium should be miles from any homes.

- The EIR fails to adequately address the impacts from amplified sound from the UWSP area, such as at the outdoor pavilion. Amplified sound should be prohibited in all residential areas. In the past, developers and the County have said that amplified sound can be regulated to minimize impacts. That has proven to be untrue. Over time, sound equipment and the location of speakers can change and noise makers like bull horns and portable sound systems can be introduced, resulting in uncontrolled noise that can travel more than 2 miles.
- The EIR fails to identify the health impacts of traffic noise, school and park noise, and amplified noise from the outdoor pavilion and stadium.
- The EIR fails to adequately address that project related noise, as well as project construction noise, could be serious impacts on Garden Highway residents because of the prevailing wind that carries sound toward Garden Highway.

Population and Housing

- The EIR should, and does not make clear that the UWSP has no commitment to a specific number or percentage of the type of housing Sacramento needs, including very affordable, affordable, missing middle duplexes and triplexes, senior housing and handicapped housing all located near transit.
- The EIR should and does not make clear that the UWSP has no commitment to including affordable housing as part of each housing development, so affordable housing is integrated in each phase of development, and not targeted for one area of the project, or built in the last phase of development in 20-30 years.
- The EIR should and does not make clear that the UWSP is unlikely to result in the development of any housing for at least 7 years (the projected time for construction of Phase 1). This project will not help with Sacramento's urgent housing needs.

Public Services and Recreation

- The EIR fails to mention that County policy says the County shall not provide urban services beyond the Urban Policy Area (UPA), because it is the intent of the County to focus investment of public resources on revitalization efforts within existing communities. The EIR fails to mention that the UWSP project violates this policy, and the EIR fails to identify impacts from the UWSP's violation of this policy.
- The EIR fails to indicate that the extension of public services to the project area is unanticipated and unplanned.
- The EIR fails to say the UWSP has no control over when some of the services and recreation areas would be available in the project area, which would, at least, increase vehicle trips to access services in other areas.
- The EIR fails to identify harms caused by the unplanned extension of public infrastructure and services to accommodate the UWSP outside the Urban Services

Boundary and the Urban Policy Area, particularly the harms to the County's efforts to focus investment of public resources on revitalization efforts within existing communities.

Transportation

- The project EIR says traffic safety is a key consideration. However, the EIR fails to adequately address the severe and dangerous impacts UWSP traffic would have on the Garden Highway roadway and existing Garden Highway roadway users. The EIR suggests the project could add 4,000 trips a day on Garden Highway. Garden Highway is a rural 2-lane, undivided, elevated roadway. Garden Highway is half the width it should be for traffic safety. It has blind curves, no shoulders and no guard rails. The greatest safety issue on Garden Highway, which the EIR fails to identify, is the mixed use of the road by personal vehicles, semitrucks, agricultural equipment, cars pulling boats, golf carts, individual and groups of cyclists, pedestrians, and wildlife, any of which can enter the roadway unexpectedly from farm roads, driveways, and the riverbank. Adding traffic to Garden Highway has life safety consequences which cannot be mitigated.
- The EIR fails to identify that a mitigation to serious Garden Highway traffic and other rural road safety impacts identified in the EIR is to reroute UWSP traffic to avoid and actively discourage UWSP traffic from using rural roads including Garden Highway.
- The EIR fails to identify that adding traffic to Garden Highway would change the physical safety characteristics and make recreational use of Garden Highway too dangerous for cyclists and for vehicle clubs such as antique car clubs and motorcycle groups, eliminating a valuable Sacramento recreational opportunity.
- The EIR fails to highlight that the UWSP would introduce freeway and rural roadway traffic hazards for Sacramentans for which the project applicant has no ability to compel or control mitigations. That could subject Sacramento roadway and freeway users to increased traffic safety hazards, potentially for many years.
- The EIR asserts, with no evidence, that most employment related vehicle trips will be to downtown Sacramento. It is wrong for the EIR to present VMT data as fact when it is not based on evidence. Focusing so much on VMT to downtown Sacramento serves to minimize VMT. The EIR should have considered VMT more realistically to multiple job centers. While downtown Sacramento is a job center, Sacramento County has more jobs than downtown, as noted in the EIR. Yolo County and Placer County are also job centers.
- The EIR fails to consider traffic impacts on the surrounding area from the UWSP stadium, outdoor pavilion, or schools.
- The EIR fails to suggest traffic mitigations such as locating UWSP traffic generating uses (e.g. stadium, outdoor pavilion or schools) near major roadways and commercial uses to reduce traffic dangers, congestion, noise and air pollution in residential areas.

- The EIR fails to mention that County policy says the County shall not provide urban services, such as road improvements and transit, beyond the Urban Policy Area (UPA), because it is the intent of the County to focus investment of public resources on revitalization efforts within existing communities. The EIR fails to present the impacts from the UWSP violation of this policy and the impacts from the changes to this policy proposed by the project applicant.
- The EIR fails to identify impacts caused by the unplanned extension of public infrastructure and services, such as transit and roadway improvements, to accommodate the UWSP outside the Urban Services Boundary and the Urban Policy Area, particularly the harms to the County's efforts to focus investment of public resources on revitalization efforts within existing communities.

Tribal Cultural Resources

- While the UWSP would have a holistic impact on the tribal cultural landscape, the EIR fails to identify priority sites for tribal resource protection within the UWSP area.

Utilities

- The EIR fails to state that the UWSP violates the County's Urban Services Boundary policy which says that the County shall maintain an Urban Services Boundary (USB) that defines the long-range plans (beyond twenty-five years) for urbanization and extension of public infrastructure and services. The EIR fails to identify impacts associated with this violation and UWSP impacts associated with proposed changes to the County's Urban Services Boundary policy.
- The EIR fails to mention that County policy says the County shall not provide urban services beyond the Urban Policy Area (UPA), because it is the intent of the County to focus investment of public resources on revitalization efforts within existing communities. The EIR fails to identify UWSP impacts associated with this violation and impacts associated with proposed changes to the County's Urban Policy Area policy.
- The EIR fails to identify harms caused by the unplanned extension of public infrastructure and services, such as utility services, to accommodate the UWSP outside the Urban Services Boundary and the Urban Policy Area, particularly the harms to the County's efforts to focus investment of public resources on revitalization within existing communities.

Other Resource Topics- Wildfire

- The EIR says the UWSP is outside an area where CalFire establishes fire hazard zones. Then the EIR makes the misleading statement that the project area is not in a fire hazard zone. It is wrong to say, and dishonest to leave the impression that the area has been assessed for fire hazard when it has not been assessed by CalFire or any other fire agency. The EIR should delete incorrect and misleading information and just say the area has not been assessed for wildfire risk and the wildfire risk is unknown.

- The EIR is also incorrect about area conditions that could contribute to a wildfire hazard. There is heavy wooded growth adjacent to the river, less than 1,000 feet from the project area, from Sacramento up into rural wildfire hazard areas in Butte County. There are also at different times of the year dried crops and hay bales on farmland on both the Yolo and Sacramento sides of the Sacramento river that could and have caught fire (hay bales can be seen in EIR photos). A wind driven fire could easily jump the river as it has jumped freeways. The 2017 Tubbs fire burned into the City of Santa Rosa where more than a dozen people lost their lives and more than 2500 homes and one Hilton Hotel were destroyed. Wildfire could happen in the project area.

Cumulative Impacts

- The UWSP projects a 20–30-year buildout. The EIR fails to address ongoing impacts from construction noise, dust, traffic, etc. on area residents over an extensive period of time during which time mitigations the project applicant does not control may not be available to diminish impacts on existing area residents and new project area residents.

Growth Inducement and Urban Decay

- The EIR fails to accurately identify the UWSP project as unplanned urban development. The UWSP is unplanned – not included or anticipated in the County's General Plan, or the Urban Services Boundary, or the SACOG Blueprint for regional development or plans for transit, regional roadway improvements, utility services extensions, or air quality improvement.

- In violation of CEQA, the EIR entirely fails to include in this section the long list of changes the UWSP project would require to County plans, policies, codes, etc., and the growth inducement impacts of changing those County plans and policies and codes.

- Sacramento County's 2030 General Plan and the County's Urban Services Boundary (USB) explicitly state that one of their purposes is to reduce unplanned urban development and its impacts outside the Urban Services Boundary. The EIR fails to clearly state that the UWSP violates the County's policies to prevent urban sprawl.

- The EIR fails to clearly identify all growth inducement impacts from the UWSP's development outside the County's Urban Services Boundary.

- The EIR falsely says, "the proposed UWSP is consistent with Sacramento County General Plan Policy LU-120, which is intended to reduce impacts of many different types – such as growth inducement, unacceptable operating conditions on roadways, poor air quality, and lack of appropriate infrastructure." As stated in the EIR, the UWSP creates unacceptable operating conditions on roadways, poor air quality, currently lacks appropriate infrastructure, and in most cases the project applicant cannot compel, and does not control possible mitigations. False statements should be removed from the EIR.

- The EIR falsely claims the pressure for future development in the area would be reduced because of the need to show consistency with the County General Plan and to receive approval from the Sacramento County Board of Supervisors. Those

impediments are not enough to stop the UWSP project applicant. Why would they stop other project applicants? The EIR does not say, and should say, that if the Sacramento County Board of Supervisors approves the project, other similar urban development projects may also be approved using the same criteria.

RESPONSE 40-1

Letter 40 is identical to the letter submitted by the Garden Highway Community Association (GHCA) included as Letter 18 in this Final EIR. Please see Responses 18-1 to 18-73.

LETTER 41

Heather Fargo, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 41-1

Good evening to the Natomas CPAC, it's nice to see you all here. My name is Heather Fargo. I'm a South Natomas resident and have been for more decades than I want to tell you. So, if you need to use me as a resource down the road when you are looking at more information about the project, please let me know, I can make myself available.

I am also the former mayor here in Sacramento and I was the mayor when the Natomas Habitat Conservation Plan was approved. I was serving Natomas as a City Council Member when the North Natomas Community Plan was approved. I'm also currently the board member of the Environmental Council of Sacramento (ECOS), and I'm chairing their Natomas team. I along with our team are adamantly opposed to this project. We do not want to see it move forward. I want to first start by saying there are number of farmers here, number of property owners. We don't have any opposition to people selling their land. I mean, everyone can do that. If farmers can find someone to buy their land, I think that's fine. Our concerns are what happens in terms of development to that land. So, as you have heard already there are significant and unavoidable impacts. I want you to think about what that term means because they asked us to focus on the EIR, which by the way, was not in the announcement for the meeting. It didn't ask us to focus so not everyone who is speaking on the behalf of the community got that message. But the first issue, is that of aesthetics, the view that people have in Natomas and drive through Natomas, the actual visual impacts really do matter. Valley Vision did a survey and found out that the number one reason people like living in the Sacramento region is the access to open space. So, keep that in mind, that's what people would like to see. The second impact, which obviously could not be mitigated. *[Clerk notes two minutes is up]* Did you just tell me I ran out of time? The loss of farmland, increase in air pollution is a huge issue, they call it traffic, but we call it congestion when you pass by on the I-5 and I-80 and obviously two minutes is not enough. Please deny the project.

RESPONSE 41-1

The commenter expresses opinions on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 42

Edith Thatcher, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 42-1

My name is Edith Thatcher, I'm a resident of Natomas. The Upper Westside project is a part of 8,000-acres of proposed development in the Natomas Basin. The EIR does not consider cumulative impacts on traffic congestion, the environment, roads, flood, emergency response, evacuation and so on. I provided the Council with a map, you can't see it well, I'm very sorry. There is a black line, black dotted line, that is the Urban Services Boundary. In the most recent County General Plan it describes the Urban Services Boundary as the ultimate growth boundary for the unincorporated area. I mean, the General Plan says that that's the edge of growth. The building occurring in the Natomas Basin, that we see, the apartments, Costco, all that is inside that Urban Services Boundary. But there are 8,000 acres of projects planned outside that boundary. On this map. If you look at page 4 in your handout, there will help you a little bit. Grandpark which is 5,000 acres of residential, commercial. That's basically a small city. Over here we have a Watt EV. Watt EV is about 118 that will be solar charging, solar park. This is Airport South Industrial; that is about 150 acres that is planned to be over six million square feet of warehouses. And then we have the 2,000 acres of Upper Westside, which is why all of us are here thinking about that. Of those projects, three of them are going to require moving the Urban Services Boundary which is supposed to delineate our [\[Clerk notes two minutes is up\]](#) the other thing to think about is the cumulative impacts of all of these projects, not just the Upper Westside. Thank you very much and thank you to the Council.

RESPONSE 42-1

Cumulative impacts associated with the proposed project and cumulative development in the County, including all of the projects in the Natomas Basin mentioned in the comment, are discussed in Chapter 22, *Cumulative Impacts*, of the Draft EIR. Please see Master Response TR-3: Traffic Congestion for a discussion of congestion, Master Response HYD-1: Flood Protection and Drainage for a discussion of flooding, and Master Response LU-1: County Urban Services Boundary and Urban Policy Area for a discussion of extending the Urban Services Boundary.

LETTER 43

Robert Burness, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 43-1

Thank you, good evening. I would like to address; my name is Robert Burness. I'm a resident of South Sacramento, but I was also a Planner for the County for 30 years and was very much involved in the development of the policies that we're going to be talking about tonight. I'd like to get into a little bit of detail about the consistency of policy number LU-127, which is about moving the USB. I want to talk briefly about the fact that really the County should not be deciding on this project, it should be the city. And thirdly, there are some other risks, issues, and impacts associated with this project that are not adequately dealt with in the Environmental Impact Report.

First of all, Policy LU-127 lays out very specific requirements before the boundary should be expanded. I won't get into detail on it, but I encourage you to look at them closely. It's pretty clear that most of them are not being met in effect. There is an opt-out clause which basically says that the Board with a super majority of 4 can approve the project and override these concerns if there is something of extraordinary value associated with the project that merits them making this decision. I've looked and I don't see anything really very extraordinary about it. And if you really have to stretch to find it that's a good reason to consider this inconsistent with the policy. The County should not be approving this project and here's why. When this whole project went to hearing, or rather the General Plan policy went to hearing, it came to the Board with the recommendation of that the entire North Natomas area be included within the Urban Services Boundary. That was a recommendation of the Planning Commission at the behest of landowners with an interest in the area. At the time, Grantland Johnson was a representative on the Board. *[Clerk notes two minutes is up]* And Grantland basically said this should be developed by the City. They will be providing services for the area. They will be having the most residents living in areas that are being impacted by it. It should be their decision we won't get into it why. *[Clerk asks for comments to be concluded]* But keep in mind as you talk and finally just once, there really does need to be a close look at congestion issues. There's an analysis buried in the environmental document, Appendix B that has a whole bunch of numbers about what the traffic will be. You should ask the County specifically *[Clerk asks for comments to be concluded]* for direction of what that impact is. The congestion is your most important issue. Talk about all these projects that are on the table. Thank you.

RESPONSE 43-1

Please see Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127 and Master Response Master Response TR-3: Traffic Congestion.

This comment expresses opposition to the project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The

comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 44

Luz Lynn, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 44-1

Good evening and thank you for taking our comments tonight. Today, I'm just really going to ask you to consider the housing and climate readiness challenges that are here in Sacramento. And really, what is this project going to address these needs that we have. There's no doubt there is a housing crisis going on and we definitely needing to increase housing, especially affordable housing. But at the same time, we really need to think about what kind of development is going to be good for the area. We know that vehicle miles traveled, VMT, is the leading cause for greenhouse gases. As we're in a climate crisis right now, we really need to focus on going forward with infill development with dense development around areas where there are existing transit lines and infrastructure. The Upper Westside project area currently does not have the transportation infrastructure that the new community would need. Nor is the area transit priority region so it will take a very long time to actually have this transit infrastructure built. Creating this new community before addressing necessary infrastructure needs will only drive up VMT's and will actually reduce affordability of this housing as an option. I also urge you to consider the importance of working with the agencies that are already leading efforts to increase housing. That includes SACOG and one quote that they had in their comment letters in the Notice of Preparation for this project says the capacity for growth in existing entitled lands far exceeds expected demand for over the next 20 years. Collectively, the region's jurisdictions have entitled or are in the process of entitling two and a half times the region's projected needs for the next ten years. So, we already have people addressing these issues of housing and if we already have that in the works, then how can we justify the removing 2,000 acres of... *[Clerk notes two minutes is up]* How can we justify all of these negative consequences that everybody is speaking to? Thank you.

RESPONSE 44-1

Please see Impact TR-2 on pages 18-28 through 18-32 in Chapter 18, *Transportation*, of the Draft EIR, for a discussion of the proposed project's impact with respect to VMT.

Please see Response 15-2 for a discussion of entitled units in the region.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 45

Alex Jang, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 45-1

Thank you so much for taking our comments. I'm Alex Jang, I've been born and raised here in Natomas specifically. My family has been here since the 1950's just for reference here. And I'm going to comment specifically on, like, the environmental impact. The Natomas has changed a lot over the years. But it's charm and its balance between city and nature is what makes it unique. Sadly, I've noticed the silence of frogs and crickets and the decline of migratory birds, other wildlife. I mean, just the other day I heard some coyotes howling which I didn't hear it for a long time. We would lose that, essentially over time. Now is a perfect time to consider other alternatives to the development plan, like establishing easements or trusts to keep our open spaces safe from overdevelopment. Development is part of what puts Natomas at risk. Recently I saw a lot of residents on Facebook actually talking about the increase of mice in their home. And I think that's due to the development that has happened already. The Natomas Basin Habitat Conservation Plan has also been created to protect vital habitats and various species, like endangered ones that we have here, the giant garter snake and Swainson's hawk. If the development plan continues [...] the development plan does talk about mitigation strategies, but disrupting these critical habitats can still lead to even more declines. Of wildlife populations putting short term profits ahead of long-term environmental care, and it's just not fair to future generations. We should focus on sustainable solutions that utilize existing spaces, address built community needs rather than contributing to urban blight. It's important to note that the Upper Westside Specific Plan is heavily backed by private developers, which raises a conflict of interest and concern. Their financial interests suggest participation of profit over community welfare and environmental sustainability. On top of that, while there's a plan to ease the pressure on local services, traffic is still a big issue. *[Clerk notes two minutes is up]* Our roads need to be able to safely sustain our people here. Sorry. I'm, like, panicking now. May all the victims of our traffic incident in our area rest in peace. We have not been able to sustain and keep our people safe here. Let's not forget that we live in a high flood risk zone. Heavy rains and potential levee failure are real concerns. Soil and natural vegetation are crucial to flood control. Paving over these elements have disastrous consequences. *[Chair notes time is up]* Thank you so much, and I hope you can continue to be proud of generations to come.

RESPONSE 45-1

Draft EIR, Chapter 3, Alternatives, includes a discussion of Alternative 1: No Project/No Development. As discussed, Alternative 1 would not achieve any of the basic objectives of the proposed project.

Please also see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, Master Response

HYD-1: Flood Protection and Drainage, and Master Response Master Response TR-3: Traffic Congestion.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 46

Josh Harmatz, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 46-1

Hi everybody, Josh Harmatz, I'm a 19-year resident in Natomas. I started on Del Paso Road and was fortunate enough to buy on Garden Highway and have lived there for some time. I don't mind the coyotes being gone actually because they keep eating my chickens. [...] Really urge this group not approving it as is. They are glossing over some really important points on mitigation which I'm very concerned about. Mitigation efforts need to be detailed out. I'm going to give you four big points that are very important. By the way, of the public comments, 90 percent of these 24 in support are all from email address and they're all canned emails. So please hear the real voice of the residents here, not the canned emails you're getting likely from the developer, who knows.

So, number one traffic is the most pressing concern. You are talking about the [...] lifestyle of residents. Two roads, one of them is to be maintained by the County [...] and the other annexation. Sacramento County is getting no benefit from this plan. They're not getting the millions in tax revenue that is coming in. And they already lack the ability to navigate the resources that are needed. Access to our beaches, levees, and out river fronts are going to be a problem. 25,000 people now wanting to go to the waterway, which has to be managed by the County. There's no plan in here of how that's going to be dealt with. There's already not enough parking, not enough amenities, no trash service. The Garden Highway Community Association, I'm the former Deputy Director of District Three, has not been consulted. And I urge you to add that in there that the local resident groups, including the Garden Highway Community Association, are required to be consulted on this plan moving forward. Safety is a huge concern for us. During the levee project, we saw a huge uptick in crime and traffic coming to our area. That pales in comparison to a project like this. There's been nothing to address specific mitigation efforts of crime, traffic, remember residents of Garden Highway are managed by the County. It takes up to an hour when you call 911. The County is nowhere close to where we live. Now you are adding 25,000 new residents *[Clerk notes two minutes is up]*. Finally, I want to talk about [..recording unclear..] from the crumbling roads over the past decade, things that have not already not been addressed by prior construction. You're exasperating that with no solution and coining mitigation efforts without outlining those things is a serious concerning flaw in this plan. I will say now, I will not support the new 25,000 new residents. Just do the math, look at the infrastructure there, it doesn't work. Thank you very much.

RESPONSE 46-1

Please see Master Response TR-2: Garden Highway Safety Considerations and Master Response TR-3: Traffic Congestion.

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 47

Ronald Costa, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 47-1

My name is Ronald Costa, and I live in South Natomas. Me and my family, we moved from Garden Highway, the land side, over to 3200 block of El Centro Road in 1951. So that puts me at 87 years old and I know the area real well. When I moved in you could count the houses along the riverside at Garden Highway by a couple of hands. There wasn't any. Now, during all that time my parents were two, then the offspring was four, my offspring was four, so I had children, grandchildren, great grandchildren. It multiplies. Our children need a place to live. If we are going to go procreate and make a lot of children, we have to provide a place for them to live. How are they going to survive? It just got to be done. So not building housing is not an option. [..recording unclear..] In order to house the people, we need to house the people that came from us. I don't think that, I think the plan is well-developed. The environmental impact covers the issues. And if we have to step on a couple of bugs or a couple of snakes or let the bird fly to a different tree and make a nest, so be it. The dinosaurs have been gone for thousands of years and you won't miss them a bit. So, if we lose a few bugs, it won't hurt a thing. We haven't for five thousands [..recording unclear..]. There's no getting around it, that's a good housing place and biggest job center in the area, *[Clerk notes two minutes is up]* and it's close. So, not building housing is not an option.

RESPONSE 47-1

This comment expresses opinions on the merits of the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 48

Howard Lamborn, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 48-1

Howard Lamborn, I'm a pharmacist. I've been here in Sacramento for 48 years. I used to work for Sacramento, I realized that there are a lot of problems that go along with any development but this one as long as it is done conscientiously and the concern for the environment, I think would be a very good thing, stimulate people. You all like positive things, we've pretty much talked about the negatives already. It will stimulate the economy, housing, and I think it would be a good thing for Sacramento as long as it's done in view of the environment and i.e. situations like overcrowding etc. But we do need room for people to come here, and they will come here regardless. Sacramento is growing so as long as it done responsibly, I think it's a very good thing. I had a speech all written out, I'm not going to read that I'm going to put it away. I will keep it short and sweet. Thank you very much.

RESPONSE 48-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 49

Joseph Brazil, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 49-1

Chair, CPAC members, my name is Joseph Brazil. My family has been farming 120 acres in the Upper Westside Project area for over 80 years. Unfortunately, urbanization and changing conditions, along with many other problematic issues, has made agriculture in this area increasingly, unsustainable and quite frankly, no longer profitable for us. We actually were forced to sell a portion of our land in order to simply keep our farming operations afloat. The prevailing concern is that the land being converted into the Upper Westside development should remain designated as farmland. Anyone who thinks this is prime farmland really needs to talk to my family, who has been farming this for eighty years. In reality, urbanization has surrounded our land, which has created numerous problems for us. So let me share a few points on that issue and bring some truth to light. Number one, we can't leave our tractors or equipment in the fields overnight. People also come onto our fields and trample and steal their crops. Vandalism, this is definitely, definitely a problem and a real issue for us. Increased traffic. This impacts the transport moving of our slow moving tractors up to the heavy equipment, farming restrictions on methods, timing, pesticides, etc. They're all now due to the proximity of all the homes and the businesses all around the area. Water table and soil mineral erosion. This limits our crops. Fences from planting an orchard, keeping agricultural designation for this land ignores the on the ground reality that farming here is no longer practical, sustainable and extremely difficult to profit from. But Upper Westside has solutions. Number one mitigation land. They offer a 1 to 1 mitigation ratio of prime farmland to contribute for every acre developed in the project. This ensures that while development proceeds, farmland preservation continues in other areas that are much better suited.

[Clerk notes two minutes is up]

Okay, yes, I will wrap it up. Wildlife corridor [...recording unclear...] has a system to ensure that there's an ecosystem for the Swainson Hawk, giant garter snake and other species are intact. Number three housing shortage. This also takes care of the demands for the severe housing shortage that is happening. So, in closing, Upper Westside project offers a forward-thinking solution that balances the nature of development, response to farmland mitigation, and environmental protections. Our family and I fully support the Upper Westside Project thereof and all these benefits, solutions I mentioned, along with others, which had considered as well. I hope you guys consider it as well.

RESPONSE 49-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 50

Yudwinder Singh, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 50-1

Good evening, everybody and decision makers. I'm a resident of Sacramento and been living here for the past 25-years and same area the Natomas Sacramento. I'm in support of this site-specific plan, which is why I end up at the meeting today. It's my pleasure to share my opinions of this agenda. For your information, I am managing and running the [..recording unclear..] group for the community group in this area for the last 12 years, more than a decade. And almost all of the members are living here in Natomas. And all of the members we spoke when this project was started, five-six years ago. We made our statements about this project its already in your files. And let me come to the point in short, we still have residence in California and the convenience of Sacramento houses, we need more homes here. My grandson, he lives in an apartment because the home prices are very high. Why are the home prices high? And if that objective can be processed, then the homes can be built over there so that new construction [..recording unclear..]. That's why I support this project which can also predict some percentage of the population. And, this project site is very convenient and very close to the freeways, downtown and get pushed moreover [..recording unclear..]. We will get a few more schools, colleges, and universities in this area. And the hospitals to for the future generations. *[Clerk notes two minutes is up]*

Eco friendly transportation system will be a part of the plan. And the city can attest to the public transit, light rail, and transportation system. Moreover, the commercial, hotels, motels, and the hospitals and clinics are the main market. Everything creates the employment opportunities over there. [..recording unclear..] (clerk ended public comment). *[Clerk notes two minutes is up]*

RESPONSE 50-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 51

Srirama Tanniru, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 51-1

Good evening members of the Natomas CPAC Board and members of the public. My name is Srirama, short for Sri. I work for the State of California as an IT project manager. I have been working in the IT industry in the Sacramento area for the past 30 years. And, and I'm here to express my strong support for the Upper Westside Specific Plan project. And I want to share with you all, some of. - there are many reasons just I feel like we should support this project, but a few critical. I'd like to, quickly share, I don't know if I will have enough time. So not in any particular order, first reason, I feel like we should support this project is because of the shortage of housing that we have, not only in this region, but it's a statewide problem. So, I think that this project will alleviate some of that, shortage, especially, regards to apartments, affordable apartments and duplexes. So that's reason number one. The other reason why I am in strong support of this project is because it's very close to downtown Sacramento, and there are over 200,000 existing jobs close by. And so, this will enable the region to meet its goals of especially people, miles traveled VMT as well as the greenhouse gas emissions. So, those things are going to be satisfied by this project. I got many points. I mean, the other thing I want to point out is, as I've lived here for such a long time. Every time I pass by this area, I also see this area empty and see so many northern area projects being done. I always felt like why can't we develop so close to downtown and so close to job centers meeting smart growth objectives. Thank you.

RESPONSE 51-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 52

Tristen Griffith, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 52-1

Recently, we completed significant renovations to our restaurant and exterior, repaved facility, upgraded our lighting to enhance the experience for everyone who visits, to name a few. I'm excited about the Upper Westside Plan, which is vital for our future. This project will bring essential infrastructure improvements, including expanding West El Camino Avenue and upgrading Interstate 80 interchange. These changes will reduce congestion, improve accessibility for truckers, and make it easier for travelers to stop by our plaza. I try to exit our plaza, often have to wait several minutes for all the traffic is either pass or stop long enough for my car to exit, let alone a large truck. Moreover, this plan is an investment to our local economy; projected to create thousands of new jobs and foster more growth. More people living and working in this area means more customers for not just the Sacramento 49er Travel Plaza, but for all local businesses that contribute to our commute as someone who has invested in sustainable technology and happy to see that the Upper Westside development prioritizes payments to accommodate these practices. In fact, 49er is on the verge of opening a new Tesla supercharging station any day now. The improvements planned are long-term solutions, including enhanced roadways, expanded intersections, and better public transit connections that will help manage the region's growth rate decades to come. For my family and the Sacramento 49er of Travel Plaza, I'm here to testify in support.

RESPONSE 52-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 53

Bal Soin, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 53-1

My name is Bal Soin. First of all, I want to admire and really appreciate the people who put this project together. And this is the best project it's going to be looking like in that area. I want to thank all of you guys. At least you are looking at the area. Sacramento needs housing. This is the biggest problem we have right now. Sacramento needs the jobs, there are so many, all in a different type of industry, there a lot of stores, lot of [..recording unclear..], and many people be working in the stores to give us services for people who are in the area. And there's a school, there's a park, what else do we need in the community, what else do we need in the area. Maybe new roads, new projects, new everything. I think this is the best project for the area. Look, if you see now, you see two, three, four, five years. I don't know how long it will take. You guys know better, I can't tell you what to say but I like the project, and I support it.

RESPONSE 53-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 54

Paul Pannu, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 54-1

Good evening, Council Members and fellow residents, my name is Paul Pannu. I'm a long time Natomas resident since 2002. I came to you to express my strong support for the Upper Westside development project. After reviewing their proposal, it's very clear this plan promises to bring substantial benefits to all local residents. Development staff addressed housing diversity with many years of varied densities, this project tackles housing supply while promoting voting, social equity, [..recording unclear..] economic growth, the integration of commerce on all the space and bring local job opportunities, reduced commute times, and fueling our local economy. The town center promotes social interactions, walkable and bike friendly environment. School sites will ensure access to quality education [..recording unclear..], and access to parks, trails, and greenbelts will promote healthier lifestyles, and preserve our connection to nature. The plan also aligns with regional goals to reduce car dependency and decrease greenhouse gas emissions. I would like to highlight the fact that there would still remain an agricultural buffer which will maintain the area's farming heritage while integrating urban and rural land use. The proposed special financing district will ensure sustainable funding of enhanced public services like police and fire and for maintenance. In conclusion, the Upper Westside development project represents a holistic approach to urban planning that addresses our community's current needs while safeguarding the future prosperity. It's really a testament to thoughtful, sustainable growth that will enhance the quality of life for all residents. I urge you to support this transformative project. Thank you.

RESPONSE 54-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 55

Patrice Stafford, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 55-1

Hello, my name is Patrice Stafford, I'm a retired Caltrans and County of Sacramento civil engineer. I have worked in this area and all-around Sacramento in various levels of engineering work and from Caltrans greenway work, sewer and stormwater infrastructure during flooding events around this area. And I'm in support of this development with some considerations. Well, I would appreciate more single-family homes instead of so much urbanized development, but there are a lot of I would in this area. It is very important to develop this because everything around is developed. It needs a good development plan. And there's also many parcels that I have worked on, but they're zoned agriculture. So, some have been allowed to be there for over 50 years but they need to be in alignment with what's going on and providing and they already provide housing. And I do agree with the buffer for agriculture because this area has been, you know, it's a great place to have all the farm stands and also, I love the 49er truck stop. And, when I came out here 30 or so years ago, it was just that and Witter Ranch and the senior mobile home park, and then it's moved up. So, then I would say that's what I would support. And I agree that this should be approved. Thank you.

RESPONSE 55-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 56

Hector, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 56-1

I will say that I support the project as long as it's done responsibly. Give an opportunity to the people that live in the neighborhood, not have people come in and buy all the houses. It's interesting for the community, it has schools, parks, lakes, trails and all that stuff. So that's pretty much it, yeah.

RESPONSE 56-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 57

Dana Schwartz, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 57-1

My name is Dana Schwartz. Besides the many negative impacts of this project, like traffic increase and noise, deterioration of air quality, we need to ask ourselves why is this being built when there is so much infill land within city boundaries that can be developed first. Why are we instead developing open farmland and that has been designated for flood control and habitat and wildlife conservation. This does not make sense and will impact the quality of all residents of South Natomas negatively. I implore you to save our open spaces and not approve this plan. Thank you.

RESPONSE 57-1

This comment expresses opposition to the project but raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 58

Simarnjit Malhi, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 58-1

Good evening Natomas Council members. My name is Simarnjit Malhi. I go by Malhi as well. I've been living in Natomas for the past 16 years, since 2008, and ever since I moved to Natomas. Ever since Natomas has been developing, day after day, night after night. So today I'm here to deliver my message once again that I am in favor of another development which is the Upper Westside. So, I'm in favor of the project. Thank you.

RESPONSE 58-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 59

Z. Wayne Johnson, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 59-1

Hi, I'm Z Wayne Johnson, everybody simply calls me Z. I'm president of the River Oaks community association and former chairman of the District 3 Community Coalition. We have caveats about this project. Clearly as you heard, traffic is a huge concern. With all due respect and support for the 49ers. When you come off of I-80 on the [..recording unclear..], you come down to El Centro, the weave between cars and trucks is horrible. There have been accidents as well as multiple near accidents that have occurred along the El Centro itself. There's already a two-lane road, absolutely would have to go to four to be able to sustain this level of traffic. There are no budgeted plans for Caltrans with City of Sacramento for substantial improvement to the I-80 ramps that don't [..recording unclear..]. Not in the ten-year plans and not in the twenty-year plan. Destruction of farmland is a mix use, you know, on our farmers in terms of that. But also, we're concerned about what the traffic studies tend to indicate. The most people are going to access and egress from using I-80 off of Arena Drive. That doesn't make sense for those of us that live here and live in close proximity to the those that are closest to West El Camino are going to use West El Camino to get on the I-80 coming and going. That's also not just for cars but also for trucks that are coming in, which will all create an issue of the problem. It is just disingenuous to be able to note that the studies indicate there will be significant impacts, air, cultural and so forth and not mitigate each one of those, you know, say this is a bigger issue. The air quality effects not only the area directly around but also [..recording unclear..] the air currents that push the pollutants further out. *[Clerk notes two minutes is up]* Actually, I'm done right away. And then lastly, you can't just mention housing. There needs to be a commitment to build affordable housing. Don't use the buzz words because it allows them to move forward. There has to be a commitment to change. And the last comment, again, you talk about change but look at what the quality of life is like in this section of Natomas. And what we want on it versus what we're going to propose. And we have been supportive of various developments. I thank you so much.

RESPONSE 59-1

Please see Master Response TR-3: Traffic Congestion.

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 60

Dave Brady, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 60-1

Hi, good evening, I'm Dave Brady, I also live in the River Oaks, neighborhood. I was gonna call myself a long time Natomas resident, but I can't compare to Heather and so many others here. But I have to say, in the time I've lived here, I've been involved in a lot of community projects, and I've never seen one like this. It struck me as I was sitting in the crowd out there, we're meeting in a silo, and it's very indicative of this project, because the County has been operating in a silo this whole time for this project. They have not engaged with the environmental community. They have not engaged with the City of Sacramento. And most of us live in the City of Sacramento, they represent us and they represent our interest. And so, yeah, the project with the County can go ahead and push it through, they probably will. But you're going to get resistance from other folks in the community if you do that. So, I think the thing that I really want to get across tonight is you need to engage better. This is not going to do it. And I brought two things that I would hope to submit to you tonight. There's been a lot of talk about transportation. In the proposal, there's two comments, and one of them says it's the 2030 County General Plan, and it has a map that says these are four lane arterial roads and I marked six places where that is false. So, I think it's really incumbent of this body to get with the applicants and correct this information. And I wanted to finally - the other item that I wanted to submit tonight, it's a picture I took of the El Camino overpass over I-80 on my way here tonight. This was about two hours ago- wall to wall traffic, and it gets a lot worse than this. But this is the only way, the only logical way you're going to access this site. People are not to drive 20 minutes up to Arena Boulevard and back. So, you guys keep going over this, and I hope you'll consider this. Thank you.

RESPONSE 60-1

Please see Master Response TR-3: Traffic Congestion.

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 61

Pam Davis, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 61-1

I'm not a public speaker. Thank you for allowing me. Just really quickly my concerns. And I'm not involved in anything except I've lived here for 40 years. The major impact to the wildlife habitat that had been promised for so long, and the major traffic impact the existing roads that are mostly two-lane. And like Dave said, the traffic right now on the freeway is insane. Come 3:00 pm here it's a dead stop. And then the lights that make you stop before you get on the freeway -you know- the traffic gets backed up from those. It's insane. To add, I don't remember how many people it said for this housing project. It's just going to impact ten times worst going to impact ten times worse. So that's what I want. And it doesn't say anywhere that housing is affordable and affordable for who, the people from San Francisco?

RESPONSE 61-1

Please see Master Response TR-3: Traffic Congestion.

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 62

Susan Herre, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 62-1

Good afternoon, good evening, Board and everyone, I'm Susan Herre. I'm the president of the Board of Directors for ECOS, that's Environmental Council for Sacramento, and I'm an architect and planner, and South Natomas resident. So, I'd like to thank you and thank everyone who spoke. And summarize briefly the concerns from a neighbor point of view and a from planning point of view. So first, of thank you's to the CPAC members and County staff, and the community members who spoke, and our own Natomas team from ECOS, Heather, [...recording unclear...], and Edith. But the concerns, I'd say they're two. One is, from the neighbor's point of view, and that's increased traffic, loss of use; perhaps if they've got a house that fronts what they were told would be open space in perpetuity, there are lots more people and people have. So, but those are impact issues.

I'd like to talk to you about larger, the bigger picture and larger planning issues. And three things in particular that I would say are really important for our region. And they are planning actions that have been taken over time that have set framework for us here in Sacramento, in the Sacramento region. One has maybe been talked about, the Blueprint from 2004 by SACOG and all the community. It was a smart growth plan. It was considered a model for the nation. And it is really about infill and working around transit, living close in. The second one is the Urban Services Boundary, which has been touched on since 1993, and it was set to protect development from fire and flood, and to preserve Ag and habitat on the outside of it. And the third is the Habitat Conservation Plan, which people have talked about. To protect species in the basin, resident wildlife and much work has gone into making those planning actions. It's something that this region should be really proud of and not toss away lightly. And also, those three things together, if you think of them, they are really guards, defenses, etc., against climate change and for our regional sustainability.

RESPONSE 62-1

Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, Master Response LU-1: County Urban Services Boundary and Urban Policy Area, and Master Response LU-3: SACOG Blueprint and MTP/SCS.

LETTER 63

Shikha, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 63-1

Thank you, I am in favor of the Upper Westside project. My question to you is, or perhaps the planner might be able to address is, you know, I appreciate folks sharing their kind of thoughts around you know, pros and cons. What are the next steps from here on out? What will be the next steps? I've heard the conversations that take place today. And how is that going to kind of circle back to the owners of the parcels?

RESPONSE 63-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 64

Harriet Steiner, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 64-1

My name is Harriet Steiner. I live in North Natomas. This is a matter of history. I was, General Counsel in Sacramento Area Council of Governments when they did the first Blueprint. So, I've been around a long time. And I would say that, like we did the Blueprint, there was a lot of discussion about urban and rural and urban and conservation and why, why and what you develop and what shouldn't. And at the end of that process, which sometimes is contentious, we came up with a plan. The County adopted the Urban Service Boundary and the adopted Natomas Basin Conservancy plan and the Blueprint. And we lived with those for a long time and now we're at a crossroads where different partners, different developers are coming in and asking, can I build this, can I build that, and they are not in the General Plan. They're outside the Urban Services Boundary and they should at least consider that, but they don't, and I think that's wrong. I think that if we are going to take these plans, which were so thought out and has served us so well and decide to do away with them, we should do it in a more thoughtful manner, and we should do it so that we look at all these different lands and other people who make plans and figure out what should develop if any and what shouldn't develop. And that way we can save our conservation and make sure that we are done with flooding issues, we have horrible traffic as many people will say, and we can deal with that too, but to take and do different EIRs, for little pieces or not so little pieces, and build all these little cities in these little pieces without really being able to grasp all of these areas and yet still do away, and yet still do away with all wildlife conservation with our flooding and take these plans and go with them. And not using them as guidepost, but rather use them as impediments. I just don't think that that's what the County should do, and I don't think that's what the City should do. I think we should go back, and we should look at these plans. Maybe they're good plans but they're not timely. And we all know that they is little bit of housing. But SACOG will tell you, two and half times, the amount of housing we need for twenty years in their land, we just need people to build on it and make sure it's affordable when they do. Anyway, thank you very much.

RESPONSE 64-1

Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, Master Response LU-1: County Urban Services Boundary and Urban Policy Area, and Master Response LU-3: SACOG Blueprint and MTP/SCS.

LETTER 65

Harpreet Banga, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 65-1

My name is Harpreet. Thank you all for being here. And lending your ears. And, I want to tell you, my son was going to come and talk today. He couldn't get through, he's becoming a doctor, and he wanted to give a comment. So, I want to read what he said in the message. He said, hello, I am Raj Banga, and I am a resident physician completing training in the Florida and right now I have full intention to return to my hometown of Sacramento after the residency in the next few years. I firmly believe that establishing the Upper Westside community will be a transformative step for the region. It would offer unique amenities, school, and walkability that would make it ideal for families and local business alike. This project helps to address our region's housing shortage, aligns with the smart growth goals, and will create countless valuable opportunities for the community. It will enhance quality of life through expanded recreational facilities, new schools and a welcoming environment for all ages. I look forward to serving this vibrant community in the very near future. I strongly urge you to support this project moving forward. I understand you all are very busy, so thank you for your time and consideration and I am a pharmacist, and my name is Harpreet Banda. I am also in support of this project and all the family and friends; they are here for the support of this project. Just a small thank you so much.

RESPONSE 65-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 66

Caller, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 66-1

I wanted to comment on the inadequate public transit. If this project is going to go forward and need something better than a bus route. People are not going to take the bus. The developer should be required to build a light rail system that goes out there. That would be efficient, and people would actually use it. And that way we wouldn't be overcrowding west El Camino, with cars of everyone trying to get downtown from that community, because that's the only way they're going to be able to get into downtown. So, the public transit needs to be way better if this is going to go through.

RESPONSE 66-1

Please see Master Response TR-1: Transit. The current plan for the light rail service extension to the north of the Central City, known as the Downtown-Natomas-Airport Line, is for an extension from the current Township 9 RT Station, to a new bridge over the American River at Truxel Road, and then north on Truxel to Del Paso Road, where the line would turn to the northeast toward an eventual destination at Sacramento International Airport. There are no current plans for light rail service to be provided to the area of North Natomas west of I-5. As such, light rail service is not reflected in the proposed UWSP.

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 67

Liz Bergeron, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 67-1

Hi, my name is Liz Bergeron and I'm a resident. I was twelve when I moved here in South Natomas and I married somebody who works at a California Highway Patrol for 25 years and we've had a lot of conversations about traffic, safety, and congestion. I've spent a lot of time driving up and down Garden Highway and the speed limit is 40 miles an hour and I get passed on a regular basis by people doing 55 miles an hour. Same on Orchard Lane, which actually has a school on it. And I've been passed on Orchard Lane. And if you think the traffic is bad now you have to take to get to your area. Very, very concerned. That's my biggest concern I have. I agree with all the other side of the comments today and I strongly oppose this project.

RESPONSE 67-1

See Master Response TR-2: Garden Highway Safety Considerations and Master Response TR-3: Traffic Congestion.

LETTER 68

Jana Demar, member of the community, oral comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 68-1

I'm Jana, and I have lived in this area first and have been in this area and my husband has been in this area for over that. We've had property for over 50 years. I pretty much agree with everything that people have said about opposing this project. But there is one thing that only one person really mentioned in here and that was crime. Shortly after we moved in here, we had somebody actively trying to break into your house while we were there and it took the police 45 minutes to get to our house. So, if that was 15 years ago, I can't imagine how long would it take for them to get to my house now. And, I've had several other incidents with criminals where I've had to call the police, but it's a big concern. I noticed on the map that there was one potential police station and one potential fire station. Okay, who's going to man that? Who's going to pay for that? Yeah, they're already plenty police officers and everything like that. So, to me, crime is a big issue along with many other things. And by the way, I don't hear the frogs anymore either. Thank you.

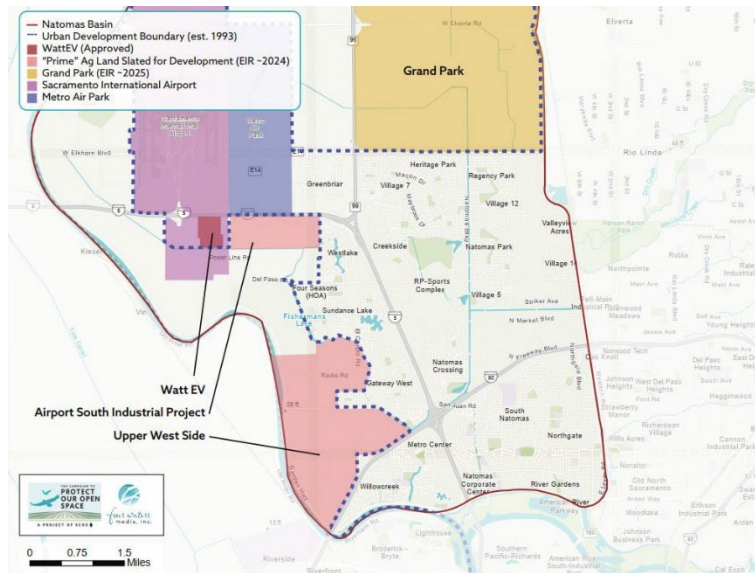

RESPONSE 68-1

Issues related to the crime and funding of police services are social and economic issues, and not a consideration under CEQA. As part of its consideration of the proposed project, the County will assess the social and economic effects of the proposed project. However, while social and economic impacts are important considerations for the County in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that "[e]conomic or social effects of a project shall not be treated as significant effects on the environment." Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a number of factors considered in addressing the feasibility of an alternative, mitigation measure, or change to the project (see CEQA Guidelines sections 15131(b, c). Furthermore, as discussed in Chapter 17, *Public Services and Recreation*, the Sheriff's Department has indicated that staffing levels at present are sufficient to provide efficient response per capita, and the proposed UWSP has identified a new 2.0-acre sheriff's substation within land designated for Employment/Highway Commercial at the east end of Farm Road to provide a local presence for Sheriff's Department staff.

The commenter expresses an opinion on the merits of the project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 69-1

- These projects would dramatically decrease open land in Natomas and present impacts to traffic, air quality, flood control, the Natomas Basin Habitat Conservation Plan, and City services -- all of which should be considered together.

COMMENT 69-2

- The USB was drawn in 1993 to protect development from the risk of flood and fire, and to preserve agriculture, ranch, and habitat lands. The image below of Sacramento County shows the urbanized area inside the USB, with areas outside of it in GREEN. With climate change, the USB is a bulwark of sustainability for our region.

Consider the requirements in Sacramento County's General Plan Policy LU-127 for projects that propose to break through the USB:

LU-127. The County shall not expand the Urban Service Boundary unless:

- *There is inadequate vacant land within the USB to accommodate the projected 25 year demand for urban uses; and*
- *The proposal calling for such expansion can satisfy the requirements of a master water plan as contained in the Conservation Element; and*
- *The proposal calling for such expansion can satisfy the requirements of the Sacramento County Air Quality Attainment Plan; and*
- *The area of expansion does not incorporate open space areas for which previously secured open space easements would need to be relinquished; and*
- *The area of expansion does not include the development of important natural resource areas, aquifer recharge lands or prime agricultural lands;*
- *The area of expansion does not preclude implementation of a Sacramento County-adopted Habitat Conservation Plan;*

OR

- *The Board approves such expansion by a 4/5ths vote based upon on finding that the expansion would provide extraordinary environmental, social or economic benefits and opportunities to the County.*

Given the impacts of this project on the region and the Natomas community, the Upper Westside project does not meet most of the listed requirements, nor does it merit a finding of extraordinary benefits and opportunities by 4/5ths of the Board of Supervisors.

¹ [Sacramento County General Plan, Land Use Element](#)

RESPONSE 69-2

As discussed in Chapter 14, *Land Use*, of the Draft EIR, the Sacramento County General Plan includes a comprehensive and robust policy framework for acceptance and approval of proposed applications to expand the USB and the UPA. The Draft EIR includes discussion of the consistency of the proposed UWSP with this stringent policy framework. The physical effects of the proposed UWSP are fully evaluated in the Draft EIR.

General Plan Policy LU-127 specifies that expansion of the USB is subject to the discretion of the Board of Supervisors. Accordingly, the Board will consider the proposed expansion of the USB in its decision whether to approve the proposed UWSP and in accordance with Policy LU-127.

Please also see Response 15-13 and Master Response LU-2: Consistency With Sacramento County General Plan Policy LU-127.

COMMENT 69-3

- 3) **Consider what it means to develop on land not within the NBHCP/MAPHCP Permit Acres.** The NBHCP is basin-wide for important biological reasons. The hatched areas on the Natomas Basin Habitat Conservation Plan (NBHCP) below indicate where development is permitted. Land outside of the NBHCP/MAPHCP Permit Acres “is designated for retention as Agricultural Cropland by the Sacramento County General Plan.”²

The Upper Westside project (Airport South Industrial and Grand Park as well) is proposed for areas outside of the NBHCP/MAPHCP Permit Acres. It would replace wildlife-supportive agriculture with concrete, vehicles and houses, severely impacting the resident wildlife in the Basin. The protection of resident wildlife in the Basin became a commitment when the City of Sacramento signed a contract with the federal government and approved the NBHCP. Sacramento Area Flood Control Agency (SAFCA) also agreed to protect resident wildlife. The Upper Westside project cannot mitigate for its impacts to resident wildlife as the Natomas Basin is finite – the harm to the Basin’s wildlife conservation efforts will be irreparable.

² https://natomasbasin.org/wp-content/uploads/natomas-basin-habitat-conservation-plan/5nbhccpland_use2006_a11y.pdf, pg. III-13

RESPONSE 69-3

The County of Sacramento is not a permittee under the NBHCP and therefore the environmental commitments referenced in the comment are not applicable to the UWSP. Although Sacramento County is not a signatory to the NBHCP, the County recognizes the NBHCP’s importance as an instrument for conservation of listed species in the Natomas Basin and for the mitigation of development activities within the City of Sacramento and Sutter County portions of the Basin. The Draft EIR proposes avoidance and mitigation measures BR-1 through BR-9 to avoid and minimize impacts on wildlife and finds that implementation of these proposed measures would reduce potential impacts to wildlife from the proposed UWSP to a less significant impact. These measures were carefully designed to provide for mitigation of the effects of the proposed UWSP while avoiding measures that would conflict with, or create obstacles to the successful implementation of, the NBHCP.

Please see the Master Response BR-1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

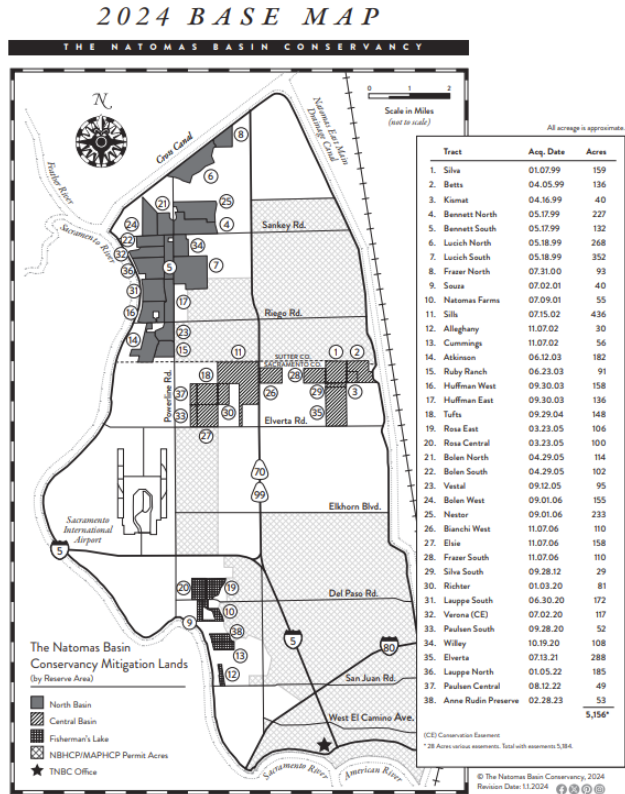

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed UWSP.

COMMENT 69-4

The Natomas Basin is a deep flood basin. Much of the interior of the Basin is lower than the elevation of the Sacramento and American Rivers, particularly during annual high-water flows in winter and spring.

The Natomas levees were designed for a 200-year storm, as it was understood at the time of design in the late 1990s. Climate change is creating a moving target for flood protection, we no longer can accurately estimate size and frequency of floods.

In a crisis, flood mitigation requires everything to work perfectly – pumps, electricity, detention basins, canals, river levels, and people. Hurricane Helene just provided an example of what happens when systems are overwhelmed by water.

Development in the Natomas Basin should be consistent with the NBHCP.

RESPONSE 69-4

This comment states that the Natomas Basin levees were designed for the 200-year storm but expresses concern that climate change creates a moving target for flood protection and that project designers can no longer accurately estimate size and frequency of floods. The comment does not provide data regarding whether storms in the region would be stronger or weaker and does not provide data as to why the 200-year storm design level would not provide the currently required protection. Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage.

The comment closes with the request that development within the Natomas Basin be consistent with the Natomas Basin Habitat Conservation Plan (NBHCP). Consistency with the NBHCP, which is focused on biological resources, is addressed in Chapter 7, *Biological Resources*. The NBHCP does not contain details regarding flood control requirements. Please also see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 69-5

4) Consider how Upper Westside is inconsistent with the goals of the Blueprint.

On November 4, 2020, SACOG commented on the Notice of Preparation of the Upper Westside DEIR, stating “implementation of the Blueprint vision depends greatly on the efforts of cities and counties through local plans and projects. . . [and] the Upper Westside project and the project area itself are not anticipated for development in either the MTP/SCS or the Blueprint.”³

This is still true today. SACOG’s selected land use scenario for the 2025 MTP/SCS, dated April 2024, does not include the Upper Westside, or Airport South Industrial, or Grand Park— it includes no buildout in the coming decades, as shown in the excerpt at right.

SACOG went on to say “The Upper Westside project . . . raises important

policy questions for the region’s implementation of the Blueprint. For example, the capacity for growth in existing entitled lands far exceeds expected demand over the next twenty years: collectively, the region’s jurisdictions have entitled, or are in the process of entitling **2.5 times the region’s projected need for the next 20 years**. More than half of that capacity—387,000 units—is in greenfield areas that are on the edge of existing development.”⁴ This means there is far more entitled acreage for new homes than the market will bear. Upper Westside is not needed.

Attachment A								
2025 Blueprint (MTP/SCS) Discussion Scenario

⁴ James Corless, SACOG Ex Dir., November 4, 2020 letter to County Environmental Planning, Notice of Preparation of DEIR for Upper West Side Specific Plan (PLNP2018- 00284, p. 6)

RESPONSE 69-5

As discussed in Chapter 14, *Land Use*, of the Draft EIR, the UWSP area and the proposed UWSP are not anticipated for development in the SACOG Blueprint. However, as discussed in Impact LU-4 on pages 14-23 through 14-33 of the Draft EIR, the proposed UWSP aligns with many of the principles contained in the Blueprint, including compact development, mixed-use development, housing choice and diversity,

transportation choice, reduction of VMT, reduction of GHG emissions, natural resource conservation, and quality design. The assertion that approval and implementation of the proposed UWSP risks non-attainment of greenhouse gas reduction targets or loss of transportation funding is unsupported. Moreover, the Blueprint is intended to be advisory and to guide the region's transportation planning and funding decisions. As discussed in Chapter 14, *Land Use*, while an EIR may provide information regarding land use and planning issues, CEQA does not consider inconsistency with land use plans and policies to be a physical effect on the environment unless the plan or policy was adopted for the purpose of avoiding or mitigating a significant environmental effect.

Please also see Responses 12-17, 15-2, 15-80, and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 69-6

- 5) **Consider how Upper Westside is inconsistent with General Plans.** The project proposes a change to Sacramento County's General Plan from agricultural to residential/commercial uses. While the project would be in Sacramento County, it would obviously impact the City of Sacramento.

RESPONSE 69-6

The comment does not include any general or specific description of impacts the proposed USWP would have on the City of Sacramento. The Draft EIR addressed the significant impacts of the proposed project irrespective of whether they would occur in unincorporated Sacramento County, the City of Sacramento, Yolo County, or beyond. This included such effects as additional traffic on the local and regional roadway system, public services that are delivered in the County and the City, noise impacts that could occur east of El Centro Road in the City.

As discussed in Chapter 14, *Land Use*, of the Draft EIR, the proposed UWSP meets both regional and County visions and plans intended to promote smart growth principles. The proposed UWSP is immediately adjacent to existing and planned development, including residential uses within the City of Sacramento's North Natomas and South Natomas community that are located to the north and east of the UWSP area. As discussed in Chapter 14, of the Draft EIR, extensive planning efforts for the County lands located near the North Natomas community have established guiding principles for future master planning efforts within the Natomas Joint Vision Area. As discussed in Chapter 14, the proposed UWSP's community form responds to this important groundwork, and the proposed UWSP has been determined to be consistent with County General Plan Policy LU-114, which specifies that development and open space preservation in the Natomas Joint Vision Overlay Area occur in a comprehensive, responsible, and cohesive manner that best addresses land use, economic development, and environmental opportunities and challenges in Natomas.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 69-7

- 6) **Consider the project's effect on our Air Quality Plan.** The proposed project would worsen the Sacramento region's ability to meet state and federal air quality standards by interfering with implementation of our Air Quality Plan. The Upper Westside DEIR makes clear that the project's air quality impacts are significant and unavoidable. Failure to honor our Air Quality Plan could result in our area losing access to federal transportation funds.

RESPONSE 69-7

The Draft EIR fully evaluated air quality impacts in Chapter 6, *Air Quality*, of the Draft EIR. The Project would result in a significant and unavoidable air quality impact related to a conflict with an applicable air quality plan during project operation. The comment reiterates the conclusions of the Draft EIR related to consistency with SMAQMD's air quality plans.

COMMENT 69-8

- 7) **Consider the other areas available for development.** Open land inside the Urban Services Boundary (USB) is available for housing, both in the City of Sacramento and unincorporated Sacramento County – land that is not in a deep flood basin or on prime farmland. In addition, there is enormous capacity for infill development in existing communities, especially around transit stations. Building in communities with existing public infrastructure and services can limit costs to local jurisdictions for maintenance and operations, and it can lower the combined housing-transportation costs to households. While the Upper Westside project proposes the City of Sacramento extend its utilities and services to the project, the City's new 2040 General Plan strongly emphasizes infill development to provide needed housing.

RESPONSE 69-8

Please see Response 15-87.

COMMENT 69-9

- 8) **Consider the land uses being proposed.** We need more housing, but it does not need to be located in the Natomas Basin; and the Upper Westside project does not address our most critical housing need -- for low income households.

RESPONSE 69-9

Please see Response 15-59.

This comment expresses an opinion related to the merits of the project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 69-10

The project proposes three million square feet of commercial space. For comparison, the Westfield Galleria shopping mall in Roseville is 1.3 million square feet. If this commercial space is built, will it take the life out of the 100,000 square-foot shopping mall at West El Camino and Truxel Road?

RESPONSE 69-10

Please see Response 15-83.

COMMENT 69-11

The proposed site is on the urban edge, bounded by the Sacramento River. For an educational campus, this means difficult access by automobile, and certainly by public transit.

RESPONSE 69-11

The comment suggests that given location of the proposed UWSP project area, access would be difficult for automobiles, and certainly by public transit. There would be a number of public street entry/exit points that can be used by vehicles (including buses) to access the specific plan area. The assertion that access for vehicles would be 'difficult' is not accurate nor is it supported by evidence in the record.

This comment expresses an opinion related to the merits of the project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 69-12

9) Consider the traffic impacts. The project proposes 9,000 residences and three million square feet of commercial space, plus the schools. The project will be almost entirely auto-centric. Thousands of auto-trips each day will significantly impact El Centro Road and West El Camino (whose width varies from 2 lanes to 6 lanes between I-80 and Northgate Blvd), as well as Garden Highway and San Juan Road (neither of which can be widened.)

RESPONSE 69-12

The comment asserts that the proposed UWSP would be "almost entirely auto-centric" and that thousands of auto-trips each day would significantly impact El Centro Road and West El Camino Avenue, Garden Highway, and San Juan Road. To be conservative when analyzing the project's VMT, the Draft EIR transportation analysis assumed that over 95% of external trips would be made by vehicle. However, by including a complementary mix of residential and non-residential land uses, a substantial amount of project trips 22.5% on a daily basis per Table TR-1) would remain

internal to the UWSP project area. Additionally, the proposed project would be required to work with Regional Transit to deliver high-quality fixed-route transit to the UWSP plan area. Thus, the assertion the proposed project would be almost entirely auto-centric is not accurate.

The LTA includes an analysis of the amount of traffic the project would add to roadways such as El Centro Road and West El Camino Avenue, Garden Highway, and San Juan Road. It also analyzes whether intersections along each segment would operate acceptably according to the applicable LOS policy. Recommendations are made to restore operations to acceptable levels. Those recommendations, which are summarized in Table ES-1 of the LTA, do not qualify as mitigation measures, per se, because with implementation of Senate Bill 743, and as established in Public Resources Code section 21099(b)(2), LOS or other measures of delay may no longer be used in EIRs to determine the significance of impacts. Sacramento County would use the recommended off-site improvements in the LTA, along with the dynamic implementation tool described in the Draft EIR, to determine when the proposed project should construct off-site improvements to ensure traffic continues to flow acceptably.

COMMENT 69-13

Traffic will increase throughout South Natomas. The six-lane West El Camino overpass of I-80 and El Centro Road, at the primary gateway to the project, will be especially congested. This junction and the gateway itself, intended to be a “smart growth street”, will be bumper to bumper.

RESPONSE 69-13

The LTA includes an analysis of the amount of traffic implementation of the proposed project would add to roadways, including those in South Natomas. The comment is correct in that West El Camino Avenue at I-80 would experience a large increase in traffic. Improvements are planned at the I-80/West El Camino Avenue interchange to accommodate that growth.

LETTER 70

Friends of the Swainson's Hawk (ECOS), non-profit organization, written comment to Natomas Community Planning Advisory Council; dated October 2, 2024.

COMMENT 70-1

The County Urban Services Boundary, a part of the County General Plan, is a core public policy protecting agricultural land, and biological resources in the County. The proposed project would change the Urban Services Boundary and effectively remove agricultural and biological resources from 2,000 greenfield acres. The USB undergirds other key countywide public policies and plans for transportation infrastructure, air quality attainment of state and federal standards, and climate action, policies and plans adopted in the public interest.

Among the biological resources protected by the County General Plan's Urban Services Boundary are populations of rare, endangered and threatened species. These include the state listed Swainson's Hawk.

The project would develop an important natural resource area, namely 2,000 acres within the Natomas Basin Habitat Conservation Plan (NBHCP) Swainson's Hawk Zone. The entire project area is prime farmland, as noted in the DEIR. The loss of farmland is noted in the DEIR as significant and unavoidable.

To approve urbanization within an agricultural area that is part of a federal and state habitat conservation plan is contrary to the County's General Plan conservation policies.

RESPONSE 70-1

Please see Master Responses BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan Master Response, and BR-4: Impacts on Swainson's Hawk Zone.

COMMENT 70-2

The DEIR states that mitigation for these impacts to the Natomas Basin will be mitigated outside the Natomas Basin. This would defeat the purpose of the US Army Corp of Engineers permit condition on Basin flood control projects enabled all development in the Basin, that all development in the Basin be subject to a basin wide habitat conservation plan. The USFWS Opinion, nowhere mentioned in this DEIR, expressly conditions the USFWS approval of the flood control project on a "multispecies habitat management plan for the 55,000 acre lower American Basin" and issuance of Incidental Take Permit from USFWS and Fish and Game Code Section 2081 permit from CDFW.

RESPONSE 70-2

The UWSP is not subject to the conditions of the referenced USACE permit of Biological Opinion, and Sacramento County is not a participant in the NBHCP. Furthermore, the

CEQA significance thresholds for impacts to Biological Resources do not require analysis of the proposed UWSP in the context of the U.S. Army Corp of Engineers' or U.S. Fish and Wildlife Service's permit conditions regarding flood control projects in Natomas Basin. The Draft EIR, Chapter 7, *Biological Resources*, presents an accurate, objective, and adequate analysis of the potential significant impacts of the proposed UWSP on the habitats and sensitive species of the project site. Chapter 22, *Cumulative Impacts*, pages 22-19 to 22-31, includes an analysis of the significant impacts on biological resources that would be the result of the proposed UWSP in combination with other reasonably foreseeable cumulative projects. Because the UWSP is not subject to the requirements of the USACE permit biological opinion, the USFWS ITP, and the CDFW 2081 permit, it is not relevant to the evaluation of impacts of the proposed project.

Please also see Master Response BR-1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan. As is explained therein, the requirements that compensatory mitigation for giant garter snake (Mitigation Measure 3b) and Swainson's hawk foraging habitat (Mitigation Measure 7b) would by design avoid competition with TNBC for limited habitat mitigation opportunities within the Natomas Basin, avoiding a conflict with the NBHCP.

COMMENT 70-3

Approval of this project will undermine the effectiveness of the Natomas Basin Habitat Conservation Plan, a basin wide plan approved by federal and state wildlife agencies.

RESPONSE 70-3

Please see Master Response BR-1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

This comment expresses an opinion on the merits of the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 70-4

The DEIR states that mitigation for loss of Swainson's Hawk foraging habitat caused by the project will be at an unidentified locations in Yolo County. Yolo County requires a permit for any out of county mitigation projects which Yolo may or may not approve. The mitigation provided for in the DEIR is speculative, deferred to an uncertain permit process in Yolo County, and is inconsistent with the Natomas Basin Habitat Conservation Plan.

RESPONSE 70-4

Mitigation Measure BR-7b requires compensatory mitigation for permanent impacts to Swainson's hawk foraging habitat. Compensatory mitigation must be addressed for

each project development phase prior to the approval of either grading permits or building permits, whichever is first. The area of permanently impacted Swainson's hawk foraging habitat for each development phase would be quantified (acres) by a qualified biologist. Mitigation outside of Natomas Basin, as described under Mitigation Measure BR-7b, would avoid conflicts with the NBHCP. While compensatory mitigation for impacts to Swainson's hawk foraging habitat may occur in Yolo County, the mitigation measure identifies a broader geographic area, which includes Sutter County and Yuba County, in which such mitigation may be implemented.

Please also see Master Response 1: Conflicts with the Conservation Strategy for the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

COMMENT 70-5

General Plan Land Use Element Policy LU-127 (p. 144, 2022) recognizes the significance of the Urban Service Boundary ("USB"). It requires that the Board make six findings before it approves an expansion of the USB. Alternatively, the Board can, by a 4/5 vote, avoid these findings if it determines that "expansion would provide extraordinary environmental, social or economic benefits and opportunities for the County." This policy sets a much higher bar for moving the USB than normal land use decisions.

The project fails to meet several of those six mandatory criteria for expansion of the USB, as follows:

a. Inadequate vacant land within the USB to accommodate projected 25 year demand for urban uses. The Board cannot make this finding because: **In fact** there is more than enough vacant land within the USB, including the cities and Urban Policy Areas, designated for urban development to accommodate projected 25 year demand for urban development, as well as thousands of acres of vacant land designated for urban development in West Sacramento (including Southport) which is very close to job opportunities in West Sacramento and downtown Sacramento.

RESPONSE 70-5

As discussed in Chapter 14, *Land Use*, of the Draft EIR, the Sacramento County General Plan includes a comprehensive and robust policy framework for acceptance and approval of proposed applications to expand the USB and the UPA. The Draft EIR includes discussion of the consistency of the proposed UWSP with this stringent policy framework. The physical effects of the proposed UWSP are fully evaluated in the Draft EIR.

General Plan Policy LU-127 specifies that expansion of the USB is subject to the discretion of the Board of Supervisors. Accordingly, the Board will consider the proposed expansion of the USB in its decision whether to approve the proposed UWSP and in accordance with Policy LU-127.

Please also see Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 70-6

b. The area of expansion does not include the development of important natural resource areas or prime agricultural lands. The Board cannot make this finding because:

In fact the entire project area is prime farmland, as shown on the map titled “Agricultural Component, Figure 1A,” General Plan Open Space Element, Amended 2017, p. 7, which precludes including that area within the USB.

The project would develop an important natural resource area, namely the Swainson’s Hawk Zone, the biologically-rich mile-wide corridor of habitat and farmland running alongside the inland toe of the Sacramento River levee between the City limit and Natomas Cross-Canal, designated by the Natomas Basin Habitat Conservation Plan to supplement the habitat preserves established by the Natomas Basin Conservancy and to provide opportunity for the Natomas Basin Conservancy to acquire mitigation preserves adjacent to the Sacramento River riparian corridor that is important nesting habitat for the Swainson’s Hawk.

RESPONSE 70-6

Please see Response 70-5 above and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 70-7

c. The proposal for expansion can satisfy the requirements of a master water plan as contained in the Conservation Element. The Board cannot make this finding because:

In fact there is no such document in the Conservation Element, and is no discussion of **any** water supply plan in the Application, other than applicant’s unsupported assertion that it “could likely demonstrate that it can meet the requirements of a Master Water Plan as contained in the Conservation Element.”

RESPONSE 70-7

Please see Response 70-5 above and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 70-8

The Natomas Basin groundwater is contaminated with arsenic and other minerals, the proposed project would have no access to City’s water rights or supply because the development violates the City’s Implementation Agreement for the NBHCP with state and federal wildlife agencies (NBHCP), and the State has not approved Natomas Mutual Water Company, an agricultural water supplier, as a provider of water for municipal and industrial purposes.

RESPONSE 70-8

Section 3.1 of the Implementation Agreement for the Natomas Basin Habitat Conservation Plan includes a set of articulated obligations of parties, which applies to the City of Sacramento and Sutter County. The precise wording of the Agreement prohibits the City of Sacramento (and Sutter County) from approval of urban development within the Basin outside of their respective Permit Areas. More specifically, the Agreement states that “prior to approval of any related rezoning or prezone, such future urban development shall trigger a reevaluation of the Plan and Permits,...” Thus, the prohibition on the City of Sacramento extends to an action it could take to rezone or prezone property outside its Permit Area. The Agreement does not address, and thus does not prohibit, the City from entering into a service delivery agreement to deliver water that is within its current water rights and place of use, and which has been planned for in its current Urban Water Management Plan. It should further be noted that the City of Sacramento has prepared a Water Supply Assessment, included in the Draft EIR as Appendix H, in which it has confirmed that it has available water supply to provide through an agreement with SCWA the domestic water demand of the proposed project.

COMMENT 70-9

There is no showing that the proposed expansion would provide “extraordinary environmental, social, or economic benefits to the County” that would justify a 4/5 vote of the Board. Thousands of acres – probably at least 9,000 acres - in Natomas Basin which are within the Permit Areas of the NBHCP and Greenbriar remain undeveloped despite being entitled for urban development for years and covered by existing community plans. (Sutter Pointe, Metro Air Park, and City, including Greenbriar and proposed Panhandle annexations.) There is no shortage of land zoned and ready to develop in Natomas or elsewhere in the region.

RESPONSE 70-9

Please see Response 70-5 above and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 70-10

We request that NCPAC members recommend a denial of the project based on the significant and unavoidable negative impacts of the project on the County General Plan, air quality, agricultural land preservation, biological resources, and on the public.

RESPONSE 70-10

The commenter expresses an opinion on the merits of the project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 71

Josh Harmatz, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 71-1

1. Traffic Impact: The Upper West Side project will introduce thousands of new vehicles, exacerbating traffic on Garden Highway, Powerline Road, and the West end of Del Paso Boulevard. Garden Highway, with its single access road for residents, is already facing significant strain from local commuters. The influx of vehicles from the new residents using Garden Highway as a thoroughfare will make the situation untenable.

Request: A full traffic impact report should be conducted, specifically assessing Garden Highway and adjacent roads to determine necessary mitigation strategies, such as road expansions, additional exits, or alternate routes to alleviate congestion.

RESPONSE 71-1

This comment expresses concerns about the proposed UWSP traffic adversely affecting local roadways including Garden Highway, Powerline Road, and the West end of Del Paso Boulevard. Garden Highway. The commenter requests that a full traffic impact report conducted, specifically assessing Garden Highway and adjacent roads to determine necessary mitigation strategies, such as road expansions, additional exits, or alternate routes to alleviate congestion.

In addition to the CEQA-required analysis of VMT and traffic safety included in Chapter 18, *Transportation*, of the Draft EIR, the Draft EIR also contained a Local Transportation Analysis (LTA) in Appendix TR-2. The LTA was based on travel demand modeling using SACOG's SACSIM model. Each of the roadway segments listed by the commenter were evaluated within the LTA. The LTA's traffic analyses of roadway segment and intersection operations were provided for the purposes of mobility planning but pursuant to Public Resources Code section 20199(b)(2) were not appropriately evaluated in the Draft EIR. Nonetheless, the LTA traffic study was comprehensive in nature, applied state-of-the-practice analysis methods, and appropriately identified the physical improvements that would be needed to accommodate the addition of project trips.

Please also see Master Response TR-3: Traffic Congestion, for a discussion of traffic congestion impacts.

COMMENT 71-2

2. Environmental and Recreational Pressure: With new residents, there will be increased demand for recreational spaces, such as our beaches, levees, and the river, all of which are already strained. Garden Highway lacks sufficient infrastructure for parking, trash management, and public amenities to handle more visitors, further burdening the county's limited resources.

Request: The environmental impact of increased recreational use on these areas needs a thorough evaluation, with plans for resource allocation to maintain the natural beauty and manage the influx of visitors.

RESPONSE 71-2

Draft EIR Chapter 17, *Public Services and Recreation*, analyzes the potential for an increase in use of public parks and recreation facilities resulting from the UWSP that could cause a substantial physical deterioration of those facilities (e.g., damage to vegetation, accelerated wear on sports facilities and fields, or erosion along trails) or in the need for new or expanded facilities, the construction or operation of which would result in substantial adverse physical effects. The analysis further considers whether implementation of the proposed UWSP would diminish or otherwise adversely affect recreational opportunities and existing facilities within the UWSP area based on facility capacity.

The Draft EIR analysis acknowledges approximately 127.9 acres of parkland is required to serve the needs of the proposed UWSP. To accommodate the increase in residents resulting from the proposed UWSP, the proposed UWSP includes a parks program, which outlines the proposed parks and recreational facilities that would be implemented in the UWSP area. The proposed UWSP parks program includes a diverse mix of recreational amenities and public gathering spaces which are sized and distributed to serve the anticipated needs of the residents within the UWSP.

A total of 146.6 acres of parks and amenities would be provided in the UWSP area, which accounts for 11 percent of the Development Area. Parks and amenities would include 76.5 of active parks and the 2.6-acre Town Center median park as well as the 15-acre Westside Canal, 34.1 acres of greenbelt space, a 10-acre urban farm, a 12.1-acre West Edge Buffer, and a 14.7-acre Basin Edge Parkways trail. These facilities would be sufficient to meet and exceed the requirements for parkland and recreational facilities for the 25,460 proposed residents.

An Upper Westside Public Facilities Financing Plan (PFFP) is being prepared for the proposed project which is intended to outline the funding and financing mechanisms for construction of public facilities, including backbone roadways and infrastructure. It also will summarize the envisioned phasing of facilities needed to support the development plan, as well as the programs to be employed for on-going public services and maintenance. More specifically, the PFFP will include an Urban Services Plan (USP) which will address the costs of and funding programs for ongoing provision of public services required to serve uses in the Plan Area, including costs for ongoing maintenance of public facilities. The PFFP will be part of the package of proposals included in the UWSP and made available for public review prior to being presented to the Board of Supervisors for its consideration and potential approval.

With the provided parks and recreational facilities, as well as the PFFP, implementation of the UWSP would not increase the use of existing public parks or recreation facilities such that substantial physical deterioration of those facilities (e.g., damage to

vegetation, accelerated wear on sports facilities and fields, or erosion along trails) would occur, nor would there be a need for new or expanded facilities beyond the UWSP boundaries.

COMMENT 71-3

3. Safety and Law Enforcement: The area has already seen rising crime rates during recent levee projects, and with an influx of contractors and workers, this is likely to increase. The sheriff's department is currently understaffed, with response times as long as 1hr minutes in emergencies. This situation will only worsen with the development's construction and after completion, unless proactive measures are taken.

Request: The county must allocate additional resources to law enforcement and emergency services to ensure safety for Garden Highway residents. Funding for this must be factored into the tax revenue projections of the Upper West Side project.

RESPONSE 71-3

The comments raises concerns regarding increased crime rates and response times related to law enforcement with implementation of the UWSP. CEQA's treatment of public services impacts, including impacts to police protection services, is narrowly defined to include only those impacts that would arise from the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental effects. The precise significance criteria used in Chapter 17, *Public Services and Recreation*, of the Draft EIR, and also in CEQA Guidelines Appendix G (XV)(a) states:

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: 1) Fire protection; 2) Police protection; 3) Schools; 4) Parks; and 5) Other public facilities?

CEQA regulations and applicable case law on this issue demonstrate the threshold concerns only the environmental effects associated with the provision of new or altered physical public service facilities. Response times, service ratios, and other performance objectives are relevant to the analysis only within the context of whether or not new or expanded facilities would be required to meet defined criteria related to those service objectives, and what the environmental effects would be of providing those facilities.

As stated on pages 2-53, 2-54, 17-14 and 17-15 of the Draft EIR, the proposed project would create an additional demand for police and fire protection services within the project area. Accordingly, the proposed UWSP has identified a new 2.0-acre sheriff's substation within land designated for Employment/Highway Commercial at the east end of Farm Road to provide a local presence for Sheriff's Department staff. Note that as

allowed by the proposed UWSP,¹ administrative modifications to the land use plan are allowed to reconfigure or realign land uses, including public facilities such as the sheriff's substation. This proposed substation would support the population generated from the proposed UWSP. The new sheriff's substation would be constructed as part of Phase 3 of the development plan. The North Division of the Sacramento County Sheriff's Office service area, of which the UWSP area is part, has two existing stations which would adequately serve the plan area in the interim before substation buildout.

Also, the increase in population associated with the proposed UWSP would require the construction of one new fire station. As part of the proposed UWSP, a site for a new fire station is reserved at the southeast corner of Bryte Bend Road and Street 2, approximately 2.7 miles from Station 43. Note that as allowed by the proposed UWSP,² administrative modifications to the land use plan are allowed to reconfigure or realign land uses, including public facilities such as the sheriff's substation. The fire station would be constructed as part of Phase 1 of the development plan and would therefore have no impact on capacity of existing stations within the SFD service area. The site would be well-located to provide effective response times to future UWSP area residents.

As new police and fire facilities are proposed as part of the proposed UWSP, its impacts are included in the Draft EIR's analyses of physical impacts to the environment resulting from development of the UWSP area. As discussed in the relevant chapters of the Draft EIR, compliance with mitigation measures and other construction-related regulatory requirements would reduce construction-related effects to less-than-significant levels. Therefore, the physical impacts of the proposed police and fire facilities were accounted for in the Draft EIR analysis, and the impact with respect to fire and police protection services would be less than significant.

Please see Response 71-2 above regarding the Upper Westside PFFP, which would address the financing of construction and ongoing operation of public facilities and services, including police and fire protection.

COMMENT 71-4

4. Long-term Infrastructure Concerns: For over a decade, Garden Highway residents have endured constant construction, with no repair to the damaged roads, destroyed tree lines, and erosion of natural beauty. The levee project left thousands of trees decimated, and current conditions are inadequate to handle increased traffic and recreational demand.

Request: Infrastructure improvements, including road repairs, should be completed as part of the mitigation plan. This should be prioritized before construction begins on the Upper West Side.

¹ See Section 3.5 and Section 8.8.4 of the proposed UWSP.

² See Section 3.5 and Section 8.8.4 of the proposed UWSP.

RESPONSE 71-4

The condition of roadway infrastructure facilities age and need replacement over time. The routine repair or replacement of older infrastructure facilities would not be an environmental impact appropriate for consideration under CEQA and is not addressed in the Draft EIR. Nonetheless, the long term maintenance of roadway improvements throughout the County and City of Sacramento are regularly assessed by the County's Department of Transportation and the City's Department of Public Works and other departments, as applicable, through capital improvement programs.

Please see Response 71-2 above regarding the Upper Westside PFFP, which would address the financing of construction and ongoing operation of public facilities and services, including roadways and parks and recreational facilities within the Project area.

COMMENT 71-5

5. County vs. City Responsibilities: While the city of Sacramento will benefit from the increased tax revenue (projected in the tens of millions), Garden Highway and nearby areas remain under county jurisdiction. The burden of road maintenance, law enforcement, and emergency services will fall on the county without clear funding from the tax revenue generated by the project.

Request: The county needs to allocate a portion of the anticipated tax revenue to address the impact on adjacent communities like Garden Highway, specifically in maintaining infrastructure and ensuring safety.

RESPONSE 71-5

Issues related to the allocation of tax revenue collected by local agencies is an economic issue, and not a consideration under CEQA. As part of its consideration of the proposed project, the County will assess the economic and fiscal effects of the proposed project. However, while economic and fiscal impacts are important considerations for the County in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that "[e]conomic or social effects of a project shall not be treated as significant effects on the environment." Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a number of factors considered in addressing the feasibility of an alternative, mitigation measure, or change to the project (see CEQA Guidelines sections 15131(b, c)).

This comment expresses opinions related to the merits of the project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and

made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 71-6

Conclusion: The Upper West Side development presents both opportunities and challenges. Without careful planning and appropriate mitigation, the Garden Highway community will bear the brunt of the negative impacts. I urge the Natomas Community Planning Council to require comprehensive traffic, environmental, and safety studies and to ensure that Garden Highway residents are considered during all phases of planning and implementation.

RESPONSE 71-6

This comment provides a conclusionary statement about the concerns raised in Comments 71-1 to 71-5. Responses 71-1 to 71-5 address the concerns raised in this comment. This comment expresses opinions related to the merits of the project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 71-7

Role of the Garden Highway Community Association: Finally, as the former Director of the Garden Highway Community Association, I request that our association be given an advisory role during the planning and development phases. Our insight into the local infrastructure and community concerns is invaluable, and it is essential for local voices to be part of the conversation.

RESPONSE 71-7

The County has provided opportunity for public engagement through the planning of the proposed UWSP. In the event that the project is approved, there would be numerous future steps during which interested stakeholders would be notified and provided opportunity for public comment and involvement. Please see Upper Westside Specific Plan Section 8, Implementation, for more information on the steps that would be required to achieve implementation of the proposed project subsequent to the Initial Entitlements that would be granted at project approval.

The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 72

Robert Burness, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 72-1

Inconsistent with County Policy LU-127. Not addressed in EIR. Doesn't meet most of requirements laid out regarding opt-out clause. See nothing extraordinary.

RESPONSE 72-1

As discussed in Chapter 14, *Land Use*, of the Draft EIR, the Sacramento County General Plan includes a comprehensive and robust policy framework for acceptance and approval of proposed applications to expand the USB and the UPA. The Draft EIR includes discussion of the consistency of the proposed UWSP with this stringent policy framework. The physical effects of the proposed UWSP are fully evaluated in the Draft EIR.

General Plan Policy LU-127 specifies that expansion of the USB is subject to the discretion of the Board of Supervisors. Accordingly, the Board will consider the proposed expansion of the USB in its decision whether to approve the proposed UWSP and in accordance with Policy LU-127.

Please see Master Response LU-2: Consistency With Sacramento County General Plan Policy LU-127

COMMENT 72-2

The City should be deciding this project not County
Grantland Johnson – provides this as basis for decision on establishing existing USB

RESPONSE 72-2

The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 72-3

Impacts and risks of this project are quite significant.

Over 20 S&U impacts in EIR and that doesn't in code 3 others that should be forefront not EIR require

- Traffic congestion (not VMT) look at Appendix TR B over 100,000 trips/day. Ask for nontechnical analysis of that quantifies congestion levels with this project

- No risk analysis of drainage system. Failure in a major atmospheric river event. Ask staff for one.

RESPONSE 72-3

Please see Master Response TR-3: Traffic Congestion.

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage.

The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 73

R.J., member of the community, written comment to Natomas Community Planning Advisory Council; dated September 24, 2024.

COMMENT 73-1

I live in Natomas and oppose the Upper Westside Specific Plan. This area is not vacant, neglected lots in need of rehab. It is family farms and productive working lands. I'm not making plans for what to do with your wife after you're out of the picture, don't insult our landowners by making plans for what to do with their soil after they've been pushed out.

Emotions aside, the Upper Westside Specific Plan does not align with the City of Sacramento's [2040 General Plan](#) and I urge you to scrap it and protect our farms.

Highlights from the 2040 Plan to keep in mind:

Sustainable and Responsible Growth lists as its #1 objective "Concentrate new growth within

Sacramento's existing footprint to promote a compact development pattern that supports efficient delivery of public services and infrastructure, while protecting surrounding open space lands." Appendix A, Vision and Guiding Principles

The Upper Westside Specific Plan falls within an area the City identifies as a "Special Study Area" currently composed of "Prime Farmland" and "Other Farmland." 3-3 p61

Land Use and Placemaking highlights Sacramento's "1.5million acres of some of the most fertile farmland in the United States," and as such, "planning efforts are guided by 'smart growth' principles that aim to promote a compact development footprint, helping to minimize urban sprawl and pollution." 3-2 p60

The Community Issues and Opportunities section of the plan notes that "North Natomas has some of Sacramento's biggest opportunities for infill and redevelopment," pointing out that "vacant and underutilized properties along the I-5 corridor, Del Paso Road, and Truxel Road are opportunities for infill development that make use of existing infrastructure and community resources." 11-NN-5 p367

The 2040 Plan does not endorse expanding the urban services boundary or rezoning agriculture to residential or commercial use.

When mentioning the proposals for the Upper Westside and Grandpark Specific Plans, community feedback showed "North Natomas residents want to see preservation of natural areas, including wildlife habitats and corridors within the unincorporated area consistent with the HCP; and want new development to have a compact form, integrated with existing development within the city so as to minimize traffic impacts and utility demand, and take advantage of opportunities for improved bicycle and pedestrian connectivity." 11-NN-5 p367-8

Environmental Resources and Constraints objective #2 is “Thriving rivers, wildlife, and natural open spaces that contribute to public health, livability, and protection of the environment for future generations.” 6-3 p131

Sprawling beyond the City's current boundary to pave over food production and destroy wildlife habitat is not what we want. The Upper Westside Specific Plan is a direct contradiction to the goals and wishes of our community.

Stop this nonsense. Your time and resources are better spent elsewhere.

RESPONSE 73-1

Please see Response 25-1 through 25-11.

LETTER 74

Harinder Dhanota, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 28, 2024.

COMMENT 74-1

We like the Upper Westside Specific Plan and its EIR. We support the project.

RESPONSE 74-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 75

Kamal Dhanota, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 29, 2024.

COMMENT 75-1

I support the Upper Westside Specific Plan and its EIR. I support the project. This will create more jobs and affordable housing, and [will] also make Sacramento look beautiful.

RESPONSE 75-1

The comment expresses general support for the proposed project, with an emphasis on employment and affordable housing. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 76

Ramsaran Dhanota, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 1, 2024.

COMMENT 76-1

We like the Upper Westside Specific Plan and its EIR. We support the project.

RESPONSE 76-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 77

Amy Rodrigues, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 23, 2024.

COMMENT 77-1

Position: Oppose

Dear Sacramento County Board of Supervisors,

I am a homeowner and proud resident of the Gateway West neighborhood that borders the proposed project site. I strongly oppose this development because it will significantly harm wildlife, local farms, and the existing community.

Habitat Conservation

This region provides vital habitat for wildlife including migratory and resident birds, mammals, reptiles and insects. Consider protecting these lands as part of the Natomas HCP or mitigation bank rather than developing, to maintain open space and support Swainson hawk, VELB, western pond turtle and other threatened species. This area provides contiguous habitat along the Sacramento River and Bypass Wildlife Areas that should be protected. Open space bordering our Garden Highway levee provides flood protection for greater Natomas, and permeable surfaces promote groundwater recharge.

Prime Farm Land

The existing farms on these lands feed our community and people around the world. My family enjoys watching the tomatoes, sunflowers, pumpkins, and corn grow in the fields down the street, and shopping at the Cuevas stand on El Centro for the freshest produce. Sacramento prides itself on being the Farm-to-Fork capitol. Please don't pave over these iconic family farms.

Impacts to Locals

The 49er Travel Plaza is also a cornerstone of our community, serving travelers and truckers for more than 50 years. Their proximity to the I-5 and I-80 junction and being just offset from residential tracts is ideal. Don't build around them and force them out.

I do not want the added noise and air pollution, strain on our infrastructure and utilities, increased traffic, loss of wildlife, loss of existing community & tradition, and destruction of natural resources. Open space is precious and disappearing quickly. **Agriculture and natural open space is the very best use of these lands.** Please protect the farms that are the symbol and heart of Sacramento, and the reason I chose to live here.

RESPONSE 77-1

Please see Response 24-1 through 24-5.

LETTER 78

Ashika, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 26, 2024.

COMMENT 78-1

I will be attending the Courtesy Meeting- project PLNP2018-00284- Upper West Side Specific Plan- October 3rd at 6 pm via telephone and wanted to ask a couple of questions as my family owns one of the parcels.

1. When will there be offers made to owners of current parcels, should they decide to sell their land.
2. What is the process if the current land owner does not want to sell their land?
3. Will the parcel be sold to the City of Sacramento?
4. Will offers to current parcel owners be made on a phase by phase basis. For example, if a land owner owns a parcel in phase 3 or 4, when will the owner be made an offer to sell their land?

Please feel free to answer these questions via email or at the meeting on October 3d.

RESPONSE 78-1

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 79

Oksana Adamko, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 29, 2024.

COMMENT 79-1

I support the Upper Westside Project Plan. It will make Sacramento beautiful, create more jobs, and it will make more affordable housing for our community. It will generate millions of dollars of revenue for the city and county.

RESPONSE 79-1

The comment expresses general support for the proposed project, with an emphasis on employment, affordable housing, and tax revenue. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 80

Oksana Adamko, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 80-1

We support [the] Upper Westside Specific Plan. We support the project.

RESPONSE 80-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 81

Aditya Maheshwari, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 29, 2024.

COMMENT 81-1

I am writing to express my support for the Upper Westside Project Specific Plan. I like the project and it's EIR. As a current resident of Sacramento and Natomas, I believe it will make Sacramento beautiful and bring business opportunities, jobs, and growth to the area.

RESPONSE 81-1

The comment expresses general support for the proposed project, with an emphasis on aesthetics, business opportunities, employment and growth. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 82

Neelima Maheshwari, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 28, 2024.

COMMENT 82-1

I am a resident of Natomas, and I like the Upper Westside Specific Plan and its EIR. This will bring more jobs to the area and make Natomas an attractive place for families to spend quality time with their community.

RESPONSE 82-1

The comment expresses general support for the proposed project, with an emphasis on employment and housing for families. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 83

Maneep Saheipal, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 29, 2024.

COMMENT 83-1

I support [the] Upper Westside Specific Plan because it [will] make Sacramento beautiful and create more jobs. Thanks.

RESPONSE 83-1

The comment expresses general support for the proposed project, with an emphasis on aesthetics and employment. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 84

Janet Murphy, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 28, 2024.

COMMENT 84-1

I like the Upper Westside Specific Plan and it's EIR. I support the project.

RESPONSE 84-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 85

Kevin Murphy, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 28, 2024.

COMMENT 85-1

I like the Upper west side specific plan and it's EIR. I support the project.

RESPONSE 85-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 86

Yudhvinder Sandhu, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 86-1

I like [the] Upper West[side] Specific Plan and it's EIR. We whole family support this plan.

RESPONSE 86-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 87

Gurpreet Sandhu, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 87-1

Our all family members support [the] Upper Westside Specific Plan and its EIR. We like this project.

RESPONSE 87-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 88

Marinder Sandhu, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 88-1

This is Marry and live in Natomas. We all like [the] Upper Westside Specific Plan and the EIR. We support this project and will really appreciate [it] if you develop it as soon as possible.

RESPONSE 88-1

The comment expresses general support for the proposed project, with an emphasis on constructing the project as soon as possible. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 89

Gurvir Sandhu, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 89-1

Good morning. For your kind information we [would] like to inform you that we like [the] Upper Westside Specific Plan and EIR as well. We all support this project very soundly. Have a great day.

RESPONSE 89-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 90

Resham, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 90-1

This Resham live in Natomas for the last many many years. Our whole family like[s] [the] Upper Westside Plan and it's environment report. We support this project and standing in its favor.

RESPONSE 90-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 91

Hardev Singh, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 91-1

I want to let you know that I like [the] Upper Westside Specific Plan. We all strongly support this project and it's EIR.

RESPONSE 91-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 92

Alok Kumar, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 29, 2024.

COMMENT 92-1

I am a resident of Natomas and support the Upper West Side Specific Plan and its EIR. I fully endorse and support this project.

RESPONSE 92-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 93

Howard Lamborn, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 29, 2024.

COMMENT 93-1

I like the Upper Westside Specific Project and its EIR and support the project.

RESPONSE 93-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 94

Luisa Montoya, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 29, 2024.

COMMENT 94-1

We like the Upper Westside Specific Plan and its EIR. We support the project. This beautiful growth will create better job opportunities in Sacramento.

RESPONSE 94-1

The comment expresses general support for the proposed project, with an emphasis on aesthetics and employment opportunities. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 95

Jaspal Banga, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 95-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

As a member of the Natomas community, I recognize the struggles faced by local farmers due to the changing landscape around them. The Upper Westside project offers a balanced approach to land use, preserving a 542-acre agricultural buffer to protect farmland and preserve open space.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is within 3.5 miles of downtown Sacramento. More than two-thirds of the project boundary is adjacent to existing development. This project is essentially an infill development that will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, more than 52% will be multi-family attached units, which are crucial in addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

Traffic concerns have been addressed as well. The project's location and mix of land uses result in traffic levels below the 85% threshold of baseline conditions, which is an important indicator of its suitability for the area. The developers have also prepared a comprehensive Resource Conservation Strategy, which ensures that impacts on farmland and local habitats will be responsibly mitigated.

The Upper Westside Specific Plan represents a well-balanced and forward-thinking approach to development in the most logical place in our region. It respects the areas agricultural heritage, addresses urgent housing needs, and supports economic growth, all while minimizing environmental impacts.

I urge the Natomas CPAC to support this project and help guide our community into a sustainable future.

RESPONSE 95-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 96

Raykaran Banga, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 96-1

I fully support the Upper Westside Project Specific Plan and the EIR.

RESPONSE 96-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 97

Veerkaran Banga, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 97-1

I am emailing to show support for the Upper Westside Project. The project addresses Sacramento's housing crisis with a sustainable approach.

According to California Housing Partnership's 2024 report on Affordable Housing Needs in Sacramento County: "54,615 low-income renter households in Sacramento County do not have access to an affordable home."

The Upper West Side Project will help alleviate this issue, while also offering a town center and the Westside Canal, which I believe will be a unique and exciting addition to the area — one that I hope to enjoy in the future.

I encourage the Natomas CPAC to support this project given the positive impact it will have on our community.

RESPONSE 97-1

The comment expresses general support for the proposed project, with an emphasis on housing and recreational amenities provided by the project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 98

Michele Katic, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 98-1

As a Garden Highway resident for over 5 decades I oppose the Upper Westside Project. The destruction of our neighborhood this last decade or so is devastating to wildlife and our neighborhood to name a few. We have watched our farm neighbors disappear and our once beautiful area is resembling a cement parking lot. Once you destroy this area you can't go back. What local services we have are being strained. Our law enforcement is lacking causing the crime to continually increase. Traffic is out of control without a proper number of law enforcement available to enforce laws. This area is not prepared for this project and going forward screams mismanagement. I urge you to reject this plan and save our environment.

RESPONSE 98-1

Please see Master Response TR-2: Garden Highway Safety Considerations. Also see Response 71-3 for a discussion of law enforcement.

The commenter expresses an opinion on the merits of the project. T The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 99

Dustin Moore, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 99-1

I am sending this email in opposition to the Upper Westside Project that threatens our environment, wildlife habitat, and our community.

As the Draft Environmental Impact Report clearly states, the project would result in SIGNIFICANT and UNAVOIDABLE impact on the aesthetics, agricultural resources, air quality, cultural and historical resources, noise, [sic] population and housing, transportation, and tribal cultural resources.

It will further impact climate change, geology, soils, hydrology, srainiage, [sic] water quality, public services, and water supply to name but a few of the impacts on our region and community. As a homeowner on the Garden Highway, my family has already seen the destruction of habitat, increased traffic, noise, impact on our water supply, and pollution resulting from the levee project.

RESPONSE 99-1

This comment acknowledges that significant and unavoidable impacts are identified in the Draft EIR and lists other issues analyzed in the Draft EIR. The comment expresses opinions related to the merits of the project and reiterates the conclusions of several of the analyses in the Draft EIR. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 99-2

We have seen public safety response times decrease and increased crime. I am deeply concerned about the additional pressure and burdens placed on our community if the Westside project moves forward. It is estimated that 75 thousand more vehicles a day will travel the Garden Highway and West El Camino Avenue. In an emergency, there will be no safe evacuation routes and all of us will be trapped.

RESPONSE 99-2

The comments raise concerns regarding increased crime rates and response times related to law enforcement with implementation of the UWSP. CEQA's treatment of public services impacts, including impacts to police protection services, is narrowly defined to include only those impacts that would arise from the provision of new or physically altered governmental facilities, the construction of which could cause significant environmental effects. The precise significance criteria used in Chapter 17,

Public Services and Recreation, of the Draft EIR, and also in CEQA Guidelines Appendix G (XV)(a) states:

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services: 1) Fire protection; 2) Police protection; 3) Schools; 4) Parks; and 5) Other public facilities?

The Public Resources Code, CEQA Guidelines, and applicable case law establish that the threshold concerns only the environmental effects associated with the provision of new or altered physical public service facilities. Response times, service ratios, and other performance objectives are relevant to the analysis only within the context of whether or not new or expanded facilities would be required to meet defined criteria related to those service objectives, and what the environmental effects would be of providing those facilities.

As stated on Draft EIR pages 2-53 and 17-14, the UWSP would create an additional demand for police and fire protection services within the UWSP project area. Accordingly, the proposed UWSP has proposed a new 2.0-acre sheriff's substation within land designated for Employment/Highway Commercial at the east end of Farm Road to provide a local presence for Sheriff's Department staff. The proposed UWSP,³ allows that administrative modifications to the land use plan may be made to reconfigure or realign land uses, including public facilities such as the sheriff's substation. This proposed substation would support the population generated from the proposed UWSP. The new sheriff's substation would be constructed as part of Phase 3 of the development plan. The North Division of the Sacramento County Sheriff's Office service area, of which the UWSP area is part, has two existing stations which would adequately serve the plan area in the interim before substation buildout.

Since new police facilities are part of the proposed UWSP, their impacts are included in the Draft EIR analyses of physical environment impacts that would result from development of the UWSP area. As discussed in the relevant chapters of the Draft EIR, compliance with mitigation measures and other construction-related regulatory requirements would reduce construction-related effects to the extent feasible. Therefore, the physical impacts of the proposed police facilities were accounted for in the Draft EIR analysis, and the impact with respect to police protection services would be less than significant.

Please see Response 71-2 regarding the Upper Westside PFFP, which would address the financing of construction and ongoing operation of public facilities and services, including police protection.

³ See Section 3.5 and Section 8.8.4 of the proposed UWSP.

The comment also expresses concerns regarding traffic and its effects related to emergency evacuation. The commenter incorrectly states that the UWMP will add 75,000 thousand more vehicles a day to the Garden Highway and West El Camino Avenue. Daily traffic volumes on these roadways would be far less, as shown when comparing existing traffic volumes in Figure 8 (Existing Roadway Network) to existing plus Project volumes in Figure 13 A (Average Daily Traffic Volumes and Number of Lanes - Existing Plus Project Conditions) of the Local Transportation Analysis (LTA) in Appendix TR-2 of the Draft EIR. The LTA was based on travel demand modeling using SACOG's SACSIM model. Both roadways listed by the commenter were evaluated within the LTA.

Master Response TR-3: Traffic Congestion includes a discussion of traffic congestion impacts. As discussed therein, the LTA's traffic analyses of roadway segment and intersection operations were provided for the purposes of mobility planning but pursuant to Public Resources Code section 20199(b)(2) were not appropriately evaluated in the Draft EIR. Nonetheless, the LTA traffic study was comprehensive in nature, applied state-of-the-practice analysis methods, and appropriately identified the physical improvements that would be needed to accommodate the addition of project trips. With these improvements, the area roadways would continue to function properly and provide adequate emergency access during UWSP operation.

Furthermore, while additional traffic volumes could be expected with the construction of more housing and other uses, the County would be required to periodically update its emergency response and evacuation plan(s) in response to changing conditions, as required in the County's General Plan and State law.⁴ This periodic reevaluation would address these changed conditions, and would adjust the evacuation plans accordingly, thus emergency access impacts would be less than significant.

COMMENT 99-3

Moreover, as I understand it, the increased housing is not designed for middle and low income families, which is the housing that the Sacramento community needs, not thousands of new homes to appeal to bay area transplants that are out of reach for most Sacramentans.

⁴ General Plan Policies SA-31 through SA-34 contain requirements for periodic updates to the County's Emergency Response Plan, Local Hazard Mitigation Plan, coordination with local agencies and jurisdictions on emergency response and evacuation, and public education concerning emergency response procedures. At the State level, AB 747 (2019) requires that the safety elements within general plans be reviewed and updated as necessary to identify evacuation routes and their capacity, safety, and viability under a range of emergency scenarios. Since safety elements are required to be updated at the same time as housing elements, and since housing elements are required to be updated on a five to eight-year timetable, the County's evacuation routes and procedures would also necessarily be updated on a regular basis.

RESPONSE 99-3

This comment provides support for affordable housing to meet the Sacramento Community needs. Although housing affordability is not an issue that pertains to the potential environmental impacts of the project, specific development proposals prepared in the future as part of the UWSP would be required to comply with the Sacramento County Affordable Housing Ordinance (Chapter 22.35 of the Sacramento County Code), which requires new development projects pay an affordability fee on all newly constructed market rate units; comply with the development project's approved affordable housing plan, if one exists; or enter into a development agreement or other form of agreement with the County, which provides for a fee credit for land dedication, construction of affordable dwelling units, or other mechanism which leads to the production of affordable housing, in an amount at least equivalent to the affordability fee established by the County. The proposed UWSP includes an objective to plan for enough units to provide housing choices in varying densities to respond to a range of market segments, including opportunities for rental units and affordable housing. In addition, UWSP would require an entitlement to adopt an Affordable Housing Strategy that discusses the plan for the provision of moderate, low, and very-low-income housing. Therefore, the UWSP generally aligns with this project attribute.

Please see Response 15-59 for a discussion of the proposed UWSP Affordable Housing Strategy.

The comment expresses an opinion regarding the Project's housing but does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP. The comment is acknowledged for the record and will be forwarded to the decision makers for consideration.

LETTER 100

Anthony Wall, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 100-1

I am sending this email in opposition to the Upper Westside Project that threatens our environment, wildlife habitat, and our community. As the Draft Environmental Impact Report clearly states, the project would result in SIGNIFICANT and UNAVOIDABLE impact on the aesthetics, agricultural resources, air quality, cultural and historical resources, noise, population and housing, transportation, and tribal cultural resources. It will further impact climate change, geology, soils, hydrology, drainage, water quality, public services, and water supply to name but a few of the impacts on our region and community.

As a homeowner on the Garden Highway, my family has already seen the destruction of habitat, increased traffic, noise, impact on our water supply, and pollution resulting from the levee project.

We have seen public safety response times decrease and increased crime. I am deeply concerned about the additional pressure and burdens placed on our community if the Westside project moves forward. It is estimated that 75 thousand more vehicles a day will travel the Garden Highway and West El Camino Avenue. In an emergency, there will be no safe evacuation routes and all of us will be trapped.

Moreover, as I understand it, the increased housing is not designed for middle and low income families, which is the housing that the Sacramento community needs, not thousands of new homes to appeal to bay area transplants that are out of reach for most Sacramentans.

RESPONSE 100-1

Please see Responses 99-1 through 99-3.

LETTER 101

Donald Fraulob, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 101-1

I have lived on the Garden Highway for more than 30 years. Over the years my family and my neighbors have already experienced the destruction of habitat, increased traffic, noise, impact on our water supply, and pollution resulting from the levee project.

This proposed project would be a further destruction of idyllic settings Garden Highway residents have enjoyed for many years. Instead of vistas, farmlands and the rural feel of the community, this project – which is in clear violation of the Draft Environmental Impact report – would add a new community of 9000 homes and 3 million square feet. Of commercial development.

The projects does not provide adequate vehicle access to this proposed community but rather adds something like 75,000 vehicles per day to the already congested speedway that the Garden Highway has become.

RESPONSE 101-1

Please see Responses 99-1 through 99-3.

LETTER 102

Jeffery Darin Paper, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 102-1

I am sending this email in opposition to the Upper Westside Project that threatens our environment, wildlife habitat, and our community. As the Draft Environmental Impact Report clearly states, the project would result in SIGNIFICANT and UNAVOIDABLE impact on the aesthetics, agricultural resources, air quality, cultural and historical resources, noise, population and housing, transportation, and tribal cultural resources. It will further impact climate change, geology, soils, hydrology, drainage, water quality, public services, and water supply to name but a few of the impacts on our region and community.

RESPONSE 102-1

Please see Responses 99-1 through 99-3.

LETTER 103

Harjovin Pannu, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 103-1

Attached is support I am showing for the Upper West Side to come to fruition.

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

As a member of the Natomas community, I recognize the struggles faced by local farmers due to the changing landscape around them. The Upper Westside project offers a balanced approach to land use, preserving a 542-acre agricultural buffer to protect farmland and preserve open space.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is within 3.5 miles of downtown Sacramento. More than two-thirds of the project boundary is adjacent to existing development. This project is essentially an infill development that will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, more than 52% will be multi-family attached units, which are crucial in addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

Traffic concerns have been addressed as well. The project's location and mix of land uses result in traffic levels below the 85% threshold of baseline conditions, which is an important indicator of its suitability for the area. The developers have also prepared a comprehensive Resource Conservation Strategy, which ensures that impacts on farmland and local habitats will be responsibly mitigated.

The Upper Westside Specific Plan represents a well-balanced and forward-thinking approach to development in the most logical place in our region. It respects the areas agricultural heritage, addresses urgent housing needs, and supports economic growth, all while minimizing environmental impacts.

I urge the Natomas CPAC to support this project and help guide our community into a sustainable future.

RESPONSE 103-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 104

Nina Thomson, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 104-1

I opposed the Upper Westside Project for all the reasons set forth by other Garden Highway residents. I urge you to reject this proposal.

RESPONSE 104-1

The comment expresses general opposition to the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 105

Kevin McRae, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 105-1

I am sending this email in opposition to the Upper Westside Project that threatens our environment, wildlife habitat, and our community. As the Draft Environmental Impact Report clearly states, the project would result in SIGNIFICANT and UNAVOIDABLE impact on the aesthetics, agricultural resources, air quality, cultural and historical resources, noise, population and housing, transportation, and tribal cultural resources. It will further impact climate change, geology, soils, hydrology, drainage, water quality, public services, and water supply to name but a few of the impacts on our region and community.

As a 30 YEAR homeowner on the Garden Highway, and TEN YEAR member on the BOD of THE NATOMAS BASIS CONSERVANCY, my family has already seen the destruction of habitat, increased traffic, noise, impact on our water supply, and pollution resulting from the levee project.

We have seen public safety response times decrease and increased crime. I am deeply concerned about the additional pressure and burdens placed on our community if the Westside project moves forward. It is estimated that 75 thousand more vehicles a day will travel the Garden Highway and West El Camino Avenue. In an emergency, there will be no safe evacuation routes and all of us will be trapped.

Moreover, as I understand it, the increased housing is not designed for middle and low income families, which is the housing that the Sacramento community needs, not thousands of new homes to appeal to bay area transplants that are out of reach for most Sacramentans.

RESPONSE 105-1

Please see Responses 99-1 through 99-3.

LETTER 106

Brandon Castillo, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 106-1

As a Garden Highway and Sacramento County resident, I'm strongly opposed to the proposed Upper Westside development. This massive project poses a major public safety risk to those of us on the Garden Highway, by increasing traffic, threatening our levees and flood protection, and destroying habitat and wildlife. The EIR acknowledges that many of the impacts are significant and cannot be mitigated. Equally concerning, this megadevelopment will require the erosion of the Urban Services Boundary – encroaching on critical farmland and habitat and our public waterways.

I strongly encourage the County Supervisors to reject this unsustainable and unsafe development.

RESPONSE 106-1

Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area and Master Response TR-2: Garden Highway Safety Considerations. Also see Impact HYD-4 on page 13-25 in Chapter 13, *Hydrology and Water Quality*, of the Draft EIR, for a discussion of levees and flood protection and Impacts BR-1 through BR-14 on pages 7-40 through 7-84 in Chapter 7, *Biological Resources*, for a discussion on impact to habitat and wildlife

LETTER 107

Melissa Brown, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 107-1

I am sending this email in opposition to the Upper Westside Project that threatens our environment, wildlife habitat, and our community. As the Draft Environmental Impact Report clearly states, the project would result in SIGNIFICANT and UNAVOIDABLE impact on the aesthetics, agricultural resources, air quality, cultural and historical resources, noise, population and housing, transportation, and tribal cultural resources. It will further impact climate change, geology, soils, hydrology, drainage, water quality, public services, and water supply to name but a few of the impacts on our region and community.

As a homeowner on the Garden Highway, my family has already seen the destruction of habitat, increased traffic, noise, impact on our water supply, and pollution resulting from the levee project.

We have seen public safety response times decrease and increased crime. I am deeply concerned about the additional pressure and burdens placed on our community if the Westside project moves forward. It is estimated that 75 thousand more vehicles a day will travel the Garden Highway and West El Camino Avenue. In an emergency, there will be no safe evacuation routes and all of us will be trapped.

Moreover, as I understand it, the increased housing is not designed for middle and low income families, which is the housing that the Sacramento community needs, not thousands of new homes to appeal to bay area transplants that are out of reach for most Sacramentans.

RESPONSE 107-1

Please see Responses 99-1 through 99-3.

LETTER 108

Bronwyn Schweigerdt, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 108-1

I implore CPAC to adhere to the Urban Services Boundary that was instituted years ago precisely for proposed sprawling development proposals just like this project. Please show integrity and commitment to Sacramento residents versus the few vested interests who would benefit from this proposal. There are better, more sustainable ways to create affordable housing in the Sacramento area. Do what is right, and stand by your constituents to keep Sacramento a sustainable and desirable place to live.

RESPONSE 108-1

Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area.

This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 109

Steve Schweigerdt, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 2, 2024.

COMMENT 109-1

I oppose the Upper Westside Specific Plan. Approval would be contrary to all planning to date in the Natomas Basin including the Natomas Basin Habitat Conservation Plan, Natomas Shared Joint Vision agreement between the City and County of Sacramento, Sacramento County General Plan, Urban Service Boundary, and SACOG Blueprint. Therefore, the County should inform the applicants that the proposed development directly conflicts with these plans and advise the withdrawal of the proposal. The environmental impacts of the project are overwhelmingly negative and there is no substantive economic need for the project that justifies a hearing.

The Natomas Shared Joint Vision MOU stated “The City, rather than the County, is the appropriate agent for planning new growth in Natomas and can better provide a full range of municipal services. The County is the appropriate agent for preserving open space, agricultural, and rural land uses.” This language was agreed to in the 2002 MOU, and while the Joint Vision has been abandoned, the language has not been rescinded and still holds true. The County should not be supporting development of new growth directly, but should refer development proposals to LAFCO and the City for annexation proceedings. Indeed, the County has utterly failed to make any progress on its role of preserving open space and agricultural in the Natomas Basin as not a single acre has been conserved by County efforts despite billions of dollars of state and federal grants made available since the MOU was signed. Instead, the County has signaled development potential to landowners that made it unlikely any would become willing sellers for conservation purposes.

RESPONSE 109-1

Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan And Metro Air Park Habitat Conservation Plan for a discussion of the relationship of the proposed UWSP to the NBHCP.

Please see Master Response LU-3: SACOG Blueprint and MTP/SCS for a discussion of how the proposed UWSP relates to the SACOG Blueprint.

Regarding the Natomas Joint Vision, the Sacramento County General Plan states that “the County and City of Sacramento have been engaging for many years in the Natomas Joint Vision planning process, which envisions a plan for both new communities within the unincorporated portion of the basin and permanent protection of existing open space.” This is further articulated in General Plan Policy LU-114, which states

“It is the policy of Sacramento County that development and open space preservation in the Natomas Joint Vision Overlay Area occur in a comprehensive,

responsible and cohesive manner that best addresses land use, economic development and environmental opportunities and challenges in Natomas.”

Section 1.4 of the draft UWSP demonstrates how the proposed UWSP would be consistent with County General Plan Policy LU-114.

The issues raised by the City relating to governmental responsibilities associated with planning for future urbanization in the Natomas Basin are potential points of future discussion between the County and the City. However, they are not environmental in nature and are appropriately addressed in the Draft EIR.

COMMENT 109-2

Polling shows that residents value our Natural Areas - they consistently ranks #1 in Valley Vision Livability Polls, yet our region is far behind on 30X30 goals with only 9% of our land conserved to date. This land can be put in conservation with state funds from the SALC program and landowners can be compensated at appraised fair market value if they would like to sell. This would keep the land producing food for us, protect critical habitat and soil, and encourage investment in the ample land for development within the Urban Services Boundary. That is the path the County should be pursuing for land outside the Boundary.

RESPONSE 109-2

The comment expresses opinions as to the merits of the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 109-3

This project is outside of the Urban Services Boundary and should not be considered for approval. The Sacramento County General Plan states the Urban Services Boundary "is intended to be a permanent growth boundary not subject to modification except under extraordinary circumstances." Those circumstances do not exist and any project outside of the USB is inconsistent with the General Plan on its face. While a Special Planning Zone overlay exists for the Natomas Joint Vision, that does not obviate the need for extraordinary circumstances to justify moving the Urban Services Boundary. It should be noted that the overlay stated the SACOG Blueprint shows significant development in the Joint Vision area and that is no longer the case, as detailed below.

RESPONSE 109-3

As stated on page 2-14 in Chapter 2, *Project Description*, of the Draft EIR, required entitlements for the proposed UWSP include a General Plan Amendment to expand the USB and the UPA to include the 1,524-acre Development Area within the 2,066-acre

UWSP area. The County does not allow or approve development outside the USB or the UPA. As discussed in Chapter 14, *Land Use*, of the Draft EIR, the Sacramento County General Plan includes a comprehensive and robust policy framework for acceptance and approval of proposed applications to expand the USB and the UPA.

The physical effects of the proposed UWSP are fully evaluated in the Draft EIR. General Plan Policy LU-127 specifies that expansion of the USB is subject to the discretion of the Board of Supervisors. Accordingly, the Board will consider the proposed expansion of the USB in its decision whether to approve the proposed UWSP and in accordance with Policy LU-127.

Please also see Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 109-4

General Plan Policy LU-2 states that the County shall maintain a USB that defines the long-range plans (beyond twenty-five years) for urbanization and extension of public infrastructure and services and defines important areas for protecting as open space and agriculture. The County has already approved for development more than 3 times the projected demand for housing units SACOG has modeled (35,610 from 2020-2050). The approval of this project in addition to the excess entitlements that already exist would inevitably result in widely scattered, partially built-out projects that would prevent development of “complete community” urban mass which the County asserts would reduce VMT; and would doom the County to increasing per capita GHG emissions far into the future, contrary to the necessities of climate change, State climate goals, and the intention of the County’s Phase 1 CAP. This is further amplified by the Phasing Plan, which leaves the highest density development to the last phase –when it is never built or rezoned to lower density sprawl.

RESPONSE 109-4

The comment expresses opinions as to the merits of the proposed project. The long term housing demand in the County is an economic issue and is not a consideration under CEQA. As part of its consideration of the proposed project, the County will assess the economic and fiscal effects of the proposed project. However, while economic and fiscal impacts are important considerations for the County in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that “[e]conomic or social effects of a project shall not be treated as significant effects on the environment.” Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a number of factors considered in addressing the feasibility of an alternative, mitigation measure, or change to the project (see CEQA Guidelines sections 15131(b, c)).

The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 109-5

In June 2024, SACOG adopted the 2025 Blueprint Land Use Assumptions, which do not include this project as an area to be developed. Therefore, approving this project is inconsistent with our region's Sustainable Communities Plan and risks non-attainment of greenhouse gas reduction targets along with a loss of transportation funding. The DEIR should acknowledge this fact and analyze the impact on the Sustainable Communities Plan and how much more difficult it will be for the region to meet reduction targets if the project is approved. SACOG has indicated that some approved projects need to remain unbuilt to meet the target and the impacts of this project on other projects along Jackson Highway that are more favorable for emissions reductions should be included.

RESPONSE 109-5

The SACOG Blueprint is intended to be advisory and to guide the region's transportation planning and funding decisions. As discussed in Chapter 14, *Land Use*, of the Draft EIR, the UWSP area and the proposed UWSP are not currently anticipated for development in the SACOG Blueprint. For a discussion of how SACOG develops its Land Use Forecast please see Master Response LU-3: SACOG Blueprint and MTP/SCS. As discussed in Draft EIR Impact LU-4, pages 14-23 through 14-33, the proposed UWSP aligns with many of the principles contained in the Blueprint, including compact development, mixed-use development, housing choice and diversity, transportation choice, reduction of VMT, reduction of GHG emissions, natural resource conservation, and quality design.

The assertion that approval and implementation of the proposed UWSP risks non-attainment of greenhouse gas reduction targets or loss of transportation funding is unsupported. Moreover, the Blueprint is intended to be advisory and to guide the region's transportation planning and funding decisions.

COMMENT 109-6

This project would destroy farmland that we need and the proposed mitigation measures are inadequate. SACOG's CROP report has found that in 30 years (1988-2018) Sacramento County converted more than 73,000 acres of ag land to urban uses – an area larger than the entire City of Sacramento (63,852 acres). It specifically calls out the Upper Westside project as destructive to Prime Farmland and indicates the mitigation requirements are inadequate. "Biological conservation is the planned mitigation for the project; however, biological easements have restrictions and are not guaranteed to support agriculture. Urban/community gardens have also been proposed as a mitigation measure for the project, and while a community garden will support the health and

resilience of the new community, it does not support agriculture in the same way the land is being used today.” Indeed, farmland loss cannot be mitigated by simply protecting farmland elsewhere. Mitigation measure AG-1 that protects other agricultural land does not in effect mitigate the loss of prime farmland in the area. True mitigation would require improving the productivity of less productive farmlands to the equivalent of the prime farmland being lost. Even were compensatory mitigation to be used, it should require an affirmative commitment for productive agriculture and have no restrictions on agricultural intensification. It should be further noted that many of the properties along the Garden Highway the DEIR includes as an “agricultural buffer” are zoned AR-2 (97 acres) and are primarily residential instead of productive agricultural properties, thus should not qualify as any type of agricultural credit for the project.

RESPONSE 109-6

Impacts of the proposed UWSP related to conversion of farmland to nonagricultural uses are fully addressed in Impact AG-1 on in Draft EIR Chapter 5, *Agricultural Resources*, pages 5-20 through 5-24.

The Coordinated Rural Opportunities Plan (CROP) is a joint effort between the Sacramento Area Council of Governments (SACOG) and Valley Vision and is funded by the Department of Conservation’s Sustainable Agricultural Lands Conservation (SALC) Program. CROP is intended to “serve as valuable resources for identifying priority areas for infrastructure investments and programs that will strengthen the region’s food and agricultural cluster.”⁵ As noted in the comment, on page 11 the report addresses the proposed UWSP and states that over 1,524 acres of prime farmland. This is incorrect. The entire development area of the proposed project is 1,524 acres, however as shown on Draft EIR Table AG-3, page 5-22, a total of 1,372.05 acres of important farmland, including 939.74 acres of prime farmland, would be converted with the proposed project. The conclusion of the CROP that the proposed UWSP would “not support agriculture in the same way the land is being used today,” is consistent with the conclusion of Draft EIR Impact AG-1 that the conversion of important farmland as a result of the proposed project would be a significant impact.

As referenced in the comment, Mitigation Measure AG-1 would require compensatory mitigation for loss of important farmland on a 1:1 basis. The statement on page 11 of the CROP report that “[b]iological conservation is the planned mitigation for the project;” is misconstrued. Much of the important farmland that would be converted with the proposed project also serves as foraging habitat for Swainson’s hawk. The Draft EIR recognizes that agricultural mitigation land that is preserved to meet the 1:1 requirement in Mitigation Measure AG-1 may also meet the criteria to also serve as mitigation for biological resources. This is something that would be allowed under Mitigation Measure BR-7b and is reflective of the fact biological habitat, particularly Swainson’s hawk foraging habitat, that would be impacted by the proposed project is also farmland. So, to the extent that farmland impacts that are mitigated through implementation of Mitigation

⁵ SACOG, Valley Vision, and We Are Farm to Fork Sacramento Region, *Sacramento Region Coordinated Rural Opportunities Plan – Sacramento County Profile*, March 2024, page 2.

Measure AG-1 also meet the requirements of compensatory mitigation under Mitigation Measure BR-7b, it makes sense that the multiple values of the land preserved is recognized.

The Draft EIR also recognizes that the 1:1 preservation established in Mitigation Measure AG-1 would not reduce the impact to insignificance. On page 5-24, the Draft EIR concludes that “even with this mitigation, there would be a substantial net loss of farmland within Sacramento County as a result of the proposed UWSP, and this impact would be **significant and unavoidable**.” As such, the Draft EIR and the CROP similarly reflect the impact of the proposed project on farmland.

For discussion of the Agricultural Buffer, please see Master Response AR-2: Interface Between Agricultural And Urban Uses.

COMMENT 109-7

The Natomas Basin HCP was predicated on land outside the USB remaining undeveloped. Starting to develop this land is incompatible with the protections put in place through the HCP and the analysis provided in the DEIR is lacking details on the impacts to the HCP. The DEIR Biological Resources Introduction includes requests from CDFW, USFWS, LAFCO, and City of Sacramento that are not fulfilled in the DEIR and until those details are included in a DEIR the public can review it is incomplete and must be recirculated with the requested information included.

RESPONSE 109-7

The NBHCP recognizes that within the 50-year permit term of the NBHCP and ITPs, the possibility remains that existing land use outside the Permit Areas and within the Natomas Basin could change over time in a manner that affected Swainson’s hawk foraging habitat. More specifically, the NBHCP, and the related EIR/EIS and BiOps for the HCP effectively considered how non-participating entities, such as the water districts and the County of Sacramento, would proceed while not being bound to the terms of NBHCP. The NBHCP’s adaptive management program is thus designed to respond to changes in baseline habitat which could occur if undeveloped lands in the Natomas Basin are converted to urban uses.

Please also see the Master Response BR-1: Conflict with the Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

The comment makes a general and vague reference to a lack of responsiveness in the Draft EIR to comments provided by CDFW, USFWS, LAFCO, and the City of Sacramento, but provides no specific references to issues raised in those NOP comment letters. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 109-8

Proposed mitigation for Swainson's hawk foraging habitat is unacceptable. A key part of the NBHCP Conservation Strategy is to both preserve to the extent practicable habitat within the Swainson's Hawk Zone adjacent to the Sacramento River and also to enhance and expand Swainson's hawk habitat through provision of suitable trees and groves in proximity to upland foraging reserves. The project removes about a third of the Swainson's Hawk Zone in Sacramento County from foraging habitat and impacts the already diminished habitat the hawks rely on. A much higher ratio than 1:1 mitigation land would be required and it needs to be provided within the Sacramento County portion of the Natomas Basin.

RESPONSE 109-8

Swainson's hawk foraging habitat in the portion of the SHZ within the UWSP area represents approximately 13.7% of the foraging habitat in the entire SHZ. The SHZ foraging habitat within the UWSP area includes no alfalfa production, which is the highest quality foraging habitat for Swainson's hawk; the balance of the SHZ outside of the UWSP area includes 644.0 acres of alfalfa production. As noted in Master Response BR-4, the Swainson's hawk population in the project vicinity nests and forages on both sides of the Sacramento River, as such there is no evidence in the record to support the assertion that mitigation for Swainson's hawk foraging habitat occur in Sacramento County. In contrast, Mitigation Measure BR-7 provides that mitigation should occur within the observed 10-mile distance of nesting habitat along the Sacramento or Feather Rivers, preferably within 1-mile. In addition, the mitigation ratio of 1:1 for loss of habitat is double the mitigation ratio established in the NBHCP. Please also see Master Response BR-4, Impacts on Swainson's Hawk Zone.

LETTER 110

Debra van Hulsteyn, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 110-1

As someone who grew up in the Santa Clara Valley, now Silicon Valley, I have deep opinions about the potential plan to pave this area

Santa Clara Valley, at one time had a unique climate and some of the richest deepest top soil in the world.

Most of the Santa Clara Valley's rich farmlands are paved over now. What was once a producer of food is now a heat sink.

This is what is happening to our valley. We are paving it. We are removing hundred plus year old stands of tree canopy.

We are making the region unlivable and contributing to climate change and potential flooding.

Please protect our green spaces!

RESPONSE 110-1

The comment expresses general opposition to the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 111

Srirama Tanniru, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 2, 2024.

COMMENT 111-1

My name is Srirama Tanniru ('Sri'), an IT Project Management Professional who has been working in and around downtown Sacramento for approximately 30 years.

As someone who is intimately familiar with the Sacramento area, I'm writing to express my strong support for the **Upper Westside Specific Plan** development project. My strong support for this development project is based on several reasons that include the following:

- The Upper Westside Specific Plan development project will help to alleviate the housing shortage especially with respect to affordable apartments and duplexes in our region. And as the location of the project is close to downtown Sacramento, and as there are over 200,000 existing jobs within 5 miles of the plan area this type of compact development will help to meet the region's goals of reducing Vehicle Miles Travel (VMT) and Greenhouse Gas emissions (GHG).
- The Urban town center that is envisioned by this project is similar to Santana Row in San Jose with mid-rise architecture and active pedestrian median. The town center will help create jobs as well in the community.
- The Westside Canal that is proposed as part of this project will create a unique urban waterfront experience.
- The Upper Westside Specific Plan development project will leverage the extensive investment that has occurred in the Natomas basin (airport, freeway interchanges, downtown, levees, etc.). As such it represents principles of smart growth by utilizing existing infrastructure and providing housing near job centers.

Again, I would like to express my strong support for the **Upper Westside Specific Plan** development project.

RESPONSE 111-1

The comment expresses general support for the proposed project, with an emphasis on proposed project's provision of housing and the environmental benefits of placing housing near downtown Sacramento. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 112

Dan Ramos, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 2, 2024.

COMMENT 112-1

Chair, members of the CPAC, my name is Dan Ramos. Unfortunately, I will be out of town on your scheduled hearing date. I am writing on behalf of the Ramos family. Our company (Ramco Enterprises, Inc) / Family owns approximately 35 acres within the Upper Westside project area. We have owned the land for more than 50 years. The basin has changed dramatically since we bought the property. Farming and agriculture were the prime land use then. Our property is surrounded by residential and commercial development now. Our tenant farmer struggles every year to adequately produce an economical crop and is sometimes harassed by the surrounding neighborhood.

I want to commend Tim Denham and his team at Wood Rodgers on developing a thoughtful land use plan that creates a connection from the project site to downtown Sacramento. Also, his team has done an outstanding job of communicating to us ,property owners, on every step of this entitlement process which we are very thankful for their communication efforts.

Our family has a long history of investment in the Natomas basin. We, along with our partners, have invested many decades of our family's time and money to develop Metro Airpark, one of the largest industrial, manufacturing and distribution hubs in the region. We are invested in Natomas and want to ensure that it develops while being able to preserve its history.

We strongly urge the CPAC and ultimately the Board of Supervisors to approve our project because it's smart planning according to true environmentalists with its proximity to the downtown Sacramento job center and one of the only places in our region that makes sense to continue growing.

RESPONSE 112-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 113

Amarjit Dhillon, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 2, 2024.

COMMENT 113-1

My name is Amarjit Dhillon, and I support this project.

RESPONSE 113-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 114

Ann Burke, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 2, 2024.

COMMENT 114-1

I am writing to let you know that I am opposed to further development in the Upper Westside Specific Plan. Traffic in North Natomas has become extremely congested. With the apartment buildings already constructed, the roads are inadequate regardless of the time of day. If we ever had to evacuate our homes, we would not be able to safely get out of our Community because the current roads could not handle emergency traffic. In addition, the pollution is creating more problems for me and my husband. We have been more prone to colds and congestion than we have ever experienced. These lands were supposed to be designated green space which was an important factor when we decided to build here. We have watched our green space be taken over by unnecessary building that is occurring too fast for our emergency services to maintain.

Please do not allow further unnecessary building to occur.

RESPONSE 114-1

Please also see Master Response TR-3: Traffic Congestion.

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 115

Brittany Brazil, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 2, 2024.

COMMENT 115-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

As a member of the Natomas community, I recognize the struggles faced by local farmers due to the changing landscape around them. The Upper Westside project offers a balanced approach to land use, preserving a 542-acre agricultural buffer to protect farmland and preserve open space.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is within 3.5 miles of downtown Sacramento. More than two-thirds of the project boundary is adjacent to existing development. This project is essentially an infill development that will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, more than 52% will be multi-family attached units, which are crucial in addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

Traffic concerns have been addressed as well. The project's location and mix of land uses result in traffic levels below the 85% threshold of baseline conditions, which is an important indicator of its suitability for the area. The developers have also prepared a comprehensive Resource Conservation Strategy, which ensures that impacts on farmland and local habitats will be responsibly mitigated.

The Upper Westside Specific Plan represents a well-balanced and forward-thinking approach to development in the most logical place in our region. It respects the areas agricultural heritage, addresses urgent housing needs, and supports economic growth, all while minimizing environmental impacts.

I urge the Natomas CPAC to support this project and help guide our community into a sustainable future.

RESPONSE 115-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 116

Diana Brazil, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 116-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

As a member of the Natomas community, I recognize the struggles faced by local farmers due to the changing landscape around them. The Upper Westside project offers a balanced approach to land use, preserving a 542-acre agricultural buffer to protect farmland and preserve open space.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is within 3.5 miles of downtown Sacramento. More than two-thirds of the project boundary is adjacent to existing development. This project is essentially an infill development that will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, more than 52% will be multi-family attached units, which are crucial in addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

The Upper Westside Specific Plan represents a well-balanced and forward-thinking approach to development in the most logical place in our region. It respects the areas agricultural heritage, addresses urgent housing needs, and supports economic growth, all while minimizing environmental impacts.

I urge the Natomas CPAC to support this project and help guide our community into a sustainable future.

RESPONSE 116-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 117

Joseph Brazil, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 2, 2024.

COMMENT 117-1

My name is Joseph Brazil, and I appreciate the opportunity to provide my perspective regarding the Upper Westside project and the land my family has farmed for nearly 80 years. As a farming family in the Natomas Boot, we have witnessed first-hand how urbanization and changing conditions have made agriculture in this area increasingly unsustainable. I would like to address some of the concerns raised about converting farmland for the Upper Westside development.

The Reality of Farming in Natomas Today

There is a prevailing concern that this land should remain designated as farmland. While I respect the importance of agriculture, it's essential to recognize that the viability of farming in this area has diminished drastically. Over the decades, urbanization has surrounded our farmland, introducing challenges such as theft, vandalism, increased traffic, and restrictions on farming techniques due to proximity to homes and businesses. These conditions have made it nearly impossible to farm profitably.

In recent years, our family has been forced to sell a portion of our land simply to keep our farming operations afloat. Despite these efforts, the financial strain continues to grow. Maintaining an agricultural designation for this land ignores the on-the-ground reality that farming here is no longer practical or sustainable. For those who claim this is still "prime farmland," I invite them to take a closer look at the everyday challenges we face as farmers in this urbanized landscape.

Farmland Conversion and Responsible Development

The conversion of farmland for development is a major concern for many, but the Upper Westside project offers a balanced approach to addressing this issue. For every acre of farmland converted, the project will implement a 1:1 mitigation ratio, preserving an equivalent amount of agricultural land elsewhere in Sacramento County. This ensures that while development proceeds, farmland preservation efforts continue in other areas better suited for agriculture.

Furthermore, the Upper Westside project has carefully planned to include a 534-acre agricultural buffer along its western edge to minimize conflicts between urban and agricultural uses. This buffer will help protect the surrounding farmland and reduce the impact of urban activities on agricultural operations.

Addressing Environmental Concerns

While converting farmland is always a sensitive issue, the Upper Westside development has taken significant steps to mitigate its environmental impact. Wildlife corridors and habitat restoration efforts are part of the plan to ensure that local ecosystems, including

those supporting special-status species like the Swainson's Hawk and the giant garter snake, remain intact. By including these measures, the project strikes a balance between necessary urban growth and environmental stewardship.

The Need for Housing and Economic Growth

Sacramento is facing a housing crisis, and responsible development like the Upper Westside project is essential to meet the region's growing population and housing demands. The project will provide desperately needed housing units within biking distance to downtown Sacramento. The project will include commercial and office space, creating nearly 90,000 new jobs during construction and in the long term. This development is designed to integrate with the existing urban fabric of Sacramento, while minimizing environmental impacts through sustainable practices such as green building designs and transportation improvements.

The notion that this land can continue as viable farmland is, unfortunately, no longer accurate. My family has farmed here for generations, but the challenges we face today are insurmountable. The Upper Westside project offers a forward-thinking solution that balances the need for development with responsible farmland mitigation and environmental protections.

By embracing this development, we can help address Sacramento's housing crisis, create jobs, and ensure that farmland preservation efforts continue in areas where agriculture remains sustainable. I urge you to support this project as it presents a thoughtful and necessary step forward for our community.

RESPONSE 117-1

The comment expresses general support for the proposed project, with an emphasis on the viability of maintaining agricultural production on the project site, benefits to wildlife that would occur as a result of the proposed project, and the need for housing in the Sacramento region. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 118

Sabrina Brazil, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 2, 2024.

COMMENT 118-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

As a member of the Natomas community, I recognize the struggles faced by local farmers due to the changing landscape around them. The Upper Westside project offers a balanced approach to land use, preserving a 542-acre agricultural buffer to protect farmland and preserve open space.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is within 3.5 miles of downtown Sacramento. More than two-thirds of the project boundary is adjacent to existing development. This project is essentially an infill development that will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, more than 52% will be multi-family attached units, which are crucial in addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

Traffic concerns have been addressed as well. The project's location and mix of land uses result in traffic levels below the 85% threshold of baseline conditions, which is an important indicator of its suitability for the area. The developers have also prepared a comprehensive Resource Conservation Strategy, which ensures that impacts on farmland and local habitats will be responsibly mitigated.

The Upper Westside Specific Plan represents a well-balanced and forward-thinking approach to development in the most logical place in our region. It respects the areas agricultural heritage, addresses urgent housing needs, and supports economic growth, all while minimizing environmental impacts.

I urge the Natomas CPAC to support this project and help guide our community into a sustainable future.

RESPONSE 118-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 119

Dennis Crabtree, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 119-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

I recognize the struggles faced by local farmers in the Natomas area due to the changing landscape around them. The Upper Westside project offers a balanced approach to land use, preserving a 542-acre agricultural buffer to protect farmland and preserve open space.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is within 3.5 miles of downtown Sacramento. More than two-thirds of the project boundary is adjacent to existing development. This project is essentially an infill development that will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, more than 52% will be multi-family attached units, which are crucial in addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

Traffic concerns have been addressed as well. The project's location and mix of land uses result in traffic levels below the 85% threshold of baseline conditions, which is an important indicator of its suitability for the area. The developers have also prepared a comprehensive Resource Conservation Strategy, which ensures that impacts on farmland and local habitats will be responsibly mitigated.

The Upper Westside Specific Plan represents a well-balanced and forward-thinking approach to development in the most logical place in our region. It respects the areas agricultural heritage, addresses urgent housing needs, and supports economic growth, all while minimizing environmental impacts.

I urge the Natomas CPAC to support this project and help guide our community into a sustainable future.

RESPONSE 119-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 120

Erick Deeton, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 2, 2024.

COMMENT 120-1

I am writing to lend my voice in support of the Upper West Side Specific Plan, a project that mirrors our community's vision for growth while addressing the unfortunate housing shortage in the Sacramento area. Please accept my vote in backing this project.

RESPONSE 120-1

The comment expresses general support for the proposed project, with an emphasis on community vision and affordable housing. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 121

Erick Deeton, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 2, 2024.

COMMENT 121-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

As a member of the Natomas community, I recognize the struggles faced by local farmers due to the changing landscape around them. The Upper Westside project offers a balanced approach to land use, preserving a 542-acre agricultural buffer to protect farmland and preserve open space.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is within 3.5 miles of downtown Sacramento. More than two-thirds of the project boundary is adjacent to existing development. This project is essentially an infill development that will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, more than 52% will be multi-family attached units, which are crucial in addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

Traffic concerns have been addressed as well. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 132

Jordan Walker, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 1, 2024.

COMMENT 132-1

My name is Jordan Walker. I wanted to reach out and address my position on the Upper Westside community.

I strongly support the Upper Westside Specific Plan, a development that will significantly benefit our community. The project will help alleviate Sacramento's housing crisis by providing a diverse range of housing options, including affordable multi-family units. Its location near downtown offers easy access to jobs and transit, reducing commute times and promoting a sustainable lifestyle.

The project also preserves a 542-acre agricultural buffer, maintaining the region's agricultural roots while embracing growth. Its smart design minimizes traffic impacts and promotes environmental stewardship with a Resource Conservation Strategy that mitigates harm to farmland and local habitats.

By leveraging existing infrastructure and encouraging infill development, the Upper Westside project will create a vibrant town center, boosting the local economy with job opportunities and new businesses. It fosters a balanced approach, respecting both urban needs and environmental concerns.

Supporting this project means promoting responsible growth that will strengthen our community and enhance the quality of life for residents.

RESPONSE 132-1

The comment expresses general support for the proposed project, with an emphasis on housing, resource conservation, and economic benefits. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 133

Nicholas Bennet, member of the community, written comment to Natomas Community Planning Advisory Council; dated September 30, 2024.

COMMENT 133-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

I recognize the struggles faced by local farmers in the Natomas area due to the changing landscape around them. The Upper Westside project offers a balanced approach to land use, preserving a 542-acre agricultural buffer to protect farmland and preserve open space.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is within 3.5 miles of downtown Sacramento. More than two-thirds of the project boundary is adjacent to existing development. This project is essentially an infill development that will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, more than 52% will be multi-family attached units, which are crucial in addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

Traffic concerns have been addressed as well. The project's location and mix of land uses result in traffic levels below the 85% threshold of baseline conditions, which is an important indicator of its suitability for the area. The developers have also prepared a comprehensive Resource Conservation Strategy, which ensures that impacts on farmland and local habitats will be responsibly mitigated.

The Upper Westside Specific Plan represents a well-balanced and forward-thinking approach to development in the most logical place in our region. It respects the areas agricultural heritage, addresses urgent housing needs, and supports economic growth, all while minimizing environmental impacts.

I urge the Natomas CPAC to support this project and help guide our community into a sustainable future.

RESPONSE 133-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 134

Bill Schomberg, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 134-1

I oppose the building out of one of the last true open spaces in the Natomas basin it's not necessary we need open space for our children to appreciate what life in the valley used to be

RESPONSE 134-1

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 135

Alex Lopez/Kaufman, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 135-1

Please reconsider the proposal of additional construction and look at preserving this land. Our natural resources are some of our most defining features regionally and globally. I urge our local government to do its duty in ensuring the future rather than destroying the present, especially when we have other opportunities already within existing areas.

RESPONSE 135-1

The comment expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 136

Lauren Carpenter, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 136-1

am sending this email in opposition to the Upper Westside Project that threatens our environment, wildlife habitat, and our community.

As the Draft Environmental Impact Report clearly states, the project would result in SIGNIFICANT and UNAVOIDABLE impact on the aesthetics, agricultural resources, air quality, cultural and historical resources, noise, population and housing, transportation, and tribal cultural resources.

It will further impact climate change, geology, soils, hydrology, srainiage, water quality, public services, and water supply to name but a few of the impacts on our region and community. As a homeowner on the Garden Highway, my family has already seen the destruction of habitat, increased traffic, noise, impact on our water supply, and pollution resulting from the levee project.

We have seen public safety response times decrease and increased crime. I am deeply concerned about the additional pressure and burdens placed on our community if the Westside project moves forward. It is estimated that 75 thousand more vehicles a day will travel the Garden Highway and West El Camino Avenue. In an emergency, there will be no safe evacuation routes and all of us will be trapped.

Moreover, as I understand it, the increased housing is not designed for middle and low income families, which is the housing that the Sacramento community needs, not thousands of new homes to appeal to bay area transplants that are out of reach for most Sacramentans.

RESPONSE 136-1

Please see Responses 99-1 through 99-3

LETTER 137

Perjit Virk, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 137-1

I like the Upper Westside Plan and looking forward to it growing Sacramento County with more jobs. Also, will help with making Sacramento a more diverse and populated city which is great for future companies coming here.

RESPONSE 137-1

The comment expresses general support for the proposed project, with an emphasis on employment opportunities and population diversity. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 138

Fabian Lara, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 138-1

I am sending this email in opposition to the Upper Westside Project that threatens our environment, wildlife habitat, and our community. As the Draft Environmental Impact Report clearly states, the project would result in SIGNIFICANT and UNAVOIDABLE impact on the aesthetics, agricultural resources, air quality, cultural and historical resources, noise, population and housing, transportation, and tribal cultural resources. It will further impact climate change, geology, soils, hydrology, drainage, water quality, public services, and water supply to name but a few of the impacts on our region and community.

As a homeowner on the Garden Highway, my family has already seen the destruction of habitat, increased traffic, noise, impact on our water supply, and pollution resulting from the levee project.

We have seen public safety response times decrease and increased crime. I am deeply concerned about the additional pressure and burdens placed on our community if the Westside project moves forward. It is estimated that 75 thousand more vehicles a day will travel the Garden Highway and West El Camino Avenue. In an emergency, there will be no safe evacuation routes and all of us will be trapped.

Moreover, as I understand it, the increased housing is not designed for middle and low income families, which is the housing that the Sacramento community needs, not thousands of new homes to appeal to bay area transplants that are out of reach for most Sacramentans.

RESPONSE 138-1

Please see Responses 99-1 through 99-3.

LETTER 139

Christine Olsen, member of the community, written comment to Natomas Community Planning Advisory Council; dated October 3, 2024.

COMMENT 139-1

People in Sacramento don't want to live in LA-like concrete sprawl. Hundreds of people - Sacramento residents, interest groups, experts, and government agencies have come together repeatedly, and spent thousands of hours to plan for growth that makes life better for everyone. Transportation and other urban service plans have been developed to support the County General Plan for development within the Urban Services Boundary. Planned growth saves taxpayers money by ensuring orderly growth of infrastructure and urban services. Planned growth protects Sacramento's quality of life.

The plan before you tonight is not consistent with the County General Plan. Three-quarters of the Upper Westside Plan is outside the Urban Services Boundary, where there is currently protected farmland, open space, and riparian habitat. Once that farmland, riparian habitat and open space is gone, the people of Sacramento lose that forever.

Environmental groups have come together to oppose this project. Their objections on behalf of all of us, deserve your support. Wildlife and wildlife areas contribute to the community's quality of life. We can't keep accepting mitigation that says wildlife needs to live elsewhere. Sacramento has committed to preserving and protecting habitat for the benefit of community health and the enjoyment of nature by current and future generations. Once you approve urban sprawl into protected areas, those natural areas and the wildlife they support are lost to Sacramentans forever.

Among the lengthy list of significant and unavoidable impacts from this project are loss of farmland, increased air pollution, and urban sprawl. We recognized during the pandemic that small family farms can be critical infrastructure. This project permanently wipes out about 1400 acres of already diminished available farmland. Increased air pollution from the project could result in significant health risks. The project, inconsistent with the County General Plan and the USB, is the urban sprawl we seek to avoid. It opens the door to more unplanned growth and raises public costs for unplanned infrastructure and services.

RESPONSE 139-1

This comment expresses opinion regarding the merits of the proposed project. It restates many of the conclusions of the Draft EIR but raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 139-2

The Garden Highway Community Association opposes this project and will offer more detailed written comments in the near future. Specifically with respect to Garden Highway, the EIR failed to address 2 critical impacts – noise and traffic. Garden Highway knows from experience that amplified sound can travel at least 2.5 miles from the source. The project before you has a stadium, and an outdoor pavilion that is one half mile from Garden Highway homes that will be blasted by sound from those facilities. Second, and critically, are traffic safety impacts on Garden Highway. The EIR calls for improvements at 3 Garden Highway intersections, anticipating significantly increased traffic onto Garden Highway, but there is no meaningful discussion of the traffic safety impacts of increased traffic all along Garden Highway. Garden Highway is a rural road on top of a levee. It is half the width it should be to meet safety standards. It has blind curves, no shoulders, no guardrails, and most dangerously a mixed use by regular vehicles, vehicles hauling boats, farm equipment, semi-trucks, cyclists, groups of cyclists and car clubs, pedestrians and wildlife that can all appear suddenly out of driveways and farm roads.

RESPONSE 139-2

An analysis of noise impacts from high school sports fields and stadiums is provided on page 15-47 of the Draft EIR. The analysis applies reference noise levels from sports stadium activity to predict potential noise levels at distance. The impact is identified as potentially significant and Mitigation Measure NOI-4b is identified to address the impact. There are numerous examples in Sacramento County of high schools and associated sports fields and stadiums coexisting in proximity to residential neighborhoods. As described in Response 15-59, typical noise levels from high school stadiums are at levels that are considered generally acceptable in residential neighborhoods. Nevertheless, as stated in the Draft EIR, previous studies have indicated that while available noise control mitigation for noise from stadium events may reduce associated noise levels, given the overall size of crowds and the potential for nighttime events, and the protective noise thresholds established in the County Code, noise impacts cannot always be mitigated and the impact of high school use sports fields and stadium noise at existing sensitive uses is identified as significant and unavoidable.

Please see Master Response TR-2: Garden Highway Safety Considerations.

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 139-3

Getting planning right ensures a community we love to live in and community that works for everyone. This project is the spawl we all want to avoid. The County made a commitment to the people of Sacramento that the County would not expand the Urban

Service Boundary unless there was inadequate vacant land within the USB to accommodate the projected 25-year demand for urban uses. There is ample land for development consistent with the County General Plan and within the Urban Services Boundary. Say no to any General Plan amendments or development outside the USB. Say no to sprawl. Say no to this project.

RESPONSE 139-3

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 140

Louisa Montoya, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 140-1

Board Chambers: My name is Louisa, and I'm here today with my daughters and I've been living in a Natomas for almost 10 years, and I support the Upper Westside plan. It would help aid with the housing crisis that we face today. A lot of apartment complexes in Natomas have a long waiting list, and as well as houses are selling quick to people that are coming from the outside. So, I feel like this plan will help bring the people that are already in the community like help them out as well as it will help allow for a lot of our children to continue growing in the community that we all love with the school, the community, college parks, and just everything incorporated. It is also a good location. I work 2 like 2 min away from there as well. So, it's a good. I feel like it's a good plan. I feel like everything that was that has been integrated into putting every like. Bringing the plan together will help bring more tax revenue as well with our growing community. And I, just that is all for today. Thank you. Thank you.

RESPONSE 140-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 141

Bal Soin, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 141-1

Yes, my name is Bal Soin. I think this project will be very beneficial for the community. And how can you go wrong with a new park, new commercial places, the park, the schools, and the housing Sacramento is short of housing. It will give the housing. The more the better thing is, the government will make money. There's a billion dollars. When this project is done. Look at now, it's just a field. There's nothing there, it's not pleasant to see, and when it's done, you'll be surprised to see, it'll be one of a kind. It's modern. It's a new and the government will make billions of money will be spent in that place, and the government make more money on that, too. So, the better it is. There will be a park, there will be schools, there will be commercial places. There will be a lot of new jobs will be available in that area and the surrounding community. It'll be beneficial to them. So, I really admire the people who put this plan together, and I thank you guys. At least you are considering to look at it. Thank you. Thank you.

RESPONSE 141-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 142

Melanie Hartman, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 142-1

What I'm concerned about is that the Corps of Engineers already determined that the levee as it was prior to these multi-billion dollars of investment. The levee was too fragile to protect Natomas. Okay. I'm in reach A, we're in reach A, and the construction is happening right across from us now. But one thing that hasn't been considered is the extra traffic. Every Garden Highway resident that I've spoken to about this. We all get rattled by traffic. We're talking SUVs trucks, and when Semis go by it feels like the road actually distorts in a wave as they move past the house. We rattle. The whole place does everywhere does along the Garden Highway. And so, my concern is with climate change deluges coming down and flooding areas, and with the fact that so many trees have come down on the Garden Highway and busted up the crust of clay that once capped it and made the interior of the levee secure and can't be washed out. That cap has been broken many, many times by trees and trees have come down, so we're very concerned about liquefaction. Our side will, with all that extra vibration from the traffic on our side. I'm just. I'm just fearful of the extra danger that that vibration on a liquid levee will do to our houses, and if you're a hundred percent sure that reach A is going to protect the entire Natomas basin, then approve this thing, but I don't think it will. I think it's putting too much pressure on the highway.

RESPONSE 142-1

There is no evidence in the record that the levee system along Garden Highway is prone to liquefaction and/or that vibration from traffic would result in liquefaction that would damage existing home. The condition of levees is assessed regularly and repaired over time. The routine repair of levees would not be an environmental impact appropriate for consideration under CEQA and is not addressed in the Draft EIR.

Please see Master Responses HYD-1: Flood Protection and Drainage, TR-2: Garden Highway Safety Considerations, and TR-3: Traffic Congestion.

LETTER 143

Arthur Hartman, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 143-1

We're also in agreement with the many other. Yes. Issues that are going to be brought up tonight in opposition to the size and scope of this project. Thank you.

RESPONSE 143-1

The commenter expresses opposition to the proposed project. This comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 144

Christine Schmeckel, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 144-1

Hi! I'm Christine Schmeckel. You did good. And I'm here in. I lived in. I've lived in Natomas and various areas for about 40 years. So, I've seen it grow, and I now live closer to the Garden Highway and Orchard Lane, and therefore West El Camino, and so my concern are many that are listed there, but particularly the traffic and the safety and the noise and the impact on the Garden Highway. I look at the Garden Highway. I watch the traffic go by. and it's a. This is a safety issue as well. We've, I've lived in this location, for I think, 3 years now, and we've had several horrible accidents on that road. So, adding more traffic to that location has already been said is a big risk. I don't know what the statistics are like, how many thousands of cars equals, how many lives that have possibly been lost. But it's going to be a huge impact, and I do request that you reject this proposal. Thank you.

RESPONSE 144-1

Please see Master Response TR-2: Garden Highway Safety Consideration.

The comment expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 145

Josh Harmatz, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 145-1

So, I had prepared remarks for tonight and was at a community meeting last Sunday on the 13th with our neighbors on the Garden Highway Community Association. On that evening during the middle of the meeting, while we're talking about traffic and safety issues. This happened.

This is from last Sunday night. This is the 4th time in the last 10 years I've had a car run through the front of my property. What else do you do? On Sunday evening at 6 o'clock my oldest son, his chores are to take the trash out to the street. Fortunately, he was at a friend's house that night and was not on the road when this happened. This happens all the time.

The issue for me isn't as much that there is traffic and safety. It's number one. What has the County done about it? We were promised when the levee improvement. I've been there 16 years when the levee was widened. We were promised they were going to repave and Redo Garden Highway and make it a more safer place. Nothing has happened. Now you're talking about adding 25,000 new residents. Look at this photo. I want you to understand what happens with the traffic maps down here people get rerouted on their apps from Waze from Google maps, etc. When this freeway backs up, and this is before 3 million square feet in Metro Air Park and the other places that are currently being approved have even come into play. This is the most direct route. People cut through Highway 5 and Highway 80 through Garden Highway traveling at very high speeds.

The biggest issue with this is that the current proposal that they've submitted does not provide any planning, any solution for funding or any solutions on how to execute on the plan. Now really important. Here the traffic study but done by the County. If you look at the bottom of page 7, it specifically states Garden Highway needs to meet current county requirements. Current county requirements, as provided by the County, is 2 12-foot-wide lanes with a 6-foot shoulder correct. Our road is 16 feet in total width at the shortest, and at the widest 20 feet in total width, with no room. They just finished the levee improvements. They just moved the power poles. I spoke to RD 1,000. I spoke to the Central Valley Flood Protection Board. The developers did not talk to them about any widening of Garden Highway which is required by the County, so I urge this Commission to delay this approval until these issues can be adequately addressed.

RESPONSE 145-1

Please see Master Response TR-2: Garden Highway Safety Consideration.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 146

Mr. [Ross] Oliveira, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 146-1

I am here to express my serious concerns regarding the proposed Upper West Side Specific Plan and its long-term impacts on our community. I've lived on Garden Highway for almost 40 years, grew up. There lived on the land side and the river side. I ask you to carefully consider the broader implications this project will have on the natural resources, local farmland, and public safety of our county.

I specifically want to refer to a key statement from the Sacramento County 2030 General Plan. The land use strategies and policies of the Sacramento County 2030 General Plan are designed to promote the efficient use of land, encourage economic vitality and job growth, reduce urban sprawl and its impacts, preserve habitat and open space and protect agricultural and rangeland operations. Two growth boundaries are identified to help implement this vision. The urban services boundary and the urban policy area. The USB is the ultimate growth boundary for the unincorporated area. This area is all outside of that.

The UPA defines the area within the USB expected to receive urban services in the near term together. The UPA and the USB promote orderly growth and efficient extension of infrastructure and provision of urban services. While I support these principles, I am concerned that the Upper Westside project deviates significantly from this vision. Here are my specific reasons.

Reduction of the Sacramento River corridor buffer. The County finally settled on a 1-mile buffer. This project is going to reduce that to about 700 feet in some areas and a half a mile in others, but I want to ask this basic question. Is there adequate vacancy inside the urban services boundary for a project like this? Has that been analyzed?

Second, irreversible loss of open space and farmland. Talk about protecting habitat! Now we're getting rid of it.

Traffic, safety on Garden Highway which Josh talked about. The DEIR suggested the project could add 4,000 trips per day feeling it's gonna be quite a bit more than that. Violation of existing, planning guidelines and significant and unavoidable project impacts. I guess that's it for time. Thank you. Thank you.

RESPONSE 146-1

Please see Master Responses LU-1: County Urban Services Boundary and Urban Policy Area and TR-2: Garden Highway Safety Considerations.

This comment expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 147

Brandon Castillo, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 147-1

02:20:49-02:21:59

I'll be quick. Brandon, Castillo, Garden Highway resident. I want to echo what. Well, first of all, blowing through the urban services boundary. This is an environmentally sensitive area. It's right along the Sacramento River for those of us that live there. We know how sensitive it is, not only for recreation, but for species and habitat we're blowing through farmland. I happen to think it looks great. You may not, but the traffic concerns are significant. Nobody seems to have taken [that] into account. It's become a freeway. Garden Highway has become a freeway. We're now talking about 25,000 residents. I recently lost my dog because cars just fly by and they speed. We take the garbage out. My kids, check the mailbox. You're basically condemning us. If you approve this project, our front yard will become a freeway. It already is horrible. You're talking about, I think, 4 or 5,000 more cars per day. We don't have anywhere to go. This is our front yard. Our driveways lead to the Garden Highway. It'll turn it into a freeway. So, in addition to smashing through environmentally sensitive areas blowing through the urban growth boundary. It's just not a sustainable development, and it's not safe. So, it's both unsustainable and unsafe for our community. So, we urge you to reject it. Thank you.

RESPONSE 147-1

Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area and Master Response TR-2: Garden Highway Safety Considerations.

This comment expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 148

Alex Jang, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 148-1

Hello, and thank you for your time. I'm Alex Jang, a native Natomas resident whose family has actually been in Natomas since the 1950s. And I'm here today because I deeply care about our community. Natomas is special because of its balance between environmental stewardship and growth. The Upper Westside Specific Plan threatens that the land is proposed. The land that this plan is proposed on is rich in nutrients, close to the river, and once it's developed, lost forever. Paving over it increases flood risk by reducing natural absorption, and our roads can barely handle the current population. We're already seeing accidents and deaths on fully developed roads due to drivers who neglect rules and show little respect for others. May the victims that even I personally knew rest in peace. And if our current services are not effectively addressing these issues now, what makes us think they'll be able to manage it once we add even more residents. And to add, years ago my neighborhood was alive with the sounds of frogs and crickets at night. Now their silence is a reminder that we're losing this precious wildlife. I also remember seeing herons along the levees. A bird one of our schools is named after, but now they're nowhere to be found. The plan would only further threaten their habitat, and then the Natomas Basin Habitat Conservation Plan was created to safeguard these critical habitats, like those of the endangered giant garter snake, and the Swainson's hawk, and the proposed mitigation strategies, are inadequate and insufficient to protect our local wildlife. We should remain committed to keeping our word and preserving what's left of our natural environment. Instead of continuing to pave over it. We can be smart about growth, and there's room for development within the current urban services boundary where we can respect the land and resources building outside of these boundaries will strain our roads and put everyone at risk - Drivers, pedestrians, cyclists. And in emergencies we'll be in serious trouble.

RESPONSE 148-1

Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, Master Response HYD-1: Flood Protection and Drainage, and Master Response Master Response TR-3: Traffic Congestion.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 149

Ted Costa, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 149-1

Yes, sir, thank you very much. I have some property there at El Central Road and San Juan and my family moved there in 1917. That's the same year that the levee was completed, and the family has been there ever since. and I support the plan because that's about all that could be done with that property. Now that it's surrounded by houses from aerial applications. I know you know all those arguments. But I would like to make one other thing that. I'm 83 years old, and in 83 years I have never seen a Swanson's hawk on my property, and so I think someone is obligated to say that they have seen one there. If any five of you or your staff, or anyone. Yeah, I know they live along the Garden Highway, and they probably are on the Garden Highway. That's a mile and a half away. But I will be filing with you a legal declaration of what I'm talking about here today, and it'll be much more in there because I did work for the reclamation district for years. and I used to clean the canals, and I know where the garter snakes are, there in the canals, and I will submit that to you a legal declaration, independently of perjury, so that you can use for your consideration, and I challenge anyone to do the same thing if they've seen any of those animals on my property. Thank you very much, sir. Thank you.

RESPONSE 149-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 150

Gary Demar, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 150-1

Yes, my name is Gary Demar. I came here to support my neighbors on the Garden Highway. I was born here. My dad was born here, and you know I was here when, let's see, Bradshaw Road was vineyards, you know, and the Pocket Road was farms. Man, you know, and Elk Grove was going to stop at Elk Grove Boulevard, you know, and it's reached the sky. And then now they've jumped across the road on Elkhorn, and now it's all going out in the rice paddies all the way up, all the way up into Sutter County. There's gonna be thousands of homes up there. They don't need the Garden Highway. We need to keep our farmland. We need the farmland in the country right there. It's the closest thing to the city of Sacramento, and it's the last farmland in Sacramento. There's nothing left. When you take that. It's gone. Once it's gone. You know. I went to the Alhambra Theater, too, you know. Now it's a Safeway store. I know you'd like that. Anyway, I don't know [what] I'm thinking about. If there's some way to do a class action lawsuit and sue the levee people because of the devaluation of our homes. It's a nuclear free zone. We got little wooden stakes every 30 inches, you know, and weeds. So that's what we got left with after the levee. Thank you.

RESPONSE 150-1

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 151

Jana Demar, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 151-1

So, I'm in agreement with all of those who [are] opposed to this project. I don't think that the developer is in it for anything but his own profit. The issue of the traffic is huge. I have twice almost been hit head on because the oncoming traffic was avoiding the group of bike riders that are always riding down [the] Garden Highway. They have now started the levee work, which has been awful. The dust and the dirt and the noise, and the everything that we are going through for that. Then, as soon as that's done, and they start this project, we will not have any peace.

The vibrating, the vibrations, and all of that have caused cracks in our house. It's just not a project that should go. We have plenty of places to build homes we have. They're going everywhere. Have you been out to the Folsom area? My gosh, you would not believe what's behind Slough House going up. There is not a lack of housing, maybe affordable housing, but I don't think this is what's going to be planned in this little city that they want to put in Prime Farmland. Thank you.

RESPONSE 151-1

Please see Master Response TR-2: Garden Highway Safety Consideration.

The commenter expresses opinions on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 152

Howard Lamborn, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 152-1

Hi! My name is Howard Lamborn. I'm a pharmacist. I've been in Sacramento, living and working, for 48 years. I'm here to express my support for the Upper Westside plan. I think it. It's going to help our housing crisis. We need housing desperately and it'll also bring a balanced approach to land use as it offers smart growth. It offers schools, colleges, parks, and preserving many acres of agricultural buffer. With this plan it will have a positive impact on economic growth and will generate a lot of tax revenue for the Sacramento area. I think growth is inevitable. You can't avoid it. I think this plan has hopefully worked all that out, and it will be a positive thing for Sacramento. Thank you. Thank you.

RESPONSE 152-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 153

Jas Banga, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 153-1

Thank you. My name is Jas Banga, and I have been living in Sacramento last 35 years, about 25 years in Natomas area. Whether this plan is so, I have seen the plan, the proposal. I have read the DEIR. Also, there are a lot of benefits. That's why I support this plan. But of course, there are some side effects. You can say the issues. They can be mitigated. It's in the report so reports is officially on your records with the county that they can be mitigated now. But just going back a few years, 8, 10 years ago, you know, Sacramento City had a big project called Stadium, one Golden [One] Stadium, one right, a lot of people. They opposed it at that time, a lot of people, but, thanks to Kevin Johnson, he made his right decision. He saved the Kings. They were moving to Las Vegas, if you remember now, Sacramento, everybody knows Sacramento. He saved the city of Sacramento Kings and the arena that's his legacy nobody can take away from him after a while. Now we have a project called Upper Westside. It's one of a kind, unique project, and it will make our Sacramento beautiful. And it's just, it's your legacy, the Supervisors legacy. Nobody can take away in the future, when, after 2030, 40 years from now, you won't be here. I won't be here, but this thing will be here. Your legacy will be here. Nobody can take away for centuries, or as long as the city lives. Thank you, and I support this plan, and I urge you to support the plan, please, for our next generations. Thank you. Thank you.

RESPONSE 153-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 154

Harpreet Banga, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 154-1**02:32:20-02:34:23**

Members, I'm here today to support this Upper Westside plan. First of all, I want to thank you for being here today, and as we all know the details of this project, and I firmly believe that establishing the Upper Westside community will be transformative step for our region as it offers unique amenities, schools, colleges, parks, walkability, and would make it ideal for families and local businesses. This development will have a welcoming environment for all ages. This project helps to address our region's housing shortage. We need more housing units where our people have a house place to live. We don't want people getting chased away from California because of this crisis and creating more red tapes to make it difficult to build a house. This plan is a perfect solution for our smart growth goals. It will also offer houses, apartments, condos. Best of all, it will also offer agricultural buffer land. It will create countless valuable opportunities for our community. It is a unique project, and one of a kind project that will make Sacramento more beautiful and will be more visited place in California. It will add to our region's economic growth. Lots of jobs will be created and will generate millions of dollars in revenues. I'm looking forward [to the] development of a vibrant community in the near future, and I strongly urge you all to support this project moving forward. And many of my families and friends and their friends. They are not able to come here tonight to support this project, but I want to thank everybody for consideration. Thank you. Thank you.

RESPONSE 154-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 155

Rosalyn Bryant, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 155-1

Okay. Sorry. I have a little bit of laryngitis. My name is Rosalyn Bryant, and I live in the Riverview Subdivision. That is right off the corner. It's the corner of San Juan and El Centro Road. I moved from South Natomas about 20 years ago, and I'm sorry 10 years ago, and I've been in North Natomas in that area for about 20 years. It was so nice being able to go down El Centro Road, to bike down El Centro Road. It was like a little farm road, and it was so nice. But over the years I have seen it, you know, actually grow. But the nightmare is what I'm looking at is because I live so close to the 49er truck stop! That is a nightmare. There have been times when I have tried to get out of my subdivision, and I've had to wait, I don't know how long, because of all the traffic coming up towards San Juan, and it's a four-way stop, so it just gets bogged up, and it's just, it takes a long, long time to get to get out of my just out of my subdivision.

When we get across San Juan, going down to the truck stop, the truckers are trying to get out, and nobody's, of course, letting them out so that bogs up, and it's very dangerous, and it's just been a nightmare. I was looking at the map, and I don't know if it's coming up to that area or not, you might be able to answer that I couldn't really tell. But if it comes up to that area, it's just really. And even if they widen El Centro Road, El Centro Road is like a raceway. I mean cars just speed down that road, and there's been numerous accidents on that road. There's been pedestrians that have been killed from cycling because it's like a raceway. So, if they widen it, it's still going to be even worse. So, you know, I oppose this project, because, you know, just because it's going to take away so much farmland. And it's just going to be just a nightmare.

RESPONSE 155-1

Please see Master Response TR-3: Traffic Congestion.

The commenter expresses opposition to the proposed project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 156

Lynn Randolph, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 156-1

Good evening. My name is Lynn Randolph, and I also reside in Riverview Park, at the corner of El Centro and San Juan Road. I strongly oppose the Upper Westside project as I am a nearly 25-year resident of the area.

I raised my family, boy and girl twins, in Riverview Park. We spent many, many days, holidays, birthdays, [and] play dates at the park. We bought strawberries at Perry's farm. We learned golf at Leader's driving range. I'm sorry. and my children played nearly every day at Bastillo's pumpkin patch in October when they were 8, 9, and 10 years old. All of those places will be gone with this project. We moved to West Natomas for these reasons, as well as many others, and I don't want other families to miss out on the wonderful experiences of knowing that farmland and nature are right in their backyard. There are many other reasons to oppose this project, such as the traffic. Currently, during commute time, it can take as much as 10 minutes just to get through the overpass at West El Camino coming from South Natomas. We would displace wildlife. Lately West Lake residents have been complaining about increased rodents in their neighborhoods, due to the apartment construction at El Centro and Del Paso. That project is probably less than two acres. Imagine what it will be developing thousands. There's also the ability to evacuate in case of an emergency. There's little room to expand and widen existing access roads. There are also many other reasons that my fellow community members have outlined. Please consider our concerns and reject this plan. There are other nearby areas that are approved already to accommodate housing. I wasn't going to mention this, but four years ago my husband was killed on Garden Highway in a motorcycle accident. So, I support my Garden Highway neighbors in their concerns. Please don't pave over what little farmland we have left. Thank you.

RESPONSE 156-1

Please see Master Response TR-2: Garden Highway Safety Considerations and Master Response TR-3: Traffic Congestion.

The commenter expresses opposition to the proposed project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 157

Katie McCammon, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 157-1

Hi! I'm Katie McCammon, and I'm [on] staff with 350 Sacramento, an environmental justice organization. And I support all the other environmental organizations in the area who are in opposition to this plan. I can't really state it better than a lot of the folks who already spoke tonight. So, I want to touch on what I've experienced. I live in Del Paso Heights and since I moved here just a couple years ago, it's been really unique to experience a place that is trying so hard to develop an urban life in the midst of protecting its ecology. That's a very special thing. And this project obviously is going to risk that. And so, take that very seriously. Climate change is happening. There's no doubt about that and mitigating it is our job. You have a really awesome opportunity to continue to protect and expand the ecology here and make Sacramento even more unique than it already is. It's an amazing thing to be next to a highway that has so many problems that we could probably fix and focus on fixing that. But then, right next to that parallel to that is a bike trail where I can go and see cranes and a waterway full of life. And it's truly a magical place. So, if I was a person with kids, I would say, those kids deserve a place like that to grow up in. I couldn't live without nature, and I really hope you think about that and think about the world you want to create for generations to come. Thank you.

RESPONSE 157-1

This comment expresses opinions related to the merits of the project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 158

Heather Fargo, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 158-1

Good evening. My name is Heather Fargo, longtime resident of Natomas, and, like so many of my neighbors here, I think Natomas is a special place that deserves special attention. You spend a lot of time on that cell tower, and this is 2,000 acres. So please give us that level of attention that you gave the cell tower. We think it's worth it like a lot of my neighbors. I am here to strongly oppose the Upper Westside project and to point out to you the many flaws in the environmental impact report. Obviously, with two minutes I can't share with you all of the reasons I oppose this project or all the problems with the EIR. But as planning commissioners, I know that part of your job is to implement the general plan, the county general plan, and to implement county policies and plans. This project is so out of line, not just with the county general plan, but with so many plans and policies that the county, that staff and residents have worked on for decades, not just the Natomas Habitat Conservation Plan, but the Urban Services Boundary Plan, which, by the way, is not mentioned or discussed in the EIR and there are so many impacts to this project that are so severe some of them had mentioned already. We'll certainly be putting a lot of those into our written comments. But when you realize how inconsistent this plan is with the policies and plans of the county. I don't think you have any option but to say no to the project. So, I hope you will do that, and I hope that you also will look closely at so many of the impacts that cannot be mitigated, and that are so severe and just as a final note, I want to say that when the Natomas Vision was initially voted on decades ago, not the county version, but the city county version. The idea was that the city of Sacramento would do the development of neighborhoods in the Natomas Basin, and that the county would take care of the farmland and the airport and those areas outside of the urbanization. And this project is completely contrary to that. So, I only have two minutes I could go on. Thank you for your time.

RESPONSE 158-1

The comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 159

Edith Thatcher, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 159-1

There's been a lot of talk this evening about the Urban Services Boundary, and so I thought I would bring a map and show it to you, and so you can see what it looks like in the Natomas basin. So that's the lower part of the Natomas basin. So okay, the poison. It's like we're at the airport flying in and out. The point I'd like to make is that there's not just one project outside of the Urban Services Boundary in the Natomas basin, there are three, and there's one that's already been approved. And so, what I was going to try and ask you to do is to consider that when people are talking about traffic problems, impact on the city services, issues with flooding, it's not just the Upper Westside, Grandpark is 5,000 acres proposed for commercial and residential. We've been told that the DEIR for that will be coming out next summer. This is Airport South Industrial, that is, 6 million plus square feet of warehousing next to communities and schools. And then we have Upper Westside, also of 2,000 acres, the people speaking before me. Almost all of them have mentioned traffic. Please think about it. It's not just Upper Westside. This is huge, and finally Watt EV, which I think you already know about. It is a charging station for semi-trucks, and that has already been approved. And more traffic. What's being imposed on our roads here is enormous. These fears are real, and the impacts on city services are as well. Thanks for your time. Thank you.

RESPONSE 159-1

Cumulative impacts associated with the proposed project and cumulative development in the County, including all of the projects in the Natomas Basin mentioned in the comment, are discussed in Chapter 22, *Cumulative Impacts*, of the Draft EIR. Please see Master Response TR-3: Traffic Congestion for a discussion of congestion, Master Response HYD-1: Flood Protection and Drainage for a discussion of flooding, and Master Response LU-1: County Urban Services Boundary and Urban Policy Area for a discussion of extending the Urban Services Boundary.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 160

Steve Schwyer, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 160-1

Good evening, Commissioners. I'm Steve Schwyer. I'm working to protect our natural areas and agricultural lands and reach our statewide national 30 by 30 goals, but our region is severely behind. We only have nine percent of our land protected compared to the Bay area that has 30 percent already and looking to protect 50 percent. So, we need to catch up. I oppose this project. It's counter to the county's policies to protect open space and farmland.

SACOG recently adopted their Blueprint land use map for the current their current projections, and where we should be building it does not include this project. The general plan states, the county will support implementation of, say, SACOG's Blueprint and the initial planning that was done. It basically relies on this being in the Blueprint. The Draft EIR attempts to dance around that conflict by stating that somehow it complies by just meeting the goals of that, but doesn't mean it's in the map, right? The region will not meet its greenhouse gas reduction targets. If we develop outside those Blueprint boundaries, and there's already issues where they can't meet that with their projections. Now, which could cause us to lose our transportation funding. The DEIR needs to analyze what the effects of that are. Also, the Natomas Basin Habitat Conservation Plan will be severely undermined. This area was predicated on staying in agriculture, and North Natomas and Metro Airport Park were developed, based on that. Developing this land is incompatible. You'll notice in the Draft EIR there's requests from CDFW, Fish and wildlife service, LAFCO and the city for analysis of how it would impact the habitat conservation plan, which is totally lacking in the DEIR. It removes almost a third of the Swainson's Hawk zone in Sacramento County, which is the one-mile buffer from the Sacramento River. It's critical to the species and diminishes our already impacted areas that the hawks have to forage. Thank you, and we urge your rejection of the project.

RESPONSE 160-1

See Master Response BR-1: Conflict With Natomas Basin Habitat Conservation Plan And Metro Air Park Habitat Conservation Plan and Master Response LU-3: SACOG Blueprint and MTP/SCS.

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 161

Louis, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 161-1

Hi, good evening, and thank you for the correct name pronunciation. I have many concerns and doubts surrounding the safety and affordability of housing in the project area. Even if the project develops an affordable housing strategy, there are a few site-specific issues that drive up costs of living. These issues will not be addressed in the near future. First, the Upper Westside Specific Plan area is in a flood plain, and, as the DEIR says, it is susceptible to land subsidence or sinking of the land. This project certainly wouldn't help the situation. Developing and increasing the weight load on land that is susceptible to land subsidence will further lower the already low floodplain and consequently drive up the flood risks. This drives up construction costs to build code safe housing and may also have unaccounted impacts on adjacent regions. What is the plan to keep hazard mitigation costs down and make sure that the affordable housing is actually affordable and will regional subsidence impacts be assessed with each project proposal. Could cumulative effects impede full build out of the proposed structures?

Secondly, although the project area is geographically close to existing metropolitan centers. This point is made moot by the lack of transit infrastructure. This is not a high priority transit region, and necessary transit will not be built anytime soon. How affordable will living be if people and their need their own cars for work and everyday necessities, particularly through initial phases of development, when essential resource centers may not be fully built. These issues are fundamental to the project area. We should not forego important regional planning policies to allow development on this land. The SACOG Blueprint states that we are already entitling two and a half times the land for housing that we will need over the next 20 years. We don't need to focus on approving more land. We need to focus on getting housing built in already zoned vacant land within the urban services boundary and on infill in regions that already have the necessary infrastructure. Thank you.

RESPONSE 161-1

See Master Response HYD-1 Flood Protection and Drainage and Master Response TR-1: Transit. Also see response 15-63 for a discussion on subsidence. See Master Response.

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 162

Susan Herre, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 162-1

Chair Raethel and planning commissioners. I'm Susan Herre, the president of the Board of Directors of ECOS, Environmental Council of Sacramento. We submitted a letter today for your reading. This is Penn Station. It was destroyed in 1963, after passenger traffic declined. There was an international outcry and causing two years later the formation of the New York Landmarks Commission to make sure that nothing like that destruction ever happened again. Now this, of course, is Notre Dame Cathedral in Paris on fire in 2019. It burned. They could have torn it down, but they wouldn't think of it. There would have been an international outcry. But we're in California. Our treasures are different. They are, in fact, nature itself.

We prize our open space. So tonight, we've heard about the Blueprint. we've heard about the urban services boundary and the Natomas Basin Habitat Conservation Plan. These planning actions are like the Landmarks Commission in New York. They're our planning legacy. So, if you go ahead and approve this tonight and keep the process rolling. There won't be an international outcry. but perhaps a couple years down the road. Maybe people will say, never, never again. Thank you.

RESPONSE 162-1

Please see Responses 187-1 to 187-4.

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 163

Srirama Tanniru, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 163-1

Good evening, chair and members of the Planning Commission. My name is Srirama Tanniru. I currently work for the State of California as a It project manager. I have lived in the Sacramento area for almost 30 years. And as someone who's intimately familiar with this area, I am here to express my strong support for this Upper Westside Specific Plan project, and I have several reasons. I know I have very limited time. Maybe I'll be able to cover all of them. Number one at the top of my list. Anybody paying attention to the economic life of this country, of this state, of this region is fully aware of the housing shortage, especially when it comes to multifamily and duplexes. This project is going to produce upwards of more than 9,000 units, more than half of which are going to be multifamily and duplexes. So, I think this project goes a long way to alleviate some of the homeless problems related to housing shortage in this in Sacramento region. The other thing that makes me strongly support this project is the location. It's less than five miles from the location of this project is about almost 200,000 jobs. And so, as some of the concerns that were expressed about vehicles miles traveled, VMT. Or the greenhouse gas emissions. The fact that you're reducing the commute, I think, will help to meet those goals. The urban town center that is being planned is a pattern along the lines of the Santana Row in San Jose would help with commercial activity as well as create new jobs. There is a proposal for a west side canal, which I think would help with the beautification and provide a unique urban waterfront experience. Finally, this area, this project has been in discussion for more than two decades, and all during this time frame North Natomas has been developed. Projects have been approved in Placer Vineyards and West Roseville. These are locations that are much farther away from the job centers which cause sprawl and cause traffic jams and cause greenhouse gas emissions. So, something that is so close to job centers meeting smart growth principles, I think, should be. I support it. Thank you.

RESPONSE 163-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 164

Joseph Brazil, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 164-1

Commissioners. Thank you. My name is Joe Brazil. My family has been farming 120 acres in the Upper Westside project area for well over 80 years. Now, unfortunately, urbanization, changing conditions and many other problematic issues have made agriculture no longer economically viable or profitable for us. We actually were forced to sell some of our land in order to simply keep our farming operation going. Plainly stated, our land is simply not prime agricultural land, no matter what anyone says. Let me back this up with a few facts. Number 1 theft. We can't leave tractors or equipment in fields overnight. People also come into our fields, they trample and steal the crops and also any of the materials we leave there. Number 2 vandalism. This is definitely a problem in the fields. It's a real issue for our crops and our machinery. Number 3 farming restrictions on our methods, timing pesticides, etc. These are all enacted due to the proximity of all the homes and businesses all around the area. Number 4, water table and soil and mineral erosion. This limits the types of crops we plant and prevents us from planting an orchard. I know you guys are all fond of eucalyptus trees, but unfortunately no eucalyptus trees on our property. Sorry, the good news, though, is that Upper Westside has some solutions. Number 1 mitigation land. It offers a 1-to-1 mitigation ratio of prime farmland, contributed for every acre of developed land in the project. This ensures that while development goes forward, farmland preservation continues in areas that are much more better suited for agriculture. Plus, the project includes a 534-acre agricultural buffer to help with open space and protect the surrounding farmland. Wow. Two minutes. Is that quick. Just one more thing, wildlife. It produces the corridors and habitat restoration efforts as part of the plan. Housing shortage. It will help in that area, and it will create nearly 90,000 new jobs during construction, and also after in the long term. So just in closing. thank you. In closing, I respectfully and humbly request that you support the Upper Westside development along with me and my family, who has dedicated 80 years to farming this land. Thank you.

RESPONSE 164-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 165

Steve Arditti, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 165-1

Mr. Chair and members. My name is Steve Arditti. I reside with my wife Melva, on the Garden Highway. I'm not going to tell you how long, because you'll be able to figure out how old I am. But I want to resonate with all the folks who have expressed concerns and objections frankly to this plan as it currently exists. I remember as well as others here, the development of the current urban limit line services line and so forth, much research back and forth. Input went into the development of that. It had compromises. But it was a thoughtful effort to sort of balance the need for development with the values of preservation, of open space, habitat and agriculture. I've not yet heard an argument for why this particular project needs to ride roughshod over that. Someone raised a question before. Why can this not be done within that those lines to say nothing of other areas of town that are just begging for development? For example, the Railyards, the River District. So, I would urge you to look very carefully at the policies that have been so carefully developed. The compromises and the balancing that's been done and ask yourselves whether there's really a case to just ride a rough shot over that with this new development. Thank you so much. Thank you.

RESPONSE 165-1

Master Response LU-1: County Urban Services Boundary and Urban Policy Area.

This comment expresses opinions related to the merits of the project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 166

Lalanya Rothenberger, representative, Natomas Unified School District, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 166-1

Good evening. My name is Lalanya Rothenberger, and I'm the Executive Director of Facilities and Strategic Planning for Natomas Unified School District and we've been involved with this project since the beginning, and we appreciate the opportunities that we've been given so far to be part of the process from the Technical Advisory Committee to where we're at now. We did submit comment letters on the urban services plan as well as the public facilities financing plan and on the Draft EIR so in regard to the Draft EIR, I do want to state that all of our schools need to be built in compliance with the California Department of Education and that is the size of the lot of the land, and depending on what the environmental issue is on the site or the proximity to other hazards like gas lines, electrical lines. All that needs to be considered. So, while the plan shows four schools, all four plans show four schools are going to need to be here based off the students that are going to be generated. We need some ability and flexibility and assurances that as we work with the California Department of Education to build these schools, that they're going to be in compliance, that now we're not given a lot of land that's too small or doesn't meet the needs that we need for our students. And then part of your guys' policies, of course, and the framework that you have does require the urban services plan and the public facilities financing plan. And right now, after we've done analysis on best case scenarios. If we were to pass a general obligation, bond and levy the highest amount of developer fees that we could get, and spend it all on the buildout of these schools, we would not have enough money to build these schools, and so the developer, the applicant, has been meeting with us. But right now, there is no policy that requires mitigation of that potential funding gap that can ensure before there's vested entitlements. And before this moves forward that we can meet the need of Natomas Unified School District students in their community. Thank you.

RESPONSE 166-1

Please see Responses 13-1 through 13-18.

LETTER 167

Marilyn Pendola, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 167-1

When I first moved here, 18-20 years ago Natomas was an uncongested haven for both people and the animals and birds and wildlife that live there. Since then, the natural environment of our beautiful area has been systematically destroyed with mega complexes, apartment buildings, huge industrial complexes, and thousands of new homes. I remember we had red tail hawks and sparrow hawks. We had the sweet little ground owls that would peep up out and look at you. They're all gone. There were rabbits and rodents and foxes and coyotes and an occasional deer because of human development, they are no longer here. We must preserve the open land that is left. We must preserve the open land that is left. We must be stewards of our natural environment. We must be the voice for the creatures who have no voice. I oppose this project, and the degradation of the natural world that it will destroy. Thank you.

RESPONSE 167-1

The commenter expresses opposition to the proposed project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 168

Lori Harmon, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21 2024.

COMMENT 168-1

Good evening. My name is Lori Harmon. I am a retired sergeant from the CHP. I worked for them for 27, proudly worked for them for 27 years. I will add that I am not in any way representing them tonight. I am not against development. My family's in development. I'm certainly not against our farmers selling their land. This is, I strongly oppose this project. It's for a lot of reasons, but for one, it's reckless, and it disregards the people who already live here. I've lived in Natomas for 25 years. I've seen how traffic has been impacted. This development proposes 9,000 housing units which should bring about at least 20,000 vehicles to our four roads - West El Camino, El Centro, Garden Highway, and San Juan. Two of those four roads can't be widened. They're levee roads. There's nowhere to put that other. Those extra traffic that we're stuck with it. I've heard countless people talk about accidents that they've seen. I can tell you. I've been there and I've seen them. They're bad. People are impatient at the West El Camino – I-80 interchange. People are impatient. They run that light. It's not safe for pedestrians. I won't even ride my bike over there. I know that emergency response. Time is detrimental. It can save lives. I've been there. I've been a responder, and I know how frustrating it can be 15 minutes, 20 minutes knowing someone needs my help, and I can't get there because of congestion. Because there's no way to pass. There's no way to get around. I want to be clear again. I'm not against the farmers, or I'm not against development. This is a reckless, just, a reckless disregard for the people who have already been there for nothing more than profit. Thank you.

RESPONSE 168-1

Please see Master Response TR-2: Garden Highway Safety Consideration and Master Response TR-3: Traffic Congestion.

The commenter expresses opposition to the proposed project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 169

Liz Bergeron, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 169-1

I've been a resident of Natomas for 17 years, and for the past five years I've lived in Swallow's Nest, which is on the corner of Garden Highway and Orchard Lane. Prior to that I lived in Westlake, and frequently I commuted downtown to my job downtown taking El Centro, San Juan and Garden Highway because I-5 was backed up then, and it's gotten even worse since then. So, my primary concern is traffic congestion. And we've heard a lot about that tonight. But beyond the safety concerns. I'm also troubled by the piecemeal approach being taken with the development projects in the Natomas basin, as Edith mentioned earlier. And the other concern I have is, and I'm not sure how this works. But the traffic impacts seem to be in the city while this project seems to be in the county, so I have real concerns about how to address that. But I think that you need to consider the cumulative effect of the multiple developments across the Natomas basin rather than the piecemeal approach. I have personal experience with this, as in my professional role, I worked for the Pacific Crest Trail Association, and we had a 2,650-mile corridor, and we saw a lot of piecemeal planning. And I've seen the impacts of that. So, I do hope that you will consider that, and I strongly oppose the project. Thank you.

RESPONSE 169-1

Please see Master Response TR-2: Garden Highway Safety Considerations. Please also see Chapter 22, *Cumulative Impacts*, of the Draft EIR, for a discussion of cumulative impacts of the proposed project and other project in Sacramento County, including projects in the Natomas Basin.

The commenter expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 170

Deborah Lugo, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 170-1

Yes, hello, thank you. My name is Deborah Lugo, and I've lived in South Natomas for over 35 years and I'm very concerned and opposed to this project. I'm concerned about the traffic mainly on Garden Highway, which you've heard a lot of, and I would urge all of you to maybe drive down there this weekend and take a look at it. This is the city portion, not the county portion, but [the] Army Corps of Engineers is still working on the levee down on the county side, and there are still semi-trucks traveling down Garden Highway, which should be prohibited from doing. And if you go down Garden Highway by all of the businesses, like Chevy's, Virgin Sturgeon, and so forth, you will see a crack down the center of the highway where many years ago, [the] Army Corps of Engineers came in and put down a 25-foot slurry wall. and that was probably about 12 years ago. They need to go deeper, but they didn't want to touch this, that portion this time, but the road is actually splitting. There's nothing that has been done to any of the outlying roads ever since I've lived there. It's quite a mess, and I would urge you to come and visually look at this, because there is no way, no way that we can support a city running off this road in this area. Thank you.

RESPONSE 170-1

Please see Master Responses TR-2: Garden Highway Safety Considerations, and TR-3: Traffic Congestion.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 171

Georgia Prescott, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 171-1

Well, I don't want to beat a dead horse, and everybody's talked about traffic, but I feel like probably you need to hear it from everybody. So let me just say that I think this is actually a very interesting project. It's just in the wrong place. I live about a half a block from Garden Highway, and I can tell you the present traffic right now on Garden Highway is a lot, and then you add 30 or 40 bicyclists in a group going. I play a lot of golf in Teal Bend and if you have to get around these bicyclers and the trucks that are there and the cars that are there. And then to add this kind of additional motor vehicle motor cars. You just don't want to do that. So, thank you.

RESPONSE 171-1

See Master Response TR-2: Garden Highway Traffic Considerations and Master Response TR-3: Traffic Congestion.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 172

Dana Schwartz, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 172-1

Well, I will be very brief. I want you to ask yourself, why are they planning this project? Given that the EIR, which is what you want us to talk about, says it will increase noise, air, pollution, create major traffic problems, pave over farmland and destroy wildlife habitat while increasing the potential of flooding. This will not benefit the Natomas community. There is plenty of in-fill land to build on in Natomas and address the housing shortage. So, who is going to profit from this project, I beg you to follow the money and reject this project.

RESPONSE 172-1

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 173

Harriet Steiner, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 173-1

Good evening. My name is Harriet Steiner, and you're doing a great job pronouncing all of our names. I'm here because I think this project has so many problems and so many problems that those of us who live in Natomas like I do will inherit as this project goes through if it should be approved. I think the EIR ignores the fact that there are planning documents that set urban limit lines and general plans that set development guidelines. and none of them contemplate this project. So first, I would say that the EIR is inadequate because it fails to actually look at the impacts of this project on the rest of Natomas and the rest of the county that were never considered and asked to jump ahead to some, you know right now, and amend all of these plans without any actual global. I'll call it global regional, countywide. Look at this. And the worst offender is the urban services boundary. Now, maybe I feel fondly about that because I was a young attorney when I represented SACOG, and we put the all of those things started to go into effect, and they've served us well. And they served us well because they were boundaries, and things happened within the boundaries and outside the boundaries there was conservation, and there was agriculture, and there was keeping nature together with the development of Natomas. And now we are faced with four different projects, which have thousands of houses and hundreds of thousands of square feet of commercial and industrial. Each one wants to go forward. Each one doesn't want to look at the other ones, and the county has never looked at what the impacts of all of those changes would be together. And I think that that's really important. And I think it's really important also for the EIR perspective, to have the county really look at what the impacts of the city on the city are, and to say, why is this project going to go forward in the county when all the impacts are in the city, when it has to connect to the city, when the only roads which are woefully inadequate to hold this project go through the city? I think this, as one of the other speakers says, is maybe an okay project but it's in the wrong place, and it's bringing to you lots of traffic generators and lots of other issues without any of the infrastructure necessary to do this. There's a reason why major shopping centers happen next to freeways. And this is not it so? Thank you.

RESPONSE 173-1

Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area. Aso see Chapter 22, *Cumulative Impacts*, of the Draft EIR, for a discussion of cumulative impacts of the proposed project and other project in Sacramento Conty, including projects in the Natomas Basin.

This comment expresses opinions related to the merits of the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 174

Carmen Lugo, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 174-1

Hi! I'm Carmen Lugo and I live in the Whittier ranch area. I say, leave Sacramento Green. I oppose the development of the Upper Westside. I do not want to see another Los Angeles area, one city butting up against another. The reason for this proposed development is pure greed on the side of the county and our cities collecting more revenue. Property taxes, permit fees, and for developers it is profits at the expense of residents living here. The increased revenue is a result of the passage of Prop 13. So, the authorities have figured out a backdoor to getting more money. What do we get for the increased revenue? Residents have to contend with increased traffic, air, pollution, crime, crowded living conditions, and, worst of all, the loss of our natural habitat. We cannot destroy the habitat and not have to deal with consequences. The environmental impact report does not include the impact of building on coyotes hunting grounds. Sacramentans are totally unaware of the tyranny that occurs when coyotes come into their neighborhoods. Coyotes have already been seen in Natomas Park, Swanson estates. Cats, small dogs, squirrels, possums, wild turkeys are starting to disappear. The counties, and the city's response to this situation is to keep your pets inside. Shall we keep our toddlers inside, too? Even one attack is too many. What about the free space open for the migratory birds that stop to rest? I love watching those birds land. We do not have a right to that land. It belongs to nature. This is not the Sacramento that we want to live in. Believe me, we don't want to see a concrete jungle, more people and traffic congestion. There is no compromise. Sacramento needs to stay green to protect our way of life. Thank you, miss, and to keep us unique as an area that has a lot of greenery. Do not allow greed to control your way of thinking. Thank you for your consideration. Thank you.

RESPONSE 174-1

The commenter expresses opposition to the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 175

Charles Waters, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 175-1

Thank you. Good evening. My name is Charles Waters. I'm a longtime Natomas resident, and my wife and I live immediately adjacent to the proposed project area. So, we know it well, we've been following it for five years now since it was introduced. I had concerns initially when I first heard about the project. Now, after reading the EIR, my concerns are magnified exponentially. My wonderful Natomas neighbors have so articulately outlined all of the things, and many more that I'm concerned about. But I'd like to just focus on one number in my comments. 25,460. I'll say it again. 25,460. Every impact that has been articulated tonight stems from that, the number of potential residents that would be relatively approach, or the pardon me for stumbling over that. But 25,460 is mentioned in the draft environmental impact report as the number of potential residents that would be impacted by this project. So, 25,000 residents would be approximately the size of an LA city like South Pasadena. Do we want to bring South Pasadena to Natomas, El Cerrito in the Bay Area. Do we want to have a city like that size in the Natomas area? I don't think so I think my neighbors have articulately said that we don't want that as well. So, thank you very much. I oppose this project.

RESPONSE 175-1

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 176

Yadwinder Sandhu, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 176-1

Yeah, good evening, everybody. and this is Yadwinder Sandhu. I am resident of Natomas Sacramento, for the last, many, many years. And for your kind information I'm also running a soccer group, and a community group composed of about 200 members for the last 15 years. And for your kind information we support, we all. But today I am here from that on behalf of all. And we support this project and this upper Natomas, this should be developed. And let me come to the point. In short, we still have home crisis in California, in millions and in Sacramento in thousands, so that we need more homes to accommodate the population who are not getting the homes right now. A lot of the people could not buy home because of the high prices and prices are high because of home crisis. And therefore, we need a lot of land for the new construction, and we support this Upper Westside plan so that some part of the population can be accommodated in that area. This project site is very convenient to the downtown airport and freeways as well as the environment report. I read that one that's okay with that one that's favorable. And secondly. we will also get a few more schools, colleges, and libraries for the bright future of our kids as per the plan. A lot of the playgrounds, parks, lakes, canals, and greenery, farm greenery, urban farm greenery will boost the environment. Eco-friendly transportation system is also part of this plan. Moreover, commercial zone includes. And these hospitals, clinics, and markets create a lot of employment opportunities to finally, government bodies will generate a lot of revenues through the taxes in the end. Once again, I want to mention that myself and my community, my soccer group, support this strongly, support this Upper West Side project. Thank you very much.

RESPONSE 176-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 177

Lori Tenhope, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 177-1

Good evening. Thank you for staying here so late. I'm Lori Tenhope, a homeowner in Natomas. I have several concerns with this project. Starting with flood risk. We all know we're in a flood basin dependent on a ring of levees that are still undergoing strengthening. We're one of the most at risk cities in the county for catastrophe in the country for catastrophic flooding. I love my neighborhood. But our flood risk is a deep concern to me and my family. A new development of this size puts added pressure on the levees and the entire flood protection, infrastructure by paving over farmland and open space runoff is accelerated. Climate change adds additional uncertainty with unprecedented weather patterns increasing the possibility of a flood protection, failure. A related concern is traffic congestion. How quickly can residents of this proposed project evacuate when also competing with Natomas and Sacramento? Finally, a point of pride for me, and I think many Sacramentans is the connection to our agricultural heritage. The proximity to farms fosters the local farm to fork movement. Let's not pave over this rich Ag land that surrounds the city and provides us with food, aesthetic beauty, and rich habitat for wildlife. Please consider these comments and reject this project. It's not needed at this time. It'll put undue pressure on adjacent communities and other areas are better suited for development. Thank you.

RESPONSE 177-1

Please see Master Response HYD-1: Flood Protection and Drainage. Also see Impact HAZ-5 on pages 12-21 to 12-25 in Chapter 12, *Hazards and Hazardous Materials*, of the Draft EIR, for a discussion regarding evacuation during a flood.

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 178

Ron Costa, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 178-1

I'm going to start out with the last first. I'm for the project. I think it's badly needed. We went out, and we had all these children. and then they had children, grandchildren. We have to have a place to house them. There is a housing shortage. Our children and grandchildren do not have the wherewithal to go out and start a development. So, it's up to us to do it. It's our responsibility to do it. You can't just cut them loose and then say you're on your own. I got mine. We need to build that housing, and this is a project that has been looked at carefully. They did a beautiful job on the EIR. The EIR addresses the concerns that have been raised here today about hawks and snakes and all that business. So just refer to that booklet, the EIR for the environmental concerns farming. Our family, 1917, was on El Centro and San Juan, right in that vicinity there and we still have the family farm on El Centro. I moved over there when I was in 1951. I'm now 87 years old and I'm in it for the money. You know farming doesn't get it. You'll go broke if you ever try to farm that thing and make a living off of it. So, sell the land and use the money to do some good. So just to wind it up. I am in it for the money.

RESPONSE 178-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 179

Oscar Ballagher, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 179-1

Hi! So, I'm Oscar Ballagher. I'm with 350 Sacramento. It's a climate change advocacy group. We've got a lot of comments. We'll submit written comments. But I'll just mention three of our concerns tonight in the interest of time. First Upper Westside is outside of the UPA, so it relies on land use policies 119 and 120. We believe that the project cannot tear from the General Plan EIR. In regard to those policies, because actually they were not developed, those policies until after the 2010 EIR. For the general plan was completed. and the certification of that EIR, and the findings that the county made in adopting them don't cure the lack of analysis regarded by CEQA. Section 21094. Second, the project's greenhouse gas mitigation is inappropriately considered on a project specific basis, contrary to the county, general plans to the County's 2011 promise to mitigate GHG. Emissions by adopting a climate Action Plan within one year. This was in 2011. The advantages of a CAP over default CEQA. Project-specific mitigation are the reason that that mitigation was credible. Back then the effect of now proceeding on a project specific basis is exactly as if the county had never proposed any mitigation at all. Back in 2011. We don't think that's appropriate, legally or morally. Finally, Third subject mitigate. I used a little of your time to start with, so go ahead. Thank you so much. I'll end up briefly. Third project mitigation for VMT. Assumes full build out. However, such a buildout will be indefinitely delayed because of the vast oversupply of already entitled projects within the UPA. This project is not needed, [it] is not going to bring any new housing to market that wouldn't otherwise be built economically with projects that are already approved and zoned for their development. The county has not substantiated how the modeled build out will occur. Thank you so much.

RESPONSE 179-1

Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area, and Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127. Effects of the proposed UWSP related to greenhouse gas emissions and transportation are fully evaluated in Chapter 8, *Climate Change*, and Chapter 18, *Transportation*, respectively, of the Draft EIR.

On November 6, 2024, the County adopted the *County of Sacramento Climate Action Plan for the Unincorporated Sacramento County and County Operations* (CAP). The adopted CAP included Measure GHG-17 Carbon Neutral Growth which requires all new growth projects outside of the UPA or USB to achieve carbon neutrality (i.e., net zero GHG emissions) and to demonstrate compliance with all applicable GHG measures in the CAP to ensure that new growth projects support the attainment of the County's GHG reduction targets. The requirements of the CAP, including Measure GHG-17, would apply to the proposed UWSP if it is approved.

The comment expresses opinions related to the merits of the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 180

Megan Elise, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 180-1

Board Chambers: Megan Elsie also with 350 Sacramento. A climate justice organization. That work, Hurricane Helene. Okay caused somewhere between 30 and 47 billion dollars of damages recently. Why am I talking about something that occurred across the country because it killed people was very expensive and was caused at least in part, by climate change. Climate change happens because of burning fossil fuels, fossil fuels are burned when you increase vehicle miles traveled. This project is outside of the urban services boundary which will increase vehicle miles traveled. Yes, of course we need affordable housing. My son became homeless this summer for a time and is very low income. He needs housing, but it's not this kind of housing that's far out that's away from public transportation. There's plenty of spots to build housing along light rail and established bus routes. Now, places that are accessible to services by public transportation and by bicycles, which this new project will not be. Also, it takes away from agricultural land. Agriculture done correctly, regenerative agriculture can actually sink carbon and mitigate the climate crisis. If you pave it over. There's no chance to do that same with all the hawks and all this beautiful stuff. It's beautiful, but also nature sequesters carbon. So, once you take it away, you lose that ability also. This is a flood zone. So, the chances of increased climate disasters are bigger in this area. The EIR is deficient because it does not consider all these aspects that I've just mentioned. Thank you.

RESPONSE 180-1

Measure GHG-17: Carbon Neutral New Growth from the recently adopted Sacramento County CAP requires new growth outside the current UPA or USB to demonstrate that they would achieve net zero GHG emissions, including accounting for removal of carbon sequestration. Specifically that measure states:

Net zero GHG emissions means emissions of GHGs to the atmosphere are balanced by removals of GHG emissions over a period of time; in this case, during project construction and operation of the proposed new growth project. This means that GHG emissions generated by project sources such as transportation, energy consumption, fuel combustion, industrial processes, water usage, waste generation, and land use change must be less than or equal to the amount of CO₂ that is removed from the atmosphere over the same time period, both in natural sinks and through mechanical sequestration.

The CAP, including Measure GHG-17, would apply to the proposed UWSP, which would be required to demonstrate consistency with the CAP, and thus would account for the loss of carbon sequestration within the project area.

This comment expresses opinions related to the merits of the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 181

Harvind Dartsem, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 181-1

Hello, everyone! My name is Harvind Dartsem. I live in Westlake so many years. I just like this plan, and to be proved. I don't want to say too many things. It's too late. And now, thank you for everyone. Thank you.

RESPONSE 181-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 182

Arthur Gibson Howell, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 182-1

Hello! My name is Arthur Gibson Howell, resident specifically on Garden Highway. I was originally a little upset that I got here early and got to hear all about the cell tower, but actually I was quite excited to learn how much you guys negotiate over, or, you know, talk about each other over the little things like the visual aspects of it being 55 foot tall versus 85 foot tall. And what kind of tree it is? Because for this we're talking about 25,000 new residents, 10,000 new homes up to 5 million square feet of resident or built of commercial space. So that will definitely require a lot of discussion as to how that's going to be so as to do with the DEIR. One thing I can talk about is the cultural resources, the land that is planning on being developed in the Upper Westside project, was originally part of the watershed of the Sacramento River before the levee was built and was a known area of historical tribal activity and burial site. When the construct, when any construction on Garden Highway is planned, there is a requirement to investigate on a parcel-by-parcel basis for any historical archaeological resources, even though the land on Garden Highway has been elevated by dredging from the river and fill from elsewhere to build the aforementioned levee. Any development in the Upper Westside Specific Plan will have to excavate into the original watershed to the actual depth and below of these culturally significant areas potentially causing an irreparable harm. My question is, is there a plan to investigate mitigation measures? CUL-2A and CUL-2B. On a plot-by-plot basis. or just go and say, Well, this is a 20-acre parcel. It looks fine. And then the other part of population and housing the new envision. The new project, envisions, population, density equivalent to the most crowded parts of New York City. Of approximately 18,000 per square mile with no real mass transit and a job geography that requires most people to drive. The DEIR states that they believe significant portions of residents will work in the project footprint and walk, bike, uber, or carpool. But that does not reflect the reality of life in California. And finally, what was mentioned about the Garden Highway needing widening. From what I can tell, the Army Corps is not going to allow it. So, if this project, if the DEIR says it has to be widened, and it cannot. Then that puts an end to this project right there, as far as I can see. But I would like to apply for a permit for a car and passenger ferry in case the project is approved, so I can ferry people from Natomas to downtown via the river. Thank you.

RESPONSE 182-1

Effects of the proposed UWSP related to cultural resources and tribal cultural resources are fully evaluated in Chapter 9, *Cultural Resources*, and Chapter 19, *Tribal Cultural Resources*, respectively, of the Draft EIR.

Please see Master Response TR-1: Transit.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 183

Patrice Stafford, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 183-1

Board Chambers: Hello! My name is Patrice Stafford, and I'm a retired civil engineer from the county of Sacramento and Caltrans with the county. The last place I worked was the County Sewer Department, and 1997. I popped every manhole in South Natomas to find out where everything was. All the alarms were going off. So, I know the whole area related to where the problems are regarding our water table, and so the levee work will help, because when we plotted the info we plotted the flows along with the rivers, it was just one hole. The water is just underneath the ground right there at the ground. So. But I would say I am in favor of this project, because everything else around it has a specific plan. So, this area needs a specific plan, too. The part about how long it will take for this proposal to come to fruition that could be staged so that the transportation infrastructure could be built at the truck stop, and further along San Juan and El Centro. I just almost saw a big accident on my way here. And so, one of the things is maybe because once it gets built, then maybe these smaller neighborhoods. These people that are using it as a cut through won't do that anymore. So that's one way. But also I see that there's buffer for the environmental protection of Garden Highway and the properties that are already there. And so, I think that it's pretty smart development. And I think, I think it should be approved with a commitment from the County Transportation Department to put in their master plans the work that is required in this area. Thank you.

RESPONSE 183-1

The comment expresses support for the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 184

Bill Schomberg, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 184-1

I'm Bill Schomberg, and I oppose it. I live on the Garden Highway. Friday, when I was coming home from Woodland, I-5 was backed up from Woodland to who knows that way which towards Sacramento they've added an off ramp at the airport exit that was full of people. I got in line. That line of traffic followed me. I went 45 miles an hour, which is the speed limit down Garden Highway to my residence, and I went to pull into my driveway, in which you have to pretty much stop to get down onto your property, there was 25 cars behind me, all very pissed off, beeping and very upset that I slowed down that flow. Last week I got off of I-80 on El Centro or West El Camino and El Centro was backed up clear past San Juan, clear into the residential district, and I have a video of that. I'm not sure how to put that on here. Oops. Oh, we don't. We don't need video tonight. We believe you. It's terrible, anyway, I oppose it. Thank you. And I like open space.

RESPONSE 184-1

Please see Master Responses TR-2: Garden Highway Safety Considerations, and TR-3: Traffic Congestion.

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 185

Johanna Williams, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 185-1

All right, Johanna Williams, good evening. I'm Johanna Williams, and I am a homeowner in the Willow Creek area of Sacramento, and I'm here to say that I strongly oppose this project. For all the reasons stated in the DEIR that appear to be unmitigable. The severe damage and the serious impacts that you can't mitigate. And I don't see that I'm really curious about the purpose of this project. It can't possibly be housing, because we've got millions and millions and millions of dollars that we don't even know where it's going for housing projects that are in. That's in the pipeline right now. So, I don't see where this fits in with that. So again, I, for all the reasons previously stated. I strongly oppose this project. Thank you.

RESPONSE 185-1

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 186

Terry Burns, member of the community, oral comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 186-1

Thank you. I'll associate myself with the remarks of Mayor Fargo. Those who spoke to the urban services boundaries, those who spoke to the substandard highway, and most particularly those who spoke to the flood issue. Natomas is called the Natomas Basin, because they used to sail ships through it. We are at risk of flooding. Unfortunately, the EIR has very conflicting statements about how it's going to deal with any emergency services, both access for emergency services, personnel, and egress in the situation where there's a flood or some other disaster, I think that's significant part of your concern as well. I'm a former member of the drowning accident rescue team. There's a talk about drainage canals. Drainage canals that are cement and are fixed. Get very slippery and very slick, and I can't tell you the number of children I have pulled out of drainage canals who were dead because they couldn't get out of that drainage canal, so I would like to see some mitigation done there. Likewise, I'm currently a member of the River City Waterways Alliance who does clean-up in the canals and the creeks and the rivers around here. We've taken out millions of pounds of trash. There is nothing in this EIR that talks about the maintenance of those canals, and who will be responsible for pulling out the trash and the other things that go in there and disposing of that trash. So, I would encourage you to and be sure that that is resolved. Again, this is not a destination project. It can be put in any of the places that are currently approved to build housing, I would encourage you to do so. Thanks for your time. Thank you, Miss Birds. all right.

RESPONSE 186-1

Please see Master Response HYD-1: Flood Protection and Drainage.

This comment expresses opinions related to the merits of the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 187

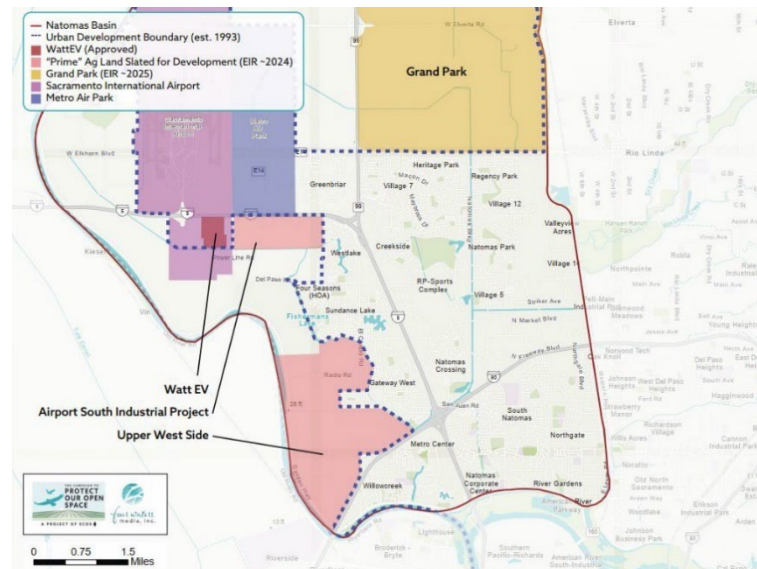

Environmental Council of Sacramento, non-profit organization, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 187-1

- 1) **Consider all of the developments currently being proposed.** Review the Upper Westside in the context of the entire 8,000 acres across three projects now proposed for development in the Natomas Basin in Sacramento County.

The map at right highlights the Upper Westside, Airport South Industrial, and Grand Park projects.

These projects would dramatically decrease open land in Natomas and present impacts to traffic, air quality, flood control, the Natomas Basin Habitat Conservation Plan, and City services -- all of which should be considered together.

- 2) **Consider what it means to break through the Urban Services Boundary (USB).** This boundary, in place for three decades, is based upon jurisdictional, natural and environmental constraints to urban growth and “is intended to be a permanent growth boundary not subject to modification except under extraordinary circumstances.”¹

All three of the projects would break through the USB. Changes to the USB are to be made only for “extraordinary projects” and yet there is nothing extraordinary about Upper Westside except that it is close to the City of Sacramento. What is extraordinary about the area is the deep, prime agricultural soil from many years of overflow from the Sacramento River.

The USB was drawn in 1993 to protect development from the risk of flood and fire, and to preserve agriculture, ranch, and habitat lands. The image below of Sacramento County shows the urbanized area inside the USB, with areas outside of it in GREEN. With climate change, the USB is a bulwark of sustainability for our region.

Consider the requirements in Sacramento County's General Plan Policy LU-127 for projects that propose to break through the USB:

LU-127. The County shall not expand the Urban Service Boundary unless:

- *There is inadequate vacant land within the USB to accommodate the projected 25-year demand for urban uses; and*
- *The proposal calling for such expansion can satisfy the requirements of a master water plan as contained in the Conservation Element; and*
- *The proposal calling for such expansion can satisfy the requirements of the Sacramento County Air Quality Attainment Plan; and*
- *The area of expansion does not incorporate open space areas for which previously secured open space easements would need to be relinquished; and*
- *The area of expansion does not include the development of important natural resource areas, aquifer recharge lands or prime agricultural lands;*
- *The area of expansion does not preclude implementation of a Sacramento County-adopted Habitat Conservation Plan;*

OR

- *The Board approves such expansion by a 4/5ths vote based upon on finding that the expansion would provide extraordinary environmental, social or economic benefits and opportunities to the County.*

Given the impacts of this project on the region and the Natomas community, the Upper Westside project does not meet most of the listed requirements, nor does it merit a finding of extraordinary benefits and opportunities by 4/5ths of the Board of Supervisors.

¹ [Sacramento County General Plan, Land Use Element](#)

3) Consider what it means to develop on land not within the NBHCP/MAPHCP Permit Acres. The NBHCP is basin-wide for important biological reasons. The hatched areas on the Natomas Basin Habitat Conservation Plan (NBHCP) below indicate where development is permitted. Land outside of the NBHCP/MAPHCP Permit Acres "is designated for retention as Agricultural Cropland by the Sacramento County General Plan."²

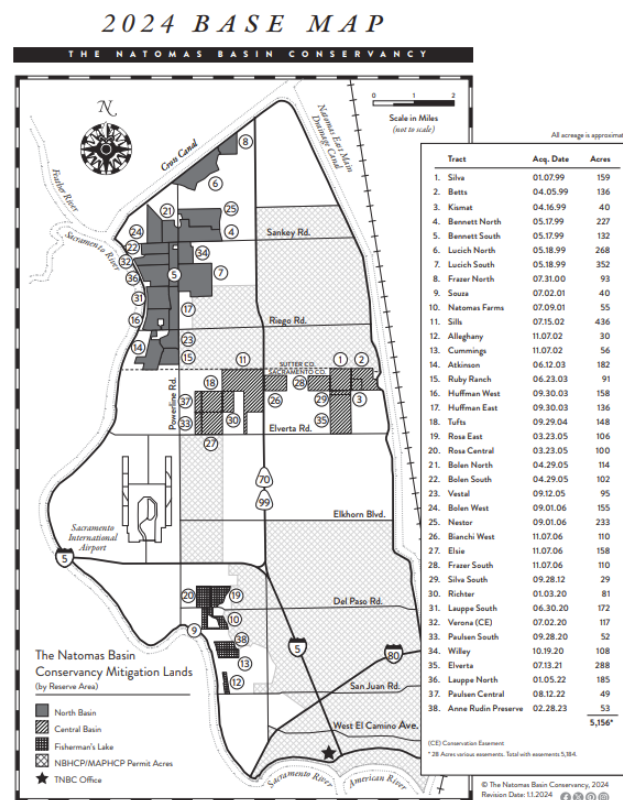

The Upper Westside project (Airport South Industrial and Grand Park as well) is proposed for areas outside of the NBHCP/MAPHCP Permit Acres. It would replace wildlife-supportive agriculture with concrete, vehicles and houses, severely

impacting the resident wildlife in the Basin. The protection of resident wildlife in the Basin was promised when the City signed a contract with the federal government and approved the Natomas Basin Habitat Conservation Plan. Sacramento Area Flood Control Agency (SAFCA) also agreed to protect resident wildlife. The Upper Westside project cannot mitigate for its impacts to resident wildlife as the Natomas Basin is finite – the harm to the Basin’s wildlife conservation efforts will be irreparable.

The Natomas Basin is a deep flood basin. Much of the interior of the Basin is lower than the elevation of the Sacramento and American Rivers, particularly during annual high-water flows in winter and spring.

The Natomas levees were designed for a 200-year storm, as it was understood at the time of design in the late 1990s. Climate change is creating a moving target for flood protection, we no longer can accurately estimate size and frequency of floods.

In a crisis, flood mitigation requires everything to work perfectly – pumps, electricity, detention basins, canals, river levels, and people. Hurricane Helene just provided an example of what happens when systems are overwhelmed by water.

Development in the Natomas Basin should be consistent with the NBHCP.

² https://natomasbasin.org/wp-content/uploads/natomas-basin-habitat-conservation-plan/5nbhpcpland_use2006_a11y.pdf
pg III-13

4) Consider how Upper Westside is inconsistent with the goals of the Blueprint.

On November 4, 2020, SACOG commented on the Notice of Preparation of the Upper Westside DEIR, stating “implementation of the Blueprint vision depends greatly on the efforts of cities and counties through local plans and projects. . . [and] the Upper Westside project and the project area itself are not anticipated for development in either the MTP/SCS or the Blueprint.”³

This is still true today. SACOG’s selected land use scenario for the 2025 MTP/SCS, dated April 2024, does not include the Upper Westside, or Airport South Industrial, or

Grand Park – it includes no buildout in the coming decades, as shown in the excerpt at right.

SACOG went on to say “The Upper Westside project . . . raises important policy questions for the region’s implementation of the Blueprint. For example, the capacity for growth in existing entitled lands far exceeds expected demand

over the next twenty years: collectively, the region’s jurisdictions have entitled, or are in the process of entitling **2.5 times the region’s projected need for the next 20 years**. More than half of that capacity—387,000 units—is in greenfield areas that are on the edge of existing development.”⁴ This means there is far more entitled acreage for new homes than the market will bear. Upper Westside is not needed.

⁴ James Corless, SACOG Ex Dir., November 4, 2020 letter to County Environmental Planning, Notice of Preparation of DEIR for Upper West Side Specific Plan (PLNP2018- 00284, p. 6)

- 5) **Consider how Upper Westside is inconsistent with General Plans.** The project proposes a change to Sacramento County’s General Plan from agricultural to residential/commercial uses. While the project would be in Sacramento County, it would likely be served with utilities and services by the City of Sacramento, and, in future, could be fully annexed into the City.
- 6) **Consider the project’s effect on our Air Quality Plan.** The proposed project would worsen the Sacramento region’s ability to meet state and federal air quality standards by interfering with implementation of our Air Quality Plan. The Upper Westside DEIR makes clear that the project’s air quality impacts are significant and unavoidable. Failure to honor our Air Quality Plan could result in our area losing access to federal transportation funds.
- 7) **Consider the other areas available for development.** Open land inside the Urban Services Boundary (USB) is available for housing, both in the City of Sacramento and unincorporated Sacramento County – land that is not in a deep flood basin or on prime farmland. In addition, there is enormous capacity for infill development in

existing communities, especially around transit stations. Building in communities with existing public infrastructure and services can limit costs to local jurisdictions for maintenance and operations, and it can lower the combined housing-transportation costs to households. While the Upper Westside project proposes the City of Sacramento extend its utilities and services to the project, the City's new 2040 General Plan strongly emphasizes infill development to provide needed housing.

- 8) Consider the land uses being proposed.** We need more housing, but it does not need to be located in the Natomas Basin; and the Upper Westside project does not address our most critical housing need -- for low income households.

The project proposes three million square feet of commercial space. For comparison, the Westfield Galleria shopping mall in Roseville is 1.3 million square feet. If this commercial space is built, will it take the life out of the 100,000 square-foot shopping mall at West El Camino and Truxel Road?

The proposed site is on the urban edge, bounded by the Sacramento River. For an educational campus, this means difficult access by automobile, and certainly by public transit.

- 9) Consider the traffic impacts.** The project proposes 9,000 residences and three million square feet of commercial space, plus the schools. The project will be almost entirely auto-centric. Thousands of auto-trips each day will significantly impact El Centro Road and West El Camino (whose width varies from 2 lanes to 6 lanes between I-80 and Northgate Blvd), as well as Garden Highway and San Juan Road (neither of which can be widened.)

Traffic will increase throughout South Natomas. The six-lane West El Camino overpass of I-80 and El Centro Road, at the primary gateway to the project, will be especially congested. This junction and the gateway itself, intended to be a "smart growth street", will be bumper to bumper.

RESPONSE 187-1

Please see Response 69-1 through 69-13.

COMMENT 187-2

- 10) Consider impacts on biological resources.** The Upper Westside Specific Plan (UWSP), if approved, would harm the viability of the NBHCP conservation strategy and impair NBC's ability to protect wildlife in its preserve system. The UWSP conflicts with the NBHCP's intent to conserve wildlife in the Basin and fails to comply with the NBHCP's proviso that additional development outside of the NBHCP/MAPHCP Permit Acres be mitigated by amending the NBHCP or writing/obtaining approval of a new HCP to cover the project's impacts.

The NBHCP/MAPHCP Permit Acres are not built out so the impact on wildlife of full buildout is yet to be determined. At this time, key species are showing signs of

serious decline, so, now is not the time to remove habitat. Instead NBC should respond with strategic and tactical remedial actions and additional resources.

NBC's monitoring studies show Giant Garter Snake (GGS) has not been found at Fisherman's Lake since 2017. This key indicator of species protection performance shows that the range of this federally endangered species has been reduced by development despite significant effort by NBC to build robust GGS preserves. This problem must be corrected before any more development outside of the NBHCP/MAPHCP Permit Acres is considered. The UWSP would have direct and indirect impacts on the Fisherman's Lake preserve area and NBC and SAFCA mitigation properties included in and adjacent to the UWSP. The proposed mitigation is deferred, speculative, out of basin, and inadequate.

The UWSP removes 2,000 acres of essential habitat in the Swainson's Hawk zone, a key part of the NBHCP conservation strategy. Yet the Draft Environmental Impact Report does not mention the NBHCP's requirement for development projects proposed for land outside of the NBHCP/MAPHCP Permit Acres to obtain 2081 permits from the CA Department of Fish and Wildlife. Swainson's Hawk monitoring by the NBC has shown huge swings in nesting productivity, indicating a population under stress and unstable. The NBHCP is designed to support the Basin population of Swainson's Hawks through the various natural stresses in the environment. But this guarantee is only with the availability of at least 13,000 acres of foraging habitat, focused in the Swainson's Hawk Zone, maintained in the Basin in perpetuity per the 2003 NBHCP. UWSP proposes to mitigate for these impacts somewhere out of Basin. The project will result in the reduction of the range of the Swainson's Hawk and severely compromise its sustainability in the Natomas Basin.

RESPONSE 187-2

Please see the Master Response BR-1: Conflict With Natomas Basin Habitat Conservation Plan And Metro Air Park Habitat Conservation Plan.

The Draft EIR analyzed potential impacts to the NBHCP and MAP HCP under impact BR-14, in which the effects of the proposed UWSP were evaluated to determine whether they would conflict with any of the four main strategies of the NBHCP and found the impacts less than significant. In addition, implementation of mitigation measures for permanent impacts on Swainson's hawk and giant garter snake habitat would reduce those impacts to a less than significant level.

COMMENT 187-3

- 11) **Consider impacts on ground conditions.** Development of the region would likely cause subsidence of the project area and exacerbate risks for natural hazards like flooding.

With 3 million square feet of commercial use, the weight load of construction may increase subsidence. The land proposed for the Upper Westside development, with its particular soil type, flood plain status, and proximity to the Hunting Creek-

Berryessa fault system, has experienced “moderate to high land subsidence in the past.” (DEIR, 11-15) Considering the area consists largely of expansive soils that shrink and expand dynamically, additional subsidence should be expected. In addition to the structural hazards that progressive subsidence poses, further depression of the already low-lying land would increase the intensity and range of flooding in and surrounding the area.

Project designs for Upper Westside should factor in the subsidence and flooding that the buildings will cause; should evaluate the buildings’ contribution to regional subsidence and flooding and ensure that existing structures in the surrounding areas will not be compromised as a result of new construction-related subsidence.

While safe, code-compliant designs can mitigate the subsidence and flood risks to the buildings, the required structural and seismic measures may alter the land itself, and they may be costly. How costly would development of California Building Code- and County-compliant structures be, compared to development in other already approved greenfield plots within the USB?

RESPONSE 187-3

As discussed in Draft EIR Chapter 11, *Geology, Soils, and Paleontological Resources*, Environmental Setting, Subsidence and Ground Settlement, data gathered by the Department of Water Resources (DWR) indicate that the subsidence rate in the area is relatively minor. As explained in Draft EIR Impact GEO-4, the final design-level geotechnical investigations for individual projects would analyze the site-specific conditions within each project area where foundations, footings, and other infrastructure would be located, and would identify any potential for individual projects to exacerbate any geologic hazards. The geotechnical investigation would include identifying the potential for subsidence and expansive soils, and provide specific measures to address relevant site preparation, design, or other requirements consistent with the current version of the CBC. With compliance with the CBC, significant subsidence would not occur and expansive soil conditions would be addressed where present. The requirement to address subsidence and expansive soil would prevent increasing the potential for or intensity of flooding in the project area.

The costs of compliance with existing regulations is an economic issue that is not a consideration under CEQA. Economic issues are not the focus of an EIR. As part of its consideration of the proposed project, the County will assess the economic and fiscal effects of the proposed project. However, while economic and fiscal impacts are important considerations for the County in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that “[e]conomic or social effects of a project shall not be treated as significant effects on the environment.” Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a

number of factors considered in addressing the feasibility of an alternative, mitigation, or change to the project (see CEQA Guidelines sections 15131(b, c))

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 187-4

12) “It’s housing – what’s not to like?!”

The capacity for growth in existing entitled lands far exceeds expected demand over the next twenty years according to SACOG. “Collectively, the region’s jurisdictions have entitled, or are in the process of entitling **2.5 times the region’s projected need for the next 20 years**. More than half of that capacity—387,000units—is in greenfield areas that are on the edge of existing development.”⁵

This means there is far more entitled acreage for new homes than the market will bear. Upper Westside is not needed.

⁵ James Corless, SACOG Ex Dir., November 4, 2020 letter to County Environmental Planning, Notice of Preparation of DEIR for Upper West Side Specific Plan (PLNP2018- 00284, p. 6)

RESPONSE 187-4

Please see Responses 15-2 and 15-83. This comment includes statements of opinion, but it raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 188

Garden Highway Community Association, community organization, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 188-1

Arguments About Violating the Urban Services Boundary and Existing County Plans

Before considering this project, we urge you to hold public hearings on expanding the Urban Services Boundary. This project is outside the Urban Services Boundary. Before considering any development outside the Urban Services Boundary, we urge the County to pause development applications outside the Urban Services Boundary and hold hearings on whether the Urban Services Boundary should be expanded. If one project is approved beyond the Urban Services Boundary, other developments will surely follow, and the Urban Services boundary will no longer function as a barrier intended to preserve open space, habitat and farmland. Changing the Urban Services Boundary will have significant negative impacts on the environment and Sacramento County residents far beyond the Upper Westside project area.

RESPONSE 188-1

The statement that the UWSP would be developed outside the USB is incorrect. While the UWSP project site is currently located outside the USB and is not designated for development, as stated on page 2-14 in Chapter 2, *Project Description*, of the Draft EIR, required entitlements for the proposed UWSP include a General Plan Amendment to expand the USB and the UPA to include the proposed UWSP Development Area. Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-2

This project represents the urban sprawl which Sacramento County residents have said they do not want, and which the County's 2030 General Plan, County zoning, the Urban Services Boundary, the Urban Policy Area, and SACOG's Blueprint for regional development seek to avoid.

RESPONSE 188-2

Please see Response 188-3 below.

COMMENT 188-3

The EIR fails to state clearly that the proposed project violates existing County land use plans. This is clear in the entitlements the project is seeking. The land use strategies and policies of the Sacramento County 2030 General Plan were designed to promote the efficient use of land, encourage economic vitality and reduce urban sprawl and its impacts, preserve habitat and open space, and protect local farming. The Urban Services Boundary was intended to implement that vision and promote orderly growth within the County. The proposed project violates the County's 2030 General Plan, County zoning, the Urban Services Boundary, the Urban Policy Area, and SACOG's Blueprint for regional development.

RESPONSE 188-3

As discussed in Chapter 14, *Land Use*, of the Draft EIR, the proposed UWSP meets both regional and County visions and plans intended to promote smart growth principles, including compact development, mixed-use development, housing choice and diversity, transportation choice, reduction of vehicle miles travelled (VMT), reduction of greenhouse gas (GHG) emissions, natural resource conservation, and quality design. As discussed in Impact LU-3 in Chapter 14, *Land Use*, of the Draft EIR, County General Plan Policy LU-120 is intended to reduce impacts of many different types – such as growth inducement, unacceptable operating conditions on roadways, poor air quality, and lack of appropriate infrastructure – by establishing design criteria for all amendments to the Urban Policy Area (UPA). Policy LU-120 represents a performance-based approach emphasizing high quality, smart growth criteria rather than business-as-usual approach that repeated historical land use patterns. Policy LU-120 was developed with the primary objective of reducing VMT by identifying sufficiently high densities to support transit; requiring infrastructure, including transit, is put in place at the same time the project is developed; maintaining a jobs-housing balance that reduces the need for long commutes and ensures lower VMT; ensuring a project design that will enable residents to walk, ride bicycles, or take transit to their jobs and schools; and requiring a reasonable amount of mixed-use development. Draft EIR Table LU-3, pages 14-29 through 14-31, includes a discussion of the consistency of the proposed UWSP with performance criteria of Policy LU-120.

As discussed in Chapter 14, *Land Use*, of the Draft EIR, the UWSP area and the proposed UWSP are not anticipated for development in the SACOG Blueprint. However, as discussed in Impact LU-4 on pages 14-23 through 14-33 of the Draft EIR, the proposed UWSP aligns with many of the principles contained in the Blueprint, including compact development, mixed-use development, housing choice and diversity, transportation choice, reduction of VMT, reduction of GHG emissions, natural resource conservation, and quality design. Moreover, the Blueprint is intended to be advisory and to guide the region's transportation planning and funding decisions. As discussed in Chapter 14, while an EIR may provide information regarding land use and planning issues, CEQA does not consider inconsistency with land use plans and policies to be a physical effect on the environment unless the plan or policy was adopted for the purpose of avoiding or mitigating a significant environmental effect.

With regard to the assertion that the proposed UWSP could induce sprawl, the proposed UWSP is immediately adjacent to existing and planned development, including residential uses within the City of Sacramento's North Natomas and South Natomas community that are located to the north and east of the UWSP area. As discussed in Chapter 14 of the Draft EIR, extensive planning efforts for the County lands located near the North Natomas community have established guiding principles for future master planning efforts within the Natomas Joint Vision Area. As discussed in Chapter 14, the proposed UWSP's community form responds to this important groundwork, and the proposed UWSP has been determined to be consistent with County General Plan Policy LU-114, which specifies that development and open space preservation in the Natomas Joint Vision Overlay Area occur in a comprehensive, responsible, and cohesive manner that best addresses land use, economic development, and environmental opportunities and challenges in Natomas.

General Plan Policy LU-127 specifies that expansion of the USB is subject to the discretion of the Board of Supervisors. Accordingly, the Board will consider the proposed expansion of the USB in its decision whether to approve the proposed UWSP in accordance with Policy LU-127 and CEQA.

Please see also Master Response LU-1: County Urban Services Boundary and Urban Policy Area, Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127, and Master Response LU-3: SACOG Blueprint and MTP/SCS.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-4

The EIR for the project is fundamentally flawed and should be rejected. The EIR identifies changes the project applicant is seeking to the County's 2030 General Plan, County zoning, to the Urban Services Boundary, and to the Urban Policy Area, among others. Then, throughout the EIR, the EIR makes false claims that the project does not conflict with County land use policies. The purpose and legal requirement for the EIR is to provide accurate, fact-based and evidence-based information to the public and decision makers. Developers have a right to spin the truth in their communication with Planning Commissioners and County Supervisors, but deceit and spin has no place in an EIR.

RESPONSE 188-4

Please see Response 188-3 above.

COMMENT 188-5

The County's Urban Services Boundary document says, "The County shall not expand the Urban Service Boundary unless there is inadequate vacant land within the USB." There is adequate vacancy inside the Urban Services Boundary for the number of housing units and commercial space the project proposes.

RESPONSE 188-5

Please see Response 188-3 above. Also see Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127.

COMMENT 188-6

There is no responsible rationale, and **no rationale is presented in the EIR, for approving this project outside the Urban Services Boundary.**

We strongly oppose changes to the County's 2030 General Plan, the Urban Services Boundary, and the Urban Policy Area to accommodate this or other projects outside the Urban Services Boundary.

RESPONSE 188-6

The Draft EIR fully evaluates the physical effects on the environment that could result with implementation of the proposed UWSP in accordance with the requirements of CEQA. General Plan Policy LU-127 specifies that expansion of the USB is subject to the discretion of the Board of Supervisors. Accordingly, the Board will consider the proposed expansion of the USB in its decision whether to approve the proposed UWSP and in accordance with Policy LU-127. Please also see Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127. Also see Response 188-3 above.

The comment expresses opposition to the proposed project. It does not raise specific issues pertaining to the adequacy, accuracy, or completeness of the Draft EIR's analysis of the proposed UWSP that requires further response. The comment is acknowledged for the record and will be forwarded to the decision makers for consideration.

COMMENT 188-7

The EIR fails to recognize that allowing development outside the Urban Services Boundary harms the Sacramento community inside the Urban Services Boundary. An important achievement of infill development is that it not only provides advantages to residents inside the new development, it adds vitality and benefits to the nearby community, and it reduces environmental impacts associated with urban sprawl. That is not true of this project. Allowing development sprawl outside the Urban Services Boundary discourages infill development.

RESPONSE 188-7

The comment expresses an opinion related to the merits of the proposed project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-8

The County's current land use policies are the result of participation and input from multitudes of residents throughout Sacramento County over many years. The County's plans represent difficult compromises, but a broad consensus to manage development to reduce urban sprawl and its impacts, build a vibrant community where people want to live and work, and to preserve habitat, open space, and local farming. The proposed project does not respect the thousands of hours of input Sacramento [sic] County residents provided to ensure planned growth in Sacramento, nor does the project respect the huge investment of taxpayer resources that resulted in existing County plans and policies the project seeks to change.

RESPONSE 188-8

This comment expresses an opinion in opposition to the proposed project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-9

The EIR fails to identify that planned and orderly growth of services such as public transit, utility services, and roadway improvements saves taxpayers and ratepayers money. Unplanned growth upends and redirect plans, increasing costs for taxpayers and ratepayers. The proposed project is unplanned growth outside the Urban Services Boundary.

RESPONSE 188-9

The UWSP Draft EIR does not describe the provisions of public services and utilities related to the proposed project as "unplanned" because it is not true. As is described in Chapter 2, *Project Description*, of the Draft EIR, planning for development of the project area extends back for more than 20 years to the coordinated City/County Joint Vision for Natomas. More than 12 years ago, the County initiated a Master Plan process that considered the potential for movement of the USB and UPA to include the four precincts articulated in the Joint Vision, including the UWSP project area. In 2018, the property owners that make up the UWSP project area filed an application with the County, and in February 2019 the County approved their request to initiate planning for the project area. The planning for the project has gone on for more than 5 years, and has included multiple public and agency meetings, extensive planning within the many departments of the County, as well as preparation of a full EIR under CEQA, addressing all of the environmental resource topics relevant to the project and project site. The comment is noted and will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

Furthermore, the comment states that the Project will cost taxpayers and ratepayers due to unplanned growth. No facts or evidence are provided that support this contention. As part of its consideration of the proposed project, the County will assess the economic and fiscal effects of the proposed project. However, while economic and fiscal impacts are important considerations for the County in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. In fact, CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that “[e]conomic or social effects of a project shall not be treated as significant effects on the environment.” Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a number of factors considered in addressing the feasibility of an alternative, mitigation measure, or change to the project (see CEQA Guidelines sections 15131(b, c). The Draft EIR fully evaluates the physical effects on the environment that could result with implementation of the proposed UWSP in accordance with the requirements of CEQA. Nonetheless, the comment will be included as a part of the record and made available to the decision makers prior to a final decision on the proposed project.

COMMENT 188-10

Sacramento Area-Wide Harms from the Project

We strongly oppose this project. It is unnecessary and would have a severe, long-lasting, and in some cases permanent negative impacts on residents of Sacramento County.

This project harms the entire Sacramento community because of the loss of open space, and habitat and their associated recreational benefits; the loss of farmland; a significant increase in roadway dangers because of increased traffic on rural roads and increased congestion and conflicts at freeway on and off ramps which may not be able to be mitigated for some time; and a significant increase in area air pollution which has health consequences for the entire Sacramento area.

RESPONSE 188-10

The Draft EIR includes full analyses of the significant impacts of the proposed project on Agricultural Resources (see Chapter 5), Biological Resources (see Chapter 7), Parks and Recreation (see Chapter 17), Transportation (see Chapter 18), and Air Quality (see Chapter 6). Each of these issues is addressed in the context of reasonably foreseeable cumulative projects in Chapter 22, *Cumulative Impacts*. For further discussion of potential traffic safety issues on Garden Highway, please see Master Response TR-2: Garden Highway Safety Considerations.

This comment expresses opposition to the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-11

The EIR falsely claims that the project does not violate habitat conservation plans. We agree with the Environmental Council of Sacramento that the proposed project does violate approved habitat conservation plans and would lead to the permanent destruction of open space, habitat and wildlife.

RESPONSE 188-11

Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-12

The EIR fails to identify that river corridors are rare and valuable resources to residents of any community, and are particularly valued by Sacramento County residents for recreation, open space, wildlife, and local farmland. The proposed project introduces permanent harms by urbanizing a river corridor, putting urban activity within about 700 feet of Garden Highway and the river. River corridors need to be protected for current and future area residents.

RESPONSE 188-12

The Draft EIR accurately reflects the proximity of the proposed UWSP project area to the Sacramento River in text and graphics (see Chapter 2, *Project Description*, page 2-8, and Plates PD-2 through PD-5 (pages 2-4 through 2-7)). In its discussion of Issues Not Discussed in Impacts, the Draft EIR Biological Resources chapter states that “No riparian habitat or other sensitive natural community is present in the UWSP area. Therefore, no impact would occur, and this issue is not evaluated further in this EIR.” This statement is consistent with the Environmental Setting presented on Chapter 7, *Biological Resources*, pages 7-3 to 7-28 of the Draft EIR. As summarized in Draft EIR Table BR-1, page 7-5, the total acreage within the project site is comprised of the following habitat (land cover) types: annual grasses and forbs, deciduous, field crops, Fremont cottonwood, grain and hay, partially irrigated crops, pasture, ruderal, truck crops, urban/developed, valley oak, vineyard, water, and SAFCA wetland creation. The site is setback from the Sacramento River corridor by an agricultural buffer of varying distance.

Although there is no riparian habitat within the project area (see Response 18-28 for clarification on HCP habitat types, there are species that nest in or otherwise utilize the nearby riparian habitat along the Sacramento River. The effects of the proposed project on those species, including the Swainson’s hawk, are addressed in the impact analysis presented in the Draft EIR. Potential impacts to wetlands and wildlife are addressed under Impacts BR-1, BR-3, BR-4, BR-5, BR-6, BR-7, BR-8, BR-9, BR-11, and BR-12 of the Draft EIR.

This comment expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-13

*** The proposed project changes the existing one-mile river corridor protection buffer to 700 feet.** Years ago, during County hearings on the Urban Services Boundary, many residents argued for a miles wide protection buffer for the Sacramento River corridor to protect recreation, open space, habitat and local farmland. The County settled on a one-mile buffer. This project would reduce that buffer to a wholly inadequate 700 feet in some areas, up to a maximum of one-half mile.

RESPONSE 188-13

The existing USB was established in the 1993 General Plan and was continued to be reflected as is in the existing 2030 General Plan (prepared in 2010). The current proposal is to move the USB as described in Draft EIR Chapter 2, *Project Description*, and the Draft EIR analyzes the significant environmental impacts of the proposed change to the USB.

Please also see Master Responses BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, and BR-4: Impacts on Swainson's Hawk Zone.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-14

*** The proposed project would result in the significant and permanent loss** of open space, habitat, already diminished local farmland, and floodplain protections. Once these community resources are gone, they are gone forever.

RESPONSE 188-14

Effects of the proposed UWSP related to farmland and plant and wildlife habitat are fully evaluated in Chapter 5, *Agricultural Resources*, and Chapter 7, *Biological Resources*, respectively, of the Draft EIR. Refer to Master Response AR-1: Conversion of farmland to nonagricultural uses, for a discussion of impacts to farmland. Please see the discussion of Conservation Strategy for Upland Habitat in Draft EIR Impact BR-14 and Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan for discussion of compensatory mitigation and requirements for 1:1 mitigation ratios. Please see Response 14-3 which addresses flood risks.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-15

Mitigation for loss of farmland, wildlife and wildlife habitat would most likely occur beyond the Sacramento area, depriving Sacramento County residents of those benefits. The project applicant says loss of farmland, wildlife, and wildlife habitat would be mitigated outside the Natomas Basin. People in Sacramento value and find benefit in farmland, wildlife, and the open space that serves as wildlife habitat. **The EIR fails to identify the communitywide loss of farmland, wildlife and wildlife habitat resources as community assets.** If the project is approved farmland and wildlife mitigations should be required within the Natomas basin where those resources would continue to benefit community residents.

RESPONSE 188-15

Effects of the proposed UWSP related to farmland are fully evaluated in Chapter 5, *Agricultural Resources*, of the Draft EIR.

The statement that the project applicant says loss of farmland would be mitigated outside the Natomas Basin is incorrect. Moreover, there is no County requirement for land used for agricultural mitigation to be located within the Natomas Basin. As discussed on Draft EIR page 5-22, under the currently adopted General Plan Policy AG-5, the preservation of farmland at a 1:1 ratio must typically be located within Sacramento County. However, as provided in Appendix PD-1, Proposed General Plan Text Amendments, of the Draft EIR, the UWSP proposes revisions to General Plan Policy AG-5 that would clarify when out-of-county mitigation for agricultural land impacts might be considered. These text amendments would be implemented with approval of a General Plan amendment proposed as part of the UWSP. The proposed revisions provide that the Board of Supervisors would retain the authority to set aside the in-County mitigation requirement for impacts to unique, local, and grazing farmlands, but not with respect to prime and statewide farmlands unless the mitigation land is also providing mitigation for impacts to special-status species. Under those circumstances, revised Policy AG-5 explains, the Board of Supervisors may consider, on a case-by-case basis, the mitigation land required to mitigate for impacts to special-status species as also meeting the requirements of for mitigating impacts for loss of farmland, including land outside of Sacramento County. Therefore, Mitigation Measure AG-1 requires that the project proponent mitigate the loss of farmland that would result from implementation of the proposed UWSP consistent with General Plan Policy AG-5, as amended.

Effects of the proposed UWSP related to biological resources, including effects related to wildlife and wildlife habitat, are evaluated and mitigated where necessary in accordance with applicable regulations, policies, and standards in Chapter 7, *Biological Resources*, of the Draft EIR. Specifically, the commenter asks for clarification regarding the rationale for mitigating permanent impacts to agricultural land available to NBHCP covered species with mitigation lands outside of Natomas Basin. Compensatory mitigation for the conversion of Swainson's hawk foraging habitat and giant garter snake

aquatic and associated upland habitat is proposed to occur outside of Natomas Basin to avoid conflicts with the Natomas Basin Habitat Conservation Plan.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-16

The EIR fails to identify that the proposed project could result in a total loss of project area farmland. Most of the project area is currently farmland that would be converted to urban uses. In the past 10 years Sacramento has lost more than 14,000 acres of farmland. This project could result in the permanent loss of another 1500 acres or more of high-value, productive local farmland. The project applicant says 534 acres of farmland would remain, but about 130 acres of that is intended as buffer land that will not be useable for farming. The remaining 400 acres of farmland is a long narrow space (some just 700 feet wide), and just 30 to 50 feet from potential urban conflicts, which may make the remaining farmland impractical to use for commercial farming.

RESPONSE 188-16

Please see Master Response AR-1: Conversion of Farmland to Nonagricultural Uses, and Master Response AR-2: Interface Between Agricultural and Urban Uses.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-17

The recent pandemic made clear that farmland is important community infrastructure. The EIR fails to address the loss of area farmland as a community food resource when there are disruptions to the food distribution system.

RESPONSE 188-17

Effects of the proposed UWSP related to farmland are evaluated in accordance with applicable regulations, policies, and standards in Chapter 5, *Agricultural Resources*, of the Draft EIR. Please see also Master Response AR-1: Conversion of Farmland to Nonagricultural Uses.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-18

The EIR fails to identify that the proposed project could reduce existing floodplain protection. Around the United States, communities are starting to reserve land near waterways to use as open space for flood protection. This project puts housing in a floodplain close to the river. While the new Natomas levee is expected to provide 200-

year flood protection, climate change increases the chance of extreme flooding. Recent flooding in Ashville, North Carolina is proof of that. Current open space and farmland near the river provides urban areas with an additional level of flood protection. The proposed project would eliminate this protection.

RESPONSE 188-18

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage.

COMMENT 188-19

This project is unnecessary and has an unacceptably long list of significant and unavoidable impacts, many that are harmful, permanent, and cannot be mitigated, including unplanned growth, urbanization of a rural area, increased traffic and roadway hazards, increased air pollution, increased noise, loss of wildlife, loss of habitat, loss of productive farmland, and the permanent loss of an important landscape for indigenous communities of Sacramento County.

RESPONSE 188-19

This comment expresses an opinion, but it raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-20

The project significantly and unacceptably increases air pollution, possibly exceeding thresholds of significance for everyone, and posing serious health risks, including an increased risk of cancer. In addition, operation of the proposed project would significantly conflict with and obstruct implementation of the Sacramento Metropolitan Air Quality Management District air quality improvement efforts.

RESPONSE 188-20

The Draft EIR fully evaluated air quality impacts in Chapter 6, *Air Quality*, of the Draft EIR. The Project would result in significant and unavoidable air quality impacts related to a conflict with an applicable air quality plan during project operation, emissions of criteria air pollutants and precursors during project operation, and exposure of sensitive receptors to toxic air contaminants (TACs) during project operation. More specifically, Impact AQ-4, Exposure of Sensitive Receptors to TACs, evaluates health risk impacts during construction and operation of the UWSP, and discusses the long-term operational health risk impacts that the Draft EIR concluded to be significant and unavoidable. These significant and unavoidable impacts are also summarized in the Draft EIR's Executive Summary. The EIR identifies all feasible mitigation to reduce these impacts, as required by CEQA.

This comment expresses an opinion about the significant impacts disclosed in Draft EIR Chapter 6, *Air Quality*. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-21

Sacramento does need affordable housing, but **the EIR fails to note that this project makes no commitment to a specific number of very affordable, affordable, and missing middle housing (duplexes, etc.) units** or a specific percentage of affordable housing units. In addition, the buildout of this project will take 20-30 years, and the first phase will take 7 years. So, there would not be housing from this project for many years. If the project is approved it should have specific affordable housing requirements, with a high percentage of affordable housing units in each housing development.

RESPONSE 188-21

Please see Response 15-59 for a discussion of the proposed UWSP Affordable Housing Strategy.

COMMENT 188-22

The EIR fails to note that the project applicant's very limited ownership of the project (about 10%) suggests that any commitments made by the applicant in order to receive entitlements, including any community protections offered by the applicant, could be severely compromised as new developers come in to carry out the development.

RESPONSE 188-22

It is typical for large scale master plans like the Upper Westside Specific Plan to include non-participating landowners who are not involved in the funding or preparation of the specific plan and associated CEQA documentation. The Implementation chapter of the UWSP, *Chapter 8*, establishes a process for how non-participants can effectuate the development entitlements that are reflected in the plan. More specifically, section 8.3 of the UWSP states:

The UWSP is structured to regulate development activity in the entire Plan Area consistent with the land use designations established in Chapter 3. Approval of the UWSP and EIR effectuated Tier I entitlements for the Plan Area by expanding the USB and UPA, applying new land uses to the UWSP Development Area, and amending district boundaries with LAFCO approval. Tier I entitlement approvals did not include rezoning actions, thereby allowing parcels in the Development Area to be "grandfathered" into existing zoning districts and permitted uses. To effectuate development entitlements, parcels must be rezoned to an allowable

zoning district that is consistent with its land use designation, as illustrated on the Land Use Plan (Figure 3-1) and as outlined in the process below.

Effectuation of development entitlements requires several subsequent County approvals as outlined below. Improvements/remodeling to existing buildings do not trigger a process to effectuate entitlements. Any action to effectuate development entitlements must include Conditions of Approval requiring properties to join into all applicable fee programs, financing programs and financing districts, as outlined in the PFFP.

As further explained on UWSP page 8-3, in order for a parcel to effectuate its development entitlements the following approvals are required: rezone, tentative subdivision map(s), CEQA analysis, and potentially other actions and approvals that could include, but may not be limited to, subsequent infrastructure studies, participation in financing programs, development agreements, or schematic plans. Depending on whether surveys have been previously conducted, further surveys may need to be undertaken, and certain parcels may need additional technical studies or analyses to address site specific constraints. All relevant mitigation measures that are approved for the overall UWSP and any subsequent measures that are identified as necessary during subsequent CEQA analysis would be imposed on parcels as they proceed as part of the UWSP.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-23

The EIR fails to recognize that the project reduces Sacramento recreational opportunities, because increased traffic in the project area, would make it unsafe for individual cyclists and cycling clubs, as well as motorcycle clubs and antique or specialty car clubs that use Garden Highway for recreation.

RESPONSE 188-23

Please see Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 188-24

Natomas Area Harms From the Project

The proposed project could occur anywhere. It has no relationship to Natomas. It **would forever change the character of the area, and open Natomas to more urbanization**. If this development is approved outside the Urban Services Boundary, the County has no basis to deny similar projects.

RESPONSE 188-24

This comment expresses an opinion, but it raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that

would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-25

The project's 20-30 year buildout schedule creates unacceptable noise, dust, air pollution and general area disruption over decades.

RESPONSE 188-25

This comment expresses an opinion, but it raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-26

Garden Highway Impacts Not Adequately Addressed in the EIR

Garden Highway residents strongly oppose any proposed project outside the Urban Services Boundary in the Natomas area. This project is unnecessary and has permanent and harmful impacts that cannot be mitigated.

The EIR fails to identify that this project puts urban activity within 700 feet of a rural residential zone, changing the expectations and characteristics for area rural residents.

RESPONSE 188-26

Please see Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 188-27

The EIR fails to adequately address the severe and dangerous impacts project traffic would have on Garden Highway and existing Garden Highway users. The EIR suggests the project could add 4,000 trips a day to Garden Highway. Garden Highway is a rural 2-lane, undivided road. Garden Highway is an elevated roadway on top of a levee, so widening is not feasible. Garden Highway is half the width it should be for traffic safety. It has blind curves, no shoulders and no guard rails. The project EIR emphasized concerns about traffic safety, including hazardous conditions at Garden Highway intersections. However, the EIR fully failed to address the greatest safety issue on Garden Highway, which is the mixed use of the road by personal vehicles, semitrucks, agricultural equipment, cars pulling boats, golf carts, individual and groups of cyclists, pedestrians, and wildlife, any of which can enter the roadway unexpectedly from farm roads, driveways, and the riverbank. Adding traffic to Garden Highway is unacceptably dangerous. If the project is approved, a new traffic circulation plan should

be required and agreed to by the Garden Highway Community Association, that discourages project vehicle traffic on Garden Highway.

RESPONSE 188-27

Please see Master Response TR-2: Garden Highway Safety Considerations

COMMENT 188-28

The EIR fails to identify that adding traffic to Garden Highway would make recreational use of Garden Highway too dangerous for cyclists, and vehicle clubs such as antique car clubs, eliminating a valuable Sacramento recreational opportunity.

RESPONSE 188-28

Please see Master Response TR-2: Garden Highway Safety Considerations

COMMENT 188-29

The EIR fails to adequately address the impacts from a proposed stadium, which would be close to residences all around the project, including Garden Highway. Stadium traffic, noise, and light do not belong in/near residential areas. Stadium noise can travel miles. County and City Code Enforcement offices and Sacramento stadium operators can confirm stadium conflicts with residential areas. Any stadium should be miles from any residences.

RESPONSE 188-29

An analysis of noise impacts from high school sports fields and stadiums is provided on page 15-47 of the Draft EIR. The analysis applies reference noise levels from sports stadium activity to predict potential noise levels at distance. The impact is identified as potentially significant and Mitigation Measure NOI-4b is identified to address the impact. As stated in the Draft EIR, previous studies have indicated that while available noise control mitigation for noise from stadium events may reduce associated noise levels, given the overall size of crowds and the potential for nighttime events, noise impacts cannot always be mitigated and the impact of high school use sports fields and stadium noise at existing sensitive uses is identified as significant and unavoidable.

COMMENT 188-30

The EIR fails to adequately address noise impacts from amplified noise at the project site, including the stadium, and the outdoor pavilion. Amplified noise can travel miles. Prevailing winds can push amplified sound toward Garden Highway. If the project is approved, no amplified sound should be permitted (except at school sites for emergencies). For past area projects, developers have said amplified sound can be regulated. That has proven to be untrue. Over time sound equipment and the location of speakers can change resulting in unmitigated noise, and noise makers like bull horns can be introduced

RESPONSE 188-30

An analysis of noise impacts from amplified music events at the outdoor pavilion is provided on page 15-48 of the Draft EIR. The analysis identifies a distance at which a reference noise level from amplified music could result in a potential noise impact. The impact is identified as potentially significant and Mitigation Measure NOI-4c is identified to address the impact. However, because it cannot be demonstrated with certainty that noise impacts can always be sufficiently mitigated to achieve noise standards, the impact of park activity noise at existing receptors is identified as **significant and unavoidable**.

COMMENT 188-31

The EIR notes that nighttime lighting would have a permanent impact on the area. But **the EIR fails to adequately address the harmful impacts of nighttime lighting on human health and on wildlife**, including migratory birds using the Pacific Flyway. **The EIR fails to provide adequate light mitigations for humans and wildlife.** If the project is approved, there should be a minimum one-half mile buffer between the project and Garden Highway that includes a minimum 100 foot wide densely planted tree buffer adjacent to the project. The tree buffer must include tall native evergreen trees planted at the beginning of project construction.

RESPONSE 188-31

Please see Response 18-11 above.

COMMENT 188-32

According to the EIR, buildout of the project is expected to take 20-30 years. **The EIR fails to address mitigations that could reduce area impacts by requiring that development occurs first adjacent to El Centro Road, with the final project development reaching areas near Garden Highway last.**

RESPONSE 188-32

The Draft EIR prepared for the proposed UWSP is an objective, accurate, and complete analysis of the potential environmental impacts that would or could result from construction and operation of the proposed project. Pursuant to CEQA requirements as set forth in the CEQA Guidelines, each environmental resource topic subject to analysis under CEQA has been given careful consideration in light of existing and anticipated future environmental conditions, applicable regulations, and the physical and operational characteristics of the proposed project. As required under CEQA, where significant impacts are identified, the Draft EIR describes potentially feasible mitigation measures which could be adopted to substantially lessen or avoid such impacts. The future pace of development within the UWSP is not known. In that light, the Draft EIR mitigation measures have been designed to take into account potential changes in conditions, requiring surveys and other similar steps prior to initiation of construction.

This comment vaguely suggests that mitigations involving the geographic plan for development of the UWSP area could reduce significant environmental impacts. However, no specific information or evidence is provided to identify which impacts could or would be mitigated by a specific phasing plan. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-33

The EIR fails to adequately address that project related air pollution and its resulting serious health impacts, as well as construction dust, could be more severe on Garden Highway because of the prevailing wind that blows toward Garden Highway.

RESPONSE 188-33

See Response 18-23 above. As discussed there, localized health risks to nearby residential receptors, including residents living along Garden Highway, and considering prevailing wind patterns, are assessed in Impact AQ-4 (additional detail is presented in Appendix AQ-1).

COMMENT 188-34

Problems Within the Project

Children at schools in the project area would be subjected to harmful levels of air pollution, increasing cancer risks.

RESPONSE 188-34

The comment is correct that school locations in the project area could be exposed to pollutants from the proposed project. The Draft EIR fully evaluated air quality impacts in Chapter 6, *Air Quality*, of the Draft EIR. The Project would result in significant and unavoidable air quality impacts related to a conflict with an applicable air quality plan during project operation, emissions of criteria air pollutants and precursors during project operation, and exposure of sensitive receptors to toxic air contaminants (TACs) during project operation. More specifically, health impacts associated with exposure of project-generated TAC emissions to nearby receptors are described in the *Impact AQ-4: Exposure of Sensitive Receptors to Toxic Air Contaminants* discussion on EIR pages 6-47 through 6-52. The Draft EIR concludes that long-term operational health risk impacts would be significant and unavoidable. These significant and unavoidable impacts are also summarized in the Draft EIR's Executive Summary. The EIR identifies all feasible mitigation to reduce these impacts, as required by CEQA.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 188-35

The EIR says the project would be constructed over 20-30 years, and some mitigations are outside the applicant's control. **The EIR fails to consider that people may live in the project area before needed resources and mitigations are available, creating unplanned problems.**

RESPONSE 188-35

Please see Response 18-22 above.

LETTER 189

Marie Martin, member of the community, written comment to County of Sacramento Planning Commission; dated October 18, 2024.

COMMENT 189-1

Thank you for the opportunity to provide comment on this planning proposal. [have lived in Natomas for 15 years. First and foremost, I **am opposed to expanding the urban services boundary**. Urban sprawl should be avoided at all costs. Development should focus on infill and revitalizing older buildings. Only when we have maximized the efficiency and development of all areas within the existing City bounds should we consider geographic expansion.

RESPONSE 189-1

Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 189-2

Should we make the mistake of developing over our local farmland and wildlife habitat, please ensure this new community plan includes:

1. **Prioritizing people over cars.** Upper Westside residents should be able to live comfortably without owning a car. More walkways, mixed use, grocery stores, and local businesses.

RESPONSE 189-2

The comment expresses an opinion about the design of the proposed project. The issues raised in the comment are addressed in Chapter 2, *Project Description*, of the Draft EIR.

Draft EIR Chapter 2, *Project Description*, page 2-43, provides a description of the proposed UWSP pedestrian network and transit services. The proposed project would include a pedestrian system that would allow residents to walk to neighborhood schools, parks, and open spaces, and travel between neighborhoods and commercial centers,

Draft EIR Chapter 2, *Project Description*, pages 2-34 to 2-36, provides a description of the mixed-use component of the proposed UWSP. The proposed project would include a Commercial Mixed Use (CMU) district that would include multi-story buildings providing approximately 2.18 million square feet of non-residential uses and 3,216 residential units.

Draft EIR Chapter 2, *Project Description*, page 2-37, includes a description of the proposed project's commercial component. The proposed project would include a Commercial Mixed Use (CMU) district that would include an Employment/Highway Commercial (E/HC) that would include large-format retail, professional office, hotel, restaurant, entertainment, service, and similar non-residential uses.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 189-3

2. **Light Rail integration.** The community college absolutely must have a light rail station. Again, people should be able to live, work, learn, and shop here without using a car. Require the developer to work with SacRT to integrate a new rail route into the Green Line (Natomas/airport connector) map.

RESPONSE 189-3

This comment expresses an opinion about the proposed project. Draft EIR Chapter 2, *Project Description*, page 2-44 includes a description of the proposed UWSP transit accessibility. The proposed project would provide “crosstown” or large bus transit service to the UWSP area. Please also see Master Response TR-1: Transit.

The current plan for the light rail service extension to the north of the Central City, known as the Downtown-Natomas-Airport Line, is for an extension from the current Township 9 RT Station, to a new bridge over the American River at Truxel Road, and then north on Truxel to Del Paso Road, where the line would turn to the northeast toward an eventual destination at Sacramento International Airport. There are no current plans for light rail service to be provided to the area of North Natomas west of I-5. As such, light rail service is not reflected in the proposed UWSP.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 189-4

3. **Downtown Connectivity.** The proximity of the Upper Westside to downtown will likely attract people who need to commute to the grid for work. They should be able to bike or take light rail. Currently, biking is most feasible from the pedestrian bridge at Peregrine Park, along the canal, then dangerously crossing Garden Highway to get to Discovery Park. Add a pedestrian bridge near the RD 1000 site (J 633 Garden Hwy) to cross the river towards River Crest Dr in West Sacramento. Require the Upper Westside developer to also allocate funds towards the new Truxel crossing through Discovery Park which its residents will undoubtedly be using. How about a safer bike lane along West El Camino from the 49er truck stop all the way to Northgate Blvd?

RESPONSE 189-4

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 189-5

Essentially, I urge you to stop developing communities in isolated bubbles and put more thought into integrating them with existing development. Consider how to move people through the city more efficiently. Traffic is ridiculous. More roads and more lanes are not the answer. Require all new developments to expand bike paths and public transit routes, and pay for these added community amenities. We want to be a greener city.

Paving over our valuable open spaces is a BIG deal. Set the price tag and hurdles accordingly.

RESPONSE 189-5

This comment expresses an opinion related to the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 190

Aarati Chaudhary, member of the community, written comment to County of Sacramento Planning Commission; dated October 15, 2024.

COMMENT 190-1

I support the project. Thank you.

RESPONSE 190-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 191

Jennifer Ip, member of the community, written comment to County of Sacramento Planning Commission; dated October 10, 2024.

COMMENT 191-1

While I do not live in Natomas, I commute there for work from South Sacramento to Natomas. I oppose the development of the unincorporated Natomas area due to the damage it will cause to the environment and all living things, including us. I also oppose the development due to the nature of where this area is located. It is a flood basin and as our climate continues to be unpredictable, it is unwise to build here. I personally wish developers would build up instead of out, but I know that comes with other issues.

I strongly believe there are other avenues to pursue in terms of housing and commercial development. Furthermore, I do not want Sacramento County to be without some aspect of nature. We should keep our city as green as possible.

RESPONSE 191-1

The commenter expresses opposition to the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 192

Ronald Costa, member of the community, written comment to County of Sacramento Planning Commission; dated October 7, 2024.

COMMENT 192-1

I attended the October 3, 2024 meeting of the Natomas Community Planning Advisory Council (CPAC).

First let me state that it's about time that we developed that property as it is very close to the City of Sacramento, which is our largest employment center and it is only a bicycle commute away from the Upper Westside Project. Several other sites were mentioned in public comments as already approved and further, that we do not need this site as those sites are available. The problem with that is that they are a lot further away from the major employment center, which would result in longer commutes, thus more traffic congestion and pollution.

Some environmental issues were raised at the CPAC meeting; however, I think that the EIR addresses those issues adequately.

Several 20-to-30-year long-time Garden Highway residents made comments, and all of them were negative on development of the Upper Westside Specific plan. No doubt many of them raised a family during their long tenure, and the children are now grown up and are out of their childhood homes. Now they need a place to live. The production of children has outpaced the production of new homes and associated facilities for many years; consequently, there is a housing shortage that has caused home prices and rents to soar beyond affordability. This is evidenced by the many homeless tents along our streets.

The problem is easy to solve. BUILD, BUILD ,BUILD, will solve it! I urge you to approve the Upper Westside Project PLNP2018-00284.

RESPONSE 192-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 193

Ronald Costa, member of the community, written comment to County of Sacramento Planning Commission; dated October 19, 2024.

COMMENT 193-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

I read the comments from the Natomas Planning Advisory Council (NPAC). Most of the negative comments were for environmental reasons. In your deliberations and decision making, please keep in mind that while they may have good intentions, most environmentalists just think that they know what they are talking about.

CASE AND POINT: In order to increase the delta smelt population, the pseudo intellectual environmentalists have been purging the Sacramento River Delta with fresh water for 20 or 30 years without any measurable success. They keep hollering, "we need more fresh water". They overlook the fact that before Shasta Dam was built, in late summer the Sacramento River was down to a trickle. When high tide was in San Francisco Bay, the river here in Sacramento used to run backward (toward Shasta). When that occurred, saltwater from San Francisco Bay would infiltrate the delta. There was an abundance of smelt in those days. It could be that, just maybe, in order to survive the Smelt, need a dose of saltwater in late summer instead of more fresh water. It could also be that the salt water gets rid of the smelt's predators. I know that these facts are true because as a young man I lived on the Garden Highway and I watched the river run backwards several times while sitting in our family car on the Garden Highway Levee (not much traffic in those days). It amazed my father so much that he would stop the car and point it out.

Bottom line, in making your decision be skeptical of what some people tell you, use some common sense and keep in mind the public need for the development of more housing. The Upper Westside Specific Plan represents a well-balanced and forward-thinking approach to development in the most logical place in our region. It respects the areas agricultural heritage, addresses urgent housing needs, and supports economic growth, all while minimizing environmental impacts.

I urge you to support this project when it comes to a vote, in order to help guide our community into a sustainable future.

RESPONSE 193-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 194

Shannon Speaks, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 194-1

I object to the upper west side development in Natomas. The impact to traffic, wildlife, and natural land is not worth it.

RESPONSE 194-1

The comment expresses general opposition to the proposed project, with an emphasis on impacts related to traffic, wildlife and natural land. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 195

Karen Jacques, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 195-1

My name is Karen Jacques. I am a long time resident of Sacramento's Central City (District 1). I am unable to attend the October 21st Planning Commission meeting in person so I am writing to express my strong opposition to Agenda Item #3: "General Plan Amendment: Upper Westside Specific Plan". The proposed Amendment would allow the conversion of 2,000 undeveloped acres of agricultural land and wildlife habitat outside the County's Urban Services Boundary into a new sprawl development including 9,000 housing units, 3 million square ft. of commercial space and the roads and other infrastructure necessary to serve such a development. For the reasons stated below, I do not believe that any new development should be allowed outside the Urban Services Boundary in the Natomas Basin now or in the future. The County has already approved far too many sprawl projects and I don't want to see any more of them, especially in land as sensitive as the Natomas Basin.

RESPONSE 195-1

The commenter expresses opposition to the proposed project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 195-2

___ The current Urban Services Boundary was established in 1993. It was the understanding of City and County residents who lived here at that time that the boundary was to be permanent for a number of important reasons including to reduce the risk of flood and fire to surrounding, already developed communities; to preserve some of the richest farmland in the greater Sacramento region; and to buffer and ensure the integrity of the Natomas Basin Habitat Conservation Plan (NBHCP) area, which is home to several endangered species. The City of Sacramento established the NBHCP area when it opened North Natomas up for development. The NBHCP was the result of an agreement between the city and the federal government to protect the Basin's endangered species and their habitat. I find it extremely concerning that the larger Natomas Basin area is now threatened by massive sprawl development after so many of us thought that it was permanently protected.

RESPONSE 195-2

Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan and Master Response LU-1: County Urban Services Boundary and Urban Policy Area.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 195-3

___ The area where the Upper Westside development would be built isn't the only portion of the Natomas Basin that is being targeted for new sprawl development. It is my understanding that the County will be bringing forward a second even larger sprawl project (the 5,000 acre Grand Park Project) in 2025. The City of Sacramento has also received an application for a 450 acre commercial warehouse project outside the Urban Services Boundary in the Natomas Basin. Approval of the Upper Westside project would set a precedent for the approval of these other destructive sprawl projects and threaten the integrity of the NBHCP area. The county needs to look at the cumulative impact of all these destructive projects and stop them by saying no to the Upper Westside project now.

RESPONSE 195-3

Draft EIR Chapter 22, *Cumulative Impacts*, includes analyses of all of the relevant issues under CEQA in the context of the proposed project and all reasonably foreseeable projects in unincorporated Sacramento County; the cities of Sacramento, Rancho Cordova, Folsom, and Elk Grove; Sutter County; and Placer County. As presented in Draft EIR Table CI-1, Cumulative Project List, pages 22-2 through 22-8, the projects mentioned in the comment were included in the Cumulative Impact analyses.

The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 195-4

___ The Natomas Basin is a deep flood basin. Much of its' interior is lower than the elevation of the Sacramento and American Rivers. The Natomas levies were built to withstand a 200 year flood. The climate crisis is leading to extreme rain events in many parts of the country and the world. It is no longer safe to assume that levies built for a 200 year flood will be adequate to deal with the kind of floods we could well be facing. It is irresponsible to build new developments in an area where there is potential for catastrophic flooding and that would also greatly increase the flood risk to surrounding areas that have already been built out. We need the undeveloped and agricultural lands of the Natomas Basin to provide a place where flood waters can go and to recharge our ground water that gets depleted in drought years.

RESPONSE 195-4

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage.

The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 195-5

___ Undeveloped lands, especially lands that have healthy, rich soil - as the Natomas Basin does - also serve as badly needed carbon sinks. As the climate crisis worsens, the need for carbon sinks becomes more and more apparent. We cannot afford to turn what is now a valuable carbon sink into yet another paved over urban heat island, especially given the fact that temperatures are rising far faster than climate scientists predicted.

RESPONSE 195-5

Measure GHG-17: Carbon Neutral New Growth from the recently adopted Sacramento County CAP requires new growth outside the current UPA or USB to demonstrate that they would achieve net zero GHG emissions, including accounting for removal of carbon sequestration. Specifically that measure states:

Net zero GHG emissions means emissions of GHGs to the atmosphere are balanced by removals of GHG emissions over a period of time; in this case, during project construction and operation of the proposed new growth project. This means that GHG emissions generated by project sources such as transportation, energy consumption, fuel combustion, industrial processes, water usage, waste generation, and land use change must be less than or equal to the amount of CO₂ that is removed from the atmosphere over the same time period, both in natural sinks and through mechanical sequestration.

The CAP, including Measure GHG-17, would apply to the proposed UWSP, which would be required to demonstrate consistency with the CAP, and thus would account for the loss of carbon sequestration within the project area.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 195-6

___ Small farms, like those in the Natomas Basin with their fertile soil are an important source of fresh, healthy food. They will become even more important as a food source as the climate crisis worsens and some areas of the U.S. and the world that were once able to produce food no longer can.

RESPONSE 195-6

This comment expresses opinions regarding the merits of the project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 195-7

___ The 9,000 market rate housing units proposed for the Upper West Side project and however many such units will be proposed for the Grand Park project are not needed. My understanding is that Sacramento County has already entitled more market rate sprawl housing than projections say we will need for the next several years. What we do need and the County doesn't have is more infill housing, especially infill housing that is affordable. The County should start prioritizing and incentivizing such housing. There is absolutely no justification for going outside the Urban Services Boundary and destroying all or part of the Natomas Base to build sprawl housing that isn't needed. The County must start paying attention to the SACOG Blueprint and stop allowing market rate housing developers to build whatever they want wherever they want.

RESPONSE 195-7

Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area, Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127, and Master Response LU-3: SACOG Blueprint and MTP/SCS.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 195-8

___ Building more sprawl housing in the Natomas Basin (or anywhere) will lead to more traffic jams and the need to build more roads. Our region needs more transit not more cars and more transit requires more density, not more sprawl. If the Upper Westside project were built, its residents would all need cars to get around. The SACOG region is supposed to reduce its vehicle miles traveled (VMT), by 19%, but it can't do that if projects like the Upper Westside project are built. Failure to meet VMT goals could make our region ineligible for federal and state funding.

RESPONSE 195-8

One of the project's stated objectives (at page 2-13 of the Draft EIR) is to develop a master-planned community that discourages sprawl. That page also discusses the project's circulation system, which is intended to encourage non-vehicular trips and reduce VMT. Table PD-1 of the Draft EIR indicates that many of the project's land uses are planned to have densities such as commercial mixed-use at a 0.6 floor-to-area ratio

(FAR), employment/highway commercial at a 0.4 FAR, and very high-density residential at 35 units per acre. These land use yields are much denser than in suburban settings.

This comment expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 195-9

_____. More driving leads to more air pollution. The Sacramento region's failure to meet its' air quality goals could cost it federal and state funding.

Sacramento County has already approved far too much sprawl and we are all paying the price in the form of poor air quality, traffic congestion, lack of public transit and disappearing open space. Meeting clean air standards should be a priority for the county.

RESPONSE 195-9

The comment reiterates the conclusions of the Draft EIR related to the significance of criteria air pollutant levels. The Draft EIR fully evaluated air quality impacts in Chapter 6, *Air Quality*, of the Draft EIR. The Project would result in significant and unavoidable air quality impacts related to a conflict with an applicable air quality plan during project operation, emissions of criteria air pollutants and precursors during project operation, and exposure of sensitive receptors to toxic air contaminants (TACs) during project operation. These significant and unavoidable impacts are also summarized in the Draft EIR's Executive Summary. The EIR identifies all feasible mitigation to reduce these impacts, as required by CEQA.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 195-10

In conclusion, Sacramento County has already approved far too much sprawl development and can't afford any more. The Natomas Basin, with its open space, small farms, fertile farmland, significant wildlife, including endangered species, importance as a carbon sink and ability to reduce flood risk is a gem that needs to be protected, not paved over. Please recognize that development in the Natomas Basin is inappropriate and vote not to approve the Upper Westside Specific Plan.

RESPONSE 195-10

The comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 196

Aaron Brazil, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 196-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

As a member of the Natomas community, I recognize the struggles faced by local farmers due to the changing landscape around them. The Upper Westside project offers a balanced approach to land use, preserving a 542-acre agricultural buffer to protect farmland and preserve open space.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is within 3.5 miles of downtown Sacramento. More than two-thirds of the project boundary is adjacent to existing development. This project is essentially an infill development that will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, more than 52% will be multi-family attached units, which are crucial in addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

Traffic concerns have been addressed as well. The project's location and mix of land uses result in traffic levels below the 85% threshold of baseline conditions, which is an important indicator of its suitability for the area. The developers have also prepared a comprehensive Resource Conservation Strategy, which ensures that impacts on farmland and local habitats will be responsibly mitigated.

The Upper Westside Specific Plan represents a well-balanced and forward-thinking approach to development in the most logical place in our region. It respects the areas agricultural heritage, addresses urgent housing needs, and supports economic growth, all while minimizing environmental impacts.

I urge, when the project comes to a vote, that you support this project and help guide our community into a sustainable future.

RESPONSE 196-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 197

Brittany Brazil, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 197-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 198

Joseph Brazil, member of the community, written comment to County of Sacramento Planning Commission; dated October 19, 2024.

COMMENT 198-1

The Changing Realities of Agriculture in Natomas

ECOS asserts that the Upper Westside project threatens prime agricultural land, but this viewpoint does not consider the on-the-ground realities that many local farmers are facing. Farming in Natomas is no longer economically viable or sustainable. Over the past several decades, urbanization has surrounded our farmlands, introducing challenges such as increased theft, vandalism, traffic, and restrictions on farming practices due to proximity to homes and businesses. These conditions make it extremely difficult for farmers like myself to continue operations.

Despite efforts to adapt to these changing conditions (including selling portions of our land to sustain operations), our farming conditions and financial challenges continue to worsen. The land can no longer be effectively farmed at scale due to the encroaching urban environment.

Addressing Agricultural Preservation through Responsible Development

While ECOS calls for continued agricultural preservation, the Upper Westside project presents a balanced approach to development and agricultural land conservation. The project includes a 1:1 mitigation strategy for every acre of farmland converted, preserving an equivalent amount of agricultural land elsewhere in Sacramento County. This ensures that while development moves forward, agricultural land in areas more conducive to farming is preserved and protected.

Additionally, the project incorporates a 534-acre agricultural buffer on its western edge, reducing conflicts between urban and agricultural uses. This buffer demonstrates that the development has been carefully planned to protect the surrounding agricultural land and mitigate the potential impacts on neighboring farming operations.

Mitigating Environmental Impacts and Ensuring Balance

ECOS expresses concerns about wildlife and habitat loss, but the Upper Westside development takes significant steps to address these environmental issues. The project includes wildlife corridors and habitat restoration efforts that aim to protect species like the Swainson's Hawk and the giant garter snake, ensuring that local ecosystems are preserved. By implementing these strategies, the project strikes a balance between necessary urban growth and environmental stewardship, showing that development and habitat conservation can coexist.

Given the unsustainable conditions for farming in Natomas and the careful planning incorporated into the Upper Westside project, it is clear that this development represents a thoughtful, forward-thinking solution. It balances the need for new housing

and economic growth with responsible agricultural preservation and environmental protections.

I urge you to support this project as it represents a sustainable, future-oriented solution to our region's challenges.

RESPONSE 198-1

The comment expresses general support for the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 199

Sabrina Brazil, member of the community, written comment to County of Sacramento Planning Commission; dated October 19, 2024.

COMMENT 199-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

As a member of the Natomas community, I recognize the struggles faced by local farmers due to the changing landscape around them. The Upper Westside project offers a balanced approach to land use, preserving a 542-acre agricultural buffer to protect farmland and preserve open space.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is within 3.5 miles of downtown Sacramento. More than two-thirds of the project boundary is adjacent to existing development. This project is essentially an infill development that will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, more than 52% will be multi-family attached units, which are crucial in addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

Traffic concerns have been addressed as well. The project's location and mix of land uses result in traffic levels below the 85% threshold of baseline conditions, which is an important indicator of its suitability for the area. The Upper Westside Specific Plan represents a well-balanced and forward-thinking approach to development in the most logical place in our region. It respects the areas agricultural heritage, addresses urgent housing needs, and supports economic growth, all while minimizing environmental impacts.

I urge, when the project comes to a vote, that you support this project and help guide our community into a sustainable future.

RESPONSE 199-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 200

Josh Harmatz, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 200-1

I am writing to express my strong opposition to the Upper Westside Specific Plan due to the significant impact it will have on traffic conditions along Garden Highway, Powerline Road, and West Del Paso Road. These roads, which are currently narrow, single-lane urban roads, ranging between 9 and 10 feet in width, are already struggling to accommodate the existing traffic. The addition of heavy commercial vehicles, workers commuting to the proposed commercial spaces, and 25,000 future residents from the planned Upper Westside Development will exacerbate these issues.

The Sacramento County Transportation Analysis (March 2022) prepared for this project indicates that these roads will face substantial increases in traffic volumes, especially during peak hours, when freeway congestion diverts additional traffic onto local roads. Given that these routes cannot safely handle large trucks exceeding 7 tons, this poses a safety risk, and the congestion will likely become unbearable.

RESPONSE 200-1

Please see Responses 31-1 through 31-4.

The commenter expresses opposition to the proposed project and opinions on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 200-2

Moreover, the study clearly acknowledges that Garden Highway requires widening to 12 feet in each direction, with an additional 6-foot shoulder. However, the development proposal does not adequately address how this widening will be achieved or who will pay the associated costs, especially considering the recent completion of the setback levy, power pole relocations, and other flood protection measures. The levee system improvements recently undertaken along Garden Highway were designed without considering this required widening. To date, neither the U.S. Army Corps of Engineers nor the Central Valley Flood Protection Board has been consulted about this crucial aspect of the plan.

RESPONSE 200-2

Please see Responses 31-1 through 31-7.

COMMENT 200-3

Without a comprehensive and feasible solution to the traffic and safety concerns along these critical roads, approving this development would worsen traffic congestion, increase the risk of accidents, and diminish the quality of life for current residents. I strongly urge the Board of Supervisors to reconsider approving the Upper Westside Specific Plan unless these infrastructure issues are fully addressed in coordination with the relevant agencies.

RESPONSE 200-3

This comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 201

Satnam Kaur, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 201-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

As a member of the Natomas community, I recognize the struggles faced by local farmers due to the changing landscape around them. The Upper Westside project offers a balanced approach to land use, preserving a 542-acre agricultural buffer to protect farmland and preserve open space.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is within 3.5 miles of downtown Sacramento. More than two-thirds of the project boundary is adjacent to existing development. This project is essentially an infill development that will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, more than 52% will be multi-family attached units, which are crucial in addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

Traffic concerns have been addressed as well. The project's location and mix of land uses result in traffic levels below the 85% threshold of baseline conditions, which is an important indicator of its suitability for the area. The developers have also prepared a comprehensive Resource Conservation Strategy, which ensures that impacts on farmland and local habitats will be responsibly mitigated.

The Upper Westside Specific Plan represents a well-balanced and forward-thinking approach to development in the most logical place in our region. It [...]

RESPONSE 201-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT

per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 202

I support the plan.

RESPONSE 216-1

The comment expresses general opposition to the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 217

Kevin Murphy, member of the community, written comment to County of Sacramento Planning Commission; dated October 20, 2024.

COMMENT 217-1

I like the Upper Westside Specific Plan and it's EIR.

I support the plan.

RESPONSE 217-1

The comment expresses general opposition to the proposed project. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 218

Paul Jacinth, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 218-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

As a member of the Natomas community, I recognize the struggles faced by local farmers due to the changing landscape around them. The Upper Westside project offers a balanced approach to land use, preserving a 542-acre agricultural buffer to protect farmland and preserve open space.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is within 3.5 miles of downtown Sacramento. More than two-thirds of the project boundary is adjacent to existing development. This project is essentially an infill development that will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, more than 52% will be multi-family attached units, which are crucial in addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

Traffic concerns have been addressed as well. The project's location and mix of land uses result in traffic levels below the 85% threshold of baseline conditions, which is an important indicator of its suitability for the area. The developers have also prepared a comprehensive Resource Conservation Strategy, which ensures that impacts on farmland and local habitats will be responsibly mitigated.

The Upper Westside Specific Plan represents a well-balanced and forward-thinking approach to development in the most logical place in our region. It respects the areas agricultural heritage, addresses urgent housing needs, and supports economic growth, all while minimizing environmental impacts.

I urge, when the project comes to a vote, that you support this project and help guide our community into a sustainable future.

RESPONSE 218-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 219

Jordan Walker, member of the community, written comment to County of Sacramento Planning Commission; dated October 18, 2024.

COMMENT 219-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

Having worked with farmers in the area and hearing their concerns, I understand the challenges faced by local farmers in the community and this area. The Upper Westside project offers a balanced approach to land use, preserving a significant 542-acre agricultural buffer to protect farmland and open space while giving them the opportunity to provide for their families needs better than what the land is currently able to yield in crops while they often see net losses or break evens in many cases.

The Upper Westside development embodies SACOG's smart growth principles by utilizing existing infrastructure and providing housing near job centers. The proposed "town center" is conveniently located within 3.5 miles of downtown Sacramento, and more than two-thirds of the project boundary is adjacent to existing development.

This infill development will reduce sprawl, offer a variety of housing types, and provide easy access to jobs and transit. Of the 9,356 proposed housing units, over 52% will be multi-family attached units, which are crucial for addressing our region's housing crisis, particularly the need for affordable apartments and duplexes.

This project offers a balanced approach to land use, preserving a significant agricultural buffer while providing a variety of housing options and promoting smart growth. The proposed "town center" is conveniently located near downtown Sacramento, and the project's focus on affordable housing is essential for addressing our region's housing crisis.

I am particularly impressed by the project's commitment to environmental stewardship. The developers have carefully considered traffic concerns and have prepared a comprehensive Resource Conservation Strategy to mitigate impacts on farmland and local habitats.

The Upper Westside Specific Plan represents a valuable investment in our community's future. It provides a sustainable, vibrant, and inclusive neighborhood while addressing our region's pressing needs.

I urge you to support this project and help shape a brighter future for Sacramento.

RESPONSE 219-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 220

Lawrence Grzelak, member of the community, written comment to County of Sacramento Planning Commission; dated October 18, 2024.

COMMENT 220-1

I am writing to express my strong support for the Upper Westside Specific Plan, a development project that aligns with our community's vision for growth and sustainability while addressing the critical housing shortage in the Sacramento region.

The Upper Westside project is situated within the Natomas Joint Vision Overlay Area, which has been under discussion for potential development for several decades. This project satisfies the General Plan's LU-120 performance-based and design criteria which was developed in coordination with SACOG, ensuring that it fits within the established framework for thoughtful growth.

I urge, when the project comes to a vote, that you support this project and help guide our community into a sustainable future.

RESPONSE 223-1

The comment expresses general support for the proposed project, with an emphasis on the project's satisfaction of performance-based and design criteria contained in Land Use Policy LU-120 and the project's preservation of an agricultural buffer to protect farmland and preserve open space. In addition, the comment emphasizes the project's adherence with SACOG's smart growth principles, the project's achievement of a VMT per capita and VMT per employee below the County's applicable thresholds, and the project's preparation of the comprehensive Resource Conservation Strategy. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 224

Alex Jang, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 224-1

hope this message finds you well. My name is Alex Jang, a lifelong resident of Natomas whose family has been a part of this community since the 1950s. I am writing to express my deep concerns regarding the Upper Westside Specific Plan and its potential impacts on our beloved community and environment.

Natomas has always been a unique blend of growth and environmental stewardship, making it a special place to live. However, the proposed plan threatens to disrupt this delicate balance. With 9,000 housing units and 3 million square feet of retail space, the project will introduce approximately 20,000 additional cars onto our already congested roads.

Traffic is already a significant challenge for our community, with only four roads serving the area. Of these, two are two-lane roads that cannot be widened, and others, like San Juan, are limited by surrounding housing and overpasses. Garden Highway cannot be widened due to its status as a levee, as stated by the Army Corps of Engineers. Most traffic will funnel onto W. El Camino, which varies from two to six lanes and is already busy, fast, and unsafe for pedestrians. In emergencies, the evacuation of thousands of new residents would be nearly impossible.

RESPONSE 224-1

Please see Responses 31-4, 31-7, 31-9, and 32-5.

The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 224-2

Furthermore, the land designated for development is not only rich in nutrients and close to the river, but once it is paved over, it is lost forever. This development will exacerbate existing flood risks by significantly reducing natural flood absorption capabilities. We've already witnessed accidents and fatalities on fully developed roads due to drivers who neglect rules and show little respect for others. If the city has been ineffective in addressing these safety concerns to date, what assurances do we have that it will manage the added pressure from this plan?

RESPONSE 224-2

Please see Master Response HYD-1: Flood Protection and Drainage, which summarizes the Draft EIR's assessment of flood protection and drainage.

Please see Master Response TR-2: Garden Highway Safety Considerations. Please also see pages 18-39 and 18-40 of the DEIR for focused safety evaluations conducted near the project site.

The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 224-3

I've personally noticed the alarming decline in local wildlife. Years ago, my neighborhood was filled with the sounds of frogs and crickets at night, but now their silence is a painful reminder of the wildlife we are losing. Coyotes will be forced to find food and shelter within our neighborhoods. Egrets and herons, the very birds our schools are named after, are becoming increasingly rare sights along our levees and canals. The proposed plan will further threaten these species, including those protected under the Natomas Basin Habitat Conservation Plan (NBHCP). The mitigation strategies outlined in the plan are inadequate and insufficient to safeguard these critical habitats. We should be committed to upholding our agreements and preserving what remains of our natural environment instead of continuing to pave over it.

RESPONSE 224-3

The Draft EIR fully evaluates the physical effects on the environment that could result with implementation of the proposed UWSP, including Chapter 7, *Biological Resources*, which discloses significant impacts related to biological resources, including special-status species, sensitive natural communities, and wetlands.

The commenter expresses an opinion on the merits of the proposed project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 224-4

Additionally, we must consider the impact on air quality, which cannot be effectively mitigated. This development threatens our quality of life and the existing businesses in South Natomas. It fails to address the urgent need for affordable and middle-to-lower-income housing and is premature, given that there are plenty of other infill locations available for development. We cannot afford to approve more sprawl that will ultimately strain our infrastructure and quality of life.

RESPONSE 224-4

Effects of the proposed UWSP related to air quality are fully evaluated in Draft EIR Chapter 6, *Air Quality*. The assertion that the proposed UWSP comprises urban sprawl is unsupported. The Draft EIR discusses the proposed UWSP's consistency with regional and County visions and plans intended to promote smart and orderly growth. The proposed UWSP is immediately adjacent to existing and planned development, including residential uses within the City of Sacramento's North Natomas and South Natomas community that are located to the north and east of the UWSP area. As discussed in Draft EIR Chapter 14, *Land Use*, extensive planning efforts for the County lands located near the Natomas communities have established guiding principles for future master planning efforts within the Natomas Joint Vision Area. The consistency of the proposed UWSP with County General Plan Policy LU-114, which specifies that development occur in a comprehensive, responsible, and cohesive manner, is addressed in Draft EIR Table LU-3, page 14-22.

Assertions that the proposed UWSP would adversely affect businesses or quality of life are not supported with evidence and no specific adverse physical environmental effects are raised in the comment. The physical effects of the proposed UWSP are fully evaluated in the Draft EIR. Specifically, the Draft EIR fully evaluated air quality impacts in Chapter 6, *Air Quality*, of the Draft EIR. The Project would result in significant and unavoidable air quality impacts related to a conflict with an applicable air quality plan during project operation, emissions of criteria air pollutants and precursors during project operation, and exposure of sensitive receptors to toxic air contaminants (TACs) during project operation. These significant and unavoidable impacts are also summarized in the Draft EIR's Executive Summary. The EIR identifies all feasible mitigation to reduce these impacts, as required by CEQA.

The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 224-5

Natomas is unique, and we have an opportunity to preserve what makes it special for future generations. Let's create a community we can all continue to be proud of—one that balances growth with environmental responsibility.

Thank you for considering these concerns. I urge you to reject the Upper Westside Specific Plan and to commit to a future that prioritizes the well-being of our community and environment.

RESPONSE 224-5

The comment expresses opposition to the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information

in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 225

Cynthia Romero, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 225-1

I have lived and worked in Natomas for 29 years. Over those years, I have seen the area slowly develop from farmland to residential and commercial buildings. We are at the point now where the infrastructure cannot support any more development and areas that were set aside for farming and nature preserves are being threatened.

I travel El Centro Road daily between North and South Natomas. This drive used to take me 10 minutes from one end to the other but now takes 15-20 minutes with the increased traffic. If there is an accident on 1-80 or 1-5, freeway travelers detour onto El Centro Road which then takes 30-45 minutes to travel from one end to the other. The West El Camino overpass is only two lanes and during commute times, traffic is bumper to bumper with both off ramps backing up onto the freeway.

We do not have adequate infrastructure to support a development of this size.

RESPONSE 225-1

See Master Response TR-3: Traffic Congestion.

The comment expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 226

Judy Tretheway, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 226-1

Let the land speak: *No eulogy for Natomas lands*

I have grown giant oak trees,
I have grown ripe, red tomatoes,
I have grown pumpkins, I have grown bees.

I have watched generations of life thrive,
I have seen the waters rise
I've offered rest for the birds above.

I've opened myself to the roots of all kinds of plant life
mingling with the waters of the river.
I have watched my bounty
carried off to nourish hungry people.

Left open,
I can breath
the surface of my being
connecting the deep darkness of the earth
to the vastness holding ten million stars.

Left open,
I can contribute
to the passage of the animals,
to the feeding of the hungry,
to the cycles of a land pulsing with life.

Left open,
I can stay alive
married to my river,
anchoring her shape,
cheering her on as she comes into her finish line at the sea.

Left open,
I can seed the future
supporting generations of life processes
and the healing of our beloved earth.

Honor me here in the heart of the valley,
In the heart of our community.
My pulse is your pulse is our future.

RESPONSE 226-1

The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 227

Ray Tretheway, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 227-1

I recommend the Planning Commission deny in its entirety the proposed Upper Westside Specific Plan.

I urge the Planning Commission to recognize how this Plan violates and dissolves the designated Urban Services Boundary in Natomas that was adopted to give permanent protection to both farmlands and endangered and threatened species and their habitats.

I urge the Planning Commission to give serious consideration to the negative impacts of this proposal to the Natomas Basin Conservancy's nearly 40 decade's of unprecedented farming and habitat achievements.

I urge the Planning Commission to not ignore the thousands of empty parcels within the Urban Services Boundary ready to accommodate the promise of infill projects - the revitalization, as well as the building of new industrial and commercial districts and neighborhoods.

I urge the Planning Commission to consider how approval of this Plan will exasperate, and at times negate due to budgetary and staffing constrains, the ability for the County to deliver on a timely basis critical services, such as fire, police, roadway, water and other basic services, to existing neighborhoods.

Your 'NO' vote will be a validation for all the promises of infill the County has made to its residences and businesses; and it will recognize the value of farmland, wildlife and habitat protection consistent with Federal, State, City of Sacramento and County of Sutter binding agreements.

Your 'NO' vote will send a clear message countywide that the days of farmland speculation and farmland sprawl will no longer trump the guiding principles and values of urban and suburban planning in Sacramento County.

RESPONSE 227-1

See Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan and Master Response LU-1: County Urban Services Boundary and Urban Policy Area.

The commenter expresses opposition to the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 228

Don Fraulon and Melissa Brown, members of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 228-1

1. Public hearings on expanding the Urban Services Boundary are necessary.

This project is outside the Urban Services Boundary. Before considering any development outside the Urban Services Boundary, the County should pause development applications outside the Urban Services Boundary and hold hearings on whether the Urban Services Boundary should be expanded and consider the significant negative impacts on the environment and Sacramento County residents far beyond the Upper Westside project area.

2. This project's urban sprawl is unacceptable. . The County's 2030 General Plan, County zoning, the Urban Services Boundary, the Urban Policy Area, and SACOG's Blueprint for regional development all seek to avoid. The land use strategies and policies of the Sacramento County 2030 General Plan were designed to promote the efficient use of land, encourage economic vitality and reduce urban sprawl and its impacts, preserve habitat and open space, and protect local farming. The Urban Services Boundary was intended to implement that vision and promote orderly growth within the County. The proposed project violates the County's 2030 General Plan, County zoning, the Urban Services Boundary, the Urban Policy Area, and SACOG's Blueprint for regional development. There is no rationale is presented in the EIR, for approving this project outside the Urban Services Boundary.

3. This project harms the entire Sacramento community because of the loss of open space, and habitat and their associated recreational benefits; the loss of farmland; a significant increase in roadway dangers because of increased traffic on rural roads and increased congestion and conflicts at freeway on and off ramps which may not be able to be mitigated for some time; and a significant increase in area air pollution which has health consequences for the entire Sacramento area. **The EIR fails to recognize that the project reduces Sacramento recreational opportunities**, because increased traffic in the project area, would make it unsafe for individual cyclists and cycling clubs, as well as motorcycle clubs and antique or specialty car clubs that use Garden Highway for recreation.

4. The EIR falsely claims that the project does not violate habitat conservation plans. We agree with the Environmental Council of Sacramento that the proposed project does violate approved habitat conservation plans and would lead to the permanent destruction of open space, habitat and wildlife.

5. The EIR fails to identify that river corridors are rare and valuable resources to residents of any community, and are particularly valued by Sacramento County residents for recreation, open space, wildlife, and local farmland. The proposed project introduces permanent harms by urbanizing a river corridor, putting urban activity within

about 700 feet of Garden Highway and the river. River corridors need to be protected for current and future area residents.

6. The proposed project changes the existing one-mile river corridor protection buffer to 700 feet. Years ago, during County hearings on the Urban Services Boundary, many residents argued for a miles wide protection buffer for the Sacramento River corridor to protect recreation, open space, habitat and local farmland. The County settled on a one-mile buffer. This project would reduce that buffer to a wholly inadequate 700 feet in some areas, up to a maximum of one-half mile.

7. The proposed project would result in the significant and permanent loss of open space, habitat, already diminished local farmland, and floodplain protections. Once these community resources are gone, they are gone forever.

8. Mitigation for loss of farmland, wildlife and wildlife habitat would most likely occur beyond the Sacramento area, depriving Sacramento County residents of those benefits. The project applicant says loss of farmland, wildlife, and wildlife habitat would be mitigated outside the Natomas Basin. People in Sacramento value and find benefit in farmland, wildlife, and the open space that serves as wildlife habitat. The EIR fails to identify the communitywide loss of farmland, wildlife and wildlife habitat resources as community assets. If the project is approved farmland and wildlife mitigations should be required within the Natomas basin where those resources would continue to benefit community residents.

9. The EIR fails to identify that the proposed project could result in a total loss of project area farmland. Most of the project area is currently farmland that would be converted to urban uses. In the past 10 years Sacramento has lost more than 14,000 acres of farmland. This project could result in the permanent loss of another 1500 acres or more of high-value, productive local farmland. The project applicant says 534 acres of farmland would remain, but about 130 acres of that is intended as buffer land that will not be useable for farming. The remaining 400 acres of farmland is a long narrow space (some just 700 feet wide), and just 30 to 50 feet from potential urban conflicts, which may make the remaining farmland impractical to use for commercial farming.

The recent pandemic made clear that farmland is important community infrastructure. **The EIR fails to address the loss of area farmland as a community food resource** when there are disruptions to the food distribution system.

10. The EIR fails to identify that the proposed project could reduce existing floodplain protection. Around the United States, communities are starting to reserve land near waterways to use as open space for flood protection. This project puts housing in a floodplain close to the river. While the new Natomas levee is expected to provide 200-year flood protection, climate change increases the chance of extreme flooding. Recent flooding in Asheville, North Carolina is proof of that. Current open space and farmland near the river provides urban areas with an additional level of flood protection. The proposed project would eliminate this protection.

11. This project has an unacceptably long list of significant and unavoidable impacts, many that are harmful, permanent, and cannot be mitigated, including unplanned growth, urbanization of a rural area, increased traffic and roadway hazards, increased air pollution, increased noise, loss of wildlife, loss of habitat, loss of productive farmland, and the permanent loss of an important landscape for indigenous communities of Sacramento County.

12. The project significantly and unacceptably increases air pollution, possibly exceeding thresholds of significance for everyone, and posing serious health risks, including an increased risk of cancer. In addition, operation of the proposed project would significantly conflict with and obstruct implementation of the Sacramento Metropolitan Air Quality Management District air quality improvement efforts.

13. Sacramento does need affordable housing, but the EIR fails to note that this project makes no commitment to a specific number of very affordable, affordable, and missing middle housing (duplexes, etc.) units or a specific percentage of affordable housing units. In addition, the buildout of this project will take 20-30 years, and the first phase will take 7 years. So, there would not be housing from this project for many years. If the project is approved it should have specific affordable housing requirements, with a high percentage of affordable housing units in each housing development.

14. The EIR fails to adequately address the severe and dangerous impacts project traffic would have on Garden Highway and existing Garden Highway users. The EIR suggests the project could add 4,000 trips a day to Garden Highway. Garden Highway is a rural 2-lane, undivided road. Garden Highway is an elevated roadway on top of a levee, so widening is not feasible. Garden Highway is half the width it should be for traffic safety. It has blind curves, no shoulders and no guard rails. The project EIR emphasized concerns about traffic safety, including hazardous conditions at Garden Highway intersections. However, the EIR fully failed to address the greatest safety issue on Garden Highway, which is the mixed use of the road by personal vehicles, semitrucks, agricultural equipment, cars pulling boats, golf carts, individual and groups of cyclists, pedestrians, and wildlife, any of which can enter the roadway unexpectedly from farm roads, driveways, and the riverbank. Adding traffic to Garden Highway is unacceptably dangerous. If the project is approved, a new traffic circulation plan should be required and agreed to by the Garden Highway Community Association, that discourages project vehicle traffic on Garden Highway.

15. The EIR fails to adequately address the impacts from a proposed stadium, which would be close to residences all around the project, including Garden Highway. Stadium traffic, noise, and light do not belong in/near residential areas. Stadium noise can travel miles. County and City Code Enforcement offices and Sacramento stadium operators can confirm stadium conflicts with residential areas. Any stadium should be miles from any residences. We already experience amplified noise, travelling miles with concert events such as Aftershock and the CHP Firing Range across the river in West Sacramento. If the project is approved, no amplified sound should be permitted (except at school sites for emergencies).

The EIR notes that nighttime lighting would have a permanent impact on the area. But **the EIR fails to adequately address the harmful impacts of nighttime lighting on human health and on wildlife**, including migratory birds using the Pacific Flyway. **The EIR fails to provide adequate light mitigations for humans and wildlife.** If the project is approved, there should be a minimum one-half mile buffer between the project and Garden Highway that includes a minimum 100 foot wide densely planted tree buffer adjacent to the project. The tree buffer must include tall native evergreen trees planted at the beginning of project construction.

16. The EIR fails to adequately address that project related air pollution and its resulting serious health impacts, as well as construction dust, could be more severe on Garden Highway because of the prevailing wind that blows toward Garden Highway.

We trust you will carefully consider the negative impact this project will have on our community and reject efforts to greenlight the project until these and other issues are resolved. Those of us in the community are living through the years long levee improvement project which has had significant and negative impact on our well-being. The Westside project adds decades to the disruption of our lives and environment.

RESPONSE 228-1

Please see Responses 18-23, and 34-1 through 34-17.

LETTER 229

Melanie Herman, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 229-1

If you add many more vehicles to the Garden Highway per day, you will risk causing the very catastrophe that the current levee construction is attempting to ameliorate. Soil liquefaction.

1. Even with the comparatively light traffic we currently have, our houses shake when SUVs and trucks go by. I can feel the road compress like a wave when heavier semi-trucks blast past.
2. Virtually all of the riverside properties have lost large trees over the years. The stumps and roots that remain rot, creating holes like swiss cheese.
3. Climate change is making high river levels more likely. High water saturates the levee where the clay that once capped the sandy fill has been perforated by the loss of trees.
 - Soil liquefaction is a natural hazard that occurs when saturated or partially saturated soil loses its strength and stiffness in response to an applied stress, such as an earthquake. During liquefaction, soil behaves like a liquid or viscous substance, similar to quicksand.

Obviously, the entire Natomas Basin would be endangered if the Garden Highway dissolves from beneath. At the very least, the developer and county must include a determination that shaking the levee when the river is high will not lead to liquefaction anywhere along its length. If you add this much stress to the Garden Highway, it will liquify somewhere and Natomas will go underwater.

RESPONSE 229-1

As explained in Chapter 11, *Geology, Soils, and Paleontological Resources, Impact GEO-2*, the final design-level geotechnical investigations for individual projects would analyze the site-specific conditions within each project area where foundations, footings, and other infrastructure would be located, and would identify any potential for individual projects to exacerbate any geologic hazards. The geotechnical investigation would include identifying the potential for liquefaction, and provide specific measures to address relevant site preparation, design, or other requirements consistent with the current version of the CBC. With compliance with the CBC, soil conditions susceptible to liquefaction would be addressed where present, which would prevent impacts from soil susceptible to liquefaction.

LETTER 230

Steve Schweigerdt, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 230-1

I oppose the Upper Westside Specific Plan. Approval would be contrary to all planning to date in the Natomas Basin including the Natomas Basin Habitat Conservation Plan, Natomas Shared Joint Vision agreement between the City and County of Sacramento, Sacramento County General Plan, Urban Service Boundary, and SACOG Blueprint. Therefore, the County should inform the applicants that the proposed development directly conflicts with these plans and advise the withdrawal of the proposal. The environmental impacts of the project are overwhelmingly negative and there is no substantive economic need for the project that justifies further preparation of a Final EIR.

The Natomas Shared Joint Vision MOU stated "The City, rather than the County, is the appropriate agent for planning new growth in Natomas and can better provide a full range of municipal services. The County is the appropriate agent for preserving open space, agricultural, and rural land uses." This language was agreed to in the 2002 MOU, and while the Joint Vision has been abandoned, the language has not been rescinded and still holds true. The County should not be supporting development of new growth directly, but should refer development proposals to LAFCO and the City for annexation proceedings. Indeed, the County has utterly failed to make any progress on its role of preserving open space and agricultural land in the Natomas Basin as not a single acre has been conserved by County efforts despite billions of dollars of state and federal grants made available since the MOU was signed. Instead, the County has signaled development potential to landowners that made it unlikely any would become willing sellers for conservation purposes.

Polling shows that residents value our Natural Areas - they consistently rank #1 in Valley Vision Livability Polls, yet our region is far behind on 30X30 goals with only 9% of our land conserved to date. This land can be put in conservation with state funds from the SALC program and landowners can be compensated at appraised fair market value if they would like to sell. This would keep the land producing food for us, protect critical habitat and soil, and encourage investment in the ample land for development within the Urban Services Boundary. That is the path the County should be pursuing for land outside the Urban Services Boundary.

This project is outside of the Urban Services Boundary and should not be considered for approval. The Sacramento County General Plan states the Urban Services Boundary "is intended to be a permanent growth boundary not subject to modification except under extraordinary circumstances." Those circumstances do not exist and any project outside of the USB is inconsistent with the General Plan on its face. While a Special Planning Zone overlay exists for the Natomas Joint Vision, that does not obviate the need for extraordinary circumstances to justify moving the Urban Services Boundary. It should

be noted that the overlay stated the SACOG Blueprint shows significant development in the Joint Vision area and that is no longer the case, as detailed below.

General Plan Policy LU-2 states that the County shall maintain a USB that defines the long-range plans (beyond twenty-five years) for urbanization and extension of public infrastructure and services and defines important areas for protecting as open space and agriculture. The County has already approved for development more than 3 times the projected demand for housing units SACOG has modeled (35,610 from 2020-2050). The approval of this project in addition to the excess entitlements that already exist would inevitably result in widely scattered, partially built-out projects that would prevent development of “complete community” urban mass which the County asserts would reduce VMT; and would doom the County to increasing per capita GHG emissions far into the future, contrary to the necessities of climate change, State climate goals, and the intention of the County’s Phase 1 CAP. This is further amplified by the Phasing Plan, which leaves the highest density development to the last phase –when it is never built or rezoned to lower density sprawl.

In June 2024, SACOG adopted the 2025 Blueprint Land Use Assumptions, which do not include this project as an area to be developed. Therefore, approving this project is inconsistent with our region's Sustainable Communities Plan and risks non-attainment of greenhouse gas reduction targets along with a loss of transportation funding. The DEIR must be updated to acknowledge this fact and analyze the impact on the Sustainable Communities Plan and how much more difficult it will be for the region to meet reduction targets if the project is approved. SACOG has indicated that some approved projects need to remain unbuilt to meet the target and the impacts of this project on other projects along Jackson Highway that are more favorable for emissions reductions should be included. The DEIR attempts to skip around this by stating “the County is not obligated to support the land use types proposed in the Blueprint at the parcel level” on p. 14-23 but the DEIR should be required to analyze the impacts of building the project on the plan as a whole.

This project would destroy farmland that we need and the proposed mitigation measures are inadequate. SACOG’s CROP report has found that in 30 years (1988-2018) Sacramento County converted more than 73,000 acres of ag land to urban uses – an area larger than the entire City of Sacramento (63,852 acres). It specifically calls out the Upper Westside project as destructive to Prime Farmland and indicates the mitigation requirements are inadequate. “Biological conservation is the planned mitigation for the project; however, biological easements have restrictions and are not guaranteed to support agriculture. Urban/community gardens have also been proposed as a mitigation measure for the project, and while a community garden will support the health and resilience of the new community, it does not support agriculture in the same way the land is being used today.” Indeed, farmland loss cannot be mitigated by simply protecting farmland elsewhere. Mitigation measure AG-1 that protects other agricultural land does not in effect mitigate the loss of prime farmland in the area. True mitigation would require improving the productivity of less productive farmlands to the equivalent of the prime farmland being lost. Even were compensatory mitigation to be used, it should require an affirmative commitment for productive agriculture and have no restrictions on

agricultural intensification. It should be further noted that many of the properties along the Garden Highway the DEIR includes as an “agricultural buffer” are zoned AR-2 (97 acres) and are primarily residential instead of productive agricultural properties, thus should not qualify as any type of agricultural credit for the project.

The Natomas Basin HCP was predicated on land outside the USB remaining undeveloped. Starting to develop this land is incompatible with the protections put in place through the HCP and the analysis provided in the DEIR is lacking details on the impacts to the HCP. The DEIR Biological Resources Introduction includes requests from CDFW, USFWS, LAFCO, and City of Sacramento that are not fulfilled in the DEIR and until those details are included in a DEIR the public can review it is incomplete and must be recirculated with the requested information included.

Proposed mitigation for Swainson’s hawk foraging habitat is unacceptable. A key part of the NBHCP Conservation Strategy is to both preserve to the extent practicable habitat within the Swainson’s Hawk Zone adjacent to the Sacramento River and also to enhance and expand Swainson’s hawk habitat through provision of suitable trees and groves in proximity to upland foraging reserves. The project removes about a third of the Swainson’s Hawk Zone in Sacramento County from foraging habitat and impacts the already diminished habitat the hawks rely on. A much higher ration than 1:1 mitigation land would be required and it needs to be provided within the Sacramento County portion of the Natomas Basin.

RESPONSE 230-1

Please see Responses 109-1 through 109-8.

LETTER 231

Christine Olsen, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 231-1

Hundreds of Sacramento residents, interest groups, experts, and government agencies have come together repeatedly, over many years, and spent thousands of hours in workshops and hearings to tell the County we don't want sprawl. We want planned growth that makes life better for everyone. The Upper Westside development is urban sprawl.

Sacramento County's 2030 General Plan was designed to promote the efficient use of land, encourage economic vitality and reduce urban sprawl and its impacts, preserve habitat and open space, and protect local farming. The Urban Services Boundary was intended to implement that vision and promote orderly growth within the County. The Upper Westside project unnecessarily violates those County plans as well as the Urban Policy Area, County zoning and other County codes, SACOG's Blueprint for regional development, and agreed upon habitat conservation plans.

On behalf of all the Sacramento County residents who worked to ensure the countywide benefits of planned growth, you are urged to pause consideration of any projects outside the Urban Services Boundary and hold public hearings on whether the Urban Services Boundary should be expanded. If one project is approved beyond the Urban Services Boundary, other developments will surely follow, and the Urban Services Boundary will no longer function as intended to preserve open space, habitat and prime farmland, or to encourage infill development. Changing the Urban Services Boundary will have irreparable negative impacts on the County's environment, and on Sacramento County residents far beyond the Upper Westside project.

Getting planning right ensures a community we love to live in and a community that works for everyone. The Upper Westside project is the sprawl we all want to avoid. The County made a commitment to the people of Sacramento that the County would not expand the Urban Service Boundary unless there was inadequate vacant land within the USB to accommodate the demand for urban uses. There is, today, more than ample land within the Urban Services Boundary for the number of housing units and the amount of commercial space the Upper Westside Project proposes.

Allowing development outside the Urban Services Boundary harms the Sacramento community outside and inside the Urban Services Boundary. An important achievement of infill development is that it not only advantages residents inside the new development, it adds vitality and benefits to the nearby community, maximizes the cost-efficiency of urban services such as transit, and reduces environmental impacts associated with urban sprawl. The Upper Westside applicant may have no interest in infill development and that is their prerogative, but their proposed project outside the Urban Services Boundary is unnecessary and harmful far beyond the project area.

If the County does permit development outside the Urban Services Boundary, please at least protect a minimum one-mile-wide river corridor. River corridors are unique and highly valued by Sacramentans for recreation, for open space that provides a respite from urban environments, for wildlife and unique wildlife habitats and corridors, for prime farmland, for flood protection buffers, and as important tribal cultural landscapes.

With regard to the Upper Westside EIR, the EIR is fundamentally flawed and should be rejected. EIR's are intended, by law, to present the public and decisionmakers with factual, evidence-based information about a project's potential impacts. The Upper Westside EIR identifies changes the project applicant is seeking to the County's 2030 General Plan, County zoning, to the Urban Services Boundary, and to the Urban Policy Area, among others. Then, throughout the EIR, the EIR makes false claims that the project does not conflict with County land use policies. For example, under Agricultural Resources, the EIR says, "the proposed UWSP would not conflict with existing agricultural use and zoning," That is profoundly untrue. The project site is mostly zoned and used for agriculture and would be rezoned for urban uses. The project may totally wipe out local farming because the remaining 400 acres that could be used for farming is a long narrow space (some just 700 feet wide), and just 30 to 50 feet from urban conflicts, which may make the remaining farmland impractical for commercial farming. The EIR says the proposed project would not conflict with existing habitat conservation plans. That is also untrue as detailed by the Environmental Council of Sacramento. Under Land Use, the EIR says, "the proposed UWSP would not conflict with Sacramento County's Land Use Plans," despite the long list of County land use plans, policies and codes that the project seeks to change. Under Growth Inducement impacts, no rationale is presented for approving urban development outside the Urban Services Boundary and the EIR completely fails to address the growth inducement impacts due to the project applicant's requested changes to County plans, policies and codes. Developers have a right to spin the truth in their communication with Planning Commissioners and County Supervisors, but deceit and spin has no place in an EIR.

More detailed EIR comments will be submitted to the County. Here I want to highlight serious impacts the project would have on Garden Highway, where I live. The proposed project would come within 700 feet of Garden Highway. The EIR suggests the Upper Westside project could add 4,000 vehicle trips a day to Garden Highway. Intersection improvements on Garden Highway are discussed in the EIR, but there is no discussion of traffic safety impacts on the Garden Highway roadway. Garden Highway is a rural 2-lane, undivided and elevated roadway. Garden Highway is half the width it should be for traffic safety. It has blind curves, no shoulders and no guard rails. The greatest traffic safety issue on Garden Highway is the mixed use of the roadway by personal vehicles, semitrucks, agricultural equipment, cars pulling boats, golf carts, individual and groups of cyclists, pedestrians, and wildlife, any of which can enter the roadway unexpectedly from farm roads, driveways, and the riverbank. Adding traffic to Garden Highway has life safety consequences and should be rejected as unnecessary and too dangerous.

The EIR does not identify or suggest mitigations that might reduce urban-rural conflicts for a project like Upper Westside and a rural residential area such as Garden Highway. The project proposes a stadium close to residences all around the project, including

Garden Highway. Stadium traffic, noise, and light do not belong in or near residential areas. Stadium noise can travel miles. County and City Code Enforcement offices and Sacramento stadium operators can confirm stadium conflicts with residential areas. Traffic and noise generating land uses, such as schools and an outdoor pavilion, should be located close to major roadways and commercial uses to reduce all residential impacts. Amplified sound should be prohibited in all residential areas. In the past, developers and the County have determined that amplified sound can be regulated to minimize impacts. That has proven to be untrue. Over time, sound equipment and the location of speakers can change and noise makers like bull horns can be introduced, resulting in uncontrolled noise that can easily travel more than 2 miles (based on real life experience). The EIR fails to address impacts from putting urban development within 700 feet of rural residential zoning on Garden Highway and fails to identify mitigations such as requiring that project construction begin closest to existing urban uses, reaching rural areas last.

The EIR says nighttime lighting is an impact, but fails to address the harmful impacts of nighttime lighting on human health and on wildlife, including migratory birds using the Pacific Flyway. And the EIR fails to identify possible light mitigations, such as establishing a minimum one-half mile setback between the project and any rural areas (i.e. Garden Highway), with the setback to include a minimum 100-foot-wide densely planted tree buffer of tall native evergreen trees at the western project boundary, with the setback established and the tree buffer installed at the beginning of project construction.

The proposed Upper West project is unnecessary and harmful. The EIR fails to honestly present impacts from changing County plans, policies and codes. The EIR highlights an unacceptably long list of significant, harmful and unavoidable impacts countywide that cannot be mitigated, including unplanned growth, urbanization of a rural area and a river corridor, increased costs for taxpayers and ratepayers because of the unplanned extension of urban services, increased traffic and roadway hazards, increased air pollution, loss of wildlife, loss of habitat, loss of productive farmland, and the permanent loss of an important landscape for indigenous communities of Sacramento County.

For the benefit of current and future Sacramento County residents, the County should reject all development outside the Urban Services Boundary, including the Upper Westside project. What is the point of urban development if a project like Upper Westside can violate so many County plans and policies and still be approved.

RESPONSE 231-1

Please see Responses 36-1 through 36-15.

LETTER 232

Ross Oliveira, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 232-1

1. Reduction of the Sacramento River Corridor Buffer: Years ago, during County hearings on the Urban Services Boundary, many residents, as I was in High School at the time, advocated for a miles-wide protection buffer along the Sacramento River corridor to safeguard recreation, open space, habitat, and local farmland. Despite these concerns, the County settled on a one-mile buffer. This project, however, would reduce that buffer to a wholly inadequate 700 feet in some areas, and a maximum of one-half *mile* in others. This reduction would severely compromise the very protections the buffer was intended to provide.

RESPONSE 232-1

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 232-2

2. Irreversible Loss of Open Space and Farmland: The proposed project would result in the significant and permanent loss of open space, wildlife habitat, and already diminished local farmland. Additionally, it would reduce floodplain protections, which are critical in this area. Once these vital community resources are lost, they are gone forever. These impacts would alter the landscape and character of the Natomas area in ways that cannot be undone.

RESPONSE 232-2

See Response 34-7.

COMMENT 232-3

3. Traffic Safety on Garden Highway: The Environmental Impact Report (EIR) fails to adequately address the severe and dangerous impacts that increased project traffic would have on Garden Highway and its users. The EIR suggests that the project could add 4,000 trips per day, although I think it will be higher, to Garden Highway, a rural, two-lane, undivided road built atop a levee, where widening is not feasible. Garden Highway is already half the width necessary for safe traffic use, with blind curves, no shoulders, and no guardrails.

The EIR highlights concerns about traffic safety, including hazardous conditions at intersections, but it fails to address the greatest safety issue—the mixed use of the road by personal vehicles, semitrucks, agricultural equipment, cars pulling boats, golf carts, cyclists, pedestrians, and wildlife. Any of these users can enter the road unexpectedly

from farm roads, driveways, or the riverbank., creating dangerous conditions. Adding more traffic to Garden Highway would be unacceptably hazardous. If this project proceeds, a new traffic circulation plan must be required and agreed to by the Garden Highway Community Association, one that discourages additional project-related traffic on Garden Highway.

RESPONSE 232-3

See Master Response TR-2: Garden Highway Safety Considerations.

COMMENT 232-4

4. Violation of Existing Planning Guidelines: The Upper Westside project is not consistent with several key planning guidelines, including the Sacramento County 2030 General Plan, the Urban Services Boundary (USB), the Urban Policy Area (UPA), the Natomas Basin Habitat Conservation Plan (NBHCP), the SA COG (Sacramento Council of Governments) Blueprint for regional development, and the Metropolitan Transportation Plan/Sustainable Communities Strategy. This project directly conflicts with these established plans and policies, which are designed to promote sustainable growth, protect natural resources, and limit urban sprawl.

RESPONSE 232-4

Please see Master Response BR-1: Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan, Master Response LU-1: County Urban Services Boundary and Urban Policy Area, Master Response LU-2: Consistency with Sacramento County General Plan Policy LU-127, and Master Response LU-3: SACOG Blueprint and MTP/SCS.

This comment expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 232-5

5. Significant and Unavoidable Project Impacts: The Cumulative Impacts section of the project's EIR highlights several significant and unavoidable impacts, including the opening of Natomas to further urbanization. the substantial loss of farmland and wildlife habitat, and a significant increase in traffic and air pollution. These impacts will have long-lasting effects on the environment, community resources, and overall quality of life in the region.

RESPONSE 232-5

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 232-6

In light of these concerns, I strongly urge the Board to reject this project or, at the very least, require substantial modifications to protect the community's safety, natural resources, and agricultural heritage. If the project is approved, it should be done in a way that is consistent with the goals of the Sacramento County 2030 General Plan, including maintaining the integrity of the USB and UPA, ensuring traffic safety on Garden Highway, and safeguarding open space and farmland for future generations.

RESPONSE 232-6

See Master Response LU-1 Master Response LU-1: County Urban Services Boundary and Urban Policy Area and Master Response TR-2: Garden Highway Safety Considerations.

This comment expresses opposition to the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 233

Bobbi NaSal, member of the community, written comment to County of Sacramento Planning Commission; dated October 20, 2024.

COMMENT 233-1

Please consider our concerns and reject this project.

I am a North Natomas resident and I do not support this project for so many reasons. I cannot even pick one reason that I am opposed to this project as my objections concern all of the following:

- Paving farmland
- Putting developer profits over community health
- Increased traffic congestion on I-5, I-80 and local roads
- Ignoring County infill requirements and not respecting development boundaries
- Destruction of wildlife habitat and to the Pacific Flyway for migrating birds
- Increasing flood danger for current residents

I find my life in North Natomas is already concerning due to the fact if I need to evacuate in an emergency, crowded roads are already an issue. How will we evacuate if you add 9,000 new homes and families without a plan?

I am increasingly worried that overdevelopment will worsen the climate crisis that impacts every living thing. Our place in the path of migrating birds is so important and to destroy that habitat is beyond comprehension.

I could go on but I believe you can see just a few of my concerns. Please reject this project.

RESPONSE 233-1

See Master Response TR-3: Traffic Congestion. Please also see Impact HAZ-5 on pages 12-21 to 12-25 in Chapter 12, *Hazards and Hazardous Materials*, of the Draft EIR, for a discussion regarding evacuation during a flood.

The commenter expresses opposition to the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 234

Rick Dow, member of the community, written comment to County of Sacramento Planning Commission; dated October 20, 2024.

COMMENT 234-1

1) The 2,000 acres of farmland help support migratory birds in the Pacific Flyway, and loss of that farmland to development would potentially harm migratory birds that are part of the ambiance of living in the Natomas area.

RESPONSE 234-1

As described in the EIR, the Sacramento Valley is an important stopover area for migrating waterfowl, geese, shorebirds, and waterbirds that utilize flooded wetlands and flooded agricultural fields, primarily rice. The UWSP area includes little of this flooded habitat in the form of approximately 18 acres of pasture in the very southeast edge of the UWSP area. The pasture land cover is discontinuous and interspersed with ruderal, urban/developed, and valley oak land covers. Post-construction, this portion of the UWSP would be agricultural residential land use.

The analysis of potential impacts to wildlife corridors and species movement was addressed in the Draft EIR under Impact BR-12, which analyzes substantial interference with movement of wildlife species or with established migratory corridors (e.g., the Pacific Flyway). The analysis explained that

Construction-related direct impacts on migratory birds could result from the removal of vegetation while an active bird nest is present. In addition, earthmoving, operation of heavy equipment, and increased human presence could result in noise, vibration, and visual disturbance. These conditions could indirectly result in nest failure (disturbance, avoidance, or abandonment that leads to unsuccessful reproduction), or could cause flight behavior that would expose a migratory adult to predators. These activities could cause birds that have established a nest before the start of construction to change their behavior or even abandon an active nest, putting their eggs and nestlings at risk for mortality.

This analysis concluded that without mitigation, the impact on wildlife movement could be significant. As required under CEQA, all feasible mitigation measures were identified, including Mitigation Measures BR-2a, BR-3, and BR-5. These measures include implementation of a Worker Environmental Awareness Program training to avoid construction impacts to special status species, avoidance and minimization measures for nesting birds, and compensatory mitigation for long-term impacts to giant garter snake habitat. The conclusion of the analysis of wildlife movement was that with the implementation of these measures, the potential impacts would be less than significant.

Please also see Response 19-77 for additional discussion of bird-window collision effects on migratory and other protected birds, as well as addition of a new Mitigation Measure BR-12.

COMMENT 234-2

2) Loss of farmland would also be a loss of the potential to use farmland as a carbon sink and help fight climate change that is bringing about unusual weather such as severe flooding.

RESPONSE 234-2

Measure GHG-17: Carbon Neutral New Growth from the recently adopted Sacramento County CAP requires new growth outside the current UPA or USB to demonstrate that they would achieve net zero GHG emissions, including accounting for removal of carbon sequestration. Specifically that measure states:

Net zero GHG emissions means emissions of GHGs to the atmosphere are balanced by removals of GHG emissions over a period of time; in this case, during project construction and operation of the proposed new growth project. This means that GHG emissions generated by project sources such as transportation, energy consumption, fuel combustion, industrial processes, water usage, waste generation, and land use change must be less than or equal to the amount of CO₂ that is removed from the atmosphere over the same time period, both in natural sinks and through mechanical sequestration.

The CAP, including Measure GHG-17, would apply to the proposed UWSP, which would be required to demonstrate consistency with the CAP, and thus would account for the loss of carbon sequestration within the project area.

This comment expresses opinions related to the merits of the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 234-3

3) Commercial and residential development would eventually clog the area and possibly lead to panic if evacuation from the area were to occur due to disasters such as flooding, earthquake or fire. There are only three roads to be used for evacuation if the need were to occur for whatever reason.

RESPONSE 234-3

Draft EIR, Chapter 18, *Transportation*, Impact TR-4, pages 18-41 to 19-42, addresses the potential effects of the proposed UWSP on emergency access. The analysis addresses the ability of the proposed roadway system to convey traffic in emergency conditions. It also points to the review and approval process for individual buildings by

the City of Sacramento Fire Department, and the provisions of the California Vehicle Code that support the ability of emergency vehicle drivers to find a clear path of travel during an emergency. The analysis concludes that the impact would be less than significant. Please also see Impact HAZ-5 on pages 12-21 to 12-25 in Chapter 12, *Hazards and Hazardous Materials*, of the Draft EIR, for a discussion regarding evacuation during a flood.

LETTER 235

Tristen Griffith, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 235-1

I want to address the concerns raised by Environmental Council of Sacramento (ECOS) regarding transportation and traffic impacts associated with the Upper Westside Specific Plan. As a business owner whose livelihood depends on transportation efficiency, I can offer a different perspective on how this project will impact traffic flow and infrastructure.

ECOS raised concerns that the Upper Westside project would increase traffic congestion, particularly on key roads like West El Camino Avenue and El Centro Road. The project provides solutions to the existing traffic challenges by including critical infrastructure upgrades that will improve road capacity and safety.

For example, the expansion of West El Camino Avenue and El Centro Road, both of which are critical routes for truckers traveling from Interstate 80, will alleviate congestion and create smoother traffic flow. This is essential not only for my business but for the many other local businesses and residents who rely on these roads. These improvements are much-needed upgrades that will benefit the entire community.

One of the key transportation improvements as part of the Upper Westside project is the planned upgrade to the Interstate 80/West El Camino Avenue interchange. ECOS's concerns about additional traffic congestion do not fully acknowledge the positive impact these upgrades will have. With these enhancements, truckers and other drivers will experience less delay, reducing the bottlenecks that currently plague the interchange. This means more efficient transportation for goods, improved traffic flow for daily commuters, and better access to essential services like the Sacramento 49er Travel Plaza.

In fact, these improvements will directly benefit the thousands of truckers who depend on timely and efficient routes to serve the broader Sacramento region. By streamlining the movement of goods and people, the project will reduce the overall strain on the local transportation network.

ECOS expressed concerns about the potential for increased auto-dependency and associated environmental impacts. However, the Upper Westside project is taking a balanced approach to transportation planning. In addition to road expansions, the project includes improvements to public transit connections and the development of bicycle and pedestrian infrastructure. These enhancements will encourage more sustainable modes of transportation and reduce the reliance on cars for short trips.

Moreover, as a business that has invested in sustainability, such as the Shore Power system and Tesla Superchargers we've installed at the 49er Travel Plaza, I am excited to see the Upper Westside project prioritizing green infrastructure. The inclusion of

electric vehicle (EV) charging stations and renewable energy sources in the development aligns with regional goals to reduce carbon emissions and create a greener transportation network. These sustainable features directly address ECOS's concerns about the environmental impact of increased vehicle use, ensuring that the project supports a cleaner, more efficient future for our community.

ECOS is right to point out that Sacramento is growing, but this growth cannot be managed without the infrastructure improvements that the Upper Westside project brings.

The enhanced roadways, expanded intersections, and better public transit options are not short-term fixes—they are long-term solutions that will manage traGic, and transportation needs for decades to come. Without these upgrades, the current traGic congestion and safety issues will only worsen as more residents and businesses move into the area. The Upper Westside Specific Plan is a proactive investment in our region's future, ensuring that transportation infrastructure keeps pace with growth while minimizing environmental impacts.

For my family and the Sacramento 49er Travel Plaza, the Upper Westside Specific Plan represents an opportunity for the entire community to thrive. The transportation improvements included in the project will alleviate traGic congestion, improve safety, and support the long-term growth of our region.

RESPONSE 235-1

The comment expresses general support for the proposed project, with an emphasis on upgraded transportation infrastructure that will improve road capacity and safety along West El Camino Boulevard and El Centro Road and at the interchange of Interstate 80/West El Camino Avenue. In addition, the comment emphasizes project improvements regarding transit, bicycle and pedestrian infrastructure. The comment is noted and will be conveyed to the decision makers for its consideration.

LETTER 236

Z. Wayne Johnson, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 236-1

1. Traffic currently on West El Camino, the interchange with I-80, plus the intersection of El Camino and El Centro are already a congested and dangerous weave pattern during rush hours particularly, and by the 49ers Truck Stop. Adding an additional 20,000 cars and truck trips will only increase the congestion to unmanageable levels and increase the dangerous weave of full size tractor trailers and passenger cars.

RESPONSE 236-1

Please see Master Response TR-3: Traffic Congestion for overall analysis approach toward traffic operations. Regarding road safety along West El Camino Avenue near the 49er Travel Plaza, Draft EIR Mitigation Measures TR-3d and TR-3e, page 18-41, are recommended to improve safety and reduce weaving movements.

COMMENT 236-2

2. The DEIR states that the project will result in unmitigated environmental adverse impacts to air quality, traffic and protected habitat from prior federal and State agreements. Citing, but not solving the impacts is unacceptable.

RESPONSE 236-2

This comment expresses opinions regarding unavoidable significant impacts of the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 236-3

3. Only 4 roads access this area, of which 2 are only 2 lanes cannot widened.

RESPONSE 236-3

The UWSP area is accessed from the north via El Centro Road and Garden Highway, from the south by West El Camino Avenue (via its interchange at I-80) and from the east by two interchanges (Arena Boulevard and Del Paso Road) and one undercrossing of I-5 (San Juan Road). Some of these roadways are planned to be widened while others are not.

COMMENT 236-4

4. Degrading the air quality, while adding up to 9,000 more residents, including school age children and seniors is ill-advised and poses significant health concerns.

RESPONSE 236-4

The comment reiterates the conclusions of the Draft EIR related to criteria air pollutant levels. Health impacts associated with exposure of project-generated criteria pollutant emissions and TAC emissions to nearby receptors, including nearby existing schools and children in new UWSP school areas, are described in the EIR Health Effects of Criteria Pollutants discussion on Draft EIR pages 6-45 through 6-7 and under Impact AQ-4: Exposure of Sensitive Receptors to Toxic Air Contaminants discussion on Draft EIR pages 6-47 through 6-52. Localized health risks to nearby receptors, including school children, are assessed in Impact AQ-4 (additional detail is presented in Appendix AQ-1). The proposed project would result in a significant and unavoidable air quality impact related exposure of sensitive receptors to toxic air contaminants (TACs) during project operation. The EIR identifies all feasible mitigation to reduce this impact, as required by CEQA.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 236-5

5. Project adds major amount of additional impermeable surfaces and resultant run-off. Thereby increasing flood control concerns.

RESPONSE 236-5

Draft EIR Chapter 13, *Hydrology and Water Quality*, addresses storm drainage and flooding effects of the proposed project. Impact HYD-3, pages 13-23 to 13-25, addresses alteration of drainage patterns, addition of impervious surfaces and increases in runoff, and redirection of flood flows. The analysis determined that with compliance with existing regulations and the use of the project design features to control stormwater, development of the proposed UWSP area would not result in erosion, siltation, increased runoff, or impedance or redirection of flood flows. It concluded that impact of the proposed project on drainage and flooding would be less than significant.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 236-6

6. With the unaddressed traffic congestion concerns and no identified funding for I80/W. El Camino interchange improvements, we are very concerned about adequacy of Emergency Evacuation routes in case of floods, earthquakes, major fire or other causes.

RESPONSE 236-6

Draft EIR, Chapter 18, *Transportation*, Impact TR-4, pages 18-41 to 19-42, addresses the potential effects of the proposed UWSP on emergency access. The analysis addresses the ability of the proposed roadway system to convey traffic in emergency conditions. It also points to the review and approval process for individual buildings by the City of Sacramento Fire Department, and the provisions of the California Vehicle Code that support the ability of emergency vehicle drivers to find a clear path of travel during an emergency. The analysis concludes that the impact would be less than significant. Please also see Impact HAZ-5 on pages 12-21 to 12-25 in Chapter 12, *Hazards and Hazardous Materials*, of the Draft EIR, for a discussion regarding evacuation during a flood.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 236-7

7. Project will likely have impact on other, small businesses in South and North Natomas.

RESPONSE 236-7

Issues related to the effects on businesses are economic in nature, and not a properly addressed under CEQA. As part of its consideration of the proposed project, the County will assess the economic and fiscal effects of the proposed project. However, while economic and fiscal impacts are important considerations for the County in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that “[e]conomic or social effects of a project shall not be treated as significant effects on the environment.” Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a number of factors considered in addressing the feasibility of an alternative, mitigation measure, or change to the project (see CEQA Guidelines sections 15131(b, c).

This comment expresses opinions related to the merits of the project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 236-8

8. The prime benefit is to land developers and ultimate new business stores in the retail sector planned. a lesser benefit to current residents. Sufficient capacity exists in other retail locations and malls to handle the new residents.

RESPONSE 236-8

This comment expresses opinions related to the merits of the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 236-9

9. Please do not add to urban sprawl and transportation hardships

RESPONSE 236-9

The commenter expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 236-10

10. The County is interested in increasing ratables for tax revenue. Will those revenues cover the infrastructure costs of interchange(s), widening where possible, on going maintenance and claims? We think not. The project will benefit well heeled developers and some land owners, while foistering their public improvement costs and responsibility onto the taxpayers.

RESPONSE 236-10

Issues related to the allocation of tax revenue collected by local agencies is an economic issue, and not a consideration under CEQA. As part of its consideration of the proposed project, the County will assess the economic and fiscal effects of the proposed project. However, while economic and fiscal impacts are important considerations for the County in determining whether to approve the proposed project, under CEQA they are not issues that require analysis within an EIR. CEQA Guidelines section 15131 provides guidance on how economic and social effects are to be addressed in EIRs, stating that “[e]conomic or social effects of a project shall not be treated as significant effects on the environment.” Under CEQA economic and social effects are limited to (1) being addressed as a link in a chain of effects that ties the implementation of the project to a physical environmental effect, or (2) being one of a number of factors considered in addressing the feasibility of an alternative, mitigation measure, or change to the project (see CEQA Guidelines sections 15131(b, c)).

This comment expresses opinions related to the merits of the project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 236-11

11. Lastly, we are concerned on the response time by fire, police and/or ambulance services with the major traffic increase.

RESPONSE 236-11

Please see Response 12-32. The Draft EIR evaluated the environmental effects that would arise from providing additional police and fire protection facilities that would be required to serve the project. The analysis in the Draft EIR meets the requirements of CEQA.

Please see Response 12-12 regarding the Upper Westside Public Facilities Financing Plan (PFFP) which would address the financing of construction and ongoing operation of public facilities and services, including law enforcement and fire.

This comment expresses opinions related to the merits of the project. The comment raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 236-12

12. We also believe that the traffic studies do not adequately calculate the cumulative traffic volume and congestion of other projects already approved or in the pipeline. Comparing a single project's new traffic against only the current traffic conditions is understating those impacts.

RESPONSE 236-12

The Local Transportation Analysis (LTA) (Draft EIR Appendix 12) includes a detailed discussion of the cumulative setting that was used as the basis for the cumulative forecasts. Planned roadway improvements are shown on LTA Figure 15. LTA pages 82 and 83 list specific plans and other large projects assumed to be fully built out in the cumulative year model. These pages also describe smaller vacant parcels, and their zoning and expected level of development. Chapter 4 of the LTA illustrates how the project would change cumulative travel conditions in the study area if it were developed.

LETTER 237

Arthur Gibson Howell, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 237-1

1. Agricultural Resources: The loss of local farmland and local produce (1805 acres) is very significant and irreplaceable. Mitigation Measure AG-1 (replacing on a 1:1 ratio) does not guarantee local farmland will be replaced "locally", with similar "prime soil", or even be actively farmed. Does the developer plan on buying currently unused "prime soil" land locally (1:1) and pay farmers to ensure it is actively farmed as it is today?

2. Cultural Resources: The land planning on being developed in the UWSP was originally part of the watershed for the Sacramento River before the levee was built and was a known area of historical tribal activity and burial site. When any construction on Garden Hwy is planned there is a requirement to investigate "on a parcel by parcel" basis for any historic-era archaeological resources even though all the land on Garden Hwy was elevated by dredging from the river and fill from elsewhere to build the aforementioned levee. Any development in the UWSP will have to excavate into the original watershed to the actual depth (and below) of these culturally significant areas, potentially causing irreparable harm. Is there a plan to investigate via Mitigation Measure CUL-2a and CUL-2b on a "plot by plot" basis based on the size of each new parcel (home/apartment) being built?

3. Noise: The increased traffic noise on Garden Hwy (and other previously low-use roads) will be substantially increased according to the UWSP DEIR. Speed reductions have been tried before but have not been effective and there is no room for any kind of noise wall / barrier. Other than "rubberized asphalt" how does the developer plan on reducing this new, unacceptable noise? The plan proposal of a stadium in the flat geometry of the previous farm land would greatly increase the noise levels as it travels unhindered across the new project.

4. Population and Housing: This project envisions population density equivalent to the most crowded parts of New York City of ~18,000 people per sq mile (taking into account most of the housing will be within 1 sq mile), with no real mass transit and a "job geography" that requires most people to drive. The DEIR states they believe a significant portion of residents will work in the project footprint and walk, bike, Uber, or carpool - but that does not reflect the reality of life in California. Directly from page 15 of the agenda proposal, the proposed UWSP "is ultimately inconsistent with SACOG plans, and thus would be considered to directly induce substantial unplanned population growth in the region." This in itself is reason enough to stop this ill conceived project. The SACOG Blueprint was developed for a reason, stick to it. The County's Urban Services Boundary document says, "The County shall not expand the Urban Service Boundary unless there is inadequate vacant land within the USB." There is adequate vacancy inside the Urban Services Boundary for the number of housing units and commercial space the project proposes. Before considering this project, I urge you to

hold public hearings on expanding the Urban Services Boundary if truly deemed necessary.

5. Transportation: The proposed addition of substantial traffic to an already bottlenecked I-5/I-80 via the already sub-par and "landlocked" West El Camino interchange is the achilles heel of this entire project. Based on their own "Traffic Conceptual Feasibility Analysis" alone, this project is already not feasible. It shows going from 16,000 daily traffic on the West El Camino / I-80 interchange (which is already gridlocked at certain times of day) to 69,000 with a LOS (Level of Service) of "F". Does this even account for all the new housing recently built to the east of the interchange? The DEIR envisions West El Camino being enlarged to 6 lanes (+ bike, pedestrian). This would also require increasing the width of the on/off ramps to 2 lanes, which there does not appear to be room for based on development already completed surrounding the interchange. Furthermore, what is the point of increasing the capacity of an interchange to a frequently gridlocked freeway that can't handle that capacity? All this development would exasborate the use of surface roads to find alternate access to freeways away from the gridlock. The UWSP DEIR states on page 22-67 that traffic on Garden Hwy from Powerline to San Juan would double from 3300-4700 ADT to 7000-9500 ADT. Many commuters continue down Garden Hwy south of San Juan and thus I believe the additional traffic would constitute all of Garden Hwy from Powerline Rd to the I-5 interchange (near Chevy's restaurant). This is especially so considering all the proposed traffic to Garden Hwy from the new entrances (Radio Rd, Farm Rd [renamed Street 9 since no Farms], and Brytle Bend Rd [by I-80 bridge]) that the UWSP proposes. The DEIR states this volume exceeding 6000 ADT would necessitate a widening of Garden Hwy to conform with current County design standards. This widening could possibly have occured when the adjacent levee was built in the last 10 years, but the County did not fund it and USACE would not approve it. The USACE has very strict levee guidelines and they would not authorize the new power poles to extend into the new widened levee "foot print" past where they currently are. Hundreds of these poles were removed and replaced in the last 10 years for the widened levee, and without removing and replacing them again (which the USACE won't allow) there is no room to upgrade Garden Hwy to the required County standards. The DEIR also states many of their other "required" transportation mitigation strategies require approval from other various agencies outside of County jurisdiction. Does the County plan on approving the UWSP before approval of all required agencies is assured? If this plan is approved I believe we are setting ourselves up for Los Angeles style gridlock on our decidedly smaller Sacramento roads.

RESPONSE 237-1

Please see Response 35-1 through 35-5.

LETTER 238

Lalanya Rothenberger, representative, Natomas Unified School District, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 238-1

NUSD is very appreciative of the efforts to provide for adequate school sites, central to proposed residential areas, with a focus on convenient and safe active transportation routes between proposed residential development and the proposed school sites. We agree with the need for four schools and believe that the DEIR fundamentally includes them and they are required. The district respectfully requests the County require the evidence of a satisfactory plan that will ensure adequate funding of the schools before approval of the EIR. NUSD wholeheartedly supports the intent of the General Plan and General Plan policies, and we believe that the County's policy framework provides clear guidance for this Specific Plan and implementing documents, including:

Land Use Element, page 43 (Intent): "...Each residential development should access to a variety of local destinations that provide for residents' daily needs, including retail, employment, recreational amenities, schools, and municipal and social services. The resulting non-automobile street activity will promote human contact and a sense of neighborhood, as well as reduce automobile traffic and the associated impacts."

Policy PC-6. Infrastructure Master Plan and Financing Plan (Requirements for Amending the General Plan Land Use Diagram). Required: Inclusion of an Infrastructure Master Plan and Financing Plan that include the following:

- The Infrastructure Master Plan shall identify required public facilities and infrastructure (including roads, transit, water, sewer, storm drainage, schools, fire, park, library, and other needed community facilities) and associated costs for the development of the proposed UPA expansion/Master Plan;
- The Financing Plan shall:
 - Identify the phase or timing for when the facilities are needed;
 - Identify the funding mechanisms proposed to pay for the identified infrastructure and facilities...

Public Facilities Element, page 18 (Intent): "Schools are an important part of any neighborhood. In addition to their central educational role, they serve as a place for meetings, special programs, after-school play, soccer and little league games, and precinct voting. How well the school functions in these various roles depend very much on the school's location with respect to other community uses and how accessible it is... school siting and design should be a key element of a neighborhood planning effort. There remain many opportunities for design innovation and good, sensible planning to achieve neighborhoods which better integrate the school into the fabric of neighborhood life."

Policy PF-29. Schools shall be planned as a focal point of neighborhood activity and interrelated with neighborhood retail uses, churches, neighborhood and community parks, greenways and off-street paths whenever possible.

Policy PF-30. New elementary schools in the urban area should be planned whenever possible so that almost all residences will be within walking distance of the school (one mile or less) and all residences are within two miles of a school.

Policy PF-35. New schools should link with planned bikeways and pedestrian paths wherever possible.

Public Facilities Element, page 20 (Intent): ...from a school facilities perspective, school enrollment and the size of the school site are basic requirements... in growing districts the problems of timely school construction and, above all, funding new school facilities requires resolution in order to achieve this objective.

NUSD greatly appreciates the County's efforts to involve us in reviewing draft versions of the Public Facilities Financing Plan and also for the opportunity to review the Draft Specific Plan and Draft Environmental Impact Report (Draft EIR). As we move from draft to final versions of these documents, NUSD believes that the County's General Plan – particularly the direction related to identifying the cost of required public facilities, identifying when public facilities are required, and providing funding for such public facilities – will be very helpful.

NUSD applauds the County's planning efforts here – particularly the greenbelt system placement relative to school sites (summarized on Draft EIR page 2-23) and the strategic planning of school sites so that “over 90 percent of the proposed residential units would be within three-quarters of a mile of a K-8 school site” (Draft EIR, page 2-53).

In the Final EIR, Final Specific Plan, and Final Public Facilities Financing Plan, it will be important to arrive at mutually agreeable language that ensures funding in adequate amounts, and with the right timing such that school sites can be constructed within the Specific Plan Area when schools are needed by Specific Plan Area residents. This is important to meet expectations expressed in the aforementioned General Plan policies, but also because the analysis presented in the Draft EIR relies on the presence of school sites. For example, on page 8-41 of the Draft EIR is a description of the features of the Draft Specific Plan that would reduce vehicular travel demand and associated greenhouse gas emissions, including a note that “the proposed UWSP would include the development of commercial mixed use and employment/highway commercial uses, as well as schools... [and that]...[b]y providing a range of residential, commercial, and school uses within the UWSP area, approximately 22.9 percent of home-based trips associated with the proposed UWSP would be internal.” The rate of internal trips used in the air quality, greenhouse gas emissions, transportation, and transportation noise analysis in the Draft EIR would need to be adjusted if school construction is ultimately not feasible as presented in the Draft Specific Plan and Draft EIR.

Page ES-15: Toxic Air Contaminants (and page 24-4). On page ES-15, in the Executive Summary table, the toxic air contaminants impact notes that there is a significant impact for exposure of sensitive uses to substantial pollutant concentrations. School uses are identified as being within 1,000 feet of Interstate 80. From the Land Use Plan, it does appear that there is a proposed K- 8 school site within approximately 1,000 feet of Interstate 80, though we only have a PDF version of the Land Use Plan and cannot create an accurate estimate of this distance. Would Mitigation Measure AQ-4c apply to this school site – the mitigation measure that requires installation of high-efficiency filtration systems – to this school site? How would the ongoing maintenance, repair, and replacement of such a system (as described in the second bullet of this mitigation measure) apply to this school site?

Page ES-64: Greenhouse Gas Reduction Plan. The strategy for reducing GHG emissions relies on the preparation of Greenhouse Gas Reduction Plans for future project tentative maps (Mitigation Measure CC-1b). The District is interested in how this may relate to school facilities master planning as well as more detailed transportation facilities planning and improvements that ensure safe walking and bicycling routes between homes and school sites within the Specific Plan Area.

Bullet 2 of Mitigation Measure CC-1b identifies a performance standard of 1.42 metric tons of carbon dioxide equivalent per thousand square feet, measured in a future year. Does the estimate proposed in the Draft EIR include non-residential development proposed for school uses? If so, how would the strategies related to a prohibition on natural gas, on-site renewable energy, purchase of zero GHG electricity, tree planting, etc. apply to the proposed school sites? On page ES-64, there is reference to a strategy to reduce vehicular travel demand and associated GHG emissions through an “increase access to common goods and services, such as groceries, schools, and daycare.” Would this increase in access be achieved through augmenting the current active transportation plan to increase connectivity and ensure a very low stress active transportation network between proposed homes and school sites? The District is highly supportive of a transportation system that would distribute traffic and provide very low stress and convenient pedestrian and bicycle routes to the school sites, but we are unclear how an increase would be pursued beyond the estimates presented in the Draft EIR.

Additionally, since the estimates of GHG emissions rely on the presence of the four proposed school sites, what mechanism would be most effective for ensuring adequate funding for these school sites for the Specific Plan and EIR? How would the future GHG Reduction Plans prepared at the tentative map level guarantee adequate funding to provide for school sites?

Page ES-98, Subsequent Review for School Parking Lot Noise (and page 15-46). On this page of the Executive Summary is an overview of an impact related to the placement of proposed noise-sensitive uses near proposed school sites that would have parking areas. Mitigation Measure NOI-4a (page 15-48) suggests that there would be a future acoustical study to evaluate parking lot-generated noise relative to the County’s exterior noise performance standards with building placement, buffering through

distance, or a sound wall to shield adjacent proposed noise-sensitive uses from parking lot-generated noise. NUSD supports strategies to avoid land use-noise compatibility issues in this Specific Plan – both issues that would affect educational activities at the proposed school sites and issues that could be caused by school-generated noise. However, NUSD is interested in clarifying that, if buffering is required in the future, that this buffer would be required outside of the proposed school sites, if a sound wall is proposed, that this would be constructed by others outside of school property, and that if a sound wall is constructed, that it not interrupt casual surveillance of the area and not interrupt pedestrian and bicycle connectivity in the vicinity of school sites. In addition, it may not be feasible to place buildings in locations that would break the line of site between future parking fields and adjacent noise-sensitive uses.

Page ES-108, Subsequent Review for School Parking Lot Noise (and pages 15-46 and 15- 64). NUSD has the same questions about the school parking lot noise discussion and Mitigation Measure NOI-7h on page ES-108 as we have in relation to the discussion on page ES-98 and Mitigation Measure NOI-4a.

Page ES-108 and 109, Subsequent Review for School Playground Noise (and page 15-64). The Draft EIR includes an impact related to the placement of proposed residential uses near possible future playground areas within future school sites. NUSD strongly supports the County's goal to avoid land use-noise compatibility issues that could arise but we do feel that this should be balanced with a goal of making sure that school sites are fully integrated into planned residential areas in a way that supports safe and convenient walking and bicycling to school. Mitigation Measure NOI-7i recommends a minimum 90-foot setback between the center of play areas and adjacent "residential boundaries." NUSD assumes this setback would be from the center of future playground activity areas and outdoor gathering spaces associated with future residential developments, rather than 90 feet from the edge of adjacent residential property boundaries, but this clarification could be helpful. In addition, the proposed mitigation seems to suggest that the recommended buffer would be provided by future school site planning. While such a buffer may be feasible, NUSD must consider a broad range of criteria in site planning, and it may not be possible in all cases to ensure such a buffer on the school property. It may be necessary to relax the referenced exterior and interior standards for residential dwellings adjacent to school sites or to consider building orientation and the location of outdoor gathering spaces for future residential development in areas adjacent to school sites.

Page ES-109, Subsequent Review for School Stadium and Sports Fields Noise (pages 15-64 and 15-65). On this page of the Executive Summary is an overview of an impact related to the placement of proposed noise-sensitive uses near proposed school sites that would have a stadium and sports fields. Mitigation Measure NOI-7j requires an acoustical study demonstrating compliance with County exterior noise performance standards prior to issuance of a building permit for proposed school uses. NUSD has a somewhat different process for school site planning and permitting that does not involve issuance of a building permit from the County. We are also interested in understanding who would prepare this acoustical study, and whether strategies to reduce noise exposure (distance, intervening structures, etc.) would be the responsibility of adjacent

proposed residential tentative maps or other form of residential applications. NUSD absolutely supports the goal of avoiding adverse noise impacts associated with special events and use of sports fields. However, we do not believe that future residential sensitive outdoor areas near the proposed school sites have been identified, and NUSD has not done any programming or site planning for the school sites, either. Therefore, unless the site planning for proposed residential adjacent residential areas occurs in tandem with school site planning and there is flexibility on the placement and methods of noise attenuation, it may be necessary to relax the exterior noise standards for special events and school use of outdoor sports fields. In addition to “operational limits on amplified sound equipment,” it may be possible to reduce noise exposure through design of public address systems, such as through the sizing and placement of loudspeakers, but this option involves additional expense, and NUSD is not in a position at this time to determine definitively whether such additional expense would be feasible for future school sites within the Upper Westside Specific Plan Area.

Page ES-113, School Impacts (and page 17-17). In this portion of the Executive Summary, the Draft EIR explains that “the NUSD has existing capacity for the elementary and middle school students generated by the proposed UWSP, it does not have existing capacity for the high school students generated by the proposed project.” The Draft EIR goes on to explain that school facilities “impacts are included as part of the analysis of physical impacts to the environment.” This is true so long as the school sites that are proposed are developed with school facilities as identified in the Draft Specific Plan and Draft EIR. The Draft EIR assumes the presence of these schools, and impact analysis related to criteria air pollutant emissions, greenhouse gas emissions, transportation noise, and other topics assumes that the proposed school sites are operational for K-8 and high schools. Since the analysis assumes the presence of the planned schools, and since NUSD has provided information on the current cost of school facilities and the need for additional funding to ensure that schools can be provided as identified in the Specific Plan and Draft EIR, it will be important to include language in the County’s documents that ensures adequate funding and requires that adequate funding is available for construction of planned schools once they are needed to serve proposed residential development in the Specific Plan Area.

Also, in this part of the Executive Summary, the Draft EIR notes that, “compliance with mitigation measures... would reduce construction-related effects to the extent feasible.” NUSD would typically conduct environmental review for proposed school sites, and in the past, NUSD has coordinated this review with Sacramento County as a responsible agency. Assuming NUSD conducts environmental review of the planned school sites within the Specific Plan Area, this environmental review would require feasible mitigation for potentially significant impacts, including construction-related impacts. It may be helpful to understand which mitigation measures specifically are being referenced here for future school sites in the Draft EIR.

Page 2-59, Phasing. The text on page 2-59 suggests that “non-residential development anticipated under Phase 1 includes 1.3 million square feet of office development, an elementary school, and a 33.5-acre community park.” Certainly, the first phase of development will require school facilities, and the analysis in the Draft EIR relies on the

presence of school facilities, but it appears that Plate PD-22 shows the southern half only of a proposed K through 8 site rather than a complete school site. Clarification here could be helpful regarding the details of the phasing (and funding) approach for school sites to serve proposed residential development.

Page 4-18, Lighting Impacts. The Draft EIR discusses the planned high school site and associated outdoor lighting impacts. The Draft EIR identifies that such lighting would be required to comply with “Countywide Design Guidelines and Commercial Lot and Commercial and Institutional Project Development Standards in Chapter 5 of the Zoning Code.” NUSD would typically conduct environmental review for proposed school sites and would include feasible mitigation to address potentially significant impacts. If the future high school site includes outdoor sports lighting standards, and if there could be a potentially significant impact associated with this component of a future high school project, NUSD may indeed require that sports lighting include certain design components to avoid light spillage and glare. However, it would be helpful to have more clarity about any mechanism that would require school sites to comply with the County’s Zoning Code.

Page 5-12, Pesticides. The Draft EIR includes a reference to a requirement for agricultural operators to notify schools if their agricultural operation is within a quarter mile from the school boundary and identify all pesticides to be used during the school year. What pesticides are currently applied during the school year in areas near planned school sites? Please provide documentation that sites designated AG-Cropland near the planned school sites will not use pesticides during the school year once these schools are operational.

Page 8-40, Greenhouse Gas Reduction Actions in the 2022 Scoping Plan Update. Appendix D of the 2022 Scoping Plan identifies local actions that can be taken to reduce greenhouse gas emissions, including off-site mitigation (California Air Resources Board 2022 Scoping Plan, Appendix ED, page 30). Among off-site mitigation options is:

“Off-site EV chargers can increase access to EV charging throughout a community. Some examples could include EV chargers in multi-unit dwellings in disadvantaged or low-income areas, public locations (schools, libraries, city centers), workplaces, key destinations (e.g., parks, recreation areas, sports arenas).”

It may be worth considering identifying the funding of EV chargers within the proposed school sites as an additional greenhouse gas emissions mitigation strategy.

Page 15-49, Sound Generation Area of the Pavilion. There is discussion here of a plan for amplified music events at “the pavilion,” but NUSD is unable to find a discussion of this element in the Draft Specific Plan. It may be helpful to understand the location of this planned facility vis-à-vis planned school sites. On page 24-6 of the Draft EIR, there is a discussion of an outdoor pavilion in a proposed 25.8-acre park in the west-central portion of the Specific Plan Area, but NUSD is unable to find any park site of this land area on the Land Use Plan.

Page 17-8, School Downsizing. The Draft EIR includes a statement here that NUSD would like to have clarified: “[t]hrough careful planning, a reduced Plan Area school site could follow the recent trend of school downsizing and meet the Department's criteria.”

Page 22-63, Construction of K-8 and High Schools. Here, the Draft EIR includes a statement that “[t]he proposed UWSP would construct K-8 schools and a high school to serve the needs of students generated in the UWSP area.” It is our understanding that NUSD would be responsible for construction and operation of the proposed school sites, though it is important to clarify the funding mechanisms for the construction of school sites and to include language requiring that such funding is available in amounts and with the right timing to ensure NUSD schools can serve students in the Specific Plan Area once dwelling units are occupied.

RESPONSE 238-1

Please see Responses 13-1 through 13-18.

LETTER 239

Prasanna Regmi, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 239-1

I've lived in Natomas for the past 15 years, and I've always loved the area's natural beauty. Before the houses went up in West Shore, I used to take walks and see all sorts of wildlife – jackrabbits, turkeys, even coyotes. The birdsong in the morning is a treat, and it's amazing to watch the different species come and go. Even during my walk this morning I am reminded about the lovely mix of wildlife we are blessed to be surrounded by. While the area has changed a lot, Natomas has been able to maintain its charm. I love biking with my husband and 10-year-old son regularly and appreciate seeing the protected area near us. I think about not just our future, but the future ahead of ours, who will be able to enjoy all that Natomas has to offer. My family who have visited from Nepal and Australia rave about our neighborhoods to others and were very impressed by all that the city in the past balanced development with conservation.

If we develop the fields and move forward with the Upper Westside Specific Plan, I worry about the negative impact on our ecosystem. Animals who call this place home will be forced to go elsewhere, potentially ending up in our neighborhoods. The proposed development plans include mitigation strategies, but I think we need more research before making such a big decision. We need to involve more thought partners who can provide us an objective feedback in this matter before we commit to such a massive undertaking.

RESPONSE 239-1

This comment expresses opinions related to the merits of the project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 239-2

Many of my friends are concerned about the flood risk in our area. Our flood insurance reminds us of our vulnerability, and I believe we need a better plan to conserve our soil and vegetation. This would help reduce the impact of flooding if it happens.

RESPONSE 239-2

Draft EIR Chapter 13, *Hydrology and Water Quality*, addresses storm drainage and flooding effects of the proposed project. Impact HYD-3, pages 13-23 to 13-25, addresses alteration of drainage patterns, addition of impervious surfaces and increases in runoff, and redirection of flood flows. The analysis determined that with compliance with existing regulations and the use of the project design features to

control stormwater, development of the proposed UWSP area would not result in erosion, siltation, increased runoff, or impedance or redirection of flood flows. It concluded that impact of the proposed project on drainage and flooding would be less than significant.

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

LETTER 240

Megan Allen, member of the community, written comment to County of Sacramento Planning Commission; dated October 21, 2024.

COMMENT 240-1

I am a concerned Natomas native writing to OPPOSE the proposed development plan named Upper Westside Specific Plan.

Mainly, how this is even being considered? This violates the Natomas Basin Conservancy Habitat Conservation Plan (NBHCP), adopted in November 1997. This plan was designed to promote biological conservation of the Natomas Basin area.

RESPONSE 240-1

Please see Master Response BR-1, Conflict with Natomas Basin Habitat Conservation Plan and Metro Air Park Habitat Conservation Plan.

The commenter expresses opposition to the proposed project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 240-2

According to the environmental impact report there are EIGHTEEN SIGNIFICANT negative impacts, amongst many other negative impacts, that will affect our environment and community here in Natomas. Mainly citing issues with air quality (which this area already struggles to maintain healthy air), major traffic congestion, noise pollution, the PROTECTED Swainson Hawk's, and Coyotes along with all wildlife that utilize this area for survival, and lack of farmable land to supply needed food. How do you plan to address all of these issues?

Sacramento toots its horn about being "Farm to Fork" while simultaneously trying to cement over the very farmland that affords us that prestigious claim.

You should be ashamed of the greed that entices such projects and overlooks the good of the community at large!

RESPONSE 240-2

Please see Master Responses BR-4: Impacts on Swainson's Hawk Zone, and TR-3: Traffic Congestion.

This comment expresses opinions related to the merits of the proposed project. It raises neither new significant environmental issues nor specific questions about the analyses or information in the Draft EIR that would require response pursuant to CEQA Guideline

section 15088. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 240-3

I also have concerns about the increasing heat of the summer months. More cement leads to higher temperatures. This past summer of 2024 we had record breaking heat! More cemented in land and heat producing buildings will only further the warming of our city!

RESPONSE 240-3

On November 6, 2024, the County adopted the *County of Sacramento Climate Action Plan for the Unincorporated Sacramento and County Operations (CAP)*. The CAP presents a range of climate action strategies intended to reduce the generation of greenhouse gasses that drive climate change, and a set of resiliency strategies intended to adapt to anticipated future changes to the climate, including increased temperatures and extreme heat events. Adaptation measures that are intended to address increased heat effects include:

- MEASURE TEMP-01: Protect Critical Infrastructure Vulnerable to Extreme Heat Events
- MEASURE TEMP-02: Partner with Local Agencies and Utilities on Heat-Related Climate Change Initiatives and Efforts
- MEASURE TEMP-03: Expand Services and Raise Awareness of Heat-Related Risks and Illnesses for Residents of EJ Communities
- MEASURE TEMP-04: Encourage the Installation or Use of Cool Roof Technologies, Passive Solar Home Design, Green Roofs, and Rooftop Gardens
- MEASURE TEMP-05: Increase Participation in the Sacramento Area Sustainable Business Program
- County of Sacramento Climate Action Plan ADAPTATION MEASURES | 3-30
- MEASURE TEMP-06: Partner with Valley Vision to Expand the Business Resiliency Initiative
- MEASURE TEMP-07: Use Cool Pavement Technology and Reduce the Amount of Paved Surfaces
- MEASURE TEMP-08: Increase Parking Lot Shading, Landscaping, and Urban Greening, Prioritizing EJ Communities
- County of Sacramento Climate Action Plan ADAPTATION MEASURES | 3-34
- MEASURE TEMP-09: Understand the Tolerance of Current Crop Mixes to Withstand Increased Temperatures
- MEASURE TEMP-10: Work With SMUD to Improve Electric Grid Reliability

Other than Adaptation Measures TEMP-07 and TEMP-08, these heat-related adaptation measures are intended to be implemented by the County. However, under Adaptation Measures TEMP-07 and TEMP-08 there are requirements that would be implemented at the project level, and which would be required to be implemented as part of the development of the proposed UWSP. Action Measure TEMP-07-a requires the use of cool pavement technology in the development of new roads, sidewalks, parking areas, and bikeways. Action Measure TEMP-08-a requires that projects meet the County's existing parking lot shading coverage requirements (i.e., 30 percent coverage for 5-24 parking spaces, 40 percent coverage for 25-29 parking spaces, and 50 percent coverage for 50+ parking spaces).

The proposed UWSP would comply with the County's parking lot shading coverage requirements. In addition, Design Standards & Design Guidelines, Chapter 2, *Community Framework*, includes policies throughout that require the project's "green spaces" (parks, greenbelts, lake basin edges, buffer corridor, and roadway landscape corridors) to be planted with trees at a density of 30-feet on center. DS&DG Chapter 4, *Residential Neighborhoods*, requires that residential streets have trees installed between back of curb and sidewalk, which is additive to front yard trees that would be required as part of the County's design review process. DS&DG Chapters 2 and 5, *Town Center and Commercial Development*, require that site design for non-residential developments provide shade trees, which is additive to those that would be required through the County's Design Review process.

In addition, Draft EIR Mitigation Measures BR-10a and BR-10c would ensure (1) that removal of native trees is minimized, and where native trees are removed they are compensated for by planting of in-kind native trees with a collective size equivalent to the size of trees removed; and (2) that non-native tree canopy that is removed is mitigated by creation of new tree canopy equivalent to the acres of non-native tree canopy removed. If on-site mitigation of tree canopy removal is not feasible, then the project would be required to contribute funds to the Sacramento Tree Foundation's Greenprint program in an amount proportional to the tree canopy lost (as determined by the 15-year shade cover calculations for the tree species to be planted through the funding, with the cost to be determined by the Sacramento Tree Foundation).

The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.

COMMENT 240-4

I would like to know what the plans are for evacuation in the event we have a flood, fire, or earthquake with small two lane back roads? It's already a nightmare as it is with the development that has already been done!

RESPONSE 240-4

Draft EIR, Chapter 18, *Transportation*, Impact TR-4, pages 18-41 to 19-42, addresses the potential effects of the proposed UWSP on emergency access. The analysis addresses the ability of the proposed roadway system to convey traffic in emergency

conditions. It also points to the review and approval process for individual buildings by the City of Sacramento Fire Department, and the provisions of the California Vehicle Code that support the ability of emergency vehicle drivers to find a clear path of travel during an emergency. The analysis concludes that the impact would be less than significant. Please also see Impact HAZ-5 on pages 12-21 to 12-25 in Chapter 12, *Hazards and Hazardous Materials*, of the Draft EIR, for a discussion regarding evacuation during a flood.

COMMENT 240-5

How will this development affect the airport and the plane routes?

RESPONSE 240-5

The effects of the proposed UWSP related airports and air operations are addressed in Chapter 4, *Aesthetics*, Chapter 12, *Hazards and Hazardous Materials*, and Chapter 15, *Noise*, of the Draft EIR. It is currently anticipated that the proposed project would have no effects on aviation operations at Sacramento International Airport.

LETTER 241

Melva Arditti, member of the community, written comment to County of Sacramento Planning Commission; dated October 22, 2024.

COMMENT 241-1

There were two highlights to last night's meeting of the County Planning Commission regarding the Upper Westside Project:

1. When one angry farmer in his testimony shouted, "I'm for it for the money!", which doubtless resonated with the investors behind the project who refused to be identified and testify.
2. When another Natomas resident who supports the project shouted "I aint never seen a Swainson's Hawk out here - has anyone else?" and immediately about 50 hands went up in the audience, evidence of support for habitat preservation that would be harmed by the project.

It was reassuring to hear numerous residents in developments other than the Garden Hwy. testify against the project, endorsing their desire for natural habitat and farmland preservation, and citing major traffic concerns.

The Urban Services Boundary, the county's 2030 General Plan and SACOG's Blueprint for Regional Development need to be observed before accepting this development proposal. Allowing development sprawl outside the Urban Services Boundary discourages infill development.

Urbanizing a river corridor diminishes one of Sacramento's jewels. Like others, I occasionally get annoyed when I am stuck behind a group of 30 bicyclists on the Garden Highway, and then I remind myself that they're there because it's beautiful, it's fresh air, it's open fields, it's flying hawks and geese, and it's the opposite of urbanization.

Some losses cannot be mitigated away.

RESPONSE 241-1

Please see Master Response LU-1: County Urban Services Boundary and Urban Policy Area and Master Response LU-3: SACOG Blueprint and MTP/SCS.

This comment expresses an opinion on the merits of the project. The comment will be included as a part of the record and made available to the decision makers prior to making a final decision on the proposed project.
